अथ स्फुट स्थित्यर्ध और स्फुटविमर्दार्ध के साधन को कहते हैं ।

हि. भा.—चन्द्रग्रहणवत् आये हुये स्थित्यर्ध करके हीन और युत तिथ्यन्त (स्पष्ट-दर्शान्त) से पूर्ववत् असकृत् विधि से लम्बन साधन करना जब तक अविशेष हो, यहाँ यह कहा जाता है कि स्पर्श काल ज्ञान के लिये स्थित्यर्ध रहित तिथ्यन्त से तथा मोक्ष काल ज्ञान के लिये स्थित्यर्ध सहित तिथ्यन्त से असकृत् विधि से लम्बन को स्थिर करना, यदि वह लम्बन मध्यदर्शान्त कालिक लम्बन से अधिक और ऊन (अल्प) हो अर्थात् स्पर्शिक लम्बन मध्यकालिक लम्बन से अधिक और मौक्षिक लम्बन अल्प हो तथा मध्यकालिक लम्बन और स्पर्शकालिक लम्बन दोनों ऋण हो तब उन दोनों ऋणों के अन्तर को पूर्व साधित स्थित्यर्ध में जोड़ देना चाहिये, यदि मध्यलम्बन से स्पर्शिक लम्बन न्यून हो और मौक्षिक लम्बन अधिक हो तथा मध्यकालिक और स्पर्शकालिक लम्बन तथा मध्यकालिक और मोक्ष कालिक लम्बन धन हो तो भी उन दोनों धनों के अन्तर को स्थित्यर्ध में जोड़ना चाहिये । यदि एक लम्बन ऋण रहे और दूसरा लम्बन धन रहे तब दोनों के योग को स्थित्यर्ध में जोड़ना चाहिये । इस तरह स्पर्शिक और मौक्षिक स्थित्यर्ध स्फुट होता है, एवं संमीलन कालिक विमर्दार्ध और उन्मीलन कालिक विमर्दार्ध स्फुट होता है अर्थात् जैसे चन्द्रवत् स्थित्यर्ध को लेकर स्फुट स्थित्यर्ध साधित होता है उसी तरह स्थित्यर्ध स्थान में चन्द्रवत् विमर्दार्ध को ग्रहण करके स्फुट विमर्दार्ध साधन करना इति ॥ १४-१५ ॥

उपपत्ति ।

स्थिरी भूत स्पर्श कालिक, मध्यकालिक और मोक्ष कालिक लम्बन क्रम से ल, ल, ल, ऋण है, मध्यम स्थित्यर्ध=स्थि, गणितगत दर्शान्त काल=द, तब स्फुट स्पर्शकाल=द,—स्थि—ल,=स्प, स्फुट मध्यकाल=द—ल,=म, स्फुट मोक्ष काल=द+स्थि—ल,

=मो, अतः स्पर्शिक स्फुट स्थित्यर्ध = स्यास्फुटस्थि = म - स्प = स्थि + ल_१ - ल_२ मौक्षिक स्फुट स्थित्यर्ध = मौस्फुटस्थि = मो - म = स्थि + ल_१ - ल_२, इसलिये यदि ल_१ > ल_२ तथा ल_१ > ल_२ तब ल_१ - ल_२, ल_१ - ल_२ यह दोनों धन होते हैं, यदि वे लम्बन धन हैं तब ल_१ - ल_२, ल_१ - ल_२ इन दोनों के मान ल_२ - ल_१, ल_१ - ल_२ होंगे। यदि ल_२ > ल_१ तथा ल_१ > ल_२ तब ल_१ - ल_२, ल_१ - ल_२ तब ये दोनों धन होंगे अन्यथा ऋण होंगे। वित्रिभ से पूर्व स्पर्श और पश्चात् मध्यकाल रहने से ल_१ यह ऋण, ल_२ यह धन होगा, तब ल_१ - ल_२ मान ल_१ + ल_२ यह धन होगा, स्पर्शिक लम्बन के धन रहने से वित्रिभ से पश्चिम रवि के रहने से उससे भी आगे मध्यकाल स्थिति के कारण मध्य कालिक लम्बन सर्वदा धन ही होता है इसलिये वहां धनत्व स्थिति और ऋणत्व स्थिति नहीं होती है। इसी तरह वित्रिभ से पूर्व दिशा में यदि मध्यकाल है और पश्चात् मोक्षकाल तब ल_१ ऋण होता है और ल_२ धन होता है। तब पूर्व विधि से ल_१ - ल_२, इसकी ल_१ + ल_२ ऐसी स्थिति सदा धनात्मक होती है, इसलिये यदि एक ऋण हो और अन्य धन हो तब सदा उन दोनों के योग को स्थित्यर्ध में जोड़ने से स्फुट स्थित्यर्ध होता है, स्फुट स्पर्शकाल और स्फुट मोक्ष काल के अज्ञात रहने के कारण पहले ल_१, ल_२ के स्थान में स्थूल ल_१ ग्रहण किया गया, तब स्प = द - स्थि - ल_२ = द - ल_२ - स्थि = स्पष्ट - दर्शान्त - स्थि, एवं स्थूल मोक्षकाल = स्पष्टदर्शान्त + स्थि, इसलिये स्थित्यर्ध कर के हीन, युत स्पष्ट तिथ्यन्त से पहले लम्बनानयन उचित है, और तात्कालिक स्फुट स्थित्यर्ध स्पर्श-कालिक और मोक्ष कालिक शरवश से उचित है लेकिन यहां मध्यकालिक स्पष्टशरवश से स्थिर स्थित्यर्ध ग्रहण कर आनयन किया गया है इसलिये यह स्थूल है सूक्ष्मार्थ के वास्ते आगे आचार्य प्रकारान्तर को कहते हैं इति, सिद्धान्त शेखर में “तिथ्यन्तात् स्थितिलब्ध हीन-सहितात्” इत्यादि संस्कृतोपपत्ति में लिखित पद्यों से श्रीपति तथा “स्थित्यर्धोनाधिकात् प्राग्वत्” इत्यादि से सूर्य सिद्धान्तकार ने आचार्योक्त के सदृश ही कहा है इति ॥ १४-१५ ॥

अब प्रकारान्तर से स्थित्यर्धसाधन को कहते हैं

हि. भा.—पहले स्थित्यर्ध करके हीन और युत स्फुटतिथ्यन्त (स्पष्टदर्शान्त) से लम्बन लाना चाहिये, फिर उसे स्पष्टशर जनित स्थित्यर्ध करके हीन और युत तिथ्यन्त से लम्बन लाना इस तरह असकृत् करना, यहाँ यह कहा जाता है कि स्पर्शकालज्ञान के लिये पहले मध्यकालिक स्पष्टशरवश से स्थित्यर्ध साधन करना, उसको स्पष्ट तिथ्यन्त में घटाकर जो हो उससे लम्बन और नति साधन करना, तात्कालिक सपात चन्द्र से शर-साधन करना, नति और शर के संस्कार से स्पष्ट शर साधन करना, उससे चन्द्रग्रहण की तरह स्थित्यर्ध साधन करना, तिथ्यन्त में उसको घटाने से जो हो उससे पुनः लम्बन नति, स्पष्टशर और स्फुट स्थित्यर्ध सब कुछ लाना जब तक अविशेष (विशेषता से रहित) हो तब तक इसी तरह करना, अविशेष होने पर जो लम्बन हो उसको तात्कालिक स्पष्टशर जनित स्थित्यर्ध करके हीन गणितागतदर्शान्त में धन को घटाना, तब स्फुट स्पर्श-

होता है, इस तरह स्थित्यर्ध युक्त तिथ्यन्त से स्फुट भोक्षकाल होता है, उस स्फुट स्थित्यर्ध काल वा स्फुट भोक्षकाल का तथा स्पष्ट दर्शान्त काल का अन्तर स्पर्शिक और भोक्षिक स्पष्ट स्थित्यर्ध होते हैं, एवं जैसे स्थित्यर्ध से स्पष्ट स्थित्यर्ध साधन किये गये हैं उसी तरह असकृत् कर्म से अपने विमर्दार्ध से स्पष्ट विमर्दार्ध साधन करना चाहिये, अर्थात् पूर्ववत् असकृत् कर्म से स्फुट संमोलन काल और स्फुट उन्मीलन काल का साधन कर उनके और मध्यकाल के अन्तर के बराबर स्पष्ट विमर्दार्धद्वय समझना चाहिये। यहां प्राचार्य ने पहले मध्यकाल लम्बन ही को स्थूल से स्पर्शकाल में और भोक्षकाल में स्वीकार किया है उससे असकृत् कर्म में कोई हानि नहीं है ॥१६-१७॥

उपपत्ति

पहले पूर्वकपाल में विचार करते हैं। गर्भाय दर्शान्त से पूर्व पृष्ठीय दर्शान्त के होने के कारण स्वतः गर्भाय दर्शान्त से पहले पृष्ठीय स्पर्शकाल होता है, पृष्ठाभिप्रायिक स्पर्शकाल में पृष्ठाभिप्रायिक स्थित्यर्ध कला और लम्बनान्तर कला के योग तुल्य गर्भाभिप्रायिक रविचन्द्रान्तर कला होती है, क्योंकि स्पर्शकाल में सूर्यस्थान से चन्द्रस्थान पश्चिम दिशा ही में होता है, गर्भाभिप्रायिक रविस्थान से पृष्ठाभिप्रायिक रविस्थान पूर्व दिशा में होता है, चन्द्र का भी उसी तरह होता है, पृष्ठाभिप्रायिक रविकेन्द्रगतकदम्बप्रोतवृत्त और चन्द्र केन्द्रगत कदम्बप्रोतवृत्त की अन्तर कला क्रान्तिवृत्त में स्थित्यर्धकला है, अतः स्थित्यर्धकला में चन्द्रलम्बन कला को जोड़ने से गर्भाभिप्रायिक चन्द्रस्थान से पृष्ठाभिप्रायिक रविस्थान पर्यन्त अन्तिवृत्तीयकला = स्थि३क + चंलंक, इसमें रविलम्बनकला को हीन करने से गर्भाभिप्रायिक रविचन्द्रान्तरकला = स्थि३क + चंलंक — रलंक, जब रविलम्बन कला से स्थित्यर्धकला अल्प होगी तब रविलम्बन कला में स्थित्यर्ध कला को हीन करने से पृष्ठाभिप्रायिक चन्द्रस्थान से गर्भाभिप्रायिक रविस्थान पर्यन्त होता है उसका स्वरूप = रलंक — स्थि३क, इसको चन्द्रलम्बन कला में हीन करने से गर्भाभिप्रायिक रविचन्द्रान्तरकला = चंलंक — (रलंक — स्थि३क) = चंलंक — रलंक + स्थि३क = स्थि३क + लम्बनान्तरक इसको घट्यात्मक करने के लिये अनुपात करते हैं

$$\frac{६० \times \text{गर्भायरविचन्द्रान्तरक}}{\text{रविचन्द्रगत्यन्तरक}} = \frac{६० (\text{स्थि३क} + \text{लम्बनान्तरक})}{\text{रविचन्द्रगत्यन्तरक}} = \frac{६० \text{ स्थि३क}}{\text{विचंगत्यन्तर}}$$

लम्बनान्तरक

— स्थि३क + लम्बनान्तरक, इतनी घटी करके गर्भाय दर्शान्त से पूर्व

है यह सिद्ध हुआ। इसको गर्भाय दर्शान्त में घटाने से तो है।

(स्थि३क + लम्बनान्तरक) = गर्भायदध — स्थि३क — लम्बनान्तरक
में पृष्ठाभिप्रायिक स्पर्शकाल में गर्भाय दर्शान्त घटी में

पृष्ठाभिप्रायिक स्थित्यर्धं घटी को तथा लम्बनान्तर घटी को घटाने से पृष्ठाभिप्रायिक स्पर्शकाल घटी होती है। यहां स्थि^३ क = पृष्ठीयस्थि^३ कला सब जगह समझनी चाहिये। तथा स्थि^३ घ = पृस्थि^३ घ समझनी चाहिये।

यहां संस्कृतोपपत्ति में लिखित (क) क्षेत्र को देखिये। ख = खस्वस्तिक, र = गर्भीय-रवि, र = लम्बितरवि = पुरवि स्था = लम्बितरविस्थान, गचं = गर्भीयचन्द्र, चं = लम्बित-चन्द्र = पूच, स्था = गर्भीयचन्द्रस्थान, स्था_१ = लम्बितचन्द्रस्थान।

अब पश्चिमकपाल में विचार करते हैं

गर्भीयदशान्ति से आगे पृष्ठीय दशान्ति है, पृष्ठीय दशान्ति से पूर्व पृष्ठाभिप्रायिक स्पर्शकाल है इसलिये पृष्ठीयदशान्ति से पूर्व पृष्ठाभिप्रायिक स्पर्शकाल और गर्भीयामान्त के होने से सम्भव है कि गर्भीय दशान्ति से पूर्व पृष्ठाभिप्रायिक स्पर्शकाल हो और कदाचित् आगे भी, जब पृष्ठीय दशान्तकाल में गर्भाभिप्रायिक रविस्थान से पृष्ठाभिप्रायिक रविस्थान पश्चिम दिशा में होता है तब गर्भीय दशान्ति से पहले ही पृष्ठाभिप्रायिक स्पर्शकाल होता है, क्योंकि गर्भीय दशान्ति से पहले गर्भाभिप्रायिक रविस्थान से पश्चिम दिशा ही में गर्भाभिप्रायिक चन्द्रस्थान है, जब स्पर्शकाल में गर्भाभिप्राय से रविस्थान से गर्भाभिप्रायिक चन्द्रस्थान पूर्वदिशा में होता है तब गर्भीयदशान्ति से आगे पृष्ठाभिप्रायिक स्पर्शकाल होता है क्योंकि गर्भीयदशान्ति से आगे पूर्वदिशा ही में गर्भाभिप्रायिक रविस्थान और चन्द्रस्थान है।

स्पर्शकाल में गर्भाभिप्रायिक रविस्थान से गर्भाभिप्रायिक चन्द्र स्थान पूर्वदिशा में और पश्चिमदिशा में होता है, यह कैसे मालूम होता है, इस के लिए विचार करते हैं। यदि गर्भीयदशान्ति में लम्बन घटी जोड़ने से पृष्ठीय दशान्ति होता है उन घटियों से यदि पृष्ठाभिप्रायिक स्थित्यर्धं घटी अल्प हो तब पश्चिम दिशा में गर्भाभिप्रायिक रविस्थान से चन्द्रस्थान होता है अन्यथा पूर्व दिशा में। जब गर्भीय दशान्ति से पहले पृष्ठाभिप्रायिक स्पर्शकाल होता है इसके लिए विचार करते हैं। पृष्ठीय स्थित्यर्धकला में चन्द्र लम्बन कला को घटाने से गर्भाभिप्राय से चन्द्रस्थान से पृष्ठाभिप्राय से रविस्थान पर्यन्त क्रान्तिवृत्त में कला होती है, = स्थि^३ क-चलंक, इस में रविलम्बनकला को जोड़ने से पृष्ठाभिप्रायिक रविचन्द्रान्तरकला = स्थि^३ क-चलंक + रलंक, चन्द्रलम्बनकला से रविलम्बनकला के अल्प होने के कारण दोनों का अन्तर ऋणमूलक ही है तब गर्भीय रविचन्द्रान्तरकला = पृस्थि^३ क-लम्बनान्तरक तब अनुपात से ६० (पृस्थि^३ क-लम्बनान्तरक) = स्थि^३ क-लम्बनान्तरक, गर्भीय दशान्ति से पूर्व पृष्ठाभिप्रायिक

भिप्राय से स्पर्शकाल कल्पना से गर्भीयदशान्ति में स्थि^३ घ-लम्बनान्तरक हीन करने से पृष्ठाभिप्राय से स्पर्शकाल = गदशान्तघ-पृस्थि^३ घ + संघ इससे सिद्ध हुआ कि पश्चिम कपाल में भी जब गर्भीय दशान्ति से पहले ही पृष्ठाभिप्राय से स्पर्शकाल होता है तब दशान्ति में स्थित्यर्ध घटी को हीन ही करना और लम्बनान्तर को मूल करना। जब गर्भीय दशान्ति से

आगे पृष्ठाभिप्राय से स्पर्शकाल होता है तब विचार करते हैं । चन्द्रलम्बनकला में स्थित्यर्ध कला को हीन करने से पृष्ठाभिप्राय से रवि स्थान से गर्भाभिप्राय से चन्द्रस्थानावधि क्रान्तिवृत्त में कला=चलंक—स्थिक इस में रविलम्बनकला को हीन करने से गर्भाभिप्राय से रविचन्द्रान्तरकला=चलंक—स्थिक—रलंक=लम्बनान्तरक—स्थिक तब अनुपात से

$$\frac{६०(\text{लम्बनान्तरक—स्थिक})}{\text{गत्यन्तरक}} = \frac{६० \text{ लम्बनान्तरक}}{\text{गत्यन्तरक}} - \frac{६० \text{ स्थिक}}{\text{गत्यन्तरक}} =$$

लम्बनान्तरक—स्थिक गर्भायदशान्ति से आगे पृष्ठीय स्पर्शकाल कलना से इन घटियों (लम्बनान्तरक—स्थिक) को गर्भायदशान्ति में जोड़ने से पृष्ठाभिप्राय से स्पर्शकाल=दश—स्थिक+लम्बनान्तरक, इस से सिद्ध हुआ कि “स्फुटतिथ्यन्तात् स्थित्यर्धहीन-युक्तात्” यहाँ स्थित्यर्ध घटी सर्वदा गर्भाय दशान्ति में हीन ही करनी चाहिये पूर्वकपाल में और पश्चिम कपाल में, लम्बनान्तर को ऋण और धन करना इति । यहाँ संस्कृतोपपत्ति में लिखित (ख) क्षेत्र को देखिये ।

पश्चिम कपाल में गर्भाय दशान्ति से पहले जब पृष्ठाभिप्राय से स्पर्शकाल होता है तब संस्कृतोपपत्ति में लिखित (ग) क्षेत्र को देखिये । सिद्धान्तशेखर में ‘स्थित्यर्धोनयुतात् परिस्फुटतिथेः’ इत्यादि से श्रीपति ने आचार्योक्त के अनुरूप ही कहा है । सिद्धान्तशिरोमणि में “तिथ्यन्ताद् गणितागतात् स्थितिदलेनोनाधिकात्” इत्यादि से भास्कराचार्य ने भी आचार्योक्त के अनुरूप ही कहा है इति-॥१६-१७॥

जब इष्टग्रास में ग्रीर ग्रास से कालानयन में चन्द्रग्रहण
से जो विशेष बातें हैं उनको कहते हैं

हि. भा.—चन्द्रग्रहण विधि से इष्टकालोत्पन्न जो भुज हो उसको तात्कालिक
स्फुट शरजनित स्थित्यर्ध से गुणाकर स्पष्ट स्थित्यर्ध (स्पर्शकाल ग्रीर मध्यकाल के मन्तर)
से भाग देने से सूर्यग्रहण में भुज होता है, इष्टग्रास से चन्द्रग्रहणोक्तवत् भुज को
स्पष्ट स्थित्यर्ध से गुणाकर तात्कालिक स्फुटशर जनित स्थित्यर्ध से भाग देना । इस तरह
असकृत् करने से जो होता हो उसको स्थित्यर्ध में घटाने से कालसिद्धि होती है
इति ॥ १८-१९ ॥

उपपत्ति

यहां संस्कृतोपपत्ति में लिखित (क) क्षेत्र को देखिये । गर्भीयदर्शान्त से ग्रासे जब
पृष्ठाभिप्राय से स्पर्शकाल है उस कालिक यह क्षेत्र है । गर=गर्भीयरवि, च=गर्भीयचन्द्र,
स्था=लम्बितरविस्थान, स्था_१=लम्बितचन्द्रस्थान, स्था_२=गर्भीय च स्थान स्था_३=
चन्द्रस्पष्टलम्बन, गस्था_१=रविस्पष्टलम्बन, गस्था_२=गर्भीयरविचन्द्रान्तर, स्था_४=
लम्बितरविचन्द्रान्तर गर्भीयरविचन्द्रान्तर + रलं=चलं=लम्बितचन्द्रस्थान से लम्बित
रविस्थानपर्यन्त, =गर्भीयरविचन्द्रान्तर—लम्बनान्तर=कोटि

इसलिये गर्भीयरविचन्द्रान्तर=लम्बनान्तर+कोटि, विभिन्न से पूर्व कपाल में
स्पर्शकाल के बाद इष्टग्रास में इष्टकाल=गर्भीयदर्शान्त—रविचन्द्रान्तरच=गर्भीयदर्शान्त—
कोटिच—लम्बनान्तरच

‘स्फुटलिप्यन्तास्तम्बनमसकृत्’ इत्यादि से स्पर्शकाल=

गर्भीयदध—स्फुटस्वि_१च—स्पर्शिकलम्बनान्तरच=गर्भीयदध—स्फुटस्वि_२च—च,

यहां स्पर्शिक लम्बनान्तरघ = लं_१, इन दोनों का अन्तर करने से स्पर्शकाल के बाह्य इष्टकाल = इ =

(गर्भीयदघ — कोटिघ — लम्बनान्तरघ) — (गर्भीयदघ — स्फुत्स्थि_३घ — लं_१)
यहां लम्बनान्तरघ = इलंघ, तब गर्भीयदघ — कोटिघ — इलंघ — गर्भीयदघ + स्फुत्स्थि_३घ
+ लं_१ =

स्फुत्स्थि_३घ — कोघ — इलंघ + लं_१ = इ, अतः स्फुत्स्थि_३घ — इलंघ —
इ + लं_१ = कोटिघ

स्पष्टदशान्तिघ = गर्भीयदघ — लं_१, यहाँ लं_१ = रवि और चन्द्र का स्पष्टलम्बनान्तर,
तथा 'स्फुटतिथ्यन्ताल्लम्बनमसकृत्' इत्यादि से स्पर्शकाल = गर्भीयदघ — स्फुत्स्थि_३घ — लं_१,
दोनों का अन्तर करने से

स्पर्शिकस्थित्यघ = स्फुत्स्थि_३घ — गर्भीयदघ — लं_१ — (गदघ — स्फुत्स्थि_३घ — लं_१)
= गर्भीयदघ — लं_१ — गर्भीयदघ + स्फुत्स्थि_३घ + लं_१ = स्फुत्स्थि_३घ + लं_१ — लं_१ =
स्पर्शिकस्थि_३घ

तब $\frac{\text{लं}_1 - \text{लं}_2}{\text{स्फुत्स्थि}_3\text{घ}}$ इस अनुपात से जो फल होता है वह यदि लं_१ — इलंघ माना जाय तब

कोटिघटी = कोघ = स्फुत्स्थि_३घ + $\frac{(\text{लं}_1 - \text{लं}_2)}{\text{स्फुत्स्थि}_3\text{घ}}$ इ =

$\frac{\text{स्फुत्स्थि}_3\text{घ} \times \text{स्फुत्स्थि}_3\text{घ} + (\text{लं}_1 - \text{लं}_2) \text{ इ} - \text{स्फुत्स्थि}_3\text{घ} \cdot \text{इ}}{\text{स्फुत्स्थि}_3\text{घ}}$

$\frac{\text{स्फुत्स्थि}_3\text{घ} \times \text{स्फुत्स्थि}_3\text{घ} + \text{इ} \{ (\text{लं}_1 - \text{लं}_2) - \text{स्फुत्स्थि}_3\text{घ} \}}{\text{स्फुत्स्थि}_3\text{घ}}$

$\frac{\text{स्फुत्स्थि}_3\text{घ} \times \text{स्फुत्स्थि}_3\text{घ} - \text{इ} \times \text{स्फुत्स्थि}_3\text{घ}}{\text{स्फुत्स्थि}_3\text{घ}} = \frac{\text{स्फुत्स्थि}_3\text{घ} (\text{स्फुत्स्थि}_3\text{घ} - \text{इ})}{\text{स्फुत्स्थि}_3\text{घ}}$

= कोटिघ, ∴ $\frac{\text{गत्यन्तरक} \times \text{कोटिघ}}{६०} = \text{कोटिक, उत्थापन करने से}$

$\frac{\text{स्फुत्स्थि}_3\text{घ} (\text{स्फुत्स्थि}_3\text{घ} - \text{इ})}{\text{स्फुत्स्थि}_3\text{घ}} \times \frac{\text{गत्यन्तरक} \cdot \text{कोटिघ}}{६०}$

$\frac{\text{स्फुत्स्थि}_3\text{घ}}{\text{स्फुत्स्थि}_3\text{घ}} \times \text{स्पष्टनस्थि}_3\text{कला} = \frac{\text{स्फुत्स्थि}_3\text{घ}}{\text{स्फुत्स्थि}_3\text{घ}} \times \text{चन्द्रग्रहणवत्कोटि} = \text{कोटिकला} \quad (१)$

$$= \frac{\text{स्फुस्थि}^{\frac{1}{2}}}{\text{स्पस्थि}^{\frac{1}{2}}} \times \text{चन्द्रग्रहणवद्भुज} = \text{भुजकला}$$

यदि कोटिघटी = भुजघटी

$$\frac{\text{स्फुस्थि}^{\frac{1}{2}}}{\text{स्पस्थि}^{\frac{1}{2}}} \times \text{इष्टोनस्थित्यर्धकला} = \text{भुजकला} \therefore \text{इष्टोनस्पस्थि}^{\frac{1}{2}} \text{क}$$

$$= \frac{\text{भुजकला} \times \text{स्पस्थि}^{\frac{1}{2}}}{\text{स्फुस्थि}^{\frac{1}{2}}} \text{ इस फल को स्पष्टस्थित्यर्ध में घटाने से इष्टकाल होता है, लेकिन}$$

यह आनयन ठीक नहीं है, क्योंकि तात्कालिकशर विदित नहीं रहने के कारण मध्यग्रहण कालिकशरवश से ही स्थित्यर्धादि का साधन किया गया है इसलिये असकृत् कर्म करना चाहिये, इससे आचार्योक्त उपपन्न हुआ । सिद्धान्तशेखर में “बाहुश्चन्द्रग्रहणविधिनैवेष्ट-कालोद्भवो यः” इत्यादि संस्कृत पद्य में लिखित श्लोक से श्रीपति ने, तथा सिद्धान्तशिरोमणि में “शेषं शशाङ्कग्रहणोक्तमत्र स्फुटेषुजेन” इत्यादि संस्कृतोपपत्ति में लिखित पद्यों से भास्कराचार्य ने भी आचार्योक्त के अनुरूप ही कहा (१) इससे “मानोर्ग्रहे कोटिलिप्ता मध्यस्थित्यर्धसङ्गुणा” इत्यादि सूर्यसिद्धान्तोक्त भी उपपन्न हुआ इति ॥१८-१९॥

इदानीमादेश्यानादेश्ययोर्ग्रहणयोनियममाह

वलनाविशशिवदन्यद् ग्रहणं तैक्ष्ण्याद्भवेरनादेश्यम् ।

द्वादशभागादूनं स्वच्छत्वात् षोडशादिन्दोः ॥२०॥

सु. भा.—षोडशात् षोडशभागात् । शेषं स्पष्टार्थम् । चन्द्रग्रहणाधिकारे ‘इन्दोर्भागः षोडशः खण्डितोऽपि’ इत्यादि भास्करोक्तमेतदनु रूपमेव (चं.प्र. श्लो० ३७) ॥२०॥

वि. भा.—अन्यत् वलनादि शशिवत् (चन्द्रग्रहणोक्तवत्) ज्ञेयम् । रवेः (सूर्यस्य) तैक्ष्ण्यात् (तेजस्तैक्ष्ण्यात् असह्यत्वात्) द्वादशभागान्दूनं (द्वादशांशान्दूनं) ग्रहणमनादेश्यम् (ग्रस्तस्यापि द्वादशांशस्यादृश्यत्वात्) इन्दोः (चन्द्रस्य) स्वच्छत्वात् (किरणानामतिशुभ्रतावशेन) षोडशात् (षोडशभागान्दूनं) ग्रहणमनादेश्यमिति सिद्धान्तशेखरे “तेजस्तैक्ष्ण्यात्तीक्ष्णगोर्मण्डलस्य ग्रस्तोऽप्यंशो द्वादशांशोन दृश्यः । तद्वद्भागः षोडशः शीतरश्मेः स्वच्छासुत्वाल्लक्ष्यते नाधिकोऽतः” श्रीपतिनैवमुक्तम् । अमुमेव श्रीपतिप्रकारं भास्कराचार्यो यत्किञ्चित्परिवर्तितमेवमाह “इन्दोर्भागः षोडशः खण्डितोऽपितेजः पुञ्जच्छन्न-भावाच्च लक्ष्यः । तैजस्तैक्ष्ण्यात् तीक्ष्णगोर्द्वादशांशो नादेश्योऽतीक्ष्णो ग्रहो बुद्धिमद्भिः” सूर्यसिद्धान्ते च

‘स्वच्छत्वात् द्वादशांशोऽपि ग्रस्तश्चन्द्रस्य दृश्यते । लिप्तात्रयमपि ग्रस्तं

अब लघु कर्म से लम्बन और नति के साधन को कहते हैं

हि. भा.— राशित्रय रहित लग्न (वित्रिभ लग्न) से जो क्रान्त्यंश हो उसका और अक्षांश का एक दिशा में योग और भिन्न दिशा में अन्तर करने से स्वल्पाक्षांश देश में याम्योत्तर वृत्त के आसन्न में वित्रिभ के रहने से वित्रिभ नतांश होता है, इस को तीन राशि में घटाने से जो होता है उसकी ज्या वित्रिभशङ्कु है । त्रिज्याध' (त्रिज्या का आधा) वर्ग का वह (वित्रिभशङ्कु) छेद (हर) होता है, त्रिज्याध' वर्ग में छेद (हर) से भाग देने से जो फल होता है उससे वित्रिभलग्न और रवि की अन्तरज्या को भाग देने से लब्ध वा (प्रकारान्तर से) घटिकादिक लम्बन होता है । वित्रिभलग्न की क्रान्ति, वित्रिभ के शरांश और अक्ष के एक दिशा में रहने से योग और भिन्न दिशा में रहने से अन्तर करने पर जो शेष रहता है उसकी ज्या चन्द्रहक्षेप होता है । उस (ज्या) को रवि और चन्द्र के मध्य गत्यन्तर से गुणा कर पन्द्रह गुणित त्रिज्या से भाग देने से अवनति (स्पष्टनति) होती है इति॥२२-२३-२४॥

उपपत्ति

स्वल्पान्तर से याम्योत्तरवृत्त ही में वित्रिभ का मान कर दिनार्धकाल की तरह वित्रिभनतांश और उन्नतांश साधन करना । उन्नतांशज्या = वित्रिभशङ्कुः तब “त्रिज्या-

कृतेरनुगुणशङ्कुहृतायाः” इत्यादि से लम्बनघटी = $\frac{\text{ज्या (र-वि)}}{\text{त्रि}} \times \frac{\text{विशं}}{\text{त्रि}}$

$$= \frac{\text{ज्या (र-वि)}}{\frac{\text{त्रि}^2}{\text{विशं}}} = \frac{\text{ज्या (र-वि)}}{\frac{(\text{त्रि})^2}{\text{विशं}}} = \frac{\text{ज्या (र-वि)}}{\text{फल}} \quad \text{इससे स्पष्ट लम्बनानयन उपपन्न}$$

होता है ।

पूर्वसाधित वित्रिभनतांश में वित्रिभसर को संस्कार करने से विमण्डल पर्यन्त चन्द्रहक्षेप चापांश होता है, स्वल्पान्तर से इसके समान ही रवि के हक्षेप चापांश भी स्वीकार कर लिये गये । इसलिये दोनों (रवि और चन्द्र) का हक्षेप बराबर हुआ ।

तब “रविकक्षिमध्यनतिमुखे” इत्यादि से रवि और चन्द्र के पृथक्-पृथक् नतिसाधन कर दोनों का अन्तर अवनति (स्पष्टनति) होती है । वहाँ त्रि = वित्रिभ, ज्या (र-वि) =

वित्रिभाकान्तरज्या, सिद्धान्तशेखर में ‘विपदादयापमपलंकतान्तरात्’ इत्यादि संस्कृतोपपत्ति में लिखित पद्यों से श्रीपति ने आचार्यों के अनुरूप ही कहा है, केवल ‘खनगर्ह’ तो भवति वाऽवनतिः, यह आचार्यों से भिन्न कहते हैं। ‘रविशशिमध्यगतिगुणे’ इत्यादि से रविनति

$$= \frac{\text{हक्षेप-रमग}}{१५.त्रि}, \text{चन्द्रनति} = \frac{\text{हक्षेप.चमग}}{१५.त्रि} \text{ दोनों का अन्तर करने से } \frac{\text{हक्षेप.गत्यन्तर}}{१५.त्रि} =$$

$$\frac{\text{हक्षेप.}(७६०।३५-५६।८)}{३४१५ \times १५} = \frac{\text{हक्षेप}(७३१।२७)}{५१२२५} = \frac{\text{हक्षेप}}{७०} = \text{स्पष्टनति, स्वल्पान्तर से, इस}$$

से ‘खनगर्ह’ तो भवति वाऽवनतिः’ यह श्रीपःयुक्त प्रकार तथा ‘हक्षेपात् सप्ततिहृतात् भवेद्वाऽवनतिः फलम्, यह सूर्यसिद्धान्तोक्त स्पष्टनत्यानयनप्रकार उपपन्न होता है, इति॥२२-२३-२४॥

इदानीं विशेषमाह

पूर्ववदन्यत् स्पष्टं ब्रह्मोक्तस्पष्टसूर्यशशिपातैः ।

नार्यभटादिभिरुक्तं यतोऽस्फुटास्ते ततोऽस्पष्टम् ॥२५॥

सु. भा.—अन्यदवशिष्टं (स्थित्यर्धादिसाधनं) पूर्ववत् । एवं ब्रह्मोक्तस्पष्टसूर्य-शशिपातैर्ग्रहणं स्पष्टं दृग्योग्यं भवति । यत आर्यभटादिभिर्ये स्पष्टसूर्यशशिपाता उक्तास्तेऽस्फुटा न दृष्टियोग्यास्ततस्तदुक्तं रविशशिपातैर्ग्रहणमस्पष्टं न दृष्टियोग्य-मित्यर्थः ॥२५॥

वि. भा.—अन्यदवशिष्टं (स्थित्यर्धादिकं) पूर्ववत् (चन्द्रग्रहणोक्तसाधन-विधिवत्) भवति, ब्रह्मोक्तस्पष्टसूर्यशशिपातैः (मत्कथितस्पष्टरविचन्द्रपातैः) ग्रहणं स्पष्टं (दृग्योग्यं) भवति, आर्यभटादिभिराचार्यैर्दुक्तं ततो न (दृग्योग्यं न भवति) यतस्ते (आर्यभटादिकथितस्पष्टसूर्यशशिपाताः) स्फुटास्ततस्तदुक्तं ग्रहणमस्पष्टं (न दृष्टियोग्यमिति) । सिद्धान्तशेखरे ग्रहणाध्यायोपसंहारे ‘न स्फुटं भवति पञ्च-जीवया लम्बनं न हि यतस्ततः कृतम् । युक्तमुक्तमिति जिष्णुसूनुना तन्मयाऽपि कथितं परिस्फुटम्’ अनया श्रीपत्युक्त्या सूर्यग्रहणाध्यायः श्रीपतिना ब्रह्मगुप्तोक्तानुरूप एवोक्त इति सूच्यते । “दृग्गणितैक्यं न भवति यस्मात् पञ्चज्यया रविग्रहणे, तस्माद्यथा तदेक्यं प्रवक्ष्यामि तिथ्यन्ते” इत्याचार्योक्तव्याख्यायां चतुर्वेदाचार्यः—

“पञ्चज्यया पञ्चज्याविधानेन रविग्रहणं यदाचार्यैरूपनिबद्धं तद्यथा । उदयज्या, शङ्कुज्या, मध्यज्या, दृग्गतिज्या, हृक्षेपज्या च । एताभिरार्यभटादि-भिस्तथा पौलिशतन्त्रे पञ्चज्याश्चन्द्रमसः स्वदिनगतशेषचरदलक्रान्त्यादिभिः

कल्पिताः । एवं तत्र दशज्याविधानेन रविग्रहणं यदुपनिबद्धं तादृशममान्ते भवति ।
ये च तत्र दोषाः स्तानाचार्य एव वक्ष्यति तन्त्रपरीक्षाध्याये वयमपि तत्रैव व्याख्या-
स्यामः ।' तन्त्र परीक्षाध्याये च

“पञ्चज्याया यतोऽर्कग्रहणं श्रोषेणविष्णुचन्द्रकृतम् ।

आर्यभटोक्तान्यनयोरर्कग्रहणानि ततः ॥

एवं विचार्यमाणे पञ्चज्यालम्बनं महास्थूलम् ।

स्थूलाऽवनतिश्च तथा दशज्याया लम्बनावनती ॥

इत्यादिनोक्तं विचार्य ‘न स्फुटं भवति पञ्चजीवयेति’ श्रीपतिनोक्तम् । सूर्य-
सिद्धान्ते, शिष्यधीवृद्धिदे लल्लाचार्येण च पूर्वोक्तपञ्चजीवयैव रविग्रहणानयन-
मुक्तं तत् सदोषं ज्ञात्वा श्रीपतिनाऽऽचार्यं (ब्रह्मगुप्त) कथितमार्गं एवावलम्बित
इति ॥२५॥

अब विशेष कहते हैं

हि. भा.— ग्रन्थ जो शेष (स्थित्यर्थादि साधन) रह गया है वह पूर्ववत् (चन्द्र-
ग्रहणोक्त साधन की तरह) होता है, ब्रह्म (आचार्य) कथित स्पष्ट रवि, स्पष्टचन्द्र और
स्पष्ट पात से ग्रहण स्पष्ट (दृष्टियोग्य) होता है, आर्यभटादि आचार्यों से जो कथित है
उससे दृष्टियोग्य नहीं होता है, क्योंकि वे (आर्यभटादिकथित स्पष्टरवि, स्पष्टचन्द्र और
स्पष्ट पात) अस्फुट हैं इसलिये तत्कथित ग्रहण प्रस्पष्ट (दृष्टियोग्य नहीं) है इति सिद्धान्त-
शेखर में ‘न स्फुटं भवति पञ्चजीवया’ इत्यादि संस्कृतोपपत्ति में लिखित श्लोक से, सूचित
होता है कि श्रीपति ने सूर्यग्रहणाध्याय में आचार्यों के क अतुर ही कहा है । “दृग्गणितं न
भवति” इत्यादि संस्कृतोपपत्ति में लिखित आचार्यों के पक्ष की व्याख्या चतुर्विंशोऽचार्य इस तरह
कहते हैं । पञ्चज्याविधान से सूर्यग्रहण जो आचार्य से कथित है वह यह है ‘उदयज्या,
मध्यज्या, शङ्कुज्या, दृग्गतिज्या, दृक्क्षेपज्या इन से आर्यभटादि आचार्यों द्वारा तथा पौलिश-
तन्त्र में चन्द्रमा की पञ्चज्या स्वदिनगत-शेष, वरसङ्घ, क्षान्ति आदियों से कल्पित है ।
इस तरह उस में दशज्या विधान से रविग्रहण साधन जो कहा गया है वह अमान्त में होता
है, उसमें जो दोष है उनको तन्त्रपरीक्षा अध्याय में आचार्य कहेंगे मैं भी वहीं व्याख्या
करूंगा । तन्त्रपरीक्षा अध्याय में “पञ्चज्याया यतोऽर्कग्रहणं” इत्यादि संस्कृतोपपत्ति में लिखित
श्लोकोक्त को विचार कर ‘न स्फुटं भवति पञ्चजीवया’ यह श्रीपति ने कहा है । सूर्यसिद्धान्त
में, शिष्यधीवृद्धि में लल्लाचार्य ने पूर्वोक्त पञ्चज्या ही से सूर्यग्रहण साधन कहा है,
उसको दोषावह समझकर श्रीपति ने आचार्य (ब्रह्मगुप्त) कथित मार्ग ही का अवलम्बन
किया है ॥२५॥

इदानीं ग्रहणो वर्णमाह

मङ्गुलमात्रे विरते रक्तः शशिमण्डले भवेद्वर्णः ।

भानोस्तु पुनः कृष्णे वर्णः सर्वत्र निर्दिष्टः ॥२६॥

सु. भा.—शशिमण्डले चन्द्रबिम्बेऽङ्गुलमात्रे विरते विरामतां गते भानोर्वर्णो रक्तो भवेत् । अर्थाद्रविग्रहणे चन्द्रबिम्बस्य छादकत्वादङ्गुलमात्रेऽपि विरते यत्र ग्रासाभावोऽर्थाच्चन्द्रबिम्बमवशिष्टं तद्रक्तमेव भवति । अवशिष्टमङ्गुलमात्रं वा यथेच्छं ततोऽप्यल्पं भवेत् । अन्यत्र सर्वत्र तु पुनः कृष्णवर्णो गणकैर्निर्दिष्टः कथितः अर्थाद् ग्रस्तं रविबिम्बमङ्गुलाल्पं वा यथेच्छं ततोऽप्यधिकं सर्वदा कृष्णमेव भवतीत्यर्थः ॥२६॥

वि. भा.—शशिमण्डले (चन्द्रबिम्बे) ऽङ्गुलमात्रे विरामतां प्राप्ते भानोः (सूर्यस्थ) वर्णो रक्तो भवति, अर्थात् सूर्यग्रहणे चन्द्रबिम्बस्य छादकत्वादङ्गुलमात्रेऽपि विरते यत्र ग्रासाभावोऽर्थात्सूर्यबिम्बमवशिष्टं तद्रक्तमेव भवति । अवशिष्टमङ्गुलमात्रं वा यथेच्छं ततोऽप्यल्पं भवेत् । अन्यत्र सर्वत्र पुनः कृष्णो वर्णो गणकैः कथितः । अर्थाद् ग्रस्तं रविबिम्बमङ्गुलाल्पं वा यथेच्छं ततोऽप्यधिकं सर्वदा कृष्णमेव भवतीति ।

अब ग्रहण में वर्ण को कहते हैं

हि. भा.—एक मङ्गुल मात्र में सूर्यग्रहण में सूर्य बिम्ब में चन्द्र बिम्ब विरामता को प्राप्त करे अर्थात् स्थिर हो तब सूर्य का वर्ण रक्त (लाल) होता है, अन्यत्र सब जगह कृष्ण वर्ण होता है अर्थात् ग्रस्त (चन्द्र बिम्ब से ढका हुआ रवि बिम्ब) रवि बिम्ब एक मङ्गुल से अल्प का अधिक हो तो सदा उनका (सूर्य का) वर्ण कृष्ण ही होता है इति ॥२६॥

इदानीं सूर्यग्रहणाधिकारोपसंहारमाह

दृष्टग्रासविमर्दस्थित्यर्धावनतिलम्बनाद्येषु ।

आर्याषड्विंशत्याऽर्कग्रहणं पञ्चमोऽध्यायः ॥२७॥

सु. भा.—स्पष्टार्थम् ॥२७॥

मधुसूदनसूतनोदितो यस्तिलकः श्रीपृथुनेह जिष्णुजोक्ते । हृदि तं विनिधाय नूतनोऽयं रचितः सूर्ययुतौ सुधाकरेण ।

इति श्रीकृपालुदत्तसूनुसुधाकरद्विवेदिविरचिते ब्राह्मस्फुटसिद्धान्तनूतन-
तिलके सूर्यग्रहणाधिकारः पञ्चमः ॥१॥

वि. भा.—दृष्टग्रास-विमर्द-स्थित्यर्ध-स्पष्टनतिलम्बनाद्येषु विषयेषु...

षड्विंशतिप्रमिताऽऽश्लोकेन सूर्यग्रहणनामकः पञ्चमोऽध्यायः समाप्त इति ॥२७॥

इति ब्रह्मगुप्तविरचिते ब्राह्मस्फुटसिद्धान्ते सूर्यग्रहणाधिकारः पञ्चमः ॥५॥

अब सूर्यग्रहणाधिकार के उपसंहार को कहते हैं

हि. भा.—इष्टग्रास-विमर्दाघं-स्थित्यर्धं-स्पष्टनति स्पष्टलम्बनादियों में छब्बीस आया छन्द के श्लोकों से सूर्यग्रहण नामक पांचवा अध्याय समाप्त हुआ इति ॥२७॥

इति ब्रह्मगुप्तविरचित ब्राह्मस्फुटसिद्धान्त सूर्यग्रहणाधिकार समाप्त हुआ ॥५॥

ब्राह्मस्फुटसिद्धान्तः

उदयास्ताधिकारः

ब्राह्मस्फुटसिद्धान्तः

उदयास्ताधिकारः

अथोदयास्ताधिकारः प्रारम्भ्यते । तत्रादौ तदारम्भप्रयोजनमाह

ग्रहभास्कुरान्तरैः प्राक् पश्चाद्वर्कग्रहान्तरैर्यस्मात् ।

स्वांशोऽहंश्याहस्यास्तस्माद्वक्ष्ये तदानयनम् ॥१॥

सु. भा.—प्राक् पूर्वक्षितिजे ग्रहभास्कुरान्तरैः स्वांशैः स्वकालांशैः पश्चात् पश्चिमक्षितिजेऽर्कग्रहान्तरैः स्वकालांशैर्यतो यथासंख्यं ग्रहा दृश्यादृश्या भवन्ति । तस्मात् तदानयनं ग्रहाकर्कान्तरानयनं वक्ष्येहमिति । अर्थात् प्राक्-क्षितिजे यस्मिन् दिने ग्रहोदयादनन्तरं कालांशघटीभी रवेरुदयस्तस्मिन् दिने ग्रहो रात्रिशेषे दृश्यो भवति । एवं यस्मिन् दिने पश्चिमक्षितिजे रव्यस्तानन्तरं कालांश-घटीभिर्ग्रहस्यास्तमयस्तस्मिन् दिने सायंकाले ग्रहस्यादृश्यत्वम् । अत उदयास्तज्ञानं ग्रहाकर्कान्तरघटिकाधीनं तदानयनायायमध्यायोऽवश्यमारम्भणीय इति ॥१॥

वि. भा.—यस्मात् कारणात् प्राक् (पूर्वक्षितिजे) ग्रहभास्कुरान्तरैः (ग्रहसूर्यान्तरैः) स्वांशैः (स्वकालांशैः) पश्चात् (पश्चिमक्षितिजे) अर्कग्रहान्तरैः स्वकालांशैर्यथासंख्यं ग्रहा दृश्यादृश्या भवन्ति, एतदुक्तं भवति पूर्वक्षितिजे यस्मिन् दिने ग्रहोदयानन्तरं कालांशघटीभी रवेरुदयस्तस्मिन् दिने ग्रहो रात्रिशेषे दृश्यो भवति, एवं यस्मिन् दिने पश्चिमक्षितिजे सूर्यास्तानन्तरं कालांशघटी-भिर्ग्रहस्यास्तमयस्तस्मिन् दिने सायंकाले ग्रहोऽदृश्यो भवति, तस्मात् कारणा-दुदयास्तज्ञानस्य ग्रहरव्यन्तरघटिकाधीनत्वात्तदानयनं (ग्रहरव्यन्तरसाधनं) वक्ष्येऽहमिति सिद्धान्तशेखरे श्रीपतिना “प्राक् खेचार्कविवरप्रभवैर्यतोऽर्कैः पश्चात् सहस्रकिरणद्युचरान्तरस्यैः । तिग्मांशुसन्निधिवशात् स्थिरदृश्यदृश्यास्तस्माद् ब्रवीम्यथ तदानयनं स्फुटार्थम्” ऽऽचार्योक्तानुरूपमेवोक्तमिति ॥१॥

अब उदयास्ताधिकार प्रारम्भ किया जाता है, पहले प्रारम्भ करने के प्रयोजन को कहते हैं

हि. भा.—जिस कारण से पूर्वक्षितिज में ग्रह और रवि का अन्तर रूप स्वकालांश करके ग्रह दृश्य होते हैं, पश्चिम क्षितिज में रवि और ग्रह का अन्तररूप स्वकालांश करके

ग्रह ग्रहस्थ हैं, अर्थात् पूर्वक्षितिज में जिस ग्रहोदय के बाद कालांश घटीतुल्यकाल में रवि का उदय होता है उस दिन ग्रह रात्रिशेष में दृश्य होते हैं । इसी तरह जिस दिन पश्चिम क्षितिज में सूर्यास्त के बाद कालांशघटीमित काल में ग्रह अस्त होते हैं उस दिन सायंकाल में ग्रह ग्रहस्थ होते हैं, उस कारण से उदय और अस्त का ज्ञान ग्रहार्कान्तरघटी के प्रचीन होने के कारण उसके आनयन (ग्रह और रवि के अन्तर) को भी कहता है इति ॥१॥

इदानीं सूर्यसान्निध्यवशेन ग्रहाणां दृश्यादृश्यत्वमाह

प्रागूनभुक्तिरूनो दृश्योऽदृश्योऽन्यथा रवितः ।

दृश्योऽधिकगतिरधिकोऽदृश्यः पश्चाद् ग्रहोऽल्पगतिः ॥२॥

सु. भा.—रवित ऊनो रवेरूनभुक्तिर्ग्रहो प्राक् प्राच्यां दिशि रात्रिशेषे रवितः कालांशान्तरितो दृश्यो भवति । अन्यथा रवेरधिकगतिर्ग्रहो रवित ऊनः प्राच्यां दिशि रात्रिशेषे रवितः कालांशान्तरितोऽदृश्यो भवति । एवमधिकगतिर्ग्रहो रवितोऽधिकः कालांशान्तरितः पश्चात् पश्चिमायां दिशि दृश्यो भवति । अल्पगतिश्च रवितोऽधिकः कालांशान्तरितस्तत्रैवादृश्यो भवति ।

ग्रन्थोपपत्तिः । 'रवेरूनभुक्तिर्ग्रहः प्रागुदेतीत्यादिभास्करविधिना स्फुटा (ग्र. ग. उ. अ. ४) ॥

वि. भा.—रवित ऊनः (अल्पः) ऊनभुक्ति (स्वल्पगति) ग्रहः प्राक् (पूर्वस्यां) दिशि दृश्यो भवति, अन्यथा (रवेरधिकगतिर्ग्रहो न्यूनश्च) प्राक् दिश्यदृश्यो भवति । एवं रवितोऽधिकगतिरधिकश्च ग्रहः पश्चात् (पश्चिमायां दिशि) दृश्यो भवति अल्पगतिश्च ग्रहो रवितोऽधिकः पश्चाद्दृश्यो भवतीति ॥२॥

ग्रन्थोपपत्तिः

रवितोऽल्पगतिक ग्रहा सूर्यसान्निध्यवशेनादृश्यबिम्बका यदा सूर्येण याम्यं प्राप्तास्तदा स परमास्तकालः । ततोऽनन्तरं रविः क्षीघ्रगतित्वादग्रतो गच्छन् पूर्वक्षितिजे ग्रहोदयानन्तरमुत्तरोत्तरवृद्ध्या समागच्छति, ग्रहाणामेतेषां प्रथम-दर्शनरूप उदयो रात्रिशेषे भवेदिति पूर्वस्यां दिश्युदयः । ततोऽन्तरवृद्ध्यां पश्चाद् भागे रवो समागते एषां पश्चिमदिशि दर्शनं तत्रैव निश्चितकालांशतुल्येऽन्तरेऽवशिष्टेऽदर्शनमिति पश्चिमायामस्तत्वम् । रवितोऽधिकगतीनां ग्रहाणां परमास्त-समयादग्रतो गमनात् सूर्यास्तानन्तरं दर्शनसम्भवात् पश्चिमोदयः । परावर्त्य रवितः पश्चाद्भागे समायातेषु रात्रिशेषे तेषां दर्शनात् तत्रैव कालांशतुल्येऽन्तरेऽस्तसम्भावनातः पूर्वास्तगामित्वम् । अक्रगयोर्बुधशुक्रयो रवेरल्पगतित्वात्तयोः पूर्व-

यत्र सूर्यसन्नधिष्य वश से ग्रहों के दृश्यत्व और ग्रहदृश्यत्व को कहते हैं

हि. भा.—रवि से अल्प और अल्पगतिग्रह पूर्वदिशा में दृश्य होते हैं । अन्यथा (रवि से अधिक गतिग्रह और न्यून) पूर्वदिशा में ग्रहदृश्य होते हैं । एवं रवि से अधिक गतिग्रह और अधिक पश्चिम दिशा में दृश्य होते हैं । अल्पगतिग्रह और रवि से अधिक पश्चिम दिशा में ग्रहदृश्य होते हैं इति ॥२॥

उपपत्ति

रवि से अल्पगतिकग्रह सूर्यसन्नधिष्य (समीपता) वश से जिनके बिम्ब ग्रहदृश्य हैं वे जब सूर्य के साथ तुल्यता को प्राप्त होते हैं तब परमास्तकाल होता है । उसके बाद रवि श्रीघ्रगति होने के कारण आगे जाते हुए पूर्व श्रितित्र में ग्रहोदय के बाद धीरे-धीरे प्राता है । इन ग्रहों का प्रथमदर्शन रूप उदय रात्रिशेष में होता है अतः पूर्वदिशा में उदय होता है, बाद में अन्तर वृद्धि से इन ग्रहों के पश्चाद् भाग में रवि के आने से पश्चिम दिशा में इन ग्रहों का दर्शन होता है, वहीं पर निश्चित कालांश तुल्य अन्तर में अदर्शन (नहीं देखना) होता है, अतः पश्चिम दिशा में अस्तत्व होता है, रवि से अधिक गति ग्रहों के परमास्त समय से आगे जाने से सूर्यास्त के बाद दर्शन सम्भव से पश्चिम दिशा में उदय होता है, लौटकर रवि से पश्चाद् भाग में आने पर उसके रात्रि शेष में दर्शन से वहीं पर कालांश तुल्य अन्तर में अस्तसम्भावना से पूर्वदिशा में अस्तवामित्व होता है । वक्रगति बुध और शुक्र के रवि से अल्पगतित्व के कारण पूर्वदिशा में उदय होता है, और पश्चिम दिशा में अस्त होता है, इसलिये ऋजु (मार्गी) बुध और शुक्र पश्चिम दिशा में उदित होकर वहीं वक्रगति से अस्तत्व प्राप्त होते हैं । रवि से आगे वा पीछे मन्दफल और श्रीघ्रफल के योग से अधिक चलना नहीं हो सकता है इसलिये उदयकाल और अस्तकाल के अन्तर में वक्रता से इन दोनों (बुध और शुक्र) का रवि से अल्पगतित्व और अधिक गतित्व होता है, इसलिये पूर्वदिशा में और पश्चिमदिशा में (दोनों में) इन दोनों का उदय और अस्त होता है । सिद्धान्तशेखर में “ऊनो ह्यूनगतिः सहस्रकिरणाद् दृश्यो भवेत् प्राग्ग्रहः” इत्यादि

संस्कृतोपपत्ति में लिखित पद्यों से श्रीपति आचार्योंकानुरूप ही कहते हैं । सिद्धान्त-शिरोमणि में “रवेरुनभुक्तिग्रहः प्रागुदेति” इत्यादि से भास्कराचार्य ने भी इन्हीं बातों को कहा है इति ॥२॥

अब ग्रहबिम्बोदयास्तलग्नसाधन के लिये आयनद्वकर्म साधन को कहते हैं

हि. भा.— शर और सन्निभ ग्रह क्रान्ति के घात को त्रिज्या से भाग देने से जो फल
हो उसको कला को शर और सन्निभ ग्रह क्रान्ति के एक दिशा रहने से ग्रह में घटा देना
भिन्न दिशा रहने से ग्रह में जोड़ना चाहिये इति ॥३॥

उपपत्ति

ग्रहबिम्बकेन्द्रीपरिवत्कदम्बप्रोतवृत्त क्रान्तिवृत्त में जहाँ सयता है वह ग्रहस्थान

है, स्थान से बिम्बकेन्द्र तक ग्रह का मध्यमशर है स्थानोपरिगत तथा बिम्बोपरिगत ध्रुव-प्रोतवृत्त करना, स्थानीयाहोरात्रवृत्त और बिम्बीयाहोरात्रवृत्त कर देना, तब स्थानोपरिगत ध्रुवप्रोतवृत्त और स्थानोपरिगत कदम्बप्रोतवृत्त के अन्तर्गत बिम्बीयाहोरात्रवृत्तीय चाप आयन दृक्कर्मासु है अथवा स्थानोपरिगत ध्रुवप्रोतवृत्त तथा बिम्बोपरिगत ध्रुवप्रोतवृत्त के अन्तर्गत नाडीवृत्तीय चाप आयन दृक्कर्मासु है, स्थानगत कदम्बप्रोतवृत्त और ध्रुवप्रोतवृत्त से उत्पन्न कोण स्थानीय आयनवलन है, शुज्याश्रीय आयनवला सत्रिभग्रह की क्रान्ति के बराबर होता है, तब ग्रह का मध्यमशर एकभुज, बिम्बकेन्द्र से स्थानगत ध्रुवप्रोतवृत्त के ऊपर लम्बवृत्तीय चाप द्वितीय भुज, स्थानगत ध्रुवप्रोतवृत्त में तृतीय भुज, इन तीनों भुजों से उत्पन्न चापीयजात्यत्रिभुज में कोणानुपात करते हैं यदि त्रिज्या में मध्यमशरज्या पाते हैं तो आयन वलनज्या में क्या इससे लम्बवृत्तीय चापज्या आती है, $\frac{\text{मशरज्या. आयनवज्या}}{\text{त्रि}} = \text{लंबुचापज्या}$ परन्तु लम्बवृत्तीय चाप-

ज्या और बिम्बीयाहोरात्रवृत्तीयायनदृक्कर्मासुज्या बराबर है इसलिये $\frac{\text{मशरज्या. आयनवज्या}}{\text{त्रि}}$

$= \text{आयनदृक्कर्मासुज्या} = \frac{\text{मशरज्या. सत्रिभग्रक्रांज्या}}{\text{त्रि.}}$ ज्या और चाप का अभेदत्व स्वीकार करने

से $\frac{\text{मशर. सत्रिभग्रक्रान्ति}}{\text{त्रि}}$ आयनदृक्कर्मासु, यहाँ आचार्य ने स्वल्पान्तर से त्रि = स्थानीय शुज्या

स्वीकार किया है। इसके वश से आयन दृक्कर्मांकलानयन करते हैं $\frac{१८०० \times \text{आयनदृक्कर्मासु}}{\text{ग्रहाक्रान्ति राशि के निरक्षोदयसु}}$

= आयनदृक्कर्मांकला बिम्बीय शुज्या वश से आयन दृक्कर्मानयन समीचीन हो सकता है, लेकिन बिम्बीय शुज्या विदित नहीं है, स्थानीय शुज्या वश ही से आचार्य ने आनयन किया है तथा शुज्या को त्रिज्या के बराबर मान लिया है इसलिये यह आनयन ठीक नहीं है। सिद्धान्त-शिरोमणि में “आयनं वलनमस्फुटेषुणा सङ्गुणैः” इत्यादि संस्कृतोपपत्ति में लिखित श्लोक से आयन दृक्कर्मानयन किया है, लेकिन भास्कराचार्य ने भी त्रिज्या तुल्य ही शुज्या स्वीकार की है, सिद्धान्तशेखर में “शिक्षे सत्रिभग्रहोत्क्रपजाऽत्रमज्या” इत्यादि संस्कृतोपपत्ति में लिखित श्लोक से श्रीपति ने ललाचार्योक्त सत्रिभग्रह की उत्क्रमज्या से साधित क्रान्तिज्या तुल्य आयनवलज्या से आयनदृक्कर्मानयन किया है। श्रीपति ने बहुत स्थानों में आचार्य (ब्रह्मगुप्त) मत का अनुसरण करते हुये भी किसी-किसी स्थल में आचार्यमत के विरुद्ध लल्लोक्त को भी स्वीकार किया है, सत्रिभग्रह क्रान्तिज्या और शुज्याश्रीयायनवलज्या बराबर होती हैं। सत्रिभग्रहोत्क्रमज्या साधित क्रान्तिज्या, आयनवलनज्या के तुल्य नहीं होती है- इसलिये ललाचार्योक्त और श्रीपत्युक्त आयन दृक्कर्मानयन ठीक नहीं है, सूर्यसिद्धान्त में “सत्रिभ-ग्रहजक्रान्तिभागज्जा क्षेपलिसिका” इत्यादि से आयन दृक्कर्मानयन, ललाचार्य और श्रीपति से साधित आयन दृक्कर्मां से किञ्चित् सूक्ष्म है, लेकिन किसी भी आचार्य का दृक्कर्मानयन ठीक नहीं है इति-॥१॥

एतेन 'स्पष्टेष्टुरक्षवलेन हनो विभक्तो लम्बाज्यया रविहृतोऽक्षभया हतो वेति' सिद्धान्तशिरोमणी भास्करोक्तमुपपद्यते । सिद्धान्तशेखरे "क्षुण्णे क्षेपेऽक्षज्यया लम्ब-भक्तेऽक्षच्छायाग्रे भानुभक्तेऽथवाऽत्रेति" श्रोतव्युक्तमिदमाचार्योक्तानुरूपमेव; "सूर्य-सिद्धान्तेऽपि 'विषुवच्छायायाम्यस्ताद्विक्षेपादित्यादिना' तदानयनं कृतमस्ति, परं केषामपि तदानयनं समोचीनं नास्तीति तदुपपत्तिदर्शनेनाऽक्षजदृक्कर्मगौलिक-स्वरूपदर्शनेन च स्फुटमिति । अथ तैः शरे तु याम्योत्तरे क्रमविलोमविधानलग्न-मित्यादि भास्करोक्तेन—उत्तरे शरेऽक्षजदृक्कर्मकलाभिरूनौ दक्षिणे शरे युतः कृतायनफलः खेट उदयलग्नं भवति । अस्तलग्नसाधने तु सौम्ये शरेऽक्षजदृक्कर्म-कलासहितो याम्ये रहितः सषड्भः कृतायनफलः खेटो ग्रहे पश्चिमक्षितिजेऽस्तंगते प्राक्क्षितिजे यस्तलग्नं तदस्तलग्नं भास्करमते । अत्राचार्येण तस्मात् षड्राशि विशोध्य पश्चिमक्षितिजे ग्रहेऽस्तंगते यदस्तलग्नं तदेव ग्रहास्तलग्नं कल्पितमिति ॥४॥

अब अक्षज दृक्कर्मनियन को कहते हैं

हि. भा.—शर को पलभा से गुणा कर द्वादश (१२) से भाग देने से जो फल होता है उससे जो कलात्मक फल होता है उत्तर शर में उदयलग्न साधन में उस फल को (१) ऋण करना तथा अस्तलग्न साधन में घन करना, दक्षिण शर रहने से उस फल को क्रम से पूर्व-साधित आयन दृक्कर्म संस्कृत ग्रह में घन और ऋण करने से उदयलग्न और अस्त लग्न होता है । (१) पूर्व साधित आयन दृक्कर्म संस्कृतग्रह में इति ॥४॥

उपपत्ति

जब ग्रहस्थान क्षितिज में रहता है तब ग्रहबिम्ब केन्द्र क्षितिज से नीचा या ऊपर रहता है, स्थानोपरिगतध्रुवप्रोतवृत्त तथा बिम्बकेन्द्रोपरिगतध्रुवप्रोतवृत्त करने से दोनों के अन्तर्गत बिम्बीयाहोरात्र वृत्तीय चाप आसद्वर्कर्म संज्ञक है। स्थान से बिम्बीयाहोरात्र-वृत्तपर्यन्त स्थानगत ध्रुवप्रोतवृत्त में स्पष्टशर एक भुज, बिम्बीयाहोरात्रवृत्त और क्षितिज-वृत्त के सम्पात से स्थान पर्यन्त क्षितिज वृत्त में द्वितीय भुज। बिम्बीयाहोरात्रवृत्त और क्षितिज वृत्त के सम्पात से स्थानगत ध्रुवप्रोतवृत्त के ऊपर लम्बवृत्त में तृतीय भुज, इस त्रिभुज को आचार्य ने सरल जात्य मान लिया है, उक्त त्रिभुज में स्थान लग्न कोण अक्षांश या तत्तुल्य आक्षवलन है, 'क्षितिजेऽक्षज्यया तुल्यमक्षजं वलनं' इस उक्ति से एक कोण समकोण है अतः अवशिष्ट तृतीय कोण लम्बांश के बराबर हुआ। अब अनुपात करते हैं यदि लम्बज्या में स्पष्ट शरज्या पाते हैं तो अक्षज्या में क्या इससे लम्बवृत्तीय चापज्या वा बिम्बीयाहोरात्र-वृत्तीय चापज्या आती है $\frac{\text{स्पशज्या. अक्षज्या (क)}}{\text{लंज्या}} \text{ परन्तु } \frac{\text{अज्या}}{\text{लंज्या}} = \frac{\text{पभा}}{२२} \text{ अतः } \frac{\text{स्पशज्या. पभा}}{१२}$

= लम्बवृत्तचापज्या = बिम्बीयाहोरात्रवृत्तचापज्या, यहां स्वल्पान्तर से स्पशरज्या = स्पशर =

मशर तथा पूर्वागत फल के चाप करने से $\frac{\text{शर. पभा}}{१२}$ बिम्बीयाहोरात्र वृत्ता, लेकिन यह आक्ष-

द्वर्कर्म के बराबर नहीं है। इसलिए आचार्योक्त यह आनयन अत्यन्त स्थूल है। (क) इस स्वरूप में क्षितिज में ग्रहस्थान स्थित रहने से अक्षज्या = आक्षवलनज्या = आक्षवलन स्वल्पा-

न्तर से $\frac{\text{स्पशर. आक्षवलन}}{\text{लंज्या}} = \frac{\text{स्पशर. पभा}}{१२} = \text{आसद्वर्कर्म}$, इससे 'स्पष्टेषुरक्षवलनेन हतो

विभक्तः" इत्यादि सिद्धांत शिरोमणिस्थ भास्करोक्त उपपन्न होता है। सिद्धांत शेषर में "क्षुण्णे क्षेपेऽक्षज्यया लम्बभक्ते" इत्यादि से श्रीपति ने आचार्योक्तानुरूप ही कहा है। सूर्य सिद्धांत में भी "विषुवच्छायायाम्यस्ताद्विक्षेपात्" इत्यादि से आस द्वाकर्मानयन किया गया है लेकिन किसी का आनयन ठीक नहीं है यह उपपत्ति देखने से तथा अक्षज द्वाकर्मा का प्रदेश देखने से स्पष्ट है, 'अथ तैः शरे तु याम्योत्तरे क्रमविलोमविधानलग्नं' इत्यादि भास्करोक्ति से उत्तरशर में ग्रहनद्वर्कर्मसंस्कृत ग्रह में अक्षज द्वाकर्मा कला को घटाने से दक्षिण शर रहने से अक्षजद्वर्कर्म कला को आयन द्वाकर्मा संस्कृत ग्रह में जोड़ने से उदयलग्न होता है, अस्तलग्न साधन में उत्तरशर रहने से छः राशि सहित आयन द्वाकर्मा संस्कृत ग्रह में अक्षजद्वर्कर्म कला को जोड़ने से तथा दक्षिणशर रहने से घटाने से पश्चिम क्षितिज में ग्रह के अस्तगत रहने से पूर्वक्षितिज में जो लग्न होता है वह भास्कराचार्य संमत अस्तलग्न होता है, यहां आचार्य ने उस में से छः राशि को घटाकर पश्चिम क्षितिज में ग्रह के अस्तगत रहने से जो अस्तलग्न होता है उसी को ग्रहास्त लग्न स्वीकार किया है इति ॥ ४ ॥

इदानीं ग्रहाकर्न्तरघटद्यानयनमाह ।

प्रागूनमाद्यमधिकं पश्चात्लग्नाद्ग्रहोदयोऽस्तमयः ।

षड्भयुतमन्यदुदयैर्घटिकाः कृत्वोनमधिकसमम् ॥५॥

ग्रहोदयो गत एष्यो वेति विचार्यमाणे पठितकालांशेष्टकालांशयोरन्तरं कार्यं ततोऽनुपातो यदि ग्रहरविगत्यन्तरकलायामेकं दिनं लभ्यते तदा कालांशान्तरकलायां किमित्यनेन समागतदिनैः पठितकालांशेभ्य इष्टकालांशस्याधिकत्वे उदयो गतोऽन्यथा भावी भवति, अस्तविचारे तु पूर्ववदनुपातेन यानि दिनान्यागच्छेयुस्तैः पठितकालांशेभ्य इष्टकालांशस्याल्पत्वेऽस्तो गतोऽन्यथा भावी भवतीति । सिद्धान्तशेखरे श्रीपतिनो "उक्तोनाधिककालभागविवरं राशेः कलाभिः १८०० हतं भक्तं प्राचि निजोदयेन वरुणाशायां तदस्तेन च । षष्टिघ्नं ग्रहसूर्यभुक्तिविवरेणाप्तं ग्रहे वक्रिते भुक्त्यैवयेन दिनानि तैरथ मुहुः साध्योग्रहास्तोदयः ॥" उदयास्तयोर्दिनानयनं कथितम् । सिद्धान्त शिरोमणौ—

उक्तेभ्य ऊनाभ्यधिका यदीष्टाः खेटोदयो गम्यगतस्तदा स्यात् ।

अतोऽन्यथा वास्तमयोऽवगम्यः प्रोक्तेष्टकालांश वियोग लिप्ताः ॥

खाभ्राष्टभूधना झुचरोदयाप्ताः खेटार्कभुक्त्यन्तरभाजिताश्च ।

वक्रेतु भुक्त्यैकहता अवाप्तास्तदन्तराखे दिवसा गतैष्याः ॥

“तात्कालिकाभ्यां* रविदृग्ग्रहाभ्यां मुहुः कृतास्ते स्फुटतां प्रयान्ति” इति भास्करोक्तं श्रीपत्युक्तघनुरूपमेवेति, तथोदयास्तदिनादेर्गतैष्यता प्रतिपादनं सिद्धान्तशेखरे “कथितसमयांशेभ्योऽभीष्टा भवन्ति यदाधिका विगत उदयो भावी चास्तस्तथाऽपरथाऽल्पकैः । उदयति सितो वक्रं यातश्चतुर्भिरहांशकैः समयजनि-तैरेवं केचिद् वदन्त्यपरे त्रिभिः” चैवमस्ति, वक्रो शुक्रश्चतुर्भिः कालांशैरुदयतीति केचिद्वदन्ति, अपरे त्रिभिः कालांशैर्वक्रो शुक्र उदयतीति वदन्ति, परमिति केषां केषां मतमिति न ज्ञायते, सूर्यसिद्धान्त-लल्लसिद्धान्तादिषु कालांशा आचार्योक्त सदृशाः श्रीपत्युक्तसदृशा वोक्तास्तदा केचित्, अपरे इत्युक्त्या केषां बोधो भव-तीति ग्रन्थान्तर दर्शनेन स्फुटं भविष्यतीति ॥ ७ ॥

अब उदय और अस्त के गतैष्य दिनानयन को कहते हैं ।

हि. भा. — पठित कालांश और इष्ट कालांश के अन्तर कला को ग्रह और रवि के गत्यन्तर से भाग देना, ग्रह के वक्री रहने से ग्रह और रवि के गतियोग से भाग देना, लब्ध-दिन पठित कालांश से इष्टकालांश अधिक रहे तो उदय में गतदिन और पठित कालांश से इष्टकालांश अल्प रहे तो एष्यदिन समझना चाहिये । अस्तविचार में पठित कालांश से इष्ट-कालांश अल्प रहने से गतदिन और पठित कालांश से इष्टकालांश अधिक रहने से एष्यदिन समझना चाहिये । लब्ध दिनों से तात्कालिक दृग्ग्रह और रवि से पुनः तात्कालिक इष्ट कालांश साधन करना, इन (इष्ट कालांश) से पुनः पूर्ववत् गतैष्य दिनानयन करना, इस तरह असङ्क-त्कर्म करते रहना जबतक कि बिलकुल ठीक न हो जाय इति ॥ ७ ॥

उपपत्ति ।

ग्रह का उदय पहले हो गया है या पीछे होगा इस के लिये पठित कालांश और इष्ट-कालांश का अन्तर करके अनुपात करते हैं यदि ग्रह और रवि की गत्यन्तर कला में एक दिन पाते हैं तो कालांशान्तर कला में क्या इस से जो दिन प्रमाण आता है उतने दिन करके पठित कालांश से इष्ट कालांश के अधिक रहने पर उदयगत होता है अन्यथा भावी होता है, अस्त विचार के लिये पूर्ववत् अनुपात से जो दिन प्रमाण आवें उतने दिनों में पठित कालांश से इष्टकालांश के अल्प रहने पर अस्त गत होता है, अन्यथा एष्य (भावी) होता है । सिद्धान्त शेखर में श्रीपति “उक्तोनाधिककालभागविवरं राशेः कलाभि १८०० हृतं” इत्यादि संस्कृतोपपत्ति में लिखित श्लोक से उदय और अस्त के दिनानयन कहे हैं । सिद्धान्त शिरोमणि में “उक्तैर्म्य ऊनाभ्यधिका यदीष्टाः खेटोदयो गम्यगतस्तदा स्यात्” इत्यादि से भास्कराचार्य ने श्रीपत्युक्त के अनुरूप ही कहा है, उदय दिन तथा अस्तदिन की गतैष्यता का प्रतिपादन सिद्धान्त शेखर में “कथितसमयांशेभ्योऽभीष्टा भवन्ति यदाधिका” इत्यादि इस तरह किया गया है, वक्री शुक्र चार कालांश में उदित होते हैं यह किसी आचार्य का मत है, अपर (दूसरे) आचार्य कहते हैं कि वक्री शुक्र तीन कालांश में उदित होते हैं । लेकिन ये मत किन

आचार्यों का है मालूम नहीं होता है, सूर्यसिद्धान्त-लल्लसिद्धान्त आदि ग्रन्थों में पठित कालांश आचार्यों के या श्रीपत्युक्त कालांश सदृश ही है, तब पूर्वोक्त मतों के लिये ग्रन्थान्तरों को देख कर निर्णय करना चाहिये कि ये मत किन आचार्यों के हैं इति ॥ ७ ॥

इदानीं ग्रहाणां नित्योदयास्तसाधनं चन्द्रोदये च विशेषमाह ।

प्रतिदिनमुदयास्तमयावसकृत् तात्कालिकग्रहविलग्नैः ।

सूर्यास्तमयौदयिकौ शीतांशोः पूर्णिमास्यन्तः ॥ ८ ॥

सु० भा०—तात्कालिकग्रहविलग्नैरसकृत् प्रतिदिनमुदयास्तमयौ साध्यौ अर्थाद्यस्मिन्काले ग्रहोदितघटीज्ञानमपेक्षितं तदा तात्कालिकं लग्नं ग्रहोदयलग्नं च कृत्वा पूर्ववत् तयोरन्तरे घटिकाः प्रसाध्य ताभिर्ग्रहं प्रचाल्य तस्य पुनरुदयलग्नं प्रसाध्य तात्कालिकात् स्थिरलग्नात् पुनरिष्टघटिकाः साध्याः । एवमसकृत् । एवमस्तकालज्ञानार्थमस्तलग्नात् सषड्भात् कर्म कर्त्तव्यम् । एवं पूर्णिमास्यन्तः प्रथमचन्द्रदर्शनदिनात् पूर्णिमापर्यन्तमभीष्टदिने शीतांशोश्चन्द्रस्य सूर्यास्तमयौदयिकौ सूर्यास्ताद्वा सूर्योदयादस्तमयौदयिकौ कालौ साध्यौ अर्थात् सूर्यास्तात् प्राक् पश्चाद्वा कतिघटिकाभिश्चन्द्रोदयोऽस्तो वा सूर्योदयात् प्राक् पश्चात् कतिघटिकाभिश्चन्द्रोदयोऽस्तो वेति सर्वं प्रसाध्यमित्यर्थः ।

अत्रोपपत्तिः । ग्रहाकान्तरकालानयनेन स्फुटा ॥ ८ ॥

वि. भा.—तात्कालिकग्रहविलग्नैः प्रतिदिनसमकृत् उदयास्तमयौ साध्यौ, अर्थाद्यस्मिन् काले ग्रहोदितघटीज्ञानमभीष्टं तदा तात्कालिकलग्नं ग्रहोदयलग्नं च विधाय तयोरन्तर्गतघटिकाः प्रसाध्य ताभिर्ग्रहचालनं कृत्वा तस्य पुनरुदयलग्नं प्रसाध्य तात्कालिकात् स्थिरलग्नात् पुनरिष्टघटयः साध्या एवमसकृत् । एवमस्तकालं ज्ञातुमस्तलग्नात् सषड्भास्तलग्नात्कर्म कर्त्तव्यम् । एवं पूर्णिमास्यन्तः प्रथमचन्द्रदर्शनदिनात् पूर्णिमापर्यन्तमभीष्टदिने शीतांशोः (चन्द्रस्य) सूर्यास्तमयौदयिकौ (सूर्यास्ताद्वा सूर्योदयादस्तमयौदयिकौ कालौ साध्यौ) अर्थात् सूर्यास्तात्पूर्वं पश्चाद्वा कियन्मिताभिर्घटीभिश्चन्द्रोदयोऽस्तो वा सूर्योदयात् पूर्वं पश्चाद्वा कियन्मिताभिर्घटीभिश्चन्द्रोदयोऽस्तो वेति सर्वं संसाध्यमिति ॥ ८ ॥

अत्रोपपत्तिः ।

यदि सषड्भरवितश्चन्द्रोऽल्पोभवेत्तदा प्राक् दिने उदयति, तदधिकश्चेत्तदा सूर्यास्तानन्तरमुदयति तत्र कालज्ञानं “ऊनस्य भोग्योऽधिक भुक्त युक्तो मध्योदयाद्य” इतिवद् भवति, सिद्धान्तशेखरे श्रीपतिना “उदयति सममस्तं गच्छता

प्राक् तदूनस्तदनु तदधिकश्चेदुक्तवत् तत्र कालः” ज्ञेनाऽऽचार्योक्तानुरूपमेवोक्तमिति ॥ ८ ॥

अब गृहों के नित्योदयास्त साधन को तथा चन्द्रोदय के लिये विशेष कहते हैं ।

हि. भा. — तात्कालिक गृह और लग्न से असकृद् कर्म द्वारा प्रतिदिन उदय और अस्त साधन करना अर्थात् जिस समय गृहोदित घटी ज्ञान करना हो उस समय के लग्न (तात्कालिक लग्न) तथा गृहोदय लग्न साधन कर दोनों के अन्तर्गत घटी साधन कर उन (साधित घटी) से गृह को चलाकर उसके फिर उदयलग्न साधन कर तात्कालिक स्थिर लग्न से पुनः इष्टघटी साधन करना, इस तरह असकृद् (बारंवार) करना, एवं अस्तकाल ज्ञान के लिये अस्तलग्न (सषड्भास्त लग्न) से कर्म करना चाहिये । इस तरह प्रथम चन्द्र दर्शन दिन से पूर्णिमा पर्यन्त इष्ट दिन में चन्द्र के सूर्यास्त से वा सूर्योदय से अस्तमय काल और औदयिक काल साधन करना अर्थात् सूर्यास्त पहले वा पीछे कितनी इष्ट घटी में चन्द्रोदय वा चन्द्रास्त होता है वा सूर्योदय से पहले या पीछे कितनी घटी में चन्द्रोदय वा चन्द्रास्त होता है ये सब साधन करना चाहिये इति ॥ ८ ॥

उपपत्ति ।

यदि सषड्भ (छः राशि से सहित) रवि से चन्द्र अल्प हो तब सूर्यास्त से पहले चन्द्र उदित होते हैं । यदि सषड्भ रवि से चन्द्र अधिक हो तब सूर्यास्त के बाद चन्द्र उदित होते हैं वहां कालज्ञान “ऊनस्य भोग्योऽधिकभुक्त्युक्तो मध्योदयाव्यः” इसी के अनुसार होता है, सिद्धान्त शेखर में श्रीपति ने भी “उदयति सममस्तं गच्छता प्राक् तदूनः” इत्यादि से आचार्योक्तानुरूप ही कहा है इति ॥ ८ ॥

इदानीं सूर्यासन्न भावेन चन्द्रोदयास्तज्ञानमाह ।

उदयास्तमयाविन्दोः कालांशैर्कसंमितैः कार्यौ ।

हीनत्वं त्वधिकत्वं तदन्तरे योगकालः स्यात् ॥९॥

सु० भा०—अर्कसंमितैः कालांशैरर्थाद् द्वादशकालांशैरिन्दोश्चन्द्रस्योदयास्तमयो साध्यौ । अत्रपठितकालांशेभ्य इष्टकालांशानां यदि हीनत्वं वाऽधिकत्वं भवेत् तदा तदन्तरे तयोः पठितेष्टकालांशयोरन्तरे योगकालो योगवद्रहयोगवत् कालः स्यादिति सप्तमश्लोकेन स्फुटोऽर्थ इति ॥ ९ ॥

वि. भा.—इन्दोः (चन्द्रस्य) अर्कसंमितैरर्थात् द्वादशतुल्यैः कालांशैरुदयास्तमयो साध्यौ । पठितकालांशेभ्य इष्टकालांशस्य यदि हीनत्वं (अल्पत्वं)

वाऽधिकत्वं भवेत्तदा तदन्तरे (पठितेष्ट कालांशयोरन्तरे) योगकालः (ग्रह योगवत् कालः) स्यादिति ॥ ९ ॥

अत्रोपपत्तिः ।

दृश्यादृश्यैर्युतिवद् ग्रहार्कभुत्तचन्त रैक्यलब्धदिनैरित्यादिना चन्द्रपठित कालां-
शस्येष्टकालांशस्य चान्तरे याः घटिकास्ततो गतैष्यकालज्ञानं सुगममिति ॥ ९ ॥

अब सूर्यासन्न भाव से चन्द्र के उदयास्तज्ञान को कहते हैं ।

हि. भा.—चन्द्र के बारह कालांश से उदय और अस्तमय साधन करना, पठित कालांश इष्ट कालांश की अल्पता में या अधिकता में दोनों के (पठित कालांश और इष्टकालांश) के अन्तर में ग्रहयोग की तरह काल होता है इति ॥ ९ ॥

उपपत्ति ।

‘दृश्यादृश्यैर्युतिवत्’ इत्यादि सप्तम श्लोक से चन्द्र के पठित कालांश और इष्ट कालांश के अन्तर में जो घटी है उससे गत काल और एष्य काल ज्ञान सुगम ही है इति ॥ ९ ॥

इदानीं बुधगुर्वोदयास्तयोर्विशेषमाह ।

उदयास्तविधौ रविवद्बुधशोघ्रादाप्तफलयुतो नो ज्ञः ।

तैक्षण्याद्गुरुर्विहीनस्तत्समलिप्तेन भागेन ॥ १० ॥

सु० भा०—बुधशीघ्राद्बुधशीघ्रोच्चाद्रविवद्यदाप्तं प्राप्तं फलं मन्दफलं भवेत् तेन यथागतेन बुधो युतो वीनः कार्यः । एतादृशोबुध उदयास्तसाधने ग्राह्यः । अत्रैतदुक्तं भवति । बुधशीघ्रं मध्यरवि प्रकल्प्य तस्मान्मन्दफलमानीय तेन संस्कृतो बुध उदयास्तविधौग्राह्यः । एतेन बुधकालांशेषु वैलक्षण्यं सूचितम् । एवं गुरुस्तत्समलिप्तेन मध्यमगुरुस्समं मध्यमरवि प्रकल्प्य यन्मन्दफलं भागात्मकं तत्समकलाभिरूतो भागेनैकेन च विहीन उदयास्तविधौ ग्राह्यः । कस्मात् । तैक्षण्यात् । अर्थाद्गुरुर्विवं विपुलमत एवं कालांशवैलक्षण्यं भवति

अत्रोपलब्धिरेव वासना ॥ १० ॥

वि. भा.—बुधशीघ्रात् (बुधशीघ्रोच्चात्) रविवद्यदाप्तं (प्राप्तं) फलं (मन्द-फलं) भवेत्तेन ज्ञः (बुधः) युतोः कार्यस्तदेतादृशो बुध उदयास्तसाधनोपयुक्तः । अत्रैतदुक्तं भवति, बुधशीघ्रोच्चं मध्यमरवि मत्वा ततो मन्दफलमानीय तत्समकलाभिरूतो बुध उदयास्तोपयुक्त एतावता बुधकालांशे वैलक्षण्यं सूच्यते । एवं गुरुस्तत्सम-

लिप्तेन (मध्यमगुरुसमं मध्यमरविं मत्वांऽशात्मकं मन्दफलं साध्यं तत्सम-
कलाभिः) हीनो भागेनैकेन च विहीन उदयास्तोपयुक्तत्वाय् ब्राह्मः । कथमेवं
भवति तैक्षण्यात् (गुरुबिम्बं विपुलमस्त्यतएव कालांशवैलक्षण्यं भवति) इति
॥ १० ॥

अत्रोपपत्तिः ।

अत्रोपलब्धिरेव वासना नान्यत्कारणं वक्तुं शक्यत आचार्यकथनमेव
प्रमाणमिति ॥ १० ॥

अब बुध और गुरु के उदयास्त के विषय में विशेष कहते हैं ।

हि. भा.—बुध के शीघ्रोच्च से रवि की तरह प्राप्त जो मन्द फल हो उससे बुध को
युत और हीन करना, तब यह बुध उदय और अस्त साधन के लिये उपयुक्त होता है । अर्थात्
बुध शीघ्रोच्च को मध्यम रवि मानकर उससे मन्दफल लाकर बुध में उसको संस्कार करने से
उदयास्तोपयुक्त बुध होते हैं इससे बुध के कालांश में विलक्षणता सूचित होती है, उस तरह
मध्य गुरु के समान मध्यम रवि मानकर अंशात्मक मन्द फल साधन करना । तत्तुल्य कला
को गुरु में हीन तथा एकांश को हीन करना तब इस तरह के गुरु उदय और अस्त के लिये
उपयुक्त होते हैं । ऐसा क्यों होता है ? गुरु का बिम्ब बड़ा है इसलिये कालांश में विलक्षणता
होती है इति ॥ १० ॥

उपपत्ति ।

इस में उपलब्धि ही उपपत्ति है आचार्य कथन ही प्रमाण है दूसरा कारण नहीं कह
सकते हैं इति ॥ १० ॥

इदानीं शुक्रकालांशेषु विशेषमाह ।

मानात्पत्वात् पश्चादुदयोऽस्तमयः सितस्य दशभिः प्राक् ।

पश्चान्मानमहत्वादस्तमयोऽष्टाभिरुदयः प्राक् ॥ ११ ॥

सु० भा०—सितस्य पश्चात् पश्चिमायां दिशि दशभिः कालांशैरुदयः ।
प्रागस्तमयश्च दशभिरेव भवति मानात्पत्वात् । यतस्तदा शुक्लो मार्गो भवति ।
ऋजुगतेरुच्चासनत्वाद्विभं लघु भवति तस्मात् कालांशा अधिकाः पठिताः । एवं तस्य
पश्चादस्तमयः प्रागुदयश्च नीचासन्नत्वाद्वक्रत्वाच्च विवमानं विपुलं भवति तस्मा-
न्मानमहत्त्वादष्टभिरेव न्यूनैः कालांशैर्भवति । भास्करेणाप्याचार्योक्तामीदृशीं
वैलक्षण्यक्रियामवलम्ब्य तारतम्ये न 'ज्ञशुक्रयोर्वैलक्षण्योद्विहीनाः' इत्युक्तम् ।

अत्रोपपत्तिरूपलब्धिरेव ॥ ११ ॥

वि. भा.—सितस्य (शुक्रस्य) पश्चात् (पश्चिमायां दिशि) दशभिः कालांशैरुदयः, प्राक् (पूर्वदिशि) दशभिरेव कालांशैरस्तमयश्च भवति । पूर्वोक्तेभ्यो भिन्नैरंशैः कथं कथ्यत इत्याह । मानात्पत्वात्कारणात् । यतस्तदा शुक्रो मार्गी भवति मार्गगतेरुच्चासन्नत्वाद् बिम्बं लघु भवति तस्मात् कालांश अधिकः पठिताः । तस्य पश्चिमायामस्तमयः पूर्वस्यामुदयश्च नीचासन्नत्वाद् वक्रत्वाच्च बिम्बमानं विपुलं भवति, तस्मान्मानमहत्वाद्दण्डाभिरेव न्यूनैः कालांशैर्भवतीति ॥ ११ ॥

अत्रोपपत्तिः ।

सिद्धान्त शेखरे श्रीपतिना “मानात्पत्वादशभिरुदयं याति शुक्रः प्रतीच्या-मंशैरस्तं दिशि सुरपतेः पीनभावात्तु मूर्त्तः पश्चादस्तं व्रजति वसुभिः प्रागुदेतीत्यनेन” सिद्धान्त शिरोमणी भास्कराचार्येणाप्याचार्योक्तां विलक्षण्यक्रियामवगत्य ‘ज्ञशुक्र-योर्वक्रगयोर्द्विहीनाः’ इत्युक्तम् । अत्र प्राचीनानामुपलब्धिरेवोपपत्तिरिति ॥ ११ ॥

अब शुक्र कालांश में विशेष कहते हैं ।

हि. भा.—शुक्र पश्चिम दिशा में दश कालांश में उदित होते हैं और पूर्व दिशा में दश ही कालांश में अस्त होते हैं । पूर्व कथित कालांश से यहां भिन्न कालांश क्यों कहते हैं इसके लिये आचार्य कहते हैं कि बिम्ब की अल्पता के कारण ऐसा होता है क्यों कि वहां शुक्रमार्गी होते हैं । उच्च के आसन्न में मार्गगति गृह का बिम्ब छोटा होता है इसलिये कालांश अधिक पठित किया गया है । उन (शुक्र) की पश्चिम दिशा में अस्तमय और पूर्वदिशा में उदय भी (नीचासन्न में वक्रता से बिम्बमान बड़ा होता है) इसलिये बिम्ब के बड़ा होने के कारण आठ ही कालांश में होता है इति ॥ ११ ॥

उपपत्ति ।

सिद्धान्त शेखर में श्रीपति “मानात्पत्वादशभिरुदयं” इत्यादि श्लोक से तथा सिद्धान्त शिरोमणि में भास्कराचार्य ने भी आचार्योक्त क्रिया की विलक्षणता को समझ कर ‘ज्ञशुक्र-योर्वक्रगयोर्द्विहीना’ कहा है । इन में प्राचीनों की उपलब्धि ही उपपत्ति है, दूसरा कारण कुछ भी नहीं कह सकते हैं इति ॥ ११ ॥

इदानीमार्थभटदूषणं स्वप्रशंसां चाह ॥

आर्थभटः क्षेत्रांशैर्दृश्यादृश्यान् यदुक्तवांस्तदसत् ।

दृग्गणित विसंवादाद् दृग्गणितैक्यं स्वकालांशैः ॥१२॥

सु० भा०—आर्थभटः कालांशान् विहाय क्षेत्रांशैः क्रान्तिवृत्तीयग्रहाकान्ति-रांशैरेव ग्रहाणां दृश्यादृश्ययोराचार्योक्तादन्यत् साधनं यदुक्तवान् तद्दृग्गणित-विसंवादात् दृग्गणितयोर्विरोधादसत् । स्वकालांशैराचार्योक्तकालांशैश्च दृग्गणि-तैक्यं भवत्यत आचार्योक्तं साधनमेव समीचीनमिति ॥ १२ ॥

तथा चाचार्यार्यभटः ।

चन्द्रोऽशौर्द्वादशभिरविक्षिप्तोऽर्कान्तरस्थितैर्दृश्यः ।

नवभिर्भृगुभृगोस्तैर्द्वयधिकैर्यथा श्लक्ष्णाः ॥

(गोलपा. श्लो० ४)

वि. भा.—आर्यभटः क्षेत्रांशैः (क्रान्तिवृत्तीय ग्रहरव्यन्तरांशैरेव) ग्रहाणां दृश्यादृश्यान् (कालांशान्) विहायदृश्या दृश्ययोराचार्योक्तादन्यत्साधनं यत् उक्तवान्, तद्दृग्गणित विसंवादात् (दृग्गणितयोर्विरोधात्) असत् (शोभनं नास्ति) स्वकालांशैः (आचार्योक्तकालांशैः) दृग्गणितैक्यं भवत्यत आचार्योक्तसाधनमेव युक्तियुक्तमिति ॥ १२ ॥

हि. भा.—आर्य भट, दृश्यादृश्य (कालांश) को छोड़कर गृहों के उदय और अस्त के साधन आचार्योक्त से भिन्न जो कहते हैं सो ठीक नहीं है क्यों कि उनके साधन से दृग्गणित (वेधागत और गणितागत उदय और अस्त) में विरोध होता है, आचार्योक्त कालांशों से दृग्गणितैक्य होता है इसलिये आचार्यो (ब्रह्मगुप्त) क्त साधन ही युक्तियुक्त है इति ॥ १२ ॥

अथ चन्द्रशृङ्गोन्नत्यधिकारः प्रारम्भ्यते ।

तत्रादौ रवेरुपरिचन्द्रोऽस्तीति पुराण मत खण्डनमाह ।

सितवृद्धिहानिवीर्यादि शशाङ्काज्जायते कथं गणितात् ।

उपरि रवेरिन्दुश्चेदवर्गिर्षं सदा शुक्लम् ॥ १ ॥

सु० भा०—चेद्यदि रवेरुपरि इन्दुस्तदा गणिताद्विगतागतात् शशाङ्काच्चन्द्रात् सितवृद्धिहानिवीर्यादि कथं जायते । अर्थाद्गणितविधिना चन्द्रस्य शुक्लोपचयापचयमानं कृष्णाङ्गुलमानं च कथं जायते यतस्तादृशस्थितौ भौमगुरुशनिवत् सदा अवर्गिर्षं पूर्वार्धं नृदृश्यं खण्डं शुक्लं स्यात् परन्तु दृष्ट्या सदा शुक्लं नोपलक्ष्यतेऽतो रवेरुपरि नेन्दुरिति स्फुटम् । तथा रवेरधश्चन्द्रं प्रकल्प्य गणितविधिनाऽऽनीतं शुक्लादिदृष्टियोग्यं भवति तेन रवेरधश्चन्द्र इति स्फुटम् ॥ १ ॥

वि. भा.—चन्द्रस्य सितवृद्धिहानी (स्वच्छतोपचयापचयौ) शापाद् भवत इति पुराणमतमस्ति, यद्येवं तदा गणिताच्छशाङ्कात् (गणितागतचन्द्रात्) सितवृद्धिहानिवीर्यादिज्ञानं कथं जायते, अर्थाद् गणितविधिना चन्द्रस्य शुक्लोपचयापचयादिमानं नावगम्यं स्यात् । चेत् (यदि) रवेरुपरि, इन्दुः (चन्द्रः) तदाऽवर्गिर्षं (अधस्तनमर्धं नृदृश्यं खण्डं) सदा शुक्लं स्यात्, परन्तु दृष्ट्या सर्वदा शुक्लं नोपलक्ष्यतेऽतो रवेरुपरि चन्द्रो नास्ति, यदि च रवेरधश्चन्द्रं स्वीकृत्य गणितविधिना शुक्लादिमानमानीयते तदा तत्सर्वथा दृष्टियोग्यं भवत्यतो रवितश्चन्द्रोऽथ एवातश्चन्द्रशुक्लस्योपचयापचयस्य गणितावगम्यत्वात् सर्वदेव चन्द्रबिम्बपूर्वार्धस्य शुक्लत्वाभावाच्च पुराणोक्तमतद्वयं (शापाच्चन्द्रस्य सितवृद्धिहान्यादि भवति तथा रवित उपरिचन्द्रोऽस्तीति) न युक्तिसङ्गतमिति सिद्धान्तितम् । सिद्धान्तशेखरे श्रीपतिनै “शापाद्यदीन्दोः सितवृद्धिहानी कथं तु जाते गणितावगम्ये । ऊर्ध्वं यदीन्दु रवितस्तदार्धमवर्गितं हन्त सदैव शुक्लम्” वमुक्तमिति ॥ १ ॥

अब चन्द्र शृङ्गोन्नति अधिकार प्रारम्भ किया जाता है, ‘उसमें पहले रवि से ऊपर चन्द्र है’ इस पुराणमत के खण्डन को कहते हैं—

हि. भा.—चन्द्र की स्वच्छता का उपचय (वृद्धि) और अपचय (हानि) शाप से होता है यह पुराण में कहा गया है, आचार्य इसका खराब न करने हैं । यदि शाप से चन्द्र

शुक्ल का उपचय-अपचय आदि होता है तब गणितागत चन्द्र से शुक्ल के उपचय अपचय आदि) का ज्ञान क्यों होता है अर्थात् गणित विधि से उन का ज्ञान नहीं होना चाहिये, और यदि रवि से चन्द्र ऊपर है तब चन्द्र के नीचे का आघातभाग (मनुष्य के लिए दृश्य भाग) सदा शुक्ल होना चाहिये, परन्तु दृष्टि से वह सदा शुक्ल देखने में नहीं आता है इसलिये रवि से चन्द्र ऊपर नहीं है, यदि रवि से चन्द्र को नीचा मानकर गणित से शुक्लादि लाते हैं तो वे सर्वथा दृष्टि योग्य होते हैं अतः रवि से चन्द्र नीचा ही है, यह सिद्ध होता है, पुनः एतत् दोनों मत (शाप से चन्द्र शुक्ल की वृद्धि और हानि होना तथा रवि से चन्द्र ऊपर है) ठीक नहीं है यह ऊपर प्रदर्शित युक्तियों से सिद्ध हुआ । सिद्धान्त शेखर में श्रीपति “शापाद्य-दीप्तोः सितवृद्धि हानी” इत्यादि से इन्हीं बातों को कहते हैं इति ॥ १ ॥

इदानीं चन्द्र बिम्बे सितवृद्धिहान्योः कारणमाह ।

रविदृष्टं सितमर्धं कृष्णमदृष्टं यथाऽऽतपस्थस्य ।

कुम्भस्य तथासन्नं रवेरघः स्थस्य चन्द्रस्य ॥ २ ॥

सु. भा.—तदासन्नं तादृगेव । अन्यत् स्पष्टम् ॥ २ ॥

वि. भा.—यथाऽऽतपस्थस्य (रौद्र स्थितस्य) कुम्भस्य (घटस्य) रविदृष्टं (रविणा दृष्टियोग्यमर्थाद्रव्यभिमुखं) अर्धं सितं (स्वच्छं) भवति, अदृष्टं (दृष्टि-योग्यानर्हमर्थाद्रवितो विरुद्धदिशि) अर्धं कृष्णं (असितं) भवति तथासन्नं (तादृश-मेव) रवेरघः स्थस्य चन्द्रस्यार्थाद्रव्यभिमुखं चन्द्र बिम्बार्धं सितं तद्विरुद्धदिशि चन्द्र बिम्बार्धं कृष्णं (असितं) भवतीति । सिद्धान्तशेखरे श्रीपतिना “धाम्ना धामनिघेरयं जलमयो घटो सुधादीधितिः सद्यः कृतमृणालकन्दविशदच्छायां विवस्वदिशि । हर्म्यं धर्मघृणोः करैर्घट इवान्यस्मिन् विभागे पुनर्वाला कुन्तल-कालता कलयति स्वस्यास्तनोश्छायया” ज्ञेनैवमुक्तम् तथोक्तार्थमेवा “पाथोमये शीतकरेऽर्करश्मयो विमूर्छिता घ्नन्ति तमस्विनीतमः । निकेतनाभ्यन्तरां तमः स्वयं यथा त एवामल दर्पणाश्रिताः” नेन विशदयति, परमियं “सलिलमये शशिनि रवेर्दीधितयो मूर्च्छितास्तमो नैशम् । क्षपयन्ति दर्पणोदरनिहिता इव मन्दिरस्यान्तः ॥” वराहमिहिरोक्तेरस्या एव पुनरुक्तिः । सिद्धान्तशिरोमणौ भास्कराचार्येण—

“तरणि किरणसङ्गादेषपीयूषपिण्डो दिनकर दिशि चन्द्रश्चन्द्रिकाभिश्चकास्ति । तदितरदिशि बाला कुन्तलस्थामलश्रीघट इव निजमूर्तिच्छाययैवातपस्थः ॥” छन्दोगोत्तरेण श्रीपतेः काव्यकला कौशलमेवोक्तमिति विज्ञैश्चिन्त्यमिति ॥ २ ॥

अब चन्द्र बिम्ब में सितवृद्धि और सित हानि के कारण को कहते हैं ।

हि. भा.—जैसे घूप में स्थित घड़े का रवि की तरफ का आघात भाग सित (स्वच्छ) होता है और रवि से भिन्नदिशा का आघात भाग कृष्ण (असित) होता है ।

वैसा ही रवि से अघः (नीचा) स्थितचन्द्र का होता है अर्थात् रवि की तरफ का चन्द्रबिम्ब का आधा भाग सित (उज्ज्वलीभूत) होता है और रवि से भिन्न तरफ का चन्द्रबिम्बार्ध असित (अनुज्ज्वल) होता है। सिद्धान्तशेखर में श्रीपति ने “धाम्ना धामनिवे-
रयं जलमयो घत्ते सुधादीधितिः” इत्यादि से इसी तरह कहा है। इसी अर्थ को “पाथोमये
शीतकरेऽर्करश्मयो विभ्रूच्छिता” इत्यादि संस्कृत भाष्य में लिखित श्लोक से विशद (स्पष्ट)
करते हैं परन्तु यह श्रीपति की उक्ति “सलिलमये शशिनि रवेर्दीधितयो” इत्यादि संस्कृत
भाष्य में लिखित वराहमिहिरोक्ति की पुनरुक्ति मात्र है। सिद्धान्तशिरोमणि में भास्करा-
चार्य ने “तरणिकिरणसङ्गादेशपीयूषपिण्डो दिनकरदिशि” इत्यादि संस्कृत भाष्य में लिखित
श्लोक से श्रीपति की काव्यकला चातुरी को कहा है इति ॥२॥

इदानीं गणितेन शृङ्गोन्नतिज्ञानं कथं भवतीत्यत्र हेतुमाह

सितमुन्नतं यतोऽर्कः सितासितं शुक्लपक्षान्ते ।

अर्वागर्धं पश्चाद् गणिताच्छृङ्गोन्नतिस्तस्मात् ॥३॥

सु. ३७.—यतो यदिशि अर्कस्तत्रैव सितं शुक्लमुन्नतं वृद्धिगतं भवति ।
शुक्लपक्षान्ते पूर्णिमान्ते च अर्वागर्धं पूर्वार्धं रविसंमुखस्थं सितं पश्चादर्धं नृदृश्यखण्डं
चासितमुपलक्ष्यते । तस्माद्विचन्द्रांतरवशतो गणितात् शृङ्गोन्नतिः साध्या
भवतीति ॥३॥

वि. ३७.—यतः (यदिशि) अर्कः (रविः) तदिश्येव सितं (शुक्लं) उन्नतं
(वृद्धिगतं) भवति, शुक्लपक्षान्ते (पूर्णांते) अर्वागर्धं (पूर्वार्धं) सूर्याभिमुखं सितं,
पश्चादर्धं (नृदृश्यखण्डं) चासितमुपलक्ष्यते तस्मात् कारणात् रविचन्द्रान्तर-
वशेन गणिताच्चन्द्रशृङ्गोन्नतिः साधिता भवति । सिद्धान्तशेखरे श्रीपतिनाप्य
“यस्यां सहस्रकिरणो दिशि तत्र नूनमालोक्यते शशधरस्य सितोन्नतत्वम् ।
पक्षान्तयोरपि सितासितता यतोऽस्य शृङ्गोन्नतिः खलु ततो गणितावगम्या”
नेनाऽऽचार्योक्तानुरूपमेवोक्तमिति ॥३॥

अब गणित से चन्द्र शृङ्गोन्नति का ज्ञान कैसे होता है उसके कारण को कहते हैं

हि. ३७.—चन्द्र से जिस दिशा में रवि रहता है उसी तरफ सित (शुक्ल)
उन्नत (वृद्धिगत) होता है, पूर्णान्ति में सूर्याभिमुख चन्द्रबिम्ब का पूर्वार्ध शुक्ल होता है
और परार्ध असित (कृष्ण) देखने में आता है, उस कारण से रवि और चन्द्र के अन्तर
वश से गणित द्वारा चन्द्रशृङ्गोन्नति साधित होती है । सिद्धान्तशेखर में श्रीपति ने भी
“यस्यां सहस्रकिरणो दिशि तत्र नूनमालोक्यते” इत्यादि संस्कृत भाष्य में लिखित श्लोक
से आचार्योक्त के अनुरूप ही कहा है इति ॥३॥

इदानीं शृङ्गोन्नत्यर्थमितिकर्तव्यतामाह

रविचन्द्रपातलग्नैः स्वक्रान्त्युदयात् स्वलग्नगतशेषाः ।

घटिकाः खचरार्धास्तात् स्वेष्टौ रविशीतगू कृत्वा ॥४॥

सु- भा.—खचरार्धास्ताद्रव्यस्तात् स्वलग्नगतशेषाः शशिन उदयलग्नस्य गताः शेषा वा घटिकाः साध्याः । कैः । रविचन्द्रपातलग्नैस्तथा स्वक्रान्त्युदयाच्च । अत्रैतदुक्तं भवति । रव्यस्तकाले रविश्चन्द्रः पातो लग्नम् । एतानि कृत्वा तैः स्वक्रान्त्या चन्द्रक्रान्त्या उदयाच्चन्द्रोदयलग्नाच्चोदयलग्नस्य गता वा शेषा घटिका ऊनस्य भोग्योऽधिकभुक्तयुक्तो मध्योदयादय इत्यनेन विधिना साध्याः । सूर्यास्तानन्तरं यावतीभिर्घटिकाभिश्चन्द्रास्तस्ता गता घटिकाः । सूर्यास्तात् प्राग् यावतीभिर्घटिकाभिश्चन्द्रास्तस्ता एष्या घटिकाः । एवं प्राक् क्षितिजे रव्युदयाद् गता एष्या वा चन्द्रोदयघटिकाः साध्या इत्यर्थादवगम्यते । यस्मिन् दिने सूर्यास्तादनन्तरं कालांशघटिकातोऽधिकाभिश्चन्द्रास्तः । रव्युदयात् प्राक् कालांशघटिकातोऽधिकाभिश्चन्द्रोदयस्तस्मिन्नेव चन्द्रदर्शनं सति दर्शने शृङ्गोन्नतिः साध्या । सितशृङ्गोन्नतिश्च बिम्बार्धाल्पे चन्द्रसितेऽत एव भास्करेण मासान्तपादे प्रथमे च शृङ्गोन्नतिः साधिता । द्वितीयतृतीयपादयोश्च बिम्बार्धाल्पं कृष्णं भवति । अतस्तत्र कृष्णशृङ्गोन्नतिर्भवति । इत्याचार्येण शृङ्गोन्नतिद्वयं साध्यते । तदर्थं पादवर्चा न कृता । भास्करेण न हि स्पष्टा कृष्णशृङ्गोन्नतिर्नैरुपलक्ष्यत इति मनसि संप्रचार्यं सितशृङ्गोन्नतिरेव साधिता । उक्तं च 'द्वितीयतृतीययोरपि चरणयोर्ब्रह्मगुप्तादिभिः कृष्णशृङ्गोन्नतिरानीता सा मम न संमता । न हि नरैः कृष्णशृङ्गोन्नतिः स्पष्टोपलक्ष्यते' । स्वेष्टौ स्वेष्टकालिकौ रविशीतगू रविचन्द्रौ कृत्वा विक्षेपक्रान्त्यंशाः साध्या इत्यध्याहार्यम् ॥४॥

वि. भा.—खचरार्धास्तात् (रव्यस्तात्) स्वलग्नगतशेषाः शशिन उदयलग्नस्य गताः शेषाः वा घटिका रविचन्द्रपातलग्नैस्तथा स्वक्रान्त्युदयाच्च साध्याः । अत्रैतदुक्तं भवति, सूर्यास्तकाले रविश्चन्द्रः चन्द्रपातो लग्नं च कृत्वा तैः चन्द्रक्रान्त्या उदयात् (चन्द्रोदयलग्नात्) उदयलग्नस्य गता वा शेषा घटिका 'ऊनस्य भोग्योऽधिकभुक्तयुक्तो मध्योदयादय' इत्यनेन साध्याः । सूर्यास्तानन्तरं यावतीभिर्घटीभिश्चन्द्रास्तस्ता गतघटिकाः । तथा सूर्यास्तात्पूर्वं यावतीभिर्घटीभिश्चन्द्रास्तस्ता एष्या घटिकाः । एवं पूर्वक्षितिजे सूर्योदयाद् गता एष्याश्च चन्द्रोदयघट्यो विधेयाः । यस्मिन् दिने सूर्यास्तात्परं कालांशघटीतोऽधिकाभिर्घटीभिश्चन्द्रास्तः, सूर्योदयात् पूर्वं कालांशघटीतोऽधिकाभिश्चन्द्रोदयस्तस्मिन्नेव चन्द्रदर्शने शृङ्गोन्नतिः साध्या । सितशृङ्गोन्नतिश्च बिम्बार्धाल्पे चन्द्रसिते भवत्यत एव मासान्तपादे प्रथमे भास्करेण शृङ्गोन्नतिसाधनं कृतम् । द्वितीयतृतीयपादयोर्बिम्बार्धाल्पं कृष्णं भवति, तेन तत्र कृष्णशृङ्गोन्नतिर्भवति, आचार्येण

पादचर्चा न क्रियतेऽतः सूच्यते यदनेन सितशृङ्गोन्नतमनं कृष्णशृङ्गोन्नतमनं चेति शृङ्गोन्नतिद्वयं साध्यते । कृष्णशृङ्गोन्नतिः स्फुटा मनुष्यैर्नोपलक्ष्यत इति विचार्य शुक्लशृङ्गोन्नतिरेव साधिता, 'द्वितीयतृतीययोरपि चरणयोर्ब्रह्म-गुप्तादिभिः कृष्णशृङ्गोन्नतिरानीता सा मम न संमता । न हि नरैः कृष्ण-शृङ्गोन्नतिः स्पष्टोपलक्ष्यते' इत्युक्तं च । स्वेष्टौ रविशीतगू (स्वेष्टकालिकौ रवि-चन्द्रौ) कृत्वा शरक्रान्त्यंशाः साध्या इत्यध्याहार्यम् । सिद्धान्तशेखरे "सूर्यशीतकरपातविलग्नैरस्तकालजनितैः सितरश्मैः । स्वापमभ्रमचरादि-विलग्नानीतशेषघटिकाश्च विधेयाः" श्रीपतेरयं प्रकार आचार्योक्तानुरूप एवेति ॥४॥

अब शृङ्गोन्नतिकाल में सूर्यास्त से चन्द्रास्तपर्यन्त गतघटी और शेषघटी के साधन को कहते हैं

हि. भा.—सूर्यास्तकाल में रवि, चन्द्र, चन्द्रपात और लग्न से चन्द्रक्रान्ति से और चन्द्र के उदयलग्न से उदयलग्न की गतघटी और शेषघटी 'ऊनस्य भोग्योऽधिक-भुक्तयुक्तो मध्योदयाढ्य' इस विधि से साधन करना, सूर्यास्त के बाद जितनी घटी में चन्द्रास्त होता है वह गतघटी है, तथा सूर्यास्त से पहले जितनी घटी में चन्द्रास्त होता है वह एष्य घटी है, एवं पूर्वक्षितिज में सूर्योदय से गत और एष्य चन्द्रोदय घटी साधन करना । जिस दिन में सूर्यास्त के बाद कालांश घटी से अधिक घटी में चन्द्रास्त होता है तथा सूर्योदय से पहले कालांश घटी से अधिक घटी में चन्द्रोदय होता है उसी दिन चन्द्र दर्शन होने से शृङ्गोन्नति साधन करना । चन्द्रबिम्बावर्त्य शुक्ल में शुक्लशृङ्गोन्नति होती है । इसलिये भास्कराचार्य ने 'भासान्तपादे प्रथमेऽथवेन्दोः' इससे प्रथम चरण और चतुर्थ चरण में शृङ्गोन्नति साधन किया है, द्वितीय चरण (पाद) और तृतीय चरण में चन्द्रबिम्बावर्त्य कृष्ण होता है इसलिये वहां कृष्ण शृङ्गोन्नति होती है । यहाँ आचार्य पाद की चर्चा नहीं करते हैं इससे सूचित होता है कि आचार्य दोनों शृङ्गोन्नतियों (सितशृङ्गोन्नति और कृष्ण शृङ्गोन्नति) का साधन करते हैं । मनुष्यों को कृष्ण शृङ्गोन्नति स्फुट लक्षित नहीं होती है यह सोचकर शुक्ल शृङ्गोन्नति का साधन किया है । 'द्वितीय और तृतीय चरण में ब्रह्मगुप्त आदि आचार्यों ने कृष्ण शृङ्गोन्नति की है वह मेरे मत के विरुद्ध है । मनुष्य कृष्ण शृङ्गोन्नति को स्पष्ट नहीं देखते हैं, यह भास्करोक्ति है । सिद्धान्तशेखर में 'सूर्यशीतकर-पातविलग्नैः' इत्यादि संस्कृत भाष्य में लिखित श्रीपति का प्रकार आचार्योक्त के अनुरूप ही है इति ॥४॥

इदानीं चन्द्रस्य स्पष्टक्रान्तिज्यासाधनमाह

अब चन्द्र की स्पष्ट क्रान्तिज्या का साधन करते हैं

हि. भा.—एक दिशा की चन्द्रक्रान्ति और चन्द्रशर का योग करने से तथा भिन्न दिशा की चन्द्रक्रान्ति और चन्द्रशर का अन्तर करने से जो होता है उस की ज्या चन्द्र की स्पष्टक्रान्तिज्या रवि की तरह बिम्बीयाहोरात्रवृत्त से होती है इति ॥५॥

उपपत्ति

चन्द्रबिम्बकेन्द्रोपरिगत कदम्बप्रोतवृत्त क्रान्तिवृत्त में जहां लगता है वह चन्द्रस्थान है, स्थान से चन्द्रबिम्बकेन्द्रपर्यन्त चन्द्र का मध्यम शर है, चन्द्रस्थानोपरिगत ध्रुवप्रोतवृत्त नाड़ीवृत्त में जहां लगता है वहां से चन्द्रस्थानपर्यन्त चन्द्र की मध्यम क्रान्ति है, चन्द्रबिम्ब के ऊपर अहोरात्र वृत्त करने से वह चन्द्र का बिम्बीयाहोरात्रवृत्त होता है, तथा चन्द्रस्थान गत अहोरात्रवृत्त करने से चन्द्र का स्थानीय अहोरात्रवृत्त होता है, चन्द्रबिम्बकेन्द्रोपरिगत ध्रुवप्रोतवृत्त स्थानीय अहोरात्रवृत्त में जहां लगता है वहां से चन्द्रबिम्बकेन्द्रपर्यन्त अथवा चन्द्रस्थानोपरिगत ध्रुवप्रोतवृत्त बिम्बीयाहोरात्रवृत्त में जहां लगता है वहां से चन्द्रस्थान पर्यन्त चन्द्र का स्पष्ट शर है, यहां एकदिशा के चन्द्र स्पष्टशर और चन्द्रमध्यम क्रान्ति का योग करने से तथा भिन्न दिशा के उन दोनों का अन्तर करने से स्थानगत ध्रुवप्रोतवृत्त और नाड़ीवृत्त के सम्पात से स्थानगत ध्रुवप्रोतवृत्त और बिम्बीयाहोरात्रवृत्त के सम्पात पर्यन्त चन्द्र की स्पष्टा क्रान्ति होती है, लेकिन यहां आचार्य चन्द्र के स्पष्ट शर और मध्यमशर में अभेदत्व स्वीकार कर चन्द्र की स्पष्टा क्रान्ति लाये हैं इसलिये यह ठीक नहीं है, इसी कारण से भास्कराचार्य ने “ब्रह्मगुप्तादिभिः स्वल्पान्तरत्वात् कृतः स्फुटः” इस पद्य से ब्रह्मगुप्तादि मत का खण्डन किया है। सिद्धान्तवेखर में “शीतोऽश्वपक्रमधनुःशरयोः समासस्तुल्याशयोः” इत्यादि से श्रीपति ने आचार्योक्त के अनुरूप ही कहा है, सूर्यसिद्धान्त में भी “विक्षेपापक्रमैकत्वे क्रान्तिविक्षपसंयुता” इत्यादि से भगवान् सूर्य ने ब्रह्मगुप्तादि कथित प्रकार के समान ही कहा है, भास्कराचार्य ने सिद्धान्तशिरोमणि में “त्रिज्यावर्गादयनवलनज्याकृति प्रोह्य मूलं” इत्यादि से स्पष्टशर का आनयन कर के “स्पष्टा क्रान्तिः स्फुटशरयुतः” इत्यादि से चन्द्र स्पष्टशर और चन्द्रमध्यम क्रान्ति के संस्कार से चन्द्र की स्पष्ट क्रान्ति का साधन किया है जो बिलकुल ठीक है इसको विन्न लोग विचार कर समझें इति ॥५॥

इदानीं रविचन्द्रयोर्भुजसाधनमाह

स्वक्रान्तिज्ये त्रिज्यागुणे हृते लम्बकेन रविशशिनोः ।

अग्रे पृथक् स्वशङ्कुतलतुल्ययुतिरन्यदिग्वियुतिः ॥६॥

अथ शृङ्गोन्नति के लिये उपयुक्त स्पष्टभुज कोटि कर्णों के साधन को कहते हैं

हि. भा.— पृथक् स्थित रविभुज और चन्द्रभुज का एक दिशा में अन्तर और भिन्न दिशा में योग करने से स्पष्टभुज होता है । रवि से जिन दिशा में चन्द्र रहता है वह स्पष्ट भुज की दिशा है, अपनी-अपनी दृग्ज्या के वर्ग में अपने भुजवर्ग को घटाकर मूल लेने से रवि और चन्द्र की कोटि होती हैं । एक कपाल स्थित रवि और चन्द्र की कोटियों का अन्तर करने से तथा भिन्न कपालस्थित रवि और चन्द्र की कोटियों का योग करने से आद्य संज्ञक होता है । यदि रवि और चन्द्र में एक क्षितिज से ऊपर हो तो दोनों का दृक् शङ्कु का अन्तर अन्य संज्ञक होता है । यदि एक क्षितिज से ऊपर और दूसरा क्षितिज से नीचे हो तो अथः स्थित का अदृश्य शङ्कु, ऊर्ध्व स्थित का दृक् शङ्कु होता है इसलिये इन दोनों के योग से अन्य संज्ञक होता है । आद्य और अन्य का वर्गयोग मूल पूर्वसाधित भुज से पूर्वापर कोटि होती है । भुज और कोटि का वर्गयोग मूल तिर्यक् कर्ण होता है । इस कर्ण के अग्र में चन्द्र बिम्ब केन्द्र होता है इति ॥७-८-६॥

उपपत्ति

यहां एक गोल में रवि और चन्द्र को मान कर उन दोनों के बिम्बान्तर सूत्र का कर्ण का साधन करते हैं । रवि केन्द्र से चन्द्र शङ्कु के ऊपर लम्ब करने से लम्बमूल से रवि-केन्द्रपर्यन्त अन्यसंज्ञक है । लम्बमूल से पूर्वापर रेखा की समानान्तर रेखा करना उस के ऊपर रविकेन्द्र से जो द्वितीय लम्ब होता है उसके मूल से प्रथम लम्ब (पूर्वलम्ब) के मूल-पर्यन्त आद्य संज्ञक है । आद्य और अन्य का वर्गयोगमूल द्वितीय लम्बमूल से चन्द्रबिम्ब केन्द्रपर्यन्त रेखा द्वितीयलम्ब के ऊपर लम्बरूप (रे ११ अध्याय युक्ति से) होती है । और

द्वितीय लम्ब पूर्वोक्त स्पष्टभुज के तुल्य है। दोनों का वर्गयोग मूल एक गोलीय रवि और चन्द्र का बिम्बान्तर सूत्र कर्ण होता है। भुज, कोटि और कर्ण ये जिस धरातल में हैं वह धरातल क्षितिज धरातल के ऊपर समप्रोत धरातल की तरह लम्बरूप नहीं है इसलिये दर्शक के सामने यह क्षेत्र आदर्श (दर्पण) की तरह नहीं होता है इसलिये सिद्धान्तशिरोमणि में भास्कराचार्य ने इस क्षेत्र का खण्डन किया है। रवि और चन्द्र की अन्तरार्धज्या द्विगुणित कर्ण होता है। भुज और कर्ण का वर्गान्तर मूल कोटि होती है, यह शृङ्गोन्नति के उत्तराधिकार में आचार्य ने “व्यर्केन्द्रर्धभुजज्या द्विगुणा” इत्यादि संस्कृतोपपत्ति में लिखित श्लोक से प्रकारान्तर दिखलाया है। इसी कारण से भास्कराचार्य ने ‘तत् क्षेत्रं ब्रह्मगुप्तेन रवीन्द्रोरन्तरार्धज्यां द्विगुणां कर्णं प्रकल्प्य... न हि द्रष्टुर्दृष्टिसंमुखमादर्शवत्’ संस्कृतोपपत्ति में लिखित भाष्य कहा है, सिद्धान्तशेखर में श्रीपति ने भी ‘समान्यककुभोस्तयोरित्यादि’ संस्कृतोपपत्ति में लिखित श्लोकों से आचार्यों के अनुरूप ही सब कुछ कहा है। ब्रह्मगुप्त-श्रीपति-सूर्यसिद्धान्तकार भास्कराचार्य प्रभूति आचार्यों का शृङ्गोन्नति साधन ठीक नहीं है। सिद्धान्ततत्त्वविवेक में इसके सम्बन्ध में कमलाकर ने बहुत कहा है। शृङ्गोन्नति का विचार सिताङ्गुल के अधीन है लेकिन सिताङ्गुलानयन कमलाकरोक्त भी ठीक नहीं है इसलिये कमलाकरोक्त शृङ्गोन्नति साधन भी ठीक नहीं है, वास्तवानयन के लिये म.म. पण्डित श्री सुधाकर द्विवेदि निमित्त ‘वास्तवचन्द्रशृङ्गोन्नतिसाधनम्’ नामक पुस्तक देखनी चाहिये इति ॥७-८-९॥

अथ विशेषमाह

एवं तावद्भावत् पदयोराद्यन्तयोः शशिनि चार्कात् ।

रविरर्धचक्रयुक्तः कल्प्यो द्वित्रिपदयोरर्कः ॥१०॥

सु. भा.—एवमर्कात् प्रथमचतुर्थपदयोः शशिनि चन्द्रे सति क्रिया कार्या। अर्थादेवं मासान्तपादे वा प्रथमे भुजकोटिकर्णादिकं भवति। द्वित्रिपदयो रविरर्धचक्रयुक्तः षड्राशिसहितः स चार्कः कल्पः। अर्थात् सषड्भमर्कं रविं प्रकल्प्य भुजकोटिकर्णादिकमानेयम्। एवं भुजकोटिकर्णैः कृष्णशृङ्गोन्नतिरूपद्यत इत्यर्थत एवावगम्यते ॥१०॥

वि. भा.—एवमर्कात् (रवितः) यावदाद्यन्तयोः पदयोः (प्रथमचतुर्थपदयोः) शशिनि (चन्द्रे) सति तावदेव भुजकोटिकर्णादिकं भवति, द्वितीयतृतीयपदयो रविरर्धचक्रयुक्तः (षड्राशिसहितः) अर्कः कल्प्योऽर्थात् सषड्भं रविमर्कं प्रकल्प्य भुजकोटिकर्णादिकमानेयम्। एवमानोत्तैर्भुजकोटिकर्णैः कृष्णशृङ्गोन्नतिरूपद्यत इत्युपपत्त्या सिध्यतीति ॥१०॥

अत्रोपपत्तिः

‘क्षेपयोश्च पदयोः सषड्गुहं भास्करं दिनकरं प्रकल्पयेदिति’ सिद्धान्तशेखरे

श्रीपत्युक्तं 'रविरर्धचक्रयुक्तः कल्प्यो द्वित्रिपदयोरर्कः' ब्रह्मगुप्तोक्तानुरूपमेव, "द्वितीय-
तृतीययोरपि चरणयोर्ब्रह्मगुप्तादिभिः कृष्णशृङ्गोन्नतिरानीता सा मम न संमता ।
न हि नरैः कृष्णशृङ्गोन्नतिः स्पष्टोपलक्ष्यते, प्रसिद्धा तु शुक्लशृङ्गोन्नतिः"
इत्यादिना भास्करेण कृष्णशृङ्गोन्नतिसाधनस्य निराकरणं कृतमिति सुधीभि-
र्विभावनीयम् ॥१०॥

अब विशेष कहते हैं

इस तरह रवि से जब तक प्रथम पद और चतुर्थ पद में चन्द्र रहे तब ही भुज,
कोटि और कर्ण आदि होता है । द्वितीय और तृतीय पद में रवि में छः राशि जोड़कर जो
हो उसको रवि कल्पना करना अर्थात् छः राशि युक्त रवि को अर्क (रवि) मानकर भुज,
कोटि और कर्ण आदि लाना चाहिये । इस तरह लाये हुए भुज, कोटि और कर्ण से
कृष्णशृङ्गोन्नति उत्पन्न होती है, यह उपपत्ति से जानी जाती है इति ॥१०॥

उपपत्ति

"शेषयोश्च पदयोः सषड्गुहं" इत्यादि संस्कृतोपपत्ति में लिखित श्रीपतिप्रकार
'रविरर्धचक्रयुक्तः कल्प्यो द्वित्रिपदयोरर्कः' इस आचार्योक्त के अनुरूप ही है । "द्वितीय-
तृतीययोरपि चरणयोर्ब्रह्मगुप्तादिभिः यहां से प्रसिद्धा तु शुक्लशृङ्गोन्नतिः" यहां तक
संस्कृतोपपत्ति में लिखित गद्यों से भास्कराचार्य ने कृष्णशृङ्गोन्नति साधन का खण्डन किया
है । इसको पण्डित लोग विचारें ॥१०॥

अब सिताङ्गुल साधन को कहते हैं

हि. भा.—रविचन्द्रान्तरांशार्ध को चन्द्रबिम्ब से गुणा कर नब्बे से भाग देने से
रात्रि में शुक्ल प्रमाण होता है, यह प्रथम प्रकार है, जब तक रवि और चन्द्र का अन्तरांश
नब्बे हो तब तक रविचन्द्रान्तरार्ध भुजांश को द्विगुणित करना तब जो अंश हो उसकी

उत्क्रमज्या करनी चाहिये। यदि अन्तरांश नब्बे से अधिक हो तो अधिक चापांश की जो क्रमज्या हो उसको त्रिज्या में जोड़ना तब जो उत्क्रमज्या हो उसको चन्द्रबिम्ब से गुणाकर द्विगुणित त्रिज्या से भाग देने से दूसरा सित मान होता है, यह द्वितीय प्रकार है, रात्रि में शृङ्गोन्नति साधन करना हो तो प्रथम प्रकारागत सितमान ग्रहण करना चाहिये। यदि दिन में शृङ्गोन्नति साधन करना हो तो द्वितीय प्रकारागत सितमान ग्रहण करना चाहिये। रवि और चन्द्र के अन्तरांश की पूर्णज्या रविदिशा का कर्ण होता है, चन्द्र के सित को रवि कर्णागति से देते हैं इति ॥११-१२-१३॥

उपपत्ति

पूर्वाह्निकाल में रवि और चन्द्र का अन्तरांश = १८०° वहां सम्पूर्ण चन्द्रबिम्ब शुक्ल होता है। इसलिये “यदि एक सौ अस्सी रविचन्द्रान्तरांश में सम्पूर्ण चन्द्रबिम्बतुल्य शुक्ल पाते हैं तो इष्ट रवि और चन्द्र के अन्तरांश में क्या” इस अनुपात से शुक्ल प्रमाण

$$= \frac{\text{रविचन्द्रान्तरांश} \times \text{चन्द्रबिम्ब}}{१८०} = \frac{\text{रविचन्द्रान्तरांश}}{२} \times \frac{\text{चर्बि}}{\frac{१८०}{२}}$$

$$= \frac{\text{सूर्योन्नचन्द्रांशार्ध} \times \text{चर्बि}}{९०} \quad \text{इस प्रकार से रात्रि में शृङ्गोन्नति साधन में शुक्लानयन}$$

करना चाहिये। दिन में शुक्लानयन के लिये अबोलिखित विधि समझनी चाहिये।

जब रवि चन्द्रान्तरांश = ०, तदा शुक्लमान = ०, जब रविचन्द्रान्तरांश = १८०° तब चन्द्रबिम्बतुल्य शुक्लमान होता है, जब रविचन्द्रान्तरांश = ९० तब चन्द्रबिम्बार्धतुल्य शुक्लमान होता है, इन बातों को भास्कराचार्य से प्राचीन सब आचार्यों ने स्वीकार किया है। रवि और चन्द्र के अन्तरांश की उत्क्रमज्या से प्रत्यक्ष शुक्ल वृद्धि देखने से ‘यदि त्रिज्या-तुल्यरविचन्द्रान्तरांशोत्क्रमज्या में चन्द्रबिम्ब तुल्य शुक्ल पाते हैं अथवा द्विगुणित त्रिज्या तुल्य द्विगुणित भुजांशोत्क्रमज्या में चन्द्रबिम्ब तुल्य शुक्ल पाते हैं तो इष्ट द्विगुण भुजांशो-त्क्रमज्या में क्या’ इससे जो शुक्ल मान प्राप्ता है वह दिनोपयोगी होता है, लल्लोक्त मार्ग का अनुसरण करके आचार्य ने उत्क्रमज्या से अनुपात किया है। दिन में रवि के तेज से इष्ट दोष से अल्प सितभाग लक्षित होता है, दोनों सन्ध्याओं में सित में वैषम्य उपलब्ध होता है इसलिए तारतम्य से उन दोनों (प्रथम प्रकारागत तथा द्वितीय प्रकारागत) सित प्रमाणां का योगार्ध के बराबर शुक्लमान आचार्य ने स्वीकार किया है। सिद्धान्तदर्पण में “व्यकंशीत-किरणार्धभुजांशान्” इत्यादि संस्कृतोपपत्ति में लिखित श्लोक से रात्रि में उपयोगी शुक्लमान तथा “द्विध्मबाहुलवजोत्क्रमजीवा” इत्यादि संस्कृत उपपत्ति में लिखित श्लोक से इससे दिनोपयोगी शुक्लमान, “द्विगुणभुजलबाधेत् खाङ्कमागाधिकाः स्युः” इत्यादि संस्कृत

उपपत्ति में लिखित श्लोक से दिन में शुक्लानयन में विशेष “रात्रिवासरसितैव्यदलं” इत्यादि संस्कृतोपपत्ति में लिखित श्लोक से पुनर्विशेष श्रीपति ने आचार्योक्त के अनुरूप ही कहा है इति ॥११-१२-१३॥

इदानीं परिलेखसूत्रसाधनमाह

शशिमानवर्गपादो मानार्धसितान्तरार्धभक्तयुतः ।

परिलेखसूत्रमस्मात् शुक्लेऽर्धाल्पे च परिलेखः ॥१४॥

दृष्ट्वा द्वितीयवंशाग्रं चन्द्र-ग्रहणं वा ग्रहयुतिं लोकस्य (जनस्य) नरपते (राज्ञः)
र्वा विस्मयकरणाय गणको दर्शयेत् । अन्यैः (आर्यभटादिभिः) गणितविद्भिः
(गणितज्ञैः) इदं दर्शनं दुष्करं (असाध्यं) इति ॥१५-१६-१७॥

अत्रोपपत्तिः

छायाक्षेत्रं हृदि निधाय विज्ञानभाष्यदर्शनेन स्पष्टैवास्तीति विज्ञैर्भूशं
विभावनीया ॥१५-१६-१७॥

अब चन्द्र-ग्रहण-ग्रहयुति आदि देखने के प्रकार को कहते हैं

हि. भा.— त्रिप्रश्नाधिकार में कथित विधि से इष्टकाल में ग्रहशङ्कु का मान जान
कर दिङ्मध्य (दिशाओं के मध्य याने केन्द्र) में उस शङ्कु का छायाग्र जैसे पतित हो वैसे
पूर्वापर रेखा से उत्तर या दक्षिण में उस शङ्कु को रख कर स्थिर करना । शङ्कु के
बराबर प्रथम वंश मानना । छायाग्र (दिङ्मध्य) से शङ्क्वग्रगत ऊर्ध्वसूत्रवश से आगे
दूसरे वंश को स्थापन कर स्थिर करना चाहिये । उस प्रथम वंश मान को दृष्टि से समान
करना । उसकी अपेक्षा द्वितीय वंशमान को उच्चतर (अतिशय उच्च) करना चाहिये ।
दिङ्मध्य से प्रथम वंशाग्रगत कर्णसूत्र को बढ़ाने से द्वितीय वंश में जहाँ लगे वहाँ खूब
मजबूती से बांध देना चाहिये, तब प्रथम वंशा (शङ्कु) अग्रत दृष्टि से द्वितीय वंशाग्रगत
चन्द्र को, ग्रहण को वा ग्रहयोग को गणक (ज्योतिषिक) लोगों को वा राजा को आश्चर्य
चकित करने के लिये दिखावे; आर्यभट आदि गणितज्ञों से यह दिखाना असाध्य है
इति ॥१५-१६-१७॥

उपपत्ति

छाया क्षेत्र को हृदय में रखकर हिन्दी भाष्य देखने से स्पष्ट ही है । इसको विज्ञ लोग
विचारते इति ॥१५-१६-१७॥

इदानीमध्यायोपसंहारमाह

इति बाहुकोटिकर्णस्फुटसितपरिलेखसूत्रकर्णेषु ।

आर्याष्टादश चन्द्रशृङ्गोन्नतिसप्तमोऽध्यायः ॥१८॥

अध्याय सम्पूर्ण ॥

ब्राह्मस्फुटसिद्धान्तः

७

चन्द्रच्छायाधिकारः

ब्राह्मस्फुटसिद्धान्तः

चन्द्रच्छायाधिकारः

अथ चन्द्रच्छायाधिकारः प्रारम्भ्यते । तत्रादौ तदारम्भप्रयोजनमाह ।

प्राक्चन्द्रलग्नयोरस्तलग्नशशिनो यतोऽन्तरं पश्चात् ।
प्रतिदिनमिन्दुच्छाया यतस्तदानयनमभिघास्ये ॥१॥

सु. भा.—प्राक् क्षितिजे यतश्चन्द्रलग्नयोरन्तरं पश्चात् क्षितिजेऽस्तलग्न-
शशिनोरन्तरं च प्रतिदिनं यत् तेनैन्दुच्छाया ज्ञायते तथा यत् इन्दुच्छायातस्तद-
न्तरं च ज्ञायतेऽतस्तदानयनं छायायनं नमभिघास्ये कथयिष्ये इति ॥१॥

वि. भा.—प्राक् (पूर्वक्षितिजे) चन्द्रलग्नयोरन्तरं, पश्चात् (पश्चिम-
क्षितिजे) अस्तलग्नशशिनो (सप्तमलग्नचन्द्रयोः) रन्तरं च प्रतिदिनं यत्तेनैव यतः
(यस्मात्कारणात्) इन्दुच्छाया (चन्द्रच्छाया) ज्ञायते, तथेन्दुच्छायातस्तदन्तरं च
ज्ञायतेऽतस्तदानयनं (छायायनं) मभिघास्ये (कथयिष्ये) इति, सिद्धान्तशेखरे
“प्राग्यतस्तुहिनरश्मिलग्नयोरस्तलग्नशशिनोश्च पश्चिमे । अन्तरात् प्रतिदिनं
शशिप्रभा “तत्प्रसाधनमतोऽधुनोच्यते” ज्ञेयं श्रीपतिनाप्याचार्योक्तानुरूपमेवोक्त-
मिति ॥१॥

अथ चन्द्रच्छायाधिकार प्रारम्भ किया जाता है, पहले इसके प्रारम्भ-प्रयोजन को कहते हैं

हि. भा.—पूर्व क्षितिज में चन्द्र और लग्न का अन्तर, पश्चिम क्षितिज में सप्तम-
लग्न और चन्द्र का अन्तर प्रत्येक दिन में जो होता है उसी से क्योंकि चन्द्रच्छाया समझी
जाती है (अर्थात् चन्द्रच्छाया का ज्ञान होता है) तथा चन्द्रच्छाया से उस अन्तर का ज्ञान होता है
इसीलिये छायायनन को कहता हूँ । सिद्धान्तशेखर में “प्राग्यतस्तुहिनरश्मिलग्नयोः इत्यादि
सं० वि० भा० में लिखित श्लोक से” श्रीपति जी आचार्योक्त के अनुरूप ही कहते हैं ॥१॥

इदानीं कर्तव्यतामाह

प्रग्रहणकालिकैरिष्टकालिकैरर्कलग्नशशिपातैः ।
कृत्वोदयास्तलग्ने स्वचरप्रारणान् अक्षाङ्गस्य ॥२॥

सु. भा.—यदि प्रग्रहणे चन्द्रग्रहणस्पर्शकाले छायाज्ञानमभीष्टं तदा प्रग्रहण-

कालिकैरन्यथेष्टकालिकैः सूर्यलग्नशशिपातैः शशाङ्कस्योदयास्तलग्ने स्वचरप्राणान् चन्द्रचरासूँश्च कृत्वा अनष्टाः स्थाप्या इति ॥२॥

वि. भा.—यदि प्रग्रहणकाले (चन्द्रग्रहणस्पर्शसमये) छायाज्ञानमभीष्टं तदा तत्कालिकैरन्यथेष्टकालिकैः अर्कलग्नशशिपातैः (रविलग्नचन्द्रपातैः) शशाङ्कस्यो (चन्द्रस्य) दयास्तलग्ने स्वचरप्राणान् (चन्द्रचरासूँश्च) कृत्वा स्थाप्या इति ॥२॥

अब कर्तव्यता को कहते हैं

हि. भा.—यदि चन्द्रग्रहण स्पर्शकाल में छाया साधन अभीष्ट हो तो स्पर्शकालिक रवि, लग्न, और चन्द्रपात से, अन्यथा इष्टकालिक रवि, लग्न, और चन्द्रपात से चन्द्र के उदयलग्न और अस्त (सप्तम) लग्न साधन कर तथा चन्द्र के चरासु को भी साधन कर रखना इति ॥२॥

इदानीं चन्द्रस्य दृश्यादृश्यत्वमादिशति

यद्यधिकमुदयलग्नादूर्नं षड्गृह्युतास्तमयलग्नात् ।
लग्नं तदा शशाङ्को दृश्यः सति दर्शने छाया ॥३॥

सु. भा.—लग्नं तात्कालिकं प्राक्क्षितिजे क्रान्तिवृत्तस्य लग्नप्रदेशः । तद्यदि चन्द्रोदयलग्नादधिकं षड्गृह्युतास्तमयलग्नाच्चोर्नं तदा चन्द्रो दृश्यो भवति । दर्शने सति छाया साध्या ।

अत्रोपपत्तिः । उदयलग्नसमे लग्ने चन्द्रः प्राक्क्षितिजे उदेति । आचार्येणोदयास्ताधिकारे पश्चिमक्षितिजस्थे ग्रहबिम्बे पश्चिमक्षितिजलग्नस्यापमण्डलप्रदेशस्यास्तलग्नसंज्ञा कृताऽस्तदासषड्भास्तलग्नं प्राक्क्षितिजे लग्नं भवति तस्मादिष्टलग्ने न्यूने उदयलग्नाच्चाधिके बिम्बं क्षितिजादुपरि वर्त्तत इति गोलयुत्था स्फुटम् । अतश्चन्द्रदर्शने सति तच्छायासाधनमुचितमिति । 'निशीष्टलग्नादुदयास्तलग्ने न्यूनाधिके यस्य खगः स दृश्यः' इति भास्करोक्तमेतदनुरूपमेव ॥३॥

वि. भा.—यदि लग्नं तात्कालिकं पूर्वक्षितिजक्रान्तिवृत्तसम्पातरूपं चन्द्रोदयलग्नादधिकं षड्गृह्युतास्तमयलग्नादूर्नं तदा शशाङ्को (चन्द्रः) दृश्यो भवति चन्द्रदर्शने सति तदीया छाया साध्येति ॥३॥

अत्रोपपत्तिः

उदयलग्नतुल्ये लग्ने पूर्वक्षितिजे चन्द्रस्योदयः । पश्चिमक्षितिजस्ये ग्रह-
बिम्बे पश्चिमक्षितिजक्रान्तिवृत्तयोः सम्पातबिन्दोरस्तलग्नसंज्ञोदयास्ताधिकारे
आचार्येण कृतोऽस्ततदा षड्भास्तलग्नं पूर्वक्षितिजे लग्नं भवेत् । तस्मादिष्टलग्ने
न्यूने उदयलग्नाच्चाधिके बिम्बं क्षितिजादुपरि भवेत्तेन तदा चन्द्रदर्शनं भवेदेव ।
चन्द्रदर्शने सति तदीया छाया साध्या सिद्धान्तशेखरे श्रीपति “ऊनको यदि विल-
ग्नतो भवेत् शुभ्रभानुरधिकोऽस्तलग्नतः । दृश्यते विहितदृग्विद्वयस्तत्प्रभा खलु-
विलोकने सति” रेवं कथितवान् । सिद्धान्तशिरोमणौ भास्कराचार्येणा “निशीष्ट
लग्नादुदयास्तलग्ने न्यूनाधिके यस्य खगः स दृश्यः” नेनाचार्योक्तानुरूपमेवोक्त-
मिति ॥३॥

अब चन्द्र के दृश्यादृश्यत्व को कहते हैं

हि.भा.—यदि पूर्व क्षितिज और क्रान्तिवृत्त का सम्पात रूप तात्कालिक लग्न चन्द्रो-
दय लग्न से अधिक हो तथा छः राशि युक्त अस्त लग्न से न्यून हो तो चन्द्र दृश्य होते हैं,
चन्द्रदर्शन होने से उनका छाया-साधन करना चाहिए इति ॥३॥

उपपत्ति

उदय लग्न के तुल्य लग्न के रहने से पूर्व क्षितिज में चन्द्र उदित होते हैं । पश्चिम
क्षितिज में ग्रह बिम्ब के रहने से पश्चिम क्षितिज और क्रान्तिवृत्त के सम्पात-बिन्दु को
आचार्य ने उदयास्ताधिकार में अस्तलग्न संज्ञक कहा है इसलिये तब छः राशियुक्त अस्तलग्न
पूर्व क्षितिज में लग्न होता है । उस से इष्ट लग्न न्यून हो तथा उदय लग्न से अधिक हो तो
बिम्ब क्षितिज से ऊपर होता है इसलिये तब चन्द्र दर्शन भी होता ही है, चन्द्र दर्शन होने से
उसकी छाया का साधन करना समुचित है, सिद्धान्तशेखर में “ऊनको यदि विलग्नतो भवेद-
त्यादि सं. उपपत्ति में लिखित श्लोक से” श्रीपति ऐसे कहते हैं, सिद्धान्तशिरोमणि में भास्करा
चार्य “निशीष्ट लग्नोदयास्तलग्ने” इत्यादि से आचार्योक्तानुरूप ही कहते हैं इति ॥३॥

इदानीं चन्द्रोन्नतकालसाधनमाह

लग्नसममुदयलग्नं षड्गृहयुक्तास्तमयलग्नसमम् ।

पूर्वापरयोः कृत्वा मतशेषाः स्वोदयैर्घटिकाः ॥४॥

सु. भा.—पूर्वापरयोः क्षितिजयोः क्रमेणोदयलग्नं लग्नसमं लग्नं च षड्गृह-
युक्तास्तमयलग्नसमं कृत्वाऽर्थात् प्राक् क्षितिजे उदयलग्नभोग्यकालो लग्नभुक्तकालो

मध्योदयाश्चैषां स्वदेश्युदयैर्योगं कृत्वा पश्चिमक्षितिजे च लग्नभोग्यकालः सषड्भा-
स्तलग्नभुक्तकालो मध्योदयाश्चैषां योगं कृत्वा चन्द्रस्य गतशेषा घटिकाः साध्याः ।

अत्रोपपत्तिः । लग्नात् कालसाधनविधिना स्फुटा ॥४॥

वि. भा.—पूर्वापरयोः (पूर्वक्षितिजपश्चिमक्षितिजयोः) क्रमेण लग्नतुल्य-
मुदयलग्नं, षड्गृहयुक्तास्तमयलग्नसमम् (षडांशियुतास्तलग्नतुल्यं) लग्नं कृत्वाऽर्था-
त्पूर्वक्षितिजे उदयलग्नभोग्यकालो लग्नस्यभुक्तकालो मध्योदयाश्चैषां स्वदेश्युदयै-
र्युतिं कृत्वा पश्चिमक्षितिजे च लग्नस्य भोग्यकालः षड्गृहयुक्तास्तलग्नभुक्तकालो
मध्यादयाश्चैषां युतिं कृत्वा चन्द्रस्य गतघटिकाः शेषघटिकाः साधनीया
इति ॥४॥

अत्रोपपत्तिः

अत्रोपपत्तिस्तु लग्नतः कालानयनप्रकारेण स्फुटेति; सिद्धान्तशेखरे श्रीपति
“प्राचिलग्न उदयेन्दुना समे सत्तुभास्तशशिना च पश्चिमे । संविधाय गतशेष-
नाडिकाः” रेवं कथितवानिति ॥४॥

अब चन्द्र के उन्नत कालानयन को कहते हैं ।

हि. भा. पूर्वक्षितिज में लग्न के तुल्य उदय लग्न को करके तथा छः राशियुत
अस्तलग्न के तुल्य लग्न को करके अर्थात् पूर्वक्षितिज में उदयलग्न के भोग्यकाल लग्न के
भुक्तकाल और दोनों (उदयलग्न और लग्न) के मध्योदय इन सबों का योग कर तथा पश्चिम
क्षितिज में लग्न के भोग्यकाल छः राशियुत अस्तलग्न के भुक्तकाल तथा मध्योदय इन सबों का
योग कर चन्द्र की गत घटी और शेष घटी साधन करना इति ॥४॥

उपपत्ति

लग्न से इष्ट कालानयन प्रकार से स्पष्ट है ‘सिद्धान्तशेखर में श्रीपति ने
‘प्राचि उदयेन्दुना समे इत्यादि’ से ऐसा कहा है इति ॥४॥

इदानीं चन्द्रशङ्कवानयनमाह

गतघटिकाः शेषा वा स्वदिनार्धसमा यवेन्दुरस्त्यर्थे ।

गतशेषनाडिकाभिर्नताभिरथवाऽर्कवच्छङ्कुः ॥५॥

सु. भा.—पूर्वसाधिता गतघटिका वा शेषघटिका यदा स्वदिनार्धसमाश्चन्द्र-
दिनार्धसमास्तदेन्दुरर्धे याम्योत्तरवृत्तेऽस्तीति ज्ञेयम् । अथ गत शेषनाडिकाभिस्त्रि-
प्रश्नोक्त्या चन्द्रचरं विधायार्कवच्चन्द्रशङ्कुः साध्यः । अथवा चन्द्रचराच्चन्द्रदिनार्धं

प्रसाध्य गतशेषनाडिकाभिश्चन्द्रनतघटिकाः कृत्वा ततो नताभिरर्कवच्चन्द्रशङ्कुः साध्य इति ।

अत्रोपपत्तिः । शङ्कुसाधने त्रिप्रश्नोक्तैव ॥१॥

वि. भा.—पूर्वानीता गतघटिकाः शेषघटिका वा यदा स्वदिनार्धसमा-
(चन्द्रदिनार्धतुल्याः) स्तदेन्दु (चन्द्रः) रर्धे (याम्योत्तरवृत्तेऽस्तीति) गतशेष नाडि-
काभिस्त्रिप्रश्नोक्त्या चन्द्रचरं विज्ञाय रविवच्चन्द्रशङ्कुः साध्यः । अथवा नताभिः
चन्द्रचरवशेन चन्द्रदिनार्धं कृत्वा गतशेषनाडिकाभिश्चन्द्रनतघटिकाः कृत्वा
ततो नताभिरर्कवच्चन्द्रशङ्कुः साध्य इति ॥१॥

अत्रोपपत्तिः

चन्द्रशङ्कुसाधनं त्रिप्रश्नोक्तविधिनैव कार्यं सिद्धान्तशेखरे श्रीपतिना
“निजदिनदलतुल्या नाडिका यातयेया यदि तुहिनमरीचेः स्युस्तदाऽसी खमध्ये ।
सवितुरिव नताभिर्वोन्नताभिर्घटीभिः स्फुटतरनिजशङ्कोः” उप्यनेनाचार्योक्तानुरूप-
मेवोक्तमिति ॥१॥

अब चन्द्रशङ्कु के मानयन को कहते हैं ।

हि. भा.—यदि पूर्व साधित गत घटी वा शेषघटी चन्द्रदिनार्ध के बराबर हो तो चन्द्र
याम्योत्तर वृत्त में है यह समझना चाहिये । गत घटी या शेष घटी से त्रिप्रश्नोक्त विधि से
चन्द्र के चर जान कर रवि की तरह चन्द्रशङ्कु साधन करना, अथवा चन्द्रचरवश से चन्द्र के
दिनार्ध जान कर गतघटी और शेष घटी से चन्द्र की नत घटी साधन कर रवि की तरह
चन्द्रशङ्कु साधन करना चाहिये इति ॥१॥

उपपत्ति

त्रिप्रश्नोक्त विधि से चन्द्रशङ्कु साधन करना चाहिये । सिद्धान्तशेखर में श्रीपति ने भी
“निजदिनदलतुल्या नाडिका” इत्यादि से आचार्योक्त के अनुरूप ही कहा है इति ॥१॥

इदानीं रविचन्द्रयोः स्फुटशङ्कुवानयनमाह

शङ्कुषनुषोऽधिकस्य स्फुटप्रमाणार्धलिप्तिकाभिर्न्या ।

रविशशिमध्यगतिकला तिथ्यंशेनोनिता द्वेदः ॥६॥

सु. भा.—स्फुटप्रमाणार्धलिप्तिकाभिरधिकस्य शङ्कुषनुषो ज्या साध्या सा
रविशशिमध्यगतिकलातिथ्यंशेनोनिता द्वेदो हरः स्याद् । द्वादशभिर्भुजिताया

इदानीं चन्द्रस्य स्फुटच्छायासाधनप्रकारमाह

द्वादशभिर्गुणिताया हज्याया इष्टमङ्गुलाप्तं यत् ।
तत् प्रग्रहणे छाया स्फुटा विधोरन्यथाऽऽसन्ना ॥७॥

सु. भा.—द्वादशभिर्गुणिताया हज्यायाश्छेदहृतेन यदिष्टमङ्गुलाप्तं तत् प्रग्रहणे ग्रहणकाले विधोरचन्द्रस्य स्फुटा छाया स्यादन्यथाऽऽसन्ना स्वल्पान्तरा । अर्थाद्यदा चन्द्रसर्वग्रहणे उन्मीलनप्रदेश एव विधोर्दृष्टमण्डलीय ऊर्ध्वप्रदेशस्तदैवा-नेन साधनेन स्फुटा छायाऽन्यथा तु स्थूलेत्याचार्योक्तं समोचो नमेवेति ।

अत्रोपपत्तिः । ‘स्वभुक्तिथिंशविर्जितोना महान् लघु’ रित्यादि भास्करो-क्तेन स्फुटा तत्र या स्थूलता सा कमलाकरेण सम्यगुपपादितेति तत्त्वविवेके तच्छायाधिकारो द्रष्टव्यः ॥७॥

वि. भा.—द्वादशभिर्गुणिताया हज्यायाः पूर्वानीतच्छेदेन हृताया यदिष्ट-मङ्गुलं प्राप्तं तत् ग्रहणकाले विधोः (चन्द्रस्य) स्फुटा छाया भवत्यन्यथाऽऽसन्ना (स्वल्पान्तरा) । अर्थाद्यदा चन्द्र सर्वग्रहणे उन्मीलनप्रदेश एव चन्द्रस्य दृष्टमण्डलीय ऊर्ध्वप्रदेशस्तदेव प्रकारेणानेन स्फुटा छाया भवितुमर्हत्यन्यथा स्थूलेत्याचार्य-कथनं युक्तियुक्तमिति ॥७॥

अत्रोपपत्तिः ।

मध्यमशङ्कु द्भवां दृग्ज्यां द्वादशभिर्गुणयित्वा पूर्वानीतेन चन्द्रस्फुटशङ्कुना विभजेत्तदाऽङ्गुलादिकं फलं चन्द्रग्रहणकाले तदीया सूक्ष्मा छाया भवति, अन्यथा मध्यमशङ्कुनेव छायासाधनेन स्थूलेति, सिद्धान्तशिरोमणौ भास्कराचार्येण “स्वभुक्ति तिथ्यंश विवर्जितोना महान् लघुः खाग्निकृतांशहीनः । स्पष्टो भवेदस्फुट जातदृग्ज्यासंताडितार्कः स्फुटशङ्कुभक्ता ॥ प्रभा भवे” दित्यादिना भास्करा-
चार्येण छाया साधनं स्फुटी कृतं तत्रत्यं स्थूल्यं च सिद्धान्ततत्त्वविवेके कमलाकरेण स्फुटं प्रतिपादितम् । सिद्धान्तशेखरे “अस्पष्टशङ्कुजनितां खलुदृष्टिजीवामभ्यस्य युग्मशशिभिर्विभजेन्नरेण । स्पष्टीकृतेन फलमङ्गुल पूर्वकं यत् सेन्दोः स्फुटा भवति भा निकटा ज्यथा तु ”नेन श्रीपतिना ऽऽचार्योक्तानुरूपमेवोक्तम् । परं छायायानयनं कस्यापि प्राचीनाचार्यस्य समीचीनं नास्तीति बुद्धिमद्भिर्ज्ञेयमिति ॥७॥

अब चन्द्र की स्फुटच्छाया के साधन-प्रकार को कहते हैं ।

हि.भा.—दृग्ज्या को चारह से गुणा कर पूर्वसाधित छेद (स्फुटशङ्कु.) से भाग देने से जो अङ्गुलादिक फल होता है वह ग्रहण काल में चन्द्र की स्फुटच्छाया होती है, अन्यथा मासन्न (स्वल्पान्तर, स्थूल) होती है अर्थात् जब चन्द्र के सर्व ग्रहण में उन्मीलन प्रदेश हो चन्द्र दृग्मण्डलीय ऊर्ध्व प्रदेश हो तब ही इस प्रकार से स्फुटच्छाया होती है अन्यथा स्थूल होती है यह आचार्य का कथन युक्ति युक्त है इति ॥७॥

उपपत्ति

सिद्धान्तशिरोमणि में ‘स्वभुक्ति तिथ्यंश विवर्जितोना’ इत्यादि सं. उपपत्ति में लिखित श्लोक से भास्कराचार्य ने जो छायायानयन किया है उसी से यह माचार्योक्त स्पष्ट है, भास्करोक्त छाया साधन में जो स्थूलता है वह सिद्धान्त तत्त्व विवेक में कमलाकर से सम्यक् प्रतिपादित है, सिद्धान्त शेखर में ‘अस्पष्ट शङ्कुजनितां खलु दृष्टिजीवां इत्यादि से’ श्रीपति आचार्योक्तानुरूप ही कहते हैं, लेकिन किसी भी प्राचीनाचार्य का छायायानयन ठीक नहीं है इसको विशदभाव विचार कर समझें इति. ॥७॥

इदानीं मध्यच्छायासाधनप्रकारमाह

स्पष्टापक्रमभागेर्मध्यच्छाया अर्कवच्छायाऽङ्कुस्य ।

अक्षिब्धभौमादीनामृक्षाणां तु स्वककुब्जसात् ॥८॥

सु. भा.—अर्कवच्छायाऽङ्कुस्य मध्यच्छायामध्याह्नच्छाया अर्धचाम्योत्तरवृत्तस्थे चन्द्रे तस्य स्पष्टापक्रमभागेः साध्या । अर्थाच्च या क्रान्त्यक्षांशसंस्कारेण खेर्मध्यनतांशा

उन्नतांशाश्च साधितास्ततः शङ्खवनुपातेन मध्यच्छाया त्रिप्रश्नाधिकारे साधिता तथैव चन्द्रस्पष्टापक्रमभागैर्याम्योत्तरवृत्तस्थे चन्द्रे तन्मध्यच्छाया साध्या शशिवद् भौमादीनां नक्षत्राणां च स्वककुब्जशात् स्पष्टापक्रमदिग्बशात् स्पष्टापक्रमांशेच्छाया साध्येत्यर्थः ॥८॥

वि. भा.—शशाङ्कस्या (चन्द्रस्य) ऊर्वत् (रविमध्यच्छाया साधन सहैव) स्पष्टापक्रमभागैः (स्फुटक्रान्त्यंशैः) छाया साध्या ऽर्थाद्यथा त्रिप्रश्नाधिकारे मध्यान्हकाले (याम्योत्तरवृत्तस्थे रवी) क्रान्त्यक्षांश संस्कारेण रवेर्नतांशा उन्नतांशाश्च साधितास्ततोऽनुपातेन मध्यच्छाया साधिता तथैव याम्योत्तरवृत्तस्थिते चन्द्रे तत्स्पष्टक्रान्त्यंशैर्मध्य-च्छाया साधनीया, भौमादीनां ग्रहाणां शशिवत् (चन्द्रच्छायानयनवत्) छायासाध्या, ऋक्षाणां (नक्षत्राणां) स्वककुब्जशात् (स्पष्टक्रान्तिदिग्बशात्) स्पष्टक्रान्त्यंशै-श्छायासाध्येति ॥८॥

श्रीपतिः ॥

चन्द्र भौमादीनां सर्वेषां ग्रहाणां नक्षत्राणां च छाया साधनार्थं सर्वयैवेक युक्तित्वात्सुगमेति सिद्धान्तशेखरे “स्वक्रान्तिभागैः शशिनो दिनार्धच्छायाश्रुतीभास्कर वत् प्रसाध्ये । भौमादिकानां च नभश्चराणां शशाङ्कवत् स्वध्रुवकाच्च भानाम्” श्रीपतिरेवं कथितवान् ॥८॥

अब मध्यच्छाया के साधन-प्रकार को कहते हैं ।

हि. भा.—रवि के मध्यच्छायानयन के सहस्र ही चन्द्र के स्फुटक्रान्त्यंश से मध्यच्छाया-साधन करना अर्थात् जैसे त्रिप्रश्नाधिकार में मध्यान्ह काल में (याम्योत्तर वृत्त में रवि के रहने से) क्रान्त्यंश और अक्षांश के संस्कार से रवि का नतांश और उन्नतांश साधन किया गया है और उससे शङ्खवनुपातद्वारा मध्यच्छाया का साधन किया गया है उसी तरह याम्योत्तर वृत्त में चन्द्र के रहने से उनके स्पष्ट क्रान्त्यंश से मध्यच्छाया का साधन करना चाहिये । चन्द्रच्छायानयन के सहस्र ही मङ्गलादि ग्रहों के छाया साधन करना, नक्षत्रों के स्पष्ट क्रान्ति दिशावश से स्पष्ट क्रान्त्यंश से छाया साधन करना चाहिये. इति ॥८॥

श्रीपति

चन्द्र और भौमादि सब ग्रहों के तथा नक्षत्रों के छाया साधन सर्वथा एक ही युक्ति से होने के कारण सुगम ही हैं, सिद्धान्त शेखर में “स्वक्रान्ति भागैः शशिनो दिनार्धच्छायाश्रुतीभास्करवत् प्रसाध्ये” श्रीपति इस तरह कहते हैं इति ॥८॥

इदानीमध्यायोपसंहारमाह ।

सिद्धान्तशेखरपाठः सम्भाव्यते इति ॥१-२॥

ग्रहयुत्यधिकार प्रारम्भ किया जाता है । उसमें पहले ग्रहों की मध्यम शर कला को
और मध्यमबिम्बकला को कहते हैं ।

हि. भा.— ११०, १५२, ७६, १३६, १३० ये क्रमशः कुजादि ग्रहों की मध्यम शर
कला हैं तथा ८१ कला को उदयास्ताधिकार में पठित कुजादि ग्रहों के दृश्यांश (कालांश) से
भाग देने से लब्धि तुल्य कुजादि ग्रहों की मध्यम बिम्बकला होती है 'विक्षेपलिप्ताः क्षितिजा-
दिकानाम्, इत्यादि तथा 'व्यङ्ग्रीषवः सचरणा ऋतवः, इत्यादि भास्कराचार्योक्ति आचार्योक्ति
के अनुरूप ही है ।

आचार्य मत से उदयास्ताधिकार में पठित कुजादि ग्रहों के दृश्यांश (कालांश) को लेकर कुजादि ग्रहों की मध्यम बिम्बकला अधोलिखित है, कु = $\frac{51}{17} = 3' 14''$,

$$बु = \frac{51}{13} = 3' 54'', गु = \frac{51}{11} = 4' 38'', शु = \frac{51}{8} = 6' 15''$$

$$श = \frac{51}{15} = 3' 24'' \text{ इस तरह निष्पन्न मध्यम बिम्बकला =}$$

$$\text{कु} = 3' 14'', \text{ बु} = 3' 54'', \text{ गु} = 4' 38'', \text{ शु} = 6' 15'', \text{ श} = 3' 24''$$

भास्कराचार्य के मत से कु = 3' 14'', बु = 3' 15'', गु = 4' 20'', शु = 5' 10'', श = 3' 20''

सिद्धान्तशेखर में कुजादि ग्रहों की पठित शरकला ये हैं, कु = ११० कला, बु = १५२ कला, गु = २६ कला यहां गुरु की शर कला ८६ आचार्योंक्त वा भास्करोक्त गुरु की शर कला ७६ से अन्तरित है ॥ इति १-२ ॥

मानेनाऽऽसन्नत्वादवेरिति कल्पना कृता सा न युक्तिसङ्गतेतिविज्ञेयम् ॥ १३४॥

अब ग्रह बिम्बकला के स्फुटीकरण को कहते हैं ।

ह.भा.—त्रिज्या में त्रिगुणित अन्त्यफलज्या को जोड़कर अन्त्यकर्ण (शिघरीभूत शीघ्रकर्ण) को घटा देना फिर सहाइस से गुणा कर अपने कालांश से गुणित अन्त्य-फलज्या से भाग देने से कुज, बुध, गुरु, शुक्र और शनैश्वर की स्फुट मानकला होती है, रवि से अबः (नीचा) स्थित बुध और शुक्र के रवि के निकट (समीप) में रहने के कारण चन्द्र की तरह असित (कृष्ण) नहीं होता है इति ॥३०४॥

उपपत्ति

उच्च स्थान में ग्रह बिम्ब के रहने से मध्यम बिम्बमान के तृतीयांश तुल्य अपचय होता है, तथा नीच स्थान में ग्रह बिम्ब के रहने से मध्यम बिम्बमान के तृतीयांश तुल्य उपचय होता है, इसलिए इन दोनों (उच्च और नीच) के अन्तर में अनुपात करते हैं । यदि अन्त्य-फलज्या तुल्य त्रिज्या और शीघ्र कर्ण के अन्तर में बिम्बमान के तृतीयांशतुल्य उपचय और अपचय पाते हैं तो त्रिज्या और इष्ट शीघ्र कर्ण के अन्तर में क्या इससे जो फल आता है उसको त्रिज्या से अधिक शीघ्र कर्ण रहने से मध्यम बिम्ब में से घटा देना, त्रिज्या से अल्प शीघ्र कर्ण रहने से मध्यम बिम्ब में जोड़ देना तब स्फुट मानकला होती है । जैसे—

$$\text{मवि—} \frac{\text{मवि (शीक—त्रि)}}{३ \text{ अंफज्या}} = \text{स्फुटमानकला} = \frac{\text{मवि}}{३ \text{ अंफज्या}} (३ \text{ अंफज्या} + \text{त्रि—शीक})$$

$$= \text{मवि} + \frac{\text{मवि (त्रि—शीक)}}{३ \text{ अंफज्या}} = \frac{\text{मवि}}{३ \text{ अंफज्या}} (३ \text{ अंफज्या} + \text{त्रि—शीक})$$

$$\text{मध्यम बिम्बकला} = \frac{८१}{\text{कालांश}}, \text{ इससे उत्थापन देने से स्फुट बिम्बकला}$$

$$= \frac{२७ (३ \text{ अंफज्या} + \text{त्रि—शीक})}{\text{अंफज्या} \cdot \text{कालांश}}$$

इससे आचार्योक्त उपपन्न हुआ । इसी से भास्कराचार्योक्त स्फुटबिम्बमान कला-नयन भी उपपन्न होता है, सिद्धान्त शेखर में श्रीपति “त्रिगुण्याऽन्त्यफलोद्भव जीवया इत्यादि” सं- उपपत्ति में लिखित श्लोकों से आचार्योक्त के अनुरूप ही कहा है । लेकिन यह मानयन ठीक नहीं है, क्योंकि उच्चस्थानीय और मध्यस्थानीय बिम्बकलाज्या के अन्तर के तुल्य ही नीच स्थानीय और मध्य स्थानीय बिम्ब कलाज्या के अन्तर आचार्य ने स्वीकार किये हैं जो ठीक नहीं है, जैसे—

$$\text{आचार्य संमत उच्च स्थानीयबिम्ब कलाज्या} = \frac{\text{त्रि. विव्या}}{\text{त्रि} + \text{अंफज्या}} \cdot \frac{\text{त्रि. विव्या}}{\text{उकर्ण}},$$

$$\text{मध्यस्थानीय बिम्बकलाज्या} = \text{विव्या}, \text{ तथा नीचस्थानीय बिम्ब कलाज्या} = \frac{\text{त्रि. विव्या}}{\text{नीकर्ण}}$$

$$\frac{\text{त्रि० विव्या}}{\text{त्रि — अंफज्या}}$$

तब आचार्य स्वीकृति से मध्यस्थानीय विकज्या—उच्चस्थायिकज्या=नीचिकज्या—

$$\text{मध्यस्थायिकज्या} = \text{विव्या} - \frac{\text{त्रि विव्या}}{\text{त्रि + अंफज्या}} = \frac{\text{त्रि विव्या}}{\text{त्रि अंफज्या}} - \text{विव्या}$$

$$= \frac{\text{त्रि० विव्या} + \text{विव्या० अंफज्या} - \text{त्रि विव्या}}{\text{त्रि + अंफज्या}}$$

$$= \frac{\text{त्रि० विव्या} - \text{त्रि० विव्या} + \text{विव्या० अंफज्या}}{\text{त्रि — अंफज्या}}$$

$$= \frac{\text{विव्या० अंफज्या}}{\text{त्रि + अंफज्या}} = \frac{\text{विव्या० अंफज्या}}{\text{त्रि — अंफज्या}} \text{ प्रपवर्तन देने से } \frac{?}{\text{त्रि + अंफज्या}} = \frac{?}{\text{त्रि — अंफज्या}}$$

∴ त्रि—अंफज्या=त्रि+अंफज्या, तुल्य जोड़ने से त्रि+अंफज्या+अंफज्या

$$= \text{त्रि} + २\text{अंफज्या} = \text{त्रि}$$

∴ २अंफज्या=त्रि—त्रि=० दो से भाग देने से अंफज्या=०, पूर्वोक्त आचार्यस्वीकृति से अन्त्यफलज्या का मान शून्य आया यह अयुक्त आया इसलिये आचार्योक्त स्फुट बिम्ब कला-नयन ठीक नहीं है यह सिद्ध हुआ। बुध और शुक्र के भी चन्द्र ही की तरह शृङ्गोन्नति-दर्शन और सित के उपचयत्व और अपचयत्व आधुनिक सूक्ष्म दूरदर्शक यन्त्रवल से उपलब्ध होता है दृष्टि से उसको आचार्य ने उपलब्ध नहीं किया क्योंकि उस समय (आचार्य के समय) में उस तरह के यन्त्र का प्रभाव था इसलिए अनुमान से 'आसन्नत्वाद्भवे' यह कल्पना की गयी जो युक्तियुक्त नहीं है इति ॥३-४॥

अथ युति काल ज्ञानार्थं चालन फल ज्ञानार्थं चाह ।

लिप्तिकौघाद् गत्योर्वियोगेन हृतादित्यादिना" ऽऽचार्योक्तानुरूपमेवोक्तं, सिद्धान्त-
शेखरे श्रीपतिनापि "भुक्त्यन्तरेण विवरे ग्रहयोर्विभक्ते मार्गस्थयोः कुटिलयोरपि
भिन्नगत्योरित्यादिना" तथैवोक्तमिति विज्ञैश्चिन्त्यम् । ५-६

अब युतिकाल तथा चालनफल के ज्ञान के लिए कहते हैं ।

हि. भा. ग्रहान्तर कला को मार्गगति ग्रहद्वय के गत्यन्तर से भाग देने से फल दिन
होवे है । अधिक गतिग्रह अल्पगति ग्रह से अधिक रहे तब पूर्वगत दिनों में ग्रहयुति गत

समझनी चाहिये । यदि ग्रहगतिग्रह अधिक गतिग्रह से अधिक हो तब पूर्व विधि से समागत दिनों में ग्रहयुति एव्य समझनी चाहिये । दोनों ग्रह वक्री रहें तब विपरीत होता है अर्थात् पूर्वोक्त गत लक्षण को एव्य तथा एव्य लक्षण को गत समझना चाहिये, यदि दोनों ग्रहों में एक ग्रह वक्री हो तब ग्रहान्तर को गतियोग से भाग देने से लब्ध दिन होते हैं । यदि भाग-गति ग्रह से वक्री ग्रह प्रत्य हो तब पूर्व लब्ध दिनों में युति गत कहनी चाहिये, यदि अधिक हो तो एव्य समझनी चाहिए ग्रहान्तर कला को पूर्वांकस्थित स्थिति के अनुसार ग्रहगति के अन्तर वा योग से भाग देना फल को अपनी गति से गुणने से चालन फल कला होती है इति ॥ ५-६ ॥

उपपत्ति

एक दिशा में चलने वाले दो ग्रहों का गत्यन्तर ही प्रत्येक दिन में अन्तर होता है, यदि दोनों ग्रहों में एक ग्रह पूर्व दिशा में चले और दूसरा ग्रह पश्चिम दिशा में तब दोनों की गति का योग करने से अन्तरज्ञान होता है । तब अनुपात करते हैं । यदि गत्यन्तर कला में एक दिन पाते हैं तो ग्रहान्तर कला में क्या इससे जो लब्ध दिन हो उतने दिन पहले युति कहनी चाहिये । क्योंकि ग्रहगति ग्रह के अधिक गतिग्रह ने न्यून रहने से वा वक्री ग्रह के न्यून रहने से दूसरे ग्रह उसको अतिक्रमण कर आगे चले जाते हैं । दोनों ग्रहों के वक्री रहने से इससे विपरीत होता है, अब चालन फल के लिये अनुपात करते हैं यदि गत्यन्तर कला वा गतियोग-कला में एक दिन पाते हैं तो ग्रहान्तर कला में क्या इससे ग्रहान्तर कला सम्बन्धी दिन आते हैं तब पुनः अनुपात करते हैं, एक दिन में यदि ग्रहगतिकला पाते हैं तो ग्रहान्तर-कला सम्बन्धी दिनों में क्या इससे ग्रहान्तर कला सम्बन्धी दिन जनित ग्रहगति आती है इसके संस्कार के लिये आगे के श्लोक में आचार्य व्यवस्था करते हैं । 'सिद्धान्त शिरोमणि' में भास्कराचार्य "दिवोक्तोरन्तर लिप्तिकौघात्" इत्यादि से आचार्योक्तानुरूप ही कहते हैं । सिद्धान्त शेखर में 'भुक्त्यन्तरेण विवरे ग्रहयो विभवते इत्यादि से' श्रीपति भी उसी तरह कहते हैं इति ॥ ५-६ ॥

इदानीं चालनफलसंस्कार द्वारा ग्रहयोः समलिप्तोत्तरणार्थमाह

स्वफलमूणं प्राक् पश्चाच्चतौ घनं वक्रिणि व्यस्तम् ।

समलिप्तौ बुधसित शीघ्रचन्द्रपातेषु च स्वफलम् ॥ ७ ॥

सु. भा.— प्राग्गतौ (गतेयोगे) स्वफलं पूर्वागतमूणं पश्चाच्चतुर्भावेभ्ययोगे घनं भवति । वक्रिणि ग्रहे च चालनं व्यस्तं देयं गतयोगे घनमेभ्ययोगे ऋणमित्यर्थः । एवं ग्रहौ युतौ समलिप्तौ तुल्यौ भवतः । एवं यदि केनापि ग्रहेण सह बुध-शुक्रचन्द्रा युति कुर्वन्ति तदा बुधशुक्र शीघ्रोच्चयोश्चन्द्रपाते पूर्वागतं स्वचालन-फलं देयं ।

अत्रोपपत्तिः । चालनघनर्णस्याति सुगमा बुधशुक्रयोः शरानयनं तच्छीघ्रोच्च-
वशाद्भवति । चन्द्रपातस्य च गतिर्देनन्दिनी वर्ततेऽतस्तेषु शरज्ञानाय चाल
युतिकालेऽत्यावश्यकम् । अन्येषां पातानां गतिश्च वर्षशतेनापि नोपलक्ष्यतेऽतस्त
चालनं युतिकाले शून्यमेवेति सर्वं स्फुटम् ॥ ७ ॥

वि. भा.— प्राग्युतौ (गते योगे) स्वफलं “ग्रहयोरन्तरलिप्तास्तथैव भक्ताः
स्वभुक्तिगुणा इत्यनेनाऽऽनीतं चालनफलं” ऋणं पश्चाद्युतौ (एष्य योगे)
चालनफलं घनं भवति, वक्रिणि ग्रहे चालनफलं व्यस्तं (विपरीतं) देय-
मर्थाद्गतयोगे घनमेष्ययोगे च ऋणं तदायुतौ ग्रहौ समलिप्तौ (राश्वंश
कलाभिस्तुल्यौ) भवतः । यदि बुधशुक्रचन्द्राः केनापि ग्रहेण सह युतिं कुर्युस्तदा
बुधशुक्रशीघ्रोच्चयोश्चन्द्रपाते च स्वफलं (स्वचालन फलं) देयमिति ॥ ७ ॥

अत्रोपपत्तिः

चालनफलस्य घनर्णत्वमिति सुगमम् । बुधशुक्रयोः शरसाधनं तच्छी-
घ्रोच्च वशाद् भवति, चन्द्रपातस्य देनन्दिनी गतिरस्त्यतो युतिकाले शरज्ञानार्थं
तेषु चालनमत्यावश्यकम् । अन्येषां पातानां गतिर्वर्षशतेनापि नोपलक्ष्यतेऽतो
युतिकाले तच्चालनं शून्यमेवेति । सिद्धान्त शेखरे “योगे गते फलमृणं ग्रहयो-
र्विधेयं गम्येघनं कुटिलयोर्विपरीत मन्त्रेऽनेन” श्रोपतिनापि चालन फलस्य
घनर्णत्वमाचार्योक्तानुरूपमेवोक्तमिति ॥ ७ ॥

अब चालनफल के घनत्व और ऋणत्व के विषय में कहते हैं

हि. भा.— गतयोग में “ग्रहयोरन्तरलिप्तास्तथैव भक्ता इत्यादि” से आनीत
चालन फल ऋण होता है, एष्य योग में चालन फल घन होता है । वक्रि ग्रह में चालन फल
विपरीत (उल्टा) होता है अर्थात् गत योग में घन और एष्य योग में ऋण इस तरह
युतिकाल में ग्रहद्वय समजितिक (राशि-प्रंश-कला करके तुल्य) होते हैं । यदि बुध शुक्र और
चन्द्र किसी ग्रह के साथ युति (योग) करें तो बुध और शुक्र के शीघ्रोच्चों में और चन्द्रपात
में भी अपना अपना चालनफल देना चाहिये अर्थात् चालनफल का संस्कार करना चाहिये
इति ॥

उपपत्ति

चालन फल की घनर्णता की उपपत्ति अति सुगम है, बुध और शुक्र के शर साधन
उनके शीघ्रोच्च वश से होता है, चन्द्रपात की दैनिक (एक दिन सम्बन्धी) गति है इसलिये
युतिकाल में शर साधन के लिये उनमें चालन देना अत्यावश्यक है, अन्य ग्रहों के पातों की
गति दो वर्ष में भी नहीं लक्षित होती है इसलिये युतिकाल में उनका चालन फल शून्य ही
होता है, सिद्धान्त शेखर में “योगे गते फलमृणं ग्रहयोर्विधेयं” इत्यादि से श्रोपति भी
वाचन फल की घनर्णता आचार्योक्तानुरूप ही कहते हैं इति ॥ ७ ॥

इदानीं स्फुटपातानयनमाह

बुधसितपातेऽव्यस्तं मन्दफलमुपान्त्यशीघ्रफलम् ।

माचार्योक्तसदृशमेव, सूर्यसिद्धान्तकारमते पाते व्यस्तं देयमिति सिध्यति पातस्य
चक्राद्विशोधनादिति ॥८॥

अब स्फुट पातानयन को कहते हैं

हि. भा.—बुध और शुक्र के गणितागत पात में मन्द फल को यथागत घन या
ऋण देना चाहिये, और शीघ्रफल को विपरीत देना चाहिये । तब दोनों (बुध और शुक्र)
के स्फुट पात होते हैं । शेष ग्रहों (भौम, गुरु, और शनैश्चर) के पातों में केवल शीघ्रफल
को विपरीत देना चाहिये तब उन सबों के स्फुट पात होते हैं । उस मध्यग्रह योग रहित
स्फुटपात से शर साधन करना चाहिये अर्थात् स्फुटपात में स्फुट ग्रह को जोड़ कर जो हो
उससे शर साधन करना ; बुध और शुक्र के शर साधन के लिये उन दोनों के शीघ्रोच्चों में
यथागत स्फुट शीघ्र फल को संस्कार कर शीघ्रोच्च को स्पष्ट करना चाहिये, तब स्व-स्व
स्फुट पात सहित स्फुट शीघ्रोच्चों से शरानयन करना चाहिये इति ॥८॥

उपपत्ति

ग्रहगोल में क्रान्तिवृत्त और विमण्डल के सम्पात बिन्दु पात हैं, मेवादि से पात
विशोम चलता है तथा मन्दस्पष्टग्रह अनुलोम चलता है इसलिये दोनों का अन्तर
दोनों के योग करने से पात स्थान से मन्द स्पष्ट ग्रहपर्यन्त होता है, विपरीत शीघ्रफल संस्कृत
स्फुटग्रह मन्दस्पष्ट ग्रह होते हैं । यहाँ पात में विपरीत शीघ्र फल का संस्कार कर उससे

(विपरीत शीघ्रफल संस्कृत पात से) रहित स्फुट ग्रह मन्द स्पष्ट ग्रह होते हैं । बुध और शुक्र के जो पात भगण पठित हैं उनमें दोनों के शीघ्र केन्द्र भगणों को जोड़ने से वास्तव पात भगण होते हैं । वहाँ लाभ के लिये स्वल्प ही पठित है, यह प्राचीनों की उक्ति है । सिद्धान्त शिरोमणि में “ये चात्र पातभगणाः पठिता जभृग्वोस्ते शीघ्र केन्द्र भगणाः” इत्यादि सं. उपपत्ति में लिखित श्लोकों से भास्कराचार्य ने अपना मत प्रदर्शित किया है ।

बुध या शुक्र के पात = पा, इसमें मध्यम शीघ्र केन्द्र को जोड़ने से वास्तव पात होता है, पा + मशीके = वास्तव पात उच्च में से मध्यमग्रह को घटाने पर मध्यम शीघ्र केन्द्र होता है, परन्तु मध्यमग्रह = विपरीत मन्द फल संस्कृत मन्द स्पष्टग्र । यहाँ यदि मन्द फल को घन माना जाय तब मध्यग्रह = मन्दस्पग्र = मन्दफ, इसलिए मध्यशीके = शीउ — मंस्पग्र + मन्दफ इसलिये बुध और शुक्र के वास्तव पात = — पा + मशीके = — पा + शीउ — मन्दस्पग्र + मन्दफ, अतः सपातमन्दस्पष्टग्रह = शरसाधनार्थं भुजांश = — पा + मंस्पग्र = पा + शीउ — मंस्पग्र + मन्दफ + मंस्पग्र = — पा + शीउ + मन्दफ = शीउ — (पा — मन्दफ) = विक्षेपकेन्द्र, इससे बुध और शुक्र का विक्षेपकेन्द्रानयन उपपन्न होता है । अतः अपने वाचना भाष्य में “किंच मन्द स्फुटोऽनं शीघ्रोच्चं प्रतिमण्डले केन्द्रम्” यहाँ से “पातेऽव्यस्तं-देयम्” यहाँ तक संस्कृतोपपत्ति में लिखित भाष्य से” भास्कराचार्य ने प्राचार्योक्त के सहस्र ही कहा है, सूर्य सिद्धान्तकार के मत में “पाते व्यस्तं देयम्” यह सिद्ध होता है क्योंकि उनके मत में पात को चक्र (द्वादशराशि) में घटा देने से पात है इति ॥ ८ ॥

अथ गणितागतादेव पातान्मध्यमसंज्ञकाच्छरसाधनोपायमाह ।

मन्दफल स्फुटशशिनो विक्षेपो भौमजीवरविजानाम् ।

मन्दफलाव्यस्तस्फुटशीघ्राद्बुधशुक्रयोरथवा ॥ ९ ॥

सु. भा.—अथवा मन्दफल स्फुट शशिनो मन्दस्पष्टचन्द्रस्य तथा भौमजीवर-विजानां मन्दस्पष्टकुजगुरुशनीनां गणितागतात् पातादेव विक्षेपः साध्यः । बुधशुक्रयोश्च मन्दफलाव्यस्तस्फुटशीघ्राद्यथागतमन्दफलसंस्कृतशीघ्रोच्चा-दगणितागतपाताच्च शरः साध्यः । इति सर्वपूर्वं प्रदर्शितभास्करवचनतः स्फुटम् ॥ ९ ॥

वि. भा.—अथवा मन्दफलस्फुटशशिनः (मन्दस्पष्टचन्द्रस्य) तथा भौमजीवरविजानां (मन्दस्पष्टभौमगुरुशनीनां). गणितागतात्पातादेव विक्षेपः (शरः) साध्यः । बुधशुक्रयोर्मन्दफलाव्यस्तस्फुटशीघ्रादर्थव्यथागतमन्दफल-संस्कृतशीघ्रोच्चाद्गणितागतपाताच्च शरः साध्य इति ॥ ९ ॥

अत्रोपपत्तिः

सिद्धान्त शिरोमणौ “मन्द स्फुटो द्राक् प्रति मण्डले हि ब्रह्मो भ्रमत्यत्र च तस्य पातः। पातेन युक्ताद् गणितागतेन मन्दस्फुटात् खेचरतः शरोऽस्मात् ॥ पातेऽथवा शीघ्रफलं विलोमं कृत्वा स्फुटात्तेन युताच्छरोऽतः। चन्द्रस्य कक्षाबलये हि पातः स्फुटाद्विघ्नोर्मध्यमपातयुक्तात् एभिस्तथा ये चात्र पातभगणाः पठिता जभृग्वोरित्यादि पूर्वश्लोकोपपत्तौ लिखित भास्कराचार्योक्तवचनैस्तद्वासना-भाष्याच्च ज्ञातव्या, सिद्धान्त श्रेष्ठरे श्रीपतिना “मृदुफल स्फुट गुर्विजासृजां शशधरस्य च बोधन शुक्रयोः। अपरथा कृत मन्द फलाच्चलात् कथितवत् क्रियते शरसाधनम्” ज्ञेनाऽऽचार्योक्तानुरूपमेवोक्तमिति ॥ ६ ॥

अब गणितागत पात ही से शरसाधन में विशेष कहते हैं

हि. भा.— मन्दस्पष्ट चन्द्र के तथा मन्दस्पष्ट कुज, गुरु और शनैश्चर के गणिता-गत पात ही से शरसाधन करना चाहिये, बुध और शुक्र के यथागत मन्दफल संस्कृत शीघ्रोच्च से तथा गणितागत पात से शरसाधन करना चाहिये इति ॥ ६ ॥

उपपत्ति

अब युतिकाल में ग्रह के शरसाधन को कहते हैं ।

हि.भा.—अपने पाठसहित युतिकालिक मन्दस्पष्टग्रह से तथा स्वपाठपुस्तक

बुधशीघ्रोच्च और शुक्रशीघ्रोच्च से जो ज्या (सपातमन्दस्पष्टग्रहभुजज्या, सपात बुधशीघ्रोच्चज्या, सपात शुक्रशीघ्रोच्चज्या) हो उनको ग्रहगोलीय पठितशर (परमशर) से गुणा कर स्थिरीभूत शीघ्र कर्ण से भाग देने से स्फुटशर (भगोलीयेष्टशर) होता है ॥१०॥

उपपत्ति

ग्रहगोल में क्रान्तिवृत्त और विमण्डल के सम्पात बिन्दु पात संज्ञक हैं, पातस्थान में ग्रह के रहने से शर (ग्रहबिम्ब केन्द्रोपरिगत कदम्ब प्रोतवृत्त क्रान्तिवृत्त में जहाँ लगता है वह ग्रह स्थान है, स्थान से बिम्ब केन्द्र तक) का भ्रमाव होता है, पात स्थान से तीन राशि पर ग्रह के रहने से परमशर होता है, पातस्थान से मन्दस्पष्ट ग्रहपर्यन्त सपात-मन्दस्पष्ट ग्रह है, पातस्थान से बिम्ब केन्द्रपर्यन्त विमण्डल में कर्णचाप, बिम्बकेन्द्रोपरिगत कदम्ब प्रोत वृत्त में स्थान से बिम्बकेन्द्रतक शर भुज, ग्रहस्थान से पातस्थान पर्यन्त (सपातमन्दस्पष्टग्रहभुज) क्रान्ति वृत्त में कोटि, इन तीनों कर्णभुज कोटिचापों से उत्पन्न चापजात्य में क्रान्ति वृत्त और विमण्डल से उत्पन्न पातस्थान लग्नकोण = पाठपठित परमशर,

$$\text{तब कोणानुपात से } \frac{\text{ग्रहगोलीय परमशरज्या} \times \text{सपातमन्दस्पष्टभुजज्या}}{\text{त्रि}} = \text{ग्रहगोलीयेष्टशरज्या}$$

$$\text{स्वल्पात्तराज्याचापयोरभेदात् } \frac{\text{प्रगोलीय परमशर} \times \text{सपातमन्दस्पष्टभुजज्या}}{\text{त्रि}} = \text{ग्रहगोलीयेष्टशर}$$

यहां विमण्डलीय भुजज्या रूप कर्ण विदित नहीं है, क्रान्तिवृत्तीय सपात मन्दस्पष्टग्रह भुजज्या विदित है इसलिये क्रान्तिवृत्तीयसपातमन्दस्पष्टग्रहभुजज्या ही से प्राचीनाचार्यों ने जो इष्ट शरानयन किया है वह ठीक नहीं है, तब यदि शीघ्र कर्ण में ग्रह गोलीयेष्टशर पाते हैं तो

$$\text{त्रिज्या में क्या इस अनुपात से भगोल में इष्टशर आता है, जैसे } \frac{\text{ग्रहगो इष्टशर} \times \text{त्रि}}{\text{शीक}}$$

$$= \frac{\text{ग्रगोपरमशर} \times \text{सपात मन्दस्पष्टभुजज्या} \times \text{त्रि}}{\text{त्रि} \times \text{शीक}} = \frac{\text{ग्रगो परमशर} \times \text{सपातमन्दस्पष्टभुजज्या}}{\text{शीक}}$$

= भगोलीयेष्टशर, यह भी भगोलीयेष्टशर ठीक नहीं है क्योंकि पूर्वोक्तकर्णानुपात ठीक नहीं है। सिद्धान्त तत्व विवेक में 'साधित स्फुटग्रह विमण्डल में आते हैं' कमलाकर कहते हैं सो ठीक नहीं है, गणित से साधित स्फुटग्रह क्रान्तिवृत्त ही में आते हैं क्योंकि क्रान्तिवृत्त धरातल से कटित तलद् ग्रहगोल के कटित प्रदेश वृत्ताकार (शीघ्र प्रतिवृत्तरूप) तलद् ग्रहगोल में होता है उसी (कटित प्रदेश रूप शीघ्र प्रति वृत्त) में फलादि की व्यवस्था हो सकती है। विमण्डल में साधित स्फुट ग्रहों को स्वीकार करने से फलादि की व्यवस्था नहीं हो सकती है क्योंकि प्रत्येक ग्रहगोल में विमण्डल धरातल भिन्न भिन्न है, इसलिये साधित स्फुटग्रह क्रान्ति वृत्तीय ही होते हैं यह प्राचीनों का कथन युक्तियुक्त है, कमलाकर का कथन यहां पर ठीक नहीं है। सूर्यसिद्धान्त में "स्वपातोत्ताद् ग्रहाज्जीवा, इत्यादि सं० उपपत्ति में लिखित

श्लोक से" आचार्योक्त के अनुरूप ही कहा गया है, मेषादि से पात विलोम चलता है और मन्द स्पष्टग्रह अनुलोम चलते हैं इसलिये दोनों का अन्तर योग करने से होता है लेकिन सूर्य सिद्धान्तकार ने पात को चक्र में से घटा दिया है सूर्यसिद्धान्तोक्त विपात मन्दस्पष्टग्रह आचार्योक्त सपात मन्दस्पष्ट ग्रह के बराबर होते हैं, उसी को शर साधन के लिये विक्षेप केन्द्र कहते हैं। सिद्धान्त शेखर में "समकल ग्रह पात समागताद् इत्यादि सं उपपत्ति में लिखित श्लोक से श्रीपति, तथा सिद्धान्त शिरोमणि में भास्कराचार्य भी "मन्दस्फुटाद् विक्षेपः स्वपातयुक्ताद्, इत्यादि सं उपपत्ति में लिखित श्लोक से आचार्योक्तानुरूप ही कहते हैं। लेकिन यह भगोलिये पटशरानयन किसी का ठीक नहीं है यह पूर्व कथित उपपत्ति से स्फुट है इति ॥१०॥

प्राचीनाचार्यों ने भगोल में विमण्डल को वृत्ताकार मान कर इष्टशरानयन किया है लेकिन भगोल में विमण्डल की आकृति वृत्ताकार होती है या नहीं इसके लिये विचार करते हैं। भूकेन्द्र से ग्रहगोलीय विमण्डलाधारा सूची विषम सूची होती है, उसको भगोल से काटने से जैसा वक्र बनेगा वैसा ही भगोल में विमण्डल होता है। भूकेन्द्र से ग्रहगोलीय विमण्डलाधारा विषम सूची में स्थिर त्रिभुज घरातल और विमण्डल घरातल की योगरेखा विमण्डल की व्यास रेखा है। इसके अर्धबिन्दु से कितने अन्तर पर उसके ऊपर लम्बरूपिणी पूर्णज्या प्रगत समकर्णद्वयोत्पन्न कोण परम होता है उसका मान = y मानते हैं, ये दोनों कर्ण परमात्म कर्ण और परमाधिक कर्णों से तुल्यान्तर में होते हैं, अनेक कर्णों से इस तरह की स्थिति बनती है, उन में किन दो कर्णों से उत्पन्न कोण परम होता है इसके लिये विचार करते हैं।

संस्कृतोपपत्ति में लिखित (क) क्षेत्र को देखिये। इन = अ। तब सूचइ त्रिभुज में "भूस्समुखास्त्रोद्भवकोटिशिञ्जिनी" इत्यादि से $y^2 + क^2 = २$ इको.क.य = y^2 , यहां इको इष्टकोणकोटिज्या, तथा अ = $y^2 =$ तत्स्थानीय पूर्णज्या^२, इन दोनों का योग करने से तत्स्थानीयकर्णवर्ग = $क^2 = क^2 + अ = २$ इको.य.क = इष्टकोणज्या, तब अनुपात से $\frac{अ - य^2}{क^2 + अ - २ इको.य.क} = इकोज्या^2$ इस का परमतत्व तब ही होगा जब उसकी तात्कालिकवर्ति धून्य होगी, इस तरह मानने से - y २ताय $(अ^2 + क^2 - २इको.य^2.क) + इको.क$ २ताय $(अ^2 - के^2) = ०$ यहां चल राशि केवल y है, अपवर्तित करने से

$$-y(अ^2 + क^2) + य^2.इको.२क - इको.य^2.क = -इको.अ^2 = -y(अ^2 + क^2) + य^2.इको.क = इको.क.अ^2$$

$$\frac{य^2(अ^2 + क^2)}{इको.क} + य^2 = -अ^2, \text{ वगं पूर्ति करने से } -\frac{य(अ^2 + क^2)}{इको.क} + य^2 +$$

$$\left(\frac{अ^2 + क^2}{२ इको.क}\right)^2 = -अ^2 + \left(\frac{अ^2 + क^2}{२ इको.क}\right)^2 \text{ मूलग्रहण से य } -\frac{अ^2 + क^2}{(२ इको.क)^2} =$$

$$\sqrt{\frac{(अ^2 \pm क^2) - अ^2 (२ इको. क)^2}{(२ इको. क)^2}} \text{ वर्गान्तर योगान्तर घात के बराबर होता है इसलिए}$$

$$\sqrt{\frac{(अ^2 + क^2 - २ अ. क. इको.) \cdot (अ^2 + क^2 + २ इको. अ. क.)}{(२ इको. क)^2}}, \therefore अ^2 + क^2 -$$

$$२ अ. क. इको = परमाल्पक^2, \text{ तथा } अ^2 + क^2 + २ अ. क. इको = परमाधिक^2$$

$$\therefore य = \frac{अ^2 + क^2}{२ इको. क} = \frac{\text{परमाल्पक. परमाधिक}}{२ इको. क} \text{ दोनों पक्षों में तुल्य जोड़ने से}$$

$$य = \frac{अ^2 + क^2 + \text{परमाल्पक. परमाधिक}}{२ इको. क}, \text{ यतः } अ^2 + क^2 = \frac{\text{परमाल्पक}^2 + \text{परमाधिक}^2}{२}, \text{ तथा}$$

$$क = \text{माधारार्धगामिनी रेखा},$$

$$\text{अतः } \frac{\text{परमाल्पक}^2 + \text{परमाधिक}^2 + २ \text{ परमाल्पक. परमाधिक.}}{४ इको. क} = \frac{(\text{परमाल्पक} + \text{परमाधिक})^2}{४ इको. क}$$

$$= य, \text{ इससे पूर्वोक्त सिद्ध हुआ ।}$$

परमाल्पकर्ण और परमाधिक कर्ण से उत्पन्न कोण की अर्ध कारिणी रेखा माधार-वृत्त व्यास में जहां लगती है वह बिन्दु केन्द्र से कितने अन्तर पर होता है इसका उत्तर बहुत सुलभता से होता है इसको विज्ञ लोग स्वयं विचार कर समझें ।

अवशिष्ट के लिये विचार करते हैं ।

$$\angle गकघ = \angle अ, \angle गकच = \frac{अ}{२} \text{ कच असरेखा गघ माधार में जहां लगती है}$$

उक्त बिन्दु से उस रेखा के ऊपर लम्बरूप पूर्णज्या जो होती है उसके वर्ग को लाते हैं ।

$$\frac{\text{कच. ज्या}^2}{२}$$

$$\text{माधारलग्न कोणद्वय ग, घ है, तब अनुपात से } \frac{\text{ज्याम}}{\text{ज्याम}} = गच, \text{ तथा ज्याघ कच ज्या } \frac{अ}{२}$$

$$= गच, \text{ दोनों का घात करने से } \frac{\text{कच ज्या}^2 \frac{अ}{२}}{\text{ज्याम ज्याघ}} = गघ^2, \text{ यहां (ख) क्षेत्र को देखिये ।}$$

$$\text{चक्र त्रिभुज जात्र है इसलिये क क्षोर्कोण स्पर्शरे}^2 = \frac{\text{कच}^2 \cdot \text{ज्या}^2 \frac{\text{अ}}{2}}{\text{कच}^2 \cdot \text{ज्याग} \cdot \text{ज्याघ}} =$$

$\frac{\text{ज्या}^2 \frac{\text{अ}}{2}}{\text{ज्याग} \cdot \text{ज्याघ}}$, तथा इष्टस्थान में इष्टकरण से कोणज्याद्वय को भाग देने से उसके

$$\frac{\text{अ}^2}{2} - \text{य}^2, \frac{\text{अ}^2}{2} + \text{य}^2 \text{ इन कोणों से इष्टस्थानीय पूर्णवर्ग} = \text{ज्याघ}^2$$

$$\frac{\text{इक}^2 \cdot \text{ज्या} \left(\frac{\text{अ}}{2} + \text{य} \right) \text{ ज्या} \left(\frac{\text{अ}}{2} - \text{य} \right)}{\text{ज्याग} \cdot \text{ज्याघ}}, \text{ यहाँ ज्या} \left(\frac{\text{अ}}{2} + \text{य} \right) \text{ ज्या} \left(\frac{\text{अ}}{2} - \text{य} \right) = \text{ज्या}^2$$

$$\frac{\text{अ}}{2} - \text{ज्या}^2 \text{ इसलिये इष्टस्थानीय पूर्णज्याघ वर्ग} = \frac{(\text{ज्या}^2 \frac{\text{अ}}{2} - \text{ज्या}^2 \text{य}) \text{ इक}^2}{\text{ज्याग} \cdot \text{ज्याघ}}, \text{ कोण-}$$

$$\text{स्पर्शरेखा}^2 = \frac{\text{इक}^2 \left(\text{ज्या}^2 \frac{\text{अ}}{2} - \text{ज्या}^2 \text{य} \right)}{\text{ज्याग} \cdot \text{ज्याघ} \cdot \text{इक}^2} = \frac{\text{ज्या}^2 \frac{\text{अ}}{2} - \text{ज्या}^2 \text{य}}{\text{ज्याग} \cdot \text{ज्याघ}} = \text{इष्टस्थानीय}$$

$$\text{कोस्पर् तथा कोणाघं कारिणी रेखा स्थानीय कोस्पर्शरे}^2 = \frac{\text{ज्या}^2 \frac{\text{अ}}{2}}{\text{ज्याग} \cdot \text{ज्याघ}} \text{ इसकी अपेक्षा}$$

अन्य स्पर्शरेखाओं के वर्गमान न्यून ही होते हैं, स्पर्श रेखाखण्डों से चाप करने से सब कोण के चाप की अपेक्षा कोणाघंकारिणी रेखा स्थानीय कोणस्पर्श रेखाजनित चाप ही अधिक

होता है। यह ध्याये हुए सर्वाधिक स्पर्शरेखावर्ग = $\frac{\text{अ}^2}{2}$, स्पर्शरेखा वर्ग से न्यून होता है या

अधिक इसके लिये विचार करते हैं। पूर्वोक्त स्पर्शरेखाद्वय के विषमीकरण करने से

$$\frac{\text{ज्या}^2 \frac{\text{अ}}{2}}{\text{ज्याग} \cdot \text{ज्याघ}} > < \frac{\text{ज्या}^2 \frac{\text{अ}}{2}}{\text{कोज्या}^2 \frac{\text{अ}}{2}}, \text{ कवच त्रिभुज में } १८० - (\text{ग} + \text{घ}) = \text{अ}$$

$$\therefore ६० - \frac{(\text{ग} + \text{घ})}{2} = \frac{\text{अ}}{2}$$

$$\therefore १० - \frac{अ}{२} = \frac{ग+घ}{२} = को \left(\frac{अ}{२} \right), \quad \frac{ग-घ}{२} = प, \quad \text{तब संक्रमण गणित से}$$

$$को \left(\frac{अ}{२} \right) + प = ग, \quad को \left(\frac{अ}{२} \right) - प = घ$$

$$\text{इन दोनों के ज्याघात पूर्व स्थित ज्याग. ज्याघ के बराबर हैं ज्या } \left\{ को \left(\frac{अ}{२} - प \right) \right\}$$

$$\times ज्या \left\{ को \left(\frac{अ}{२} + प \right) \right\} = ज्याग. ज्याघ$$

$$\text{पूर्व युक्ति से कोज्या}^२ \left(\frac{अ}{२} \right) - ज्या^२ प = ज्याग. ज्याघ$$

$$\therefore \frac{ज्या^२ \frac{अ}{२}}{को ज्या^२ \left(\frac{अ}{२} \right) - ज्या^२ प} > < \frac{ज्या^२ \frac{अ}{२}}{कोज्या^२ \frac{अ}{२}}$$

यहां भाज्यमान बराबर है इसलिए जिसका हर ज्यादा होगा वह फल अल्प होगा
फलतः परमाल्पकर्ण और परमाधिक कर्णों से उत्पन्न कोण सर्वाधिक सिद्ध हुआ . इति ॥

परम कोण बिन्दु से दोनों तरफ अवश्य ही परमाल्पकर्ण और परमाधिककर्णों से
उत्पन्न कोण के बराबर कोणद्वय होता है, तथा समीकरण से

$$\frac{ज्या^२ \frac{अ}{२} - ज्या^२ प}{ज्याग. ज्याघ} = \frac{ज्या^२ \frac{अ}{२}}{कोज्या^२ \frac{अ}{२}} = \frac{ग-घ}{२} = प, \quad \frac{ग+घ}{२} = को \frac{अ}{२}$$

$$ज्याग. ज्याघ = कोज्या^२ \frac{अ}{२} - ज्या^२ प, \quad \text{तथा} \quad \frac{ज्या^२ \frac{अ}{२} - ज्या^२ प}{कोज्या^२ \frac{अ}{२} - ज्या^२ प}$$

$$= \frac{ज्या^२ \frac{अ}{२}}{कोज्या^२ \frac{अ}{२}} \quad \text{केवल्य से}$$

$$\text{कोज्या}^2 \frac{\text{अ}}{2} \left(\text{ज्या}^2 \frac{\text{अ}}{2} \text{ज्या}^2 \text{य} \right) = \text{ज्या}^2 \frac{\text{अ}}{2} \left(\text{कोज्या}^2 \frac{\text{अ}}{2} - \text{ज्या}^2 \text{य} \right), \text{ वा } \text{ज्या}^2 \text{प. कोज्या}^2 \frac{\text{अ}}{2} \\ = \text{ज्या}^2 \text{प. ज्या}^2 \frac{\text{अ}}{2}$$

$$\text{अतः } \frac{\text{ज्या}^2 \frac{\text{अ}}{2} \cdot \text{ज्या}^2 \text{प}}{\text{कोज्या}^2 \frac{\text{अ}}{2}} = \text{ज्या}^2 \text{य}, \because \text{प} = \frac{\text{ग}-\text{घ}}{2}, \\ \text{अतः } \frac{\text{ज्या}^2 \frac{\text{अ}}{2} \cdot \text{ज्या}^2 \left(\frac{\text{ग}-\text{घ}}{2} \right)}{\text{कोज्या}^2 \frac{\text{अ}}{2}} = \text{ज्या}^2 \text{य}$$

मूल लेने से ज्याय मान विदित हो जायगा, तब 'य' के दोनों तरफ आये हुये स्थिराङ्क के बराबर दो मान होगा, तब उसके ऊपर लम्ब, $\frac{\text{अ}}{2}$ इसके बराबर होता है।

भगोल विमण्डल वक्र के उपयोगी भिन्न भी सिद्धान्त लिखते हैं।

विषम सूची में सूची शीर्षस्थान से आधार वृत्त बरातल के ऊपर जो लम्ब होता है उसके मूल से आधार वृत्त की घनेक पूर्णज्यायें कर देना, सूची शीर्ष स्थान से प्रत्येक पूर्णज्या के दोनों प्रान्तों में रेखा करने से पूर्णज्या और उसके प्रान्तद्वयगत रेखाओं से जितने त्रिभुज बनते हैं उनमें किस त्रिभुज का शिरःकोण सर्वाधिक होता है इसके लिये विचार करते हैं।

पूर्णज्या के खण्डद्वय प्र, द्वि, परमाधिककर्ण, परमाल्पकर्ण और पूर्णज्या (आधार वृत्तव्यास) से उत्पन्न त्रिभुज में पूर्णज्या (आधार वृत्तव्यास) के खण्डद्वय प्र, द्वि, है लम्ब और पूर्णज्याग्रगत कर्णों से उत्पन्न कोणद्वय को, को, है। लम्ब और परमाल्पकर्ण तथा परमाधिककर्ण से उत्पन्न कोणद्वय को, को, है,

$$\text{तब } \frac{\text{प्र}}{\text{लम्ब}} = \text{स्पको}, \frac{\text{द्वि}}{\text{लम्ब}} = \text{स्पको} \text{ तथा } \frac{\text{प्र}}{\text{लम्ब}} = \text{स्पको}, \frac{\text{द्वि}}{\text{लम्ब}} = \text{स्पको}, \text{ तब 'कोदण्ड}$$

पक्ष रेखा इत्यादि' सूत्र से स्प (को+को) = पूर्णज्या प्रान्त द्वय गत कर्णोत्पन्न कोणस्व =

$$\frac{\text{प्र} + \text{द्वि}}{\text{लम्ब}}$$

$$\frac{\text{स्पर्को} + \text{स्पर्को}}{1 - \text{स्पर्को} \cdot \text{स्पर्को}} = 1 - \frac{\text{प्र} \cdot \text{द्वि}}{\text{लम्ब}^2}, \text{ तथा लम्ब के साथ परमात्प कर्ण और}$$

परमाधिक कर्ण से उत्पन्न कोणद्वय के योग

(परमात्पकर्ण और परमाधिक कर्ण से उत्पन्न कोण) स्पर्श रेखा =

$$\frac{\text{स्पर्को}_1 + \text{स्पर्को}_2}{1 - \text{स्पर्को}_1 \cdot \text{स्पर्को}_2}$$

$$\frac{\text{प्र} + \text{द्वि}}{\text{लम्ब}} \text{ परन्तु, } \text{प्र} \times \text{द्वि} = \text{प्र} \times \text{द्वि} \dots \text{ तथा } \text{प्र} + \text{द्वि} > \text{प्र} + \text{द्वि} \dots$$

क्योंकि $\text{प्र} + \text{द्वि} = \text{माधारवृत्तव्या}$

अतः परमात्पकर्ण तथा परमाधिक कर्ण से उत्पन्न कोण की स्पर्शरेखा प्रत्येक पूर्णज्या प्रान्तद्वयगत कर्णरेखाद्वय से उत्पन्न कोणस्पर्श रेखाओं से अधिक सिद्ध हुई, चाप करने से परमात्पकर्ण और परमाधिक कर्ण से उत्पन्न कोण सब कोणों की अपेक्षा अधिक सिद्ध हुआ ।

पूर्व लिखित भगोल विमण्डल बन्धोपयोगी सिद्धान्त समूहों को देखने से अधोनिखित विषय सिद्ध होता है । कोणार्ध कारिणी रेखा से दोनों तरफ जो जो समान कोणोत्पादक रेखाद्वय होता है वह माधार में जहां लगता है उन दोनों स्थानों से उसकी योग रेखा के ऊपर जो जो लम्बरूपिणी दो दो पूर्णज्या होती है उनके प्रपगत जो जो दो कर्ण होते हैं उनसे उत्पन्न कोणद्वय बराबर होता है, तथा इन दोनों कोणों के गोला में जो चापात्मक मान होते हैं उनमें तुल्य-तुल्य चापद्वय के विरुद्धाग्रामिचाप परमात्पकर्ण और परमाधिक कर्ण से उत्पन्न कोण के चाप से अधिक होता है । और यह केन्द्रगत भी होता है इससे इस वक्र का प्रयोजक चापद्वयव्यास्रू हुआ, उनमें एक (परमात्पकर्ण और परमाधिक कर्ण) इनसे उत्पन्न और दूसरा उसके ऊपर लम्बरूप परमचाप, इससे वह भी सिद्ध होता है कि इन चापों के सम्पात से दोनों तरफ तुल्यान्तर पर (परमात्पकर्ण और परमाधिक कर्ण) इससे उत्पन्न चाप के ऊपर लम्बरूप चापद्वय वक्र पाली में जहां लगते हैं वहां से बराबर होते हैं इससे पूर्व लखल लखितवक्त्र 'कूर्मपृष्ठाकृतिवक्त्र' सिद्ध हुआ, ॥१०॥

अथ युतिकाले ग्रहयोर्दक्षिणोत्तरान्तरमाह

अन्तरयोगौ तुल्यान्यदिशोर्विक्षेपयोर्ग्रहान्तरकम् ।

आर्यभटादिष्वेवं समलिप्तिकयोर्युतिर्ग्रहयोः ॥११॥

सु. भा. — तुल्यान्यदिशोर्विक्षेप योरन्तरयोगौ दक्षिणोत्तरं ग्रहान्तरकं भवति । एवमार्यभटादिष्वार्यभटादितन्त्रेषु समलिप्तिकयोर्ग्रहयोर्युतियुतिसाधनमस्ति । एवं गोलयुक्त्या कदम्बप्रोते युतिरार्यभटाद्यैरानीता सा ऽऽचार्य संमता न । आचार्य संमता युतिः समसूत्रे तदर्थमग्रे वक्ष्यति ॥११॥

वि. भा. — तुल्यान्य दिशोः (समभिन्न दिक्कयोः) विक्षेपयोः (शरयोः) अन्तरयोगौ दक्षिणोत्तरं ग्रहान्तरकं भवति, एवमार्यभटादिषु तन्त्रेषु समलिप्तिकयोः (समकलयोः) ग्रहयोर्युतिः (युतिसाधनं) अस्ति, इयं युतिर्गोलयुत्त्वच्चैकस्मिन् कदम्बप्रोतवृत्ते ग्रहयोरवस्थाने सत्येव सिद्ध्यति । तदस्या युतेरसमीचीनता स्वसम्भतां समसूत्रयुतिं चाग्रतो वक्ष्यत्याचार्य इति ॥११॥

अत्रोपपत्तिः

भाष्येनैव स्फुटाऽस्तीति सिद्धान्तशेखरे “समदिगन्यदिशोः शरयोः क्रमात् वियुतिरेक्यमिह द्युव्रान्तरम् । इति युतिः कथिताऽऽर्यभटादिभिः सदृशल्लिप्तिकयोर्गंगनौकसोः” श्रीपत्युक्तमिदमाचार्योक्तानुरूपमेवेति ॥११॥

अथ युटिकास में ग्रहद्वय के दक्षिणोत्तरान्तर साधन को कहते हैं ।

हि. भा. :—कलावयव से बराबर दो ग्रहों के एक दिशा के शरों के योग करने से भिन्न दिशा के शरों के अन्तर करने से दक्षिणोत्तर ग्रहान्तर होता है, इस तरह आर्यभटादि आचार्यों के तन्त्रों में युति साधन है, यह युति गोलयुक्ति से एक कदम्ब प्रोतवृत्त में ग्रहद्वय के रहते ही से सिद्ध होती है, इस युक्ति की असमीचीनता को तथा स्व सम्मत समसूत्र युति को आचार्य आगे कहते हैं इति ॥११॥

इसकी उपपत्ति भाष्य ही से स्फुट है, सिद्धान्तशेखर में “समदिगन्यदिशोः शरयोः क्रमात् इत्यादि” से श्रीपति आचार्योक्तानुरूप ही कहते हैं इति ॥११॥

अथ कदम्ब प्रोतवृत्तीया युतिर्नशोभनेति दृष्टान्त द्वारा निरूपयति

चित्रा स्वातिबुधद्वये यथा अन्यथाऽस्ते तथा युतौ ग्रहयोः ।

न भवति दृग्गणितैक्यं यथा तदैक्यं तदुक्तिरतः ॥१२॥

सु. भा. — यथाद्वयोर्ग्रहयोरुदये उदयलम्ने न्यूनाधिके अपि तयोरस्ते अस्तलने

अन्यथाऽथदिधिकन्यूने भवतः । परन्तु तयोर्ग्रहयोर्युतिश्चित्रास्वातिवद्भवति चित्रायाः क्रान्तिवृत्ते यत् स्थानं तदेव स्वात्या न तथापि तयोः प्रतिदिनं षडशी-
त्यङ्गुलसमे खार्कमितव्यासार्धे शंकौ समप्रोतीया युतिर्भवति । एवं ग्रहयो-
क्रान्तिवृत्तीय स्थान वैषम्येऽपि युतिर्भवति सा च कदम्बप्रोतीययुतितो भिन्ने काले
आर्यभटादिमतेन ग्रहयोर्युतौ समप्रोतीयायां न दृग्गणितैक्यं भवति । अतो यथा
तदैक्यं तयोर्ग्रहयोरैक्यं युतिर्दृग्गणितैक्यं तथा तदुक्तिस्तद्युतिमाधनोक्ति-
रुचिता । चित्रास्वात्योर्युत्यर्थं मदीया दिग्मीमांसा विलोक्या ॥१२॥

वि. भा. :—यथा ग्रहयोरुदये (उदयलग्ने) न्यूनाधिके अपि तयोरस्तलग्नं
अन्यथा (अधिकन्यूने) भवतः । परं तयोर्ग्रहयोर्युतिश्चित्रास्वातिवद् भवति । क्रान्ति
वृत्ते चित्राया यत्स्थानं तदेव स्वात्या नास्ति, तयोर्दक्षिणोत्तरान्तरमेकोनचत्वारिंश
३६ दंशाः, तयोः प्रत्यहं षडशो ८६ त्वङ्गुलसमे खार्क १२० मितव्यासार्धे शङ्कौ
समप्रोतीया युतिर्भवति, एवमेव ग्रहयोः क्रान्तिवृत्तीयस्थानवैषम्येऽपि युतिर्भवति
सा च कदम्बप्रोतीययुतितो भिन्ने काले, अत आर्यभटादिमतेन ग्रहयोर्युतौ
समप्रोतीयायां दृग्गणितैक्यं न भवति, अतोऽस्मात्कारणात् यथा तदैक्यं (तयोर्ग्रह
योर्युतिविषये दृग्गणितैक्यं) तथा तदुक्तिर (तद्युतिमाधनोक्तिरुचिता)
स्तीति ॥१२॥

अब कदम्ब प्रोतवृत्तीय युति ठीक नहीं है इसको दृष्टान्त द्वारा दिखाते हैं ।

हि. भा. :—जैसे दो ग्रहों के उदयलग्न न्यूनाधिक रहने पर भी उनके अस्तलग्न
विपरीत (अधिक न्यून) होते हैं, लेकिन उन दोनों ग्रहों की युति चित्रा नक्षत्र और स्वाती
नक्षत्र की युति की तरह होती है, क्रान्तिवृत्त में चित्रा नक्षत्र का जो स्थान है वही स्वाती
का भी नहीं है, उन दोनों के दक्षिणोत्तरान्तर ३६ अंश है, दोनों के प्रतिदिन छयासी ८६
अङ्गुल तुल्य, एक सौ बीस १२० व्यासार्धे य (त्रिज्या) शकु में समप्रोतवृत्तीय युति होती है
इसी तरह दोनों ग्रहों के क्रान्तिवृत्तीय स्थान के वैषम्य (भिन्नता) में भी युति होती है वह
कदम्ब प्रोतवृत्तीय युति से भिन्न समय में होती है, इसलिए आर्य भट आदि आचार्यों के मत
से दो ग्रहों की समप्रोतवृत्तीय युति में दृग्गणितैक्यं नहीं होता है, इस कारण से जैसे दोनों-
ग्रहों के युति विषय में दृग्गणितैक्यं होता है वैसे उनके युति साधन उचित है इति ॥१२॥

अथ समप्रोतीययुतिमाह ।

प्रकारः श्रीपत्युक्त आचार्योक्तप्रकारानुरूप एवेति ॥१३-१४-१५-१६-१७-१८ ॥

अब सम प्रोतीय युति को कहते हैं ।

हि. भा.—समलिप्तिक (समान कला वाले) दो ग्रहों (एक कदम्ब प्रोतवृत्त में जब युति होती है तब तात्कालिक दोनों ग्रह समलिप्तिक होते हैं क्योंकि क्रान्तिवृत्त में दोनों के स्थान एक ही हैं) का स्वोदयलग्न और अस्तलग्न उदयास्ताधिकारोक्त विधि से साधन करना चाहिए, उसके बाद स्वदेशीय राश्युदय से स्वोदयलग्न और छः राशियुत ग्रह के स्वास्त लग्न को जोड़ कर अर्थात् स्वोदय लग्न के भोग्यकाल, छः राशियुत ग्रह के अस्तलग्न के भुवतकाल और मध्योदय (स्वोदय लग्न और छः राशियुत ग्रह के अस्तलग्न के मध्य में वर्तमान राशियों के उदयमान) के जोड़ने से दोनों ग्रहों की दिनमान घटी होती है, इससे समकलात्मक दो ग्रहों के दिनमान साधन आचार्य ने कहे हैं, समलिप्तिक दो ग्रहों के उदय लगनों में जो राश्यादि से अल्प है वह यदि अन्यग्रह के छ राशियुत अस्तलग्न से भी अल्प हो तो युति एष्य कहनी चाहिए, उदयलग्न अन्यग्रह के छ राशियुत अस्तलग्न से अधिक हो तो युतिगत कहनी चाहिए इससे आचार्य ने युति के गतैष्यत्व को (कब युति गत होती है और कब एष्य होती है) कहा है ॥१४॥

यदि पारिभाषिक अस्तलग्न स्वोदय लग्न से अल्प हो तो वक्ष्यमाण (आगे कहे जाने वाला) संस्कार फल ऋण होता है, यदि अधिक हो तो संस्कार फल धन होता है, स्वोदय-लग्न और स्वास्तलग्न की अन्तर कला को पूर्व साधित स्वरूप दिनमान घटी से पृथक्-पृथक् भाग देने से जो दो फल (लब्धि) होते हैं उन्हें कहे हुए लक्षण के अनुसार धन और ऋण समझना, इससे सम प्रोतीय युति के गतैष्यत्व विदित होने से युति समय ज्ञान के लिए ऋण-धन संस्कार आचार्य ने कहे हैं ॥१५॥

पूर्वोक्त दोनों फलों के ऋण वा धन रहने से दोनों के अन्तर से स्वोदय लग्न की अन्तर कला को भाग देने से जो लब्ध घटी हो उससे दृग्युति गत वा एष्य होती है । यदि

पूर्वोक्त दोनों फलों में एक घन हो और दूसरा ऋण हो तो दोनों फलों के योग से स्वोदय कलान्तर कला को भाग देने से जो लब्ध घटी हो उससे दृग्युति गत वा एष्य होती है ॥१६॥

स्वोदय लग्न और छ राशियुत अस्तलग्न की अन्तर कला को पूर्वलब्ध घटी से गुणा कर अपनी-अपनी दिनमान घटी से भाग देने से जो फलकला आती है उसको स्वोदयलग्न में जोड़ देना यदि उदयलग्न छ राशियुत अस्तलग्न से अल्प हो तब, अधिक हो तो फलकला को स्वोदयलग्न में ऊन करना तब समप्रतीय युति में समलिप्तिक ग्रहोदय होते हैं । यदि वे दोनों ग्रह रात्रि में इष्टलग्न से न्यून हो, छ राशियुत इष्टलग्न से अधिक हो तो वे दर्शन योग्य होते हैं इति ॥१७-१८॥

उपपत्ति

पूर्व क्षितिज में जब ग्रह बिम्ब रहता है तब क्षितिजवृत्त में क्रान्तिवृत्त का जो प्रदेश लगा रहता है वही उदय लग्न है तात्कालिक ग्रह स्थान-शर आदि के द्वारा उसका (उदय-लग्न) ज्ञान होता है, आचार्य ने कदम्ब प्रतीय युति कालिक ही स्थान-शर आदि को स्वल्पान्तर से ग्रह बिम्बोदय कालिक स्वीकार कर उदयलग्न का साधन किया है, और पश्चिम क्षितिज में ग्रह बिम्ब के रहने पर भी उन्हीं शरादि को लेकर अस्त लग्न (पश्चिम क्षितिज में ग्रह बिम्ब के रहने से पश्चिम क्षितिज में क्रान्तिवृत्त का जो प्रदेश लगा रहता है) का साधन किया है, उसमें छः राशि जोड़ने से ग्रह बिम्बास्त काल में पूर्व क्षितिज में लग्न होता है, उदय लग्न में ग्रह-बिम्ब का उदय होता है, छः राशि युत अस्तलग्न में अस्त होता है, उन दोनों के अन्तर में स्वदेशोदय से “ऊनस्य भोग्योधिकभुक्तयुक्तो मध्योदयादयः” इससे, जो घटिकायें होती हैं वे ग्रहदिनमान घटिका होती हैं, उतने काल तक क्षिति के ऊपर ग्रह बिम्ब भ्रमण करता है इसलिए ग्रह दिनमान नाम रखना ठीक ही है । सिद्धान्त सेखर में “दृक्कर्मणी सङ्गक्षितिर्बिम्बो-विधाय साध्ये पृथक् खलु तयोद्दयास्तलग्ने” इत्यादि सं० उपपत्ति में लिखित भी पण्डित श्लोक भी उपपन्न होता है, जिसका उदयलग्न ऊन रहता है वह ग्रह पहले अस्त होता है । जिसका उदय लग्न अधिक रहता है वह पीछे उदित होता है । तथा जिसका अस्तलग्न ऊन रहता है वह ग्रह पहले अस्त होता है । जिसका अधिक रहता है वह पीछे अस्त होता है । जिस ग्रहबिम्ब का द्वितीय ग्रहबिम्ब की अपेक्षा पहले उदय होता है और पहले ही अस्त होता है उसके आगे योग की सम्भावना होती है, जिस ग्रह का उदय अन्य ग्रह से पहले होता है और अस्त पीछे होता है वह ग्रह योग कर आगे चले जाते हैं इसलिए योग गत होता है, सिद्धान्त-सेखर में “ग्रहयोद्दयास्तलग्नयोरूनं यच्च निरास्त लग्नकम्” इत्यादि सं० उपपत्ति में लिखित श्लोक से श्रीपति ने भी आचार्योक्त युति के गतेष्यत्व-प्रतिपादन के अनुरूप ही प्रतिपादन किया है ।

ग्रहबिम्बोदय काल में उदयलग्न और ग्रहबिम्बास्त काल में अस्त लग्न है इसलिए ग्रह की दिनमान घटी में उदय लग्न का चलन उदयलग्न और अस्तलग्न के अन्तर के बराबर होता है। उसके बाद जैसे अल्प होता है वैसे अस्त लग्न का न्यूनाधिक्य मानना अर्थात् उदयलग्न और अस्तलग्न के मध्य में एक में से दूसरे को घटाने से जहाँ अल्प शेष रहे वहीं दूसरे की अल्पता होती है। जैसे यदि अस्त लग्न तुलान्त = ७ है, उदयलग्न = वृषान्त, तो ७ - २ = ५, २ - ७ = ५ इसलिए उदयलग्न को अल्प और अस्तलग्न को अधिक समझना चाहिए। अब अनुपात करते हैं यदि ग्रहदिनमान घटी में उसके उदय लग्न की गति (उदयलग्न और अस्त लग्न के अन्तर तुल्य) पाते हैं तब एक घटी में क्या इससे एक रूप वेग से एक घटी में स्वस्व उदयलग्न गति आती है, अब पुनः अनुपात करते हैं यदि दोनों उदयलग्न गति के अन्तर में एक घटी पाते हैं तो स्वस्व उदयलग्न के अन्तर में क्या इससे समप्रोतीय युतिकाल में गत घटी वा एष्य घटी आती है। उन घटियों में युतिकाल में स्वोदय लग्न का जितना चलन होता है ग्रहद्वय में उसके संस्कार करने से सम प्रोतीय समलितिक ग्रहद्वय होते हैं। इस तरह उदयलग्न के चलन समान वेग में स्वीकार कर अनुपात से स्थूल युतिकाल होता है। आयन-दृक्कर्म और आशदृक्कर्म के प्रतिक्षण में विलक्षण होने के कारण उदयलग्न गति के अनुल्यवेगत्व से विजातीय उदयलग्न गति का अन्तर उसके योग के बराबर होता है 'धनर्णयोगयोरन्तरमेव योगः' इससे स्पष्ट है। रात्रि में इष्ट लग्न से अल्प और छः रात्रि युत इष्ट लग्न से जो अधिक होता है वह लितिज के ऊपर होने के कारण दृश्य होता है, ग्रह के अल्प बार रहने तथा क्रान्ति-वृत्तीय स्थान के आसन्न में उदयलग्न के रहने से ऐसा होता है, नहीं तो स्वेष्टलग्न से जिसका उदयलग्न अल्प होता है और अस्तलग्न अधिक होता है वही दृश्य होता है। (सिद्धान्त-शेखर में)।

“स्वयमस्तलग्नं ह्युदयाख्य लग्नादृणाख्ययूनं धनमन्यथा स्यात्” यहाँ से लेकर “दृश्यो भवेतां स्फुटमन्यथा तु समुद्रगतावप्यनवेक्षणीयौ” यहाँ तक सं० उपपत्ति में लिखित श्लोकों से श्रीपति ने समप्रोतीय युति के गर्तप्यत्व जागर उससे युति समय ज्ञानार्थ ऋण-धन संस्कार के लिए आचार्योक्त प्रकार के अनुरूप ही कहा है इति ॥ १३-१४-१५-१६-१७-१८॥

अत्रोपपत्तिः

“मानैक्यार्धाद् द्युचरविवरे स्यान्न भेदोऽधिके तु न्यूनं भेदो ब्रह्मणवदिहच्छाद-
कोऽघस्तनः स्यात् । साध्यलम्बनं युतिसमयतो विविधं तद् विधाय कार्याः सूर्य-
ग्रहणवदखिला लम्बनार्थाः क्रियाश्च” इति सिद्धान्तशेखरे श्रीपत्युत्था “मानैक्या-

र्धाद् द्युचर विवरे ऽल्पे भवेदभेदयोगः” इत्यादि सिद्धान्तशिरोमणौ भास्कराचार्योत्तधाच स्फुटा वासनेति, अथाचार्येण कथ्यते ग्रहयुतावपि लम्बन-स्थित्यर्धं विमर्दाध्वं दिसर्वं सूर्यग्रहणावत् साध्यम् । सिद्धान्त शेलरे श्रीपतिना ग्रहयुतौ तत्साधनं पृथक् पृथक् प्रदर्शितं यथाग्रहयुतौ लम्बनानयनार्थं तिथिस्वरूपं कथ्यते ।

अब ग्रह युति में विशेष कहते हैं

हि. भा.—एवं दो ग्रहों के केन्द्रान्तर मानैक्यार्ध (व्यासार्धयोग) से अधिक रहे तो युति नहीं होती है, मानैक्यार्ध से अल्प केन्द्रान्तर में स्थित्यर्ध और विमर्दाध्वं साधन करना अर्थात् कदम्ब प्रोतीय युति काल ही को गर्भायामान्त काल मान कर सूर्य ग्रहणोक्त विधि से वे (स्थित्यर्ध और विमर्दाध्वं) साधन करना । तारारूप जो ग्रह (मङ्गलादि) है उनकी और नक्षत्र की जो युति होती है उसमें भी यही क्रिया होती है । कदम्बप्रोतीय युतिकाल में सूर्य ग्रहणोक्त विधिवत् असकृत् (बार-बार) लम्बन साधन करना, दोनों ग्रहों की अपनी अपनी नीतिकला से तात्कालिक स्पष्टशर साधन कर उन दोनों का एक दिशा में अन्तर करने से भिन्न दिशा में योग करने से स्पष्टशर होता है । उसी (स्पष्टशर) को केन्द्रान्तर कल्पना करना, ऊर्ध्वस्थित ग्रह के अधःस्थ (नीचस्थित) ग्रह को छादक मानना, इस तरह सूर्यग्रहण की तरह सब बातें मानकर स्पष्टस्थित्यर्ध और स्पष्ट विमर्दाध्वं साधन करना, मानैक्यार्ध से केन्द्रान्तर को अधिक रहने से पूर्वं साधित समप्रोतीय युति अतिस्पष्ट नहीं होती है इसलिये स्फुट युतिसाधन के लिये कहना युक्तियुक्त है इति ॥ १९-२१ ॥

उपपत्ति

“मानैक्यार्धाद् द्युचर विवरे स्यान्त भेदोऽधिके तु न्यूनं भेदो ग्रहणवदिहृच्छादकोऽघस्तनः स्यात्” इत्यादि सं० उपपत्ति में लिखित सिद्धान्तशेखरोक्त श्लोक से तथा “मानैक्यार्धाद् द्युचर विवरेऽल्पे भवेदभेदयोगः” इत्यादि सं० उपपत्ति में लिखित सिद्धान्तशिरोमण्यस्थ भास्कराचार्योक्त श्लोक से उपपत्ति स्फुट ही है इति ॥ १९-२१ ॥

‘स्वोदयात् समकलौ च यावता खेचरौ च भवतामनेहसा ।
तावती भवति भेदसंयुतौ लम्बनादि विधिसिद्धये तिथिः’ ॥

वि. भा.—स्वोदयात् (स्वविम्बोदयकालात्) यावता अनेहसा यत्प्रमित-घट्यादिकालेन खेचरौ ग्रहौ समकलौ समलिप्तौ, भवेतां । भेदसंयुतौ ग्रहयोर्भेद युद्धे संयुतौ योगार्धं लम्बनादि विधिसिद्धये लम्बननतिस्थित्यर्धादि-साधनार्थं तिथिर्भवतीति ॥

अत्रोपपत्तिः

सूर्यग्रहणे लम्बनावनत्याद्यानयनाय सूर्योदयादमान्तं यावद्यथा तिथिप्रमाणं

गृहीतं तथैवात्र ग्रहोदयतः समकलकालपर्यन्तं कालस्तिथित्वेन ग्रहीतव्यस्तुल्य-
समयादिति ॥

हि. भा.—यहां आचार्य कहते हैं कि ग्रहयुति में भी सूर्यग्रहणवत् लम्बन नति स्थित्यर्थं
विमर्दार्थं आदि सब कुछ साधन करना चाहिये । सिद्धान्तशेखर में श्रीरिति ने ग्रहयुति में उन
सबोंका पृथक् पृथक् साधन दिखलाया है जैसे लम्बनानयन के लिये तिथि का स्वरूप कहते हैं ।

“स्वोदयात् समकली च यावता खेचरो च भवतामनेहमा” इत्यादि संस्कृत में लिखित
श्लोक को देखिये” ।

स्वविम्बोदय काल से जितने घटघादि काल में ग्रहद्वय, दोनों ग्रह समलिप्तिक
होते हैं, दोनों ग्रहों के भेद युद्ध में और संयुति में, लम्बन, नति, स्थित्यर्थं साधन के
लिये तिथि होती है ॥

उपपत्ति

सूर्य ग्रहण में लम्बन नति आदि के आनयन के लिए जैसे सूर्योदय से अमान्त पर्यन्त
तिथि प्रमाण ग्रहण किया गया है वैसे यहां ग्रहोदय से समलिप्तिक काल पर्यन्त जो समय है
उसको तिथित्व करके ग्रहण करना चाहिये इति ।

स्युः । ग्रहपृष्ठज्या, दृक्क्षेप दृग्लम्बनज्या वशेन ग्रहयोः पृथक् पृथक् नती साध्ये ।
 घट्यादिलम्बनज्ञानार्थं यदि ग्रहगत्यन्तरकलाभिः षष्टि घटिका लभ्यन्ते तदा
 लम्बनकलाभिः किं समागच्छन्ति लम्बनघटयः । ग्रहयोर्मध्ये यद्येको वक्री,
 अपरश्च मार्गी तदा गतियोगेनानुपातेन घट्यात्मकं लम्बनं समागच्छतीति ॥

युतिकाल में लम्बनानयन में विशेष कहते हैं ।

‘प्राह्य ग्राहक लम्बनाख्य कलिका’ इत्यादि ऊपर लिखे श्लोक देखिये ।

हि. भा.—युत्यर्थं समलिप्तिक दोनों ग्रहों में प्रथः स्थित ग्रह छादक होते हैं, ऊपर-
 स्थित ग्रह छाद्य होते हैं, उन दोनों के पृथक्-पृथक् स्व-स्व पृष्ठीय दृग्ज्यावश से जो लम्बन
 कलाएँ होती हैं उनके अन्तर लम्बन सम्बन्धिनो कला होती है, एवं पृथक्-पृथक् नति होती
 है, पूर्ववत् आयो हुई लम्बन कला को साठ गुणा कर समलिप्तिक ग्रहद्वय के गत्यन्तर
 (यदि समलिप्तिक दोनों ग्रह मार्ग गामी हो वा वक्रगामी हो तब) से भाग देने से घट्यादिक
 लम्बन होता है, यदि समलिप्तिक दोनों ग्रहों में एक वक्री हो और दूसरा मार्गी हो तो गति-
 योग से भाग देने से घट्यादिक लम्बन होता है इति ।

उपपत्ति

भूकेन्द्र से और भूपृष्ठ स्थान से ग्रह केन्द्रगत रेखा लाने से दोनों रेखाओं से उत्पन्न
 कोणो दृग्लम्बन है, भूकेन्द्र से ग्रह केन्द्रगत रेखा = ग्रहकर्ण, पृष्ठ स्थान से ग्रहकेन्द्रगतरेखा =
 पृष्ठीय कर्ण, भूकेन्द्र से भूपृष्ठ स्थान पर्यन्त रेखा = भूव्यासार्ध । इन तीनों रेखाओं से उत्पन्न
 त्रिभुज में पृष्ठीय कर्ण और भूव्यासार्ध से उत्पन्न कोण = १८०—पृष्ठीय नतांश कोणज्या
 और कोखेन भाषांशज्या बराबर होती है इसलिए ज्या (१८०—पृष्ठीय नतांश) = पृष्ठीय

नतांश ज्या = पृष्टज्या तब पूर्वोक्त त्रिभुज में अनुपात से $\frac{\text{ग्रह पृष्टज्या भूज्या}}{\text{ग्रहकर्ण}}$

= ग्रन्म्वनज्या, एवं $\frac{\text{ग्रपृष्टज्या भूज्या}}{\text{ग्रकर्ण}}$ = ग्रन्म्वज्या दोनों के चाप का अन्तर करने से

लम्बन सम्बन्धिनी कला होती है, एवं ग्रहज्या, हृक्षेप, हलम्बनज्या वश से दोनों ग्रहों की पृथक् पृथक् नति साधन करना, घट्यादिक लम्बन ज्ञानार्थ यदि ग्रह गत्यन्तर कला में साठ घटी पाते हैं तो लम्बन कला में क्या इससे लम्बन घटी आती है, दोनों ग्रहों में यदि एक बन्नी हो और दूसरा मार्गी हो तो गतियोग से पूर्ववत् अनुपात से घट्यादिक लम्बन होता है इति ॥

अथ ग्रहयुतौ लम्बनानयनमाह ।

अत्रोपपत्तिः ।

सूर्य ग्रहणो रविचन्द्रयोर्नती आनीते, अत्र समलिप्तिकग्रहयोश्चाद्यच्छादक-योश्च कल्पितरविचन्द्रयोः । अन्यत्सर्वं स्फुटमेवेति ॥

अब युतिकाल में नति साधन पुरःसर स्फुटशर साधन को कहते हैं ।

'शङ्कु घट्वं निजवाणसंस्कृतं भास्कर ग्रहणवत्' इत्यादि ऊपर लिखे श्लोक को देखें ।

अथ युतिकाल में नति साधन पुरःसर स्फुटशर साधन को कहते हैं ।

हि. भा.—सूर्यग्रहणोक्त विधिवत् ग्रहशङ्कुचाप को अपने शर के साथ संस्कार करने से जो होता है उस की ज्या स्पष्टशङ्कु होती है, उस से पूर्ववत् दृज्या (त्रिज्यावर्ग में स्पष्ट शङ्कुवर्ग को घटा कर मूल लेने से) होती है, इसतरह आयी हुई दृज्या को परमनति कला से गुणाकर त्रिज्या से भाग देने से जो फल होता है वह नतिकला होती है, इस नति और शर के योग और अन्तर करने से स्फुट शर होता है, इस तरह आनीत ग्रहद्वय का स्पष्ट शरान्तर, ग्रहान्तर (समलिप्तिक दोनों ग्रहों के दक्षिणोत्तरान्तर) होता है इति ।

उपपत्ति

सूर्यग्रहण में रवि और चन्द्र की नति लाई गई है, यहां समलिप्तिक दोनों ग्रहों (छाद्य और छादक की तरह काल्पित रवि और चन्द्र) की लाई गई है । इति ॥

इदानीं ग्रहयुतौ स्थित्यर्धविमर्दाधिसाधनार्थमाह ।

तत्स्फुटेषु सहितोनितात् स्वकान्मानयोगदलतः स्थितेर्दलम् ।
तत्रमार्गदलपूर्वमुक्तवत् साधयेन्निजजवैवयमेदतः ॥

वि. भा. - स्वकान्मानयोगदलतः (ग्राह्यग्राहकविम्बयोर्योगार्धात्) तत् स्फुटेषु सहितोनितात् (तस्य ग्राहकस्य स्पष्टशरेण युतोनितात्) स्थितेर्दलं भवत्यर्था न्मानैक्यार्धं स्फुटशरयोर्योगान्तरघातात् स्थित्यर्धं भवति, विम्बमानैक्यार्धं वर्गाच्छरवर्गं विशोध्य तन्मूलं ग्राहकमार्गखण्डं तत्सम्बन्धिकालो ग्रहणे यथा समानीत-स्तथैवानुक्त्या नेतव्य इति, (विमर्दाधिसाधनं) साधयेदिति ॥ सर्वमिदं सिद्धान्त-शेखरोक्तं वैशद्यार्थं लिखितम् ॥

(१) मानैक्यार्धस्फुटशरयोर्योगान्तरघातान्मूलं स्थित्यर्धं भवितुं मर्हेति, श्लोकोक्त्या तत्स्थित्यर्धं न भवतीति सिद्धान्तग्रन्थनिष्णातानां स्फुटमेवेति मुकुन्द मिश्रः ।

अथ ग्रहयुति में स्थित्यर्ध और विमर्दाधिसाधन के लिये कहते हैं ।

‘तत्स्फुटेषु सहितोनितात् स्वकान्मानयोगदलतःस्थितेर्दलम्’ इत्यादि ऊपर लिखे श्लोक को देखिये ।

हि. भा.—ग्राह्यविम्ब और ग्राहक विम्ब के योगार्ध (मानैक्यार्ध) में ग्राहक के स्फुटशर को जोड़ने और घटाने से स्थित्यर्ध होता है, विम्बमानैक्यार्ध वर्ग को घटा कर मूल लेने से ग्राहक मार्ग खण्ड होता है तत्सम्बन्धिकाल ग्रहण में जैसे लाया गया है वैसे यहां भी

लाना चाहिये, ग्रहयुति में छाद्य और छादक की गतियों के योगान्तर से पूर्ववत् (चन्द्रग्रहणो-
क्तरीति से) विमर्दाध्रं आदि साधन करना । यहाँ सिद्धान्त खेखरोक्त श्लोक से स्थित्यध्रं
साधन ठीक नहीं हो सकता है, इसलिये मानैक्यार्ध में स्फुटग्रह को जोड़ कर, और घटा कर
जो हो उनके घात का मूल स्थित्यर्थ होना चाहिए, परन्तु श्लोक में ऐसा नहीं है ! इसलिये
श्रीपत्युक्त स्थित्यध्रं साधन ठीक नहीं है यह मेरा मत है । ये सब विषय सिद्धान्तखेखरोक्त
लिखे गये हैं ॥

इदानीं स्फुटयुतिसाधनमाह ।

अब स्फुट युति साधन को कहते हैं ।

हि. भा.—जिस समय में कदम्ब प्रोतीय समलिप्तिक ग्रहद्वय हुए हैं उस समय में
स्वदेशीय राश्युदयमानों से उदय लग्न साधन करना, भगोल को घुमाकर दोनों ग्रहों को
पूर्वक्षितिजस्थित करके दोनों के उदयलग्न साधन करना, उसके बाद तात्कालिक लग्न और
ग्रहोदय लग्न के अन्तर में लग्न से काल साधन की तरह ग्रह की दिन घटी साधन करना,
बही यहां दिनोदित घटी समझनी चाहिये । पहले दोनों ग्रहों की दिन-मान घटी लाई हुई है,
जिस ग्रह के दिन प्रमाण अल्प है उसकी दिनगत घटी ऊनदिनोदित घटी कहलाती है और जिस
ग्रह के दिन प्रमाण अधिक है उसकी दिनगत घटी अधिक दिनोदित घटी कहलाती है अल्प
दिन प्रमाण ऊनदिन प्रमाण और अधिक दिन प्रमाण अधिक दिन यह आचार्य का संज्ञित है,
अधिक दिन को ऊनदिनोदित से गुणा कर ऊन दिन से भाग देने से जो लब्धि हो वह यदि
अधिक दिनोदित से अधिक हो तो युति गत समझनी चाहिये, यदि न्यून हो तो युति एष्य
समझनी चाहिये । लब्ध घटी और अधिक दिनोदित घटी का अन्तर आद्य संज्ञक है, एवं
इष्टघटी कल करके ऊन और युत दोनों ग्रह अन्य संज्ञक हैं, अतयुति में गत और एष्य युति
में एष्य इष्टघटी मानकर इस से दोनों ग्रहों को चालन देकर दोनों ग्रहों के उदयलग्न
आदि से दोनों की गतघटी लाकर ‘ऊनदिनोदित मुसितात्’ इत्यादि से पुनः अन्तर साधन
करना उसको अन्य संज्ञक समझना । यदि दोनों अन्तर से गत वा एष्य युति हो तो इष्ट
गुणित आद्यको आद्य और अन्य के अन्तर से भाग देने से फल घटी होती है वह
आद्यवश से समलिप्तिक काल से यत वा एष्य होती है, अन्यथा यदि एक से यतयुति हो
और दूसरे से एष्य युति हो तो आद्य और अन्य के योग से भाग देने से फल घटी समझनी
चाहिये इति ॥

उपपत्ति

यदि ऊनदिनमान में ऊनदिनोदित घटी पाते हैं तो अधिक दिनमान में क्या उस अनुपात से युतिकाल में अधिक दिनोदित घटी आती है, यहां आचार्य ने दोनों ग्रहों की दिनमान गत घटी के मध्य में तुल्य निष्पत्ति स्वीकार की है। यदि लब्धघटी अधिक दिनगतघटी से अधिक हो तो युतिगत अन्यथा एष्य होती है, दोनों के अन्तर को आद्य कल्पना करना, इष्ट घटी से दोनों ग्रहों को चालन देकर फिर अन्तर को अन्य संज्ञक करके अनुपात करते हैं। यदि आद्य और अन्य के अन्तरतुल्य अपचय में इष्ट घटी पाते हैं तो आद्यतुल्य अपचय में क्या इससे जो फल नाड़ी आती है उससे आद्यकाल से पहले वा पीछे आद्यतुल्य अपचय से अन्तराभाव होता है इसलिये वहां युति होती है, ग्रहगति और शरगति की विलक्षणता के कारण असकृत्वर्म करना उचित है परन्तु आचार्य ने स्वल्पान्तर से उसको छोड़ दिया है। विजातीय आद्य और अन्य का अन्तर करने से दोनों का योग होता है उससे भाग देकर फल ग्रहण करना चाहिये। सिद्धान्तशेखर में “अल्पद्युत्वेचरसमुद्गतनाडिकाभिर्ज्येष्ठं दिनं निहतमल्पदिनेन भक्तम्” स लेकर “भवति पूर्वमथोत्तरकालिका गणितहृक्समता विविनाऽपुनः” तक सस्कृतोपपत्ति में लिखित श्लोकों से श्रीपति ने आचार्योक्त के अनुरूप ही कहा है इति ॥२२-२३-२४॥

स्वदिनघटिका विभक्तस्तदुदितपरदिवसनाडिकाघातः ।

तुल्यः परोदिताभिर्घटिकाभियदि युतिग्रहयोः ॥२५॥

सु. भा.—तदुदितपरदिवसनाडिकाघातः स्वदिनघटिकाविभक्तो यदि परोदिताभिर्घटिकाभिस्तुल्यस्तदा तयोर्ग्रहयोर्युतिर्भवतीति वेदितव्यम् । अत्रैतदुक्तं भवति । एकस्य गता घटिका : परस्य दिनमानघटिकाभिर्गुणा एकस्य दिनमानेन हृता : फलतुल्या यदि परस्य गतघटिका : स्युस्तदा तयोर्ग्रहयोः कदम्बप्रोतीया युतिर्वाच्येति पूर्वसाधितयुतिकालतः स्फुटम् ॥ २५ ॥

वि. भा.—तदुदित पर दिवसनाडिकाघातः स्वदिनघटिकाविभक्तो यदि परोदिताभिर्घटिकाभिस्तुल्यस्तदा तयोर्ग्रहयोर्युतिर्भवतीति ज्ञेयम् । अत्रैतदुक्तं भवति । एकस्य गतघटिका : परस्य दिनमानघटिकाभिर्गुणिता एकस्य दिनमानेन भक्ता लब्धतुल्या यदि परस्य गतघटिका भवेयुस्तदा तयोर्ग्रहयोः कदम्बप्रोतीया युतिर्वाच्येति ।

अत्रोपपत्तिः

यद्येकस्य दिनमानेन तस्य दिनगतघटिका लभ्यन्ते तदा परस्य दिनप्रमाणेन किमिति परस्य दिनगतघटिकाः प्रागुक्तया भवन्तीति तदवेषा तयोर्ग्रहयोर्युतिर्वक्तु-मुचिता नान्यथेति पूर्वकथितयुतिविवेचनया स्फुटा, सिद्धान्त शेखरे “गुणितमपर

वासरेण भक्तं स्वदिनेनोदितमत्र जायते चेत् । कथमपिच परोदितेन तुल्यं युति-
विधिरेष विधीयते तदानीम्” जनेन श्रोपतिनाऽऽचार्योक्तानुरूपमेवोक्तमिति
विज्ञर्बोधयम् ॥२५॥

अब कब युति होती है इसको कहते हैं ।

हि.भा.—एकग्रह की गतघटी को अन्य ग्रह की दिनमान घटी से गुणाकर एक ग्रह
के दिन प्रमाण से भाग देने से जो फल हो तत्तुल्य यदि अन्य ग्रह की गत घटी हो तो दोनों
ग्रहों की कदम्ब प्रोतीय युति कहनी चाहिये इति ॥२५॥

उपपत्ति

यदि एक ग्रह के दिन प्रमाण में उसकी दिनगत घटी पात्रे हैं तो अन्य ग्रह के दिन
प्रमाण में क्या इससे अन्य ग्रह की दिनगत घटी पूर्वोक्त के अनुसार होती है, तब ही उन
दोनों ग्रहों की युति कहना उचित है अन्यथा नहीं यह बात पूर्वंकथित युति विचार से स्फुट
है । सिद्धान्त शेखर में “गुणितमपरवासरेण भक्तं स्वदिनोदितमत्र जायते चेत्” इत्यादि सं०
उपपत्ति में लिखित श्लोक से श्रीपति ने आचार्योक्त के अनुरूप ही कहा है इति ॥२५॥

इदानीमध्यायोपसंहारमाह

विक्षेपमानसमकलविनघटिका स्वोदयास्तलग्नाद्यैः ।

षड्विंशत्यार्याणां नवमो ग्रहमेलनाध्यायः ॥२६॥

सु. भा.—समकली समलिप्तौ ग्रहौ । शेषं स्पष्टार्थम् ।

मधुसूदनसूनुनोदितो यस्तिलकः श्रीपृथुनेह जिष्णुजोक्तं ।

हृदि तं विनिधाय नूतनोऽयं रचितो योगविधौ सुधाकरेण ॥

इति श्रीकृपालुदत्तसूनुसुधाकरद्विवेदिविरचिते ब्राह्मस्फुटसिद्धान्तनूतनतिलके
ग्रहयुत्यधिकारो नवमः ॥ ६ ॥

वि. भा.—विक्षेप (शर) मानसाधनम्, समकल (समलिप्तिक) ग्रहयोर्दिन-
मानसाधनं तद्दिनगतघटिकासाधनं च तयोर्ग्रहयोरुदयास्तलग्नयोः साधनमेतदा-
द्यैविषयैः सम्बलितौ नवमो ग्रहमेलनाध्यायः (ग्रहयुत्यधिकारः) आर्याणां षड्विंशत्या
(षड्विंशतिसंख्यकैरायश्लोकैः) गत इति ॥२६॥

इति श्री ब्रह्मगुप्तविरचितब्राह्मस्फुटसिद्धान्ते ग्रहयुत्यधिकारो नवमः ॥६॥

अब अध्याय के उपसंहार को कहते हैं ।

हि. भा.—विक्षेप (शर) मान साधन, समलिप्तिक ग्रहद्वय के दिनमान साधन और दिनगतघटी साधन, उन्हीं दोनों ग्रहों के उदयलग्न और अस्तलग्न साधन एतदादि विषयों से युत नवम ग्रह मेलनाध्याय (ग्रहयुत्यधिकार) छब्बीस आर्याश्लोकों से युक्त समाप्त हुआ ॥२६॥

इति श्री ब्रह्मगुप्त विरचित ब्राह्मस्फुटसिद्धान्त में नवम ग्रहयुत्यधिकार समाप्त हुआ ॥१॥

आचार्योक्ता एत एवाश्विन्यादीनां भानां ध्रुवांशाः सिद्धान्तशेखरे श्रीपतिना
सिद्धान्तशिरोमणौ भास्कराचार्येणापि भग्रहयुत्यधिकारे पठिताः सन्ति । सूर्य-
सिद्धान्ते तु “अष्टार्णवाः शून्यकृताः पञ्चषष्टिर्नगेषवः । अष्टार्था अब्धयोऽष्टागा
अङ्गागा मनवस्तथा । कृतेष्वो युगरसाः शून्यवाणा वियद्रसाः । खवेदाः सागरनगा
गजागाः सागरर्त्तवः ॥ मनवोऽथरसा वेदा वैश्वमाप्यार्धभोगगम् । आप्यस्यैवाभि-
जित् प्रान्ते वैश्वान्ते श्रवणस्थितिः, इत्यादिभिः श्लोकैर्नक्षत्राणां भोगकलाः पठिता-
स्ततो “प्रोच्यन्ते लिप्तिका भानां स्वभोगोऽथदशाहतः । भवन्त्यतीतविष्ण्यानां
भोगलिप्ता युता ध्रुवाः” ज्ञेन नक्षत्राणां ध्रुवानयनमभिमतम् ।

यथा भरण्या भोग कलाः=४०, दश गुणिताः=४००

गतनक्षत्रभोगकलाः = ८००

अनयोर्योगे जाता भरण्या ध्रुवकलाः = १२०० = ०।२०।

एवं सर्वेषां नक्षत्राणां तदीयभोगकलाभ्यो ध्रुवाः साध्या इति ॥ १-२-३ ॥

अत्रोपपत्तिः

गोलबन्धोक्त विधिना विपुलं गोलयन्त्रं विरचय्य रात्रौ गोलमध्यगतया दृष्ट्या
रेवतीतारां विलोक्य क्रान्तिवृत्ते यो मीनान्तस्तं रेवतीतारायां निवेश्य मध्यगतयैव
दृष्ट्या तन्नक्षत्रं विलोक्य तदुपरि कदम्बप्रोतवृत्तं ध्रुवप्रोतवृत्तं च कार्यम् । कदम्ब-

प्रोतवृत्तक्रान्तिवृत्त सम्पातात् मेवादि (क्रान्तिवृत्तनाडीवृत्तयोः सम्पातं) याव-
त्क्रान्तिवृत्ते येऽशारते सायना ध्रुवाः । नक्षत्रबिम्बोपरिगतध्रुवप्रोतवृत्त क्रान्ति-
वृत्तयोः सम्पातान्मेषादि यावदायनद्वक्कर्म संस्कृत ध्रुवाः । एवमाचार्येण स्वसमये
वेधेन ज्ञात्वा पठिता इति ॥ १-३ ॥

अब भग्रहयुत्यधिकार प्रारम्भ किया जाता है ।

८समे पहले नक्षत्रों के ध्रुवांश को कहते हैं ।

हि. भा.—‘अग्रनखैर्मेषे गविरदलिप्तोर्नैर्गुणस्वरैर्मिथुने’ इत्यादि श्लोकों से अश्विनी
आदि नक्षत्रों की राश्यादिक ध्रुवा संस्कृत विज्ञान भाष्य में लिखित के अनुसार समझनी
चाहिए । अश्विनी आदि नक्षत्रों की ध्रुवा आचार्योंक्त जो है वही सिद्धान्त शेखर में श्रीपति
ने तथा सिद्धान्त शिरोमणि में भास्कराचार्य ने भी पठित की है । सूर्य सिद्धान्त में ‘‘अष्टार्गवाः
४८ शून्यकृता ४० पञ्चषष्टि ६५ नगेषवः ५७ । अष्टार्था २८ अर्धयो ४ ऽष्टागा ७८
अङ्गागा ७६ मनव १४ स्तथा’’ इत्यादि संस्कृत वि. भाष्य में लिखित श्लोकों से अश्विनी
आदि नक्षत्रों की भोग कला पठित की है । उनसे ‘प्रोच्यन्ते लिप्तका भाना स्वाभोगोऽथ
दशाहताः । भवन्त्यतीत धिष्याना भोगलिप्ता युता ध्रुवाः’ इस श्लोक द्वारा नक्षत्रों का
ध्रुवानयन कहा है । जैसे भरणी की पठित भोग कला = ४०, दस से गुणने से = ४०० यहाँ
गत नक्षत्र = १ है, इसकी भोगकला = ८०० जोड़ देने से $४०० + ८०० = १२०० = २०^{\circ}$
इसी तरह सब नक्षत्रों की उनकी भोग कलाओं से ध्रुवा साधन करना चाहिए इति ॥ १-३

उपपत्ति ।

विपुल (बड़ा) गोल यन्त्र बना कर रात्रि में गोल केन्द्रगत दृष्टि से रेवती तारा को देख
कर क्रांतिवृत्त में जो मीनान्त बिन्दु है उसको रेवती तारा में निविष्ट कर केन्द्रगत दृष्टि ही से
उस नक्षत्र (जिस की ध्रुवा लानी है) को देखकर उसके ऊपर कदम्बप्रोतवृत्त और ध्रुव-
प्रोतवृत्त कर देना, कदम्बप्रोतवृत्त क्रांतिवृत्त में जहाँ लगता है वहाँ से क्रांतिवृत्त और
नाडीवृत्त के सम्पात पर्यन्त क्रांतिवृत्त में सायन ध्रुवांश है, तथा ध्रुवप्रोतवृत्त क्रांतिवृत्त में
जहाँ लगा है वहाँ से नाडीवृत्त और क्रांतिवृत्त के सम्पात पर्यन्त आयन द्वक्कर्म संस्कृत सायन
नक्षत्र ध्रुवा है, आचार्य ने नक्षत्रबिम्ब के ऊपर ध्रुवप्रोतवृत्त करके उसके वश से आयन द्वक्कर्म
संस्कृत ध्रुववेध से जानकर पठित किया है ॥ १-३ ॥

इदानीं भग्रहयोगस्थ गतगम्यत्वमाह

ध्रुवकादूनः पश्चादधिकः प्राग्वक्रितेऽन्यथा योगः ।

अन्यवृत्तहमेलकवद् ध्रुवक्रान्तेर्भविष्येयाः ॥ ४ ॥

सु. भा.—ग्रहो भध्रुवकादूनस्तदा योगः पश्चाद्भविष्यति । अधिकस्तदा योगः प्राग्गतः । ग्रहे वक्रिते सति योगोऽन्यथा वाच्यः । अर्थादूने पश्चादधिके गत इति वेदितव्यम् । अन्यद्भग्रहयुतौ ग्रहमेलकवज्ज्ञेयम् । अथ भध्रुवकक्रान्तेरग्राद्भ विक्षेपा वक्ष्यमाणा एते ॥ ४ ॥

वि. भा.—ध्रुवकात् (पूर्वोक्तात्) ग्रह ऊनः (अल्पः) तदा योगः (भग्रहयोर्योगः) पश्चात् (एष्यः) भवति । ध्रुवकाद् ग्रहोऽधिकस्तदा योगः प्राक् (गतः) भवति, ग्रहे वक्रिते सति योगोऽन्यथाऽर्थाद् ग्रहे ऊने गतः । अधिके एष्य इति ज्ञेयः अन्यद्ग्रहमेलकवत् (ग्रहयुतिवत्) भग्रहयुतौ ज्ञेयम् । भध्रुवकक्रान्तेरग्राद् भविक्षेपाः (नक्षत्रशराः) वक्ष्यमाणा विज्ञेया इति ; सिद्धान्त शेखरे “महति युतिरतीता भध्रुवात् खेचरेऽल्पे भवति हि पुनरेष्या चान्यथा वक्रयाते । द्युचर युतिवदन्यत् कर्म सर्व विधेयं क्रमश उद्गुरांशाः स्वध्रुवापक्रमाग्रात्” इत्यनेन श्रीपतिनाऽऽचार्योक्तानुरूपमेवोक्तम् । सूर्यसिद्धान्तेऽपि “ग्रहमेलकवच्छेषं ग्रहभुक्त्या दिनानि च । एष्यो हीने ग्रहे योगो ध्रुवकादधिके गतः । विपर्ययाद्भ्रगते ग्रहे ज्ञेयः समागमः” पूर्वोक्तानुरूपमेव । एवं कदम्बप्रोतीयेन ग्रहेण स्फुटक्रियाऽऽगतेन नक्षत्रयोगो ह्यानीतः । भास्कराचार्येण तु कदम्बप्रोतीययोर्ग्रहयोर्योगतैष्ययुतिवदेव ध्रुवप्रोतीययोर्ग्रहयोर्योगतैष्या युतिरभिहिता सा न समीचीना, कदम्ब प्रोतीय गतैष्य युति वत्सर्वदा ध्रुव प्रोतीय गतैष्यायुतिर्न भवति कदाचिद्गतैष्यत्वं विलोमत्वं भवति । यथा ध्रु=उत्तर ध्रुवः । क=उत्तर-

कदम्बम् । ग्र=मार्गोमन्दगतिर्ग्रहो यस्य स्थानम् =न, ग्र=अधिक-गतिर्ग्रहोमार्गो यस्य स्थानम् =म, तदा कदम्ब प्रोतीया युतिर्गता-ऽधिकगतिर्ग्रहस्याग्रे गतत्वात् । ग्रहयोरुपरि ध्रुवप्रोतवृत्तकरणेन

ग्र गृहस्यायन द्वकर्म संस्कृत स्थानम् =य, ग्र गृहस्यायन द्वकर्म संस्कृत स्थानम् =र अत्र मन्दगतिर्गृहादधिकगतिर्गृहः पृष्ठेऽस्त्यतो युतिरेष्या ; एवं बहुत्र स्थले व्यभिचरित, सिद्धान्ततत्त्वविवेकेकमला करेण भास्करोक्त युतिसाधनस्य यत्खण्डनं कृतं तद्युक्तियुक्तमिति ॥ ४ ॥

हि. भा.—पूर्वोक्त पठित ध्रुवा से ग्रह ऊन (अल्प) रहे तो योग एष्य होता है, यदि ध्रुवा से ग्रह अधिक रहे तो योग गत होता है, ग्रह के वक्री रहने से अन्यथा अर्थात् विपरीत होता है (ग्रह के ऊन रहने से योग गत, अधिक रहने से एष्य) अन्य सब कर्म (गत गम्य दिनदि के आनयनादि) ग्रहयुति की तरह समझना चाहिए । भध्रुवक की क्रान्ति के अग्र से वक्ष्यमाण नक्षत्रों का शरांश समझना चाहिए इति ; सिद्धान्त शेखर में “महति युतिरतीता भध्रुवात् खेचरे ऽल्पे भवति हि पुनरेष्या चान्यथा वक्रयाते” इत्यादि सं० भाष्य में लिखित श्लोकों से श्रीपति ने आचार्योक्तानुरूप ही कहा है । सूर्य सिद्धान्त में भी “ग्रहमेलकवच्छेषं ग्रहभुक्त्या दिनानि च । एष्यो हीने” इत्यादि सं० भाष्य में लिखित श्लोकों से पूर्वोक्त सट्श ही

कहा गया है। एवं स्फुट क्रिया द्वारा आए हुए कदम्बप्रोतीय ग्रह से नक्षत्रयोग विचार किया गया है। भास्कराचार्य ने कदम्ब प्रोतीय दो ग्रहों की गतैष्य युति की तरह ध्रुवप्रोतीय दो ग्रहों की गतैष्ययुति का भी विचार किया है, सो ठीक नहीं है कदम्बप्रोतीय गतैष्य युति की तरह सर्वदा ध्रुवप्रोतीय गतैष्य युति नहीं होती है कभी कभी गतैष्यत्व में विपर्यय होता है जैसे—

यहां सं० भाष्य में लिखित क्षेत्र को देखिए। ध्रु = उत्तर ध्रुव। क = उत्तर कदम्ब ग्र = मार्गमन्दगति ग्रह है जिसका स्थान न है, ग्र = मार्गी अधिकगति ग्रह है जिसका स्थान = म है, तब यहां अधिक गति ग्रह के मन्द गति ग्रह से आगे होने के कारण कदम्बप्रोतीय युति गत होती है, दोनों ग्रहों के ऊपर ध्रुवप्रोतवृत्त करने से ग्र ग्रह के आयन द्वकर्म संस्कृत स्थान = य, है और ग्र ग्रह के आयन द्वकर्म संस्कृत स्थान = र है, यहां मन्दगति ग्रह से अधिक गति ग्रह पीछे है इस लिए युति एष्य होती है, इस तरह बहुत स्थलों में व्यभिचार होता है, सिद्धान्त तत्त्व विवेक में कमलाकर ने भास्करोक्त युति साधन का जो खण्डन किया है वह युक्ति युक्त है इति ॥ ४ ॥

बिम्ब केन्द्र तक कदम्ब प्रोतवृत्त में नक्षत्र के मध्यमशर है, नाडीवृत्त और क्रान्तिवृत्त के सम्पात
से ध्रुवप्रोतवृत्त और क्रान्तिवृत्त के सम्पात पर्यन्त आयन दृक्कर्म सस्कृत सायन नक्षत्र ध्रुवा
है, नक्षत्र बिम्ब से ध्रुवप्रोतवृत्त और क्रान्तिवृत्त के सम्पात पर्यन्त ध्रुव प्रोत वृत्त में नक्षत्र
के स्फुटशर है, इस तरह आचार्य ने अपने समय में बेध से नक्षत्रों के शराश को परीक्षित कर
पठित किया। भास्कराचार्य “इत्यभावेऽयनांशानां कृत दृक्कर्मका ध्रुवाः” इत्यादि से विलोम-
विधि से नक्षत्र स्फुटशर से मध्यमशर का जो साधन किया है सो ठीक नहीं है, क्योंकि
‘त्रिज्यावर्गादयनवलनज्याकर्त्ति प्रोह्यमूलं’ इत्यादि से मध्यमशर से स्फुटशर (ध्रुव प्रोतवृत्तीय
कोटिचाप) अल्प होता है, यहां नक्षत्र बिम्ब से क्रान्तिवृत्त पर्यन्त (नक्षत्र स्पष्टभोग चिह्न
तक) कदम्बप्रोतवृत्त में मध्यमशर कोटिरूप है, और नक्षत्र बिम्ब से क्रान्ति वृत्तपर्यन्त ध्रुव
प्रोतवृत्त में स्पष्टशर कर्णरूप है, मध्यमशर से स्फुटशर यहां अधिक है, विलोम विधि से
नक्षत्र स्फुटशर से भी अधिक बहुत अशुद्ध होगा। उसके वश से अन्य ध्रुवा आदि भी
समीचीन नहीं होती है, इसलिये भास्करोक्त सब बातें निर्युक्तिक समझनी चाहिये। नक्षत्र-
स्फुटशर कर्ण एक भुज, नक्षत्र मध्यमशर कोटि द्वितीय भुज, क्रान्तिवृत्त में आयन दृक्कर्मकला
भुज तृतीय भुज, इन तीनों अवयवों से उत्पन्न चापीयजात्य में क्रान्तिवृत्त और ध्रुव प्रोत वृत्त
से उत्पन्न कोण आयन वलनकोटि है, कदम्ब प्रोत वृत्त और क्रान्तिवृत्त से उत्पन्न कोण
समकोण है, इसलिये अनुपात करते हैं यदि त्रिज्या में नक्षत्र स्फुटशरज्या पाते हैं तो आयन-
वलन कोटिज्या में क्या इससे नक्षत्र की मध्यमशरज्या आयी, चाप करने से नक्षत्र का मध्यमशर
हुआ, तब उक्त त्रिभुज में भुज कोटिज्या और कोटि कोटिज्या का घात त्रिज्या और कर्ण-
कोटिज्या के घात के बराबर होता है, इससे आयन दृक्कर्मकला कोज्या. नक्षत्रमशर कोज्या =
त्रि. नक्षत्र स्पष्टकोज्या, दोनो पक्षों में ‘नक्षत्रमशकोज्या’ से भाग देने से त्रि. नक्षत्रस्पष्टकोज्या
नक्षत्रमशकोज्या
= आयन दृक्कर्मकलाकोज्या, इसके चाप को नवत्यश में से घटाने से आयनदृक्कर्म कला होती
है, इसलिये यहां सक्तकर्म ही से सबों के ज्ञान होते हैं अतः भास्करोक्त विधि आदरणीय
नहीं हैं इति ॥ ५-६ ॥

इदानीं विशेषमाह ।

छादयति योगतारां मानार्धोनाधिकाद् भविक्षेपात् ।

स्फुटविक्षेपो यस्याधिकोनको भवति समद्विक्स्थः ॥१०॥

सु. मा.—भविक्षेपान्नक्षत्रशरात् किंविशिष्टात् मानार्धोनाधिकाद् ग्रहबिम्ब-
मानार्धोनाद्युताच्च यस्य ग्रहस्य स्फुटविक्षेपो ध्रुवप्रोतीयः शरः क्रमेणाधिकोनो
भवति स समद्विक्स्थो ग्रहो योगतारां छादयति ।

अत्रोपपत्तिः । कल्प्यते ग्रहशरो नक्षत्रशरदिक्को नक्षत्रशरादल्पस्तदा द्वयो-
रन्तरेण केन्द्रान्तरम् नश-ग्रश इदं ग्रहबिम्बमानार्धादल्पं तदाग्रहो योगतारां छाद-
यति । अतस्तदा नश-ग्रश $< \frac{\text{विमा}}{२}$ \therefore नश $= \frac{\text{विमा}}{२} < \text{ग्रश}$ । एवं यदा नक्षत्र-
शर दिक्को ग्रहशरोऽधिकस्तदा भेदयोगे ग्रश-नश $< -\frac{\text{विमा}}{२}$ \therefore ग्रश $< \text{नश} +$
 $\frac{\text{विमा}}{२}$ अतः आचार्योक्तं स्पष्टमुपपद्यते ॥ १० ॥

वि. भा. — भविक्षेपात् (नक्षत्रशरात्) मानार्धोनाधिकात् (ग्रहबिम्बमानार्धेन
हीनाद्युनाच्च) यस्य ग्रहस्य समदिक्स्थः स्फुटविक्षेपः (ध्रुवप्रोतवृत्तीयो ग्रहस्पष्टशरः)
क्रमेणाधिकोनो (अधिक हीनः) भवति स ग्रहो योगतारां छादयतीति ॥ १० ॥

अत्रोपपत्तिः ।

कल्प्यते—एकदिक्कोयुर्ग्रहनक्षत्रशरयोर्मध्ये यदि नक्षत्रशराद् ग्रहशरोऽल्पस्तदा
तयोरन्तरेण केन्द्रान्तरम् = नक्षत्रशर — ग्रहशर, इदं यदि ग्रहबिम्बार्धाल्पं तदाग्रहो
योगतारां छादयति, अतस्तदा नक्षत्रश — ग्रहश $< \frac{\text{विमा}}{२}$ तेन नक्षत्रश — $\frac{\text{विमा}}{२}$
 $< \text{ग्रहश}$ । एवं यद्येकदिक्कोयुर्नक्षत्रग्रहशरयोर्मध्ये ग्रहशरोऽधिकस्तदा भेदयोगे
ग्रशर — नक्षत्रश $< \frac{\text{विमा}}{२}$ अतः नक्षत्रश + $\frac{\text{विमा}}{२} > \text{ग्रशर}$ अत आचार्योक्तमुपपन्न-
मिति । सिद्धान्तशेखरे “ऋक्षक्षेपान्मानखण्डाधिकोनात् स्पष्टः क्षेपो यस्य हीना
धिकश्चेत् । तुल्यांशः स्यात् योगतारां हि घत्ते तद्विषयस्य व्योमगामी स नूनम्”
इत्यनेन श्रीपतिनाऽचार्योक्तानुरूपमेवोक्तमिति ॥ १० ॥

अब भग्रहयुति में विशेष कहते हैं ।

हि. भा. — नक्षत्र शर में ग्रह बिम्बमानार्ध को हीन और युत करने से जो हो उनसे
जिस ग्रह के समदिक् स्थित स्पष्टशर क्रम से अधिक और ही न हो तो वह ग्रह योगतारा
को छादित करते हैं इति ॥ १० ॥

उपपत्ति ।

एक दिशा के ग्रहशर और नक्षत्र शर में यदि नक्षत्रशर से ग्रहशर अल्प है तब दोनों
के अन्तर करने से केन्द्रान्तर = नक्षत्रश — ग्रहश, यह यदि ग्रहबिम्बमानार्धाल्प है तो ग्रह योग-

तारा को छादित करते हैं। इसलिये तब नक्षत्रश - ग्रशर $< \frac{\text{विमा}}{२} \therefore \text{नक्षत्रश} - \frac{\text{विमा}}{२}$
 $< \text{ग्रहश}$ । एवं एक दिशा के नक्षत्रशर और ग्रहशर में यदि ग्रहशर अधिक है तो भेदयोग में
 ग्रहश - नक्षत्रश $< \frac{\text{विमा}}{२}$, अतः नक्षत्रश + $\frac{\text{विमा}}{२} > \text{ग्रशर}$ इससे आचार्योक्त उत्पन्न हुआ।
 सिद्धान्त शेखर में “ऋक्षभेपान्मानखण्डाधिको ऽतु” इत्यादि सं. उपपत्ति में लिखित श्लोक से
 श्रीपति ने आचार्योक्त के अनुरूप ही कहा है इति ॥ १० ॥

इदानीं रोहिणीशकटभेदमाह ।

विक्षेपांश द्वितयादधिको वृषभस्य सप्तदश भागे ।

यस्य ग्रहस्य याम्यो भिनत्ति शकटं स रोहिण्याः ॥ ११ ॥

सु. भा.—स्पष्टार्थम् । अत्रोपपत्तिः । रोहिणीशकटस्य ध्रुवभागा वृषस्य
 सप्तदशांशाः । याम्यः शरश्चांशद्वयाधिकः । अतो ग्रहस्य तादृश स्थितौ शकटे
 प्रवेश इति स्फुटम् ।

अत्राधिकपदेन रोहिणीशर पर्यन्तमेव गृह्यतेऽन्यथा रोहिणीयोगतारातोऽपि-
 दक्षिणस्थे ग्रहबिम्बे शकटभेदाभावस्तेनांशद्वयाधिको रोहिणीशरतोऽल्पो याम्यः
 शरो यस्य स एव रोहिणीशकटं भिनत्ति ।

वि. भा. यस्य ग्रहस्य स्थानं वृषभस्य सप्तदश १७ भागे भवेद्याम्यः
 (दक्षिणः) शरश्चांशद्वयादधिकः स ग्रहो रोहिण्याः शकटं भिनत्तीति
 ॥ ११ ॥

अत्रोपपत्तिः ।

रोहिणी नक्षत्रस्थितिवशेन तदाऽऽकृतिः शकटाकाराऽऽकाशे ऽस्तीति
 प्राचीनानां विश्वासः । तस्य शकटस्य ध्रुवो वृषस्य सप्तदशां १७ शेऽस्ति, क्रान्ति-
 वृत्तासन्नतारायाश्च दक्षिणः शरोऽंशद्वयतुल्योऽतो यस्य ग्रहस्य वृषस्य सप्तदशेशे
 स्थितिः, दक्षिणः शरश्चांशद्वयादधिकः स शकटान्तर्गतत्वाच्छकटं भेदयेदेव ।
 अत्रांशद्वयाधिक इत्यत्राधिक पदेन रोहिणी शरपर्यन्तमेव गृह्यतेऽन्यथा रोहिणी
 योगतारातोऽपि दक्षिणस्थे ग्रहबिम्बेशकट भेदाभावस्तेनांशद्वयाधिको
 रोहिणी शरतोऽल्पो यस्य ग्रहस्य दक्षिणः शरो भवेत्स एव रोहिणी शकटं
 भिनत्तीति ॥

सूर्य सिद्धान्ते “वृषे सप्तदशे भागे यस्य याम्योऽंशकद्वयात् । विक्षेपोऽभ्यधिको भिन्धाद्रोहिण्याः शकटं तु सः” जनेन सिद्धान्त शेखरे “अत्यष्टिसंख्ये वृषभस्य भागे स्थितस्य यस्य द्युचरस्य नूनम् । याम्यःशरोऽंशद्वितयाधिकः स्यात् स रोहिणीनां शकटस्य भेत्ता” जनेन श्रीपतिनाप्याचार्योक्तानुरूपमेवोक्तमिति ॥ ११ ॥

अब रोहिणीशकट भेद को कहते हैं ।

हि. भा.—रोहिणी नक्षत्र के स्थितिबश से उसकी आकृति (आकार-स्वरूप) शकट (गाड़ी) के आकार के है यह प्राचीनों के वचन प्रमाण से विदित होता है । उस शकट के ध्रुव वृष (राशि) के सतरह अंश में है, क्रान्तिवृत्त के आसन्न (समीप) स्थित तारा के दक्षिण शर दो अंश के तुल्य है, इसलिये जिस ग्रह की वृष के सप्तदशांश में स्थिति हो और दक्षिण शर दो अंश से अधिक हो वह ग्रह शकट अन्तर्गत होने के कारण शकट को भेदन करता ही है । यहां श्लोक में दो अंश से अधिक कहा गया है, अधिक पद से रोहिणीशर पर्यन्त ही लेना चाहिये नहीं तो रोहिणी योगतारा से भी दक्षिण में ग्रहबिम्ब के रहने से शकट भेदाभाव होता है इसलिये दो अंश से अधिक और रोहिणीशर से अल्प जिस ग्रह का दक्षिणशर होता है वही (ग्रह) रोहिणीशकट को भेदन करता है । इससे आचार्योक्त उपपन्न हुआ ।

सूर्य सिद्धान्त में “वृषे सप्तदशे भागे यस्य याम्योऽंशकद्वयात्” इत्यादि से, तथा सिद्धान्त शेखर में “अत्यष्टि संख्ये वृषभस्य भागे” इत्यादि सं. उपपत्ति में लिखित श्लोक से श्रीपति ने भी आचार्योक्त के अनुरूप ही कहा है इति ॥ ११ ॥

इदानीं भेदे विशेषमाह ।

विक्षेपान्ते सौम्ये तृतीयतारां भिनत्ति पित्र्यस्य ।

इन्दुभिनत्ति पुष्यं यौष्णं वारुणमविक्षिप्तः ॥१२॥

सु. भा.—इन्दुः सौम्ये विक्षेपान्ते सौम्यशरस्य परमे पित्र्यस्य मघायास्तृतीय-तारां भिनत्ति । एवमविक्षिप्तःशररहित इन्दु पुष्यं पौष्णं रेवतीं वारुणं शततारकां च भिनत्ति ।

अत्रोपपत्तिः । मघातृतीयतारायाः शर उत्तरश्चन्द्रपरमशरसमो ध्रुवश्च-पूर्वोक्ताः ४ रा । ९ अं । अतस्तत्रैव ग्रहबिम्बे भेदयोगोभवत्येवात्र किं चित्रम् । शेषोपपत्तिरप्यत्र पूर्वयुक्त्या स्फुटा । यस्या मघायोगताराया ध्रुवाः शून्यशरभागाश्च पठितास्तां चाविक्षिप्त एवेन्दुभिनत्ति ॥१२॥

वि. भा.—इन्दुः (चन्द्रः) सौम्ये विक्षेपान्ते (उत्तरे परमशरे) पित्र्यस्य

(मघायाः) तृतीयतारां भिनत्ति (भेदयति) एवं अविक्षिप्तः (शररहित) चन्द्रः पुष्यं, पौष्णं (रेवती) वारुण (शततारकां) भिनत्तीति ॥१२॥

अत्रोपपत्तिः ।

मघातृतीयताराया उत्तरः शरश्चन्द्रपरमशर $२७०^{\circ} = (४^{\circ} ३०')$ तुल्या
 रा अं
 ध्रुवश्च पूर्वकथितः ४।९, अतस्तत्र विद्यमानश्चन्द्रो मघातृतीयतारां भिनत्तीति,
 रा अं
 यस्या मघा योगताराया ध्रुवः $= ४।९$, शराभावश्चोक्तस्तां शरहीन एव चन्द्रो
 भिनत्ति, तथैव शराभाववतां पुष्य शतभिषग्रेवतीनां नक्षत्राणां पृथक् पृथक् ध्रुव-
 कैस्तुल्यः शररहितश्चन्द्रस्तेषां भेत्ता भवतीति ॥ सिद्धान्तशेखरे “चन्द्रो मघा-
 ध्रुवसमः परमोत्तरेषुः पित्राभिषस्य हि भिनत्ति तृतीयताराम् । क्षेपोज्जिनो वरुणा-
 पूष सुरेज्यभानां भेत्ता तदा भवति तद्ध्युवकैः समश्चेत्” अनेन श्रीपतिनाऽऽचार्यो-
 क्तानुरूपमेवोक्तमिति सुधीभिश्चिन्त्यम् ॥१२॥

अब भेद में विशेष कहते हैं ।

हि. मा.—चन्द्रमा ऊत्तर परमशर में मघा की तृतीयतारा को भेदन करने है,
 एवं शर रहित चन्द्र पुष्य, रेवती, और शततारा को भेदन करते हैं इति ॥१२॥

उपपत्ति ।

मघा तृतीय तारा का उत्तर शर चन्द्र के परमशर $२७०^{\circ} = ४^{\circ}$ । $३०'$ के तुल्या
 रा अं
 है और पूर्वोक्त ध्रुवा ४।९, है इसलिये उस में स्थित चन्द्र मघा की तृतीय तारा को भेदन
 रा अं
 करते ही हैं । जिस मघायोगतारा की ध्रुवा $= ४।९$ और शराभाव है उसको शरहीन ही
 चन्द्र भेदन करते हैं । उसी तरह शराभाव वाले पुष्य, रेवती और शततारक, इन नक्षत्रों के
 पृथक् पृथक् ध्रुवक के तुल्य शर रहित चन्द्र भेत्ता (भेदन करने वाले) होते हैं ।

सिद्धान्त शेखर में “चन्द्रो मघा ध्रुवसमः परमोत्तरेषुः “इत्यादि सं. उपपत्ति मे
 लिखित श्लोक से श्रीपति” आचार्योक्त के अनुरूप ही कहा है इति ॥१२॥

इदानीं नक्षत्रादि दृक्कर्म साधने कारणमाह ।

कृत्वापि दृष्टिकर्म श्रीषेणार्यभटविष्णुचन्द्रोक्तम् ।

प्रतिदिनमुदयेऽस्ते वा न भवति दृग्गणितयोरेक्यम् ॥१३॥

भमुनि मृगव्याधानां यतस्ततो दृष्टिकर्म वक्ष्यामि ।
दृग्गणितसमं देयं शिष्याय चिरोषितायेदम् ॥१४॥

सु. भा.—श्रीषेणार्यभट विष्णुचन्द्रोक्तं दृष्टिकर्म कृत्वापि प्रतिदिनं भमुनि-
मृगव्याधानां नक्षत्रागस्त्यलुब्धकानामुदयेऽस्ते वा यतो दृग्गणितयोरैक्यं न भवति
ततस्तस्मात् कारणाद् दृग्गणितसमं दृष्टिकर्म वक्ष्यामि । इदं दुर्लभं वक्ष्यमाणं दृक्कर्म
चिरोषिताय भक्ताय शिष्याय देयं नान्येभ्य इति ॥१३-१४॥

वि. भा.—यतः (यस्मात् कारणात्) श्रीषेणार्यभट विष्णुचन्द्रोक्तं (श्रीषेण-
आर्यभटादि कथितम्) दृष्टिकर्म (आयनं दृक्कर्मक्षजं दृक्कर्म च) कृत्वापि (नक्षत्रा-
दिषु तत्संस्कार दानेनापि) प्रतिदिनं भमुनिमृगव्याधाना (नक्षत्रागस्त्यलुब्ध-
कानां) मुदयेऽस्तेवा दृग्गणितयोरैक्यं (वेधगणितसाम्यम्) न भवति, ततः
(तस्मात् कारणात्) दृग्गणितसमं (दृष्ट्या वेधेन-गणितेन च तुल्यं) दृष्टिकर्म
(दृक्कर्म) वक्ष्यामि, इदमपूर्वं वक्ष्यमाणं दृक्कर्म चिरोषिताय (स्वान्ते चिरवासिने)
शिष्याय देयं-नान्येभ्य इति :१३-१४॥

अब नक्षत्र आदि के दृक्कर्म साधन में कारण कहते हैं ।

हि. भा.— जिस कारण से श्रीषेण-आर्यभट-विष्णुचन्द्र आचार्य कथित दृष्टि कर्म
(आयन दृक्कर्म और आक्षदृक्कर्म) को नक्षत्रादि में संस्कार करने से भी प्रतिदिन नक्षत्र
अगस्त-लुब्धक इन सर्वों के उदय और अस्त में दृग्गणितैक्य (वेधगत और गणितगत
उदयकाल और और अस्तकाल में समता) नहीं होता है, उस कारण से वेध से और गणित
से तुल्य आने वाले दृष्टि कर्म को कहता हूँ । यह दुर्लभ आगे कहे जाने वाले दृक्कर्म अपने
निकट में बहुत दिन तक रहने वाले शिष्य को देना चाहिये, दूसरे को नहीं इति ॥१३-१४॥

अथ भमुनिव्याधाक्षज दृक्कर्मार्थ स्फुटक्रान्तिज्यां प्रतिपादयति ।

क्रान्तिज्या तत्क्रान्तिर्विक्षेपक्रान्तिचापभागानाम् ।

संयोगान्तरजीवा स्वक्रान्तिज्यैकभिन्नदिशाम् ॥१५॥

सु. भा.—नक्षत्रमुनिव्याधध्रुवकेभ्यो ध्रुवज्या जिनज्यागुणा त्रिज्याभक्तेति
विधिना क्रान्तिज्या साध्या सा तत्क्रान्तिरुच्यते । तत एकभिन्नदिशां विक्षेपक्रान्ति-
चापभागानां संयोगान्तरजीवा स्वक्रान्तिज्या स्फुटा भवति ।

अत्रोपपत्तिः । आचार्येण ध्रुवप्रोतीया ध्रुवाः शरांशाश्चा पठिताः । अतो

ध्रुवक्रान्तिर्नक्षत्रध्रुवप्रोते नक्षत्रस्थाननाडीमण्डलान्तरांशास्तत्र ध्रुवप्रोतीयशरसं-
स्कारेण नाडीमण्डलान्नक्षत्रबिम्बावधि ध्रुवपोतेऽंशः स्पष्टक्रान्त्यशा भवन्तीति
गोलयुक्त्या स्फुटम् । संस्कार वासना चाति सुगमा ॥१५॥

वि. भा.—नक्षत्रमुनिव्याधध्रुवकेभ्यो ध्रुवज्या जितज्या गुणा त्रिज्या
भक्ता फलं क्रान्तिज्या सा तत्क्रान्तिः कथ्यते । तत एकभिन्नदिशां त्रिक्षेपक्रान्ति-
चापभागानां संयोगान्तरजीवा स्फुटा स्वक्रान्तिज्या भवतीति ॥१५॥

अत्रोपपत्तिः

आचार्येण ध्रुवाः शरांशाश्च ध्रुवप्रोतवृत्तीयः पठिताः । अतो ध्रुवक्रान्ति-
नक्षत्रस्थानोपरिगतध्रुवप्रोतवृत्तनाडी वृत्तसम्पातान्नक्षत्र स्थानं यावत्तत्र नक्षत्र-
बिम्बोपरिगतध्रुवप्रोतवृत्तनक्षत्रस्थानीयाहोरात्रवृत्तायोः सम्पातान्नक्षत्रबिम्ब यावन्न-
क्षत्रस्पष्टशरस्य संस्कारेण नक्षत्रबिम्बोपरिगतध्रुवप्रोतवृत्तनाडीवृत्तयोः सम्पातान्न-
क्षत्रबिम्बं यावद् ध्रुवप्रोतवृत्ते नक्षत्रस्पष्टक्रान्तिर्भवेदिति । सूर्यसिद्धान्ते 'विशेषाप-
क्रमैकत्वे क्रान्तिविक्षेपसंयुता । दिग्भेदे वियुता स्पष्टे' त्यनेन या हि ग्रहाणां
स्पष्ट क्रान्तिः साधितास्ति सा न समीचीना, यतो हि सूर्य सिद्धान्तकारेण ध्रुव
प्रोतवृत्तीयः स्पष्टशरो न साधितः, तदा विजातीय ध्रुवप्रोतवृत्तीयमध्यक्रान्तिकदम्ब-
प्रोतवृत्तीयभगोलीयस्फुटशरयोर्योगान्तराभावात्स्फुटक्रान्तिसिद्धिर्न भवितुमर्हतीति
विज्ञेयम् ॥१५॥

अब नक्षत्र मुनि व्याधो के अक्षज दृक्कर्म के लिये स्फुट क्रान्तिज्या को कहते हैं ।

हि. भा.—नक्षत्र मुनि व्याधो के ध्रुवकों से जो ध्रुवज्या हो उनको जितज्या मे
गुणाकार त्रिज्या से भागदेने से फल क्रान्तिज्या होती है उसका चाप क्रान्ति है, एक दिशा
में और भिन्नदिशा में शर चाप (स्पष्टशरचाप) और क्रान्तिचाप का योग और अन्तर
करने से स्फुट क्रान्ति चाप होता है उसकी ज्या स्फुट क्रान्तिज्या होती है इति ॥१५॥

उपपत्ति ।

आचार्य ने ध्रुवा और शरांश ध्रुव प्रोतवृत्तीय पठित किया है । इसलिये नक्षत्र स्थानो-
परिगत ध्रुवप्रोतवृत्त और नाडीवृत्त के सम्पात से नक्षत्रस्थान पर्यन्त ध्रुवक्रान्ति है, तथा
नक्षत्र बिम्बोपरिगतध्रुवप्रोतवृत्त और नक्षत्र स्थानीयाहोरात्रवृत्त के सम्पात से नक्षत्र
बिम्बपर्यन्त नक्षत्र का स्पष्टशर है, इन दोनों का योगान्तर करने से नक्षत्रबिम्बोपरिगतध्रुव
प्रोतवृत्त और नाडीवृत्त के सम्पात से नक्षत्र बिम्बपर्यन्त ध्रुव प्रोतवृत्त में नक्षत्र की

स्पष्टक्रान्ति होती है। सूर्य सिद्धान्त में “विक्षेपापक्रमैवत्वे क्रान्ति विक्षेप संयुता । दिग्भेदे वियुता स्पष्टा” इस से जो ग्रहों की स्पष्ट क्रान्ति साधित है सो ठीक नहीं है, क्योंकि सूर्य सिद्धान्तकार ने ध्रुव प्रोतवृत्तीय स्फुटशर का साधन नहीं किया है। तब विजातीय ध्रुव प्रोतीय ध्रुव प्रोतवृत्तीय मध्यम क्रान्ति और कदम्ब प्रोतवृत्तीय भगोलीय स्फुट शर के योग और अन्तर न होने के कारण स्फुट क्रान्ति की सिद्धि नहीं होती है, नक्षत्र के लिये भी वही प्रक्रिया है जो ग्रह के लिये सूर्य सिद्धान्तकार कहते हैं इति ॥१५॥

इदानीं विशेषमाह ।

एवंभमुनि ध्रुवयोर्ग्रह तत्क्रान्त्या च दृष्टिकर्मार्थम् ।

कृत्वा ग्रहे भमुनिवत् तस्मात् स्वक्रान्तिजीवा च ॥१६॥

सु. भा.— एवं भमुनिध्रुवयोः पूर्वप्रकारेण स्पष्टक्रान्तिज्यानयनं कार्यं । नक्षत्रध्रुवा वेधेनाऽऽयनदृक्कर्मसंस्कृता एव पठिताः । अतो ग्रहतत्क्रान्त्या च ग्रहे चाद्यं दृष्टिकर्मार्थं दृक्कर्म सजातीयत्वात् कृत्वा तस्मादायनदृक्कर्म संस्कृताद् ग्रहाद् भमुनिवत् स्वक्रान्तिजीवा ग्रहस्पष्टक्रान्तिज्या च साध्या ।

अत्रोपपत्तिः । आचार्येण ग्रहकदम्बप्रोतीयः शर एव स्वल्पान्तराद् ध्रुवप्रोतीयः कल्पितो ग्रहशराणामल्पत्वात् । तत आयनदृक्कर्म संस्कृतग्रहक्रान्ति शरसंस्कारेण नक्षत्रवत् स्फुटक्रान्तिज्यासाधनं कृतम् । भास्कराचार्येण च ‘त्रिज्यावर्गादयनवलनज्याकृतिं प्रोह्ये’ त्यादिविधिना ध्रुवप्रोतीयः स्फुटशरः क्रान्तिसंस्कारयोग्यः साधितः । स च स्थानीय बिम्बीयाहोरात्रवृत्तयोरन्तरचापसमश्चापीयत्रिकोणमिति युक्त्या न भवतीति भास्करसाधितः स्थुटशरः स्थूलोऽतः कमलाकरेण भास्करशरसाधनस्य यत् खण्डनं कृतं तत् समीचीनमेव । ‘ब्रह्मगुप्तादिभिः स्वल्पान्तरत्वान्न कृतः स्फुटः’ इत्यादिना भास्करेण स्वदृक्कर्मवासनायां गोलाध्याये ह्याचार्यपक्षः समर्थित इति सर्व स्फुटं सिद्धान्तविदाम् ॥१६॥

वि. भा.— भमुनिध्रुवयोः पूर्वोक्त्या स्पष्टक्रान्तिज्यानयनं कार्यम् वेधेनाऽऽयनदृक्कर्म संस्कृता एव नक्षत्र ध्रुवाः पठिताः । अतो ग्रहतत्क्रान्त्या च ग्रहेऽऽद्यं दृष्टिकर्म (आयनं दृक्कर्म) कृत्वा तस्मात् (आयन दृक्कर्म संस्कृताद् ग्रहात्) भमुनिवत् स्वक्रान्तिजीवा (ग्रह स्पष्ट क्रान्तिज्या) साध्येति ॥ १६ ॥

अत्रोपपत्तिः

ग्रहशराल्पत्वात् ग्रह कदम्बप्रोतवृत्तीयशर (मध्यमशरः) एव ध्रुवप्रोतवृत्तीयशरः (स्पष्टशरः) कल्पितः । ततो नक्षत्रवदेवाऽऽयनदृक्कर्म संस्कृतग्रहक्रान्ति-

शरसंस्कारेण स्फुट क्रान्तिज्यानयनं कृतमाचार्येण । “त्रिज्यावर्गदियनवलनज्या-
कृति प्रोह्यमूल” मित्यादिना भास्करेण ध्रुवप्रोतवृत्तीयः स्फुटशरः यः साधितः स
च न समीचीनः, वस्तुतस्तदानयनेन स्फुटशरप्रदेशोनाऽऽयाति, तथा च तदानयनेऽन्या
अप्यनेकाश्चुटयः सन्तीति तदुपपत्तिदर्शनेनैव स्फुटाः सन्तीति सिद्धान्त तत्त्वविवे-
के तत्खण्डनं कमलाकरेण युक्तियुक्तं कृतम् । गोलाध्याये “ब्रह्मगुप्तादिभिः
स्वल्पान्तरत्वान्न कृतः स्फुटः” इत्यादिना भास्कराचार्येणाऽऽचार्यपक्षस्य समर्थन-
मेवकृतमिति सर्वं विवेचकैर्विवेचनीयम् ॥१६॥

अब विशेष कहते हैं ।

ह. भा.—नक्षत्र में ध्रुव का और मुनि (अग्रस्त्य) ध्रुव का पूर्वोक्त प्रकार से स्पष्ट
क्रान्तिज्यानयन करना चाहिये । वेध से आयन दृक्कर्म संस्कृत ही नक्षत्र ध्रुवा पठित है, इसलिये
ग्रह और उसकी क्रान्ति से साधित आद्य (प्रथम) दृष्टि कर्म (अर्थात् आयन दृक्कर्म) ग्रह में
संस्कार कर उस से (आयन दृक्कर्म संस्कृत ग्रह से) नक्षत्र और मुनि (अग्रस्त्य) की तरह ग्रह
की स्पष्टक्रान्तिज्या साधन करना इति ॥१६॥

उपपत्ति ।

ग्रहों के शर की अल्पता के कारण स्वल्पान्तर से ग्रह के कदम्बप्रोतवृत्तीयशर
(मध्यमशर) ही को ध्रुवप्रोतवृत्तीय शर (स्पष्टशर) आचार्य ने स्वीकार कर लिया है । उसके
बाद नक्षत्र ही की तरह आयन दृक्कर्म संस्कृत ग्रह की क्रान्ति और शर के संस्कार से स्फुट
क्रान्तिज्यानयन किया है । “त्रिज्यावर्गदियनवलनज्याकृति प्रोह्यमूलम्” इत्यादि से भास्करा-
चार्य ने ध्रुव प्रोतवृत्तीय स्फुटशर क्रान्ति संस्कार योग्य जो साधन किया है सो ठीक नहीं हैं,
वरतुतः उन के ज्ञानयन प्रकार से स्फुटशर का प्रदेश नहीं आता है, और उनके ज्ञानयन
प्रकार में अन्य भी अनेक त्रुटियाँ हैं जो उस की उपपत्ति देखने से ही स्फुट है, सिद्धान्त-तत्त्व
विवेक में कमलाकर ने उस का खण्डन युक्ति युक्त किया हैं । गोलाध्याय में “ब्रह्मगुप्तादिभिः
स्वल्पान्तरत्वान्न कृतः स्फुटः” इत्यादि से भास्कराचार्य ने पक्ष के समर्थन ही किया है
इति ॥१६॥

इदानीमायनं दृक्कर्महि ।

त्रिज्याप्तानुभिखद्यैर्घाताद्विक्षेपसत्रिभक्रान्त्योः ।

एतेने “सत्रिभग्रहक्रान्तिभागघ्नाः क्षेपलिप्तिकाः । विकलाः” ति सूर्यसिद्धान्तो-
क्ताऽऽयनदृक्कर्म विकलानयनमुपपद्यते । परन्तवेतेष्वायनदृक्कर्मानयनेषु न
कस्यापि समीचीनमिति तदुपपत्तिदर्शनेनैव स्फुटं भवतीति संस्कारोपपत्तिस्तु “ता
ग्रहेऽयनपृष्त्कयोः क्रमादेकभिन्नककुभोर्ऋणं घनम्” भास्करोक्तेनानेन स्फुटैवेति
॥ १७ ॥

अब आयन दृक्कर्म को कहते हैं ।

हि. भा.—शर और सत्रिभग्रह क्रान्ति के घात में त्रिज्या से भाग देने से फलासु
हो उनसे और निरक्षोदयासु से जो क्षेत्र कला होती है उसको शर और सत्रिभग्रह की क्रान्ति
की एक दिशा रहने से ग्रह में से ऋण करना चाहिये, और भिन्न दिशा रहने से ग्रह में घन
करना चाहिये तब आयन दृक्कर्म संस्कृतग्रह (ग्रहबिम्बकेन्द्रोपरिगतध्रुवप्रोतवृत्त और क्रान्ति
वृत्त के सम्पात रूप) होते हैं । नक्षत्रध्रुवक में और भुनि (अगस्त्य) ध्रुवक में आयन दृक्कर्म
संस्कार नहीं करना चाहिये क्योंकि उनकी ध्रुवाः वेध से आयन दृक्कर्म संस्कृत ही पठित है
इति ।

उपपत्ति

यहां संस्कृतोपपत्ति में लिखित क्षेत्र को देखिये । ग्रह बिम्ब केन्द्रोपरिगत कदम्ब प्रोत-
वृत्त क्रान्तिवृत्त में जहां लगता है वह ग्रह स्थान है । ग्रहबिम्बकेन्द्रोपरिगतध्रुवप्रोतवृत्त
क्रान्तिवृत्त में जहां लगता है वहां से ग्रह स्थान पर्यन्त क्रान्तिवृत्तीय चाप आयनदृक्कर्म
कला है । ध्रु = ध्रुव, क = कदम्ब, वि = ग्रहबिम्बकेन्द्र, स्था = ग्रह स्थान, स्थानोपरिगत
ध्रुव प्रोतवृत्त = ध्रुश, बिम्बोपरिगत ध्रुव प्रोतवृत्त = ध्रुप, वि बिन्दु से ध्रुश वृत्त के ऊपर
विन लम्ब वृत्त करना, ध्रुवि = बिम्बीय द्युज्या चाप, विस्था = ग्रहमध्यमशर, ध्रुस्था = स्था-
नीय द्युज्या चाप, ∠ विस्थान = स्थानीयायनवलन = आयन वलन, < न = ९०, स्थाम =
आयन दृक्कर्म कला, शप = आयन दृक्कर्मासु, तब विस्थान चापीयजात्य त्रिभुज में कोणानुपात
से $\frac{\text{मध्यशरज्या} \times \text{आयनवलनज्या}}{\text{त्रि}} = \text{ज्या विन}$, यहां स्वल्पान्तर से मध्यशरज्या = मशर.

तथा आयनवलनज्या = आयनवलन, स्वीकार किया है, तब $\frac{\text{मशर} \times \text{आयनवलन}}{\text{त्रि}} = \text{ज्याविन}$

= लम्बवृत्तापज्या, ध्रुविन, ध्रुशप, दोनों चापीय त्रिभुजों के ज्याक्षेत्र सजातीय है इसलिये

अनुपात करते से $\frac{\text{ज्याविम} \times \text{त्रि}}{\text{बिम्बीयद्यु}} = \text{ज्याशप} = \text{आयनदृक्कर्मसिज्या} = \frac{\text{मशर} \times \text{आयनवलन} \times \text{त्रि}}{\text{त्रि बिम्बीय}}$

$= \text{आयन दृक्कर्मसि स्वल्पा} \frac{\text{मशर} \times \text{आयनवलन}}{\text{बिम्बीय द्यु.}}$ यहां स्वल्पान्तर से बिम्बीयद्यु = स्थानीयद्यु

$= \text{द्यु. तब} \frac{\text{मशर} \times \text{आयनवलन}}{\text{द्यु.}} = \text{आयन दृक्कर्मसि} \dots\dots (१)।$ परन्तु सन्निभग्रह क्रान्ति $=$

द्युज्याग्रीयायनवलन, इसलिये $\frac{\text{मशर} \times \text{सन्निभग्रहां}}{\text{त्रि}} = \text{आयन दृक्कर्मसि, क्योंकि}$

$\frac{\text{आयनवलन} \times \text{द्यु.}}{\text{त्रि}} = \text{द्युज्याग्रीयायनवलन, अब अनुपात करते है यदि निरक्षदेशीय राश्यादयामु}$

में राशिकला पाते हैं तो आयनदृक्कर्मसि में क्या इस से आयन दृक्कर्म कला आनी है, उसका

स्वरूप $= \frac{१८०० \times \text{आयनदृक्कर्मसि}}{\text{निउ}} = \frac{१८०० \times \text{मशर} \times \text{सन्निभग्रहां}}{\text{त्रि. निउ}}$ इससे आचार्योक्त

आयन दृक्कर्मनियन उपपन्न हुता । $\frac{१८०० \times \text{आयनदृक्कर्मसि}}{\text{निउ}} = \text{आयनदृक्कर्मकला, उम में (१)}$

एतच्चिन्हस्य आयन दृक्कर्मसि स्वरूप से उत्थापन देने से $\frac{१८०० \times \text{मशर} \times \text{आयनवलन}}{\text{द्यु. निउ}} =$

आयनदृक्कर्मकला इस से “आयनं वलनमस्फुटेषुणा सगुणम्” इत्यादि से उपपत्ति में लिखित भास्करोक्त उपपन्न होता है ।

विस्थाम त्रिभुज में अनुपात से $\frac{\text{ज्याविस्था} \times \text{ज्या} \angle \text{स्थाविम}}{\text{ज्या} \angle \text{म}} = \frac{\text{शरज्या} \times \text{आयनवज्या}}{\text{त्रि}}$

$= \text{ज्यास्थाम, यहाँ शर की अल्पता के कारण विम} = \text{विस्था स्वीकार किया है। लघुज्या}$

प्रकार से $\frac{२ \text{ शरक}}{६०} = \text{शरज्या, सन्निभग्रह क्रान्तिज्या} = \text{द्युज्याग्रीयायनवज्या} = \frac{\text{क्रांभा} \times २}{१२०}$

$\text{त्रि} = १२०, \text{ तब} \frac{२ \text{ शरक}}{६०} \times \frac{\text{क्रांभा} \times २}{१२०} = \text{आयनदृज्या, इस को दो से भाग देने से}$

दृक्कर्म भाग होता है इसको साठ के वर्ग $= ३६००$ से गुणा करने से आयन दृक्कर्म विकला,

होती है, $\frac{२ \text{ शरक}}{२ \times ६०} \times \frac{३६०० \times \text{क्रांभा} \times २}{१२०} = \text{शरक. क्रांभा} = \text{आयन दृक्कर्म विकला}$

इससे “सन्निभग्रहजक्रान्तिभागघना इत्यादि” सं. उपपत्ति में लिखित सूर्यसिद्धान्तोक्त

आयन दृक्कर्म विकलानयन उपपन्न होता है । परन्तु इन आयनदृक्कर्मनियनों में किसी भी

आचार्य का ठीक नहीं है यह उसकी उपपत्ति देखने से ही स्फुट है, संस्कारोपपत्ति ‘ता ग्रहे-

अन पृषत्कयोः क्रमात्’ । इत्यादि भास्करोक्त से स्पष्ट ही है इति ॥१७॥

इदानीं चन्द्रादीनां महति शरे सूक्ष्ममाक्षदृक्कर्मह ।

मानीय तथा क्रान्तिज्यामानयेत् सा मध्यक्रान्तिज्या, तस्याश्चापं ध्रुवापक्रमकामु-
कम् । ध्रुवापक्रमकामुक्तात् नक्षत्रशरेण संस्कृतात् या ज्या सा स्पष्टक्रान्तिज्या,
आभ्यां मध्यस्पष्टक्रान्तिज्याभ्यामर्कवच्चन्द्रवच्च चरार्धद्वयं साध्यं शेषं सुगमम् ॥”
एभिरुपर्युक्तैः श्लोकैः श्रीपतिनाऽऽचार्योक्तानुरूपमेव सर्वं कथितम् । सिद्धान्त-

शिरोमणौ “स्फुटास्फुटक्रान्तिजयोश्चरार्धयोः समान्यदिक्त्वेऽन्तरयोगजासवः । पलोद्भाख्या भनभः सदां शर महति” याम्योत्तरे क्रमविलोमविधानलग्नं खेटात् कृतायनफलादुदयाख्य लग्नम् । सौम्ये क्रमेण विपरीतमिषौ तु याम्ये भार्धाधिकात् खचरतोऽस्त विलग्नमेवम्” भास्करोक्तमिदमाचार्यानुरूपं श्रीपत्युक्तानुरूपं वेति । तथा “इत्यभावेऽयनांशानां कृतदृक्कर्मध्रुवाः । कथिताश्च स्फुटा वाराणाः सुन्नार्थ पूर्व सूरिभिः ।” भास्करोक्तमिद “नक्षत्राणां स्फुटा एव स्थिरत्वात् पठिताः शराः । दृक्कर्मणाऽयनेनैषां संस्कृताश्च तथा ध्रुवाः ।” इत्युक्ते च “आयनेन खलु दृष्टि-कर्मणा भध्रुवेषु विहिताऽत्र संस्कृतिः” इत्यादि श्रीपत्युक्ति गृहीत्वैव लिखितं भास्करोक्ति ॥

अब चन्द्रादियों के महान् शर रहने पर सूक्ष्म अक्षदृक्कर्म को कहते हैं ।

हि. भा.— चन्द्र और नक्षत्र आदि के महान् शर रहने पर उन की स्थानीय क्रान्ति और बिम्बीय क्रान्ति से पृथक् पृथक् रवि की तरह (पल प्रभा सगुणितापमज्या तद्द्वाद-शांशो भवति क्षितिज्या) इत्यादि भास्करोक्त विधि से चरासुओं का साधन कर दोनों (मध्य-क्रान्तिजनित चरासु और स्पष्ट क्रान्ति जनित चरासुओं) का एक-एक दिशा में अन्तर और भिन्न दिशा में योग करने से अक्षज दृक्कर्मसु प्रमाण होता है । उत्तरशर में अक्षजदृक्कर्मसु को ग्रह में से हीन करना और दक्षिणशर के ग्रह में जोड़ना अर्थात् उत्तरशर में आयन दृक्कर्म संस्कृत ग्रह से विलोम (उल्टा) और दक्षिण शर में अनुलोम उन असुओं से स्वदेश में जो लग्न होता है वह ग्रह बिम्बोदय काल में लग्न होता है, इस तरह नक्षत्र ध्रुवक को और मुनि (अगस्त्य) ध्रुवक को हीन या युत करना अर्थात् उनको स्थानीय क्रान्ति और बिम्बीय क्रान्ति से पृथक् पृथक् चरासुओं के साधन कर उन दोनों के योग और अन्तर वस से अक्षज दृक्कर्मसु लाना उन असुओं से शरवश से नक्षत्र ध्रुव से और अगस्त्य ध्रुव से क्रम सेवा विलोम से स्वदेश में लग्न साधन कर दोनों के उदय लग्न साधन करना, एवं ग्रह, नक्षत्र और मुनियों के उदय में लग्न साधन हुआ, अस्त समय में उत्तर शर में छः राशि सहित ग्रह से वा ध्रुव से उन असु (आक्षदृक्कर्मसु) से अधिक अर्थात् क्रम लग्न, दक्षिणशर में हीन अर्थात् उत्क्रम लग्न पूर्वक्षितिज में जो होता है उसमें छः राशि जोड़ने से पश्चिमक्षितिज में ग्रह बिम्ब और नक्षत्र बिम्ब के स्थित रहने पर अस्तलग्न होता है इति ॥१५-२०॥

उपपत्ति ।

मध्यम क्रान्ति = मक्रां, स्पष्ट क्रान्ति = स्पक्रां, मध्यद्युज्या = मयु । स्पष्टद्युज्या = स्पद्यु. $\sqrt{\text{त्रि}^2 - \text{मक्रांज्या}^2} = \text{मद्यु}$ । $\sqrt{\text{त्रि}^2 - \text{स्पष्टक्रांज्या}^2} = \text{स्पद्यु}$, तब अक्षक्षेत्र के अनुपात से $\frac{\text{पभा. मक्रांज्या}}{१२} = \text{मकुज्या}$ । एवं $\frac{\text{पभा. स्पक्रांज्या}}{१२} = \text{स्पकुज्या}$, त्रिज्या में

परिणामन करने से $\frac{\text{मकुज्या. त्रि}}{\text{मद्यु}} = \text{मध्यक्रान्ति जनित चरज्या, एव } \frac{\text{स्पष्टज्या. त्रि}}{\text{स्पष्टु}}$

= स्पष्ट क्रान्ति जनित चरज्या,

इन दोनों के चाप करने से मध्यचरार्ध और स्पष्ट चरार्ध होते हैं । जब ग्रह स्थान क्षितिज में रहता है तो ग्रह बिम्ब क्षितिज से नीचा या ऊपर होता है, स्थानोपरिगतध्रुव प्रोत वृत्त और नाडीवृत्त के सम्पात से पूर्व स्वस्तिक पर्यन्त नाडीवृत्तीय चाप मध्यम क्रान्ति जनित चरार्ध है, क्योंकि स्थान से नाडीवृत्त पर्यन्त स्थानोपरिगतध्रुव प्रोतवृत्त में मध्यम क्रान्ति है, तथा बिम्बोपरिगत ध्रुवप्रोतवृत्त और नाडीवृत्त के सम्पात से पूर्व स्वस्तिक पर्यन्त नाडीवृत्तीय चाप स्पष्ट क्रान्ति जनित चरार्ध है, क्योंकि बिम्ब से नाडीवृत्तपर्यन्त बिम्बोपरिगत ध्रुव प्रोतवृत्त में स्पष्ट क्रान्ति है, एक दिशा में इन दोनों चरार्धों का अन्तर करने से और भिन्न दिशा में योग करने से अक्षज द्वक्कर्मासु प्रमाण होता है । शेष विषय भाष्य ही से स्पष्ट है । ग्रहबिम्ब केन्द्रोपरिगत ध्रुव प्रोतवृत्त और ग्रह बिम्ब केन्द्रोपरिगत सम प्रोतवृत्त के अन्तर्गत क्रान्तिवृत्तीय चाप अक्षज द्वक्कर्म कला है ।

सिद्धान्त शेखर में “स्वस्वध्रुवापक्रमकामुक्तात् पृथक् यथोक्तमात्मीयशरेण मंस्कृतात्” इत्यादि संस्कृतोपपत्ति में लिखित श्लोकों से श्रीपति ने आचार्योक्त के अनुरूप ही कहा है । सिद्धान्तशिरोमणि में “स्फुटास्फुटक्रान्तिजयोश्चरार्धयोः समान्यदिक्त्वेऽन्तरयोगजासवः” इत्यादि, “याम्योत्तरे क्रमविलोमविधानलग्न खेटात् कृतायनफलादुदयाख्यलग्नम्” इत्यादि सं. उपपत्ति में लिखित श्लोकों से भास्कराचार्य ने बिलकुल आचार्योक्त के अनुरूप वा श्रीपत्युक्त के अनुरूप ही कहा है । तथा “इत्यभावेऽयनांशानां कृत द्वक्कर्मका ध्रुवाः” इत्यादि, तथा “नक्षत्राणां स्फुटा एव स्थिरत्वात् पठिताः शराः” इत्यादि संस्कृतोपपत्ति में लिखित श्लोको से भास्कराचार्य ने “आयनेन खलु दृष्टि कर्मणा भध्रुवेषु” इत्यादि श्रीपत्युक्त विषयों को लेकर ही लिखा है इति ॥१८-२०॥

रात्रि विलग्ने दृश्यो दिनेऽपि चन्द्रोऽन्यथाऽदृश्यः ॥२१॥

सु. भा.—स्पष्टार्थम् उपपत्तिश्चोदयास्ताधिकारे प्रतिपादितैव ॥२१॥

वि. भा.—रात्रि विलग्ने (प्राक् क्षितिजे क्रान्तिवृत्तस्य लग्नप्रदेशे) उदय-विलग्नादधिके षड्राशियुतास्तलग्नात् हीने तदा ग्रहो दृश्यो भवति, एवं सति चन्द्रो दिनेऽपि दृश्यो भवत्यन्यथाऽदृश्यो भवतीति; एतत्कथनस्यात्राऽऽवश्यकता नाऽऽसीत्प्रागेवाऽस्त्योक्तत्वादिति ॥१॥

अत्रोपपत्तिः

उदयलग्नसमे रात्राविष्टलग्ने ग्रहः प्राक् क्षितिजे उदेति, पश्चिमक्षितिज-स्थे ग्रहबिम्बे पश्चिमक्षितिजे लग्नस्य क्रान्तिवृत्तप्रदेशस्यास्तलग्नसंज्ञा ऽऽचार्येण कृताऽस्ति, तेन सषड्भास्तलग्नं प्राक्क्षितिजे लग्नं भवति, तस्मादिष्टलग्ने न्यूने उदयलग्नाच्चाधिके बिम्बस्य क्षितिजादुपरि विद्यमानत्वात्तद्दर्शनं भवेदेव, एवं स्थितौ दिनेऽपि चन्द्रबिम्बदर्शनं भवितुमर्हत्यन्यथा नेति ॥२१॥

अब दृश्यादृश्यत्व के विषय में कहते हैं ।

हि. भा.—रात्रि में इष्ट लग्न ग्रह के उदय लग्न से अधिक हो तथा छः राशि युत अस्तलग्न से हीन हो तो वह ग्रह दृश्य होते हैं, इस तरह दिन में भी चन्द्र दृश्य होते हैं अन्यथा दृश्य नहीं होते हैं इति ॥२१॥

उपपत्ति

ग्रह के उदय लग्न के तुल्य रात्रि में इष्ट लग्न रहने से वह ग्रह प्राक्क्षितिज में उदित होता है, पश्चिम क्षितिज में ग्रह बिम्ब के रहने से पश्चिम क्षितिज में क्रान्तिवृत्त का जो प्रदेश लगा रहता है उसी को आचार्य अस्तलग्न कहते हैं, इसलिये अस्त लग्न में छः राशि जोड़ने से पूर्व क्षितिज में लग्न होता है, उस से इष्ट लग्न न्यून हो तथा उदय लग्न से भी अधिक हो तो क्षितिज से ऊपर ग्रह बिम्ब के रहने के कारण उन का दर्शन होता ही है; इस तरह की स्थिति में दिन में भी चन्द्र दृश्य होते हैं अन्यथा अदृश्य होते हैं । इस विषय का कहना यहाँ निरर्थक मालूम होता है क्योंकि पहले चन्द्रच्छायाधिकार में यह विषय कहा जा चुका है इति ॥२१॥

इदानीं ग्रहोदयस्य गतागतत्वमाह ।

प्रागुदयलग्नमूलं लग्नादधिकं ग्रहोदयः पश्चात् ।
ऊनमधिकेन तुल्यं कृत्वा घटिकाः स्वराश्वयुदयैः ॥२२॥

सु. भा.—लग्नादिष्ट लग्नादुदयलग्नमूलं तदा ग्रहोदयः प्रागगतः । यद्यधिकं तदा ग्रहोदयः पश्चाद्भविष्यतीति । स्वराश्वयुदयरूनमधिकेन तुल्यं कृत्वाऽर्था 'दूनस्य भोग्योधिकं भुक्तं युक्तं' इत्यादिना तदन्तरघटिकाः साध्या इति ।

अत्रोपपत्तिः । इह भगोलस्य पश्चिमभ्रमेण ग्रहस्य नित्यमुदयो यस्तस्यैव गतैष्यत्वं प्रदर्श्यते । उदयलग्ने प्राक् क्षितिजस्थे ग्रहोदयोऽस्तस्मिन् इष्टलग्ना-

दूने ग्रहबिम्बोदयो जातः क्षितिजोपरि गतत्वादन्यथा क्षितिजाधःस्थत्वाद् ग्रह बिम्बमुदेप्यतीति । अन्तरघटिकासाधनोपपत्तिर्लगनात् कालसाधनोपपत्तिवत् स्पष्टा ॥ २२ ॥

वि. भा.—लग्नात् (इष्टलग्नात्) उदयलग्नमून (अल्प) तदा ग्रहोदयः प्राक् (गतः) यदोष्टलग्नादुदयलग्नमधिकं तदा ग्रहोदयः पश्चात् (एष्य) भवति राश्युदयैरूनमधिकेन तुल्यं कृत्वाऽर्थात् 'ऊनस्य भोग्योऽधिकभुक्तयुक्त' इत्यादिना, घटिकाः (तदन्तर घटिकाः) साध्या इति ॥ २२ ॥

अत्रोपपत्तिः

अत्र भगोलस्य पश्चिमभ्रमणेन नित्यं ग्रहस्योदयो यो भवति तस्यैव गतैष्यत्वं विचार्यते । प्राक् क्षितिजस्थे उदयलग्ने ग्रहोदयोऽस्तस्मिन् इष्टलग्नादल्पे क्षितिजोपरिगतत्वाद् ग्रहबिम्बोदयो भवेदन्यथा क्षितिजाधः स्थितत्वाद् ग्रहबिम्बमुदेप्यतीति, लग्नात् कालसाधनोपपत्तिवदन्तरघटिकासाधनोपपत्तिः स्फुटैवास्तीति ॥ २२ ॥

अब ग्रहोदय के गतैष्यत्व को कहते हैं ।

हि. भा.—इष्टलग्न से उदय लग्न अल्प हो तो ग्रहोदय गत होना है, यदि इष्ट लग्न से उदय लग्न अधिक हो तो ग्रहोदय पश्चात् (एष्य) होता है । राश्युदयो से ऊन को अधिक के साथ कर अर्थात् "ऊनस्य भोग्योऽधिकभुक्तयुक्तो मध्योदयादधः" इस में अन्तर घटी साधन करना इति ॥ २२ ॥

उपपत्ति

भगोल के पश्चिम भ्रमण से नित्य ग्रहों का जो उदय होता है उसी के गतैष्यत्व का विचार करते हैं । उदय लग्न पूर्व क्षितिज में रहता है तो ग्रह का उदय होता है इसलिये इष्ट लग्न से उदय लग्न के अल्प रहने से ग्रह बिम्ब के क्षितिज से ऊपर होने के कारण उदय होता है, अन्यथा क्षितिज से अधः स्थित होने के कारण ग्रह बिम्ब उदित होगा, लग्न से काल साधन के लिये जो उपपत्ति है उसी तरह यहां अन्तर घटी साधन की उपपत्ति समझनी चाहिये इति ॥ २२ ॥

इदानीं ग्रहास्तस्य गतैष्यत्वमाह ।

प्रागस्तमयो लग्नादूनं षड्राशिसंयुतास्तमयलग्नम् ।
अधिकं घटिकाः पश्चात् कृत्वा सममूनमधिकेन ॥ २३ ॥

सु. भा.—लग्नादिष्टलग्नाद्यदि षड्राशिसंयुतास्तलग्नमूनं तदा ग्रहबिम्बास्तमयः प्रागजात इति । अधिकं चेत् तदाऽस्तमयः पश्चाद् भविष्यति । अत्राप्यधिकेन सममूनं कृतवार्था 'ऊनस्य भोग्योऽधिकभुक्त युक्त' इत्यादिविधिना तदन्तरघटिकाः साध्याः ।

अत्रोपपत्तिः । आचार्यसाधितमस्तलग्नं सषड्भं ग्रहबिम्बास्तकाले प्राक्क्षितिजस्य लग्नं भवेत् । तत्तमे स्वेष्ट लग्ने पश्चिमक्षितिजे ग्रहास्तमयः । ऊने ग्रहबिम्बस्य क्षितिजावस्थित्वादस्तमयो गतः । अधिके च बिम्बस्य क्षितिजोपरिवर्तमानत्वादस्तं यास्यतीति स्फुटा वासना ॥२३॥

वि. भा.—लग्नात् (इष्टलग्नात्) षड्राशिसंयुतास्तमयलग्नं यच्चूनं (अल्पं) भवेत्तदाऽस्तमयः प्राक् (पूर्व) जातो गतइत्यर्थः । अधिकं चेत्तदाऽस्तमयः पश्चात् (एष्यः) भवति, अधिकेन समं (साकं) ऊनं कृत्वा ऽर्थात् "ऊनस्य भोग्योऽधिकभुक्तयुक्तो मध्योदयादय" इत्यादिना तदन्तरघटिकाः साध्या इति ॥२३॥

अत्रोपपत्तिः ।

आचार्योक्तमस्तलग्नं षड्राशियुतं तदाग्रहबिम्बास्तसमये पूर्वं क्षितिजस्थं लग्नं भवेत् । तत्तुल्ये स्वेष्टलग्ने पश्चिमक्षितिजे ग्रहास्त । अल्पे ग्रहबिम्बस्य क्षितिजादधः स्थित्वादस्तमयो गतः । अधिके तु क्षितिजोपरिवर्तमानाद्विम्बस्यास्तमयो भविष्यतीति । अन्तरघटयानयनोपपत्तिर्लग्नात्कालसाधनोपपत्तिवद् बोध्येति ॥२३॥

अब ग्रहास्त के गतैष्यत्व को कहते हैं ।

हि. भा.—यदि इष्ट लग्न से छः राशियुत अस्त लग्न अल्प हो तो अस्तमय गत होता है । यदि अधिक हो तो अस्तमय एष्य होता है अधिक के साथ ऊन (अल्प) को करके अर्थात् 'ऊनस्य भोग्योऽधिक भुक्त युक्तः' इत्यादि से अन्तर घटी साधन करना इति ॥२३॥

उपपत्ति ।

आचार्योक्त अस्त लग्न में छः राशि जोड़ने से ग्रह बिम्बास्त काल में पूर्वं क्षितिज स्थित लग्न होता है, उसके बराबर स्वेष्ट लग्न के रहने से पश्चिम क्षितिज में ग्रहास्त होता है, अल्प रहने से ग्रह बिम्ब के क्षितिज से अधः स्थित होने के कारण अस्तमय गत होता है, अधिक रहने से बिम्ब के क्षितिज से ऊपर होने के कारण अस्तमय एष्य होता है, अन्तर घटयानयन की उपपत्ति लग्न से कालसाधन की उपपत्तिवत् समझनी चाहिये इति ॥२३॥

इदानीं चन्द्रस्य विशेषमाह ।

तात्कालिकोपकरणादसकृद्गतनः।ङिकाभिरन्हीन्दोः ।

रात्रौ वा प्रतिघटिकं प्राग्वत् शृङ्गोन्नतिः कार्या ॥२४॥

सु. भा.—गतनाङिकाभिः पूर्वागताभिस्तात्कालिकोपकरणादिन्दोरसकृद्-
गता नाङ्योऽह्नि दिवसे वा रात्रौ स्फुटाः साध्यास्ततः प्रतिघटिकं प्राग्वत्

दयलग्नेष्ट लग्नान्तरोत्पन्नाभिः साध्या, एतत्प्रसंगे शिद्धान्तशिरोमणौ भास्करा-
चार्येण “चन्द्र प्रभार्यमसकृद्विधिनोदितं यत्कृतं खलु न सत्तदसावनत्वात्” त्यादिना
समीचीनं बहु प्रतिपादितमिति ॥ २४ ॥

अब चन्द्र के लिये विशेष कहते हैं ।

हि. भा.—पूर्वागत गतनाडिकाओं से तात्कालिक उपयुक्त सामग्री समूहों से असकृत् कर्म से चन्द्र की स्फुट गत नाडी दिन में वा रात्रि में साधन करना तब प्रत्येक घटी में शृङ्गोव्रति करनी चाहिये ॥२४॥

उपपत्ति

जिस समय में गत वा एष्य समय की परीक्षा करनी है उस समय में तात्कालिक ग्रहज्ञान से उदयलग्न और अस्त लग्न के साधन किये हैं । परन्तु अपेक्षित है क्षितिजस्थ ग्रह बिम्ब के समय में इसलिये ग्रहशर और दृक्कर्म आदि से असकृत्कर्म से स्फुट उदयलग्न और अस्त लग्न होता है, इस तरह असकृत्कर्म से जो घटिकाये होती हैं वे नाक्षत्री होती हैं उन से ग्रह को चलाकर आगे क्रिया समुचित है, अन्य ग्रहों की गति की अल्पता के कारण में आचार्य असकृत् कर्म को छोड़ दिया, केवल चन्द्र ही के लिये असकृत्कर्म कहा है । इस तरह असकृत् कर्म से आई हुई घटिकाये नाक्षत्री होती हैं उन से छाया साधन नहीं करना चाहिये, चन्द्र की छाया उनकी इष्ट कालिक उदय लग्न-इष्टलग्न के अन्तर से उत्पन्न सावन घटी से साधन करना चाहिये । इस के प्रसङ्ग में शिद्धान्त शिरोमणि में भास्कराचार्य ने “चन्द्र प्रभार्थमसकृ-द्विधिनोदित यत्” इत्यादि से बहुत समीचीन बातें कही हैं इति ॥२४॥

इदानीं विशेषमाह ।

मध्यच्छाया रविवत् स्वक्रान्त्या दर्शने सतीष्टा च ।

एवं ग्रहभमुनीनामन्तरघटिका गुणां भुक्तिम् ॥२५॥

सु. भा.—ग्रहस्य भस्य वा दर्शने सति स्वक्रान्त्या ग्रहस्य वा भस्य स्फुट-क्रान्त्या रविवत् इष्टा मध्यच्छाया याम्योत्तर वृत्तस्थे बिम्बे छाया साध्या । एवं ग्रहभोदययोर्वा ग्रहभास्तयोरथवा ग्रहमुन्युदययोर्वाऽस्तमययोः स्फुटान्तरघटिका-ज्ञानार्थमादाविष्टकालिकग्रहवशेन तदुदयास्तलाने कृत्वा ग्रहभोदययोरस्तयोर्वा पूर्ववदन्तरघटिकाः साध्याः । ताभिर्भुक्तिं ग्रहभुक्तिं गुणामित्यस्याग्रे सम्बन्धः ।

अत्र चतुर्वेदाचार्यः । ‘पलालभक्षणमेतत्’ । अर्थाच्चिदा पलालस्य नीरसशुष्क-तृणस्य (लोके पुत्राल इति प्रसिद्धस्य) भक्षणो रसप्राप्तिर्न तथैवैतत्प्रकारेणाऽऽचार्यस्य यशः प्राप्तिर्न यत इदं सर्वमानयनं सर्वत्रैव प्रसिद्ध मिति ॥२५॥

वि. भा.—ग्रहस्य नक्षत्रस्य वा दर्शने सति स्वक्रान्त्या (ग्रहस्फुटक्रान्त्या नक्षत्रस्फुटक्रान्त्या च) रविवत् मध्यच्छाया (याम्योत्तरवृत्तस्थिते बिम्बे छाया

साध्या) एवं ग्रहनक्षत्रोदययोर्ग्रहनक्षत्रास्तयोर्वा-ग्रहमुन्युदययोरस्तयोर्वा स्फुटान्तर घटिकानयनार्थं प्रथममिष्टकालिकग्रहवशेन तदुदयास्तलग्ने संसाध्य ग्रहनक्षत्रोदययोरस्तयोर्वा पूर्ववदन्तर घटिकाः साध्याः । ताभिर्भुक्ति गुणामित्यस्याग्रे सम्बन्धः एतैरानयनैराचार्यस्य न किमपि वैशिष्ट्यं लक्ष्यते यत इदं सर्वमानयनं प्रसिद्धमेवेति ॥२५॥

हि. भा.—ग्रह या नक्षत्र दृश्य होने पर ग्रह की स्फुटक्रान्ति से तथा नक्षत्र की स्फुट क्रान्ति से रवि की तरह मध्यच्छाया अर्थात् याम्योत्तर वृत्त में बिम्ब के स्थित रहने से छाया साधन करना चाहिये । इसी तरह ग्रह और नक्षत्र की उदयान्तर घटी वा अस्तान्तर घटी वा ग्रह और मुनि की उदयान्तर घटी वा अस्तान्तर घटी के आनयन के लिये पहले इष्टकालिक ग्रहवश से उन के उदयलग्न और अस्तलग्न साधन कर पूर्ववत् ग्रह और नक्षत्र की उदयान्तर घटी वा अस्तान्तर घटी साधन करना, उस से गति को गुणा करना इसका अगले श्लोक के साथ सम्बन्ध है । इन आनयनो से आचार्य की कुछ भी विशिष्टता नहीं मालूम पड़ती है क्यों कि यह सब आनयन प्रसिद्ध ही है ॥२५॥

इदानीं नक्षत्रोदयास्तवशेन ग्रहोदयास्तयोः साधनमाह ।

षष्ट्या विभजेत्लब्धं प्रागुदयास्तमयोर्ग्रहे शोध्यम् ।

पश्चात् क्षेप्यं प्रतिदिनमुदयास्तमयावसकृदेवम् ॥२६॥

सु० भा०—पूर्वागत घटीगुणां भुक्तिं षष्ट्या गणको विभजेत् । लब्धं चालनफलं पूर्वप्रकारेणोदयास्तमयोः प्राग्गते लक्षणो ग्रहे शोध्यं पश्चादेष्ट्यलक्षणो क्षेप्यमेवं चालितग्राह्यात् पुनस्तदुदयास्तलग्ने कृत्वा ग्रहोदययोरस्तमयोर्वा अन्तरघटिकाः साध्याः । एवमसकृद्विधिना प्रतिदिनं ग्रहस्योदयास्तमयो भवत इति ।

अत्रोपपत्तिः पूर्वविधिना स्फुटा ॥२६॥

वि. भा.—पूर्वागतघटी गुणां भुक्तिं षष्ट्या विभजेत् । लब्धं फलं पूर्वप्रकारेणोदयास्तयोर्गते लक्षणो ग्रहे शोध्यम् । पश्चात् (एष्ट्यलक्षणो) ग्रहे क्षेप्यं (योज्यम्) । एवं पूर्वलब्धफलेन चालिताद् ग्राह्यात्पुनस्तदुदयास्तलग्नयोः साधनं कृत्वा ग्रहनक्षत्रयोर्दयान्तरघटिका वा अस्तान्तरघटिका वा साध्याः । एवमसकृत्कर्मणा प्रति दिनं ग्रहस्योदयास्ता भवेतामिति ॥२६॥

अत्रोपपत्तिः पूर्वोक्तयैव स्फुटेति ॥२६॥

अब नक्षत्र के उदय और अस्त वश से ग्रह के उदय और अस्त का साधन कहते हैं ।

हि. भा.—पूर्वागत ग्रह और नक्षत्र की उदयान्तर घटी वा अस्तान्तर घटी से गति को गुणा कर साठ से भाग देना लब्ध चालन फल को पूर्व प्रकार से उदय और अस्त के गत लक्षण के ग्रह में से घटा देना, एष्य लक्षण के चालन फल को ग्रह में जोड़ना, इस तरह चालित ग्रह से पुनः उसके उदय लग्न और अस्त लग्न साधन कर ग्रह और नक्षत्र की उदयान्तर घटी वा अस्तान्तर घटी साधन करना, एव असकृत्कर्म से प्रतिदिन ग्रह का उदय और अस्तमय होता है ॥२६॥

उपपत्ति पूर्व विधि से स्फुट है इति ॥२६॥

इदानीं प्रकारान्तरेण ग्रहोदयास्तयोः साधनमाह ।

इष्टात् कालाद् भानोरुदयास्ताद्वा ग्रहोदयास्तमयौ ।
तात्कालिकैर्विलग्नं ग्रहोदयास्तमयलग्नाद्यैः ॥ २७ ॥

सु. भा. —इष्टात् कालाद्वा भानोरुदयास्तात् पूर्वविधिना ग्रहोदयास्तमयौ साध्यौ किं नक्षत्रव्यपदेशेन । अत्र यदीष्टलग्नमपेक्षितं तदा तात्कालिकैर्ग्रहोदयास्तमयलग्नाद्यैर्विलग्नं साध्यम् । अर्थाद् ग्रहस्य तात्कालिकोदयलग्नमस्तलग्नं वा रवि ग्रह दिनगतशेषा घटिका इष्टघटिकाः प्रकल्प्य स्वदेशोदयैर्विलग्नमपि साध्यं भवतीति सर्व स्फुटम् ।

अत्र चतुर्वेदाचार्यः । 'एवमेतत् क्रियते' कर्म कः सन्देहोऽथान्यथा कर्त्तन-जातिमूर्खोऽपि जानाति ॥२७॥

वि. भा.—इष्टात् कालाद्वा भानोः (सूर्यस्य) उदयास्तात् पूर्वोक्तरीत्या ग्रहस्योदयास्तौ साध्यौ, यद्यत्रेष्टलग्नमपेक्षितं तदा तात्कालिकैर्ग्रहोदयास्तमयलग्नाद्यैर्विलग्नं साध्यम् । अर्थाद् ग्रहस्य तात्कालिकमुदयलग्नमस्तलग्नं वा रवि प्रकल्प्य ग्रहदिनगतशेष घटिका इष्टघटिकाः प्रकल्प्य स्वदेशोदयैर्विलग्नानयन-विलग्नं साध्यं तदेवेष्टलग्नं भवेदिति । आचार्येणैतावतान किमपि वैशिष्ट्यं प्रति पाद्यत इति सिद्धान्तविद्भिः परीक्ष्य ज्ञेयमिति ॥२७॥

अब प्रकारान्तर से ग्रह के उदय और अस्त का साधन कहते हैं ।

हि. भा.—इष्टकाल से वा सूर्य के उदय और अस्त समय से पूर्वोक्त रीति से ग्रह का उदय और अस्त साधन करना । यदि यहां इष्ट लग्न अपेक्षित हो तो तात्कालिक ग्रहोदय

लग्न और ग्रहास्त-लग्न आदि से लग्न साधन करना अर्थात् ग्रह के तात्कालिक उदयलग्न को वा अस्त लग्न को रवि मानकर तथा ग्रह की दिनगत घटी वा दिन शेष घटी को इष्ट घटी मान कर स्वदेशीय राश्युदयो से लग्नानयन की तरह लग्न साधन करना वही इष्ट लग्न होना है, इससे आचार्य कोई विशिष्ट बात नहीं कहते हैं इस को विचार कर समझना चाहिये इति ॥२७॥

इदानी पुनः ग्रहोदयास्तयोः साधनमाह ।

प्रागुदयलग्नमुदयैर्लग्नसमं लग्नमुदयलग्नेन ।

पश्चात् तद्वधटिकाभिः कृत्वा तात्कालिकैरसकृत् ॥२८॥

उदयः प्रागस्तमयो लग्नेन सषड्ग्रहास्तमय लग्नम् ।

पश्चात्लग्नं चक्रार्धसंयुतास्तमयलग्नेन ॥२९॥

सु० भा० - तात्कालिकैर्ग्रहशराद्यैरसकृदुदयः साध्यः । शेषं 'प्रागुदय-लग्नमून' तथा 'प्रागस्तमयो लग्नादूनम्' इत्याद्याद्वयेन स्पष्टार्थम् ।

अत्र चतुर्वेदाचार्यः । पिष्टपेषणमेतत् ॥२८-२९॥

वि. भा.—तात्कालिकैर्ग्रहशराद्यैरसकृत्प्रकारेणोदयः साध्यः । अवशिष्टं 'प्रागुदयलग्नमून मित्यादि' "प्रागस्तमयो लग्नादूनमित्यादिना च" स्पष्टमिति, पिष्टपेषण मात्रमेवैतदाचार्यस्येति ॥२८-२९॥

अब पुनः ग्रह के उदय और अस्त का साधन कहते हैं ।

हि. भा.—तात्कालिक ग्रह के शर आदि से असकृत्प्रकार से उदय साधन करना । शेष बातें "प्रागुदयलग्नमून इत्यादि से" तथा "प्रागस्तमयो लग्नादून" इत्यादि से स्पष्ट है, आचार्य का यह कथन बिलकुल निरर्थक है, इस कथन की कोई जरूरत नहीं थी इति ॥२८-२९॥

इदानी ग्रहोदयास्तयोर्दिग्ज्ञानमाह ।

ऊनोऽल्पभुक्तिरुदितः प्रागथवोदेष्यति ग्रहः सूर्यात् ।

पश्चादधिकोऽधिकगतिरल्पगती वक्रिणौ ज्ञसितौ ॥३०॥

प्रागूनोऽधिकभुक्तिः पश्चादधिकोऽल्पभुक्तिरस्तमितः ।

यास्यत्यथवा अस्तमयं यतस्ततो दृश्यघटिकोक्तिः ॥३१॥

सु० भा०—अल्पभुक्तिर्ग्रहः सूर्याद्यदोनस्तदा प्राक् प्राच्यां दिशि उदितो वोदेष्यति । अर्कग्रहान्तरघटिकानां दृश्यघटिकातोऽधिकन्यूनवशात् । एवमधिकगतिर्ग्रहः सूर्यादधिकः पश्चादुदितो वोदेष्यति इति वेदितव्यम् । बुधशुक्रौ यदा वक्रिणौ भवतस्तदा तावल्पगती कल्प्यौ । अर्थात् तदा तयोः पूर्वदिश्युदय इति वेदितव्यम् । एवं सूर्यादधिकगतिर्ग्रह ऊनः प्राक् प्राच्यां दिशि अल्पभुक्तिर्ग्रहश्चाधिकः पश्चात् पश्चिमायां दिशि अस्तमितोऽस्तं गतो वाऽस्तमयं यास्यति । यत उदयास्तगतैष्यज्ञानं दृश्यघटिकाभिः कालांशघटिकाभिरतो दृश्यघटिकोक्तिरुच्यतेति ।

अत्रोपपत्तिः । 'रवेरूनभुक्तिर्ग्रहः प्रागुदेति' तथा 'ज्ञशुक्रावृजू प्रत्यगुदम्य वक्रां गतिं प्राप्येत्यादि भास्कर विधिना स्फुटा ।

अत्र चतुर्वेदाचार्यः । 'प्रागूनभुक्तिरून' इत्यार्यया गतार्थमिदमार्ययोर्द्वयं । विशेषश्च यदुक्तमूनोऽल्पभुक्तिरित्यादिना बुधसितयोर्वक्रिणोरेव संभवति स्वल्पगतित्वं तदा च तयोः पश्चादस्तमयः प्रागुदयश्चे' त्यादि ॥३०-३१॥

वि. भा.—सूर्यादल्पभुक्तिर्ग्रहो यदोनः (सूर्यादल्पः) तदा प्राक् (पूर्वदिशि) उदितो वोदेष्यति । दृश्यघटिकातो (कालांशघटीतः) रविग्रहान्तरघटोनामधिकन्यूनवशात् । ज्ञसितौ (बुधशुक्रौ) यदा वक्रिणौ भवतस्तदा तावल्पगती कल्प्यावर्था तदा तयोः पूर्वदिश्युदयो बोध्यः । एवं सूर्यादधिकगतिर्ग्रह ऊनः (अल्पः) प्राक् (पूर्वदिशि), अल्पभुक्तिः (अल्पगतिः) ग्रहश्चाधिकः पश्चात् (पश्चिम दिशि) अस्तमितोऽस्तं गतो वाऽस्तं यास्यति, यतः (यस्मात् कारणात्) उदयास्तयोर्गतैष्यज्ञानं दृश्यघटिकाभिः (कालांशघटिकाभिः) भवत्यतो दृश्यघटिकोक्तिरुच्यतेति ॥३०-३१॥

अत्रोपपत्तिः ।

रवेः सकाशादल्पगतिर्ग्रहः पूर्वदिशि कालांशान्तरित उदेति, पश्चिम दिश्यस्तमेति, यथा कुज गुरुशनयो रवितोऽल्पाः कालांशान्तरिता रात्रिशेषे पूर्वदिशि रव्युदयात्पूर्वमेवोदयं गच्छन्ति लोकैश्च दृश्या भवन्ति, रवितोऽभ्यधिकास्त एव कालांशान्तरिताः पश्चिमदिश्यस्तं यान्ति, योऽधिकगतिर्ग्रहोऽसौ पश्चिमायामुदेति, पूर्वदिशि प्रतितिष्ठति यथा चन्द्रः । बुधशुक्रौ मार्गिणौ रवितोऽधिकगतित्वात् पश्चिमायामुदगच्छतः । ततस्तत्रैव वक्रतां प्राप्यास्तं गच्छतः । ततोवक्रतयैव पूर्वदिश्युदगम्य ततोऽवक्रतां प्राप्याधिकगतित्वात् पूर्वदिश्ये वास्त व्रजेताम् ।

नवीनास्तु ग्रहाणां भ्रमणं दीर्घवृत्ते स्वीकुर्वन्ति, यस्यैकनाभौ रविः स्थि-

‘ज्ञशुकावृज्ज प्रत्यगुद्गम्य वक्रां गतिं प्राप्य तत्रैव यातः प्रतिष्ठासु । ततः प्राक् समुद्गम्य वक्रावृज्जत्व’ मित्यादिभास्कराचार्योक्तं स्फुटमुपपद्यत इति ॥३०-३१॥

अब ग्रहों के उदय और अस्त के दिशाज्ञान को कहते हैं ।

हि. भा.—सूर्य से अल्पगति वाले ग्रह जब सूर्य से अल्प होते हैं तब वे पूर्व दिशा में उदित होते हैं या उदित होंगे । कालांश घटी से रवि और ग्रह की अन्तर घटी के अधिक न्यून वश से, बुध और शुक्र जब वक्री होते हैं तो उन दोनों को अल्पगतिक मानना चाहिये अर्थात् उन दोनों का उदय पूर्व दिशा में समझना चाहिये । एवं सूर्य से अधिकगतिग्रह सूर्य से ऊन (अल्प) रहने से पूर्व दिशा में, अल्पगतिक ग्रह अधिक रहने से पश्चिम दिशा में अस्तगत होते हैं या होंगे जिस कारण से उदय और अस्त का गतैष्य ज्ञान कालांश घटी से होता है इस कारण से दृश्यघटी के सम्बन्ध में कहना उचित ही है ॥३०-३१॥

उपपत्ति ।

रवि से अल्पगति वाले ग्रह कालांशतुल्य अन्तर पर पूर्व दिशा में उदित होते हैं । जैसे कुज, गुरु, और शनैश्चर रवि से अल्प होने के कारण कालांश तुल्य अन्तर में रात्रिशेष में पूर्वदिशा में रवि के उदय से पहले ही उदित होते हैं और लोगों से देखे जाते हैं । रवि से अधिक वे ही ग्रह कालांशान्तरित होने से पश्चिम दिशा में अस्त होते हैं । जो अधिक गति-ग्रह है वह पश्चिम दिशा में उदित होता है और पूर्व दिशा में अस्तगत होता है, जैसे चन्द्र, मार्गी बुध और शुक्र रवि से अधिकगति होने के कारण पश्चिमदिशा में उदित होते हैं । अनन्तर वही (पश्चिमदिशा ही में) वक्रता को प्राप्त कर अस्तगत होते हैं । बाद में वक्रता ही से पूर्व दिशा में उदय होकर फिर बाद में अवक्रता को प्राप्त कर अधिक गतित्व से पूर्व दिशा ही में अस्तगत होते हैं ।

नवीन लोग ग्रहों का भ्रमण दीर्घवृत्ताकार कक्षावृत्तों में मानते हैं । जिसकी एक नाभि स्थान में रवि स्थिर है, वहां स्वल्पान्तर से दीर्घवृत्त वृत्त की तरह भासित होता है जिसके केन्द्र में रवि स्थिर है । भू (पृथ्वी) रवि के चारों तरफ अपने कक्षावृत्त में भ्रमण करती है, वहां भू को स्थिर मानकर शुक्र के कक्षावृत्त स्प य उ स्प ल मानते हैं भवलय (नीलाम्बर गोलीय क्रान्तिवृत्त) उस (शुक्रकक्षावृत्त) से बहुत दूर में स्प, य, उ, म स्प, है जहां मेषादि की गणना से मेषादि से पूर्वाभिमुख होती है स्वकक्षावृत्त में स्प य, उ, म, स्प, बिन्दुओं में स्थित शुक्र भवलय में क्रम से स्प, य, उ, म, स्प, बिन्दुओं में भू निवासी द्वारा देखे जाते हैं । स्प बिन्दु से स्प बिन्दु पर्यन्त स्वकक्षा में स्थित शुक्र पूर्वाभिमुख गति के कारण भवलय में स्प, बिन्दु से स्प, बिन्दु पर्यन्त जाते हुये मालूम पड़ते हैं

इसलिये जब भवलय में शुक्र उ बिन्दुगत होते हैं तो वहाँ रवि और शुक्र के तुल्यत्व के कारण परमास्तकाल होता है, उसके बाद कालांशान्तर में म बिन्दुगत शुक्र के होने से भूउ रेखा में प्रवह से रवि के अस्तगत होने पर म बिन्दुगत शुक्र का दर्शन पश्चिम दिशा में होता है, उसके बाद पश्चिम दिशा में प्रत्येक दिन रवि और शुक्र का अन्तर बहुत बड़ा होता है इसलिये प्रत्येक दिन शुक्र बिम्ब द्युतिमान् (कान्तिवान् चमकदार) देखने में आता है, स्प, बिन्दुगतशुक्र बहुत द्युतिमान् होता है उस समय स्वकक्षावृत्त में शुक्र स्प बिन्दु में रहते हैं, उसके बाद क्रम से स्वकक्षावृत्त में भ्रमण करते हुए शुक्र भवलय में स्प, बिन्दु से उत्तरोत्तर पश्चिम दिशा में देखे जा सकते हैं। इसलिए मार्गी शुक्र पश्चिम दिशा में उदित होते हैं वही वक्रगति प्राप्त कर अस्तगत होते हैं। एव वक्रगति से जब शुक्र उ स्थान से म बिन्दुगत होते हैं तो कालांशतुल्य अन्तर होने के कारण रात्रिरोप में रवि के उदय से पहले पूर्व दिशा में देखे जाते हैं (यहाँ सं. उपपत्ति में लिखित क्षेत्र को देखिये) उसके बाद यावत् शुक्र स्प, बिन्दुगत लक्षित होते हैं सूर्य से बहुत अन्तरित होने हे। उस समय में अपनी कक्षा में शुक्र स्प बिन्दुगत होंगे। भू बिन्दु से शुक्र कक्षा वृत्त की भू स्प, भूस्प, दोनों रेखायें स्पर्श रेखाये समझनी चाहिये। अपनी कक्षा में स्प बिन्दु से क्रम से जाते हुए शुक्र भवलय में मार्गगतिक लक्षित होते हैं। इसलिये मार्ग गतित्व में रवि के समीप में फिर पूर्वदिशा में अदृश्य होते हैं। इसी तरह की स्थिति बुध की भी होती है। इससे आचार्योक्त बुध और शुक्र के उदय और अस्त का दिक्ज्ञान प्रकार स्फुट उपपन्न होता है, सूर्यसिद्धान्त में भी “सूर्यदिग्यधिकाः पश्चादस्तं जीव कुजार्कजाः। ऊनाः प्रागुदयं यान्ति” इत्यादि आचार्योक्त के सदृश ही हैं, इन उपपत्तियों के देखने से प्राचीनों के मन में सूर्य केन्द्राभिप्रायिक ही कक्षा स्थिति थी, मालूम पड़ता है, लोगों में प्रतीति उत्पन्न करने के लिये पृथ्वी की चारों तरफ ग्रहों की कक्षा प्रतिपादित है। उन लोगों से, यह कल्पना युक्तिगुक्त है, पूर्वोपपत्ति ही से “जशुक्रावृज्जू प्रत्यगुदगम्य वक्रां गतिं प्राप्स्य तत्रैव यातः प्रनिष्ठाम्” इत्यादि भास्करोक्त भी स्फुट उपपन्न होता है इति ॥३०-३१॥

इदानीं दृश्य घटिका (कालांश घटिका) आह

घटिकाद्वयेन चन्द्रो दृश्योऽर्कात् सितगुरुक्षशनिभौमाः ।

अध्यर्धया घटिकया त्रिभाग घटिकोत्तराधिकया ॥ ३२ ॥

वि. भा.—अर्कात् (रवितः) घटिकाद्वयेनान्तरितश्चन्द्रो दृश्यो भवति । सित-गुरुज्ञशनिभौमाः त्रिभाग २० घटिकोत्तराधिकया (विशत्या घटिकया युतया) ऽध्यर्धया घटिकया (सार्धेक घट्या) दृश्या भवन्त्यर्थात् शुक्रस्य कालांशघटिका सार्धेका १।३०, गुरोस्त्रिभागाधिका सार्धेका १।३०+२०—१।५०, बुधस्य १।५०+२०=२।१०। शनेः=२।१०+२०=२।३०, भौमस्य=२।३०+२०=२।५० एताः षड्गुणस्तदा चन्द्रादिग्रहाणां कालांशा भवन्ति, यथा चन्द्रस्य=१२, शुक्रस्य=९, गुरोः=११ बुधस्य=१३, शनेः=१५, भौमस्य=१७ इति 'द्वादशभिः शीतांशु' रित्यादि पाठपठित समा जाता इति सूर्यसिद्धान्ते "एकादशमरेज्यस्य तिथि सङ्ख्यार्कजस्य च । अस्तांशा भूमिपुत्रस्य दश सप्ताधिकास्ततः ॥ पश्चादस्तमयोऽष्टाभिरुदयः प्राङ्महत्तया । प्रागस्तमुदयः पश्चादल्पत्वादशभिर्भृगोः । एवं बुधो द्वादशभिश्चतुर्दशभिरशकैः । वक्री शीघ्रगतिश्चाकात् करोत्यस्तमयोदयौ ॥ अस्तांशाः कालांशा उदयांशाश्चैकपर्यायवाचिनः शब्दाः । अमरेज्यस्य (गुरोः) कालांशा एकादश, अर्कजस्य (शनेः) कालांशाः पञ्चदश, भूमिपुत्रस्य (मङ्गलस्य) कालांशाः सप्तदश, भृगोः (शुक्रस्य) बिम्बमहत्वात्तीचासन्नगतत्वाच्चाष्टाभिः कालांशैः पश्चादस्तः, पूर्वदिश्युदयश्च । तथोच्चासन्नगतत्वाद्बिम्बाल्पत्वाच्च दशभिः कालांशैः पूर्वदिश्यस्तं पश्चादुदयश्च । एवं वक्री बुधो रवितो द्वादशभिः कालांशैः बिम्बमहत्वादस्तोदयौ करोति, शीघ्रगतिर्बुधश्च बिम्बाल्पत्वाद्रवितश्चतुर्दशभिः कालांशैरस्तोदयौ करोति, अत्र बुधशुक्रयोरस्तोदययोः कालांशा, आचार्योक्त-कालांशतो भिन्ना दृश्यन्ते इति ॥

अत्रोपपत्तिः

ग्रहबिम्बस्य लघुत्वं महत्त्वं चोच्चनीचस्थितिबलेन भवति, बिम्बान्तरसूत्र-वशाद्रवेस्तेजसो ग्रहबिम्बोपरि न्यूनाधिकत्वं भवत्यतः कालांशाः स्थिरा न भवितु-मर्हन्ति, तस्मादेव कारणात् लोकव्यवहारार्थमसकृद्वेधेन प्राचीनैः स्थूलाः कालांशाः समवगत्य पठिताः । बिम्बस्य स्थूलत्व सूक्ष्मत्व वशात्तेषां (कालांशानां) न्यूना-धिकता भवन्त्यतो वक्रगयोर्बुधशुक्रयोर्बिम्बस्य महत्वाद्द्विहीना सूर्यसिद्धान्त-कारेण कृता, सिद्धान्त शिरोमणौ भास्करेण "ज्ञशुक्रयोर्वक्रगयोर्द्विहीना" ऽप्यनेन तदेव कथ्यते इति ॥ ३२ ॥

अब दृश्य घटी (कालांश घटी) को कहते हैं ।

हि. भा.—रवि से दो घटी अन्तर पर चन्द्र दृश्य होते हैं, शुक्र, गुरु, बुध, शनि, और भीम (मङ्गल) ये ग्रह डेढ़ घटी १।३० में त्रिभाग घटिकोत्तर (बीस घटी वृद्धि) करके दृश्य होते हैं अर्थात् शुक्र की कालांश घटी=१।३०, गुरु की कालांश घटी=१।३०+२०=१।५०, बुध की कालांश घटी=१।५०+२०=२।१० शनि की कालांश घटी=२।१०+२०=२।३०। भीम की कालांश घटी=२।३०+२०=२।५०, इनको छः से गुणने से चन्द्र आदि ग्रहों के कालांश होते हैं, चन्द्र के कालांश=१२, शुक्र के कालांश=६, गुरु के कालांश=११, बुध के कालांश=१३, शनि के कालांश=१५, भीम के कालांश=१७ ये 'द्वादशभिः शीतांशुः' इत्यादि पाठपठित कालांश के तुल्य ही हैं। सूर्य सिद्धान्त में "एकादशामरेज्यस्य तिथिसङ्ख्यार्कजस्य च । अस्तांशा भूमिपुत्रस्य दश सप्तऋकाम्नतः" इत्यादि संस्कृत विज्ञान भाष्य में लिखित श्लोकों के अनुसार गुरु के कालांश=११, शनि के कालांश=१५, भीम के कालांश=१७, शुक्र के नीचासन्न मे रहने से बिम्ब के महत्त्व के कारण ८ कालांश में पश्चिम दिशा में अस्त और पूर्व दिशा में उदय होता है। तथा उच्चासन्न में रहने से बिम्ब की अल्पता के कारण दश कालांश में पूर्व दिशा में अस्त और पश्चिम दिशा में उदय होता है। एवं वक्री बुध रवि से बारह कालांश में बिम्ब के महत्त्व के कारण अस्त और उदित होते हैं, शीघ्रगतिक बुध बिम्ब की अल्पता के कारण चौदह कालांश में अस्त होते हैं और उदित होते हैं, बुध और शुक्र का कालांश यहां आचार्योक्त कालांश से भिन्न कहा गया है इति ॥ ३२ ॥

उपपत्ति ।

उच्च और नीच के वश से ग्रह बिम्ब का लघुत्व और महत्त्व होता है। बिम्बान्तर सूत्रवश से रवि के तेज ग्रह बिम्ब के ऊपर न्यून और अधिक होता है इसलिये कालांश स्थिर नहीं हो सकता है, इसी कारण से लोक व्यवहार के लिये प्राचीनाचार्यों ने बार-बार वेध से कालांश को जानकर स्थूल कालांश पठित किया है। बिम्ब की स्थूलता और सूक्ष्मतावश से उन (कालांश) की न्यूनता और अधिकता होती है, इसलिये वक्रगत बुध और शुक्र की बिम्ब स्थूलता के कारण दो घटाया गया है, सूर्य सिद्धान्तकार के मत में, सिद्धान्त शिरोमणि में भास्कराचार्य ने भी "शशुक्रयोर्वक्रगतयोर्द्विहीना" इससे उसी बात को कहा है इति ॥ ३२ ॥

प्येभिः सर्वं स्फुटीकृतमेवेति ॥ ३३-३४ ॥

अब अन्तर घटी से तात्कालिकी करण और काल ज्ञान को कहते हैं ।

हि. भा.—ग्रह और रवि की अन्तर घटी तथा स्वदृश्य घटी (स्वकालांश घटी) का अन्तर करना, तब उस अन्तर से कला-साधन करना अर्थात् अन्तर घटिकासु को अठारह सौ कला (राशि कला) से गुण कर ग्रहाधिष्ठित राशि (जिस राशि में ग्रह है) की उदयामु से भाग देने से फल अन्तर घटिकासु सम्बन्धिनी कला (क्षेत्र कला) होती है । इन क्षेत्र कलाओं को पूर्ववत् रवि और ग्रह के गत्यन्तर से भाग देना, बुध और शुक के वक्री रहने से रवि और वक्री बुध या वक्री शुक के गतियोग से भाग देना, फल एष्य दिन और गत दिन होते हैं । अर्थात् यदि इष्ट कालांश पठित कालांश से अल्प हो तो हीन सम्बन्धी दिन और अधिक हो तो अधिक सम्बन्धी दिन समझना चाहिये । उन दिनों से अपनी गति से चालन कला साधन करना उसके संस्कार करने से ग्रहोदय और ग्रह के अस्त समय में ग्रह और रवि होते हैं । उनसे

पुनः रवि और ग्रह अन्तर घटी साधन करना इस तरह असकृत्कर्म तब तक करना चाहिये जब तक अन्तर घटी दृश्यघटी (कालांश घटी) के बराबर हो; उस समय में ग्रह और रवि की अन्तर घटी दृश्य घटी (कालांश घटी) के बराबर होने का कारण ग्रह का उदय वा अस्त होता है। वक्री बुध और शुक्र की चालन कला को विपरीत (उल्टा) ऋण धन करना, एवं ग्रह के वक्री रहने से चालन फल को उदय अस्त मे विपरीत अर्थात् धन रहने से ऋण और ऋण रहने से धन करना चाहिये इति ॥ ३३-३४ ॥

उपपत्ति

पठित कालांश घटी और इष्ट कालांश घटी का अन्तर करना, तब अनुपात करते हैं। यदि ग्रहाधिष्ठित राशि की उदयासु में अठारह सौ कला राशिकला पाते हैं तो कालांश घटिकान्तरासु में क्या इससे कालांश घटिकान्तरासु सम्बन्धिनी क्षेत्र कला आती है। पठित कालांश और इष्ट कालांश की अन्तर कला कालवृत्त में है इसलिये उसके सजातीय ग्रहगति और कालगति के अन्तर से ग्रह के वक्री रहने से गति योग में यदि एक दिन पाते हैं तो कालांशान्तर कला में क्या इससे फल दिनादि आता है, कालगति के ज्ञान के लिये अनुपात करते हैं यदि क्रान्तिवृत्तीय अठारह सौ कला में ग्रहनिष्ठ राशयुदयासु पाते हैं तो क्रान्तिवृत्तीय ग्रहगति कला में क्या इससे फल कालगति होती है, पठित कालांश से यदि इष्ट कालांश भिन्न दिशा में हो तो पठित कालांश और इष्ट कालांश की योग कला से गत दिन और एष्यदिन साधन करना। सूर्य सिद्धान्त में “तत्कालांशान्तर कला भुत्तयन्तरविभाजिताः। दिनादि-तत्फलं लब्धं भुक्ति योगेन वक्रिणः” इत्यादि श्लोकों से सूर्य सिद्धान्तकार ने सब बातें स्पष्ट कर दी है। सिद्धान्त शिरोमणि में भास्कराचार्य ने भी “उक्तेभ्य ऊनाभ्यधिका यदीष्टाः खेटोदयो गम्यगतस्तदा स्यात्। अतोऽन्यथा वास्तमयोऽवगम्यः” इत्यादि श्लोकों से सब विषय को स्पष्ट कर दिया है इति ॥ ३३-३४ ॥

आचार्यकथितमस्तलग्नं गृहीत्वा 'दृक्कर्मणा पलभवेन तु केवलेन भानां मुनेर्मृगरिपोरुदयास्तलग्ने', इत्यादि । भास्करोत्तया वासना स्फुटैव बोध्या । एवं मध्यक्रान्त्यक्षांशयोः संस्कारेण परमाल्पा मध्याह्न नतांशा भवन्ति । अगस्त्य स्फुटकान्तिः स्वल्पान्तरात् $७७^{\circ} - २४^{\circ} = ५३^{\circ}$ दक्षिणा, अतो यत्राक्षांशाः ३७ सप्तत्रिंशतोऽधिकास्तत्र मध्यनतांशा नवतेरधिका अतस्तत्रागस्त्यो न दृश्यो भवति । सूर्यं सिद्धान्ते "अशीतिभागैर्याम्यायामगस्त्यो मिथुनान्तगः । विशेषे च मिथुनस्यांशे मृगव्याधो व्यवस्थितः ॥ विक्षेपो दक्षिणे भागैः खार्गवैः स्वादप क्रमात्" इति सूर्यसिद्धान्तकारोत्तयागस्त्यध्रुवः $= ९०^{\circ}$, दक्षिणः शरश्च $= ८०^{\circ}$, मृगव्याधस्य ध्रुवः $= ८०^{\circ}$, तस्य दक्षिणशरांशाः $= ४०^{\circ}$, सिद्धान्तशेखरे "नक्षत्रांशैः संयुतं राशियुग्मं ८७° लोपा मुद्रावल्लभस्य ध्रुवः स्यात् । शैलाभ्यस्तै रुद्रतुल्यैश्च भागैः "विक्षिप्तोऽयं दक्षिणे स्वापमाग्रात्" इति श्रीपत्युत्तया गस्त्यध्रुवः $= ८७^{\circ}$ अगस्त्यस्य दक्षिण शरांशाः $= ७७^{\circ}$, आचार्योक्तानुरूपमेव श्रीपत्युत्तमस्ति, किन्तु सूर्यं सिद्धान्तोक्तादाचार्योक्तौ महदन्तरं दृग्गोचरी भूतं भवति प्रत्यक्षमेव तद्दर्शनेन ज्ञातुं शक्यत इति ध्रुवशरांशयोरुपपत्ती भग्रहयुत्यधिकारारम्भ एवं प्रतिपादिते मया ते तत एवावगन्तव्ये ॥ ३५-३७ ॥

अब अगस्त्य के ध्रुव और शरांश को तथा उनके उदयार्क और अस्तार्क के साधन को कहते हैं ।

हि. भा. अगस्त्य मिथुन के सताईस अंश में स्थित होकर उसके स्थानीय क्रान्ति के अग्र से सतहत्तर ७७ अंश करके दक्षिण दिशा में विक्षिप्त होते हैं अर्थात् अगस्त्य के ध्रुव $= २$ राशि $+ २७^{\circ} = ६०^{\circ} + २७^{\circ} = ८७^{\circ}$, तथा दक्षिण शर $= ७७^{\circ}$ नवत्यंश से अल्प नतांश होने से अगस्त्य दृश्य होते हैं अर्थात् खस्वस्तिक से अगस्त्य पर्यन्त अगस्त्य के नतांश नवत्यंशाल्प रहने से वे अगस्त्य क्षितिज से ऊपर रहते हैं अतः वे तब दृश्य होते हैं । एवं सूर्य से दो घटी पर अगस्त्य के रहने से वे दृश्य होते हैं २ घटी $\times ६ = १२^{\circ}$ अर्थात् अगस्त्य के कालांश १२ बारह अंश है, उनके उदयलग्नको तात्कालिक रवि मान कर तथा घटिका द्वितय

याने दो घटी को इष्ट काल मान कर स्वदेशोदय से लगनानयन विधि में जो लगन होता है वही अगस्त्य के उदयसूर्य होते हैं। उदय सूर्य के बराबर रवि के होने में स्वदेश में रवि उदित होते हैं। एवं अगस्त्य के अस्त लगन में छः राशि जोड़ने से जो हो उस को तात्कालिक रवि मान कर घटी द्वय (दो घटी) को इष्ट काल मान कर विलोम विधि से जो लगन होता है उसमें छः राशि जोड़ने से अस्त सूर्य होते हैं। अस्त सूर्य के बराबर रवि के रहने से अगस्त्य अस्त होते हैं। एवं मृगव्याध के षड्भागयुत दो घटी में उदय सूर्य और अस्त सूर्य होते हैं अर्थात् मृग व्याध के कालांश १३ होते हैं, इन्हीं से उन (मृग व्याध) के उदय सूर्य और अस्तसूर्य का साधन करना चाहिये इति ॥ ३५-३७ ॥

उपपत्ति ।

आचार्य कथित अस्त लगन को ग्रहण कर 'द्वक्कर्मणापल भवेन तु केवलेन भाना मुनेर्मृगरिपोरुदयास्त लग्ने' इत्यादि भास्करोक्त विधि से उपपत्ति स्फुट ही है। एवं मध्यक्रान्ति और अक्षांश के संस्कार से परमाल्पमध्यान्ह नतांश होता है, अगस्त्य की स्फुट क्रान्ति स्वल्पान्तर से $७७^{\circ} - २४^{\circ} = ५३^{\circ}$, अतः जिस देश में अक्षांश ३७ सैतीस अंश में अधिक है वहाँ मध्मनतांश नवत्यंश से अधिक होता है इसलिये वहाँ अगस्त्य दृश्य नहीं होते हैं। सूर्य सिद्धान्त में "अशीतिभागैर्यम्याया मगस्त्यो सिधुनान्तगः" इत्यादि स. उपपत्ति में निम्नित पद्यो से अगस्त्य के ध्रुव = ६०° , दक्षिणेश्वर = ८०° , सिद्धान्तशेखर में "नक्षत्राणैः मयुनं राशि-युग्मं लोपापुद्गावल्लभस्य ध्रुवः स्यात्" इत्यादि स. उपपत्ति में लिखित श्लोक से श्रीपत्युक्त अगस्त्य ध्रुव = ८७° , अगस्त्य के दक्षिण शरांश = ७७° , आचार्योक्त के अनुरूप ही श्रीपत्युक्त भी है, लेकिन सूर्य सिद्धान्तोक्त से आचार्यकथन में बहुत अन्तर देखने में आता है, ध्रुव और शरांश की उपलब्धि की उपपत्ति भग्रहयुत्यधिकार के प्रारम्भ में ही दिखलायी गई है ये वहीं से समझनी चाहिये इति । ३५-३७ ॥

इदानीं नक्षत्रस्य सदोदितत्वं सदाऽस्तमितत्वं चाह ।

अब नक्षत्रों के सदोदितत्व और सदा अस्तमितत्व को कहते हैं ।

हि. भा.—एवं अन्य नक्षत्रों के त्रिभाग सहित दो घटी से उदयार्क और अस्तार्क साधन करना । अर्थात् अन्य नक्षत्रों के कालांश तारतम्य से चौदह मान लिया गया, जिस नक्षत्र के अस्तार्क से उदयार्क ऊन (अल्प) हो वह नक्षत्र सदा दृश्य होता है, सूर्य-सान्निध्य वश से उसका अस्त नहीं होता है, आचार्य कथित अस्त सूर्य में छः राशि जोड़ने से वा घटाने से भास्कराचार्य कथित अस्तमय सूर्य होते हैं । अतः 'यस्योदयार्कादधिकोऽस्तभानुः प्रजायते सौम्यशरातिदैर्घ्यात्' इत्यादि भास्कराचार्योक्त आचार्योक्त के अनुरूप ही है इति ॥३८॥

उपपत्ति

नक्षत्र बिम्बोदय लग्न के उदय से दृश्य घटिकानन्तर उदयसूर्य का उदय होता है, एवं आचार्योक्त अस्त सूर्यास्त के बाद दृश्य घटी तुल्यकाल में नक्षत्रास्त लग्न का अस्तमय होता है, कल्पना करते हैं नक्षत्रोदय लग्न के उदय के बाद द्विगुणित दृश्य घटी से अधिक काल में सषड्भास्तलग्न का उदय है, नक्षत्रोदय लग्न और उदयार्क के मध्य मे रवि है, तब पूर्व क्षितिज में नक्षत्रोदयानन्तर दृश्यघटी से अल्पकाल में अर्कोदय (रवि के उदय) से पहले क्षितिज में नक्षत्रदर्शनाभाव होता है, नक्षत्र बिम्बोदय के बाद दृश्यघटी तुल्य काल में उसके उदयार्क चिन्ह का उदय होता है, सषड्भास्त लग्न के उदय से पहले दृश्य घटी तुल्यकाल में सषड्भास्त सूर्य चिन्ह का उदय होता है, इसलिये उदयार्क से सषड्भाक अधिक तथा आचार्योक्त अस्तसूर्य उदयार्क से अल्प है यह स्थिति है । इस स्थिति में पूर्व क्षितिज में दर्शनाभाव है, परन्तु पश्चिम क्षितिज में सूर्यास्त के बाद उदय सूर्य चिन्ह का उसके बाद अस्त सूर्य चिन्ह का, उस के बाद अस्त लग्न का अर्थात् नक्षत्र बिम्ब का अस्तमय होता है, इसलिये पश्चिम क्षितिज में नक्षत्र बिम्ब का दर्शन होता है । एवं यदि पश्चिम क्षितिज में नक्षत्रास्त सूर्य और अस्त लग्न के मध्य में सूर्य के रहने के कारण नक्षत्र बिम्ब दर्शनाभाव हो

तो उसी दिन में पूर्व क्षितिज में रात्रिशेष में नक्षत्र बिम्ब दर्शन होता है, इसलिये इस नरह की स्थिति में रात्रि सान्निध्यवश से नक्षत्र बिम्ब का अदृश्यत्व नहीं होना है इसका विचार करना चाहिये, इससे भास्करोक्त भी उपपन्न होता है। यहाँ म. म. पण्डित सुधाकर द्विवेदी जी का विशेष कथन निम्न लिखित है।

“यस्योदयार्कादधिकोऽस्तभानुरित्यत्र वक्ष्ये बहुधा विशेषम्” इत्यादि में “ध्रिण्यस्य चेत् तद्विद्युतिः समाना निजेष्टघटघास्त सदीदयः स्यात्” यहाँ तक स. उपपत्ति में निखिन श्लोकों को देखना चाहिये इति। सूर्यसिद्धान्त में “अभिजिद् ब्रह्महृदय स्वाती-वैष्णव-वासवाः। अहिर्बुध्न्यमुदक्स्थत्वान्न लुप्यन्तेऽर्करश्मिभिः” इस श्लोक में कथित नक्षत्र उत्तर दिशा में स्थित रहने के कारण रवि किरणों से लुप्त नहीं होते हैं। इस तरह कहा गया है। स्वल्पान्तर से अभिजित् की उत्तर स्पष्टक्रान्ति = 35° , ब्रह्महृदय की उत्तर स्फुट क्रान्ति = 46° , स्वाती की उत्तर स्फुट क्रान्ति = 25° श्रवण की उत्तर स्फुट क्रान्ति = 7° , धनिष्ठा की उत्तर स्फुट क्रान्ति = 15° उत्तर भाद्रपदा की उत्तर स्फुट क्रान्ति = 17° , यहाँ यदि श्रवण की उत्तरा क्रान्ति परमाल्प लेते हैं तथा उस के वन्मयर लम्बांश ग्रहण करते हैं तो अक्षांश 53° आते हैं। लेकिन वहाँ अन्य भी बहुत नक्षत्र लम्बा-शाविक उत्तरा क्रान्तिवश से “लम्बाधिका क्रान्तिरुदक् च यावत्तावद्दिन सन्नतमेव तत्र” इस भास्करोक्त से सर्वदा दृश्य होते हैं जो कि सूर्य सिद्धान्तकार ने पठित नहीं किया है। इसलिये “यस्योदयार्कादधिकोऽस्त भानुः” इत्यादि भास्करोक्त विधि से पाठ पठित नक्षत्र सदोदित है। उसी देश में सूर्य सिद्धान्त की रचना हुई यह समझना चाहिये। सूर्य सिद्धान्तकार ने उत्तराश्वर अधिक ग्रहण किये हैं क्यों कि अभिजित् का शर = 62° , ब्रह्महृदय का = 30° , स्वाती का = 37° , श्रवण का = 30° , धनिष्ठा का = 6° , उत्तर भाद्रपदा का = 26° , “देश ज्ञान बिना सदोदित नक्षत्रों का ज्ञान नहीं होता है। निरक्ष देश में उत्तर ध्रुव भी अदृश्य है इसलिये गोल को न जानने वाले किसी गणक के द्वारा से यह श्लोक हम में दे दिया गया है यह मेरा मत है” सूर्य सिद्धान्त की सुधा वर्षिणी टीका में म. म. पण्डित सुधाकर द्विवेदी जी ने लिखा है लेकिन उनका कथन ठीक नहीं है।

सिद्धान्त शेखर में “अस्तादित्यो महान् स्यादुदयदिनकराद्यस्य ध्रिण्यध्रुवस्य” इत्यादि सं. उपपत्ति में लिखित श्लोक से श्रीपति ने नक्षत्रों का सदोदितत्व और सदाऽस्तमितत्व दिखलाया है इति ॥३८॥

इदानीं नक्षत्रबिम्बं कदा दृश्यत इत्याह।

अब नक्षत्र बिम्ब का कब देखते है कहते है ।

हि. भा.—नक्षत्र के उदय सूर्य और अस्त सूर्य के मध्य में रवि के रहने से वह
नक्षत्र बिम्ब क्षितिज से ऊपर रहता है इसलिये दृश्य होता है, अन्यथा अस्तगत होता है,
यहां उदयार्क से वा अस्तार्क से तात्कालिक रवि हीन अधिक हो तो दोनों के अन्तर कला
में रविगति से भाग देने से एष्य दिन वा गत दिन होता है ।

उपपत्ति

उदय सूर्य तुल्य सूर्य के रहने से उदय होता है और अस्त सूर्य तुल्य सूर्य के रहने

से अस्त होता है इस युक्ति से इन दोनों के अभ्यन्तर में सूर्य के स्थायी रहने से उस नक्षत्र बिम्ब का दर्शन स्फुट है, उसके बाद अस्त सूर्य तुल्य सूर्य काल से लेकर जब तक उदय सूर्य के बराबर सूर्य नहीं होते हैं तबतक उसका अदर्शन होता है यह केवल परिभाषा ही से स्फुट है, सिद्धान्त शेखर में “उदय दिनकरास्तब्रध्नयोर्मध्यगः स्यात्” इत्यादि स. उपपत्ति से लिखित श्लोक से श्रीपति ने आचार्योक्त के अनुरूप ही कहा है उदयार्क और अस्तार्क के मध्यगत कला के रवि की स्फुट गति से भाग देने से फल नक्षत्र के उदय दिन और अस्त दिन होते हैं अर्थात् उदयार्क में से अस्तार्क को घटा कर कलात्मक बनाकर रवि गति कला से भाग देने से जितने लब्ध दिन होते हैं उतने दिनों में नक्षत्र बिम्ब दृश्य नहीं होता है एव अस्तार्क में से उदयार्क को घटा कर कलात्मक बना कर उस में रवि गति कला से भाग देने से जितने लब्ध दिन होते हैं उन दिनों में अगस्त्य-लुब्धक और नक्षत्र बिम्ब दृश्य होते हैं, सिद्धान्त शेखर में “मध्यगास्तदुभयोः कला हि यास्ता भजेत् स्फुट जवेन भास्वतः स्याद् दिनादि फल-मुद्गमास्तयोः कुम्भजस्य मृगयोरुडोरपि” इस से श्रीपति ने आचार्योक्तानुरूप ही कहा है इति ॥३६॥

तत्क्रान्तेर्दक्षिणतो विक्षिप्तोजगस्त्यवच्छेषम् ॥ ४० ॥

सु. भा.—शेषमुदयास्तार्क साधनमगस्त्यवत् । शेषं स्पष्टार्थम् ॥४०॥

वि. भा.—मृगव्याधः (लुब्धकः) षड्विंशे मिथुनांशे स्थितो दक्षिणतस्तत्क्रान्तेः (दक्षिण क्रान्त्यग्रात्) अंशकचत्वारिंशता विक्षिप्तो भवति, अर्थात् लुब्धकस्य ध्रुवः = 40° , शेषं कर्म उदयास्तार्क साधनादिकं सर्वमगस्त्यवत्कर्तव्यमिति शेषः । सूर्य सिद्धान्त मतेन लुब्धकस्य ध्रुवः = 60° , दक्षिण शरांशाश्च = 40° शरांशाश्चोभयत्र समाना एव, केवलं ध्रुवयोरन्तरमस्ति यच्च प्रत्यक्षमेव दृग्गोचरीभूतं भवति । सिद्धान्त शेखरे “उत्क्रान्त्यांशैर्लुब्धको वैरिणकक्षे विक्षिप्तोऽंशैर्दक्षिणो चाभ्रवेदैः । इष्टः कालः षड्दलाढये च नाड्यौ शेषं कर्मगस्त्यवत् तस्य सर्वम्” ज्ञेन श्रीपत्युक्ते लुब्धकस्य ध्रुवदक्षिणशरप्रमाणे आचार्योक्तानुरूपे एवेति इष्टः कालः षड्दलाढये च नाड्याविति श्रीपत्युक्तं “घटिका द्वितयेनैव षड्भागयुतेन मृगहर्तु” रित्याचार्योक्तानुरूपमेवेति सुधीर्भिर्विभावनीयम् ॥४०॥

अथ लुब्धक के ध्रुव और शरांश को कहते हैं ।

हि. भा.—लुब्धक मिथुन राशि के छब्बीस अंश में स्थित है, तथा उसकी दक्षिण क्रान्ति के अग्र से अर्थात् क्रान्तिवृत्ता से चालीस अंश में विक्षिप्त होते हैं अर्थात् क्रान्तिवृत्त

से दक्षिण चालीस अंश पर रहते हैं। अर्थात् लुब्धक के ध्रुव = ८६°, तथा दक्षिण शरांश = ४०°, शेषकर्म (उदयार्क और अस्तार्क आदि के साधन) अगस्त्य की तरह करना चाहिये। सूर्यसिद्धान्तमत से लुब्धक के ध्रुव = ८०°, दक्षिणशर = ४७° शरांश दोनों के मत में तुल्य ही हैं किन्तु ध्रुव में अन्तर देखने में आता है, सिद्धान्तशेखर में “उत्कृत्यांशैर्लुब्धको वैरिणिकर्षे विक्षिप्तोऽर्शैर्दक्षिणे चाभ्रवेदैः” इत्यादि स. भाष्य में लिखित श्लोक से श्रीपति आचार्योक्त के अनुरूप ही लुब्धक के ध्रुव और शरांश कहते हैं, इष्टकान् (कालांश) भी आचार्योक्त “घटिका द्वितयेनैव षड्भाग युतेन मृगहर्तुः” के अनुरूप ही कहे हैं इति ॥४०॥

इदानीमग्रासाधनमाह ।

गुणिता व्यासार्धेन स्वक्रान्तिज्यावलम्बक हृताऽग्रा ।
प्रतिदिनमुदयास्तमयावग्राग्रे भग्रहमुनीनाम् ॥४१॥

सु. भा.—स्वक्रान्तिज्या व्यासार्धेन त्रिज्यया हृतावलम्बकेन लम्बज्यया हृताऽग्रा भवति । भग्रहमुनीनां प्रतिदिनमग्राग्रे उदयास्तमयौ भवतः ॥

अत्रोपपत्तिः । लम्बज्या कोट्या त्रिज्या कर्णस्तदा क्रान्तिज्या कोट्या क इति जाताऽग्रा । अग्राग्रयोर्बद्धं सूत्रमुदयास्तसूत्रमुच्यते ततस्तदग्रे भस्य ग्रहाणा-मगस्त्यस्य चोदयास्तौ इति सर्व स्फुटम् ॥४१॥

वि. भा.—स्वक्रान्तिज्या (अगस्त्यादीनां क्रान्तिज्या) व्यासार्धेन (त्रिज्यया) गुणिता, अवलम्बकेन (लम्बज्यया) हृता (भक्ता) तदाऽग्राभवति, भग्रहमुनीनां (नक्षत्र ग्रहागस्त्यादीनां) प्रतिदिनमग्राग्रे उदयास्तमयौ भवतः इति ॥४१॥

अत्रोपपत्तिः

अक्षज्या भुजः । लम्बज्या कोटिः । त्रिज्या कर्ण इत्येकमक्षक्षेत्रम्, कुज्या भुजः क्रान्तिज्या कोटिः । अग्राकर्ण इति द्वितीयमक्षक्षेत्रमनयोः साजात्यादनुपातो यदि लम्बज्यया त्रिज्या लभ्यते तदा क्रान्तिज्यया किं समागताऽग्रा, अग्राग्रयोर्बद्धं सूत्रमुदयास्तसूत्रम् । तदग्रे ग्रहादेरुदयास्तौ भवत इति सर्व स्फुटमेव, मन्मतेत्व-त्राग्रा साधनस्याऽऽवश्यकता नाऽऽसीत्, किं समवगत्यात्राग्रासाधनं कृतमिति त एव (आचार्या एवं) ज्ञातुं शक्नुवन्तीति, सिद्धान्तशेखरे “अग्रां ग्रहागस्त्यकलुब्ध-कानां प्राग्वत् स्फुटक्रान्ति गुणात् प्रसाध्य । अग्रप्रदेशेऽन्वहमग्राकायाः समुद्गम-श्चास्तमयश्च तेषाम्” इति श्रीपतिनाप्याचार्यस्यैवानुकरणं कृतमिति ॥ ४१ ॥

अब अग्रा-साधन कहते हैं ।

हि. भा.—नक्षत्र आदि की स्पष्ट क्रान्तिज्या को त्रिज्या से गुणा कर लम्बज्या

से भाग देने से अग्रा होती है, नक्षत्र ग्रह मुनि (अगस्त्य) इन सबों के प्रति दिन अग्राग्र में उदय और अस्त होता है इति ॥४१॥

उपपत्ति ।

अक्षज्याभुज, लम्बज्या कोटि, त्रिज्या कर्ण यह एक अक्षक्षेत्र तथा कुज्याभुज, क्रान्तिज्या कोटि, अग्रा कर्ण यह द्वितीय अक्षक्षेत्र है, ये दोनों अक्षक्षेत्र सजातीय हैं इसलिए अनुपात करते हैं यदि लम्बज्या में त्रिज्या पाते हैं तो क्रान्तिज्या में क्या इस से अग्रा प्रमाण आता है, दोनों अग्राग्र में बद्धसूत्र उदयास्त सूत्र है, अग्राग्र में ग्रह आदि के उदय और अस्त होते हैं । मेरे मत से यहां अग्रा साधन की आवश्यकता नहीं थी, क्या समझकर यहां आचार्य ने अग्रा का साधन किया है यह बात आचार्य ही जान सकते हैं । सिद्धान्त शेखर में 'अग्रा ग्रहागस्त्यक लुब्धकानां प्राग्बत् से स्फुटक्रान्तिगुणात् प्रसाध्य' इत्यादि स उपपत्ति में लिखित श्लोक से श्रीपति ने भी आचार्योक्त का ही अनुकरण किया है इति ॥४१॥

इदानीं भुजसाधनमाह ।

अग्रा शङ्कुतलैक्यं तुल्यदिशोरन्तरं तथा अन्यदिशोः ।
प्राच्यपरायाः शङ्कुस्तलं तदग्रे ग्रहो भं च ॥ ४२ ॥

सु. भा.—तुल्यदिशोरग्रा शङ्कुतलयोरैक्यं तथा अन्यदिशोरन्तरं प्राच्य-
परायाः पूर्वापरितः शङ्कुस्तलं शङ्कुमूलपर्यन्तं स्यात् । तदग्रे शङ्क्वग्रे ग्रहो वा

अब भग्रह युति दर्शन प्रकार को कहते हैं ।

हि. भा.—भ (नक्षत्र) और ग्रह के युति दर्शन के लिये दोनों (भ और ग्रह) में ऊन
 (अल्प) शङ्कू, सम्बन्धिनी कोटि को अधिक शङ्कू से गुणा करना । तथा अधिक शङ्कू
 सम्बन्धिनी कोटि को ऊन शङ्कू से गुणा करना स्वशङ्कू (अपने शङ्कू) से भाग देना
 अर्थात् एक की कोटि को अपरशङ्कू (दूसरे शङ्कू) से गुणा कर स्वशङ्कू से भाग देना तब
 अपर कोटि होती है, अपनी दृष्ट्या के अग्र में पृथक्-पृथक् (अलग-अलग) ऊनशङ्कू और
 अधिकशङ्कू को करके ऊन शङ्कू के अग्र में दृष्टि को करके अधिकशङ्कू और ग्रह के मध्य
 में प्रत्येक क्षण नक्षत्र को दिखाना चाहिये अर्थात् न्यून शङ्कू के अग्र में स्थापित नेत्र (दृष्टि)
 से वृहत् शङ्कू के अग्र में वर्त्तमान नक्षत्र आदि को लोगों के अथवा राजा के मनोविनोद के
 लिये गणक (ज्योतिषिक) दिखावें । अशेष (सम्पूर्ण) शङ्कू अग्रण आदि त्रिप्रश्नाधिकारोक्त
 रीति से रवि की तरह साधन करना इति ॥ ४४ ॥

उपपत्ति ।

भ (नक्षत्र) और ग्रह के युति काल में दृष्टिस्थान से ग्रह बिम्ब केन्द्रो परिगत सूत्र नक्षत्र बिम्ब केन्द्रो परिगत भी होता है, इसलिये तब दोनों के नतांश बराबर (तुल्य) होने के कारण स्वस्व गोलीय 'भुज, कोटि, दृग्ज्या, शङ्कु' योजन परस्पर सजातीय होते हैं। इसलिये एक की कोटि को अपर शङ्कु से गुणा कर स्व (अपने) शङ्कु से भाग देने से अपर कोटि होती है। उसके बाद परिलेखन रचना भी स्पष्ट ही है, यहां किसी अभीष्ट शङ्कु से ग्रह कर्ण को और भकर्ण (नक्षत्र कर्ण) को अपवर्तन देकर लाघव के लिये उस व्यासार्ध से ग्रहगोल की और भगोल की रचना कर स्वस्वगोलीय दृग्ज्या आदि की रचना कर भग्रह युति को दिखावे। सिद्धान्त शेलर में "दृष्ट्युच्छितोच्चतर शङ्कु गुणाः स्वकर्णदोः कोटयः पृथगतौ निजशङ्कुभक्ता" इत्यादि से श्री पति ने आचार्योक्त के अनुरूप ही कहा है, आचार्य "भानि दर्शयेत्" कहते हैं यहां 'भ' उपलक्षण है, श्रीपति 'खेचर भमुनिलुब्धकान्' इससे उसी का स्पष्टीकरण किया है। सूर्य सिद्धान्त में युतिकाल में दो ग्रहों के दर्शनार्थ प्रकार कहा गया है, जैसे "पञ्च-हस्ताच्छ्रितौ शङ्कु यथादिग्रम सस्थितौ" इत्यादि स. उपपत्ति में लिखित श्लोकों को देखिये अर्थात् जब दर्शन योग्य दो ग्रह हो तो पांच हाथ के दो शङ्कु (काठ के सरलाकार या बंश के) बनाना चाहिये, युति काल में त्रिप्रश्नाधिकारोक्त रीति से दोनों ग्रहों के शङ्कु साधन करना, वे पूर्वापर रेखा से जिस दिशा में जिस काल में गणित से सिद्ध है इस तरह स्वच्छ भूमि में इन दोनों को स्थापन करना जिससे वास्तव शङ्कु रूप हो, युति-काल में दोनों ग्रहों के पूर्वापर रेखा और शङ्कु मूल के अन्तर रूप भुजद्वय तथा दिग्मध्य से पूर्वापर रेखा में यथा दिक्क (जिस दिशा के कोटिद्वय है उस दिशा में) कोटिद्वय को लेकर, उन दोनों भुजों के संस्कार से स्पष्ट भुज तथा दोनों कोटियों के संस्कार से स्पष्ट कोटि लाकर दोनों के वर्गयोग मूल दोनों ग्रहों के शङ्कु मूलान्तर लाना चाहिये। तत्तुल्यान्तरित में यथा-दिक्क के शङ्कुद्वय को स्थापित करना, उन दोनों को क्षितिज के ऊपर लम्बरूप स्थिति के लिये भूमि के नीचा एक हाथ खात (खद्दा) में गाड़ देना चाहिये जिससे उन दोनों के नीचे पतन (गिरजाना) न हो। वहां से अपनी-अपनी छायादान से जहां उनके अग्र हो वहां से अपने-अपने शङ्कु के शीर्षगत छाया कर्णों को दान देना। छाया कर्ण सूत्र को बढ़ाने से ग्रह केन्द्रगत होता है यह छाया क्षेत्र से प्रसिद्ध है। इसलिये छाया कर्ण स्थित दृष्टि से ग्रह दर्शन होता है। अतः उन दोनों छायाकर्णों के संयोग स्थान में यदि दृष्टि स्थान हो तो केवल दृष्टि संचालन ही से दोनों ग्रहों का दर्शन होगा इसलिये वहां रखी हुई शिष्य दृष्टि से या राजा की दृष्टि से उनकी प्रतीति के लिये आकाश में स्वस्वशङ्कु के शीर्ष स्थानगत दृक्तुन्यता को प्राप्त किये हुये ग्रहद्वय को दिखाना चाहिये। इति ॥ ४४-४५ ॥

इदानीं द्वादशाङ्गुलशङ्कु भुजात् क्रान्तिसाधनमाह ।

अत्रोपपत्तिः ।

“त्रिभज्याहृताऽकर्णिका कर्णानिघ्नी भवेत्कर्णवृत्ताग्रका व्यस्तगोलेति” भास्करोत्तथा कर्णवृत्ताग्रा भवति अग्राशङ्कुतलयोः संस्कारेण भुजो भवति, छायाकर्णगोले शङ्कुतलं पलभातुल्यं भवत्यतो विलोमेन शङ्कुतलभुजयोर्यथ-त्पलभा भुजयोः संस्कारेण कर्णवृत्ताग्रा भवेत् । पूर्वोक्तभास्करोक्त सूत्रेण कर्ण-वृत्ताग्रा = $\frac{\text{अग्रा. छाक}}{\text{त्रि}}$ अतः अग्रा. छाक = त्रि. कर्णवृत्ताग्रा, तत छाक = अग्रा, ततोऽक्षक्षेत्रानुपातेना ‘त्रिज्याकर्णेन लम्बज्या कोटिलम्ब्यते तदाऽग्राकर्णेन कि लब्धा क्रान्तिज्या’ नेन क्रान्तिज्या = $\frac{\text{लज्या} \times \text{अग्रा}}{\text{त्रि}} = \frac{\text{लज्या} \times \text{त्रि} \times \text{क.वृ.अ.}}{\text{त्रि} \times \text{छाक}}$ = $\frac{\text{लज्या} \times \text{कर्णवृत्ताग्रा}}{\text{छाक}}$ एतावताऽऽचार्योक्तमुपन्नम् । सूर्यसिद्धान्तेऽपि “इष्टाग्राघ्नीतु लम्बज्या स्वकर्णाङ्गुल भाजिता । क्रान्तिज्येत्यनेन” कर्णवृत्ताग्रातः क्रान्तिज्या ज्ञानमाचार्योक्त सदृशमेवास्ति । सिद्धान्तशेखरे “शङ्कोश्च पूर्वापररेखि-काया यदन्तरं तद्विषुवत्प्रभैक्यम् । सौम्ये नराग्रेऽन्तरमन्यथा तु लम्बाहृतं तच्छवशेन भक्तम् ॥ क्रान्तिज्यके” त्यनेन श्रीपतिनाऽऽचार्योक्तानुरूपमेवोक्तमिति विज्ञैर्विभाव-नीयम् ॥ ४६ ॥

अब द्वादशाङ्गुलशङ्कु के भुज से क्रांति साधन को कहते हैं ।

हि. भा.—उत्तर शङ्कुतल (पूर्वापर रेखा से उत्तर शङ्कुतल में अर्थात् उत्तर भुज) में भुज और विषुवच्छाया (पलभा) का योग करना, दक्षिण भुज में उन दोनों का अन्तर

करना तब कर्णवृत्ताग्रा होती है, उन योग और अन्तर को अर्थात्पूर्वगत कर्णवृत्ताग्रा को लम्बज्या से गुराकर इष्ट छाया कर्ण से भाग देने से नक्षत्र की बिम्बीय स्पष्ट क्रांतिज्या होती है इति ॥ ४६ ॥

उपपत्ति ।

अग्रा और शङ्कुतल के संस्कार करने से भुज होता है इसके विपरीत शङ्कुतल और भुज के संस्कार करने से अग्रा होती है, परन्तु छायाकर्ण गोल में शङ्कुतल पलभा के समान होता है इसलिये पलभा और भुज का संस्कार करने से कर्णवृत्ताग्रा होती है, 'त्रिभज्याहृताऽर्काग्रिका कर्ण निघ्नी भवेत्कर्णवृत्ताग्रिका व्यस्तगोला' इस भास्करोक्त विधि से

$\frac{\text{अग्रा. छाक}}{\text{त्रि}} = \text{कर्णवृत्ताग्रा, छेदगम करने से अग्रा. छाक} = \text{त्रि. कर्णवृत्ताग्रा}$

∴ $\frac{\text{त्रि. कर्णवृत्ताग्रा}}{\text{छाक}} = \text{अग्रा, तब 'त्रिज्याकर्ण में लम्बज्या कोटि पाते हैं तो अग्रा-}$

कर्ण में क्या, इस अक्षक्षेत्रानुपात से लब्धि क्रांतिज्या आती है । $\frac{\text{लंज्या अग्रा}}{\text{त्रि}} = \text{क्रांज्या, यहाँ}$

अग्रा का उत्थापन करने से $\frac{\text{लंज्या . त्रि. कर्णवृत्ताग्रा}}{\text{त्रि. छाक}} = \text{क्रांज्या} = \frac{\text{लंज्या. कर्णवृत्ताग्रा}}{\text{छाक}}$ इससे

आचार्योक्त उपपन्न हुआ । सूर्यसिद्धान्त में "इष्टाग्राघ्नीतु लम्बज्या स्वकर्णाङ्गलभाजिता" इत्यादि सं. उपपत्ति में लिखित श्लोक से कर्णवृत्ताग्रा से क्रांति साधन प्रकार के सदृश ही आचार्योक्त प्रकार है । सिद्धान्त शेखर में "शङ्कोश्च पूर्वापर रेखिकाया यदन्तरतद्विषुवत्प्रभैक्यम्" इत्यादि सं. उपपत्ति में लिखित श्लोक से श्रीपति ने आचार्योक्त के अनुरूप ही कहा है इति ॥ ४ ॥

अत्रोपपत्तिः ।

पूर्वसाधित नक्षत्र स्पष्ट क्रान्तिज्यायाश्चापं नक्षत्रस्य बिम्बीया स्पष्टा क्रान्ति-भवेत्साच नक्षत्रस्य मध्यमक्रान्त्यंशैः (भद्रुवापमांशैः) सहितोना तदा नक्षत्रस्य शरांशा भवन्तीति क्रान्ति स्पष्टक्रान्ति शरांशादि स्वरूप भावनया स्फुटैव । संस्कार-विषयेऽपि विपरीत शोधनाद्युक्तक्रिया वैचित्र्यादि सर्व विज्ञेयम् । विपुलं गोल यन्त्रं विरचय्य रात्रौ गोलमध्यगतदृष्ट्या रेवती तारां विलोक्य क्रान्तिवृत्ते यो मीनान्तस्तं रेवतीतारायां निवेश्य मध्यगतदृष्ट्यैव नक्षत्रं विलोक्य तदुपरि ध्रुवप्रोतवृत्तं कदम्ब प्रोतवृत्तं च कार्यम् । ध्रुवप्रोतवृत्तं क्रान्तिवृत्ते यत्र लग्नं तस्माद्गोलसन्धि (नाडीक्रान्तिवृत्तयोः सम्पातं) यावत् येऽशास्ते सायना ध्रुवाः । नक्षत्रबिम्बोपरिगतं कदम्बप्रोतवृत्तं क्रान्तिवृत्ते यत्र लगति तन्नक्षत्रस्थानम् । स्थानोपरि गतमहोरात्रवृत्तं कार्यं तद् ध्रुवप्रोतवृत्ते यत्र लगति तस्मान्नाडीवृत्ता वधि नक्षत्रबिम्बोपरिगतध्रुवप्रोतवृत्ते नक्षत्रमध्यमा क्रान्तिः । नक्षत्र बिम्बात्-ध्रुवप्रोतवृत्तनाडीवृत्तसम्पातावधि ध्रुवप्रोतवृत्ते नक्षत्रस्पष्टा क्रान्तिः । नक्षत्र-बिम्बात् स्थानीयाहोरात्रवृत्तध्रुवप्रोतवृत्तयोः सम्पातं यावन्नक्षत्रस्पष्टशरः । अत्रैकदिशायां स्पष्टक्रान्ति-मध्यमक्रान्त्योरन्तरेणाऽर्थात् 'स्पष्टक्रान्ति-मध्यमक्रान्ति = स्पष्टशरः' । यो नक्षत्रस्फुटशरो भवति स स्पष्टक्रान्तिदिवको भवति । विलोम शोधनेऽर्थात् मध्यमक्रान्ति-स्पष्टक्रान्ति = स्फुटशरः । यो नक्षत्रस्फुटशरः स स्पष्टक्रान्तेर्भिन्नदिवको भवति । यदि स्पष्टक्रान्तिमध्यमक्रान्तिदिशोर्भिन्नत्वं

तदा तयोर्योगकरणेन उत्तरो दक्षिणश्च नक्षत्र स्फुटशरो भवति । अतो विलोम-विधिना स्पष्ट क्रान्ति-स्पष्टशरयोरन्तरेण योगेन च नक्षत्र मध्यमक्रान्तिर्भवेदेव ततो जिनज्यया यदि त्रिज्या लभ्यते तदा नक्षत्रमध्यमक्रान्त्या किं समागच्छति नक्षत्र भुजज्या = $\frac{\text{त्रि. नक्षत्रमक्रांज्या}}{\text{त्रिज्या}}$ अस्याश्चापम् = नक्षत्र ध्रुवः । एतत्सम्बन्धे सूर्य-सिद्धान्ते केवलं 'गोलं बद्ध्वा परीक्षेत विक्षेपं ध्रुवकं स्फुटम्' लिखितम् इति ॥ ४७-४८ ॥

हि. भा.— पूर्वसाधित बिम्बीय स्पष्ट क्रान्तिज्या के चाप करने से स्पष्ट क्रान्ति होती है; उसमे एक जातीय नक्षत्र ध्रुवक्रान्ति को घटाने से नक्षत्र का शरांश होता है, स्पष्ट क्रान्ति जिस दिशा की है उसी दिशा का यह (नक्षत्र शरांश) भी होता है । यदि विपरीत शोधन हो अर्थात् नक्षत्र ध्रुवक्रान्ति में से यदि स्पष्ट क्रान्ति घट जाय तब जो नक्षत्र शरांश होगा उसकी दिशा स्पष्ट क्रान्ति की दिशा से विपरीत होगी । यदि नक्षत्र ध्रुवक्रान्त्यश भिन्न दिशा (विजातीय) के हैं तब भिन्न दिशा के नक्षत्र ध्रुवक्रान्त्य को स्पष्ट क्रान्ति में जोड़ने से स्पष्ट क्रान्तिवश से उत्तर-दक्षिण नक्षत्र शरांश होता है । एवं विलोम विधि से स्पष्ट क्रान्ति और नक्षत्र शरांश के सस्कार से नक्षत्र की स्थानीय (मध्यम) क्रान्ति होती है । मध्यम क्रान्ति ज्ञान से रवि की तरह $\frac{\text{त्रि} \times \text{नक्षत्रस्थानीय क्रान्ज्या}}{\text{त्रिज्या}} = \text{नक्षत्र भुज्या}$, इसका चाप नक्षत्र भुजज्या = नक्षत्र ध्रुव होता है ॥ ४७-४८ ॥

उपपत्ति

नक्षत्र बिम्बोपरिगत ध्रुव प्रोतवृत्त क्रान्तिवृत्त के सम्पात से गोल सन्धि (नाडी वृत्त क्रान्तिवृत्त के सम्पात बिन्दु) पर्यन्त क्रान्तिवृत्तीय चाप नक्षत्र का सायन ध्रुव है । नक्षत्र बिम्बोपरि ध्रुवप्रोतवृत्त क्रान्तिवृत्त के सम्पात से नक्षत्र बिम्बतक ध्रुवप्रोतवृत्ति में नक्षत्र के स्पष्टशर है । नक्षत्र बिम्बोपरिगत कदम्ब प्रोतवृत्त और क्रान्ति वृत्त का सम्पात बिन्दु नक्षत्र का स्थान है । नक्षत्र स्थानोपरिगत अहोरात्रवृत्त और नक्षत्र बिम्बोपरिगत ध्रुव प्रोतवृत्त के सम्पात बिन्दु से ध्रुव प्रोतवृत्त नाडीवृत्त के सम्पात पर्यन्त नक्षत्र मध्यम क्रान्ति है । नक्षत्र-बिम्बोपरिगत ध्रुवप्रोतवृत्त और स्थानीयाहोरात्रवृत्त के सम्पात से नक्षत्रबिम्ब तक नक्षत्र का स्पष्टशर है नक्षत्रबिम्ब से नाडीवृत्त पर्यन्त नक्षत्र बिम्बोपरिगत ध्रुव प्रोतवृत्तीय चाप (स्पष्टक्रान्ति) में यदि स्थानीय-होरात्रवृत्त, और ध्रुवप्रोतवृत्त के सम्पात से नाडीवृत्त पर्यन्त नक्षत्र बिम्बोपरिगत ध्रुवप्रोतवृत्तीय चाप (मध्यम क्रान्ति) को एकदिशा में अन्तर करने से अर्थात् स्पष्ट क्रान्ति-मध्यम क्रान्ति और भिन्न दिशा में दोनों का योग करने से नक्षत्र स्पष्ट शर (नक्षत्र बिम्ब से स्थानीयाहोरात्रवृत्त ध्रुवप्रोतवृत्त के सम्पात पर्यन्त) होता है । एवं विपरीत विधि से नक्षत्र स्पष्ट क्रान्ति और स्पष्टशर के सस्कार से नक्षत्र की मध्यम क्रान्ति

होती है। मध्यम क्रांतिज्ञान से $\frac{\text{त्रि} \times \text{नक्षत्रम क्रांज्या}}{\text{जिज्या}} = \text{नक्षत्र भुजज्या}$, इसका चाप करने से नक्षत्र

ध्रुव होता है। इसके सम्बन्ध में सूर्य सिद्धान्त में केवल 'गोल बध्वा परीक्षेन विधेय ध्रुवक स्फुटम्' लिखा है अर्थात् गोल यन्त्र बनाकर अश्विन्यादि नक्षत्रों के स्फुटशर और ध्रुव की परीक्षा कर अर्थात् गोल-यन्त्र द्वारा वेध से स्फुटशर और ध्रुव का ज्ञान करे। एक गोल यन्त्र को बनाकर रात्रि में गोल केन्द्रगत दृष्टि से रेवती तारा को देखकर क्रान्तिवृत्त में जो मीनान्त बिन्दु है उसको रेवती तारा में निवेशकर गोल-केन्द्रगत दृष्टि से ही नक्षत्र को देखकर उसके ऊपर ध्रुव प्रोतवृत्त और कदम्ब प्रोतवृत्त कर देना चाहिए उसके बाद उपर्युक्त युक्तियों से नक्षत्र ध्रुवज्ञान करना चाहिए, इति ॥ ४७-४८ ॥

इदानी युतिलक्षणमाह ।

ऊने मानैक्यार्थाद् ग्रहयोर्मध्यान्तरे युतिग्रहयोः ।

समलिप्तिकयोर्ग्रहणवदधिके स्फुटमानयोगार्थात् ॥४९॥

सु० भा०—'मानैक्यार्थादधिके' इति ग्रहसमागमोक्ते न स्फुटा व्याख्योप-
पत्तिश्च ॥ ४९ ॥

वि. भा.—समकलयोर्ग्रहयोर्मध्यान्तरे (केन्द्रान्तरे) ऽर्थाद् ग्रहयोरन्तरे तयो-
बिम्बयोगार्थादूने (न्यूने) तदायुतिर्भवेदर्थाद्ग्रहणवदाच्छादनं भवेत्-अर्थादुपरिस्थो
ग्रहो ग्राह्यः स्यात्-अधःस्थो ग्रहो ग्राहकः स्यादित्यर्थः । ग्रहयोरन्तरे स्फुटमान-
योगार्था (स्पष्ट बिम्बयोर्योगार्थात्) दधिके सति तयोर्युति (आच्छादनं ग्रहणवत्)
न स्यादिति । सिद्धान्तशेखरे "मानैक्यार्थाद् द्युचरविवरे स्यान्न भेदोऽधिके तु
न्यूने भेदो ग्रहणवदिहच्छादकोऽधस्तनः स्यात्" श्रीपत्युक्तमिदं-सिद्धान्तशिरोमणी
'मानैक्यार्थाद् द्युचरविवरेऽप्ये भवेद् योग' इत्यादि भास्करोक्तं चाचार्योक्तानुरूप-
मेवास्ति ॥ ४९ ॥

अब युति लक्षण को कहते हैं ।

हि. भा.—सम कलात्मक दो ग्रहों के अन्तर यदि दोनों ग्रहों के बिम्बयोगार्थ से
न्यून हों तब ग्रह द्वय की युति होती है अर्थात् ग्रहणवत् आच्छादन (उपरिस्थ ग्रह ग्राह्य
और अधःस्थित ग्रह ग्राहक) होता है । यदि दोनों ग्रहों के अन्तर स्फुट बिम्बयोगार्थ से अधिक
हो तब ग्रह की युति नहीं होती । सिद्धान्त शेखर में 'मानैक्यार्थाद् द्युचरविवरे स्यान्न भेदोऽ-
धिके तु' इत्यादि विज्ञान भाष्य में लिखित श्लोकार्थ से श्रीपति सिद्धान्त शिरोमणि में 'मानै-
क्यार्थाद् द्युचर विवरेऽप्ये भवेद् योगः' इत्यादि से भास्कराचार्य ने भी आचार्योक्त के अनुरूप ही
कहा है इति ॥ ४९ ॥

इदानीं समलिप्तिककाले ग्रहयोर्दिनगतघटीसाधनमाह ।

समपिप्तिकालिकार्कात् कृत्वा लग्नं स्वदेशराश्युदयैः ।

ग्रहयोः समलिप्तिकयोः स्वदिनोदित नाड़िकाः प्राग्वत् ॥ ५० ॥

सु. भा.—अत्रैवाध्याये प्रागुदयलग्नमूनमित्यादिना ऽऽचार्योक्तेन व्याख्योप-
पत्तिश्च स्फुटा ॥ ५० ॥

वि. भा.—यस्मिन् काले कदम्बप्रोतीयौ समलिप्तिकौ ग्रहौ जातौ तस्मिन्
काले स्वदेशराश्युदयैरिष्टलग्नं साध्यम् । भगोल परिभ्राम्य तौ ग्रहौ पूर्वक्षितिजे

अब स्फुट युतिकाल साधन को कहते हैं ।

हि. भा.—समलिप्तिक (समकलात्मक) दो ग्रहों के दिनमान प्रमाण और दिनगतघटी प्रमाण पहले लाये गये हैं । जिस ग्रह के दिनमान प्रमाण अधिक है उसकी दिनगतघटी अधिक दिनोदितघटी कहलाती है, जिस ग्रह के दिनमान प्रमाण अल्प है उसके दिन नाड़ी से अधिक दिनोदित घटी को गुणाकर अधिक दिन नाड़ी (जिसके दिनमान अधिक हैं उसकी दिन नाड़ी) से भाग देने से जो लब्धघटी हो वह अल्पदिनोदित घटी से यदि ऊन (अल्प) हो तब ग्रहयुति गत होती है । यदि अधिक (लब्धघटी यदि अल्प दिनोदित घटी से अधिक) हो तब ग्रहयुति गम्य (भावी) होती है । लब्धघटी और अल्पदिनग्रह की दिनगतघटी के अन्तर आद्य संज्ञक हैं । तब साठ घटी में यदि ग्रह गति कला पाते हैं तो इष्ट घटी में क्या इस अनुपात से दोनो ग्रहों के पृथक् पृथक् इष्ट घटीफल को ग्रहद्वय में ऊन-युत करना चाहिये । इस तरह अन्य होता है अर्थात् गतयुति में गत और एष्य युति में एष्य इष्टघटी कल्पनाकर उस से दोनों ग्रहों को चालन देकर दोनों ग्रहों के उदय लग्न आदि से गत घटी लानी चाहिये । तब आचार्योक्त ‘अधिक दिनोदितघटिकाभिः’ इत्यादि सूत्र से पुनः अन्तर साधन करना अन्य संज्ञक होता है । यदि दोनों अन्तर से पहले गत-पश्चात् एष्य हो तब आद्य और अन्य के अन्तर से अन्यथा यदि एक से युति गत हो और अन्य से एष्य हो तब आद्य और अन्य के योग से इष्टघटी से गुणित आद्य को भाग देने से लब्ध घटिकाओं से — यदि अन्तर द्वय से भी गत वा गम्ययुति हो तब इष्टगुणित आद्य को आद्य और अन्य के अन्तर

से भाग देना—यदि एक से गत और अन्य से गम्य युति हो तब आद्य और अन्य के योग से भाग देने से जो लब्धघटी हो उतने काल में समलिप्तिक काल से आद्यवश से पहले पीछे ग्रहयुति होती है। अपने दिन के घटिकादि को इतर (भिन्न) ग्रह के दिनमान घटी में गुणा कर अपने दिन प्रमाण से भाग देना जो लब्ध हो वह यदि इतर ग्रह के दिनगत के बराबर किसी तरह हो तब पूर्वोक्त विधि का प्रयोग करना चाहिये अन्यथा असकृत् कर्म करना चाहिये इति ॥५१-५६॥

उपपत्ति ।

यदि अधिक दिनमानघटी में अधिक दिनोदित घटी पाते हैं तो अल्पदिनमान घटी में क्या इस से युतिकाल में अल्पदिनोदित घटी आई, यहाँ आचार्य ने दोनों ग्रहों की दिनमान गतघटी के मध्य में स्वल्पान्तर से तुल्य निष्पत्ति स्वीकार की है। लब्धघटी यदि अल्प दिनोदित गतघटी से अल्प हो तब युति गत होती है अन्यथा एष्ययुति होती है। दोनों के अन्तर आद्यसंज्ञक है। इष्टघटी सम्बन्धी फल से दोनों ग्रहों को चालन देकर पुनः अन्तर साधन करना वह अन्य संज्ञक है। तब अनुपात करते हैं यदि अल्पतुल्य अपचय में इष्टघटी पाते हैं तो आद्यतुल्य अपचय में क्या फल घटी में आद्यकाल में पहले वा पीछे अन्तर के आद्यतुल्य अपचय से अभाव होता है इसलिये वहाँ युति होती है। ग्रहगति और जग्गति की विलक्षणता के कारण असकृत् कर्म उचित ही है। यदि एक ग्रह के दिन प्रमाण में उमक्री दिनगत घटी पाते हैं तो द्वितीयग्रह के दिनप्रमाण में क्या इससे द्वितीय ग्रह की दिन गतघटी होती है। सिद्धान्तशेखर में 'अल्पबुधेचसमुदगत्नाडिकाभिः' इत्यादि सम्मूहोपपत्ति में लिखित श्लोकों से 'श्रीपल्युक्त आनयन 'ऊनदिनोदित गुणितात्' इत्यादि रीति के अनुसार है यहाँ आचार्य 'ऊनदिनोदित 'स्थान में' 'अधिकदिनोदित' ग्रहण किया है इति ॥५१-५६॥

अब ग्रहयुति में एक स्थित दृष्टि से ग्रहदर्शन के लिए कहते हैं ।

हि. भा.—यदि अन्य दृष्ट घटी के साथ समेलन करते हैं तब योग होता है । ग्रह-युति में दो ग्रहों के बिम्ब केन्द्रान्तर रहने से चन्द्रशृङ्गोन्नति की तरह एक दिशा में अग्र और शकुतल के योग करने से तथा भिन्न दिशा में अग्र और शकुतल के अन्तर करने से दोनों ग्रहों के भुज होते हैं । दोनों ग्रहों की दृग्ज्या कर्ण होती है, कर्ण (दृग्ज्या) और भुज के वर्गान्तर मूल ग्रहद्वय की कोटि होती है । इस तरह सिद्ध दोनों ग्रहों की कोटि, भुज कर्ण और शंकु को कल्पित दृष्ट यष्टि से गुणा कर त्रिज्या से भाग देना चाहिए तब यष्टि-व्यासार्ध में परिणत कोटि, भुज, कर्ण और शकु होते हैं । यष्टि व्यासार्ध परिणत पूर्वापर रेखानुरूप में पूर्व दिशा में और पश्चिम दिशा में पृथक् कोटि को देनी चाहिए । दोनों कोटियों के अग्र बिन्दुओं से दोनों भुजों को दान देकर दिङ्मध्य (मध्य) बिन्दु में भुजाग्र बिन्दु-द्वय संसक्त दोनों कर्णों को दान देकर अपने-अपने भुजाग्र में अपने-अपने शंकु को देना, मध्य से अपने अपने शंकु के अग्र में लगी हुई पूर्व कल्पित यष्टि देनी चाहिए । मध्य बिन्दु में स्थापित नेत्र द्वारा अपने शंकु के अग्र में पृथक् ग्रहों को दिखावें । योग (दो ग्रहों के योग) में उन दोनों के शंकु का अन्तराभाव होता है । क्योंकि वहाँ शंकु भुजा आदि बराबर होते हैं । ग्रह युति से भिन्न समय में उन दोनों के शंकु का अन्तर होता ही है इति ॥-५७-६१ ॥

उपपत्ति ।

दो ग्रहों के बिम्ब केन्द्रान्तर रहने से उनके भुज, कोटि और कर्ण के आनयन प्रसिद्ध ही हैं । उन भुज, कोटि, कर्ण और शंकु को यष्टि व्यासार्ध में परिणामन के लिए उनको यष्टि से गुणा कर त्रिज्या से भाग देना चाहिए । यष्टि व्यासार्ध में परिणत भुज, कोटि, कर्ण और शंकु के कथित संस्थान वश से गोलयुक्ति से शंकु के अग्र में उन दोनों ग्रहों का दर्शन होता ही है । चन्द्रशृङ्गोन्नति अधिकार में भी इसी तरह भुज आदि के संस्थापनवश से

चन्द्रशृङ्गोन्नति के दर्शन प्रकार आचार्य कह चुके हैं । एवं ग्रह बिम्बो के सर्वतो भावेन योग में शंकु, भुज, कोटि, बर्राँ का सर्वथा समत्व के कारण शंकु का अग्रान्तरा भाव होता है, मध्यान्तर योग में शंकु का अग्रान्तर दोनों ग्रहो का अन्तर होता है, ग्रहयुति से भिन्न समय में भी ग्रह दर्शन विधि हो सकती है, सिद्धान्त शेखर में “ग्रहयुतौ विवरे सति मध्ययोः शशि-विषाणसमुन्नतिवत् पृथक्” से लेकर “शङ्क्वग्रयोरन्तरमन्तरंच द्युचारिणोर्ज्ञेयमिहान्य दापि” तक स. उपपत्ति में लिखित श्लोकों से श्रीपति ने आचार्योक्त के अनुरूप ही कहा है । सूर्यसिद्धान्त में भी “पञ्चहस्तोच्छ्रितौ शकु” इत्यादि श्लोकों से युतिकाल में दो ग्रहो के दर्शन के लिए प्रकार कहा गया है जिसकी व्याख्या इसी अधिकार के ४४-४५ श्लोको की उपपत्ति में की गयी है. यह वही देखना चाहिए इति ॥५७-६१ ॥

इदानीमात्मगणितस्य प्रशंसामाह ।

नाचार्यो ज्ञातैरपि तन्त्रैरार्यभटविष्णुचन्द्राद्यैः ।

यो ब्राह्म धूलिकर्मविदाचार्यत्वं भवति तस्य ॥६२॥

सु. भा.—आर्यभटविष्णुचन्द्राद्यैस्तन्त्रैर्ज्ञातैरपि गणको ज्योतिषशास्त्रे आचार्यो न भवति । यो गणको ब्राह्मधूलिकर्मविद् ब्रह्मोक्तगणितवेत्ता तस्यैवाऽऽचार्यत्वं भवतीति स्फुटोऽर्थः ॥६२॥

वि. भा.—ज्ञातै (विदितैः) रप्यार्यभटविष्णुचन्द्राद्यैः (आर्यभटादिरचितैः) तन्त्रैर्गणको ज्योतिः शास्त्रे आचार्यो न भवति, यो गणको ब्राह्मधूलिकर्मविद् (ब्रह्मोक्त गणितज्ञः) तस्यैवाऽऽचार्यत्वं भवतीति ॥६२॥

अब अपने गणित की प्रशंसा को कहते हैं ।

हि. भा.—आर्यभट, विष्णु, चन्द्र आदि से रचित तन्त्रो को जान करके भी गणक ज्योतिष शास्त्र में आचार्य नहीं होते हैं अर्थात् वे आचार्यत्व को नहीं प्राप्त करते हैं । जो गणक ब्रह्म कथित गणित को जानने वाले होते हैं । उन्हीं को आचार्यत्व प्राप्त होता है इति ॥६२॥

इदानीं ग्रहगतिज्ञस्य फलं वर्णयति ।

रविशशितमस्त्रिचरितं ब्रह्मोक्तं पुण्यमद्भुतं ज्ञात्वा ।

रविचन्द्रराहुलोकान् प्राप्नोति पुमानिह यशश्च ॥६३॥

सु० भा०—रवेः शशिनस्तमसो राहोरिति त्रिचरितम् । शेषं स्पष्टार्थम् ॥६३॥

योरन्तरं भवतीति । ग्रहदर्शनविधिर्ग्रहयुत्यतिरिक्तेऽपि समये भवितुमर्हति तुल्यन्यायादिति । सिद्धान्तशेखरे. “ग्रहयुतो विवरे सति मध्ययोः शशिविपाग-समुन्नतिवत् पृथक् । स्वनृतलाग्रकयोः सदृशाशयोर्युतिरथान्यदिशोवियुतिर्भुजौ । दृग्ध्ये श्रुती श्रुतिभुजाकृतिभेदमूले कोटी नरश्रवणकोटिभुजाश्च हन्यात् । यष्ट्या भजेत् त्रिभुगेन ततश्च कोटी पूर्वापरे निजभुजावथ कोटिकोटेः । दत्त्वा च मध्यात् श्रवसी भुजाग्रसक्ते स्वशङ्कू स्वभुजाग्रयोश्च । यष्टी च मध्यात् स्वनराग्रसक्ते दृष्ट्याऽथ मध्यस्थितया प्रदृश्यौ । ग्रहौ स्वशङ्कूवग्रगतौ जनस्य कुतूहलार्थं यदि वा नृपस्य । शङ्कूवग्रयोरन्तरंमन्तरं च द्युचारिणोऽज्ञेयमिहान्यदापि” इति श्लोकैः श्रीपतिना सर्वमाचार्योक्तानुरूपमेवोक्तं । सूर्यसिद्धान्तेऽपि “पञ्चहस्नोच्छिन्नो गच्छ यथा दिग्भ्रम संस्थिता” वित्यादिभिः श्लोकैर्युक्तिकाले ग्रहयोर्दर्शनार्थं प्रकारोऽभिहितोऽस्ति यद् व्याख्यानं मयाऽस्यैवाधिकारस्य ४४-४५ श्लोकयोरुपपत्तौ प्रदर्शितमिति तत्रैवावलोकनीयमिति ॥ ५७-६१ ॥

अब ग्रहयुति में एक स्थित दृष्टि से ग्रहदर्शन के लिए कहते हैं ।

हि. भा.—यदि अन्य दृष्ट घटी के साथ समेलन करते हैं तब योग होता है । ग्रह-युति में दो ग्रहों के बिम्ब केन्द्रान्तर रहने से चन्द्रशृङ्गोन्नति की तरह एक दिशा में अग्र और शकुतल के योग करने से तथा भिन्न दिशा में अग्र और शंकुतल के अन्तर करने से दोनों ग्रहों के भुज होते हैं । दोनों ग्रहों की दृग्ज्या कर्ण होती हैं , कर्ण (दृग्ज्या) और भुज के वर्गान्तर मूल ग्रहद्वय की कोटि होती है । इस तरह सिद्ध दोनों ग्रहों की कोटि, भुज कर्ण और शकु को कल्पित दृष्ट यष्टि से गुणा कर त्रिज्या से भाग देना चाहिए तब यष्टि-व्यासार्ध में परिणत कोटि, भुज, कर्ण और शकु होते हैं । यष्टि व्यासार्ध परिणत पूर्वापर रेखानुरूप में पूर्व दिशा में और पश्चिम दिशा में पृथक् कोटि को देनी चाहिए । दोनों कोटियों के अग्र बिन्दुओं से दोनों भुजों को दान देकर दिङ्मध्य (मध्य) बिन्दु में भुजाग्र बिन्दु-द्वय ससक्त दोनों कर्णों को दान देकर अपने-अपने भुजाग्र में अपने-अपने शंकु को देना, मध्य से अपने अपने शंकु के अग्र में लगी हुई पूर्व कल्पित यष्टि देनी चाहिए । मध्य बिन्दु में स्थापित नेत्र द्वारा अपने शकु के अग्र में पृथक् ग्रहों को दिखावें । योग (दो ग्रहों के योग) में उन दोनों के शकु का अन्तराभाव होता है । क्योंकि वहाँ शंकु भुजा आदि बराबर होने हैं । ग्रह युति से भिन्न समय में उन दोनों के शकु का अन्तर होता ही है इति ॥-५७-६१ ॥

उपपत्ति ।

दो ग्रहों के बिम्ब केन्द्रान्तर रहने से उनके भुज, कोटि और कर्ण के आनयन प्रसिद्ध ही हैं । उन भुज, कोटि, कर्ण और शंकु को यष्टि व्यासार्ध में परिणामन के लिए उनको यष्टि से गुणा कर त्रिज्या से भाग देना चाहिए । यष्टि व्यासार्ध में परिणत भुज, कोटि, कर्ण और शंकु के कथित संस्थान वश से गोलयुक्ति से शंकु के अग्र में उन दोनों ग्रहों का दर्शन होता ही है । चन्द्रशृङ्गोन्नति अधिकार में भी इसी तरह भुज आदि के संस्थापनवश से

चन्द्रशृङ्गोन्नति के दर्शन प्रकार आचार्य कह चुके हैं। एव ग्रह बिम्बो के सर्वतो भावेन योग में शकु, भुज, कोटि, वरुणों का सर्वथा समत्व के कारण शकु का अग्रान्तरा भाव होता है, मध्यान्तर योग में शंकु का अग्रान्तर दोनों ग्रहों का अन्तर होता है, ग्रहयुति से भिन्न समय में भी ग्रह दर्शन विधि हो सकती है, सिद्धान्त शेखर में “ग्रहयुती विवरे सति मध्ययोः शशि-विषाणसमुन्नतिवन् पृथक्” से लेकर “शङ्कुवग्रयोरन्तरमन्तरंच द्युचारिणोर्ज्ञेयमिहान्य दापि” तक स. उपपत्ति में लिखित श्लोकों से श्रीपति ने आचार्योक्त के अनुरूप ही कहा है। सूर्यसिद्धान्त में भी “पञ्चहस्तोच्छ्रितौ शकु” इत्यादि श्लोको से युतिकाल में दो ग्रहों के दर्शन के लिए प्रकार कहा गया है जिसकी व्याख्या इसी अधिकार के ४४-४५ श्लोको की उपपत्ति में की गयी है। यह वही देखना चाहिए इति ॥५७-६१॥

इदानीमात्मगणितस्य प्रशंसामाह ।

नाचार्यो ज्ञातैरपि तन्त्रैरार्यभटविष्णुचन्द्राद्यैः ।

यो ब्राह्म धूलिकर्मविदाचार्यत्वं भवति तस्य ॥६२॥

सु. भा.—आर्यभटविष्णुचन्द्राद्यैस्तन्त्रैर्ज्ञातैरपि गणको ज्योतिषशास्त्रे आचार्यो न भवति । यो गणको ब्राह्मधूलिकर्मविद् ब्रह्मोक्तगणितवेत्ता तस्यैवाऽऽचार्यत्वं भवतीति स्फुटोऽर्थः ॥६२॥

वि. भा.—ज्ञातै (विदितैः) रप्यार्यभटविष्णुचन्द्राद्यैः (आर्यभटादिरचितैः) तन्त्रैर्गणको ज्योतिः शास्त्रे आचार्यो न भवति, यो गणको ब्राह्मधूलिकर्मविद् (ब्रह्मोक्त गणितज्ञः) तस्यैवाऽऽचार्यत्वं भवतीति ॥६२॥

अब अपने गणित की प्रशंसा को कहते हैं ।

हि. भा.—आर्यभट, विष्णु, चन्द्र आदि से रचित तन्त्रों को जान करके भी गणक ज्योतिष शास्त्र में आचार्य नहीं होते हैं अर्थात् वे आचार्यत्व को नहीं प्राप्त करते हैं। जो गणक ब्रह्म कथित गणित को जानने वाले होते हैं। उन्हीं को आचार्यत्व प्राप्त होता है इति ॥६२॥

इदानीं ग्रहगतिज्ञस्य फलं वर्णयति ।

रविशशितमस्त्रिचरितं ब्रह्मोक्तं पुण्यमद्भुतं ज्ञात्वा ।

रविचन्द्रराहुलोकान् प्राप्नोति पुमानिह यशश्च ॥६३॥

सु० भा०—रवेः शशिनस्तमसो राहोरिति त्रिचरितम् । शेषं स्पष्टार्थम् ॥६३॥

वि. भा.—ब्रह्मोक्तं (ब्रह्मगुप्तकथितं) अद्भुतं (आश्चर्यकरं) पुण्यं (पुण्यजनकं) रविशशितमसां (रविचन्द्र राहूणां) त्रयाणां चरित (पुराणा वर्गानमेतेषां ग्रहणादिकारणम्) ज्ञात्वा पुमान् रविचन्द्रराहुलोकान् प्राप्नोति, इह (अस्मिन् लोके) यशश्च प्राप्नोति ॥६३॥

अब ग्रहगतिवेत्ता के फल को कहते हैं ।

हि. भा.—ब्रह्मगुप्तकथित आश्चर्यकारक तथा पुण्योत्पादक रवि, चन्द्र, राहु इन तीनों के चरित (पुराणों में ग्रहण आदि से सम्बन्धित इन सबों के माहान्म्य वर्गान बहुत विस्तृत हैं इस के लिये पुराणों को देखना चाहिये) को जानकर मनुष्य मूर्खनोक, चन्द्र लोक, राहुलोक को पाते हैं, और इस लोक (भूलोक) में यश को पाते हैं उति ॥६३॥

इदानीमन्यमतेनाप्यदृष्टफलमाह ।

अन्यैरप्युक्तमिदं योज्यं सम्यग्रहं विजानाति ।

याति स हि ग्रहलोकं ग्रहाष्टकज्ञः परं ब्रह्म ॥६४॥

सु० भा०—अन्यैराचार्यैरपीदमुक्तमदृष्टफलम् । ग्रहाष्टज्ञोऽष्टग्रहाणां रविचन्द्र-कुजबुधगुरुशुक्रशनितमसां गतिज्ञः ।

तथा च भगवान् गर्गः ।

न संवत्सरपाठी च नरकेषूपपद्यते ।

ब्रह्मलोकप्रतिष्ठां च लभते दैवचिन्तकः इति ॥६४॥

वि. भा.—अन्यैराचार्यैरपि इदं (अदृष्टफलं) उक्तं (कथितम्) योज्यं ग्रहं सम्यक् (शोभनरूपेण) विजानाति स ग्रहाष्टकज्ञः (अष्टग्रहाणां रविचन्द्रभीमबुधगुरुशुक्रशनिराहूणां गतिज्ञः) ग्रहलोकं याति (गच्छति) तथा परं (उत्कृष्टं) ब्रह्मलोकं यातीति, एतद्विषये चोक्तं बराहसंहितायाम् ।

न साम्वत्सरपाठाच्च नरकेषूपपद्यते । ब्रह्मलोकप्रतिष्ठां च लभतेदैवचिन्तकः । भगवता गर्गेणाप्येवमेवोक्तम् । बराहसंहितायामेव “अन्यथाश्चार्थतश्चैव कृत्स्नं जानाति यो द्विजः । अग्रभुक् स भवेच्छ्राद्धे पूजितः पङ्क्तिपावनः इति ॥६४॥

तब अन्य मत से भी अदृष्ट फल को कहते हैं ।

हि. भा.—अन्य आचार्य भी इस अदृष्ट फल को कहते हैं जो मनुष्य इस ग्रह को अच्छी तरह जानते हैं वह ग्रहलोक को पाते हैं तथा वह ग्रहाष्टकज्ञ (रवि, चन्द्र, भीम, बुध, गुरु, शुक्र, शनि, राहु) को जानते हैं तो वह ब्रह्मलोक को पाते हैं तथा वह अग्रभुक् (रवि, चन्द्र, भीम,

बुध, गुरु, शुक्र, शनि और राहु' इन आठों ग्रहों की गति को जानने वाला) परम उत्कृष्ट ब्रह्म लोक को पाता है। इस विषय में बराह संहिता में कहा गया है जैसे

‘न साम्बत्सरपाठाच्च नरकेषूपपद्यते’ इत्यादि सं. भाष्य में लिखित श्लोक को देखिये, भगवान् गर्ग ने भी इसी तरह कहा है इति ॥६४॥

अब अध्यायों के नाम और ग्रन्थ सख्या को कहते हैं

हि.आ.—मध्यगति (मध्यमाधिकार), स्पष्टगति (स्पष्टाधिकार) त्रिप्रश्नाधिकार, चन्द्रग्रहणाधिकार, सूर्यग्रहणाधिकार, उदयास्ताधिकार, चन्द्रशृङ्गोन्नत्यधिकार, चन्द्रच्छायाधि-
कार, ग्रहयुत्यधिकार, भग्रहयुत्यधिकार, इन दश अध्यायों में ब्राह्मसिद्धान्त में तीन गी ग्रन्थनर
३७८ आर्याश्लोको से जो ध्रुलिकर्म (गणित) है वह दोष रहित है अर्थात् समीचान है, यथा
चतुर्वेदाचार्य कहते हैं कि मध्यगति (मध्यमाधिकार) आदि दश अध्यायों में तीन गी पचहत्तर
आर्याओं की मैंने जो व्याख्या की है उनमें अवशिष्ट तीन की पूर्ति नहीं होती है यथा कोई
कोई शृङ्गोन्नत्यध्याय में बीस आर्याओं को कहते हैं तथा समागम (ग्रहयुत्यधिकार) में
छब्बीस कहते हैं इस तरह सख्या पूरी हो जाती है । 'आर्यात्रिंशती युताष्ट सप्तत्या' यह
बलभद्र का पाठ है ।

इससे अनुमान किया जाता है कि ब्रह्म सिद्धान्त के ऊपर बलभद्र की भी टीका है ।

यहां प्राप्त पुस्तक के अनुसार—

मध्यगति में	= ६३ आर्या की संख्या
स्पष्टगतिमें	= ६७ (योग साधन श्लोक को छोड़ कर)
त्रिप्रश्न में	= ६६
चन्द्रग्रहण में	= २०
सूर्यग्रहण में	= २७
उदयास्ताधिकार में	= १३
चन्द्रशृङ्गोन्नति में	= १८
चन्द्रच्छायाधिकार में	= ६
ग्रहयुत्यधिकार में	= २६ (इस में १ श्लोक बिम्बकला पाठ ५० मुद्राकर त्रिवेदी रचित को लेकर है)
भग्रहयुति में	= ६६ (इस अध्याय के ६६ वर्तमान आर्या पर्यन्त)
<hr/>	
३७५ = आर्यायुति	

ऊपर लिखित अध्याय श्लोक संख्या + अध्यायोपसंहार श्लोक संख्या = ३७५, इस
लिये सूर्यग्रहणाधिकार में उपसंहार श्लोक में छब्बीस के स्थान में सत्ताइस, तथा उदयास्ता-
धिकार के उपसंहार में 'द्वादशभिः' यहां त्रयोदश (तेरह) वाचक पद उचित हैं, चतुर्वेदा-
चार्य लिखितानुसार ग्रहसमागम (ग्रहयुत्यधिकार) में २५ श्लोक, तथा योगसाधन श्लोक

को लेकर स्पष्टगति में ६८ तब सबों के योग = ३८५, यदि ऐसा है तब ग्रहयुत्यधिकार के उपसंहार में 'षड्विंशति = २६' स्थान में 'पंचविंशति = २५' वाचक पद उचित है इन बातों पर विवेचक लोग विचार करें। उदयास्ताधिकार में २५, स्पष्टाधिकार में ६७, इस अधिकार के उपसंहार पर्यन्त ७० लेकर यदि योग करते हैं तो ३७८ आते हैं। ६५-६६ इन दोनों आर्याग्रो से मालूम होता है कि दश अध्याय वाला ग्रहगणित नाम का यह पहला खण्ड है। इस में पाताधिकार नहीं है, वह उत्तर खण्ड (द्वितीय खण्ड) में स्पष्टगत्युत्तराध्याय में निरूपित है। उसके स्थान में प्रथम खण्ड में चन्द्रछायाधिकार है सिद्धान्त शेखर में श्रीपति ने "मध्य स्पष्टगती प्रपंचबहुले त्रिप्रश्नसंज्ञस्ततः" इत्यादि सं भाष्य में लिखित श्लोक से मध्यगति अध्याय, स्पष्टगति अध्याय, त्रिप्रश्न अध्याय, चन्द्रग्रहण अध्याय, सूर्यग्रहण अध्याय, पात अध्याय, ग्रहोदयास्त अध्याय, चन्द्रशृङ्गोन्नति अध्याय, ग्रहयोग अध्याय, भग्रहयोग अध्याय, इन दशों अध्यायों से कालतन्त्र (पूर्वाचार्यों के ग्रहगणित तन्त्र) को कहा है। यद्यपि अध्यायों की गणना से श्रीपति कथित यह कालतन्त्र वा ग्रहगणित बारह अध्याय वाला है तथापि "मध्य स्पष्टगती" इत्यादि उक्ति से दश अध्यायों के ही नाम लिखे हैं इसलिये ग्रहगणनाध्याय मध्यमाध्याय के अन्तर्गत तथा पर्व सम्भवाध्याय, चन्द्रग्रहणाध्याय और सूर्यग्रहणाध्याय के अन्तर्गत ही सिद्ध होता है, श्रीपति ने चन्द्राच्छायाधिकार में निरूपित विषयों को भी चन्द्रशृङ्गोन्नत्यध्याय ही में निरूपण किया है इसलिये चन्द्रशृङ्गोन्नत्यध्याय, चन्द्राध्याय के नाम ही से कहा गया है। इस तरह आचार्यों के (ब्रह्मगुप्त) वत् दश अध्यायों में विभक्त (बटे हुए) प्रथम खण्ड को सिद्धान्त शेखर के प्रथम खण्ड को ग्रहगणित तन्त्र वा कालतन्त्र श्रीपति कहते हैं। लल्लाचार्य अपने शिष्य धीवृद्धिदत्तन्त्र के एक खण्ड को आठ अध्यायों में विभक्त कर "आदौ व्योमगतिस्ततः स्फुटगतिस्त्रिप्रश्नचन्द्रग्रहावादित्यग्रहपौर्णमासकरण" इत्यादि सं. भाष्य में लिखित श्लोक से उपसंहार किया है। सूर्यसिद्धान्तकार ने भी "मध्यमाधिकार, स्पष्टाधिकार, त्रिप्रश्नाधिकार, चन्द्रग्रहणाधिकार, सूर्यग्रहणाधिकार, छेद्यकाधिकार, नक्षत्र ग्रहयुत्यधिकार, उदयास्ताधिकार चन्द्रशृङ्गोन्नत्यधिकार, पाताधिकार, इन ग्यारह अधिकारों से सूर्य सिद्धान्त के पूर्वार्ध भाग को उपनिबद्ध किया है। इसमें छेद्यकाधिकार जो है सो चन्द्रग्रहण और सूर्यग्रहण के परिलेख रूप ही है, इसलिये तात्त्विक दृष्टि से विचार करने से यहां भी दस ही अधिकारों से पूर्वार्धभाग अलंकृत है यह सिद्ध होता है, भास्कराचार्य ने भी एक खण्ड को इसी तरह समाप्त कर गोलाध्याय नाम के दूसरे खण्ड को मङ्गलाचरण द्वारा आरम्भ किया है इति ॥६५-६६॥

इदानीमिदं (गणितं) पिशुनाय न देयमित्याह ।

गुरुणा न धूलिकर्म प्रतिकञ्चुकारिणो प्रदातव्यम् ।

तस्य मुकृतप्रणाशः कुरुते प्रतिकञ्चुकं योजस्य ॥६७॥

सु० भा०—गुरुणा महानुभावेन ज्योतिःशास्त्रविदा पुरुषेणोदं धूलिकर्म

गणितं प्रतिकचुककारिणो पिशुनाय न प्रदातव्यम् । योऽस्य शास्त्रस्य प्रतिकचुक निन्दां कुरुते तस्य सुकृतप्रणाशो भवतीति ॥६७॥

वि. भा.—गुरुणा (ज्योतिःशास्त्रविदा महानुभावेन) ददं धूलिकर्म (गणित) प्रतिकचुककारिणो (पिशुनाय) न प्रदातव्यम् (न देयम्) योऽस्य शास्त्रस्य गणितस्य वा प्रतिकचुकं (निन्दां) कुरुते तस्य सुकृतप्रणाशः (सुकृतक्षय) भवतीति । सूर्यसिद्धान्तकारेणापि सूर्यसिद्धान्तपूर्वार्धान्ते पानाधिकारान्तेऽधिका-
रोपसंहारे 'इत्येतत्परमं पुण्यं ज्योतिषां चरितं हितम् । रहस्य महदाख्यातमि-
त्यनेन गणितस्य (ज्योतिः शास्त्रस्य) पुण्यजनकत्वं रहस्यत्व च कथितम् ॥६७॥

‘अब इस धूलिकर्म (गणित) को पिशुन (धुगलखोर) के लिये नदी देना चाहिये ।’

इसको कहते हैं ।

हि. भा.—गुरु (ज्योतिः शास्त्र विचारद महानुभाव) इस धूलिकर्म (गणित) को पिशुन (धुगलखोर) के लिये नहीं दे । जो इस शास्त्र (ज्योतिःशास्त्र) की निन्दा करता है उसका सुकृत (पुण्य आदि सुन्दर कार्य) नष्ट होता है, सूर्यसिद्धान्तकार भी सूर्य सिद्धान्त के पूर्वार्धभाग के अन्त में पाताधिकार के उपसंहार में 'इत्येतत्परमं पुण्यं ज्योतिषां चरितं महत् । रहस्य महदाख्यातं' इस से इस ज्योतिः शास्त्र (गणित) का पुण्य जनकत्व और रहस्यत्व कहा है इति ॥६७॥

इदानीं स्वप्रशंसांमाह ।

ग्रहमेलके यदुक्तं तत् स्थूलं स्पष्टमिह यदुक्तं तत् ।

ग्रहभमुनीन्दुच्छाया शृङ्गोन्नतिर्भ्रमहाद्येषु ॥ ६८ ॥

अब संहिताकार के मत का खण्डन करते हैं ।

हि. भा.—संहिताङ्गकार (लगध आदि) ने अधिमास, क्षयाह और स्फुटतिथियों के अज्ञान के कारण रवि और चन्द्र के सम्बन्ध से जो उनका साधन किया है सो ठीक नहीं है, तथा

पाच वर्ष का युग होता है यह जो कहा है सो भी ठीक नहीं है, इस समय लगधकृत ज्यौतिष-वेदाङ्ग नामक प्रसिद्ध ग्रन्थ देखने में आता है, उसी में पांच वर्ष का युग होता है इत्यादि सब विषय स्थूल लिखा हुआ है, आचार्य के मत से वही सहिताकार मत है तथा वराहमिहिर के मत से वही पितामह मत है। उस ग्रन्थ में तीस सौर मासों में एक अधिमास होता है इत्यादि सब बातें लिखित हैं, सूर्य सिद्धान्त में “तद्द्वादश सहस्राणि चतुर्युगमुदाहृतम्” इत्यादि सं० भाष्य में लिखित श्लोक से स्मृतिकार कथित बारह हजार दिव्य वर्षों के चतुर्युग (चारो युगचरण कृत, त्रेता, द्वापर, कलि सञ्ज्ञकों के योग रूप महायुग) कथित है। सध्या और सन्ध्यांश सहित व चतुर्युग (महायुग) ४३२०००० सौर वर्षों का होता है उसी में आगे कहते हैं कि “युगस्य दशमो भागश्चतुरिन्द्रयेक सङ्गुणः” इत्यादि स. भाष्य में लिखित श्लोक से यथा दिव्यचतुर्युग मान १२००० के दशम भाग १२०० चार से गुणने से कृत युग चरण = ४८००, उसी दशमांश को तीन से गुणने से त्रेता युग चरण = १२०० × ३ = ३६००, उसी को दो से गुणने से द्वापर युगचरण = २४०० उसी को एक से गुणने से कलियुगचरण = १२००, ये कृतादियों के मान मनुस्मृति कथित मान से भिन्न क्यों हैं इसके लिये “षष्ठांश. मन्ध्ययोः स्वकः” कहते हैं, यथा कृतयुगचरण = ४८०० इसका षष्ठांश ८०० = यह दोनों सन्ध्याओं के मान है, इसका आधा = ४०० = कृतयुगादि में सन्ध्या, कृतयुगान्त में भी सन्ध्या = ४०० एव दोनों सन्ध्याओं से रहित कृतयुगमान = ४८०० — ८०० = ४००० = मनुस्मृत्युक्तमान, इसी तरह दोनों सन्ध्याओं से रहित सूर्य सिद्धान्तीय युगमान शुद्ध मनुस्मृत्युक्त युगमान होता है, सूर्यसिद्धान्त आदि ज्यौतिष सिद्धान्त ग्रन्थोक्त युगवर्षों से भी “युग पञ्चाब्द” यह सहिताङ्गकारोक्त युगवर्ष मान भिन्न है इसलिये उनके मत ठीक नहीं है, तथा ‘चान्द्रोनेसौरेण हृतात्तु चान्द्रात्’ इत्यादि सिद्धान्त शिरोमणि में भास्कराचार्यों के तथा ‘द्वात्रिंशद्विंशतैर्मासैर्दिनैः षोडशभिस्तथा’ इस युक्ति सिद्ध वचन से तथा उसके पोषक अन्य सिद्धान्तीय वचनों से सिद्ध है कि बत्तीस ३२ सौरमास तथा १६ सोलह दिनों में एक अधि-मासपात होता है परन्तु लगध के मत से तीस सौर मासों में एक अधिमास होता है इसलिये युक्ति विरुद्ध होने के कारण उनके मत ठीक नहीं हैं इसको विज्ञ लोग समझें इति ॥ २ ॥

इदानीं ‘दो चन्दा दो सज्जा’ इत्यादि जैनमतं खण्डयति ।

भानि चतुष्पञ्चाशत् द्वौ द्वा वर्कन्दवौ जिनोक्तं यत् ।

(तस्मात् कारणात्) चतुष्पञ्चाशत् संख्यकानि नक्षत्राणि (द्विगुणित नक्षत्र-संख्यातुल्यानि) रविचन्द्रौ द्वौ द्वाविति जिनोक्तं यत्तदसत् (न समीचीन मित्यर्थः) इति ॥ ३ ॥

अत्रोपपत्तिः

यदा रविर्भरणीस्थो भवति तदा सूर्यास्तकाले भरण्याः पुच्छतारा पूर्वतो-भवति, मुखतारा च पश्चिमतोऽर्थादस्तक्षितिजे भवत्यर्थान्मुखतारा स्थितो रविर्भवति, गोल भ्रमणेन गोलस्य यो भागः पश्चिम दिशि स पूर्वभागे गमिष्यति पूर्वभागश्च पश्चिमदिशि, तदा मुखतारास्थितस्यैव रवेरुदयो दृष्टिपथमायात्यतो जैनेन रविद्वयं चन्द्रद्वयं चतुष्पञ्चाशत्संख्यकं नक्षत्रं च यत् स्वीकृतं तन्निरर्थकं प्रतिभाति, एकेनैव रविणोदयास्तौ सिद्धयतः, जैनेन कथ्यते यदुदयकाले यो रविरस्ति सोऽस्तकाले न भवति, अत्र कथने किमपि कारणं न दृश्यते, चन्द्रद्वयकल्पने चतुष्पञ्चाशत्संख्यक-नक्षत्रकल्पनेऽपीदृशखण्डनमेव बोध्यम् । सिद्धान्तशिरोमणौ भास्कराचार्येणापि-“द्वौ द्वौ रवीन्दू भगणौ च तद्वदेकान्तरो तावुदयं व्रजेता” मित्यनेन जैनमतं प्रतिपाद्ये “किं गण्यं तव वैगुण्यं द्वयैगुण्यं यो वृथा ऽकृयाः । भार्कन्दूनां विलो-क्यान्हा ध्रुव मत्स्य परिभ्रमम्” त्यनेनाचार्योक्तानुरूपमेव खण्डनमभिहितमिति ॥३

अब 'दो चन्दा दो सुज्जा' इत्यादि जैनमत का खण्डन करते हैं ।

हि. भा. जिस कारण से एक दिन में ध्रुवतारा के समीप वर्ती मत्स्याकार (मछली के सदृश) तारा का परिभ्रमण होता है इस कारण से चौवन (द्विगुणित नक्षत्र संख्या) नक्षत्र, दो दो रवि और चन्द्र है यह जो जैनों ने कहा है सो ठीक नहीं है इति ॥ ३ ॥

उपपत्ति

जब रवि भरणी नक्षत्र में स्थित होते हैं तो सूर्यास्त काल में भरणी की पुच्छतारा पूर्व की ओर रहती है और मुखतारा पश्चिम की ओर (अस्तक्षितिज में) तब रवि पुच्छतारा में स्थित रहते हैं, गोलभ्रमण से गोल के पश्चिम तरफ का अंश पूर्व तरफ जायगा और पूर्व की ओर का अंश पश्चिम की ओर जायगा, तब तो मुखतारा स्थित रवि ही का उदय देखने में आता है, इसलिये दो सूर्य, दो चन्द्र, और चौवन नक्षत्र जो जैनों ने स्वीकार किया है वह निरर्थक मालूम होता है, एक ही रवि से उदय और अस्तादि होता है, जैन उदय काल के लिये एक रवि मानते हैं और अस्त काल के लिये दूसरा रवि, अर्थात् एक ही रवि के द्वारा दिन और रात्रि को नहीं मानते हैं । दो चन्द्र कल्पना में तथा चौवन नक्षत्र कल्पना में भी इसी तरह खण्डन समझना चाहिये । सिद्धान्त शिरोमणि में भास्कराचार्य ने “द्वौ द्वौ रवीन्दू भगणौ च तद्वदेकान्तरो तावुदयं व्रजेताम्” इससे जैन मत का प्रतिपादन कर “किं गण्यं तव

वैगुण्य" इत्यादि सं. उपपत्ति मे लिखित श्लोक से आचार्योक्त खण्डन के अनुरूप ही खण्डन किया है इति ॥ ३ ॥

इदानीमार्यभटोक्तं युगं खण्डयति ।

आर्यभटो युगपादांस्त्रीन् यातानाह कलियुगादौ यत् ।

तस्य कृतान्तर्यस्मात् स्वयुगाद्यन्तौ न सत् तस्मात् ॥ ४ ॥

सु. भा.—आर्यभटः कलियुगादौ त्रीन् युगपादान् यातान् आह कथितवान् । यच्च प्रसिद्धं तदग्रन्थतः । (द्रष्टव्या मध्यमाधिकारे ऽष्टाविंशतिश्लोकस्य मदीया व्याख्या) यस्मात् कारणात् तन्मते तस्य स्वयुगाद्यन्तौ तदेकयुगस्यादिरन्यस्यान्त इति द्वौ कृतान्तः कृतयुगमध्ये भवतस्तस्मात् तद्युगं न सत् ।

सूर्यसिद्धान्तेऽपि "युगस्य दशमो भागश्चतुस्त्रिद्वयेक संगुणः । क्रमात्कृतयुगादीनां"
इत्यनेन कथितयुगचरणा आर्यभटोक्ता द्विसदृशा एव सन्ति, कथमार्यभटेन सर्वे
युगपादाः समानाः कल्पिता इति त एव ज्ञातुं शक्यन्तीति ॥ ४ ॥

अब आर्यभटोक्त युग का खण्डन करते हैं ।

हि. भा. — आर्यभट ने कलियुगादि में तीन युग चरणों को गत (बीता हुआ) कहा है ।
इस कारण से उनके एक युग का आदि अन्य युग का अन्त ये दोनों कृतयुग के मध्य में होते
हैं इस कारण से उनके युग ठीक नहीं हैं इति ॥ ४ ॥

उपपत्ति ।

आर्यभट के मत से एक युगान्त से अर्थात् अन्य युग के आरम्भ में कलियुगादि पर्यन्त
तीनों युगचरण = $\frac{४३२०००० \times ३}{४} = ३२४०००००$, आर्यभट के मत में भी महायुगमान

= चतुर्युगमान = ४३२०००००, तथा एक युग चरण = $\frac{४३२०००००}{४}$, उनके मत में सब

युगपाद समान ही हैं, इसलिये युगपाद को तीन से गुणा करने से तीन युगपाद होते हैं ।

$\frac{४३२००००० \times ३}{४} =$ कलियुगादिपर्यन्त तीनों युगचरण, आचार्यमत में भी महायुग =

४३२००००० कृत युग में धर्म चरण = ४, त्रेता में धर्मचरण = ३, द्वापर में धर्मचरण = २,

कल में धर्मचरण = १ सर्वों के योग = ४ + ३ + २ + १ = १० = महायुग में धर्म चरण,

तब अनुपात करते हैं यदि दस धर्म चरण में महायुगमान पाते हैं तो चार धर्म चरण में

क्या इससे कृतयुग चरण मान आता है, इसी तरह त्रेता और द्वापर के धर्मपाद से अनुपात

करने से उनके मान आते हैं जैसे $\frac{\text{महायु} \times ३}{१०} = \text{त्रेतायु}$, $\frac{\text{महायु} \times २}{१०} = \text{द्वापर यु}$;

इन सबों का योग करने से कृतयु + त्रेतायु + द्वापरयु = $\frac{\text{मयु} \times ४}{१०} + \frac{\text{मयु} \times ३}{१०}$
 $+ \frac{\text{मयु} \times २}{१०} = \frac{\text{मयु} (४ + ३ + २)}{१०} = \frac{\text{मयु} \times ९}{१०} = \frac{४३२०००० \times ९}{१०} = \frac{३८८८००००}{१०}$
 $= ३८८८००००$, दोनों का अन्तर करने से $३८८८०००० - ३२४००००० = ६४८००००$ इतने वर्ष आचार्य के मत से सख्याधिकत्व के कारण कृतयुग के मध्य में होते हैं इसलिये आर्य-भटोक्त युगादि और युगान्त कृतयुग के मध्य ही में सिद्ध होता है। जहां आचार्य ने अपने कृतयुग के मध्य में आर्य भटोक्त युगादि और युगान्त को कहा है वहां यदि आचार्योक्त युगादि में मेषादि में ग्रहों की स्थिति हो तब यह खण्डन ठीक है अन्यथा नहीं। सूर्य सिद्धान्त में भी “युगस्य दशमो भागश्चतुस्त्रिद्वचकसङ्गुणः” इत्यादि से कथित युगचरण आर्य-भटोक्त से भिन्न ही है, आर्यभट ने क्यों सब युग चरणों को समान स्वीकार किया है इस विषय को वे ही जान सकते हैं इति ॥४॥

इदानीमार्यभटोक्तग्रन्थयोर्मतभेदं खण्डयति ।

युगरविभगणाः रव्युध्रिति यत् प्रोक्तं तत् तयोर्युगं स्पष्टम् ।

‘त्रिशती रव्युदयानां तदन्तरं हेतुना केन ॥५॥

सु. भा.—आर्यभटेन ग्रन्थद्वयं रचितं । तत्रैकस्मिन् ग्रन्थे युगरविभगणाः रव्युधृ ४३२००००० । सावनदिनानि = १५७७९१७५०० सृष्टिश्च लङ्कायां सूर्योदये इत्यभिहितम् । अन्यस्मिन् ग्रन्थे युगरविभगणास्तावन्त एव ४३२००००० । सावनदिनानि = १५७७९१७८०० । सृष्टिश्च लङ्कायामर्धरात्रे । तेनायमर्थः । आर्यभटेन ‘युगरविभगणाः रव्युधृ’ इति यत् तयोर्ग्रन्थयोरेकमेव स्पष्टं युगं प्रोक्तं तर्हि केन हेतुना रव्युदयानां त्रिशती तदन्तरं तयोर्ग्रन्थयोर्युगसावन दिनान्तरं यतो मतद्वयेन रविभगणासाभ्येऽर्थाद्भुगवर्षसाम्ये युगसावनदिनमध्येऽन्तरं त्रिशती कथमुत्पन्नमिति वदतोव्याघातदोष इति ॥ ५ ॥

वि. भा.—रव्युधृ = ४३२०००००, इति युगरविभगणा आर्यभटेन तयोर्ग्रन्थयोरेकमेव स्पष्टं युगं प्रोक्तं तर्हि केन हेतुना रव्युदयानां त्रिशती तदन्तरं (तयोर्ग्रन्थयोर्युगसावनदिनान्तरं) कथितमिति ॥५॥

अत्रोपपत्तिः

आर्यभटेन ग्रन्थद्वयं रचितम् । ग्रन्थद्वयेऽपि युगरविभगणाः = ४३२००००० समाना एव सन्ति, एकस्मिन् ग्रन्थे युगसावनदिनानि = १५७७९१७५००, द्वितीय-ग्रन्थे च युगसावन दिनानि = १५७७९१७८००, ग्रन्थद्वयेऽपि सृष्टिलङ्काधर्धरात्रेऽभिहितास्ति, ग्रन्थद्वयेऽपि युगरविभगणा ४३२००००० नां समत्वात्स्पष्टं युगमेकमेव

सिद्धं तदा ग्रन्थद्वयप्रोक्तयुगसावनदिनसंख्ययोर्मध्येऽन्तरं न भवितुमर्हति, परमत्र तयो (ग्रन्थद्वयकथितयुगसावनदिनसंख्ययोः) रन्तरं त्रिशत्या समं दृश्यते तेन सिद्धयति यदार्यभटमनसि युगसावनदिनानां निश्चितसंख्याविषये निश्चयो नाऽऽसीत् कथमन्यथैकस्मिन् युगे ग्रन्थद्वये भिन्न-भिन्न सावनदिनानां पाठ-स्तेन कृतोऽत आर्यभटमतं न समीचीनमिति ॥ ५ ॥

अब आर्यभटरचित ग्रन्थद्वय में मतभेद का खण्डन करते हैं

. हि. भा.—युगरविभरण = ४३२०००० यहां आर्यभट ने दोनो ग्रन्थों में स्पष्ट युग कहा है, तब किस कारण से उन दोनों ग्रन्थों में पठित युग सावन दिनो का अन्तर तीन सौ होता है इति ॥५॥

उपपत्ति ।

आर्यभट ने दो ग्रन्थ बनाये, दोनो ग्रन्थों में युगरविभरण = ४३२०००० है, एक ग्रन्थ में युग सावन दिन संख्या = १५७७६१७५०० है अन्य ग्रन्थ में युग सावन दिन संख्या = १५७७६१७८००, दोनों ग्रन्थों में सृष्टिकाल लङ्का का अर्धरात्र काल ही है, इससे यह सिद्ध होता है कि आर्यभट ने युगरविभरण = ४३२०००० दोनो ग्रन्थों में एक ही स्पष्ट रूप से कहा है तब एक युग के मध्य में रवि सावन दिन संख्याओं में भेद नहीं होना चाहिये, परन्तु आर्यभट के मत से दोनों ग्रन्थों में पठित युग सावन दिन संख्याओं का अन्तर १५७७६१७ ८००—१५७७६१७५०० = ३०० होता है, इससे सिद्ध होता है कि आर्यभट के मन में युग सावन दिनों की संख्या निश्चित नहीं थी, नहीं तो क्यों एक युग में दोनों ग्रन्थों में भिन्न-भिन्न सावन दिन संख्याओं का पाठ करते, इसलिये आर्य भट का मत ठीक नहीं है इति ॥५॥

इदानीमार्यभटोक्तस्फुटयुगं खण्डयति ।

युगवर्षादीन् वदता चैत्र सितादेः समं प्रवृत्तान् यत् ।

तदसत् यतः स्फुटयुगं तत् स्थैर्यान्मन्दपातानाम् ॥६॥

सु. भा.—आर्यभटेन लघ्वार्यभटीयतन्त्रे चैत्रसितादेः सकाशाद्युगपद्युगवर्ष-ग्रहादीनां प्रवृत्तिर्लिखिता । चन्द्रमन्दोच्चपातो विहायान्ये मन्दोच्चपाताश्च स्थिराः प्रठिता अतस्तन्मते युगादौ सर्वेषां मेषादौ स्थितिर्नेति स्फुटमिति । तेनायमर्थः । आर्यभटेन चैत्रसितादेः सकाशात् समं युगपत् प्रवृत्तात् युगवर्षादीन् वदता कथयता मत् स्फुटयुगमुक्तं तदसत् । यतो मन्दपातानां स्थैर्यात् तत् स्फुटयुगं कथमिति ।

तथा चाचार्यभटः ।

‘युगवर्षमासदिवसाः समं प्रवृत्तास्तु चैत्रशुक्लादेः ।

कालोऽयमनाद्यन्तो ग्रहभैरनुमीयते क्षेत्रे ॥६॥’

वि. भा.—आर्यभटेन चैत्रसितादेः (चैत्रशुक्ल प्रतिपदादेः) सकाशात् समं (एककालावच्छेदेन-युगपद्वा) प्रवृत्तान् युगवर्षादीन् (युग-वर्षमासदिनादीन्) वदता (कथयता) यत् स्फुटयुग कथितं तदसत् (समोचीनं न), मन्दोच्चपातानां (मन्दोच्च पातानां) स्थैर्यात् (स्थिरत्वात्) तत् स्फुटयुग कथं भवेत् । आर्यभटेन लघ्वाय-भटीयतन्त्रे चैत्रशुक्लप्रतिपदादेर्युगपत् युगवर्षमासदिनग्रहादीनां सर्वेषां प्रवृत्ति-लिखितास्ति, चन्द्रमन्दोच्चपातौ विहायान्ये मन्दोच्चपाताश्च स्थिराः पठितास्त-दा तु तन्मते युगादौ मेषादौ सर्वेषां ग्रहादीनां स्थितिर्न सिद्ध्यत्यतस्तन्मतीयं स्फुटयुगं न शोभनम् इति ॥६॥

अत्रोपपत्तिः

क्रान्तिमण्डल ग्रहविमण्डलयोः सम्पातः पातः कथ्यते, स च वेधेन चलो विलोमगतिश्च लक्ष्यतेऽतो विलोमगत्या तेषां भगणाः सूर्यसिद्धान्त-सिद्धान्त शिरोमण्यादिप्रसिद्धसिद्धान्तग्रन्थेषु युगे पठिताः सन्ति-युगारम्भे (सृष्ट्यादौ) सर्वेषां ग्रहमन्दोच्चशीघ्रोच्चपातादीनामेकत्र (मेषादौ) स्थितिः समुचितास्ति, तेन तन्मतीययुगारम्भे सर्वेषां ग्रहादीनां युगपत्प्रवृत्तिसत्त्वात्तद्युग स्फुटयुगं समुचितमेव, किन्त्वार्यं भटेन भौमादिग्रहाणां मन्दोच्चपाताः स्थिराः पठिताः सन्ति तदा युगादौ सर्वेषां ग्रहाणां तन्मन्दोच्चानां पातादीनामेकत्र (मेषादौ) स्थितेरस-म्भवादार्यभटोक्तं स्फुटयुगं न समीचीनम् यद्यपि युगारम्भे (सृष्ट्यादिकाले) सिद्धान्तग्रन्थेषु मतभेदोऽस्ति सूर्य सिद्धान्तकारेण लङ्कार्धरात्रे सृष्ट्यादिः कथ्यते, अन्ये श्रीपतिभास्करप्रभृतयश्चैत्रशुक्लप्रतिपदादौ लङ्कासूर्योदयकाले सृष्ट्यादि कथयन्ति, तथापि भास्कराचार्याद्याचार्याणां सिद्धान्तेषु मन्दोच्चपातानां भगणाः पठिताः सन्ति तेन तत्कथितयुगविषयेऽयं प्रश्न एव नोदेति, परमार्यभटेन भिन्न एव मार्गं आश्रितोऽतस्तन्मतखण्डनमाचार्येण क्रियते तत्समीचीनमेव । एतद्विषये चाऽऽर्य-भटोक्तश्लोकः—

‘युगवर्षमास दिवसाः समं प्रवृत्तास्तु चैत्रशुक्लादे’ । कालोऽयमनाद्यन्तो ग्रहभैरनुमीयते क्षेत्रे’ इति ॥६॥

अब आर्यभटोक्त स्फुटयुग का खण्डन करते हैं ।

हि. भा.—चैत्र शुक्ल प्रतिपदादि से युगपत् (एक ही समय में) प्रवृत्त युग वर्ष मास दिन आदि को कहने वाले आर्यभट ने जो स्फुटयुग कहा है सो ठीक नहीं है, क्योंकि मन्दोच्चों और पातों को वे स्थिर मानते हैं तब वह (आर्यभटोक्त) स्फुटयुग कैसे हो सकता है, लघ्वाय भटीय तन्त्र में आर्यभट चैत्र शुक्लप्रतिपदादि से एक ही समय में युग-वर्ष मास आदि सबों की प्रवृत्ति लिखी है । चन्द्रमन्दोच्च और चन्द्रपात को छोड़ कर अन्य

मन्दोच्च और पात स्थिर पठित किया है, तब तो उनके मत में युगादि में सब ग्रहादियों की स्थिति मेषादि में सिद्ध नहीं होती है इसलिये उनके स्फुटयुग ठीक नहीं है इति ॥ ६ ॥

उपपत्ति

क्रान्तिमण्डल और ग्रह विमण्डल का सम्पात पात कहलाता है, वह वेध से चल है तथा विलोम गतिक (उलटा चलने वाला) लक्षित होता है, इसलिये विलोम गति से उन सबों के भरण 'सूर्यसिद्धान्त सिद्धान्तशिरोमणि' आदि प्रसिद्ध सिद्धान्त ग्रन्थों में युग में पठित है, युगारम्भ (सृष्ट्यादि) में ग्रह-मन्दोच्च-पात आदि सबों की स्थिति एक स्थान (मेषादि) में समुचित है, इसलिये उन सबों के युगारम्भ में ग्रहादियों की प्रवृत्ति एक ही समय में होने के कारण उनके युग ठीक है, लेकिन आर्यभट ने भीमादि ग्रहों के मन्दोच्चों और पातों को स्थिर पठित किया है तब युगादि में सब ग्रहों की तथा मन्दोच्चों की और पात आदि की एक स्थान (मेषादि) में स्थिति नहीं हो सकती है इसलिये आर्यभटोक्त स्फुटयुग ठीक नहीं है, यद्यपि युगारम्भ (सृष्ट्यादिकाल) में सिद्धान्त ग्रन्थों में मतभेद है सूर्यसिद्धान्त-कार लङ्कार्घरात्र काल में सृष्ट्यादि मानते हैं। अन्य (श्रीपति भास्कर आदि) आचार्य चैत्र शुक्ल प्रतिपदादि में लङ्का सूर्योदय काल में सृष्ट्यादि काल को कहते हैं, तथापि भास्कराचार्य आदि आचार्यों के सिद्धान्त ग्रन्थों में मन्दोच्चों और पातों के भरण पठित है उन (मन्दोच्चों और पातों) को स्थिर नहीं दर्शाया गया है इसलिये उनके युग विषय में यह प्रश्न ही नहीं उठता है, लेकिन आर्यभट ने तो एक भिन्न ही मार्ग का आश्रय ग्रहण किया है इसलिये उनके मत का खण्डन आचार्य ने किया है जो कि सर्वथा ठीक है, इस विषय में आर्यभटोक्त श्लोक यह है—युगवर्षमासदिवसाः सम प्रवृत्तास्तु चैत्रशुक्लादेः इत्यादि स. उपपत्ति से लिखित श्लोक को देखिये' इति ॥ ६ ॥

इदानीं मन्दोच्चं न स्थिरमिति कथयति

ग्रहभुक्तेरुनायां मन्दोच्चं भवति शीघ्रमधिकायाम् ।

उच्चगतौ मन्दोच्चं न बिना भुक्त्येन्दुवर्ज्यमतः ॥ ७ ॥

सु. भा.—यत उच्चगतौ ग्रहभुक्तेरुनायां मन्दोच्चमधिकायां च शीघ्रं शीघ्रोच्चं भवति । अत आर्यभटमते इन्दुवर्ज्यमिन्दुमन्दोच्चं विहायान्येषां मन्दोच्चं भुक्त्वा बिना न सिध्यति तद्भगणानां पाठाभावादिति ॥ ७ ॥

वि. भा.—यतो ग्रहभुक्तेः (ग्रहगतितः) ऊनाया (अल्पायां) मुच्चगतौ मन्दोच्चं भवति, ग्रहगतितोऽधिकायामुच्चगतौ च शीघ्रोच्चं भवति, अत आर्यभटमते इन्दुवर्ज्य (चन्द्रमन्दोच्चं विहाय) मन्दोच्चं (अन्येषां मन्दोच्चं) भुक्त्वा बिना (गत्या बिना) न सिध्यति तद्भगणानां पाठाभावात् । सूर्य सिद्धान्ते तु उच्चगतितो ग्रहगति-

(मध्यमग्रहगतिः) स्तथा शीघ्रोच्चगतितो मन्दस्पष्टग्रहगतिरल्पा कथिताऽस्ति, केन्द्र-परिभाषार्थं “ग्रहं संशोध्य मन्दोच्चात्तथा शीघ्राद्विशोध्य च” मिति तदुक्तपद्येन ज्ञायते, सिद्धान्ते शेखरे “खेचरो निजमृदूच्चवर्जितः खेचरेण च चलोच्चमूनितम्” सिद्धान्त शिरोमणौ “मृदूच्चेन हीनो ग्रहो मन्दकेन्द्रं चलोच्चं ग्रहोनं भवेच्छीघ्र-केन्द्रम्” । इत्यादि बहुषु सिद्धान्तग्रन्थेषु सूर्यसिद्धान्तोक्ताद्भिन्नमेवास्ति, ग्रहलाघव-करणे “मन्दोच्चं ग्रहवर्जितं निगदितं केन्द्रं तदाख्यं बुधैः” रिति सूर्यसिद्धान्तोक्त-वदेवास्ति, कुजादिग्रहाणां मन्दोच्चानां स्थिरत्वकल्पनं कथमार्यभटेन कृतमिति त एव ज्ञातुं शक्यन्ति, मन्ये मन्दोच्चानां गतिरतीवाल्पीयसी (अनिर्वाच्या) वर्तते परन्तु बहुभि (सहस्रवर्षैर्लक्षवर्षादिभिः) वर्षैः काचिदपि तद्गतिर्भवेत्तदा तु तज्जन्या त्रुटिर्भवेदेव, सिद्धान्ततत्त्वविवेके कमलाकरेण बहुभिर्वर्षैरविमन्दोच्चस्य सर्वेषु राशिषु चलनसम्भवात्सर्वेषु मासेषु क्षयमासो भवितुमर्हति तर्हि “क्षयः कार्तिका-दित्रये नान्यतः स्यादिति” भास्करेणाग्रहरणपौषमाद्येष्वेव मासत्रयेषु य. क्षयमास सम्भवो लिखितः स न समीचीन इति भास्करमतं खण्डितम् तथा च तदुक्त-पद्यम् । “इदानीन्तनार्थं न शास्त्रं प्रवृत्तं न सत् कार्तिकादि त्रयोत्थं यदुक्तम्” इति ॥ ७ ॥

‘अब मन्दोच्च स्थिर नहीं है’ इसको कहते हैं ।

हि. भा.—जिस कारण से ग्रह गति (ग्रहमध्यगति) से अल्प उच्च गति में मन्दोच्च होता है तथा ग्रहगति से अधिक उच्च गति में शीघ्रोच्च होता है इसलिए आर्यभट के मत में चन्द्र मन्दोच्च को छोड़कर अन्य ग्रहों के मन्दोच्च गति बिना सिद्ध नहीं होते हैं क्योंकि उन सबों के भगणों के पाठ नहीं हैं । सूर्य सिद्धान्त में उच्च गति से मध्यमग्रहगति तथा शीघ्रोच्च-गति से मन्द स्पष्ट गति को अल्प कहा गया है, केन्द्र परिभाषा के लिये “ग्रहं संशोध्य मन्दो-च्चात्तथा शीघ्राद्विशोध्य च” यह उनके इस पद्य से ज्ञात होता है । ग्रहलाघव करण में भी “मन्दोच्चं ग्रहवर्जितं निगदितं केन्द्रं तदाख्यं बुधैः” यह सूर्य सिद्धान्तोक्तवत् ही है । किन्तु सिद्धान्तशेखर में “खेचरो निजमृदूच्चवर्जितः खेचरेण च चलोच्चमूनितम्” तथा सिद्धान्त शिरो-मणि में “मृदूच्चेन हीनो ग्रहो मन्दकेन्द्रं चलोच्चं ग्रहोनं भवेच्छीघ्रकेन्द्रम्” इत्यादि बहुत सिद्धान्त ग्रन्थों में सूर्य सिद्धान्तोक्त से भिन्न ही है, इससे मालूम होता है कि आचार्यों को यह निश्चय नहीं था कि ग्रह गति से उच्च गति अल्प है या अधिक है, नहीं तो भिन्न भिन्न सिद्धान्त ग्रन्थों में भिन्न भिन्न लेख नहीं रहता अस्तु । आर्यभट ने कुजादि ग्रहों के मन्दोच्चों को स्थिर क्यों माना, इस बात को वे ही जान सकते हैं । मानते हैं कि मन्दोच्चों की गति अत्यन्त अल्प है लेकिन बहुत वर्षों (लाख, कोटि) में उनकी गति कुछ भिन्न जरूर होगी तब तो तज्ज-नित त्रुटि होगी ही, सिद्धान्त तत्त्व विवेक में कमलाकर “बहुत वर्षों (लाख-कोटि) में प्रत्येक राशि में रवि मन्दोच्च के जाने से प्रत्येक मास में क्षयमास सम्भव हो सकता है तब “क्षयः कार्तिकादित्रये नान्यतः स्यात्” इससे भास्कराचार्य ने केवल अग्रहरण, पौष और माघ इन

तीनों मासों में जो क्षय मास की सम्भावना लिखी है सो ठीक नहीं है। भास्कराचार्य ने रवि मन्दोच्च २ रा, १८ अ. मानकर उक्त बात कही है। परन्तु रवि मन्दोच्च बराबर मियुन राशि में नहीं रहेगा इसलिए “इदानीन्तनार्थं न शास्त्र प्रवृत्त न मत् कार्तिकादित्रयोन्ध ददुक्त” इससे भास्करोक्त मत का खण्डन किया है इति ॥ ७ ॥

इदानी पाता न स्थिरा इति कथयति

आर्याष्टशते पाता भ्रमन्ति दशगीतिके स्थिराः पाताः ।

मुक्तवेन्दुपातमपमण्डले भ्रमन्ति स्थिरा नातः ॥ ८ ॥

सु. भा.—आर्यभटीयतन्त्रे आर्या अष्टाधिकं शतमतस्तत् तन्त्रमायाष्टशतमिति चोच्यते । तत्र दशभिरार्याभिर्भगणादिमानानि लिखितानि ता आर्या दशगीतिक-मुच्यते । तत्र चन्द्रस्य पातभगणा एव पठिता नान्येषाम् । आर्याष्टशते गोलपादे ग्रहस्थानवर्णने च पाता भ्रमन्तीत्यभिहितम् । तेनायमर्थः । आर्य भटेनाऽऽर्याष्टशते पाता भ्रमन्ति दशगीतिके चेन्दुपातं मुक्त्वा विहायान्ये स्थिराः पाताः सन्ति इति लिखितम् । गोलयुक्त्या च सर्वे पाता अपमण्डले क्रान्तिमण्डले भ्रमन्ति अतस्ते स्थिरा नेति वदतो व्याघातदोषः । भौमादिमन्दपातानां वर्षशतेनापि गतिर्नोपलक्ष्यत इति स्वसमये आर्यभटेन स्थिराः पठिता इति वस्तुतो न किमपि द्वपरमिहाचार्य-स्याग्रह एव स्पष्टः ॥ ८ ॥

वि. भा.—आर्यभटीयतन्त्रे आर्या अष्टाधिकं शतमतस्तत् तन्त्रमायाष्टशत-मिति कथ्यते । तत्र भगणादिमानानि दशभिरार्याभिर्लिखितानि सन्ति तस्मात्ता आर्या दशगीतिकमिति कथ्यते । तत्र चन्द्रस्य पातभगणा एव पठिता नान्येषाम् । आर्याष्टशते गोलपादे ग्रहस्थानवर्णने पाता भ्रमन्तीत्यभिहितम् । एतेनायमर्थः प्रतिफलति आर्यभटेनाऽऽर्याष्टशते पाता भ्रमन्ति दशगीतिके च चन्द्रपातं मुक्त्वा (विहाय) अन्ये पाताः स्थिराः सन्ति इति लिखितम् । गोलयुक्त्या सर्वे पाता अप-मण्डले (क्रान्तिवृत्ते) भ्रमन्त्यतस्ते स्थिरा नेति वदतो व्याघातदोषः । आर्याष्टशते पाता भ्रमन्ति, दशगीतिके च चन्द्रपातातिरिक्तपाताः स्थिराः सन्तीत्यार्यभटलेखेन ज्ञायते यत्पातभ्रमणसम्बन्धे आर्यभटस्य मनसि दाढ्यं नासीत् ‘चन्द्र पातारिक्त-पाताः स्थिरा’ इति यदार्थभटेन लिखितं तन्महदनुचितम् । यद्व्याख्येन स्वसमये पातगतिर्नोपलब्धा तथापि त्वस्मिन् विषये गोलयुक्तिः किं कथयतीति बिचारः कर्तव्य आसीत्, परं गोलयुक्तिविचारमकृत्वैव चन्द्रपातातिरिक्तपाताः स्थिराः सन्तीति लिखितं तन्नशोभनमिति विवेचका विवेचयन्तिवति ॥ ८ ॥

अब पात की अस्थिरता को कहते हैं ।

हि. भा.—आर्य भटीयतन्त्र में एक सौ आर्या हैं इसलिए वह आर्याष्टशतं कहा जाता है, उसमें भगणादिमान दश आर्याओं में लिखे गए हैं इसलिए वे आर्या ‘दशगीतिक’ कहे जाते हैं,

उनमें केवल चन्द्रपात भगण पठित है, अन्य (भौमादि) ग्रहों के पात भगण पठित नहीं है, आर्याष्टशत में गोलपाद में ग्रहस्थान वर्णन में पात भ्रमण करते हैं ऐसा लिखा गया है, इससे यह अर्थ निकलता है कि आर्यभट ने “आर्याष्टशत में पात भ्रमण करते हैं और दशगीतिक में चन्द्रपात को छोड़कर अन्य सब पात स्थिर हैं” लिखा है गोलयुक्त से सब पात क्रान्तिवृत्त में भ्रमण करते हैं इसलिए पात स्थिर नहीं है । ‘आर्याष्टशत में पात भ्रमण करते हैं तथा दशगीतिक में चन्द्रपातातिरिक्त पात स्थिर हैं’ इस आर्यभट के लेखक से मालूम होता है कि पात भ्रमण के विषय में आर्यभट के मन में कुछ भी निश्चय नहीं था, चन्द्रपात से भिन्न पात स्थिर है यह जो आर्यभट ने लिखा है सो अत्यन्त अनुचित है, यद्यपि अपने समय में आर्यभट को पात गति उपलब्ध नहीं हुई हो तथापि इस विषय में गोलयुक्ति से विचार करना उचित था लेकिन गौलिक विचार न करके चन्द्रपात के भिन्न पात स्थिर है जो आर्यभट ने लिखे हैं बहुत अनुचित है इति ॥ ८ ॥

इदानीमार्यभटराहुं खण्डयति ।

आर्यभटो जानाति ग्रहाष्टगतिं यदुक्तवांस्तदसत् ।

राहुकृतं न ग्रहणं तत्पातो नाष्टमो राहुः ॥६॥

सु. भा.—आर्यभटो ग्रहाष्टगतिमष्टानां ग्रहाणां चलनं जानातीति कश्चिदार्थभट एव वा यदुक्तवान् तदसत् यतस्तन्मते राहुकृतं ग्रहणं परन्तु वस्तुतो राहुकृतं ग्रहणं न भवति । तत्पातश्चाष्टमो ग्रहो राहुर्न भवति । अर्थात् तद्भ्रमणितेन यश्चन्द्रपातः स दृष्टियोग्यो नेति । वाग्वलमेतत् । आर्यभटेन राहुकृतं ग्रहणं नोक्तं । तथा च तद्वाक्यम् । छादयति शशी सूर्यं शशिनं महती च भूछाया ।

(गोलपा. श्लो० २७) ॥ ९ ॥

वि. भा.—ग्रहाष्टगतिं (अष्टानां ग्रहाणां चलनं) आर्यभटो जानातीति कश्चिदार्थभट एव वा यदुक्तवान् तदसत् । यत आर्यभटमते राहुकृतं ग्रहणं भवति परन्तु यथार्थतो राहुकृतं ग्रहणं न भवति, तत्पातश्चाष्टमो ग्रहो राहुर्न भवति अर्थात्तद्भ्रमणितेन यश्चन्द्रपातः स दृष्टियोग्यो नेति, खण्डनमिदं निरर्थकं प्रतिभाति, आर्यभटेन राहुकृतं ग्रहणं न कथितम् तथा च तद्वाक्यम् ‘छादयति शशी सूर्यं शशिनं महती च भूछाया (गोलपादे) २७ श्लो० आर्यभटेन यद्वस्तु नोक्तं तदपि स्वमनसि-घृत्वा ज्योतिर्विदां शिरोमणिनाऽऽचार्येण (ब्रह्मगुप्तेन) तन्मतं खण्डयते इति-महदाश्चर्यम् । आचार्येणेति विचारो न कृतो यत् पाठकास्तु (आर्यभटस्य किं मतमाचार्येण च किं खण्डयते इत्युभयोर्दर्शनेनैव) विचारं करिष्यन्ति, केवलं मल्ले-खोपरि विश्वासं न करिष्यन्ति, तर्हि मन्मिथ्या कल्पनयालमिति ॥९॥

अब आर्यभटीय राहु का खण्डन करते हैं ।

हि. भा.—आठ ग्रहों के चलन को आर्यभट जानता है यह जो कहा गया है सो ठीक नहीं है, क्योंकि आर्यभट के मत में राहुकृत ग्रहण है परन्तु वस्तुतः राहुकृतग्रहण नहीं होता है, उनके पात अष्टमग्रह राहु नहीं है अर्थात् उनके गणित से जो चन्द्रपात आता है वह दृष्टियोग्य नहीं है, यह खण्डन निरर्थक मालूम होता है । आर्यभट ने राहुकृत ग्रहण को नहीं कहा है उनके वाक्य हैं “छादयतिशशी सूर्य शशिनं महती च भूदाया, जिह्वात को आर्यभट ने नहीं कहा है उसको भी अपने मन से महा पण्डित राज आचार्य (ब्रह्मगुप्त) आर्यभटोक्त कह कर खण्डन करते हैं यह बहुत आश्चर्य है, आचार्य ने यह विचार नहीं किया कि विवेचक लोग आर्यभट मत को और हमारे खण्डन को देख ही करके कुछ विचार करेंगे केवल मेरे लेख के ऊपर विश्वास नहीं करेंगे तब मेरी मिथ्या कल्पना से क्या लाभ इति॥६॥

पुनरायंभटमतं खण्डयति ।

न समा मनुयुगकल्पाः कल्पादिगतं कृतादियातं च ।

स्मृत्युक्तैरायंभटो नातो जानाति मध्यगतिम् ॥१०॥

सु० भा०—आर्यभटोक्ता मनुयुगकल्पाः स्मृत्युक्तैर्मनुस्मृत्याद्युक्तैर्न समास्तथा तदुक्तं कल्पादिगतं कृतादियातं च स्मृत्युक्तेन न सममत आर्यभटो मध्यगतिं मध्यग्रहाणां चलनं न जानाति । इति सर्वं मध्यगत्यध्यायस्य ९, २८ श्लोकतः स्फुटम् ॥ १० ॥

वि. भा.—मनुयुगकल्पा आर्यभटोक्ताः स्मृत्युक्तैः (मनुस्मृत्यादिकथितैः) समा न सन्ति, तथा तदुक्तं कल्पादिगतं कृतादियातं च स्मृत्युक्तेन न सममत आर्यभटो मध्यगतिं (मध्यग्रहाणां चलनं) न जानातीति । विषयोऽयं मध्यगत्यध्याये पूर्वप्रतिपादित एव, अत्र पुनस्तत्प्रतिपादनं पिष्टपेषणमात्रमेव, किमत्र तथ्यमिति प्रामाण्यवचनाधीनम् । कथमार्यभटेन स्मृतिप्रतिपादितमनुयुगादिमानेभ्यस्तन्मानानि भिन्नानि कथितानीति त एव ज्ञातुं शक्नुवन्तीति ॥१०॥

पुनः आर्यभट के मत का खण्डन करते हैं ।

हि. भा.—आर्यभटोक्त मनु, युग, कल्प ये स्मृति कथित मनु, युग, कल्प के बराबर नहीं हैं, तथा आर्यभटोक्त कल्पादिगत और कृत (सत्ययुग) आदि गतयुग चरण भी स्मृति-कथित के बराबर नहीं हैं इसलिये आर्यभट मध्य गति को नहीं जानते हैं । यह विषय पहले मध्यगत्यध्याय में आचार्य कह चुके हैं पुनः यहां उसका प्रतिपादन करना पिष्टपेषण मात्र है, इसमें क्या ठीक है यह बहुत प्रबल वचन प्रामाण्यवीन है, आर्यभट ने स्मृति प्रतिपादित मनु, युग आदि मानों से भिन्न उनके मानों को कहा है इस बात को वे ही जान सकते हैं इति ॥१०॥

इदानीमार्यभटोक्त कल्पादिवारस्य खण्डनं करोति ।

श्रोङ्कारो दिनवारो गुरुद्वयोऽस्य भवति कल्पादौ ।

न भवत्यर्को यस्मादश्रोङ्कारो विस्तरस्तस्मात् ॥११॥

सु० भा०—आर्यभटेन स्वतन्त्रे 'गुरुदिवसात् भारतात् पूर्वं' मित्यनेन कल्पादौ गुरुवारः स्वीकृतः । तेनायमर्थः । यस्मादस्यार्यभटस्योङ्कारः स्वीकारः कल्पादावौदयिको दिनवारो गुरुर्भवति रविर्न भवति तस्मादस्योङ्कारः स्वीकारो विस्तर आधाररहितोऽर्थादिप्रामाणिकः (स्तरः स्तरणमास्तरणम् । विगतः स्तरो यस्य स विस्तर इति) ।

आर्यभटमते द्वापरान्ते कल्पाद् गतयुगानि ४३२ $\frac{३}{४}$ (मध्यमाधिकारे २८९ श्लोकटीका द्रष्टव्या)

एतानि युगसावनदिवसै—१५७७९१७५०० गुणानि जातः सावनाहर्गणः

$$= ४३२ \times १५७७९१७५०० + \frac{१५७७९१७५०० \times ३}{४} = ४३२ \times १५७७९१७५००$$

+ ३९४४७९३७५ $\times ३$ । अयं सप्ततष्टो जातो द्वापरान्ते वारः = ५ $\times ५$ + ३ $\times ३$ = २५ + ९ = ३४ = ६ । अयं सैकः कलियुगादौ वारः ७ = ० । अतो यदि गुरुवाराद्-गणनाऽऽरभ्यते तदा कलियुगादौ गतवारः ० । वर्तमानो गुरुरेव सिध्यत्यत आर्य-भटमतेन कल्पादौ गुरुवार आयाति ॥ ११ ॥

वि. भा.—स्वतन्त्रे 'गुरुदिवसात् भारतात् पूर्वं' मित्यनेन कल्पादावार्य-भटेन गुरुवारः स्वीकृतोऽस्ति । तेनायमर्थः—यस्मात् कारणात्-अस्य (आर्यभटस्य) श्रोङ्कारः (स्वीकारः) कल्पादावौदयिको दिनवारो गुरुर्भवति रविर्न भवति तस्मादस्य-श्रोङ्कारः स्वीकारो विस्तरः (आधाररहितोऽर्थादिप्रामाणिकः) (स्तरः स्तरणमास्तरणम्) विगतः स्तरो यस्य स विस्तर इति ॥११॥

अत्रोपपत्तिः

आर्यभटमतेन कलियुगारम्भात् पूर्वं वर्त्तमानकल्पे षड् ६ मनवो व्यतीता युगचरणत्रयं च, तथा तन्मते द्विसप्ततियुगैरेको मनुमतः कल्पादौ द्वापरान्ते कल्पाद् गतयुगानि = ७२ $\times ६$ + $\frac{३}{४}$ = ४३२ $\frac{३}{४}$, युगपठितसावनदिनैर्गुणनेन

जातः सावनाहर्गणः = ४३२ $\times १५७७९१७५००$ + $\frac{३ \times १५७७९१७५००}{४}$, युग-

पठित सावनदि. = १५७७९१७५०० = ४३२ $\times १५७७९१७५००$ + ३९४४७९३७५ $\times ३$ अयं सप्तभिर्भक्तस्तदा द्वापरान्ते वारः = ५ $\times ५$ + ३ $\times ३$ = २५ + ९ = ३४ सप्तत-

श्रिते शेषम् = ६ अयं सैकस्तदा कलियुगादौ वारः = ७, वा = ० अतो यदि गुरुवार-
द्वारगणना प्रारम्भ्यते तदा कलियुगादौ गतवार = ०, वर्तमानो वारो गुरुरेव
सिध्यत्यत आर्यभटमतेन कल्पादौ गुरुवार आयाति ॥११॥

अब आर्यभटोक्त कल्पादिवार का खण्डन करते हैं ।

हि. भा.—अपने तन्त्र में 'गुरुदिवसात् भारतात्पूर्व' इस से कल्पादि में आर्यभट
ने गुरुवार स्वीकार किया है, इसी कारण से कल्पादि में औदयिक दिनवार गुरु है, रवि
नहीं यह जो आर्यभट ने स्वीकार किया है सो विस्तर है अर्थात् आधार रहित (अप्रामाणिक)
है इति ॥११॥

उपपत्ति

आर्यभट के मत से कलियुगारम्भ से पूर्व वर्तमान कल्प मे छः मनु व्यनीत हुए हैं नथा
तीन युगचरण व्यतीत हैं और उनके मत में बहत्तर ७२ युगों का एक मनु है इसलिये
कल्पादि (द्वापरान्त) में कल्प से गतयुग— $७२ \times ६ + \frac{३}{४} = ४३२ \frac{३}{४}$, युगपटितसावन
दिन = १५७७६१७५०० इस से गुणने से सावनाहर्गण हुआ । ४३२×१५७७६१७५००
 $+ \frac{३ \times १५७७६१७५००}{४}$ इस को सात से भाग देने से द्वापरान्त में वार = $५ \times ५ + ३ \times ३$
= $२५ + ९ = ३४$ सात से अधिक है, इसलिये सात से भाग देने से शेष = ६ इस में नैक
करने से कलियुगादि में वार = ७, वा = ० इसलिये यदि गुरुवार से वार गणना प्रारम्भ
करते हैं तब कलियुगादि में गतवार = ०, वर्तमान वार गुरुवार ही सिद्ध होता है अतः
आर्यभट के मत से कल्पादि में गुरुवार ही आता है । परन्तु यहां मुझे यह कहना है कि
आर्यभट भी तो वार गणना रवि, सोम, मंगल... इसी क्रम से करते हैं, रवि से वार
गणना क्यों की जाती है इसका एक मात्र कारण यही है कि सृष्ट्यादि काल में रविवार
था-तब फिर कल्पादि को गुरुवार में क्यों कहेंगे, गुरु दिनान्त में द्वापर युग समाप्त हुआ
अर्थात् कलियुगारम्भ हुआ, यहां शुक्रवार में सिद्धान्तकार लोग कलियुगारम्भ स्वीकार
करते हैं इसलिये कलियुगादि से अभीष्ट रवि मण्डलान्त में जो गतकाल (कलिगत) है उससे
पूर्ववत् ग्रहानयन होता है परन्तु यहां शुक्र से आरम्भकर वर्षाधिपति की गणना होती है ।

(१) अत्रास्माक कथनमस्ति यदायंभटोऽपि तु, रविः, सोमः, कुजः.....
एतत्क्रमेणैव वारगणनां करोति, रवितो वारगणना कथं भवतीत्यत्रैकमात्रकारणमिदमेवास्ति
यत् सृष्ट्यादिकाले रविवार एवाऽऽसीत् । तदा कल्पादौ गुरुवार आसीदिति तेन प्रकाण्ड-
विदुषा कथं कथयिष्यते, गुरुदिनान्ते द्वापरयुगसमाप्तिरभवत्-कलियुगारम्भश्च शुक्रवारे
ऽभवत् । अन्येऽत्रैव मत भेदोऽस्ति कलियुगारम्भ आर्यभटेन गुरुवारे कथ्यते, मन्विचारे त्वित्थ-
मेवाऽऽयाति । गुरुवारे कल्पादिरभवदिति कैरपि स्वीकर्तुं न शक्यत इति ।

वाराहपति की गणना भी शुक्र ही से होती है, आर्यभट्ट शुक्रवार में कलियुगादि नहीं मानते हैं गुरुवार में मानते हैं, कल्पादि को गुरुवार में मानना तो नितान्त अनुचित है इस को तो कोई भी स्वीकार नहीं कर सकता है । आर्यभट्ट भी वारगणना रवि से ही करते हैं इति ॥११॥

इदानीमार्यभटोक्तवारप्रवृत्तिं खण्डयति ।

सूर्यादयश्चतुर्था दिनद्वारा यदुवाच तदसदार्थभटः ।

लङ्कोदये यतोऽर्कस्यास्तमयं प्राह सिद्धपुरे ॥१२॥

सु. भा.—आर्यभटेन 'शीघ्रक्रमाच्चतुर्था भवन्ति सूर्यादयो दिनपाः ।' इति

स्वतन्त्रे लिखितम् । च^१, बु^२, शु^३, र^४, कु^५, गु^६, श^७ । कक्षाक्रमेण ग्रहाणां संस्था । तत्र शीघ्रक्रमात् सूर्यादयो ग्रहाः र, चं, मं, बु, गु, शु, श । उपरिष्ठा ग्रहा मन्दगतयोऽवस्थाः शीघ्रगतयो भवन्ति । ते च रवितः शीघ्रक्रमादधःस्थग्रहगणनया विपरीतगणनया रवेरनन्तरं शुक्रस्तदनन्तरं बुध इत्यादिगणनयेति स्फुटम् । अथ गोलपादे च तेनैवार्यभटेन 'उदयो यो लङ्कायां सोऽस्तमयः सवितुरेव सिद्धपुरे' इत्युक्तम् । तेनायमर्थः । सूर्यादयश्चतुर्था दिनद्वारा दिनपा भवन्तीति यदार्थभट उवाच तदसत् । यतः स एव लङ्कोदये सिद्धपुरेऽर्कस्यास्तमयं प्राह । अर्थाच्चिदलङ्कोदये वारादिस्तिर्हि सिद्धपुरेऽपि कथं न स एव वारादिरतो वारगणना स्थिरा न । अतस्तदुक्ताः सूर्यादयश्चतुर्था दिनपाः स्थिरा न समीचीनाः । आर्यभटेनैकदेशस्थितिवशेन दिनवारगणना प्रदर्शिताऽतोऽसद्गूढणमेतत् ॥ १२ ॥

वि. भा.—शीघ्रक्रमाच्चतुर्था भवन्ति सूर्यादयो दिनपाः, इत्यार्यभटोक्तम् । कक्षाक्रमेण ग्रहाणां स्थितिः=चन्द्रः, बुधः, शुक्रः, रविः, कुजः, गुरुः, शनिः । चन्द्रादुपरिष्ठा ग्रहाः क्रमशो मन्दगतयो भवन्ति, आर्यभटोक्तपद्येनाने 'शीघ्रक्रमाच्चतुर्था' नेत्यादि रविः, चन्द्रः, कुजः, बुधः, गुरुः, शुक्रः, शनिः, इति दिनपतयः । गोलपादे 'उदयो यो लङ्कायां सोऽस्तमयः सवितुरेव सिद्धपुरे' आर्यभटेनोक्तम् । तेनायमर्थः—सूर्यादयश्चतुर्था दिनद्वारा दिनपा भवन्तीति यदार्थभट उवाच तदसत् । यतः स एव लङ्कोदये सिद्धपुरेऽर्कस्यास्तमयं प्राह; शीघ्रक्रमाच्चतुर्था इत्यादिना ऽऽर्यभटेन यद्दिनपतिज्ञानं कृतं तत् समीचीनमेव । संसारे सर्वत्रैव वारगणनक्रमो रवित एवास्ति, तज्ज्ञानप्रकार आर्यभटेन प्रदर्शितोऽस्ति । सूर्यसिद्धान्ते 'मन्दादधः क्रमेण स्युश्चतुर्था दिवसाधिपाः' अनेन दिनपतिज्ञानप्रकार एव कथ्यते । पूर्वलिखितप्रकारयोः (आचार्योक्तसूर्यसिद्धान्तोक्तयोः) केवलमेता-

वानेव भेदोऽस्ति यदाचार्येण रवित आरभ्य शीघ्रक्रमाच्चतुर्थश्चतुर्थो वारो दिनपति-
र्भवतीति कथ्यते, सूर्यसिद्धान्तकारेण शनित आरभ्याऽधोऽधः क्रमेणार्थाच्छीघ्र-
गतिक्रमेण चतुर्थश्चतुर्थो वारो दिनपतिः कथ्यते । तथा लङ्कोदयकाल एव
सिद्धपुरेऽस्तकालो ऽतो यदि लङ्कोदये वारादिस्तदा सिद्धपुरेऽपि (सिद्धपुरीयास्त-
कालेऽपि) स एव वारादिर्भवेदेव, तर्ह्यार्यभटोक्तौ को दोष आयातोति न ज्ञायते ।
“सूर्यादयश्चतुर्था दिनवारा दिनपा भवन्तीति यदार्यभट उवाच तदसत् यनः स एव
लङ्कोदये सिद्धपुरेऽर्कस्यास्तमयं प्राह । अर्थाद्यदि लङ्कोदये वारादिस्तिह सिद्धपुरेऽपि
कथं न स एव वारादिरतो वारगणना स्थिरा न, अतस्तदुक्ताः सूर्यादयश्चतुर्था
दिनपाः स्थिरा न समीचीनाः” इति कथनं समीचीनं न प्रतिभाति, आर्यभटोक्त
समीचीनमेवास्ति, आचार्यो व्यर्थमेव खण्डयतीति ॥१२॥

अब आर्यभटोक्त वार प्रवृत्ति का खण्डन करते हैं ।

हि. भा. ‘शीघ्रक्रमाच्चतुर्था भवन्ति सूर्यादयो दिनपाः’ यह आर्यभटोक्त पद्य है, कक्षा
क्रम से ग्रहों की स्थिति इस तरह है—चन्द्र, बुध, शुक्र, रवि, कुज, गुरु, शनि, चन्द्र से
उपरिस्थित ग्रह क्रम से मन्द गति होते हैं । आर्यभटोक्त पद्य से रवि से शीघ्र क्रम से
चौथे चौथे ग्रह दिनपति होते हैं अर्थात् रवि, चन्द्र, कुज, बुध, गुरु, शुक्र, शनि दिनपति
हैं, गोलपाद में आर्यभटोक्ति है “उदयो यो लङ्कायां सोऽस्तमयः सदितुरेव सिद्धपुरे” इसलिये
यह अर्थ है कि सूर्य आदि चौथे चौथे ग्रह दिनपति होते हैं यह जो आर्यभट कहते हैं सो
ठीक नहीं है क्योंकि वे ही आर्यभट लङ्कोदय में सिद्धपुर में सूर्य के अस्तमय को कहते हैं,
आर्यभट ने “शीघ्र क्रमाच्चतुर्था भवन्ति सूर्यादयो दिनपाः” इससे जो दिनपति का ज्ञान किया है
सो ठीक ही है, संसार में सब जगह रवि ही से वार गणना क्रम है अर्थात् रवि सोम,
कुज, बुध..... यही क्रम है इस के ज्ञान के लिये आर्यभट ने प्रकार दिखलाया है ।
सूर्य सिद्धान्त में “मन्दादधः क्रमेण स्युश्चतुर्था दिवसाविपाः” इस से दिनपतिज्ञान का प्रकार
कहा है । दोनों (आचार्योक्त और सूर्य सिद्धान्तोक्त) प्रकारों में केवल इतना ही भेद है कि
आचार्य रवि से शीघ्र क्रम से चौथे चौथे ग्रह को दिन पति कहते हैं और सूर्यसिद्धान्तकार
शनि से अधोऽधः क्रम से अर्थात् शीघ्रगति क्रम में चौथे चौथे ग्रह को दिनपति कहते हैं,
दोनों प्रकार समान ही हैं । तथा लङ्कोदय काल ही सिद्धपुरीय अस्तकाल है, इसलिये यदि
लङ्कोदय में वारादि है तो वही सिद्धपुरीयास्त काल में भी होगा तब आर्यभटोक्ति में
क्या दोष आता है यह मैं नहीं कह सकता हूँ, “सूर्य आदि चौथे दिनवार दिनपति होते हैं”
यह जो आर्यभट ने कहा है सो ठीक नहीं है, क्योंकि वे ही आर्यभट लङ्कोदय काल में सिद्धपुर
में अस्तमय कहते हैं अर्थात् यदि लङ्कोदय में वारादि है तो सिद्धपुर में भी वही वारादि
क्यों नहीं होता, इसलिये वार गणना स्थिर नहीं हो सकती है अतः आर्यभटोक्त ‘सूर्यादयश्चतुर्था
दिनपाः’ यह ठीक नहीं है यह कथन मुझे ठीक नहीं मालूम होता है, आर्यभटोक्त समीचीन
ही है, आचार्य निरर्थक ही खण्डन करते हैं इति ॥१२॥

अथ पुनरायंभटोक्तवारादि खण्डयति ।

अधिकैः शतैश्चतुर्भिवर्षसहस्रैश्चतुर्दशभिरेकः ।

युगयातैर्दिनवारान्तरमौदयिकार्धं रात्रिकयोः ॥१३॥

सु. भा.—आयंभटेन ग्रन्थद्वयं रचितम् । एकस्मिन् युगसावनदिनानि १५७७९१७५०० । लङ्कायामर्कौदये सृष्टिः । अन्यस्मिन् युगसावनदिनानि १५७७९१७८०० । लङ्कायामर्धरात्रे सृष्टिः । उभयत्र युगवर्षसंख्या ४३२००००० एतावती तुल्यैव । अतो ग्रन्थद्वयतो वारगणनया युगवर्षैर्दिनशतत्रयान्तरं तथाऽनुपातेनैकदिन वारान्तरं च $\frac{४३२०००००}{३००} = १४४००$ एतैर्युगातवर्षैः । तेनायमर्थः । आयंभटमतेनौदयिकार्ध- रात्रिकयोर्दिनवारमध्ये चतुर्दशभिर्वर्षसहस्रैश्चतुर्भिः शतैर्वर्षैरधिकैर्युगयातैर्दिनवा- रान्तरं दिनवारयोरेकमन्तरं पततीति वारगणना न स्थिरेति ॥ १३ ॥

वि० भा०—आयंभटेन ग्रन्थद्वयं रचितम् । एकस्मिन् ग्रन्थे युगसावन- दिनानि=१५७७९१७५००, लङ्कायां रव्युदये सृष्टिः । अन्यस्मिन् ग्रन्थे युगसावन- दिनानि=१५७७९१७८००, लङ्कायामर्धरात्रे सृष्टिः । उभयत्र युगवर्षसंख्या = ४३२००००० समाना एव, युगपठितसावन दिनान्तरम् = ३००, अतो ग्रन्थद्वयतो वार गणनया युगवर्षैर्दिनशतत्रयान्तरं भवति, तथानुपातेनैकदिनवारान्तरं च $\frac{४३२०००००}{३००} = १४४००$ एतैर्युगगतवर्षैः । तेनायमर्थः—आयंभटमतेनौदयिकार्धरा- त्रिकयोर्दिनवारमध्ये चतुर्दशभिर्वर्षसहस्रैश्चतुर्भिः शतैर्वर्षैरधिकैर्युगयातैर्दिनवार- योरेकमन्तरं पततीति वारगणना न स्थिरेति । सर्वप्रथममार्यंभटस्यायं दोषो यत्तेनैकस्मिन् ग्रन्थे युगसावनदिनानि यानि लिखितानि तद्भिन्नान्यन्यस्मिन् ग्रन्थे कथं लिखितानि, तथैकत्र लङ्काकोदयकाले सृष्टिरन्यत्र लङ्काधर्धरात्रे सृष्टिः कथं लिखिता, एकस्मिन्नेव विषये मतद्वयप्रतिपादनमेव तस्य दोषाधिक्यं व्यनक्ति अन्यद्वस्तु द्वेरे तिष्ठतु । अत्राचार्योक्तखण्डनमपि समोचनमेवास्तोति विज्ञैर्ज्ञेय- मिति ॥१३॥

अब पुनः आयंभटोक्त वारादि का खण्डन करते हैं ।

हि. भा.—आयंभट ने दो ग्रन्थों को बनाया, एक ग्रन्थ में युग सावन दिन संख्या = १५७७९१७५०० तथा लङ्का में रवि के उदयकाल में सृष्टिकाल लिखा है । दूसरे ग्रन्थ में युग सावन दिन सं. = १५७७९१७८०० तथा लङ्का के अर्धरात्र समय में सृष्टि काल लिखा है । दोनों ग्रन्थों में युगवर्ष संख्या = ४३२००००० इतनी ही है, युग पठित सावन दिनों का अन्तर = १५७७९१७८०० - १५७७९१७५०० = ३००, इसलिये दोनों ग्रन्थों से युगवर्षों में

अब आर्यभटीय राहु का खण्डन करते हैं ।

हि. भा.—आठ ग्रहों के चलन को आर्यभट जानता है यह जो कहा गया है सी ठीक नहीं है, क्यों कि आर्यभट के मत में राहुकृत ग्रहण है परन्तु वस्तुतः राहुकृतग्रहण नहीं होता है, उनके पात अष्टमग्रह राहु नहीं है अर्थात् उनके गणित से जो चन्द्रपात आता है वह दृष्टियोग्य नहीं है, यह खण्डन निरर्थक मालूम होता है । आर्यभट ने राहुकृत ग्रहण को नहीं कहा है उनके वाक्य है “छादयतिशशी सूर्य शशिन महती च भूध्याया, जिह्वान को आर्यभट ने नहीं कहा है उसको भी अपने मन से महा पण्डित राज आचार्य (ब्रह्मगुप्त) आर्यभटोक्त कह कर खण्डन करते हैं यह बहुत आश्चर्य है, आचार्य ने यह विचार नहीं किया कि विवेचक लोग आर्यभट मत को और हमारे खण्डन को देख ही करके कुछ विचार करेंगे केवल मेरे लेख के ऊपर विश्वास नहीं करेंगे तब मेरी मिथ्या कल्पना से क्या लाभ उठेगा ॥६॥

पुनरायंभटमतं खण्डयति ।

न समा मनुयुगकल्पाः कल्पादिगतं कृतादियातं च ।

स्मृत्युक्तरायंभटो नातो जानाति मध्यगतिम् ॥१०॥

सु० भा०—आर्यभटोक्ता मनुयुगकल्पाः स्मृत्युक्तेर्मनुस्मृत्याद्युक्तेर्न समा-
स्तथा तदुक्तं कल्पादिगतं कृतादियातं च स्मृत्युक्तेन न सममत आर्यभटो मध्यगतिं
मध्यग्रहाणां चलनं न जानाति । इति सर्वं मध्यगत्यध्यायस्य ९, २८ श्लोकतः
स्फुटम् ॥ १० ॥

वि. भा.—मनुयुगकल्पा आर्यभटोक्ताः स्मृत्युक्तैः (मनुस्मृत्यादिकथितैः)
समा न सन्ति, तथा तदुक्तं कल्पादिगतं कृतादियातं च स्मृत्युक्तेन न सममत
आर्यभटो मध्यगतिं (मध्यग्रहाणां चलनं) न जानातीति । विषयोऽयं मध्यगत्य-
ध्याये पूर्वप्रतिपादित एव, अत्र पुनस्तत्प्रतिपादनं पिष्टपेषणमात्रमेव, हिमत्र
तथ्यमिति प्रामाण्यवचनाधीनम् । कथमार्यभटेन स्मृतिप्रतिपादितमनुयुगादिमाने-
भ्यस्तन्मानानि भिन्नानि कथितानीति त एव ज्ञातुं शक्नुवन्तीति ॥१०॥

पुनः आर्यभट के मत का खण्डन करते हैं ।

हि. भा.—आर्यभटोक्त मनु, युग, कल्प ये स्मृति कथित मनु, युग, कल्प के बराबर
नहीं हैं, तथा आर्यभटोक्त कल्पादिगत और कृत (सत्ययुग) आदि गतयुग चरण भी स्मृति-
कथित के बराबर नहीं हैं इसलिये आर्यभट मध्य गति को नहीं जानते हैं । यह विषय
पहले मध्यगत्यध्याय में आचार्य कह चुके हैं पुनः यहां उसका प्रतिपादन करना पिष्टपेषण
मात्र है, इसमें क्या ठीक है यह बहुत प्रबल वचन प्रामाणावीन है, आर्यभट ने स्मृति प्रतिपा-
दित मनु, युग आदि मानों से भिन्न उनके मानों को कहा है इस बात को वे ही जान सकते
हैं इति ॥१०॥

इदानीमार्यभटोक्त कल्पादिवारस्य खण्डनं करोति ।

ओङ्कारो दिनवारो गुरुदयिकोऽस्य भवति कल्पादौ ।

न भवत्यर्को यस्मादोङ्कारो विस्तररतस्मात् ॥११॥

सु० भा०—आर्यभटेन स्वतन्त्रे 'गुरुदिवसात् भारतात् पूर्वं' मित्यनेन कल्पादौ गुरुवारः स्वीकृतः । तेनायमर्थः । यस्मादस्यार्यभटस्योङ्कारः स्वीकारः कल्पादावौदयिको दिनवारो गुरुर्भवति रविर्न भवति तस्मादस्योङ्कारः स्वीकारो विस्तर आधाररहितोऽर्थादप्रामाणिकः (स्तरः स्तरणमास्तरणम् । विगतः स्तरो यस्य स विस्तर इति) ।

आर्यभटमते द्वापरान्ते कल्पाद् गतयुगानि ४३२ $\frac{३}{४}$ (मध्यमाधिकारे २८९ श्लोकटीका द्रष्टव्या)

एतानि युगसावनदिवसै—१५७७९१७५०० गुणानि जातः सावनाहर्गणः
 $= .४३२ \times १५७७९१७५०० + \frac{१५७७९१७५०० \times ३}{४} = ४३२ \times १५७७९१७५००$
 $+ ३९४४७९३७५ \times ३$ । अयं सप्ततष्टो जातो द्वापरान्ते वारः $= ५ \times ५ + ३ \times ३$
 $= २५ + ९ = ३४ = ६$ । अयं सैकः कलियुगादौ वारः ७ = ० । अतो यदि गुरुवाराद्-
 गणनाऽऽरभ्यते तदा कलियुगादौ गतवारः ० । वर्तमानो गुरुरेव सिध्यत्यत आर्य-
 भटमतेन कल्पादौ गुरुवार आयाति ॥ ११ ॥

वि. भा.—स्वतन्त्रे 'गुरुदिवसात् भारतात् पूर्वं' मित्यनेन कल्पादावार्य-
 भटेन गुरुवारः स्वीकृतोऽस्ति । तेनायमर्थः—यस्मात् कारणात्-अस्य (आर्यभटस्य)
 ओङ्कारः (स्वीकारः) कल्पादावौदयिको दिनवारो गुरुर्भवति रविर्न भवति
 तस्मादस्य-ओङ्कारः स्वीकारो विस्तरः (आधाररहितोऽर्थादप्रामाणिकः) (स्तरः

अत्रोपपत्तिः

आर्यभटमतेन कलियुगारम्भात् पूर्वं वर्त्तमानकल्पे षड् ६ मनवो व्यतीता
 युगचरणत्रयं च, तथा तन्मते द्विसप्ततियुगैरेको मनुमतः कल्पादौ द्वापरान्ते
 कल्पाद् गतयुगानि $= ७२ \times ६ + \frac{३}{४} = ४३२ \frac{३}{४}$, युगपठितसावनदिनैर्गुणनेन

जातः सावनाहर्गणः $= ४३२ \times १५७७९१७५०० + \frac{३ \times १५७७९१७५००}{४}$, युग-
 पठित सावनदि. $= १५७७९१७५०० = ४३२ \times १५७७९१७५०० + ३९४४७९३७५ \times ३$
 अयं सप्तभिर्भक्तस्तदा द्वापरान्ते वारः $= ५ \times ५ + ३ \times ३ = २५ + ९ = ३४$ सप्तत-

श्रिते शेषम् = ६ अयं सैकस्तदा कलियुगादौ वारः = ७, वा = ० अतो यदि गुरुवार-
द्वारगणना प्रारम्भ्यते तदा कलियुगादौ गतवार = ०, वर्त्तमानो वारो गुरुरेव
सिध्यत्यत आर्यभटमतेन कल्पादौ गुरुवार आयाति ॥११॥

अब आर्यभटोक्त कल्पादिवार का खण्डन करते हैं ।

हि. भा.—अपने तन्त्र में 'गुरुदिवसात् भारतात्पूर्वं' इस से कल्पादि में आर्यभट
ने गुरुवार स्वीकार किया है, इसी कारण से कल्पादि में औदयिक दिनवार गुरु है, रवि
नहीं यह जो आर्यभट ने स्वीकार किया है सो विस्तर है अर्थात् आधार रहित (अप्रामाणिक)
है इति ॥११॥

उपपत्ति

आर्यभट के मत से कलियुगारम्भ से पूर्व वर्त्तमान कल्प मे छः मनु व्यतीत हुए, हे नथा
तीन युगचरण व्यतीत है और उनके मत में बहत्तर ७२ युगो का एक मनु है इसलिये
कल्पादि (द्वापरान्त) में कल्प से गतयुग— $७२ \times ६ + \frac{३}{४} = ४३२ \frac{३}{४}$, युगपठितसावन
दिन = १५७७९१७५०० इस से गुणने से सावनाहर्गण हुआ । ४३२×१५७७९१७५००
 $+ \frac{३ \times १५७७९१७५००}{४}$ इस को सात से भाग देने से द्वापरान्त में वार = $५ \times ५ + ३ \times ३$

= $२५ + ९ = ३४$ सात से अधिक है, इसलिये सात से भाग देने से शेष = ६ इस में सैक
करने से कलियुगादि में वार = ७, वा = ० इसलिये यदि गुरुवार से वार गणना प्रारम्भ
करते हैं तब कलियुगादि में गतवार = ०, वर्त्तमान वार गुरुवार ही सिद्ध होता है अतः
आर्यभट के मत से कल्पादि में गुरुवार ही आता है । परन्तु यहां मुझे यह कहना है कि
आर्यभट भी तो वार गणना रवि, सोम, मंगल... इसी क्रम से करते हैं, रवि से वार
गणना क्यों की जाती है इसका एक मात्र कारण यही है कि सृष्ट्यादि काल में रविवार
थान्तब फिर कल्पादि को गुरुवार में क्यों कहेंगे, गुरु दिनान्त में द्वापर युग समाप्त हुआ
अर्थात् कलियुगारम्भ हुआ, यहां शुक्रवार में सिद्धान्तकार लोग कलियुगारम्भ स्वीकार
करते हैं इसलिये कलियुगादि से अभीष्ट रवि मण्डलान्त में जो गतकाल (कलिगत) है उससे
पूर्ववत् ग्रहानयन होता है परन्तु यहां शुरु से आरम्भकर वर्षाधिपति की गणना होती है ।

(१) अत्रात्माकं कथनमस्ति यदार्यभटोऽपि तु, रविः, सोमः, कुजः.....
एतत्क्रमेणैव वारगणनां करोति, रवितो वारगणना कथं भवतीत्यत्रैकमात्रकारणमिदमेवास्ति
यत् सृष्ट्यादिकाले रविवार एवाऽसीत् । तदा कल्पादौ गुरुवार आसीदिति तेन प्रकाण्ड-
विदुषा कथं कथयिष्यते, गुरुदिनान्ते द्वापरयुगसमाप्तिरभवत्-कलियुगारम्भश्च शुक्रवारे
ऽभवत् । मन्येऽत्रैव मत भेदोऽस्ति कलियुगारम्भ आर्यभटेन गुरुवारे कथ्यते, मन्दिचारे त्वित्थ-
मेवाऽऽयाति । गुरुवारे कल्पादिरभवदिति कैरपि स्वीकर्तुं न शक्यत इति ।

वाराहपति की गणना भी शुक्र ही से होती है, आर्यभट्ट शुक्रवार में कलियुगादि नहीं मानते हैं गुरुवार में मानतं है, कल्पादि को गुरुवार से मानना तो नितान्त अनुचित है इस को तो कोई भी स्वीकार नहीं कर सकता है । आर्यभट्ट भी वारगणना रवि से ही करते हैं इति ॥११॥

इदानीमार्यभटोक्तवारप्रवृत्तिं खण्डयति ।

सूर्यादयश्चतुर्था दिनद्वारा यदुवाच तदसदार्यभटः ।

लङ्कोदये यतोऽर्कस्यास्तमयं प्राह सिद्धपुरे ॥१२॥

सु. भा.—आर्यभटेन 'शीघ्रक्रमाच्चतुर्था भवन्ति सूर्यादयो दिनपाः ।' इति

स्वतन्त्रे लिखितम् । च^१, बु^२, शु^३, र^४, कु^५, गु^६, श^७ । कक्षाक्रमेण ग्रहाणां संस्था । तत्र शीघ्रक्रमात् सूर्यादयो ग्रहाः र, चं, मं, बु, गु, शु, श । उपरिष्ठा ग्रहा मन्दगतयोऽवस्थाः शीघ्रगतयो भवन्ति । ते च रवितः शीघ्रक्रमादधःस्थग्रहगणनया विपरीतगणनया रवेरनन्तरं शुक्रस्तदनन्तरं बुध इत्यादिगणनयेति स्फुटम् । अथ गोलपादे च तेनैवार्यभटेन 'उदयो यो लङ्कायां सोऽस्तमयः सवितुरेव सिद्धपुरे' इत्युक्तम् । तेनायमर्थः । सूर्यादयश्चतुर्था दिनद्वारा दिनपा भवन्तीति यदार्यभट उवाच तदसत् । यतः स एव लङ्कोदये सिद्धपुरेऽर्कस्यास्तमयं प्राह । अर्थाद्यदि लङ्कोदये वारादिस्तिर्हि सिद्धपुरेऽपि कथं न स एव वारादिरतो वारगणना स्थिरा न । अतस्तदुक्ताः सूर्यादयश्चतुर्था दिनपाः स्थिरा न समीचीनाः । आर्यभटेनैकदेशस्थितिवशेन दिनवारगणना प्रदर्शिताऽतोऽसद्गूढगणमेतत् ॥ १२ ॥

वि. भा.—शीघ्रक्रमाच्चतुर्था भवन्ति सूर्यादयो दिनपाः, इत्यार्यभटोक्तम् । कक्षाक्रमेण ग्रहाणां स्थितिः=चन्द्रः, बुधः, शुक्रः, रविः, कुजः, गुरुः, शनिः । चन्द्रादुपरिष्ठा ग्रहाः क्रमशो मन्दगतयो भवन्ति, आर्यभटोक्तपद्येनाने 'शीघ्रक्रमाच्चतुर्था' नेत्यादि रविः, चन्द्रः, कुजः, बुधः, गुरुः, शुक्रः, शनिः, इति दिनपतयः । गोलपादे 'उदयो यो लङ्कायां सोऽस्तमयः सवितुरेव सिद्धपुरे' आर्यभटेनोक्तम् । तेनायमर्थः—सूर्योदयश्चतुर्था दिनद्वारा दिनपा भवन्तीति यदार्यभट उवाच तदसत् । यतः स एव लङ्कोदये सिद्धपुरेऽर्कस्यास्तमयं प्राह; शीघ्रक्रमाच्चतुर्था इत्यादिना ऽऽर्यभटेन यद्दिनपतिज्ञानं कृतं तत् समीचीनमेव । संसारे सर्वत्रैव वारगणनक्रमो रवित एवास्ति, तज्ज्ञानप्रकार आर्यभटेन प्रदर्शितोऽस्ति । सूर्यसिद्धान्ते 'मन्दादधः क्रमेण स्युश्चतुर्था दिवसाधिपाः' अनेन दिनपतिज्ञानप्रकार एव कथ्यते । पूर्वलिखितप्रकारयोः (आचार्योक्तसूर्यसिद्धान्तोक्तयोः) केवलमेता-

वानेव भेदोऽस्ति यदाचार्येण रवित आरभ्य शीघ्रक्रमाच्चतुर्थश्चतुर्थो वारो दिनपति-
र्भवतीति कथ्यते, सूर्यसिद्धान्तकारेण शनित आरभ्याऽधोऽधः क्रमेणार्थाच्छीघ्र-
गतिक्रमेण चतुर्थश्चतुर्थो वारो दिनपतिः कथ्यते । तथा लङ्कोदयकाल एव
सिद्धपुरेऽस्तकालो ऽतो यदि लङ्कोदये वारादिस्तदा सिद्धपुरेऽपि (सिद्धपुरीयास्त-
कालेऽपि) स एव वारादिर्भवेदेव, तद्वार्यभटोक्तौ को दोष आयातीति न ज्ञायते ।
“सूर्यादयश्चतुर्था दिनवारा दिनपा भवन्तीति यदायभट उवाच तदसत् यतः स एव
लङ्कोदये सिद्धपुरेऽर्कस्यास्तमयं प्राह । अर्थाद्यदि लङ्कोदये वारादिस्तर्हि सिद्धपुरेऽपि
कथं न स एव वारादिरतो वारगणना स्थिरा न, अतस्तदुक्ताः सूर्यादयश्चतुर्था
दिनपाः स्थिरा न समीचीनाः” इति कथनं समीचीनं न प्रतिभाति, आर्यभटोक्तं
समीचीनमेवास्ति, आचार्यो व्यर्थमेव खण्डयतीति ॥१२॥

अब आर्यभटोक्त वार प्रवृत्ति का खण्डन करते हैं ।

हि. भा. ‘शीघ्रक्रमाच्चतुर्था भवन्ति सूर्यादयो दिनपाः’ यह आर्यभटोक्त पद्य है, कक्षा
क्रम से ग्रहों की स्थिति इस तरह है—चन्द्र, बुध, शुक्र, रवि, कुज, गुरु, शनि, चन्द्र से
उपरिस्थित ग्रह क्रम से मन्द गति होते हैं । आर्यभटोक्त पद्य से रवि से शीघ्र क्रम से
चौथे चौथे ग्रह दिनपति होते हैं अर्थात् रवि, चन्द्र, कुज, बुध, गुरु, शुक्र, शनि दिनपति
हैं, गोलपाद में आर्यभटोक्ति है “उदयो यो लङ्कायां सोऽस्तमयः सद्यितुरेव सिद्धपुरे” इसलिये
यह अर्थ है कि सूर्य आदि चौथे चौथे ग्रह दिनपति होते हैं यह जो आर्यभट कहते हैं सो
ठीक नहीं है क्योंकि वे ही आर्यभट लङ्कोदय में सिद्धपुर में सूर्य के अस्तमय को कहते हैं,
आर्यभट ने “शीघ्र क्रमाच्चतुर्था भवन्ति सूर्यादयो दिनपाः” इससे जो दिनपति का ज्ञान किया है
सो ठीक ही है, ससार में सब जगह रवि ही से वार गणना क्रम है अर्थात् रवि सोम,
कुज, बुध..... यही क्रम है इस के ज्ञान के लिये आर्यभट ने प्रकार दिखलाया है ।
सूर्य सिद्धान्त में “मन्दादधः क्रमेण स्युश्चतुर्था दिवसाविपाः” इस से दिनपतिज्ञान का प्रकार
कहा है । दोनों (आचार्योक्त और सूर्य सिद्धान्तोक्त) प्रकारों में केवल इतना ही भेद है कि
आचार्य रवि से शीघ्र क्रम से चौथे चौथे ग्रह को दिन पति कहते हैं और सूर्यसिद्धान्तकार
शनि से अधोऽधः क्रम से अर्थात् शीघ्रगति क्रम में चौथे चौथे ग्रह को दिनपति कहते हैं,
दोनों प्रकार समान ही हैं । तथा लङ्कोदय काल ही सिद्धपुरीय अस्तकाल है, इसलिये यदि
लङ्कोदय में वारादि है तो वही सिद्धपुरीयास्त काल में भी होगा तब आर्यभटोक्ति में
क्या दोष आता है यह मैं नहीं कह सकता हूं, “सूर्य आदि चौथे दिनवार दिनपति होते हैं”
यह जो आर्यभट ने कहा है सो ठीक नहीं है, क्योंकि वे ही आर्यभट लङ्कोदय काल में सिद्धपुर
में अस्तमय कहते हैं अर्थात् यदि लङ्कोदय में वारादि है तो सिद्धपुर में भी वही वारादि
क्यों नहीं होता, इसलिये वार गणना स्थिर नहीं हो सकती है अतः आर्यभटोक्त ‘सूर्यादयश्चतुर्था
दिनपाः’ यह ठीक नहीं है यह कथन मुझे ठीक नहीं मालूम होता है, आर्यभटोक्त समीचीन
ही है, आचार्य निरर्थक ही खण्डन करते हैं इति ॥१२॥

अथ पुनरायंभटोक्तवारादि खण्डयति ।

अधिकैः शतैश्चतुर्भिवर्षसहस्रैश्चतुर्दशभिरेकः ।

युगयातैर्दिनवारान्तरमौदयिकार्थं रात्रिकयोः ॥१३॥

सु. भा.—आयंभटेन ग्रन्थद्वयं रचितम् । एकस्मिन् युगसावनदिनानि १५७७९१७५०० । लङ्कायामर्कौदये सृष्टिः । अन्यस्मिन् युगसावनदिनानि १५७७९१७८०० लङ्कायामर्धरात्रे सृष्टिः । उभयत्र युगवर्षसंख्या ४३२०००० एतावती तुल्यैव । अतो ग्रन्थद्वयतो वारगणनया युगवर्षैर्दिनशतत्रयान्तरं तथाऽनुपातेनैकदिन वारान्तरं च $\frac{४३२००००}{३००} = १४४००$ एतैर्युगयातवर्षैः । तेनायमर्थः । आयंभटमतेनौदयिकार्ध-रात्रिकयोर्दिनवारमध्ये चतुर्दशभिर्वर्षसहस्रैश्चतुर्भिः शतैर्वर्षैरधिकैर्युगयातैर्दिनवारान्तरं दिनवारयोरेकमन्तरं पततीति वारगणना न स्थिरेति ॥ १३ ॥

वि० भा०—आयंभटेन ग्रन्थद्वयं रचितम् । एकस्मिन् ग्रन्थे युगसावन-दिनानि=१५७७९१७५००, लङ्कायां रव्युदये सृष्टिः । अन्यस्मिन् ग्रन्थे युगसावन-दिनानि=१५७७९१७८००, लङ्कायामर्धरात्रे सृष्टिः । उभयत्र युगवर्षसंख्या=४३२०००० समाना एव, युगपठितसावन दिनान्तरम्=३००, अतो ग्रन्थद्वयतो वारगणनया युगवर्षैर्दिनशतत्रयान्तरं भवति, तथानुपातेनैकदिनवारान्तरं च $\frac{४३२००००}{३००} = १४४००$ एतैर्युगयातवर्षैः । तेनायमर्थः—आयंभटमतेनौदयिकार्धरा-

त्रिकयोर्दिनवारमध्ये चतुर्दशभिर्वर्षसहस्रैश्चतुर्भिः शतैर्वर्षैरधिकैर्युगयातैर्दिनवार-योरेकमन्तरं पततीति वारगणना न स्थिरेति । सर्वप्रथममार्यभटस्यायं दोषो यत्तेनैकस्मिन् ग्रन्थे युगसावनदिनानि यानि लिखितानि तद्भिन्नान्यन्यस्मिन् ग्रन्थे कथं लिखितानि, तथैकत्र लङ्काकोदयकाले सृष्टिरन्यत्र लङ्काधर्धरात्रे सृष्टिः कथं लिखिता, एकस्मिन्नेव विषये मतद्वयप्रतिपादनमेव तस्य दोषाधिक्यं व्यनक्ति अन्यद्वस्तु दूरे तिष्ठतु । अत्राचार्योक्तखण्डनमपि समोचनमेवास्त्योति विज्ञेय-मिति ॥१३॥

अब पुनः आयंभटोक्त वारादि का खण्डन करते हैं ।

हि. भा.—आयंभट ने दो ग्रन्थों को बनाया, एक ग्रन्थ में युग सावन दिन संख्या = १५७७९१७५०० तथा लङ्का में रवि के उदयकाल में सृष्टिकाल लिखा है । दूसरे ग्रन्थ में युग सावन दिन सं. = १५७७९१७८०० तथा लङ्का के अर्धरात्र समय में सृष्टि काल लिखा है । दोनों ग्रन्थों में युगवर्ष संख्या = ४३२०००० इतनी ही है, युग पठित सावन दिनों का अन्तर = १५७७९१७८०० - १५७७९१७५०० = ३००, इसलिये दोनों ग्रन्थों से युगवर्षों में

वार गणना से तीन सौ ३०० दिन का अन्तर पड़ता है, तथा अनुपात से एकदिन वारान्तर
 $\frac{४३२००००}{३००} = १४४००$ इतने युग गत वर्षों में होते हैं, इसलिये ऐसा अर्थ कीजिये कि

आर्यभट के मत से औदयिक दिनवार और अर्धरात्रिक दिनवार के मध्य में चौदह हजार चार सौ युगगत वर्षों में दोनों दिनवारों का अन्तर एक होता है इसलिये आर्यभटोक्त वारगणना स्थिर नहीं है सिद्ध हुआ । सब से मुख्य दोष आर्यभट मत में यह है कि उन्होंने एक ग्रन्थ में युग सावन दिन जो लिखे हैं उससे भिन्न दूसरे ग्रन्थ में लिखा; एक ही विषय में दो तरह के मत होना यही आर्यभट का सब से प्रधान दोष है, और बाते अनग रहीं । यहाँ आचार्योक्त खण्डन युक्तियुक्त है इसको विज्ञ लोग समझे इति ॥१३॥

इदानीमार्यभटोक्त ग्रही खण्डयति ।

औदयिकादिनभुक्तेस्तुर्याशेनार्धरात्रिको भवत्यूनः ।

कतरं स्फुटं न निश्चितमनयोः स्फुटमेकमपि नातः ॥ १४ ॥

सु. भा.—आर्यभटस्य प्रथमग्रन्थेनौदयिको ग्रहो य आगच्छति तस्माद् द्वितीयग्रन्थागत आर्धरात्रिको ग्रहो दिनगति चतुर्थाशेनोभो भवति, अर्थाद् द्वयोर्ग्रहयोरन्तरे ग्रहगतिचतुर्थाशकला भवन्ति । यतोऽनयोः कतरं स्फुटं वास्तवमित्यार्यभटेन न निश्चितमतस्तन्मते नैकमपि न स्फुटमिति ॥ १४ ॥

वि. भा.—औदयिकात् (आर्यभटस्य प्रथम ग्रन्थेन समागतात्) ग्रहात्-आर्धरात्रिको (द्वितीयग्रन्थागतः) ग्रहो दिनभुक्तेस्तुर्याशेन (दिनगतिचतुर्थाशेन) ऊनो भवत्यर्थाद् द्वयोर्ग्रहयोरन्तरे ग्रहगतिचतुर्थाशकला भवन्ति । यतोऽनयोर्मध्ये कतरं स्फुटं (वास्तव) इत्यार्यभटेन न निश्चितमतस्तन्मतेनैकमपि न स्फुटमस्तीति । ग्रन्थद्वये प्रतिपादितयो (लङ्कार्कोदयिकार्धरात्रिकयोः) ग्रहयोः कः स्फुट एतत्प्रश्नस्यैवाऽऽवश्यकता नासीद्यद्यार्यभटेनोभयत्रैकस्यैव ग्रहस्योल्लेखः कृतो भवेत् । आर्यभटेनग्रन्थद्वये भिन्नं भिन्नं (लङ्कार्कोदयिकमार्धरात्रिकं च) ग्रहद्वयं प्रतिपाद्य स्वस्याल्पज्ञत्वं प्रकटीकृतमिति, यस्यमूलमशुद्धं तत्सम्बन्धेऽनेके दोषा आद्यान्त्येवात्राऽऽचार्यखण्डनं युक्तिसङ्गतमेवेति ॥ १४ ॥

अथ आर्यभटोक्त ग्रहद्वय का खण्डन करते हैं ।

हि. भा.—आर्यभट के प्रथमग्रन्थ से जो औदयिक ग्रह आते हैं उससे द्वितीय ग्रन्थागत आर्धरात्रिक ग्रहदिनगति के चतुर्थांश तुल्य ऊन (अल्प) होते हैं अर्थात् दोनों ग्रहों के अन्तर में ग्रहगति चतुर्थांशकला होती है । इन दोनों ग्रहों में कौन स्फुट (वास्तव) है यह बात आर्यभट ने निश्चित की है इसलिये उनके मत से एक भी ग्रह स्फुट नहीं है । दोनों ग्रन्थों में कथित लङ्कार्कोदयिक ग्रह और लङ्कार्ध रात्रिक ग्रह में कौन स्फुट है इस प्रश्न की आवश्यक-

कता ही नहीं थी यदि आर्यभट ने दोनों ग्रन्थों में एक ही ग्रह का उल्लेख किया होता । आर्यभट ने दोनों ग्रन्थों में भिन्न भिन्न (औदयिक और आर्धरात्रिक) ग्रहों का प्रतिपादन कर अपनी अल्पज्ञता ही को प्रकाशित किया है । जिस विषय का मूल अशुद्ध रहता है उसके विषय में अनेक दोष आते ही है यहां आचार्य जो खण्डन करते हैं सो युक्ति सङ्गत ही है इति ॥ १४ ॥

इदानीमार्यभटोक्तभूव्यासमानं खण्डयति ।

षोडशगवियोजनपरिधिं प्रतिभूव्यासं पुलावदता ।

आत्मज्ञानं ख्यापितमनिश्चयस्तत्कृतकन्यात् ॥ १५ ॥

(नृषि-योजन भूपरिधिं प्रतिभूव्यासं पुनर्जिला वदता ।

आत्मज्ञानं ख्यापितमनिश्चयस्तत्कृतकन्यासः ॥ १५ ॥)

(इति कोष्ठकान्तर्गतः सुधाकरद्विवेदिशोधितः पाठः साधुः)

सु. भा.—आर्यभटेन 'घहस्तो ना' चतुर्हस्तः पुरुष इत्युक्तम् तथा नृषि-योजनं नरप्रमाणानां षि-अष्टसहस्रं योजनमुक्तम् । तैर्योजनैर्यो भूपरिधिरस्ति त प्रति भूव्यासश्च त्रिला त्रि सहस्रं ला पञ्चाशत् पञ्चाशदधिकसहस्रयोजनानि भूव्यासस्तेनार्यभटेनोक्तः स च न समीचीनः । आचार्ययोजनमानमार्यभटयोजन-मानं त्वेकमेव परन्तु भूव्यासमाने भेदोऽत आचार्यस्य 'आर्यभटेन पुनर्भूव्यासं त्रिला वदताऽऽत्मज्ञानमात्रमेव ख्यापितं प्रसिद्धीकृतं वस्तुतस्तत्कृते भूव्यासो-ऽनिश्चयोऽस्ति न समीचीन' इति खण्डनम् । बागबलमेतद्युतचप्रतिपादनादिति ।

तथाचार्यभटः ।

'नृषि योजनं त्रिला भूव्यास' इति (गीतिकापा० ५२लो०)

घहस्तोना (गीतिका पा० ६ श्लो०) ॥ १५ ॥

वि. भा.—'घहस्तोना' चतुर्हस्तः पुरुष इत्यार्यभटोक्तम् । नृषि योजनं (नर-प्रमाणानां षि-अष्टसहस्रं) योजनं उक्तम् । तैर्योजनैर्यो भूपरिधिरस्ति तं प्रति भूव्यासश्च त्रिला (त्रि 'सहस्रं', ला 'पञ्चाशत्' अर्थात् पञ्चाशदधिकसहस्रयोजन-नानि) तेनो (आर्यभटेन) क्तः स च न समीचीनः । द्वयो (आचार्याऽऽर्यभटयोः) र्योजनमानमेकमेव किन्तु भूव्यासमानेऽन्तरमस्त्यत आचार्यस्य 'आर्यभटेन पुनर्भू-व्यासं त्रिला (१०५० योजनानि) वदताऽऽत्मज्ञानमात्रमेव ख्यापितं (प्रसिद्धी कृतं) वस्तुतस्तत्कृते भूव्यासोऽनिश्चयोऽस्ति (न समीचीनः) आचार्येणात्र न कापि युक्तिः प्रदर्शिताऽत आचार्योक्तमिदं खण्डनं कथमादरणीयं भवेत् । वस्तुतो भूव्यासज्ञानं वेधाधीनम् । वेधेन यस्य यन्मितो भूव्यास उपलब्धस्तन्मितो लिखितः । भूव्यास

ज्ञानार्थमेकः प्रकारो मया लिख्यते, भौगोलिकं किमप्येकं वृत्तं ग्रहोत्तम्यम् । तद्वृत्त-
परिधौ कुत्रापिष्टककटस्थै (कर्कटकस्याग्रयोरन्तरं मापनेन विदितमस्ति) कमग्रं-
स्थापयित्वा द्वितीयाग्रस्य भ्रमणेनैकं लघुवृत्तं लेख्यम् । यथा

न = कर्कटस्थैकमग्रम् । द्वितीयाग्रस्य भ्रमणेन जात लघु-
वृत्तम् । नम = कर्कटकाग्रद्वयान्तरं विदितं मस्ति,

नमचापम् = नरचापम् अतः नम पूर्णज्या = नर पूज्या

नम, नर, मर रेखाभिरुत्पन्नं त्रिभुजं समद्विबाहुकम् । न
बिन्दुतो मरपूर्णज्योपरिकृतो लम्बो भौगोलिकवृत्तकेन्द्रे (भूकेन्द्रे)
गतो भवेत्तदा यन = भूव्यासः यम रेखा कार्या, < यमन = ९०

नम चापं विदितमस्ति तेन तज्ज्यो (मस) त्क्रमज्या (सन) पूर्णज्या (नम)
अपि विदिता भवेयुस्तदा यमस, मसन त्रिभुजयोः साजात्यात्

$$\frac{\text{मस} \times \text{मस}}{\text{नस}} = \text{यस} = \frac{\text{मस}^2}{\text{नस}}$$

अत्र नस, मस विदिते स्तस्तेन यक्ष रेखा विदिता जाता,

अतः यस + नस = नय = भूव्यासः, एवं भूव्यासस्य ज्ञानं जानम् । गणित-
करणेन नयमानं मन्मत्तमागच्छेत्तदेव वास्तव भूव्यासमानं भवितुमर्हति । 'नृषि
योजन त्रिला भूव्यास' इति गोतिकायाः ५ श्लोके तथा 'घहस्तोना' गोतिकायाः ६
श्लोके आर्यभटोक्तमिति ॥१५॥

अत्र आर्यभटोक्तं भूव्यासमानं का खण्डनं करते हैं ।

हि. भा. — 'घ हस्तोना' अर्थात् चार हाथ के पुरुष होते हैं यह आर्यभटोक्त है, आठ
हजार पुरुष प्रमाण का एक योजन होता है, उन योजनों से जो भूपरिधि है उसका व्यास
(भूव्यास) १०५० एक हजार पचास योजन आर्यभट ने कहा है सो ठीक नहीं है । आचार्य
और आर्यभट के योजनमान एक ही हैं लेकिन भूव्यास मान में भेद है, आचार्य कहते हैं
कि आर्यभट ने भूव्यास मान '१०५० योजन' को कहते हुए आत्मज्ञानमात्र को प्रसिद्ध किया है
वस्तुतः उनके मत में भूव्यास अनिश्चित (असमीचीन) है, आचार्य ने यहां कोई युक्ति नहीं
दिखाई है इसलिये यह खण्डन कैसे आदरणीय हो सकता है । वस्तुतः भूव्यास का ज्ञान वेध
के अधीन है, वेध से जिनको जितना भूव्यास उपलब्ध हुआ है उतना अपने-अपने ग्रन्थ में
आचार्यों ने लिखा है । भूव्यास ज्ञान के लिये यहां एक प्रकार हम दिखलाते हैं । भौगोलिक
कोई एक वृत्त लीजिये । उस वृत्त की परिधि में इष्ट कर्कट (कर्कट के दोनों अग्रों के अन्तर
मापन के द्वारा विदित है) के एक अग्र को रख कर दूसरे अग्र को घुमाने से एक लघुवृत्त
लिखिये । यहां सं. व्याख्या में लिखित क्षेत्र को देखिये । न = कर्कट का एक अग्र, द्वितीय अग्र

ने घुमाने से एक लघुवृत्त हुआ जो क्षेत्र में देखने में आता है। नम=कर्कट के दोनों अग्रों ; अन्तः, विदित है, नम चाप=नरचाप इसलिये नम पूर्णज्या=नर पूर्णज्या नम, नर, र रेखाओं से उत्पन्न त्रिभुज सम द्विबाहुक है, न बिन्दु से मर पूर्णज्या के ऊपर लम्ब करने वह लम्बरेखा भौगोलिकवृत्तकेन्द्र (भूकेन्द्र) गत होती है (रे. ग. ३ अ युक्ति से), तब न = भूव्यास दम रेखा लीजिये। < यमन = ६० (रे. ग. ३ अध्याय), नम चाप विदित ; इसलिये उसकी ज्या = मस, उत्क्रमज्या = सन, पूर्णज्या = मर ये सत विदित होगी। अब यमस, मसन दोनों त्रिभुजों में सजातीय होने के कारण अनुपात करते हैं $\frac{मस}{नस} = \frac{यस}{नस} = \frac{मस}{नस}$ यहां नस, मस विदित है इसलिये यस रेखा भी विदित हो गई। अतः यस + नस = नय = भूव्यास, इस तरह भूव्यास का ज्ञान हो गया, गणित करने से नय का मान जितना आता है उतने ही वास्तव भू व्यास मान होंगे।

‘नृषि योजन त्रिला भूव्यासः’ गीतिका के ५ श्लो ०, अर्थात् आठ हजार पुरुष प्रमाण का एक योजन होता है उन योजनों से १०५० = भूव्यास, तथा ‘व हस्तोना’ गीतिका का ६ छठा श्लो. अर्थात् चार हाथ का पुरुष होता है यह आर्यभटोक्त है इति ॥१५॥

इदानीं भूव्यासस्य प्राधान्यं वर्णयति ।

भूव्यासस्याज्ञानाद् व्यर्थं देशान्तरं तदज्ञानात् ।

स्फुटतिथ्यन्ताज्ञानं तिथिनाशाद् ग्रहणयोर्नाशः ॥१६॥

सु. भा.—भूव्यासस्याज्ञानाद् देशान्तरं व्यर्थं मशुद्धं भवति। तदज्ञानाद्देशान्तराज्ञानात् स्फुटतिथ्यन्तस्याज्ञानम्। तिथिनाशाद् ग्रहणयोर्नाश इति प्रसिद्धमेव ॥ १६ ॥

वि. भा.—भूव्यासस्याज्ञानात् देशान्तरं व्यर्थं (अशुद्धं) भवति, तदज्ञानात् (देशान्तराज्ञानात्) स्फुटतिथ्यन्तस्याज्ञानम् तिथिनाशाद् ग्रहणयोर्नाश इति ॥१६॥

अत्रोपपत्तिः ।

भूकेन्द्रान्नाडीवृत्तस्य प्रति बिन्दौ रेखा नेयास्ता भूबिम्बे यत्र लग्नास्तदा कृतिर्दृष्टाकारा भवति तदेव वृत्त स्फुटभूपरिधिः। स्वपृष्ठस्थानाद् ध्रुवयष्ट्युपरि यो लम्बस्तदेव स्फुटभूपरिधिव्यासार्धम्। भूकेन्द्रात्स्वपृष्ठस्थानं यावद् भूव्यासार्धं कर्णः। स्फुटभूव्यासार्धं कोटिः। भूकेन्द्रात्कोटिमूलं यावद् भुजः। अत्र त्रिभुजे भूकेन्द्रलग्नकोणो लम्बांशास्ततोऽनुपातो यदि त्रिज्यया भूव्यासार्धं लभ्यते तदा लम्बज्यया किं लब्धं स्फुटभूपरिधिव्यासार्धम् = $\frac{\text{लज्या}}{\text{त्रि}} \cdot \frac{\text{भूव्यासार्धं}}{1}$ ततो भूव्यासार्धेन भूपरिधिर्लभ्यते तदा स्फुटभूपरिधिव्यासार्धेन किं समागतः स्फुटभूपरिधिः-

$$= \frac{\text{भूप} \times \text{स्फुटभूप}}{\text{भूव्या} \frac{1}{2}} = \frac{\text{भूप} \times \text{लंज्या} \times \text{भूव्या} \frac{1}{2}}{\text{त्रि. भूव्या} \frac{1}{2}} = \frac{\text{भूप. लंज्या}}{\text{त्रि}}, \text{स्वस्फुटभूपरिधि-}$$

अत्रार्यभटाभिप्रायमनुदुधैव परमेश्वरेण स्वटीकायामन्यथा व्याख्यातं तत् सुधीभिर्नादिरणोयमिति । यदि परमेश्वरव्याख्या समोचीना स्यात् तर्हि ब्रह्मगुप्त खण्डनस्यावसरो नैव भवेत् 'प्राणेनेति कलां भ'मिति तत्प्रकल्पितः पाटोऽपि नार्य-भटसंमत इति सुधीभिर्भृशं विचिन्त्यम् ॥ १७ ॥

वि. भा.—आर्यभटेन भूश्चला भगणाः स्थिरा इति कल्पितम् । यथाऽन्येऽहो-रात्रासुभिर्भ्रमादेकं भदिन मन्यन्ते तथैवार्यभटोऽहोरात्रासुभिः स्वाक्षोपरि भूभ्रमणं मन्यते । तेनायमर्थः—यदि भूः प्राणेन (एकेनामुना) एकां कलामेति (गच्छति) तर्हि नरः कुतः (कस्मात् स्थानात्) कमध्वानं (कं मार्गं) व्रजेत् । अर्थात् मनुष्याः पक्षिणश्च पृथिव्याः पूर्वाभिमुखभ्रमणेन स्वस्थानतोऽन्यत्रगताः पुनः स्वस्थानं न प्राप्नुयुः । तथा उर्व्याः (भूमेः) यद्यध ऊर्ध्वं वा आवर्त्तनं (भ्रमणं) भवेत्तदा समुच्छ्रयाः (प्रासादपर्वतादयः) कस्मात्कारणात् न पतन्ति, अतो भूमेः पूर्वाभिमुखं भ्रमणं न भवतीत्याचार्याभिप्रायः । सूर्यसिद्धान्तकारेणा "मध्ये समन्तादण्डस्य भूगोलो व्योम्नि तिष्ठति । बिभ्राणः परमां शक्तिं ब्रह्मणो धारणा-त्मिकाम्" ज्ञेन भुवः स्थिरत्वमेवोक्तम् । लल्लभास्करप्रभृतय आचार्या भुवः स्थिरत्वमेवोक्तवन्तः । आकाशे ये किल ग्रहादिपिण्डास्ते सर्वे सततं भ्रमन्त्येव तर्हि प्राचीनैरस्मज्ज्योतिषसिद्धान्तकारैः कथं भुवः स्थिरत्वं प्रतिपादितम्, तत्रेदं कारणं यद्यस्य गोलस्य पृष्ठे द्रष्टा तिष्ठति तं गोलमचलं मन्यतेऽन्ये च गोलास्त-द्वशतो भ्रमन्त इव भान्त्यत आचार्यैर्भूगोलपृष्ठवास्यभिप्रायेण 'आकाशे निराधागो ब्रह्मणो धारणात्मिकां शक्तिं धारयन् भूगोलस्तिष्ठति' त्युक्तम् । भूवायु-सहिताया भूमेः प्राग्भ्रमणं भवतीत्यज्ञात्वाऽऽचार्येणार्यभटोक्तभूभ्रमणं खण्डयते. वस्तुत आचार्यखण्डनमिदं न समोचीन मिति विज्ञैर्विविच्य ज्ञेयम् ॥१७॥

अब आर्यभटोक्त भूभ्रमण का खण्डन करते हैं ।

हि. भा.—आर्यभट पृथ्वी को चल और भगणों (नक्षत्रों) को स्थिर मानते हैं । जैसे अन्य आचार्य लोग ग्रहोरात्रासु में नक्षत्र भ्रमण से भदिन (नाक्षत्र दिन) को मानते

हैं वैसे आर्यभट्ट ग्रहोरात्रासु में अपने अक्ष के ऊपर भूभ्रमण (पृथ्वी के चलन) को मानते हैं। तब इलोक का यह अर्थ होता है कि यदि भू (पृथ्वी) एक असु में एक कला चलती है तो मनुष्य किस स्थान से किस मार्ग में जाता है अर्थात् मनुष्य और पक्षी गए पृथ्वी के पूर्वाभिमुख भ्रमण से अपने स्थान से अन्यत्र गये हुए पुनः अपने स्थान को नहीं प्राप्त करेंगे अर्थात् अपने स्थान में नहीं आयेगे। तथा यदि पृथ्वी का भ्रमण नीचे या ऊपर होता है तो कोठा पर्वत क्यों नहीं गिरते हैं—इसलिये पृथ्वी का पूर्वाभिमुख भ्रमण नहीं होता है यह आचार्य का अभिप्राय है। सूर्य सिद्धान्तकार ने “मध्ये समन्तादण्डस्य भूगोलो व्योम्नि तिष्ठति” इत्यादि सं. भाष्य में लिखित इलोक से पृथ्वी का स्थिरत्व ही कहा है, लल्लाचार्य-भास्कराचार्य आदि सब आचार्यों ने पृथ्वी का स्थिरत्व ही कहा है। आकाश में जितने ग्रहादि पिण्ड हैं वे सब सतत भ्रमण करते ही हैं तब हमारे प्राचीन ज्योतिषाचार्यों ने क्यों पृथ्वी को स्थिर माना है क्योंकि पृथ्वी पिण्ड भी तो आकाश ही में है, इस में यह कारण है कि जिस गोल के पृष्ठ के ऊपर द्रष्टा रहते हैं वे उसगोल को अचल (स्थिर) मानते हैं, अन्य गोल उसके वश से भ्रमण करते हुए मालूम पड़ते हैं इसलिये प्राचीनाचार्यों ने भूपृष्ठ वासी लोगों के अभिप्राय से ‘आकाश में निरावार और ब्रह्म की धारणात्मक शक्ति को धारण किये हुए भूगोल है’ कहा है, भू वायु से युक्त पृथ्वी का पूर्वाभिमुख भ्रमण होता है इस बात को न समझ कर आचार्य आर्यभट्टोक्त भूभ्रमण का खण्डन करते हैं। दस्तुनः आचार्य का यह खण्डन बिल्कुल असंज्ञत है इसको विज्ञ लोग विचार कर समझें इति ॥१७॥

इदानीमार्यभट्टोक्तमन्दपरिधि खण्डयति ।

अब आर्यभटोक्त मन्दपरिधि का खण्डन करते हैं ।

हि. भा.—आर्यभट ने विषम पद में और सम पद में कुजादि ग्रहों का मन्द परिध्यंश
 भिन्न भिन्न पठित किया है तब 'स्वेनाहते परिधिना भुज कोटि जीवे भांशैः' इत्यादि से सम-
 पदीय केन्द्रज्या को समपदीय मन्दपरिधि से गुणा कर भांश ३६० से भाग देने से जो लब्ध
 हो उसका चाप मन्द फलकला होती है, एवं विषमपदीय केन्द्रज्या को विषमपदीय मन्द-
 परिधि से गुणा कर भांश ३६० से भाग देने से जो लब्ध हो उसका चाप मन्द फल कला
 होती है, अब इससे श्लोक का अर्थ ऐसा होता है कि आर्यभट ने विषम पद में अग्न्य और सम-
 पद में अन्य जो औदयिक मन्द परिधि मन्द केन्द्र भुजज्या का गुणक पठित किया है सो ठीक

नहीं है, क्योंकि सन्धिस्थान (विषम पदान्त और समपदादि) में विषम पदीय परिधि से जो फल होता है तत्तुल्य ही समपदीय परिधि से समपदादि में फल नहीं होता है। लेकिन उन दोनों फलों का तुल्य होना उचित है। इसीलिए आर्यभटोक्त मन्दपरिध्यंश ठीक नहीं है यह आचार्य कहते हैं। दोनों पदों में परिधि पाठभेद से अवान्तर में अनुपात से परिध्यानयन करना चाहिए यह बात आर्यभट ने सूचित कर दी है। एव इष्ट कालिक मन्द परिधि वश से फल में भेद नहीं होता है। यहां आर्यभटोक्त वाक्य है “भाषार्थानि मन्दवृत्त शशिनः” इत्यादि स० भाष्य में लिखित पद्यों को देखिये। यहां भाष्य से साढ़े चार ६ से अपवर्तित परिधि समझनी चाहिये। यथोक्त ‘सूर्य, बुध, शुक्र, कुज, गुरु, शनि’ से, वरुणी ‘बुध, शुक्र, कुज, गुरु, शनि’ ग्रहों के चन्द्र की अपवर्तित मन्द परिधि = ७°, सूर्य की अपवर्तित मन्द परिधि = ३°, अन्य ग्रहों की प्रथम और तृतीय पद में अपवर्तित मन्द परिधि = बुध की = ७, शुक्र की = ४, कुज की = १४, गुरु की = ७, शनि की = ६ तथा द्वितीय और चतुर्थ पद में मन्द परिधि = बुध की = ५, शुक्र की = २, कुज की = १०, गुरु की = ८, शनि की = १३ एव शनि आदि ग्रहों की प्रथम पद में और तृतीय पद में शीघ्र परिधि = शनि की = ६, गुरु की = १६, कुज की = ५३, शुक्र की = ५६, बुध की = ३१, द्वितीय पद में तथा चतुर्थ पद में शनि की = ८, गुरु की = १५, कुज की = ५१, शुक्र की = ५७, बुध की = २६

यहां आर्यभटोक्त पद्यों की सख्या सङ्केत ज्ञान के लिये म. म. सुधाकर द्विवेदिरचित गणकतरङ्गिणी को देखिये। यहां आचार्य आर्यभटोक्त पठित विषमपदीय और समपदीय मन्द परिध्यंश का खण्डन जो किये हैं सो ठीक नहीं हैं यह ऊपर लिखित भाष्य से स्पष्ट है।

उपपत्ति ।

विष्णुधर्मोत्तर पुराणान्तर्गत ब्रह्मसिद्धान्त के स्फुट कर्त्ता आचार्य (ब्रह्मगुप्त) ने रवि और चन्द्र के वेध से भिन्न भिन्न मन्द परिध्यंश को उपलब्ध कर पठित किया है, पूर्व उन्मण्डल स्थित रवि के रहने से रवि के धनफल में उनके मन्द परिध्यंशादि = १३°१२०', मध्याह्न में उनके मन्द परिध्यंशादि = १३°१४०', पश्चिम उन्मण्डलस्थित रवि में उनके मन्द-परिध्यंशादि = १४°१०, ऋणफल में पूर्व उन्मण्डल स्थित रवि में मन्द परिध्यंशादि = १४°१०, मध्याह्न में मन्द परिध्यंशादि = १३°१४०', पश्चिम उन्मण्डलस्थ रवि में मन्दपरिध्यंशादि = १३°१२०', चन्द्र के धनफल में पूर्व उन्मण्डलस्थ चन्द्र में चन्द्रमन्दपरिध्यंशादि = ३०°१४'

“	“	मध्याह्न में	“	= ३१°३६'
“	“	पश्चिम उन्मण्डलस्थ	“	= ३०°१४'

चन्द्र के ऋण फल में पूर्व उन्मण्डलस्थ चन्द्रमें चन्द्रमन्द परिध्यशादि	=	३०°१४'
“ “ मध्याह्न में “ “	=	३१°३६'
“ “ पश्चिम उन्मण्डलस्थ चन्द्र में “ “	=	३२°१२५'

कुजादि ग्रहों के क्रम से मन्द परिध्यंश = ७०, ३८।३३ शुक्र के सन पदान्त में = ११, विषम पदान्त में = ९, गनि के = ३० आचार्य के मत से सूर्य के धनफल में वा ऋणफल में चौदह अंश में बीस कला को घटाने से उनके मध्याह्न परिध्यंश होते हैं। पूर्व उन्मण्डल स्थित रवि में मध्याह्न मन्द परिध्यंश में बीसकला को जोड़ने और घटाने में परिध्यंश होते हैं। पश्चिम उन्मण्डल में रवि के रहने से मध्याह्न परिध्यंश में बीस कला को घटाने में और जोड़ने से परिध्यंश होते हैं। चन्द्र के ऋण फल में और धन फल में बनीम अंश में चौबीस कला को घटाने से मध्याह्न परिध्यंश होते हैं। पूर्व उन्मण्डल में चन्द्र के रहने से मध्याह्न परिधि में बावन कला को घटाने से परिध्यंश होते हैं। पश्चिम उन्मण्डल में चन्द्र के रहने से मध्याह्न परिधि में बावन कला को घटाने से और जोड़ने से परिध्यंश होते हैं। यथा आचार्योक्त वाक्य यह है “सूर्यस्य मनुद्वितय त्र्यशोऽनं दिग्दले न तस्य प्राक्। निधि घटिकाभिः” इत्यादि स० उपपत्ति में लिखित पद्यों को देखिये। लघ्वार्यभट ने सब ग्रहों की मन्दान्त्य फलज्या और मन्दपरिध्यंश को वेध से लेकर साढ़े चार से अपवर्तित कर पठित किया। पहले ‘भाषाणि मन्द वृत्त’ इत्यादि से ग्रहों के जो मन्द परिध्यंश लिखे गये हैं वे साढ़े चार से अपवर्तित परिध्यंश ही हैं। इसलिये उन अपवर्तित मन्द परिध्यंश को साढ़े चार से गुणा कर देने में आचार्योक्त वास्तव परिध्यंश होते हैं। जैसे रवि के = १३°१३०', चन्द्र के = ३१°३०' कुज के = ६३०, बुध के = ३१°३०', गुरु के = ३१°३०', शुक्र के = १८°, गनि के = ४०°१३०', आर्यभटोक्त पठित परिध्यंश में और आचार्योक्त पठित परिध्यंश थोड़ा ही अन्तर पड़ता है। सूर्य सिद्धान्तमतानुसार समपदान्त में रवि मन्द परिध्यंश = १४°, चन्द्र के = ३२°, विषमपदान्त में रविमं परिध्यंश = १३°१४०', चन्द्र के = ३१°१४०', कुजादि ग्रहों के क्रम से समपदान्त में मन्दपरिध्यंश = ७५°, ३०°, ३३°, १२°, ४६°, विषम पदान्त में क्रम से उनके मन्द परिध्यंश = ७२°, २८°, ३२°, ११°, ४८°, उनके वाक्य ये हैं।

‘रवेर्मन्द परिध्यंशा मनवः शीतगौ रदाः’ इत्यादि स० उपपत्ति में लिखित पद्यों को देखिये।

आर्यभटमतानुसार ही लल्लोचार्य ने परिध्यंश लिखे हैं। भास्कराचार्य ने शनैश्चर को छोड़कर अन्य ग्रहों के परिध्यंश आचार्योक्तानुसार ही लिखे हैं, मन्दान्त्यफलज्या का मान सदा स्थिर नहीं रहता है इसीलिये अपने अपने समय में उपलब्ध अन्त्यफलज्या वश से आचार्य लोगों ने भिन्न भिन्न मन्दपरिध्यंश पठित किया, आचार्य ने दुराग्रह वग आर्यभटोक्त विषमपदीय और समपदीय पठित परिध्यंश का खण्डन किया है इति ॥ १८ ॥

इदानीमार्यभटोक्त शीघ्रपरिधीन् खण्डयति ।

विषमेऽन्योऽन्यो युग्मे परिधिगुणकः क्रमोत्क्रमज्यानाम् ।

चक्रार्धे फलनाशो न भवति यस्मादसत् तदपि ॥१६॥

सु. भा.—एवं शीघ्रपरिधिभेदात् स्पष्टाधिकारस्य १५ सूत्रानुसारेण विषमपदेऽन्यः समपदे चान्यः परिधिः क्रमोत्क्रमज्यानां गुणो भवति । एवं चक्रार्धे युग्मपदान्ते विषमपदादौ च सन्धित्वात् परिधिद्वयग्रहणे यस्मात् फलनाशो न भवति तस्मादार्यभटोक्तं तच्छीघ्रपरिधिमानं चासदिति । मन्दपरिधिखण्डनचदिदं खण्डनमप्यसत् ॥ १९ ॥

वि. भा.—एवं शीघ्रपरिधिभेदात् स्पष्टाधिकारस्य १५ सूत्रानुसारेण विषमपदेऽन्यः युग्मे (समपदे) चान्यः परिधिः क्रमोत्क्रमज्यानां गुणको भवति । एवं चक्रार्धे समपदान्ते विषमपदादौ च सन्धित्वात् परिधिद्वयग्रहणे यस्मान् कारणात् फलनाशो न भवति तस्मादार्यभटोक्तं तच्छीघ्रपरिधिमानं चासदिति ॥१९॥

अत्रोपपत्तिः ।

स्पष्टाधिकारस्य १५ सूत्रोपपत्तौ प्रदर्शितमस्ति यत् प्रथमपदे गतांश क्रमज्या × परिधि
भांश = भुजफलम्, पदान्ते परमं भुजफलम् । तृतीयपदे

क्रमज्या × परिधि
भांश = भुजफलम्, पदान्ते परमं भुजफलम् द्वितीयपदे परमं भुज-

फलम् — $\frac{\text{उत्क्रमज्या} \times \text{परिधि}}{\text{भांश}}$ पदान्ते शून्यं भुजफलम् । चतुर्थपदे च परमं भुज

फलम् — $\frac{\text{उत्क्रमज्या} \times \text{परिधि}}{\text{भांश}}$ = भुजफलम् । यद्यपि समपदान्ते विषमपदादौ च

सन्धित्वात्परिधिद्वयग्रहणे फलनाशो न भवति तावता न काचिद्धानिर्यत आर्यभटेन परिधिपाठभेदाद्वान्तरेऽनुपाततः परिधिग्राह्य इति सूचितम्, तस्मादाचार्योक्तं खण्डनमिदं न समीचीनमिति विज्ञेयम् ॥१९॥

अब आर्यभटोक्त शीघ्रपरिधि का खण्डन करते हैं ।

हि. भा.—शीघ्रपरिधि भेद से स्पष्टाधिकार के १५वें सूत्र के अनुसार विषमपद में और समपद में भिन्न-भिन्न परिधि भुजांश की क्रमज्या और उत्क्रमज्या की गुणक होती है, एवं चक्रार्ध (छ. राशि) में अर्थात् सम पदान्त में विषम पदादि में भी सन्धि होने के कारण से जिस हेतु परिधिद्वय ग्रहण करने से फल का नाश (फलाभाव) नहीं होता है उसी प्रकार आर्यभटोक्त शीघ्र परिधिमान असत् है इति ॥१६॥

स्पष्टाधिकार के १५वें सूत्र की उपपत्ति में दिखलाया गया है कि प्रथम पद में
 $\frac{\text{गतांश क्रमज्या} \times \text{परिधि}}{\text{भांश}} = \text{भुजफल}$ । पदान्त में परम भुज फल होता है, तृतीयपद में

$\frac{\text{क्रमज्या} \times \text{परिधि}}{\text{भांश}} = \text{भुजफल}$, पदान्त में परम भुजफल होता है, द्वितीय पद में परमभुजफल

$\frac{\text{उत्क्रमज्या} \times \text{परिधि}}{\text{भांश}} = \text{भुजफल}$, पदान्त में भुजफल शून्य होता है । चतुर्थपद में परम

भुजफल — $\frac{\text{उत्क्रमज्या} \times \text{परिधि}}{\text{भांश}} = \text{भुजफल}$, यद्यपि समपदान्त में विषम पदादि में भी दोनों

पदों की सन्धि होने के कारण परिधिद्वय (सम पद और विषम पद में पठित परिधि) ग्रहण करने से फलनाश (फलाभाव) नहीं होता है, उससे कुछ हानि नहीं है क्योंकि परिधि पाठ भेद से अवान्तर में अनुपात से परिधि का ग्रहण करना चाहिये ऐसा ने आर्यभट सूचित किया हुआ है इसलिये आचार्योक्त खण्डन ठीक नहीं है इति ॥१६॥

इदानीमार्यभटमतेनानुपातेन यदि परिधिः स्फुटः क्रियते
 तदापि न समीचीन इति खण्डयति ।

व्यासार्धहृतो बाहुः परिधिविशेषाहतः फलोनयुतः ।

प्रथमोऽधिकोनको यत् तदसत् पदयोः परिधिपाठात् ॥२०॥

सु. मा.—बाहुभुजज्या परिधिविशेषाहतः परिध्यन्तरहतो व्यासार्धेन त्रिज्याया हृतः । प्रथमः परिधिर्यदि द्वितीयादधिकोनकस्तदा क्रमेण प्रथमः परिधिः फलोनयुतः स्फुटः परिधिर्भवेदिति यत् स्पष्टपरिध्यानयनं प्रसिद्धं तदप्यार्यभटमतेनासद्भवति । कस्मात् । पदयोः परिधि पाठात् । अर्थात्तन्मते पदयोः परिधिद्वयम् । तत्र कुत्रचित् प्रथमः समपदीयः कुत्रचिच्च विषमपदीयः परिधिर्भवति । अतः संस्कार-विधिव्यभिचरति । वागबलमेतत् । प्रथमान्यभेदोऽपि तात्कालिक संस्कारस्य समीचीनत्वादिति सुधीभिर्भृशं विचिन्त्यम् ॥ २० ॥

वि. मा.—बाहुः (इष्टदोर्ज्या) परिधिविशेषाहतः (विषमसमपरिध्यन्तर-गुणः) व्यासार्धं हृतः (त्रिज्या भक्तः) प्रथमः परिधिः यदि द्वितीयादधिकोनकस्तदा यथाक्रमं प्रथमः परिधिः फलोनयुतः कार्यस्तदा स्फुटः परिधिर्भवेदिति यत्प्रसिद्धं स्फुटपरिध्यानयनं तदप्यार्यभटमतेन पदयोः परिधिपाठभेदादसद्भवति ॥२०॥

अत्रोपपत्तिः ।

यदि त्रिज्यातुल्यया केन्द्रदोर्ज्याया विषमसमपदान्तपरिध्योरन्तरं लभ्यते तदेष्टकेन्द्रदोर्ज्याया किं फलं विषमपदान्तपरिधितः समपदान्तपरिधेश्चयापचय-वशाद्धनर्णं कार्यं तदा स्फुटः परिधिर्भवति सूर्यसिद्धान्तेऽपि 'ओज युग्मान्तरगुणा भुजज्या त्रिज्ययोद्धृता । युग्मवृत्ते धनर्णं स्यादोजादूनाधिके स्फुटम्' त्यनेन तदेव कथ्यते, सिद्धान्तशेखरेऽप्येतदनुरूपमेव, आर्यभट्टमतेन पदयोः परिधिद्वयमस्ति, तत्र कुत्रचित् प्रथमः समपदीयः कुत्रचिच्च विषमपदीयः परिधिर्भवति, तदा संस्कारविधौ दोष आगच्छति । एतत् खण्डनमपि न समीचीनम् । प्रथमान्यभेदे-ऽपि तात्कालिक संस्कारस्य समीचीनत्वादिति ॥२०॥

अब आर्यभट्ट मत में "अनुपात से यदि परिधि-स्फुट की जाती है तो भी वह समीचीन नहीं होती है" इसका यह खण्डन करते हैं ।

हि. भा. इष्टदोर्ज्या को विषम परिधि और समपरिधि के अन्तर से गुणा कर त्रिज्या से भाग देने से जो फल हो उसको प्रथम परिधि यदि द्वितीय परिधि से अधिक और ऊन (अल्प) हो तो क्रम से प्रथम परिधि में ऊन और युत करना तब स्फुट परिधि होती है । यह जो प्रसिद्ध स्फुट परिध्यानयन है वह भी आर्यभट्ट मत से दोनों पदों में परिधि पाठ भेद से समीचीन नहीं होता है, इति ॥२०॥

उपपत्ति ।

यदि त्रिज्या तुल्य केन्द्रदोर्ज्या में विषम सम पदान्तीय परिध्यन्तर पाते हैं तो इष्ट केन्द्र दोर्ज्या में क्या इस से जो फल आता है उस को द्वितीय परिधि से प्रथम परिधि के ऊन और अधिक रहने से क्रम से प्रथम परिधि में युत और ऊन करने से स्फुट परिधि होती है, यह जो प्रसिद्ध स्फुट परिध्यानयन है वह भी आर्यभट्ट मत से समीचीन नहीं होता है क्योंकि उन के मत में दोनों पदों में दो तरह की परिधि है, वहां कहीं पर प्रथम-समपदीय परिधि होती है और कहीं पर विषम पदीय परिधि होती है इसलिये संस्कार विधि व्यभिचरित होती है, यह आचार्योंक्त खण्डन ठीक नहीं है क्योंकि प्रथम और अन्य के भेद में भी तात्कालिक संस्कार समीचीन ही होता है इति ॥२०॥

इदानीं पुनः आर्यभट्टोक्तपरिधीन् खण्डयति ।

विषमसमयोर्यदि द्वौ परिधौ किं सूर्य चन्द्रयोर्नोक्तौ ।

घटते च कथं चिदियं स्फुट क्रियौदयिक तन्त्रोक्ता ॥२१॥

सु. भा.—यदि तन्मते विषमसमयोः पदयोर्भेदाद् द्वौ परिधौ अपेक्षितौ तदा गोलयुक्तिसाम्यात् तेन सूर्यचन्द्रयोर्द्वौ परिधौ किं नोक्तौ ।

अत आर्यभटीयौदयिक तन्त्रोक्तेयं स्फुटक्रिया कथंचिच्च घृणाक्षरन्यायेन वदाचित् घटत इत्यर्थः । यस्मिन् तन्त्रे सूर्योदये ग्रहसाधनं तदौदयिक तन्त्रम् । सूर्यचन्द्रयोर्न द्वौ द्वौ परिधी अन्येषां च द्वौ द्वौ इत्यनेन न काचिद्धानिः फलवामना-विचित्रत्वाद् इदमपि वाग्बलमिति ॥ २१ ॥

वि. भा.—यदि विषमसमयो. पदयोर्भेदादायभटमते द्वौ परिधी अपेक्षितौ तदा तेन सूर्यचन्द्रयोर्द्वौ द्वौ परिधी किं नोक्तौ, अत आर्यभटीयौदयिकतन्त्रोक्तेयं स्फुटक्रिया घृणाक्षरन्यायेन कथंचित् घटते । यस्मिन् तन्त्रे सूर्योदये ग्रहसाधनं तदौदयिकतन्त्रम् । सूर्यचन्द्रयोर्न द्वौ द्वौ परिधी अन्येषां ग्रहाणां च द्वौ द्वौ

(१) ग्रह स्पष्टीकरणे बह्वस्तादृशा विषया. सन्ति येषां गोले सत्ता नोपलभ्यते यथा सूर्यचन्द्रयोः केवलमेक मन्दोच्चमस्ति, अन्येषां ग्रहाणां च मन्दोच्चं शीघ्रोच्चं चास्ति, तथा मान्द कर्मकमकेंद्रोर्भौमादीनामथोच्यते । शैष्य मान्द पुनर्मन्दं शैष्यं च त्वार्यनुक्रमात् । मध्ये शीघ्रफलस्यार्थं मान्दमर्धफलं तथा । मध्यग्रहे मन्दफलं सकलं शैष्यमेव च, । दलीकृताभ्यां प्रथमं फलाभ्यां ततोऽखिलाभ्यामसकृत्कुजस्तु । स्फुटौ रवीन्दू मृदुनैव वेत्तो शीघ्रास्य तुङ्गस्य तयोरभावात् । इतिक्रमेण सूर्यसिद्धान्तोक्तभास्कराचार्योक्तवाक्यानि मन्ति, अन्येषां बहूनामे तत्सदृशान्येव वाक्यानि सन्ति, गोले फलद्वयं (मन्दफलं शीघ्रफलं च) मेवोपलभ्यते यत्प्रकारेण मध्यमग्रहः स्फुटता याति, मन्दफलार्थं शीघ्रफलार्थं च कथं मस्कृत्यते इति वक्तुं न शक्यते तत्र परम्परागतमागम एव प्रमाणं न हितं न काचिद्वृत्तिः । नतकर्मविषयेऽप्येवमेवा-ऽऽगम प्रमाणम्, एवमनेके विषयाः सन्ति । यद्विषये आचार्या आगम प्रमाणमेव लिखितवन्त इति ।

(२) ग्रहस्पष्टीकरण में बहुत ऐसे विषय हैं जिनकी सत्ता गोल में नहीं उपलब्ध होती है, जैसे रवि और चन्द्र के केवल एक ही मन्दोच्च है, क्यों ? शीघ्रोच्च नहीं है, इसका उत्तर यही है कि इसी तरह उपलब्ध या आगम प्रमाण है, अन्य ग्रहों के लिये मन्दोच्च और शीघ्रोच्च दोनों हैं, यहां भी आगम प्रमाण ही कारण है । सूर्य सिद्धान्त में लिखते हैं 'मान्द कर्मकमकेंद्रोर्भौमादीनामथोच्यते' से 'सकल शैष्यमेव च' तक तथा भारकरोक्त वचन हैं 'दलीकृताभ्यां प्रथमं फलाभ्यां ततोऽखिलाभ्यामसकृत् कुजस्तु' अन्य बहुत आचार्यों के ऐसे ही वाक्य हैं, गोल में केवल दो फल (मन्दफल और शीघ्रफल) उपलब्ध होते हैं मध्यग्रह में जिन के संस्कार करने से स्पष्ट ग्रह होते हैं । मध्यम रवि और मध्यम चन्द्र में एक ही मन्दफल संस्कार करने से स्पष्ट रवि और स्पष्ट चन्द्र होते हैं । कुजादि ग्रहों के स्पष्टीकरण के लिये मन्द फलार्थ और शीघ्रफलार्थ का भी संस्कार किया जाता है । क्यों किया जाता है, इसको नहीं कह सकते हैं इसके लिये केवल आगम प्रमाण ही कह सकते हैं, युक्ति नहीं कुछ कह सकते हैं । नत कर्म संस्कार क्यों करना चाहिये वह भी केवल रवि और चन्द्र ही के लिये, यहां भी आगम प्रमाण ही को कारण कह सकते हैं, एवं अनेक विषय हैं जिन के विषय में आचार्य लोग आगम प्रमाण प्रमाण ही के लिये लिखे हैं ।

२. देखो पृष्ठ ६८८ का फुटनोट (२) ।

परिधी इत्येतावता न काऽपि हानिः फलवासनाया विचित्रत्वात्, एतत्खण्डनमप्याचार्योक्तं न समीचीनमिति ॥२१॥

अब पुनः आर्यभटोक्त परिधि का खण्डन करते हैं ।

हि. भा.—यदि विषमपद और समपद के भेद से आर्यभट के मत में दो परिधि अपेक्षित है तो वे सूर्य और चन्द्र के लिये दो दो परिधि क्यों नहीं कहते हैं । इसलिये आर्यभटीय औदयिक तन्त्र में कही हुई यह स्फुट क्रिया घुणाक्षरन्याय (घुन द्वारा लकड़ी को काटने से कभी कभी अक्षर का रूप बन जाता है, लेकिन घुन जानबूझ कर लकड़ी को अक्षराकार नहीं काटती है) से कदाचित् घटती है, जिस तन्त्र में सूर्योदय कालिक ग्रह साधन होता है वह औदयिक तन्त्र कहलाता है । सूर्य और चन्द्र के लिये दो दो परिधि नहीं कही गई हैं और अन्य ग्रहों की दो दो परिधि कही गई है इससे आर्यभट के मत में कुछ भी हानि नहीं है क्योंकि फल की वासना (उपपत्ति) विचित्र है, आचार्योक्त यह खण्डन भी ठीक नहीं है इति ॥२१॥

इदानीं रव्यग्रावशेन रवेः सममण्डलप्रवेशं खण्डयति ।

उत्तर गोलेश्रायां विषुवज्ज्यातो यदुक्तमूनायाम् ।

समण्डलगस्तदसत् क्रान्तिज्यायां यतो भवति ॥२२॥

सु. भा.—आर्यभटेन स्वगोलपादे 'उत्तरगोले यदाऽग्रा विषुवज्ज्यातो अक्षज्यात ऊना भवति तदैव रवेः सममण्डल प्रवेशः' इत्यभिहितं परन्तु गोलयुत्तया तु सौम्यापमज्याऽक्षज्योना तदा रवेः सममण्डलप्रवेशो भवत्यतो विषुवज्ज्यात उत्तरगोलेश्रायामूनायां रवेः सममण्डलप्रवेशो भवतीति यदुक्तमार्यभटेन तदसद्यतः क्रान्तिज्यायां विषुवज्ज्यातो न्यूनायामर्कस्य सममण्डल प्रवेशोभवति । आर्यभट वाक्यं च-

परमापक्रमजीवामिष्टज्यार्धाहतां ततो विभजेत् ।

ज्यालम्बकेन लब्धाऽर्काग्रा पूर्वा परे क्षितिजे ॥

सा विषुवज्ज्योना चेद्विषुवदुदगलम्बकेन संगुणिता विषुवज्ज्यया विभक्तो लब्धः पूर्वापरं शंकुः । गोलपादे श्लो० ॥३०-३१॥

वि. भा. - उत्तरगोले यदाऽग्रा विषुवज्ज्यात (अक्षज्यातः) ऊना (अल्पा) भवति तदैव रवेः सममण्डलप्रवेशो भवतीत्यार्यभटेन स्वगोलपादे कथितम् । परं गोल युत्तयोत्तरा क्रान्तिज्या यदाऽक्षज्यातोल्पा भवति तदा रवेः सममण्डल प्रवेशो भवत्यतो विषुवज्यात ऊनायां (अल्पायां) अग्रायामुत्तरगोले रवेः सम-

मण्डल प्रवेशो भवतीति यदुक्तमार्यभटेन तदसत् । यतो विषुवज्ज्यात (अक्षज्यातः) ऊनायां क्रान्तिज्यायां रवेः सममण्डल प्रवेशो भवतीति ॥२२॥

अत्रोपपत्तिः ।

यदोत्तरा क्रान्तिः स्वाक्षांशेभ्यो न्यूना तदा रवेरहोरात्रवृत्तस्य पूर्वापरवृत्तस्य च क्षितिजादुपरि संयोगाद्भवेः सममण्डलप्रवेशो भवितुमर्हति, दक्षिणक्रान्तौ रवे-
रहोरात्रवृत्तस्य पूर्वापरवृत्तस्य च क्षितिजाधः संयोगात् स्वाक्षाधिकायामुत्तरक्रान्तौ
च खस्वस्तिकादुत्तरदिशि रव्यहोरात्रवृत्तस्य याम्योत्तरवृत्तस्य च सम्पानादहो-
रात्रवृत्तस्य पूर्वापरवृत्तस्य च संयोगाभावात् सममण्डलप्रवेशो न भवेदिति गोल-
दर्शनेन स्फुटम् । आर्यभटेनोत्तरगोलेऽक्षज्यातौ स्लपायामग्रायां रवेः सममण्डल-
प्रवेशो भवतीति यदुक्तं तन्निर्युक्तिकम् । आर्यभटोक्त वाक्य च—

परमापक्रम जीवामिष्टज्यार्धाहतां ततो विभजेत् ।

ज्यालम्बकेन लब्धाऽर्काग्रा पूर्वापरे क्षितिजे ॥

सा विषुवज्ज्योना चेद्विषुवदुदालम्बकेन संगुणिता ।

विषुवज्ज्यया विभक्ता लब्धः पूर्वापरे शकुः ॥

(गोलपादे श्लो० ३०-३१) ॥२२॥

अब रवि की अग्रावश से आर्यभटोक्त रवि के सममण्डल प्रवेश का खण्डन करने है ।

हि. भा.—उत्तरगोल में जब अग्रा अक्षज्या से अल्प होती है तब ही रवि का सम-
मण्डल प्रवेश होता है यह अपने गोलपाद में आर्यभट कहते हैं । लेकिन गोलयुक्ति में जब
उत्तर क्रान्तिज्या अक्षज्या से अल्प होती है तब रवि का सममण्डलप्रवेश होता है, इसलिये
अक्षज्या से अल्प अग्रा में उत्तर गोल में रवि का सममण्डलप्रवेश होता है यह जो आर्यभट
ने कहा है सो ठीक नहीं है । क्योंकि अक्षज्या से अल्प क्रान्तिज्या में उत्तर गोल में रवि का
सममण्डल प्रवेश होता है इति ॥२२॥

उपपत्ति ।

जब उत्तराक्रान्ति अक्षांश से अल्प होती है तो रवि के अहोरात्रवृत्त और पूर्वापरवृत्त
का योग क्षितिज से ऊपर होने के कारण रवि का सममण्डलप्रवेश होता है । दक्षिण
क्रान्ति में रवि के अहोरात्रवृत्त और पूर्वापरवृत्त का योग क्षितिज से अवोभाग में होता है,
अक्षांशाधिक उत्तर क्रान्ति में खस्वस्तिक से उत्तर तरफ रवि के अहोरात्रवृत्त और याम्यो-
त्तरवृत्त के सम्पात से अहोरात्रवृत्त और पूर्वापरवृत्त के योगाभाव के कारण सममण्डलप्रवेश
नहीं होता है यह गोल देखने से स्फुट है । उत्तर गोल में अक्षज्या से अल्प अग्रा में

सममण्डल प्रवेश होता है यह जो आर्यभट्ट ने कहा है सो निर्युक्तिक है । आर्यभट्टोक्त वाक्य यह है 'परमापक्रमजीवामिष्टज्यार्धाहृतां ततो विभजेत्' इत्यादि सं. उपपत्ति में लिखित श्लोकों को देखिये ॥२२॥

इदानीमार्यभट्टोक्त लम्बनावनत्यानयनं खण्डयति ।

अत्राचार्योक्तसाधने किं लघुकर्म, आर्यभटोक्तसाधने किं महत्कर्मस्तीति मन्मनसि
नागच्छति, आचार्योक्तखण्डनमिदं मह्यं न रोचते इति विवेचका भृशं विवेच-
यन्तिवति ॥२३-२५॥

अब आर्यभटोक्त स्फुट लम्बन और स्फुटनत्यानयन का खण्डन करते हैं ।

हि. भा.—हृन्तिज्या को चार से गुणा कर त्रिज्या से भाग देने से लब्ध लम्बन घटी होती है, हृक्षेपज्या को रवि और चन्द्र के गत्यन्तर से गुणा कर पन्द्रह गुणित त्रिज्या से भाग देने से लब्ध स्फुटनति होती है, इस तरह यह स्पष्ट लम्बन और स्पष्ट नति स्फुट योजनकर्णों के बिना और भ्यूयास के बिना सिद्ध होती है । इस लघु साधन के रहने पर भी आर्यभट ने योजन कर्ण वश से क्यों महत् कर्म किया । यदि गणित के नहीं जानने के कारण किया तो यह उनकी मूर्खता है, यदि हम से कहे हुए प्रकार को जानते हुये किया तो यह उस से भी बड़ी मूर्खता है । लघुकर्म को जानकर भी क्यों गौरव कर्म लिखा इति ॥२३-२५॥

उपपत्ति ।

क्रान्तिवृत्त में जहां रवि है उनके ऊपर दृग्वृत्त कर देना, उस दृग्वृत्त में रवि जहां पर लम्बित होते हैं उनके ऊपर कदम्ब प्रोतवृत्त कर देना, वह क्रान्तिवृत्त में जहां पर लगता है वह लम्बित रवि स्थान है । लम्बित रविस्थान से लम्बित रवि पर्यन्त कदम्ब प्रोतवृत्त में रविनतिभुज, रवि और लम्बित रवि के अन्तर दृग्वृत्त में दृग्लम्बन कर्णा, तथा लम्बित रवि-स्थान से (लम्बितरव्युपरिगत कदम्बप्रोतवृत्त और क्रान्तिवृत्त के सम्पात से) रविपर्यन्त क्रान्तिवृत्त में स्पष्ट लम्बनकोटि, इन तीनों भुजकोटिकर्णों में उत्पन्न एक चापीय जात्य त्रिभुज है, तथा रवि से खस्वस्तिक पर्यन्त रविनताश कर्णा, खस्वस्तिक से वित्रिभ लम्बन पर्यन्त दृक्क्षेप वृत्त में दृक्क्षेप चाप भुज, क्रान्तिवृत्त में रवि और वित्रिभ लम्बन के अन्तर कोटि, इन तीनों से उत्पन्न द्वितीय चापीय जात्य त्रिभुज है, इस त्रिभुज के ज्याक्षेत्र में $\sqrt{\text{रदृग्ज्या}^2 - \text{दृक्क्षेपज्या}^2} = \text{वित्रिभशकु व्यासार्ध परिणत दृग्नतिज्या, स्वल्पान्तर से इसी को त्रिज्या व्यासार्धीय आचार्य ने मान लिया है, तब पूर्व कथित चापीय जात्य त्रिभुज द्वय के ज्याक्षेत्र के सजातीय होने से अनुपात करते हैं, यदि रवि दृग्ज्या में दृग्नतिज्या पाते हैं तो दृग्लम्बनज्या में तथा इस में स्पष्ट लम्बनज्या आती है, दृग्नतिज्या, दृलज्या} = \text{रविस्पलज्या । रदृग्ज्या}$

यहां सं. उपपत्ति में लिखित क्षेत्र को देखिये । वि = वित्रिभ लम्बन । ख = खस्वस्तिक, र = क्रान्तिवृत्त में रवि = गर्भीय रवि, लर = लम्बित रवि, स्था = लम्बित रविस्थान, रख = रविनताश, खवि = दृक्क्षेपचाप, विर = रविवित्रिभान्तर = दृग्नतिचाप, रलं = रवि दृग्लम्बन । लंस्था = रविनति, स्थार = रविस्पलम्बन, पृष्ठीयदृग्ज्या जहां पर परम होती है अर्थात् त्रिज्या के बराबर होती है वहीं पर दृग्लम्बन का परमत्व होता है इसलिये अनुपात करते हैं, यदि त्रिज्या तुल्य पृष्ठीय दृग्ज्या में परम दृग्लम्बनज्या पाते हैं तो दृष्ट पृष्ठीय दृग्ज्या में क्या इससे दृष्ट दृग्लम्बनज्या आती है $\frac{\text{पलज्या. पृदृग्ज्या}}{\text{त्रि.}} = \text{दृलंज्या, यहा स्वल्पान्तर से}$

दृलंज्या = दृलं, पलंज्या = पलं, तब रवि स्पष्ट लम्बनज्या स्वरूप में उत्थापन देने से $\frac{\text{दृग्नतिज्या} \times \text{पलं.} \times \text{पृदृग्ज्या}}{\text{त्रि. रदृग्ज्या}} = \text{स्पलंज्या} = \text{स्पलं, यहाँ स्वल्पान्तर में रदृग्ज्या} = \text{पृदृग्ज्या तब}$
 $\frac{\text{दृग्नतिज्या} \times \text{पल}}{\text{त्रि.}} = \text{स्पलं, अब अनुपात करते हैं कि यदि रवि और चन्द्र के गत्यन्तर कला}$

में साठ घटी पाते हैं तो स्पष्ट लम्बन कला में क्या इससे स्पष्ट लम्बन घटी आती है, $\frac{६० \times \text{स्पल}}{\text{गत्यन्तरक}}$

$= \frac{६० \times \text{दृग्नतिज्या} \times \text{पल}}{\text{त्रि. गत्यन्तर}} = \frac{\text{दृग्नतिज्या} \times ४}{\text{त्रि.}} = \text{स्पलंघ । यतः } \frac{६० \times \text{पलं}}{\text{गत्यन्तरक}} = ४ \text{ घटी, इसमें}$

“व्यासार्धेन विभक्ता दृग्नतिज्या चतुर्गुणा लब्धम् । लम्बन नाड्य” यह उपपन्न हुआ । यहां जो ऋटिया हैं उपपत्ति देखने ही से स्पष्ट हैं । सिद्धान्तशिरोमणि में भास्कराचार्य ने भी

‘त्रिभोनलग्नस्य रवेश्चाशक्वोरि’ त्यादि से आचार्योक्त के अनुरूप ही कहा है। स्फुटनत्यान-
यन के लिये विचार करते हैं। लख = पृष्ठीयनतांश = रख + रलं = रविनतांश + दृग्लम्बन,
रखवि, रलंस्था दोनों चापीयजात्य त्रिभुज के ज्याक्षेत्र सजातीय है इसलिये अनुपात करते
हैं। $\frac{\text{दृक्क्षेज्या. दलंज्या}}{\text{दृज्या}} = \text{नतिज्या, परन्तु } \frac{\text{पलंज्या. पृदृज्या.}}{\text{त्रि.}} = \text{दृलज्या, इससे उत्था-}$

पन देने से $\frac{\text{दृक्क्षेज्या. पलंज्या. पृदृज्या}}{\text{दृज्या. त्रि.}} = \text{नतिज्या, यहां स्वल्पान्तर से ज्या और चाप में}$

अभेद मानने से नतिज्या = नति, तथा दृज्या = पृदृज्या, पलंज्या = पलं, तब $\frac{\text{दृक्क्षेज्या. पलं}}{\text{त्रि.}}$

= नति, परन्तु गतिकाल का पञ्च दशांश परम लम्बन होता है, $\frac{\text{रा}}{१५} = \text{रपल } \frac{\text{चग}}{१५} = \text{चंपल}$

इसलिये $\frac{\text{दृक्क्षेपज्या. रा}}{\text{त्रि. १५}} = \text{रविनति, तथा } \frac{\text{दृक्क्षेज्या. चग}}{\text{त्रि. १५}} = \text{चन्द्रनति, दोनों के अन्तर करने}$

से स्फुटनति = $\frac{\text{दृक्क्षेज्या. रविचन्द्रगत्यन्तर}}{\text{त्रि १५}}$, इससे “पञ्चदश गुणितया त्रिज्या विभक्ताः।

दृक्क्षेपज्या भुत्तचन्तराहता लब्धमवनतिर्भवेत्” यह आचार्योक्त उपपन्न हुआ। सूर्यसिद्धान्त
कार ने “दृक्क्षेपः शीततिग्मांश्वोर्मध्यभुत्तचन्तराहतः” इत्यादि से आचार्योक्त के सदृश ही
कहा है। यहां कर्ण और भूज्यासार्ध का कुछ भी प्रयोजन नहीं है, तब आर्यभट ‘रविकर्ण’ में
या चन्द्रकर्ण में यदि उनकी पृष्ठीय दृज्या पाते हैं तो भूज्यासार्ध में क्या इससे रविदृग्लम्ब-
नज्या और चन्द्रदृग्लम्बनज्या आती हैं’ इसके वश से स्पष्ट लम्बन और स्पष्ट नति के साधन
क्यों किये। हमारे आनयन से लघुकर्म ही से उनकी सिद्धि होती है। तब वहां महत् कर्म
की क्या आवश्यकता है, इससे मालूम होता है कि आचार्यभट ने गणित के अज्ञान के कारण
महत् कर्म किया है। यह आचार्य खण्डन करते हैं। आचार्योक्त साधन में क्या लघु कर्म है
और आर्यभटोक्त साधन में क्या कर्म गौरव है यह हम नहीं कह सकते हैं। आचार्योक्त यह
खण्डन मुझे ठीक नहीं मालूम होता है इसको विवेचक लोग विचार कर समझें
इति ॥२३-२५॥

इदानीमार्यभटोक्तलम्बनं खण्डयति ।

लम्बनमृणधनमुक्तं पूर्वापरयोस्तिथौ दिनार्धस्य ।

युक्तोऽभावो यदि भवति तदृणधनयोस्तिथौ कतरत् ॥२६॥

तु. भा.—आर्यभटेन पूर्वापरकपालयोर्धथाक्रमं तिथौ लम्बनमृणं धनं
वाक्तम् । तदुक्तं स्यात् सद्यदि दिनार्धस्य लम्बनस्याभावो भवेत् परन्तु दिनार्धं
लम्बनं भवति तत् तिथौ ऋणधनयोर्मध्ये कतरद्युक्तं तन्मते । आर्यभटेन दृक्क्षेप

मण्डलवशतः पूर्वापरकपालयोर्लम्बनमुक्तमत इदं दूषणं न सत् ।

तथा च चतुर्वेदाचार्यः—

‘स्याद्दूषणमेतद्यद्यार्यभटो वक्ष्येत् ।

तद्वाक्यं च ।

दृक्षेपमण्डलमपि प्राग्लग्नं स्यात् त्रिराश्विनम् । दृक्षेपमण्डलं चानेन वाक्येन वित्रिभलग्नं भवति । तत्र चापमण्डलस्यात्युच्चता युज्यते यतः सर्वदाऽप-
मण्डलार्धमेव दृश्यतेऽतस्तत्र तस्य लम्बनक्षयस्तस्मादार्यभटस्य नायं दोषः ।
भास्करादीनामेव भवतु तैर्न बुद्धस्तदभिप्राय इति’ । एतेन ब्रह्मसिद्धान्तोपरि
भास्करादीनां प्राचीनानां ज्योतिर्विदां च टीकेति स्फुटं भवति ॥२६॥

वि. भा.—पूर्वापरयोः कपालयोर्यथाक्रममार्यभटेन तिथौ लम्बनमृगं धन
चोक्तम् । इति तत्पक्षोयुक्तः स्याद्यदि दिनार्धस्य (मध्याह्नकालीनस्य) लम्बनस्या
भावो भवेत् । परन्तु दिनार्धे लम्बनं भवति, तदा तत् तिथौ ऋणधनयोर्मध्ये
कतरद्युक्तं तन्मते इत्याचार्य आर्यभटमतं खण्डयतीति ॥२६॥

अत्रोपपत्तिः ।

आर्यभटेन दृक्षेपवृत्तवशतः पूर्वापरकपालयोर्लम्बनमुक्तमत इदं खण्डनं
न युक्तिसङ्गतम् । तथा च चतुर्वेदाचार्यः— ‘स्याद्दूषणमेतद्यद्यार्यभटो वक्ष्येत् ।
तद्वाक्यं च—दृक्षेपमण्डलमपि प्राग्लग्नं स्यात् त्रिराश्विनम्’ अनेन वाक्येन दृक्षेप-
मण्डलं वित्रिभलग्नं भवति । तत्र चापमण्डलस्यात्युच्चता युज्यते यतः सर्वदाऽपम-
मण्डलार्धमेव दृश्यतेऽतस्तत्र तस्य लम्बनक्षयस्तस्मादार्यभटस्य नायं दोषः ।

भास्करादीनां प्राचीनानां ज्योतिषिकाणां च टीकेति स्फुटं भवतीति ॥२६॥

अब आर्यभटोक्त लम्बन का खण्डन करते हैं ।

हि. भा.—आर्यभट ने ‘पूर्वकपाल में और पश्चिम कपाल में क्रम से तिथि में लम्बन
को ऋण करना और धन करना’ कहा है । यह उनका मत युक्त हो सकता है यदि दिनार्ध
काल में लम्बन का अभाव हो, (लेकिन दिनार्ध में लम्बन होता है) तब तिथि में ऋण और
धन लम्बन में कौन लम्बन आर्यभट के मत में ठीक है यह आर्यभट मत का खण्डन आचार्य
करते हैं इति ॥२६॥

उपपत्ति ।

आर्यभट ने दृक्षेप वृत्त वश से पूर्व कपाल में और पश्चिम कपाल में लम्बन कहा है
इसलिये आचार्योंक्त खण्डन ठीक नहीं है । यहां आर्यभट कहते हैं ‘स्याद्दूषणमेतद्यद्यार्यभटो

वक्ष्येत्' अर्थात् यदि आर्यभट भाष्य में लिखित बात को कहते हो तब आचार्योक्त दूषण (दोष) ठीक ही है, उनके वाक्य हैं 'दृक्षेपमण्डलमपि प्रागुलम्नं स्यात् त्रिराशूनम्' इस वाक्य से दृक्षेप मण्डल वित्रिभ लग्न है, वहा क्रान्ति मण्डल की अतिशयेन उच्चतायुक्त है क्यों कि सदा क्रान्तिवृत्त का आधा ही भाग दृश्य होता है, इसलिये वहां लम्बन का क्षय (अभाव) होता है, इसलिये आचार्योक्त दोष आर्यभट के मत में नहीं होता है, भास्कर आदि आचार्यों के मत ही मत में दोष है क्यों कि वे लोग आचार्य के अभिप्राय को नहीं समझे । इस से सिद्ध होता है कि ब्रह्म सिद्धान्त के ऊपर भास्कर आदि प्राचीन ज्योतिषियों की टीका है इति ॥२६॥

इदानीमार्यभटोक्तलम्बननत्योः क्षेत्र संस्थानं खण्डयति

अब आर्यभटोक्त लम्बन और नति के क्षेत्र संस्थान (क्षेत्र स्थिति) का खण्डन करते हैं ।

हि. भा.—दृक्षेपज्या अर्थात् वित्रिभ लग्न नतांशज्या भुज, रविनतांशज्या
(रविदृग्ज्या) कर्ण, और इन दोनों का वर्गान्तरमूल दृग्नतिजीवा कोटि होनी है । आर्यभट,
के अनुयायी भास्कर आदि आचार्यों के मत से यह भुज-कोटि कर्णों का संस्थान (स्थिति)
अयुक्त है यह भी विचारणीय है अर्थात् उनके मत से स्थान विशेष में दृग्नतिज्या और
दृक्षेपज्या व्यभिचरित होती है इति ॥२७॥

उपपत्ति

जिस देश में ख्रियासठ ६६ अक्षांश है वहां मिथुनान्त में रवि के रहने से उनकी
(आर्यभटानुयायियों की) उदयज्या (अग्रा) त्रिज्या के बराबर होती है । रवि के उदय
काल में उनकी मध्यज्या (दशमलग्न नतांशज्या) भी त्रिज्या के बराबर होती है (क्यों कि
क्रान्तिवृत्त क्षितिज वृत्तानुकार है) इसलिये 'मध्यज्योदय जीवा संवर्गे व्यास दलहृते' इत्यादि
उनकी विधि से फल वित्रिभ लग्न और दशमलग्न की अन्तरज्या होती है, उसका और

मध्यज्या का वर्गान्तर मूल दृक्षेप शून्य के बराबर होता है इसलिये आर्यभट्ट के पक्ष में वहां पर अवनति का अभाव हुआ, लेकिन वहां गोल युक्ति से प्रत्यक्ष ही परम अवनति देखी जाती है, इसलिये इस स्थान में उनके दृक्षेप का व्यभिचार होता है, पूर्वोक्त स्थान ही में रवि के रहने से उनके मत में दृक्षेप शून्य के बराबर है, रवि की दृग्ज्या त्रिज्या के बराबर है, इसलिये दोनों का वर्गान्तर मूल दृग्नतिज्या त्रिज्या के बराबर हुआ, उस के वश से आर्यभट्ट के पक्ष में परमलम्बन चार घटी के बराबर होजा है, परन्तु गोल युक्ति से वहां क्षितिजानुकार क्रान्तिवृत्त के होने से दृग्वृत्त गति से चन्द्र के परम लम्बित रहने पर भी स्थानीय लम्बित कदम्ब प्रोतवृत्तों की एकता के कारण वहां स्फुट लम्बनाभाव होता है, इस तरह आर्यभट्ट पक्ष से क्षेत्र सस्थान अयुक्त है यह आचार्योक्त खण्डन समीचीन है। चतुर्वेदाचार्य ने भी इसी उदाहरण को दिखलाया है। चापीय जाग्य त्रिभुज में कर्णचापज्या और भुज चापज्या का वर्गान्तर मूल कोटि चापज्या नहीं होती है किन्तु भुजचाप कोटि व्यासार्धवृत्त में परिणत होती हैं इस का ज्ञान उन सबों को नहीं था उनके पक्ष में यही सब से मुख्य दोष हैं और दोष तो ऊपर दिखलाया ही गया है इति ॥२७॥

इदानीं लम्बनावनत्योरानयनं यैर्दशज्यया कृतं तन्मतं खण्डयति ।

लम्बनघटिका लिप्ता दशज्ययाऽर्केन्दुदृग्नतिकलानाम् ।

यस्मान्न समास्तस्माद्दशज्यया लम्बनं स्थूलम् ॥२८॥

सु० भा.—पुलिशादिभिर्दशज्यया या लम्बनघटिका कला उत्पादितास्ता आचार्यसाधितानामर्केन्दुदृग्नतिकलानाम् (अर्केन्द्रोद्गन्ती ये ताभ्यां याः पृथक् पृथक् कला लम्बनकलास्तासां) यस्मान्न समास्तस्माद् दशज्यया लम्बनं स्थूलं भवति । २७ श्लोके यथा क्षेत्रसंस्थानमयुक्तं प्रदर्शितं तथाऽत्र पृथक् पृथक् रविचन्द्रयोर्लम्बनक्षेत्रे अयुक्ते । तद्वशतः स्फुटलम्बनं स्थूलमिति । सूर्यग्रहणाधिकारस्य प्रथमश्लोकव्याख्यायां पञ्चज्या दशज्या चास्माभिः प्रदर्शिताः वस्तुतो लम्बनमशुद्धमेवायाति तर्हि इहाचार्येण स्थूलग्रहणं किमर्थं कृतमित्यत्र ३२श्लोक टीकायां चतुर्वेदाचार्यः । 'अत्र स्थूलग्रहणं महापुरुषतया कृतमन्यथा वासनाविरोधात्लम्बनावनती एव तैर्न ज्ञाते ॥२८॥

वि. भा.—लम्बनघटिका लिप्ता दशज्यया पुलिशादिभिराचार्यैः कथितास्ता यस्मात् कारणादाचार्यसाधितानामर्केन्दु दृग्नतिकलानाम् (रविचन्द्रयोर्दृग्नती ताभ्यां पृथक् पृथक् याः कला लम्बनकलास्तासां) समा न भवन्ति तस्मात्कारणाद्दशज्यया लम्बनं स्थूलं भवतीति ॥२८॥

अत्रोपपत्तिः

पूर्व २७ श्लोके क्षेत्रसंस्थानं यथाऽयुक्तं प्रदर्शितं तथाऽत्र रविचन्द्रयोः

पृथक् पृथक् लम्बनक्षेत्रे अप्ययुक्ते भवतस्तद्वशतः साधितं स्फुटलम्बनमपि स्थूलं भवति । वस्तुतो लम्बनमशुद्धमेव समागच्छति तर्ह्याचार्येणात्र स्थूलग्रहणोपादानं किमर्थं कृतमिति त एव ज्ञातुं शक्यन्ति, उदयज्या = अग्रा, मध्यज्या = दशमलग्न-
नतांशज्या, रविशंकुः, दृग्गतिः = वित्रिभशंकुः । दृक्क्षेपः = वित्रिभनतांशज्या, इति पञ्चज्याः सन्ति, पौलिश तन्त्रे चन्द्रस्यापि पृथक् पञ्चज्याः साधिता इति दशज्याः स्युरिति ॥२८॥

अब लम्बन और अवनति के आनयन जिन आचार्यों ने दशज्या से किये हैं उनके मत का खण्डन करते हैं ।

हि. भा.—जो लम्बन घटीकला पुलिश आदि आचार्यों से दशज्या से कही गई है वे जिस कारण से आचार्य साधित रवि और चन्द्र की दृग्गति से (पृथक् पृथक् जो लम्बन कला होती है) उनके बराबर नहीं होती है उसी कारण दशज्या से साधित लम्बन स्थूल होता है इति ॥ २८ ॥

उपपत्ति ।

पहले २७ वें श्लोक में जिस तरह क्षेत्र संस्थान अयुक्त दिखलाया गया है उसी तरह यहां रवि और चन्द्र के पृथक् पृथक् लम्बन क्षेत्र भी अयुक्त होते हैं उन के वश ने साधित स्फुट लम्बन भी स्थूल होते हैं वस्तुतः लम्बन अशुद्ध ही आता है तब यहां आचार्य ने क्यों स्थूल ग्रहण का उपादान किया है । इस बात को वे ही कह सकते हैं उदयज्या = अग्रा, मध्यज्या = दशमलग्ननतांशज्या, रविशंकु, दृग्गति = वित्रिभशंकु, दृक्क्षेप = वित्रिभनतांशज्या, ये पञ्चज्या है, पौलिश तन्त्र में चन्द्र की भी पृथक् पञ्चज्या साधित हैं, यही दशज्या हैं इति ॥२८॥

इदानीं स्फुटं दृक्क्षेप संस्थानं कथयति ।

वित्रिभलग्ने दृक्क्षेपमण्डलं तदपमण्डलं युतौ ज्या ।

मध्या दृक्क्षेपज्या नार्यभटोक्ताऽनया तुल्या ॥२९॥

सु. भा.—वित्रिभलग्ने यद्दृक् क्षेपमण्डलं दृड्मण्डलं तस्यापमण्डलस्य च या युतिस्तस्यां युतौ मध्या या ज्या ऽर्थात् खस्वस्तिकाद्युतिपर्यन्तं दृक्क्षेप मण्डले ये भागास्तेषां ज्या दृक्क्षेपज्या (दृक्क्षेप एव ज्या) अनया तुल्याऽऽर्यभटोक्ता न भवति ॥२९॥

वि. भा.—वित्रिभलग्ने यद्दृक्क्षेपमण्डलं तदपमण्डलं (दृग्गतिं) तस्यापमण्डलस्य (क्रान्तिवृत्तस्य) च या युतिस्तस्यां (युतौ) या मध्याज्या (खस्वस्तिकाद्युति

पर्यन्तं दृक्षेपवृत्ते योऽशास्तेषां ज्या) दृक्षेपज्या भवति, अनया (दृक्षेपज्यया) तुल्याऽऽर्यभटोक्ता (दृक्षेपज्या) न भवतीति ॥२९॥

अत्रोपपत्तिः ।

खस्वस्तिकाद्वित्रिभलग्नपर्यन्तं दृक्षेपवृत्ते दृक्षेपचापम् । एतस्य ज्या दृक्षेपज्या, आर्यभटेन मध्यज्या (दशमलग्ननतांशज्या) वित्रिभदशमलग्नान्तर-ज्ययोर्वगन्तरमूलं दृक्षेपज्यामानं कथ्यते वस्तुतो मध्यज्या वित्रिभदशमान्तरज्य-योर्वगन्तरमूलं वित्रिभदशमान्तरकोटिव्यासार्धे परिणतं भवति (चापीय जात्यत्रि-भुजज्याक्षेत्रविधानेन) एतत् त्रिज्या व्यासार्धे परिणामनेन वास्तवं दृक्षेपज्यामानं भवितुमर्हति, आचार्य कथनमत्रातीवयुक्तियुक्तमिति सुधीभिर्बोध्यमिति ॥ २९ ॥

अब स्फुट दृक्षेप की स्थिति को कहते हैं ।

हि. भा.—वित्रिभलग्न में जो दृक्षेपवृत्त (वित्रिभदृग्वृत्त) होता है उस की और क्रान्तिवृत्त की युति (योग) में जो मध्यज्या अर्थात् खस्वस्तिक से युति बिन्दु पर्यन्त दृक्षेपवृत्तीय चापज्या दृक्षेपज्या है इसके बराबर आर्यभटोक्त दृक्षेपज्या नहीं होती है इसीलिये आर्यभटोक्त दृक्षेपज्या असत् है इति ॥ २९ ॥

उपपत्ति ।

खस्वस्तिक से वित्रिभलग्नपर्यन्त दृक्षेप वृत्त में दृक्षेप चाप है इसकी ज्या दृक्षेपज्या है आर्यभट मध्यज्या (दशमलग्ननतांशज्या) और वित्रिभ दशमलग्न की अन्तर-ज्या के वर्गान्तर मूल को दृक्षेपज्या कहते हैं, वस्तुतः मध्यज्या और दशमवित्रिभलग्नान्तर-ज्या का वर्गान्तर मूल वित्रिभ दशमान्तर कोटि व्यासार्धवृत्त में परिणत दृक्षेपज्या होती है । (चापीय जात्य त्रिभुज के ज्याक्षेत्र विधान से) इस को त्रिज्या व्यासार्ध में परिणत करने से वास्तव दृक्षेपज्या होगी, यहां आचार्य जो खण्डन करते हैं सो अतीव युक्तियुक्त है इति ॥२९॥

इदानीं दृक्षेपा शुद्धिवशतोऽन्यत्खण्डयति ।

दृक्षेपज्याऽतोऽसत् तन्नाशादवनतेर्नाशः ।

अवनतिनाशात् ग्रासस्योनाधिकता रविग्रहणे ॥३०॥

सु. भा.—अतः पूर्वप्रतिपादित संस्थानत आर्यभटीया दृक्षेपज्या ऽऽज्जा-ता । तन्नाशाद् दृक्षेपाशुद्धेरवनतेर्नाशस्तस्या गणनायास्तदधीनत्वाद् । अवनति-

नाशात् (स्फुटशरनाशस्ततो) रविग्रहणे ग्रासस्योनाधिकता भवतीति स्फुटम् ॥३०॥

वि. भा.—यतः (पूर्वप्रतिपादितयुक्तिः) आर्यभटोक्ता दृक्षेपज्याऽसत् (असमीचीना) जाता, तन्नाशात् (दृक्षेपाशुद्धे.) अवनतिर्नाशः (अवनतिसाधनस्य दृक्षेपाधीनत्वात्) अवनतिनाशात् स्फुटशरनाशः (यतः सूर्यग्रहे नतिसंस्कृतशरः स्फुटशरो भवति) तस्माद्रविग्रहणे ग्रासस्योनाधिकता (स्फुटशरोनमानैक्यार्धस्य ग्रासत्वात्) भवतीति खण्डनमिदमाचार्योक्तमतीव शोभनमिति विज्ञैः परीक्षणीयम् ॥३०॥

अब दृक्षेपज्या की अशुद्धि से अन्य खण्डन करते हैं ।

हि. भा.—पूर्व प्रतिपादित संस्थान से आर्यभटोक्त दृक्षेपज्या असत् (असमीचीन) हुई, दृक्षेप की अशुद्धि से अवनति अशुद्ध होती है (क्यों कि दृक्षेप ही के वश से अवनति का साधन होता है) अवनति की अशुद्धि से स्फुटशर अशुद्ध होता है (क्यों कि सूर्य ग्रहण में नतिसंस्कृत शर स्फुटशर होता है) इसीलिये सूर्य ग्रहण में ग्रास की अल्पता और अधिकता (क्योंकि मानैक्यार्ध में स्फुट शर को घटाने से शेष यास होता है) होती है, यह खण्डन बहुत ठीक है इसको विज्ञ लोग विचार कर देखे इति ॥३०॥

इदानीं श्रीषेणविष्णुचन्द्रकृतं सूर्यग्रहणं खण्डयति ।

पञ्चज्यया यतोऽर्कग्रहणं श्रीषेणविष्णुचन्द्रकृतम् ।

आर्यभटोक्तान्यनयोरर्कग्रहदूषणानि ततः ॥३१॥

सु. भा.—यतः श्रीषेण विष्णुचन्द्रकृतमर्कग्रहणं चाऽऽर्यभटोक्तवत् पञ्चज्ययैव । ततस्तस्मादायंभटोक्तान्यर्कग्रहदूषणान्यनयोः श्रीषेण विष्णुचन्द्रयोरपि देयानि ॥३१॥

वि. भा.—यतः (यस्मात्कारणात्) श्रीषेणविष्णुचन्द्रकृतमर्कग्रहणमार्यभटोक्तवत् पञ्चज्ययैवास्ति, ततः (तस्मात्कारणात्) अनयो (श्रीषेणविष्णुचन्द्रयोः) रप्यार्यभटोक्तान्यर्कग्रहदूषणानि वाच्यानीति ॥३१॥

अब श्रीषेण और विष्णुचन्द्रकृत सूर्यग्रहण का खण्डन करते हैं ।

हि. भा.—जिस कारण से श्रीषेण और विष्णुचन्द्रकृत सूर्यग्रहण आर्यभटोक्त की तरह पञ्चज्या ही से है, इसलिये आर्यभटोक्त सूर्यग्रहण में जितने दोष हैं वे इन दोनों में भी कहने चाहिये इति ॥३१॥

इदानीमेवं सिद्धं निर्मलितार्थमाह ।

एवं विचार्यमाणे पञ्चज्यालम्बनं महास्थूलम् ।
स्थूलाऽवनतिश्च तथा दशज्यया लम्बनावती ॥३२॥

सु० भा०—एवं पूर्वोक्तदूषणो विचार्यमाणे पञ्चज्यालम्बनं पञ्चज्यया लम्बनं महास्थूलं जातमवनतिश्च स्थूला जातम् । तथा दशज्ययाऽप्येवमेव लम्बनावती महास्थूले ॥३२॥

वि. भा.—एवं पूर्वोक्तदोषकदम्बके विचार्यमाणे पञ्चज्यया लम्बनमतीव स्थूलं जातम्, अवनतिश्च स्थूला जाता, दशज्यया लम्बनावती तथैवातीव स्थूले जाते इति ॥३२॥

अब पूर्वोक्त दूषणों से जो निर्गलितार्थ (निचोड़ बातें) निकला है उसे कहते हैं ।

हि. भा.—इस तरह पूर्वोक्त दोषों को विचार करने से सिद्ध होता है कि पञ्चज्या से साधित लम्बन बहुत स्थूल होता है, अवनति भी बहुत स्थूल होती है, दशज्या से भी साधित लम्बन और अवनति इसी तरह बहुत स्थूल होती है इति ॥ ३२ ॥

इदानीं स्वसिद्धान्तमाह ।

नाडीचतुष्कविधिना सर्वत्र समो यतस्ततः स्थूलः ।
मानार्थं कर्म महत् कृतमार्यभटेन लघुनि सति ॥३३॥

सु. भा.—यतो यदुक्तेन नाडीचतुष्क विधिना लम्बनानयनप्रकारः सर्वत्र समः समानोऽर्थात् कुत्रचिन्न व्यभिचरति ततस्तस्मात् कारणादन्योक्तः प्रकारः स्थूलो ज्ञेयः । तथा मद्बुते साधने लघुनि सति आर्यभटेन लम्बनमानार्थं महत् कर्म कृतम् तन्नादरणीयं सिद्धान्तप्रपञ्चकुशलैरिति ॥ ३३ ॥

वि. भा.—यतः (यस्मात् कारणात्) नाडीचतुष्कविधिना (व्यासार्धेन विभक्ता दृग्नतिजीवा चतुर्गुणा लब्धमित्याचार्योक्तलम्बनघटयानयनेन) सर्वत्र समोऽर्थाल्लम्बनानयनप्रकारः सर्वत्रैकरूप एव न कुत्रापि व्यभिचरति ततः (तस्मात् कारणात्) स्थूलो (अन्योक्त प्रकारः स्थूलः) ज्ञेयः । मद्बुक्ते साधने लघुनि सति मानार्थं (लम्बनमानार्थं) आर्यभटेन महत्कर्म कृतं तन्न शोभनमतो विद्वद्भिस्तन्नादरणीयमिति यद्यप्याचार्येण 'व्यासार्धेन विभक्ता दृग्नतिजीवा चतुर्गुणा लब्धमि' त्यादिना स्वमतेन लम्बनावनत्योः साधनं प्रतिपाद्याऽऽर्यभटोक्त-

तत्साधनस्य खण्डनं प्रतिपादितमस्ति, तथाप्यत्र तत्प्रतिपादनेन पिष्टपेषणमात्रमेव प्रदर्श्यते नात्र किमपि वैशिष्ट्यमिति ॥ ३३ ॥

अब आचार्य अपने सिद्धान्त को कहते हैं ।

हि. भा.—जिस कारण से नाडी चतुष्कविधि से अर्थात् “व्यासार्धेन विभक्ता हृन्मतिजीवा चतुर्गुणा लब्धम्” इत्यादि से सब स्थानों में लम्बनानयन प्रकार समान ही होता है, कहीं पर भी व्यभिचरित नहीं होता है, इसी कारण से अन्योक्त प्रकार स्थूल समझना चाहिये । हमारे लघु साधन रहने पर लम्बन मान के लिये आर्यभट ने जो महत्कर्म किया सो ठीक नहीं है इसलिये ज्योतिः सिद्धान्तज्ञ लोग इसका आदर न करे । यद्यपि आचार्य “व्यासार्धेन विभक्ता हृन्मतिजीवा इत्यादि से” अपने मत से लम्बन और अवनति के साधन प्रकार कह कर आर्यभटोक्त लम्बन और अवनति साधन प्रकार का खण्डन दिखला चुके हैं । तथापि यहां उन्हीं विषयों का प्रतिपादन कर केवल पिष्ट पेषण मात्र ही दिखलाते हैं उसमें कुछ विशिष्टता नहीं है इति ॥ ३३ ॥

इदानीमार्यभटोक्तमक्षजट्टकर्म खण्डयति ।

विक्षेपगुणाऽक्षज्या लम्बकभक्ताग्रहे धनमृणं यत् ।

उक्तमुदयास्तमययोर्न प्रतिघटिकं यतस्तदसत् ॥ ३४ ॥

सु. भा.—आर्यभटेनार्कासन्नभावेन यौ ग्रहाणामुदयास्तमयौ तयो ‘रक्षज्या विक्षेपगुणा लम्बकेन लम्बज्यया भक्ता’ इत्यक्षजं ट्टकर्म यदग्रहे धनमृणं वोक्तं तद्यतः प्रतिघटिकमर्थात् प्रवहवशेन नित्योदयास्तयोः प्रतिवेलेन नोक्तमतस्तदानयनमसदेकदेशीयत्वादिति ।

अत्र चतुर्वेदाचार्यः ।

असद्दूषणमेतत् सामान्येन तन्त्रोक्तत्वादिति ॥ ३४ ॥

वि. भा.—आर्यभटेनार्कासन्नभावेन ग्रहाणां यावदुदयास्तौ भवतस्तयोः “अक्षज्या शरगुणा लम्बज्यया भक्ता” इत्यक्षजं ट्टकर्म यदग्रहे धनमृणं वोक्तं तद्यतः प्रतिघटिकमर्थात् प्रवहवशेन नित्योदयास्तयोः प्रतिक्षणं नोक्तमतस्तदानयनमसदेकदेशीयत्वादिति ॥ ३४ ॥

अत्रोपपत्तिः ।

ध्रुवः = ध्रुवः । स = समस्थानम् । ग्र = ग्रहबिम्बम्, ध्रुग्रन = ग्रहबिम्बोपरि ध्रुवप्रोतवृत्तम् । सग्रम = ग्रहबिम्बोपरि समप्रोतवृत्तम् । जमन = क्रान्तिवृत्त खण्डम् । ग्रन = ध्रुवप्रोतवृत्तीयः शरः । <मनग्र = न ग्रहस्यायनवलनकोटिः । न = आयनट्टकर्मसंस्कृतग्रहस्थानम् । नम = अक्ष ट्टकर्म, <नग्रम = ग्रहस्याक्षजं वलनम् । अत्र शरस्या-

कला, एतावता 'त्रिज्याकृतिभक्ता विक्षेपापक्रम गुणोत्क्रमज्येन्दोरि' त्युपपद्यते । अत्र चन्द्रभुजोत्क्रमज्यास्थाने चन्द्रभुजकोटिज्याग्रहणं समुचितमस्ति, अयनादौ (अयनसन्धौ) चन्द्रे चन्द्रभुजकोटिः = ०, चन्द्रभुजः = ९० तत्राऽयनवलनाभावा-दायनदृक्कर्मणोऽप्यभावो भवेत्, परमार्यभटमतेन तत्र चन्द्रभुजस्य परमत्वा-त्तदुत्क्रमज्यावशत आयनदृक्कर्मोत्पद्यते, यच्च गोलसन्धौ परमायनवलनत्वा-दुत्पद्यतेऽतस्तन्मतं न सदिति । अत्र चतुर्वेदाचार्यः 'सदृष्टणमेतद्यत आर्यभटीयं वाक्यमेतदत्रार्थे-विक्षेपापक्रमगुणमुत्क्रमणं विस्तरार्धकृतिभक्तम्' इदं कर्म क्रमज्यया साधितं वास्तवं भवति, आर्यभटादिभिरुत्क्रमज्यया यत्साधितं तन्न समीचीनम् । उत्क्रमज्यया साधितं वलनं दृक्कर्म च न समीचीनमेतदर्थं शिद्धान्तशिरोमणौ भास्कराचार्येण युक्तियुक्तं सर्वमभिहितम् । अत्र भटदीपिकायां परमेश्वरः । 'सायन चन्द्रस्योत्क्रमणं कोट्या उत्क्रमज्येत्यर्थ' । एवं चेत्तदाऽऽचार्य खण्डनं न समीचीनमिति ॥३५॥

अब आर्यभटोक्त आयन दृक्कर्म का खण्डन करते हैं ।

हि. भा.—चन्द्र भुजोत्क्रमज्या को शर से और परम क्रान्तिज्या से गुणा कर त्रिज्या वर्ग से भाग देने से फल आयनदृक्कर्म कला होती है यह जो आर्यभट ने कहा है सो ठीक नहीं है, क्योंकि अयनान्त (गोलसन्धि) में जो ऋण फल और धन फल उत्पन्न होता है वह

उन के मत में अयनादि (अयन सन्धि) ही में उत्पन्न होता है इसलिये उनका मत ठीक नहीं है इति ॥३५॥

उपपत्ति ।

यहां सं. उपपत्ति में लिखित क्षेत्र को देखिये । ध्रु = ध्रुव । क = कदम्ब, ग्र = ग्रह-बिम्बकेन्द्र, पनस्था = क्रान्ति वृत्त खण्ड, ग्रह बिम्बोपरिगत कदम्बप्रोतवृत्त क्रान्तिवृत्त में जहां लगता है वहां ग्रहस्थान = स्था, है ग्रह बिम्ब केन्द्रोपरिगत ध्रुवप्रोतवृत्त क्रान्तिवृत्त में जहां लगता है वही अयन दृक्कर्म संस्कृत ग्रह = न, है । नस्था = आयनदृक्कर्मकला, ग्रस्था = कदम्ब प्रोतवृत्त में शर = मध्यम शर, < स्थाग्र = ग्रह के आयनवलनाश < स्थानग्र = आयनदृक्कर्म संस्कृत ग्रह की आयनवलन कोटि, शर की अल्पता के कारण स्वल्पान्तर से ग्रस्था = ग्रन इसलिये < स्थानग्र = < नस्थाग्र = ६०, तब ग्रस्थान त्रिभुज में अनुपात से शरज्या. आयनवलनज्या

त्रि = आयन दृक्कर्मकलाज्या, आर्यभट के मत से चन्द्रभुजोत्क्रमज्या. जिज्या

= आयनवज्या, अतः उत्थापन देने से शरज्या. चन्द्रभुजोत्क्रमज्या. जिज्या =

त्रि. त्रि

शरज्या. चन्द्रभुजोत्क्रमज्या. जिज्या = आयनदृक्कर्मज्या । यहां स्वल्पान्तर से शरज्या = शर,

त्रि

तथा आयन दृक्कर्मकलाज्या = आयनदृक्कर्मकला, अतः शर चन्द्रभुजोत्क्रमज्या. जिज्या =

त्रि

आयनदृक्कर्मकला, इस से 'त्रिज्या कृतिभक्ता विक्षेपापक्रमगुणोत्क्रमज्येन्दोः' यह उपपन्न हुआ । यहां चन्द्रभुजोत्क्रमज्यास्थान में चन्द्रभुज कोटिज्या का ग्रहण करना समुचित है, अयनादि (अयन सन्धि) में चन्द्र के रहने से चन्द्रभुज कोटि = ०, चन्द्रभुज = ६०, वहां आयनवलन के अभाव से आयनदृक्कर्म का भी अभाव होता है, लेकिन वहां आर्यभट के मत से चन्द्रभुज के परमत्व से आयन दृक्कर्म होता है जो गोल सन्धि में आयन वलन के परमत्व से उत्पन्न होता है इसलिये उनके मत ठीक नहीं है । यहां चतुर्वेदाचार्य कहते हैं 'सदूपणमेतच्च आर्यभटीय वाक्यमेतद्वार्थे' अर्थात् आचार्योक्त यह दोष ठीक है क्यों कि इस विषय में आर्यभट के बचन ठीक हैं 'विक्षेपापक्रमगुणोत्क्रमज्यां विस्तरार्धकृतिभक्तम्' अर्थात् 'त्रिज्याकृति भक्ता विक्षेपापक्रमगुणोत्क्रमज्येन्दोः' आचार्योक्त इस पद्य का जो अर्थ है वही आर्यभटोक्त वचन का अर्थ है, क्रमज्या से साधित आयनदृक्कर्मकला वास्तव होती है, आर्यभट आदि ने आचार्य उत्क्रमज्या से जो इसका साधन किया है सो ठीक नहीं है, उत्क्रमज्या से साधित वलन और दृक्कर्म ठीक नहीं है इसके लिये सिद्धान्तशिरोनग में भास्कराचार्य ने युक्ति युक्त सब बातें कही हैं, इति ॥३५॥

इदानीं दृक्कर्माज्ञानाद्ये दोषा आयान्ति तानाह ।

दृक्कर्माविज्ञानाद् कालाविज्ञानमकथितस्याच्च ।

कालाज्ञानाद् शङ्कोरज्ञानं कोटिनाशोऽतः ॥३६॥

शशिशङ्कोः प्राच्यपरा कोटिः कोटिभुजकृतियुतेर्मूलम् ।

तिर्यक् कर्णो न भवति यतोऽर्कचन्द्रान्तरं कर्णः ॥३७॥

कोटिश्रवणाज्ञानात् शशिनः शृङ्गोन्नतिर्विसंवदति ।

उदयास्तयोर्दिनकृतः प्रतिघटिकमतीव चाज्ञानात् ॥ ३८ ॥

सु. भा.—दृक्कर्माविज्ञानादकथितत्वात् कालसाधनानयनस्याकथितत्वाच्च कालाविज्ञानं कालाज्ञानात् शङ्कोरज्ञानमतः शङ्कोरज्ञानात् कोटिनाशः । ततश्चन्द्र-शृङ्गोन्नतौ या शङ्कोः प्राच्यपरा कोटिः साधिता तस्या नाशो भुजस्यापि नाशः । ततः कोटिभुजकृतियुतेर्मूलं तिर्यक् कर्णोऽपि न भवति । यतो रविचन्द्रान्तरं रविचन्द्र-बिम्बान्तरसूत्रमेव कर्णस्तस्य नाशे महान् विरोधः । एवं कोटिश्रवणाज्ञानाद् दिनकृतः सूर्यस्योदयादस्ताद्वा चन्द्रस्य प्रवहवशेन प्रतिघटिकं प्रतिवेलमुदयास्तयो-श्चातीवाज्ञानात् शशिनश्चन्द्रस्य शृङ्गोन्नतिर्विसंवदति विसंवादमायाति न घटत इत्यर्थः ॥३६-३८॥

वि. भा.—दृक्कर्माविज्ञानादकथितत्वात् कालसाधनस्याकथितत्वाच्च कालावि-ज्ञानं, कालाज्ञानात् शङ्कोरज्ञानं, अतः शङ्कोरज्ञानात् कोटिनाशः, ततश्चन्द्रशृङ्गोन्नतौ या शङ्कोः प्राच्यपरा (पूर्वापरा) कोटिः साधिता तस्या नाशः । भुजस्यापि नाशः । ततः कोटिभुजकृतियुते (कोटिभुजयोर्वर्गयोगस्य) मूलं तिर्यक् कर्णोऽपि न भवति, यतोऽर्कचन्द्रान्तरं (रविचन्द्रबिम्बान्तरसूत्रमेव) कर्णस्तस्य नाशे सति महान् विरोधो भवति, एवं कोटिकर्णाज्ञानात् दिनकृतः (सूर्यस्य) उदयादस्ताद्वा चन्द्रस्य प्रवहवशेन प्रतिघटिकं (प्रतिवेलं) उदयास्तयोश्चातीवा ज्ञानात् शशिनः (चन्द्रस्य) शृङ्गोन्नतिर्विसंवदति विसंवादमायाति न घटत इत्यर्थः) इति ॥३६-३८॥

अब दृक्कर्म के अज्ञान से (वास्तविक ज्ञान न रहने से) जा दोष आते हैं उन्हें कहते हैं ।

हि. भा.—दृक्कर्मक ज्ञान न रहने से काल साधन के न कहने के कारण काल ज्ञान नहीं होता है । काल के अज्ञान से शंकु का ज्ञान नहीं होता है, शंकु के अज्ञान से कोटि का ज्ञान नहीं होता, तब चन्द्रशृङ्गोन्नति में शंकु से जो पूर्वापर कोटि का ज्ञान होता है वह नहीं हो सकता, भुज का भी ज्ञान नहीं होगा, तब भुज और कोटि के वर्ग योग का मूल तिर्यक् कर्ण का भी ज्ञान नहीं होगा, इस तरह कोटि और कर्ण के अज्ञान से सूर्य के उदय से वा अस्त से चन्द्र के प्रवहवश से प्रतिक्षण उदय और अस्त के अतीव अज्ञान से चन्द्र की शृङ्गोन्नति नहीं घटती है अर्थात् जिस समय में चन्द्र शृङ्गोन्नति देखनी चाहिये वह देखने में नहीं आती है इति ॥३६-३८॥

इदानीं शृङ्गोन्नतावार्यभटोक्तं शुक्लं खण्डयति ।

प्राय आर्यभटानुयायिनां शुक्लं खण्डयत्याचार्यः ।

शिष्यधीवृद्धिदे तथैव लल्लोक्तानयनं दर्शनादिति ॥३९॥

अब शृङ्गोन्नति में आर्यभटोक्त शुक्ल का खण्डन करते हैं ।

हि. भा.—रवि और चन्द्र की अन्तर घटी से रवि और चन्द्र का जो अन्तरांश होता है उस की उत्क्रमज्या (रविचन्द्रान्तरांशोत्क्रमज्या) को चन्द्रबिम्बव्यास से गुणा कर व्यास (द्विगुणित त्रिज्या) से भाग देने से आर्यभटोक्त शुक्ल होता है, जिस कारण से वह सर्वदा दृक्तुल्य नहीं होता है इस कारण से वह असत् (असमीचीन) है इति ॥३९॥

उपपत्ति

रवि और चन्द्र के अन्तराभाव रहने से शुक्लाभाव होता है, परम अन्तर (६ राशि तुल्य अन्तर) में पूर्ण (चन्द्रबिम्ब तुल्य) शुक्ल होता है, तथा तीन राशि तुल्य अन्तर में बिम्बार्धतुल्य शुक्ल होता है ये बातें भास्कराचार्य से प्राचीन सब आचार्यों ने स्वीकार की है । यहाँ अन्तरांशोत्क्रमज्या से प्रत्यक्ष शुक्लवृद्धि के देखने से अनुपात करते हैं द्विगुणित त्रिज्यातुल्य रवि चन्द्रान्तरांशोत्क्रमज्या में चन्द्रबिम्ब तुल्य शुक्ल पाते हैं तो इष्ट रवि चन्द्र-अन्तरांशोत्क्रमज्या में क्या इससे आर्यभटीय सर्वकालिक शृङ्गोन्नति के लिये उपयुक्त शुक्ल आता है । आचार्य ने शृङ्गोन्नति अध्याय में जो शुक्लानयन किया है वह दिन में शृङ्गोन्नति के लिये है, इसलिये आचार्योंक्त से आर्यभटोक्त के विरुद्ध होने के कारण वह ठीक नहीं है यह बात आचार्य कहते हैं । यहाँ चतुर्वेदाचार्य कहते हैं 'रविचन्द्रान्तरस्थितघटिकानां प्रागानीतानां' इत्यादि सं. उपपत्ति में लिखित शब्द को देखिये अर्थात् पूर्वानीत रवि और चन्द्र की अन्तर घटी की जो उत्क्रमज्या है वह रविचन्द्रान्तर घटी की व्यस्तज्या कहलाती है, अर्थात् रवि और चन्द्र के अन्तर स्थित कालांशज्या है, तथा क्रान्तिमण्डल भोग से रवि चन्द्रान्तरांश उत्क्रमज्या में शुक्लानयन समुचित है, आचार्योंक्त यह खण्डन ठीक नहीं है, क्यों कि यह अर्थ आर्यभटीय नहीं है, शृङ्गोन्नति में आर्यभट ने इतना ही सूचित किया है कि 'भूग्रहभानां गोलाधीनि स्वच्छायया विवरणानि' इत्यादि सं. उपपत्ति में लिखित पद्य को देखिये । प्रायः आचार्य आर्यभटानुयायियों (भास्करादियों) के शुक्ल का खण्डन करते हैं क्यों कि शिष्यधीवृद्धि में वैसा ही लल्लोक्तानयन देखने में आता है इति ॥३९॥

इदानीमार्यभटसाधितचन्द्रदिनगतशेषौ खण्डयति ।

प्राक् प्रागुदिताभ्यधिकः पश्चादुदितोनकोऽपरे व्यस्तः ।

कालो यश्छायार्थं तदसत् स्फुटभूक्तिगमनात् प्राक् ॥४०॥

सु. भा.—प्राक् प्राक्क्षितिजे प्रागुदिताभ्यधिकः कार्यः । पश्चादुदितोनकः कार्यः । अर्थात् प्राक्क्षितिजे यदि चन्द्रः प्रागुदितस्तदा सोऽधिकेन तात्कालिकलग्नेन समः कार्यः । चन्द्रभोग्यकालस्य लग्नभुक्तकालस्य मध्योदयानां च योगः कार्य इत्यर्थः । एवं यदीष्टलग्नानन्तरं चन्द्रोदयस्तदा लग्नभोग्यकालस्य चन्द्रभुक्तकालस्य मध्योदयानां च योगः कार्यः । अपरे प्रत्यक्षितिजे तु पूर्वोक्ततो व्यस्तस्तदा चन्द्रस्य गतो वा शेषः कालः स्यादिति । एवमार्यभटेन छायार्थं यः कालः साधितस्तन्मानमसज्ज्ञेयं प्राक्स्फुट भुक्तिगमनात् । अर्थाद्यदि चन्द्रो नक्षत्रवत् स्थिरस्तदाऽऽर्यभटकर्मणा लग्नात् कालसाधनवत् कालो भवेत् परन्तु स्फुटभुक्त्या चन्द्रः प्राग्गच्छति अतोऽसकृत्कर्मणा तात्कालिकचन्द्रोदयास्तलग्नवशेन स्फुटकालसाधनं युक्तमत आर्यभटोक्तं सकृत्कालसाधनं न सदिति ।

अत्र चतुर्वेदाचार्यः—

‘अयमप्यर्थस्तत्र (आर्यभटतन्त्रे) नास्ति तस्मादसद्वृणमेतत् स्यात् । तद्व्याख्यातृणां यद्भवति तद्भवतु का नः क्षतिः’ ॥४०॥

वि. भा.—प्राक् (पूर्वं क्षितिजे) प्रागुदिताभ्यधिकः कार्यः पश्चादुदितोनकः कार्योर्थाद्यदि चन्द्रः पूर्वक्षितिजे प्रागुदितस्तदा सोऽधिकेन तात्कालिक लग्नेन समः कार्योऽर्थाच्चन्द्रभोग्यकाललग्नभुक्तकालमध्योदयानां योगः कार्यः । यदीष्टलग्नानन्तरं चन्द्रोदयस्तदा लग्नभोग्यकालचन्द्रभुक्तकालमध्योदयानां योगः कार्यः । अपरे (पश्चिमक्षितिजे) व्यस्तः (पूर्वोक्ततो विपरीतः) तदा चन्द्रस्य गतः शेषो वा कालः स्यात् । एवमार्यभटेन छायार्थं यः कालः साधितस्तन्मानमसद्वबोध्यं प्राक् स्फुटभुक्तिगमनात् । अर्थाद्यदि चन्द्रो नक्षत्रवत् स्थिरस्तदाऽऽर्यभटोक्त कर्मणा लग्नात्कालसाधनवत् कालो भवेत् । परन्तु चन्द्रः स्फुटगत्या पूर्वदिशि गच्छति, अतस्तात्कालिकचन्द्रोदयास्तलग्नवशेनाऽसकृत्कर्मणा स्फुटकालसाधनं समुचितं तत आर्यभटोक्तं सकृत्कर्मणा कालसाधनं न समीचीनमिति । अत्र चतुर्वेदाचार्यः ।

‘अयमप्यर्थस्तत्र (आर्यभटतन्त्रे) नास्ति तस्मादसद्वृणमेतत् स्यात् तद्व्याख्यातृणां यद्भवति तद् भवतु का नः क्षतिः’ । आर्यभट तन्त्रे यस्य विषयस्योल्लेखो नास्ति तमपि स्वकपोलकल्पितं कृत्वा ऽऽचार्यस्तं खण्डयतीति महदाश्चर्यम् ॥४०॥

अब आर्यभट से साधित चन्द्रदिनगत और चन्द्रदिनशेष का खण्डन करते हैं ।

हि. भा.—यदि चन्द्र प्राक् क्षितिज में प्राक् उदित हो तो चन्द्र को अधिक तात्कालिक लग्न के साथ सम करना यदि चन्द्र पश्चात् उदित हो तो चन्द्र को अल्पतात्कालिक लग्न के साथ सम करना अर्थात् चन्द्र के भोग्यकाल, लग्न के भुवतकाल तथा चन्द्र और लग्न के मध्यवर्ती राश्युदयासुओं का योग करना, यदि इष्ट लग्न के अनन्तर चन्द्रोदय हो तो लग्न के भोग्य काल, चन्द्र के भुक्त काल तथा चन्द्रलग्नान्तर्गत राश्युदयासुओं का योग करना चाहिये, पश्चिम क्षितिज में पूर्वोक्त से विलोम होता है तब चन्द्र का गत वा शेष काल होता है । एवं छाया के लिये आर्यभट ने जो काल साधन किया है उस का मान ठीक नहीं समझना चाहिये । स्फुटगति से चन्द्र के पूर्व दिशा में जाने के कारण अर्थात् यदि चन्द्र नक्षत्र की तरह स्थिर हो तब आर्यभटीय कर्म से लग्न से काल साधन की तरह काल होता है । लेकिन चन्द्र तो अपनी स्फुट गति से पूर्व दिशा में जाते हैं इसलिये तात्कालिक चन्द्रोदयास्त लग्नवश से असकृत्कर्म से स्फुट कालसाधन युक्त है अतः सकृत् प्रकार से आर्यभटोक्त काल साधन असत् (असमीचीन) है, यहां चतुर्वेदाचार्य कहते हैं—‘अयमप्यर्थस्तत्र (आर्यभटतन्त्रे) नास्ति’ इत्यादि सं. उपपत्ति में लिखित गद्य को देखिये अर्थात् यह अर्थ भी आर्यभटतन्त्र में ।

इदानीं दिनगतघटिकाद्यज्ञाने ये दोषास्तानाह ।

उदितानुदितास्तमितावशेषकालान्न वेत्ति यः स कथम् ।

आर्यभटज्ञः शशिनश्छाया शृङ्गोन्नती वेत्ति ॥ ४१ ॥

सु. भा.—आर्यभटज्ञ आर्यभटतन्त्रज्ञो वाऽऽर्यभट एव ज्ञः पण्डित इत्यार्यभटज्ञः । शेषं स्पष्टार्थम् ॥ ४१ ॥

वि. भा.—य आर्यभटज्ञः (आर्यभटतन्त्रवेत्ता) इतावशेषकालात् (गतकालाच्छेषकालाच्च) शशिनः (चन्द्रस्य) उदितानुदितास्तं न जानाति, स चन्द्रस्य छायाशृङ्गोन्नती कथं वेत्ति कथमपि न वेत्तीत्यर्थः—अत्रैतदुक्तं भवति पूर्वकपाले प्रश्ने प्रश्नकालिकविघटिकासु प्रागुदिते चन्द्रे अन्तरजा घटिका योज्याः । पश्चादुदिते चन्द्रे (इष्टलग्नानन्तरमुदिते चन्द्रे) अन्तरजा घटिकाः प्रश्नकालिकघटिकासु हीनाः कार्याः । पश्चिमकपाले तु विपर्ययोऽर्थात्प्रागुदिते चन्द्रे हीनाः पश्चादुदिते योज्यास्तदा चन्द्रच्छायायर्थं गतः शेषो वा कालः स्यात् । अनया रीत्या चन्द्रच्छायायर्थं गतशेषकालानयनमायं भटोक्तमस्ति, यत्खण्डनमाचार्येणात्रैवा (तन्त्रपरीक्षाध्याये) ध्याये “प्राक् प्रागुदिताभ्यधिकः पश्चादुदितोनकोऽपरे व्यस्तः । कालोयश्छायायर्थं तदसत् स्फुटभुक्ति गमनात् प्राक्” ज्ञेन कृतम् । गतशेष नाङ्किभिरेव चन्द्रस्य स्पष्टशंकुज्ञानं भवति यद्वशेन चन्द्रशृङ्गोन्नतेर्ज्ञानं भवति—आर्यभटोक्तं गतशेषकालानयनं न समीचीनमस्त्यतस्तद्वशेन साधिते चन्द्रच्छायाशृङ्गोन्नती अपि न समीचीने भवितुमर्हति इत्येवाऽचार्यकथनस्याभिप्राय इति ॥ ४१ ॥

अब दिनगत घटी आदि का ज्ञान न रहने से जो दोष होते हैं उन्हें कहते हैं ।

हि. भा.—जो आर्यभट तन्त्र के पण्डित-गत काल से और शेष काल से उदित चन्द्र और अनुदित चन्द्र चन्द्रास्त को नहीं जानते हैं वे चन्द्र की छाया और चन्द्रशृङ्गोन्नति को कैसे समझ सकते हैं अर्थात् किसी तरह नहीं समझ सकते हैं— यहाँ ऐसा कहा जाना है पूर्व कपाल में प्रश्न होने से पूर्वोदित चन्द्र में प्रश्न कालिक घटी में अन्तर घटी को जोड़ देना चाहिये, पश्चादुदित चन्द्र में (इष्टलग्नानन्तर उदित चन्द्र में) अन्तर घटी को प्रश्नकालिक घटी में से हीन करना चाहिये, परिचयकपाल में विपरीत होता है अर्थात् पूर्वोदित चन्द्र में प्रश्नकालिक घटी में से अन्तर घटी को हीन करना चाहिये, पश्चात् उदित चन्द्र में प्रश्नकालिक घटी में अन्तर घटी को जोड़ना चाहिये तब चन्द्र की छाया के लिये गतकाल वा शेषकाल होता है, इस रीति से चन्द्रच्छाया साधनार्थ गतकाल और शेषकाल का साधन आर्यभट ने अपने सिद्धान्त में किया है, जिसका खण्डन इसी तन्त्र परीक्षाध्याय में “प्राक् प्रागुदिनाभ्यधिकः” इत्यादि संस्कृत विज्ञान भाष्य में लिखित श्लोक से आचार्य ने किया है, गत घटी और शेषघटी से ही चन्द्र का स्पष्टशंकु साधन होता है, स्पष्टशंकु वग ही से चन्द्र की शृङ्गोन्नति का ज्ञान होता है, आर्यभट कथित गत कालानयन और शेष कालानयन ठीक नहीं है इसलिये उसके द्वारा साधित चन्द्रच्छाया और चन्द्रशृङ्गोन्नति भी ठीक नहीं हो सकती है यही आचार्य के कथन का अभिप्राय है इति ॥४१॥

इदानीमार्यभटं दूषयति ।

स्वयमेव नाम यत् कृतमार्यभटेन स्फुटं स्वगणितस्य ।

सिद्धं तदस्फुटत्वं ग्रहणादीनां विसंवादात् ॥ ४२ ॥

निर्भयो राजाज्ञया प्रतीयते अन्यथा पण्डितानामीदृशं मनर्गलवाक्यं दण्डार्हमिति
॥ ४२-४४ ॥

अब आर्यभट के दोषों को कहते हैं ।

हि. भा.—आर्यभट ने अपने ही अपने गणित के नाम से जो स्फुट किया है अर्थात् स्फुट
गणित नाम जो रखा है, ग्रहण आदि के विसंवाद के कारण उसकी अस्फुटता सिद्ध हुई
अर्थात् पूर्वकथित दोषसमूह से उनके गणित का अस्फुटत्व सिद्ध होता है इसलिये आर्यभट ने
व्यर्थ ही अपने गणित का नाम करण ‘स्फुट’ किया । जिस कारण से आर्यभट गणित-काल और
गोल इनमें एक को भी नहीं जानते है इस कारण से इन गणित-काल और गोल, के पृथक्-
पृथक् (अलग-अलग) दोषों को हम नहीं कहते है । अर्थात् उनके गणित पाद में कालपाद में
और गोल पाद में दोषों की अधिकता से उनके उल्लेख करने से क्या लाभ । जिस कारण से
हम आर्यभट के दोषों की संख्या कहने में असमर्थ है इस हेतु से यह पूर्वकथित दोष समूह
उदाहरण रूप ही समझना चाहिये । उनके बल से बुद्धिमान लोग अन्य दोषों की भी योजना
करेंगे । आचार्य के यह सब वाक्य अन्तर्गत है इसलिये चतुर्वेदाचार्य कहते हैं । ‘स्पष्टार्थमिदं
मार्यात्रयं राजाज्ञेयम्’ इन तीनों आर्यालोक के अर्थ स्पष्ट है, यह राजा की आज्ञा है, अर्थात्

(१) दृग्निरोधान् । (२) दृष्टि विरोध से

इस तरह के अनर्गल वाक्य के प्रति पादन से आचार्य राजा की आज्ञा से निर्भय प्रतीत होते हैं नहीं तो पण्डितों के इस तरह अनर्गल वाक्य दराडाह (दण्ड योग्य) है इति ॥ ४२-४४ ॥

इदानी विशेषमाह ।

कालान्तरेण दोषा येऽन्यैः प्रोक्ता न ते मयाऽभिहिताः ।
किं ते दूष्येष्वथ दूषकेषु कोशोऽत्र येयः स्यात् ॥ ४५ ॥

सु. भा.—अन्यैराचार्यभटानुयायिभिर्भास्करादिभिराचार्यभटतन्त्रे कालान्तरेण गत्यादिषु ये दोषाः प्रोक्तास्ते चात्र मया नाभिहिताः । दूष्येषु दुष्टजनेषु । अथ दूषकेषु च ते तव प्रतिकोशः किमत्र येयो लभ्यः स्यात् । आचार्यभटपक्षवादिने 'ते' प्रयोगः कृत आचार्येण । यदि दूष्यदूषकाणां गणना क्रियते तर्हि मम किं लभ्यो भवेदिति हेतोर्मया ते दोषा न लिखिता इति ।

अत्र चतुर्वेदाचार्यः ।

स्पष्टार्थेयं निष्प्रयोजना च ॥ ४५ ॥

वि. भा.—अन्यैः (आचार्य भटानुयायिभिर्भास्करादयः) आचार्यभटतन्त्रे कालान्तरेण गत्यादिषु ये दोषाः प्रोक्ता (कथिताः) स्तेऽत्र मया नाभिहिताः (न कथिताः) । दूष्येषु (दुष्टजनेषु), अथ दूषकेषु ते (तव) प्रति कोशोऽत्र किं येयः (लभ्यः) स्यात् आचार्यभट पक्षपातिने 'ते' प्रयोग आचार्येण कृतः । यदि दूष्यदूषकाणां गणना क्रियेत तदा मम किं लभ्यो भवेदिति हेतोस्ते दोषा मया न लिखिता इति ॥ अत्र-चतुर्वेदाचार्यः—'स्पष्टार्थेयं निष्प्रयोजना च' ॥ ४५ ॥

अब विशेष कहते हैं ।

हि. भा.—आचार्यभटतन्त्र में अन्यो (आचार्य भटानुयायी भास्करादियों) से कालान्तर में गति आदि में जो दोष कहे गये हैं वे (दोष) यहां हमने नहीं कहे हैं । दूष्य (दुष्टजन) और दूषक आपके प्रति कोश करने से यहां मुझे क्या लाभ है अर्थात् दूष्य और दूषकों की गणना करने से मुझे क्या लाभ है इसी कारण से वे दोष हमसे नहीं लिखे गये हैं इति । यहां चतुर्वेदाचार्य कहते हैं 'स्पष्टार्थेयं निष्प्रयोजना च' अर्थात् यह आचार्य स्पष्टार्थ है और बिना प्रयोजन के है ॥ ४५ ॥

इदानीं श्रीषेणादीनां दोषान् कथयति ।

श्रीषेणविष्णुचन्द्रप्रद्युम्नार्यभटलार्टासिंहानाम् ।

ग्रहणादि विसंवादात् प्रतिदिवसं द्विगुणमज्ञत्वम् ॥ ४६ ॥

सु. भा.—श्रीषेण-विष्णुचन्द्रप्रद्युम्न-आर्यभट-लाटसिंहानां प्रतिदिवसं प्रतिदिनमज्ञत्वं जाड्यं द्विगुणं द्विगुणोत्तरं वर्धते । कस्मात् । ग्रहणादिविसं-वादात् ग्रहणादिषु दृग्विरोधात् ॥४६॥

वि. भा.—ग्रहणादि विसंवादात् (ग्रहणादीनां दृग्विरोधात्) श्रीषेण-विष्णु-चन्द्र-प्रद्युम्न-आर्यभट-लाटसिंहानां प्रतिदिवसं (प्रतिदिनं) अज्ञत्वं (मूर्खत्वं) द्विगुणं (द्विगुणोत्तरं) वर्धते इति ॥ ४६ ॥

अब श्रीषेण आदि आचार्यों के दोषों को कहते हैं ।

हि. भा.—ग्रहण आदि विषयों में दृष्टि विरोध से श्रीषेण-विष्णुचन्द्र-प्रद्युम्न-आर्यभट-लाट सिंह इन सबों की मूर्खता प्रत्येक दिन द्विगुणित बढ़ती है अर्थात् इन आचार्यों के गणित द्वारा साधित ग्रहण आदि की स्थिति जो होती है वे उसी रूप में दृष्टि द्वारा देखने में नहीं आती है इसलिये इन सबों की जड़ता प्रतिदिन द्विगुणित बढ़ती जाती है इति ॥ ४६ ॥

इदानीं दोषे विशेषमाह ।

युक्त्याऽऽर्यभटोक्तानि प्रत्येकं दूषणानि योज्यानि ।

श्रीषेणप्रभृतीनां कानिचिदन्यानि वक्ष्यामि ॥ ४७ ॥

सु. भा.—आर्यभटोक्तानि प्रत्येकं दूषणानि युक्त्या श्रीषेण प्रभृतीनामपि योज्यानि तेषामपि तथोक्तत्वात् । अथ तेषां कानिचिदन्यानि विशिष्टानि दूष-णानि चाहं वक्ष्यामीति ॥४६॥

वि. भा.—आर्यभटोक्तानि (आर्यभटप्रतिपादितानि) प्रत्येकं दूषणानि (दोषकदम्बकानि) युक्त्या श्रीषेणप्रभृतीनामपि योज्यानि तथैव तेषामप्युक्तत्वात् । तेषां कानिचिदन्यानि विशिष्टानि दोष कदम्बकानि चाहं वक्ष्यामीति ॥ ४७ ॥

अब दोष में विशेष कहते हैं ।

हि. भा.—आर्यभट से प्रतिपादित प्रत्येक दोष युक्ति से श्रीषेण आदि आचार्यों के लिये भी कहना चाहिये क्योंकि उन लोगों ने भी आर्य भटोक्त के सदृश ही कहा है, अतः उन लोगों (श्रीषेण आदि आचार्यों) के कुछ विशिष्ट दोषों को मैं कहता हूँ इति ॥ ४७ ॥

इदानीं तेषां दोषा नाह ।

लाटात् सूर्यशशाङ्को मध्याविन्दूच्च चन्द्र पातो च ।

कुजबुधशीघ्रबृहस्पतिसितशीघ्र शनैश्चरान् मध्यान् ॥ ४८ ॥

इस तरह के अनर्गल वाक्य के प्रति पादन से आचार्य राजा की आज्ञा से निर्भय प्रतीत होते हैं नहीं तो पण्डितों के इस तरह अनर्गल वाक्य दराडाह (दण्ड योग्य) है इति ॥ ४२-४४ ॥

इदानीं विशेषमाह ।

कालान्तरेण दोषा येऽन्यैः प्रोक्ता न ते मयाऽभिहिताः ।
किं ते दूष्येष्वथ दूषकेषु कोशोऽत्र येयः स्यात् ॥ ४५ ॥

सु. भा.—अन्यैराचार्य भटानुयायिभिर्भास्करादिभिरार्य भटतन्त्रे कालान्तरेण गत्यादिषु ये दोषाः प्रोक्तास्ते चात्र मया नाभिहिताः । दूष्येषु दुष्टजनेषु । अथ दूषकेषु च ते तव प्रतिकोशः किमत्र येयो लभ्यः स्यात् । आर्य भटपक्षवादिने 'ते' प्रयोगः कृत आचार्येण । यदि दूष्यदूषकाणां गणना क्रियते तर्हि मम किं लभ्यो भवेदिति हेतोर्मर्या ते दोषा न लिखिता इति ।

अत्र चतुर्वेदाचार्यः ।

स्पष्टार्थेयं निष्प्रयोजना च ॥ ४५ ॥

वि. भा.—अन्यैः (आर्य भटानुयायिभिर्भास्कराद्यैः) आर्य भटतन्त्रे कालान्तरेण गत्यादिषु ये दोषाः प्रोक्ता (कथिताः) स्तेऽत्र मया नाभिहिताः (न कथिताः) । दूष्येषु (दुष्टजनेषु), अथ दूषकेषु ते (तव) प्रति कोशोऽत्र किं येयः (लभ्यः) स्यात् आर्य भट पक्षपातिने 'ते' प्रयोग आचार्येण कृतः । यदि दूष्यदूषकाणां गणना क्रियेत तदा मम किं लभ्यो भवेदिति हेतोस्ते दोषा मया न लिखिता इति ॥ अत्र चतुर्वेदाचार्यः—'स्पष्टार्थेयं निष्प्रयोजना च' ॥ ४५ ॥

अब विशेष कहते हैं ।

हि. भा.—आर्य भटतन्त्र में अन्यो (आर्य भटानुयायी भास्करादियों) से कालान्तर में गति आदि में जो दोष कहे गये हैं वे (दोष) यहां हमने नहीं कहे हैं । दूष्य (दुष्टजन) और दूषक आपके प्रति कोश करने से यहां मुझे क्या लाभ है अर्थात् दूष्य और दूषकों की गणना करने से मुझे क्या लाभ है इसी कारण से वे दोष हमसे नहीं लिखे गये हैं इति । यहां चतुर्वेदाचार्य कहते हैं 'स्पष्टार्थेयं निष्प्रयोजना च' अर्थात् यह आर्या स्पष्टार्थ है और विना प्रयोजन के है ॥ ४५ ॥

इदानीं श्रीषेणादीनां दोषात् कथयति ।

श्रीषेणविष्णुचन्द्रप्रलुम्नार्यभटलाटांसहानाम् ।

ग्रहणादि विसंवादात् प्रतिदिवसं द्विगुणमज्ञत्वम् ॥ ४६ ॥

सु. भा.—श्रीषेण-विष्णुचन्द्रप्रद्युम्न-आर्यभट-लाटसिंहानां प्रतिदिवसं प्रतिदिनमज्ञत्वं जाड्यं द्विगुणं द्विगुणोत्तरं वर्धते । कस्मात् । ग्रहणादिविसंवादात् ग्रहणादिषु दृग्विरोधात् ॥४६॥

वि. भा.—ग्रहणादि विसंवादात् (ग्रहणादीनां दृग्विरोधात्) श्रीषेण-विष्णु-चन्द्र-प्रद्युम्न-आर्यभट-लाटसिंहानां प्रतिदिवसं (प्रतिदिनं) अज्ञत्वं (मूर्खत्वं) द्विगुणं (द्विगुणोत्तर) वर्धत इति ॥ ४६ ॥

अब श्रीषेण आदि आचार्यों के दोषों को कहते हैं ।

हि. भा.—ग्रहण आदि विषयों में दृष्टि विरोध से श्रीषेण-विष्णुचन्द्र-प्रद्युम्न-आर्यभट-लाट सिंह इन सबों की मूर्खता प्रत्येक दिन द्विगुणित बढ़ती है अर्थात् इन आचार्यों के गणित द्वारा साधित ग्रहण आदि की स्थिति जो होती है वे उसी रूप में दृष्टि द्वारा देखने में नहीं आती है इसलिये इन सबों की जड़ता प्रतिदिन द्विगुणित बढ़ती जाती है इति ॥ ४६ ॥

इदानीं दोषे विशेषमाह ।

युक्त्याऽऽर्यभटोक्तानि प्रत्येकं दूषणानि योज्यानि ।

श्रीषेणप्रभृतीनां कानिचिदन्यानि वक्ष्यामि ॥ ४७ ॥

सु. भा.—आर्यभटोक्तानि प्रत्येकं दूषणानि युक्त्या श्रीषेण प्रभृतोनामपि योज्यानि तेषामपि तथोक्तत्वात् । अथ तेषां कानिचिदन्यानि विशिष्टानि दूषणानि चाहं वक्ष्यामीति ॥४६॥

वि. भा.—आर्यभटोक्तानि (आर्यभटप्रतिपादितानि) प्रत्येकं दूषणानि (दोषकदम्बकानि) युक्त्या श्रीषेणप्रभृतीनामपि योज्यानि तथैव तेषामप्युक्तत्वात् । तेषां कानिचिदन्यानि विशिष्टानि दोष कदम्बकानि चाहं वक्ष्यामीति ॥ ४७ ॥

अब दोष में विशेष कहते हैं ।

हि. भा.—आर्यभट से प्रतिपादित प्रत्येक दोष युक्ति से श्रीषेण आदि आचार्यों के लिये भी कहना चाहिये क्योंकि उन लोगों ने भी आर्य भटोक्त के सदृश ही कहा है, अतः उन लोगों (श्रीषेण आदि आचार्यों) के कुछ विशिष्ट दोषों को मैं कहता हूँ इति ॥ ४७ ॥

इदानीं तेषां दोषा नाह ।

लाटात् सूर्यशशाङ्कौ मध्याविन्दूच्च चन्द्र पातौ च ।

सु. भा.—श्रीषेणार्थकृतो रोमक सिद्धान्तो यश्च वासिष्ठो विष्णुचन्द्रेण तयोर्दूषणमाहार्याचतुष्टयेनेति” चतुर्वेदाचार्योक्तिः । तेनायमर्थः । श्रीषेणेन लाटात् लाटदेवकृतात् सिद्धान्तात् सूर्यचन्द्रौ चन्द्रोच्चमन्दपातौ च गृहीत्वा कुजादीनां मध्यान् युगयातवर्षं भगणान् वासिष्ठाद्वसिष्ठसिद्धान्ताद्विजयनन्दिकृतपादात् विजयनन्दकृतात् पादकरणादधमकरणाच्च गृहीत्वा मन्दोच्चपरिधिपात स्पष्टीकरणाद्यं चार्यभटात् गृहीत्वा रक्षोच्चयरोमको भस्मसमूहरूपो रोमकः कन्थाकृतः । तत्र भस्मरूपाणि सर्वाणि वस्तून्पवित्राणि । अत एव रोमकः कन्थाकारो यत्र मालिन्यानां भस्मादीनामेवोच्चयः । एतानेव सर्वान् गृहीत्वा विष्णुचन्द्रेण वासिष्ठो वसिष्ठसिद्धान्तः कृतः । अनयोर्ग्रहणादिषु कदाचिदपि दृष्टिगणितैक्यं न भवति । कदाचिद्दृष्टिगणितैक्यं भवति तद् घुणाक्षरं घुणाक्षरन्यायेन भवति न तद्गणितकर्मणा । अत एताभ्यामस्फुटाभ्यां रोमक वासिष्ठाभ्यां किमिति ।

अत्र चतुर्वेदाचार्यः ।

“स्पष्टार्थमार्या चतुष्टयम् । कुलशोभेयमाचार्यस्य । अर्थात् यादृशी वाणी (‘कन्था’ घुणाक्षरमित्यादि) आचार्येणानुचितोक्तेह तयाऽवगम्यते आचार्यं कुलनीचता । यतः पण्डित कुलोत्पन्नानां नेदृशी वाणी भवतीति ॥४८-५१॥

वि. भा.—श्रीषेणेन लाटात् (लाटदेवकृतात् सिद्धान्तात्) मध्यौ सूर्य-शशाङ्कौ (रविचन्द्रौ) इन्द्रोच्चचन्द्रपातौ (चन्द्रोच्च चन्द्रपातौ) च गृहीत्वा वासिष्ठात् (वासिष्ठसिद्धान्तात्) विजयनन्दिकृतपादाच्च (विजयनन्दिकृतपादात् पादकरणादधमकरणाच्च) मध्यान् कुजबुधशोघ्रवृहस्पतिसितशीघ्रशनैश्चरान् गृहीत्वा, आर्यभटात् मन्दोच्चपरिधिपातस्पष्टीकरणाद्यं गृहीत्वा रक्षोच्चयरोमकः (भस्मसमूहरूपो रोमकः) कन्था कृतः (तत्र रोमके सर्वाणि वस्तूनि भस्मरूपाण्यपवित्राणि सन्ति, अत एव रोमकः कन्थाकारो यत्र भस्मादीनां मालिन्यानामेव समूहः) एतानेव सर्वान् गृहीत्वा विष्णुचन्द्रेण वासिष्ठः (वासिष्ठसिद्धान्तः) कृतः । अनयोः (रोमक वसिष्ठसिद्धान्तयोः) ग्रहणादिषु कदाचिदपि दृष्टिगणितैक्यं न भवति । कदाचित् यद्दृष्टिगणितैक्यं भवति तद्घुणाक्षरं (घुणाक्षरन्यायेन) भवति, तद्गणित-

क्रियया नहि, अत एताभ्यां (रोमक-वासिष्ठ-सिद्धान्ताभ्याम्) किम् । अत्र चतुर्वेदाचार्यः :—

‘स्यष्टार्थेभ्योऽर्थाचतुष्टयम् । कुलगोभेयमाचार्यस्य’ । अर्थात् यादृशी वाणी (‘कन्या’ घुणाक्षर मित्यादि) आचार्यैरानुचितोक्ता तथाऽऽचार्यस्य कुलनीचता-
ऽवगम्यते अत उच्च कुलोत्पन्नानां नैतादृशी वाणी भवतीति ॥ ४८-५१ ॥

अब उन सबों (श्रीपेण आदि आचार्यों) के दोषों को कहते हैं ।

वि. भा.—श्रीपेण लाटदेवकृत सिद्धान्त में मध्यम रवि और चन्द्र को तथा चन्द्र-
मन्दोच्च और चन्द्रपात को लेकर, वासिष्ठ (वसिष्ठ सिद्धान्त) में तथा विजयनन्दिकृत अथम
करण से मध्यम कुज, बुधशीघ्रोच्च, गुरु, शुक्रशीघ्रोच्च, और गनैश्वर को लेकर तथा मन्दोच्च
परिधिपात स्पष्टीकरण आदि को आर्यभटतन्त्र से लेकर भस्मममूर्तरूप रोमक (रोमक
सिद्धान्त) को कन्या बनाये (उसमें सब चीजे भस्म के सङ्ग अपवित्र हैं इसलिये रोमक कन्या-
कार है जिसमें भस्म आदि मलिन चीजों की सम्मूह है ।) इन्हीं सबों को लेकर विष्णुचन्द्र
ने वसिष्ठ (वसिष्ठ सिद्धान्त) बनाया था । इन दोनों (रोमक सिद्धान्त और वसिष्ठ सिद्धान्त)
के ग्रहणादियों में कभी भी दृग्गणितैक्य नहीं होता है । कदाचित् दृग्गणितैक्य होता है तो
घुणाक्षरन्याय से, उनकी गणित क्रिया में नहीं इसलिये इन दोनों (रोमक और वसिष्ठ) से
क्या लाभ, कुछ भी नहीं । यहाँ चतुर्वेदाचार्य कहते हैं—संस्कृत भाष्य में देखिये, अर्थात् चारों
आचार्यों के अर्थ स्पष्ट हैं, यह आचार्य की कुल शोभा है, अर्थात् कन्या, घुणाक्षर इत्यादि
आचार्य की अनुचित उक्ति से उनकी कुल नीचता समझी जाती है क्योंकि उच्च कुलोत्पन्न
लोगों की वाणी इस तरह की नहीं होती है इति ॥ ४८-५१ ॥

इदानीमार्यभटस्यान्यं दोषमाह ।

नीचोच्चवृत्तमध्यस्य गोलवाह्येन नाम कृतमुच्चम् ।

तत्स्थो न भवत्युच्चो यतस्ततो वेत्ति नोच्चमपि ॥ ५२ ॥

सु. भा.—गोलवाह्येनार्यभटेन नीचोच्चवृत्तमध्यस्य नीचोच्चवृत्तकेन्द्रस्य
नामोच्चं कृतम् । परन्तु यतस्तत्स्थ उच्चो न भवति स च भुवो दूरे तिष्ठति ।
तत आर्यभट उच्चमपि न वेत्तीति स्फुटम् ।

अत्र चतुर्वेदाचार्यः—‘वाग्बलमेतत्’ ॥ ५२ ॥

वि. भा.—गोलवाह्येनां (गोलानभिज्ञेन) ऽऽर्यभटेन नीचोच्चवृत्तमध्यस्य
(नीचोच्चवृत्त केन्द्रस्य) नामोच्चं कृतम् । यतः (यस्मात् कारणात्) तत्स्थः
(नीचोच्चवृत्तकेन्द्रस्थितः) उच्चो न भवति, ‘यः स्यात् प्रदेशः प्रतिमण्डलस्य दूरे
भुवस्तस्य कृतोच्च संज्ञा’ इत्युक्तेः स च (उच्चः) भुवो दूरे तिष्ठति, ततः (तस्मात्

कारणात्) आर्यभट उच्चमपि न वेत्ती (जानाति) ति । अत्र चतुर्वेदाचार्यः—
'वाग्वलमेतत्' । 'कक्षास्थ मध्यग्रहचिन्हतोऽथ वृत्त' लिखेदन्त्यफलज्यया तत् ।
नीचोच्चवृत्तमि' ति भास्करोक्तया वस्तुतो नीचोच्चवृत्तस्य केन्द्रमुच्च न भवितु-
मर्हति, यथाऽऽचार्येण कथ्यतेतथै व यद्यार्यभटोक्त भवेत्तदा त्वाचार्योक्तखण्डन
समीचीनं नान्यथेति ॥ ५२ ॥

अब आर्य भट के अन्य दोष को कहते हैं ।

हि. भा.—गोल को न जानने वाले आर्यभटने नीचोच्चवृत्त के केन्द्र का नाम उच्च
रक्खा है । जिस कारण से नीचोच्चवृत्त केन्द्रस्थित उच्च नहीं होता है, वह (उच्च) पृथिवी
(भूकेन्द्र) से बहुत दूर पर स्थित है इस कारण से आर्य भट उच्च को भी नहीं जानते हैं ।
यहां चतुर्वेदाचार्य कहते हैं 'वाग्वलमेतत्' अर्थात् यह आचार्य की कमजोरी है । कक्षावृत्त
स्थित मध्यम ग्रह को केन्द्र मानकर अन्त्य फलज्या व्यासार्ध से जो वृत्त होता है वही नीचोच्च
वृत्तसंज्ञक है वस्तुतः इसका केन्द्र उच्च नहीं है, आचार्य कथनानुसार ही यदि आर्यभटोक्त हो
तब तो आचार्योक्त खण्डन ठीक ही है, अन्यथा नहीं इति ॥ ५२ ॥

इदानीं स्थिरपातमन्दोच्चान् खण्डयति ।

अन्या विक्षेपकला मन्दान्यत्वात्फलाधिकाः स्पष्टाः ।

यस्मान्महायुगादौ न राहुमन्दाः स्फुटास्तस्मात् ॥ ५३ ॥

सु० भा०—यस्मात् पातानां स्थिरत्वान्महा युगादावप्यन्या विक्षेपकलाः
सिध्यन्ति सपातमन्दस्पष्टभुजभावात् । एवं फलाधिकाः स्पष्टाश्चान्ये सिध्यन्ति
मन्दान्यत्वात् तस्मात् तदुक्ता राहुमन्दा न स्फुटाः । महायुगादौ सर्वे मेषमुखे
भवन्ति तत्र शराभावोऽपि युक्तः । पातानां सत्त्वे तत्र ग्रहशर उत्पद्यते । एवं
मन्दोच्चानां भावे मन्दफलमुत्पद्यते यद्वशाद्भौमादीनां न मेषमुखे स्थितिरिति
तद्राहुमन्दा न समीचीना इति ॥ ५३ ॥

वि. भा.—यस्मात्कारणात् राहूणां (पतानां) स्थिरत्वात् (संचलना भावात्)
महायुगादावपि विक्षेपकलाः (शरकलाः) अन्याः (भिन्नाः) भवितुमर्हन्ति, सपात-
मन्दस्पष्टग्रहभुजांशसत्त्वात् परं तत्र (महायुगादौ) ग्रहादीनां मेषादौ स्थितत्वा-
च्छराभावः समुचितः । पातसत्त्वे तु ग्रहशरा उत्पद्यन्ते, एवं मन्दोच्चसत्त्वे मन्द
फलोत्पत्तेस्तदधिकाः स्पष्टग्रहा भिन्नाः सिध्यन्ति, एतेन ग्रहाणां (मङ्गलादीनां)
महायुगादौ मेषादौ स्थितेरभावः सिध्यति, तस्मात्कारणात्तदुक्तस्थिरराहुमन्दा

न स्फुटा अर्थाद् ग्रहपातानां मन्दोच्चानां च स्थिरत्वकल्पने ग्रहशराणां मन्द-
फलानाञ्च समुत्पत्तिर्भवति, तेन महायुगादौ, मङ्गलादि ग्रहाणां मेपादौ स्थितेर-
भावः सिध्यति, परं महायुगादौ ग्रहा दीनां मेपादौ स्थितिर्भवत्येवातः पातानां
मन्दोच्चानां च स्थिरत्वकल्पनं न युक्तमिति ॥ ५३ ॥

अब स्थिर पात और स्थिर मन्दोच्च का खण्डन करते हैं ।

हि. भा.—जिस कारण से पातो की स्थिरता से महायुगादि में भी ग्रहों की शरकला
सिद्ध होती है तथा ग्रहमन्दोच्चों की स्थिरता से मन्दफलों की उत्पत्ति होती है इसलिये स्पष्ट
ग्रह भी भिन्न सिद्ध होते हैं जो उचित नहीं है इसलिये श्रीपेगादि आचार्योंक्त स्थिरपात और
स्थिर मन्दोच्च ठीक नहीं है अर्थात् महायुगादि में ग्रहादियों की स्थिति मेपादि में अवश्य रहनी
है, परन्तु ग्रहपातों की स्थिरत्व कल्पना से तथा ग्रहमन्दोच्चों की स्थिरत्व कल्पना से ग्रहादियों
की स्थिति मेपादि में सिद्ध नहीं होती है अतः उन आचार्यों (श्रीपेगादि) का स्थिरपात और
स्थिर मन्दोच्च ठीक नहीं है ॥ ५३ ॥

इदानीं विष्णुचन्द्रादीनामयनचलनं दूषयति ।

परमाल्पा मिथुनान्ते द्युरात्रि नाड्यो ऽर्कगति वशादृतवः ।

नायनयुगमयनवशात् स्थिरमयनद्वितयमपि तस्मात् ॥ ५४ ॥

सु. भा.—अस्मदादीनां परमाल्पा द्युरात्रिनाड्यो दिवसाधिकवशाद्वा
रात्रिस्तस्या नाड्यो मिथुनान्ते मिथुनान्तस्थे रवावेव भवन्ति । अर्कवशाद्विषयगा-
र्कवशादृतवश्च भवन्ति । अतोऽयन वशाद्वायनयुगमर्थाद्यथा ग्रहचलनाद् ग्रहयुग

॥ ५४ ॥

हि. भा.—मिथुनान्त में रवि के रहने पर दिन मान के अधिकवश से रात्रि और नाडी
परमाल्प होती है, रवि की गति के कारण ऋतुएं होती हैं, इसलिये अयन वश से अयन युग
नहीं होता है, अर्थात् जैसे ग्रहचलनवश से ग्रहयुगमेषादि से मीनान्त पर्यन्त होता है उसी तरह
अयन चलन वश से अयन युग नहीं होता है इसलिये दोनों का अयन स्थिर सिद्ध होता है,
अर्थात् मिथुनान्त में रवि के रहने से परम क्रान्तिवश से $\frac{\text{पभा. परम क्रान्त्या}}{१२} = \text{परम कुज्या},$

∴ $\frac{\text{परमकुज्या. त्रि}}{\text{परमाल्पद्यु}} = \text{परमचरज्या}$ चाप करने से परमचर हुआ, तब १५ घटी + परम चर

घटी = परम दिनार्धघटी, दूना करने से परमदिन घटी हुई, इस परम दिनमानवश से परमाल्प
रात्रि घटी होती है, सब से पहले मुञ्जालाचार्य को अयन चलन की उपलब्धि हुई, उसकी
संस्कार त्रिवि भी उन्होंने ही सब से पहले कही हैं, सिद्धान्त शिरोमणि में भास्कराचार्य ने
मुञ्जालोक्त अयन युगभगण १९९६६९ कहा हैं । विष्णुचन्द्र ने अयन युग कहा है, उनके

वाक्य हैं “तस्य चात्र युगं रुद्र कृत नन्दाष्टकेन्दवः १८६४११, अयनस्य युगं प्रोक्तं ब्रह्मार्कादिमत पुरा” यहाँ चतुर्वेदाचार्य कहते हैं कि यह ब्रह्मगुप्त कृत खण्डन ठीक नहीं है क्योंकि इसी समय मिथुनान्त में रात्रि और दिन का परम अपचय और उपचय नहीं होता है, सिद्धान्त शेखर में अयन चलन भाग को नहीं कह कर भी ‘ध्रुव मानस’ करण ग्रन्थ में अयनांशानयन और उसकी संस्कार विधि को श्रीपति ने कहा है। ‘लघु भास्करीयम्’ ‘वृहद्भास्करीयम्’ इन दोनों ज्योतिष सिद्धान्त ग्रन्थों के रचयिता भास्कर इस समय के प्रसिद्ध सिद्धान्त शिरोमणि के रचयिता भास्कराचार्य से अति प्राचीन, आर्य भट के समकालीन थे, इन्होंने अयन चलन की चर्चा नहीं की है, सूर्य सिद्धान्त-ग्रहलाघव आदि ग्रन्थों के देखने से अयनांशानयन स्पष्ट होता है ॥ ५४ ॥

इदानीं महायुगलक्षणं श्रीषेणादिकथितयुगखण्डनं चाह ।

यद्युगवधिरमहायुगमुक्तं श्रीषेणविष्णुचन्द्राद्यैः ।

तत्स्थूलं दृग्लिप्ता महायुगादौ ग्रहेषु यतः ॥ ५५ ॥

सु. भा.—येषां सर्वेषां ग्रहभरणानां पातमन्दोच्चशीघ्रोच्चानां युगवधिर-
र्थात् सर्वेषां मेषादिप्रवृत्तेः पुनर्यावता कालेन मेषादिप्रवेशस्तदेव महायुगमुच्यते
इति । श्रीषेणविष्णुचन्द्राद्यैर्द्वयं युगमुक्तं तत् स्थूलं यतस्तन्मतेन महायुगादौ
ग्रहेषु दृग्लिप्ताः शरकलाः मेषादितरत्र क्रान्तिवृत्तस्थानकलाश्चोत्पद्यन्ते । अर्थात्
तन्मतेन यदि मन्वादिप्रणोते स्मृतिसंमते महायुगादौ ग्रहगणना क्रियते तदा भौमा-
दीनां न मेषमुखे स्थितिरित्याचार्याभिप्रायः । वस्तुनः श्रीषेण प्रणीते रोमके ‘युग-
मन्वन्तरकल्पाः’ इत्याचार्योक्तमध्यमाधिकारवचनेन न महायुगादिचर्चेति ।
अतोऽत्र महायुगवचनेनाचार्योक्तमहायुगग्रहणमिति स्फुटम् ॥५५॥

वि. भा.—यत् (यस्मात्कारणात्) पात मन्दोच्चशीघ्रोच्चानां ग्रहभरणानां
युगवधिरर्थान्मेषादिप्रविष्टानां तेषां यावता कालेन पुनर्मेषादौ प्रवेशस्तावान् कालो
महायुगं कथ्यते । श्रीषेण विष्णुचन्द्राद्यैर्द्वयं युगं कथितं तत्स्थूलं यतस्तन्मतेन महा-
युगादौ ग्रहेषु दृग्लिप्ताः (शरकलाः) मेषादितोऽन्यत्रोत्पद्यन्ते अर्थात्तन्मतेन मन्वादि-
रचितस्मृतिग्रन्थसंमते महायुगादौ यदि ग्रहगणना क्रियते तदा मेषादौ मंगलादि-
ग्रहाणां स्थितिर्न सिध्यति, श्रीषेणरचिते रोमके न महायुगादिचर्चा कुत्राप्यस्ति
तेन महायुगशब्देनाचार्योक्तमहायुगग्रहणं कार्यमिति । यद्वा मेषादौ सर्वेषां
ग्रहाणां पातमन्दोच्चशीघ्रोच्चानां स्थितिर्भवति तस्यैव नाम महायुगादिरित्य
स्थितिः श्रीषेणकथितमहायुगादौ न भवत्यतस्तन्मतेमहायुगादिर्न समीचीन
इत्याचार्योक्तखण्डनं युक्ति युक्तमिति ॥ ५५ ॥

हि. भा.—जिस कारण से ग्रहभगणों तथा पात मन्दोच्च-शीघ्रोच्चों की मेषादि स्थिति में जितने काल में फिर मेषादि में स्थिति होती है वही काल महा युग कहलाता है, श्रीषेण-विष्णुचन्द्र आदि आचार्यों ने जो युग कहा है वह स्थूल है, क्योंकि उनके मत से महायुगादि में मेषादि से अन्यत्र (भिन्न स्थान में) उत्पन्न होता है, अर्थात् उनके मत से मनु आदि स्मृति-कार रचित स्मृतिग्रन्थ सम्मत महायुगादि में यदि ग्रहगणना करते हैं तो मेषादि में मङ्गलादि ग्रहों की स्थिति सिद्ध नहीं होती है, श्रीषेण रचित रोमक में कहीं पर महायुगादि की चर्चा नहीं है, इसलिये महायुग शब्द से यहा आचार्य कथित महायुग लेना चाहिये, जब सब ग्रहों की तथा पात मन्दोच्च शीघ्रोच्चों की स्थिति मेषादि में होती है तो उसी का नाम महायुगादि है, श्रीषेण कथित महायुगादि में यह स्थिति नहीं होती है इसलिये उनके मत से महायुगादि ठीक नहीं है, आचार्योक्त यह खण्डन ठीक है ॥ ५५ ॥

इदानीं पुनरपि तद्युगमेव निराकरोति ।

कदिनादौ स्मृतिषूक्तं ग्रहभोत्पत्तिदिनक्षये प्रलयः ।

तान्यतिबहूनि यस्मात् महायुगेऽतोऽप्रसिद्धमिदम् ॥ ५६ ॥

सु. भा.—कदिनादौ ब्रह्मादिनादौ ग्रहनक्षत्रोत्पत्तिदिनक्षये ब्रह्मादिनावसाने च ग्रहभानां प्रलय इति स्मृतिषूक्तमस्ति । एव ब्रह्मादिनसमे महायुगे यस्मात् तानि श्रीषेणाद्युक्तानि युगानि अतिबहूनि भवन्ति अत इदं तदुक्तमप्रसिद्धं न कुत्रापि स्मृत्यादौ तच्चर्चा । अतोऽनेक युगग्रहणेन गौरवकर्मणा किमिति । वाग्बलमेतत् । यतोऽनेकयुगग्रहणेनापि ग्रहगणनायां न काचिद्धानिस्तत्स्थभगणग्रहणादिति स्फुटं गणित विदामिति ॥ ५६ ॥

वि. भा.—कदिनादौ (ब्रह्मादिनादौ) ग्रहभोत्पत्तिः (ग्रहनक्षत्रसृष्टिः), दिनक्षये (ब्रह्मादिनान्ते) ग्रहाणां नक्षत्राणां च प्रलयः (नाशः) स्मृतिषु (स्मृतिग्रन्थेषु) कथितमस्ति, सिद्धान्तशेखरे श्रीपतिनाऽप्येवमुक्तं यथा—ज्योतिर्ग्रहाणां विधिवास-रादौ सृष्टिर्लयस्तद्विवसावसाने । सिद्धान्तशिरोमणौ भास्कराचार्येण 'यतः सृष्टिरेषां दिनादौ दिनान्ते लयस्तेषु सत्स्वेव तच्चार चिन्ता' इत्यनेन ब्रह्मादिनादावेव ग्रहादि-सृष्टिः कथ्यते, परं सूर्यसिद्धान्तकारेण कथ्यते यत् 'ब्रह्मादिनादितः शतगुणितवेद-सप्तवेददिव्यान्धेषु ब्रह्मा सृष्टि रचयित्वाऽऽकाशे नियोजितवान् । ब्रह्मागुप्त-श्रीपति-भास्कराचार्य कथितसृष्ट्यादिवालनिराकरणार्थं सूर्यसिद्धान्तकारमतमण्डनार्थं च कमलाकरेण सिद्धान्ततत्त्वविवेके बहुप्रपञ्चितं नहि नामभेदेन वस्तुभेदः । कल्प-सम्बन्धिभगणादीनां सृष्टिसम्बन्धिभगणादीनां चाभेदात् । यदि धर्मकृत्यानुष्ठाने सूर्यसिद्धान्तकारमतस्यैव प्राधान्यं तदा कमलाकरोक्तमवश्यं सर्वजनमान्यमेव ।

यस्मात् कारणात् महायुगे (ब्रह्मादिन समे) तानि (श्रीषेणाद्युक्तानि) युगानि-
अतिबहूनि भवन्ति, अतः (अस्मात् कारणात्) इदं तत्कथितं युगमप्रसिद्धमर्थात्कु-
त्रापि मान्यग्रन्थेषु तत्त्वार्था नास्ति, अनेकयुगग्रहणेन कर्मगौरवमेव भवति तावता
न किमपि फलम् । अनेकयुगग्रहणेनापि ग्रहगणनायां न कापि क्षतिर्भवति
तत्स्थितभगणग्रहणादत आचार्यं कथितमिदं दुराग्रहपूर्णमेव कथितुं शक्यते नात्र
किमपि याथार्थ्यमिति ॥ ५६ ॥

अब पुनः श्रीषेणादिकथित युग का खण्डन करते हैं ।

हि. भा.—ब्रह्म दिनादि में ग्रहों और नक्षत्रों की सृष्टि होती है, ब्रह्म दिनान्त में
उनका नाश होता है ये बातें स्मृति ग्रन्थ में कही गयी हैं, सिद्धान्त शेखर में श्रीपति भी
'ज्योतिर्गहाणां विधिवासरादौ' इत्यादि विज्ञान भाष्य में लिखित पद्यसे, सिद्धान्त शिरोमणि
में भास्कराचार्य ने भी 'यतः सृष्टिरेषां दिनादौ दिनान्ते' इत्यादि विज्ञानभाष्य में लिखित पद्य
से स्मृतिग्रन्थ में कथित बात ही कही है । लेकिन सूर्य सिद्धान्तकार ने ब्रह्मदिनादि में
ग्रहादियों की सृष्टि नहीं कही है, वे कहते हैं कि ब्रह्मदिनादि ४७४०० इतने दिव्य वर्ष व्यतीत
होने पर ब्रह्मा सृष्टि को रचकर आवाग में नियोजित किया । ब्रह्मगुप्त-श्रीपति-भास्कराचार्य
कथित सृष्ट्यादि काल के निराकरण के लिये और सूर्य सिद्धान्तकार के मत के समर्थन के
लिये सिद्धान्त तत्त्वविवेक में कमलाकर ने बहुत बातें कही हैं, लेकिन नाम भेद से वस्तु भेद नहीं
होता है, क्योंकि कल्पसम्बन्धी भगणादियों में और सृष्टि सम्बन्धी भगणादियों में कोई भेद
नहीं है, यदि धर्मअनुष्ठान आदि कार्यों में सूर्यसिद्धान्तकार मत ही को प्रधानता दी जाय
नब तो कमलाकर का कथन अवश्य ही सबों के लिये मान्य होगा, जिस कारण से ब्रह्मदिन
के बराबर महायुग में श्रीषेण आदि कथित युग बहुत होते हैं इस हंतु से उनका कथित युग
अप्रसिद्ध है अर्थात् स्मृति ग्रन्थों में कही पर उसकी चर्चा नहीं है, अनेक युगों के ग्रहण करने
से कर्म गौरव ही होता है और कुछ फल नहीं होता है, लेकिन यह आचार्य कथित बात ठीक
नहीं है, क्योंकि अनेक युग ग्रहण करने से भी ग्रहगणना में कुछ हानि नहीं होती है ॥ ५६ ॥

इदानीं पादकरणानि दूषयति ।

प्रतिदिवसविसंवादाद् ग्रहतिथिकरणाक्षदिवसमासानाम् ।

ग्रहणग्रहयोगादिषु पादं पादेन कः स्पृशति ॥ ५७ ॥

अङ्गुक्षिति विजयनन्दि प्रद्युम्नादीनि पादकरणानि ।

यस्मात् तस्मात्तेषां न दूषणान्यत्र लिखितानि ॥ ५८ ॥

सु. भा.—ग्रहतिथिकरणाक्ष-दिवस-मासानां तथा ग्रहणयोगादिषु च प्रति
दिवसविसंवादात् प्रत्यहं दृग्विरोधात् पादं करणाधमं कः पादेनापि स्पृशति ।

अर्थाच्चथाऽङ्गेषु अधोवर्तित्वात् पादोऽधमस्तथा दृग्गणितयोरसाम्यात् पादमधमं यत् करणं तत् पादेनापि स्पर्शनिर्हं 'प्रक्षालनाद्धि पङ्क्तस्य दूरादस्पर्शनं वरम्'— इति न्यायात् । तस्मान्मलमयस्य खण्डनेन वाणीमालिन्यमात्रमेव । 'पादं पादेन न स्पृशेत्'— इति स्मृत्यादिषु तत्स्पर्शनिषेधाच्चेति ।

यस्मादङ्कुचिति-विजयनन्दिप्रद्युम्नादीनि अथदितैर्निर्मितानि करणानि सर्वाणि पादकरणानि करणाधमानि तस्मात् 'पादं पादेन कः स्पृशति'— इति न्यायात् मया तेषां दूषणान्यत्र न लिखितानीति ।

अत्र चतुर्वेदाचार्यः—

'यत्रार्यभटादयो दूष्यन्ते तत्र पादेनापि पादकरणानि कः स्पृशति । का तेषु गणनेत्यर्थः' ।

ग्रहतिथिकरणार्क्षदिवसमासानामित्यत्र योगपदाभावात् स्पष्टीकरणाध्याये योगसाधनं नाचार्यस्येति स्पष्टं प्रतीयते ॥ ५७-५८ ॥

वि. भा.—ग्रहतिथिकरण नक्षत्र दिवस मासानां तथा ग्रहणग्रहयोगादिषु प्रतिदिवस विसंवादात् प्रतिदिनं दृग्विरोधात् पादं (करणाधमं) पादेन कः स्पृशति, अर्थाद् दृग्गणितयोर्वेषम्यात् पादं (अधमं) यत्करणं तत्पादेनापि स्पर्शयोग्यं नास्ति 'प्रक्षालनाद्धि पङ्क्तस्य दूरादस्पर्शनं वरमित्युक्तः' पादं पादेन न स्पृशेदिति स्मृतिग्रन्थेषु तत्स्पर्शनिषेधाच्च, तेन दूषितस्य विषयस्य खण्डनकरणेन केवलं वाग्मालिन्यमेव भवितुमर्हति, यस्मात् अङ्कुचिति विजयनन्दिप्रद्युम्नादि निर्मितानि पादकरणानि (करणाधमानि) सति तस्मात् कारणात् तेषां दूषणानि मयाऽन्यत्र न लिखितानि ।

अत्र चतुर्वेदाचार्यः—यत्रार्य भटादयो दूष्यन्ते तत्र पादेनापि पादकरणानि कः स्पृशति का तत्र गणनेत्यर्थः । ग्रहतिथिकरणार्क्षदिवसमासानामित्यत्र योगपदाभावात् स्पष्टीकरणाध्याये योगसाधनं नाचार्यस्येति स्पष्टं प्रतीयते ॥ ५७-५८ ॥

अब पाद करणों (करणाधम) का खण्डन करते हैं ।

हि. भा.—ग्रह-तिथि-करण-नक्षत्र दिन मासों में तथा ग्रहण-ग्रहयोगादि (ग्रहयुत्यादि) यों में प्रतिदिन दृग्विरोध के कारण अधम करण को पाद से कौन स्पर्श करता है अर्थात् वेध और गणित में असमानता से अधम जो करण है वह पाद से भी स्पर्श करने के योग्य नहीं है, पाद को पाद से स्पर्श नहीं करना चाहिये ऐसा स्मृति ग्रन्थों में उसके लिये निषेध वचन है, इसलिये दूषित विषय का खण्डन करने से केवल वाणी (बोली) की मलिनता ही होती है, अङ्कुचिति-विजयनन्दि-प्रद्युम्न आदि आचार्यों द्वारा बनाये हुये करण ग्रन्थ अधम हैं इसलिये उन सबों के दोष हमने अन्यत्र नहीं लिखे हैं ॥ ५७-५८ ॥

इदानीं दूषणान्युपसंहरति

इति बहुधा विवदन्ते ग्रहार्थिनः साग्रहा इव प्रसभम् ।

ब्राह्मस्फुटसिद्धान्ते रवीन्दुभूयोगमज्ञात्वा ॥ ५६ ॥

सु. भा.—एवं ब्राह्मस्फुटसिद्धान्ते आचार्य कृते ऽस्मिन् सिद्धान्ते यो रविः । इन्दुः । भूः भूपरिमाणम् । योगो ग्रहयुत्याद्यधिकारः । तत् सर्वमज्ञात्वा ग्रहार्थिनो ज्योतिर्विदः प्रसभं हठात् साग्रहा आग्रहिण इव बहुधा विवदन्ते विवादं कुर्वन्ति दृग्गणितैक्ययोरभाम्यादिति आचार्यस्यात्मप्रशंसैव ।

अत्र चतुर्वेदाचार्यः—

‘एतद्वाक्यमाचार्यस्येति’ ॥ ५९ ॥

वि. भा.—ब्राह्मस्फुटसिद्धान्ते (आचार्यरचितेऽस्मिन् सिद्धान्तग्रन्थे) रविः (सूर्यबिम्बादि प्रमाणम्) इन्दुः (चन्द्रबिम्बादि प्रमाणम्) भूः (पृथिव्याः प्रमाणम्) योगः (ग्रहयुतिः) एतत्सर्वमज्ञात्वा (अविज्ञाय) ग्रहार्थिनः (ग्रहसम्बन्धि विषययाजका ज्योतिर्विदः) इति (एवं) प्रसभं (हठात्) साग्रहा इव (आग्रहिण इव) बहुधा विवादं कुर्वन्ति, दृग्गणितयोर्वैपम्यादेतावता ऽऽचार्येण स्वप्रशंसा क्रियते, अत्र चतुर्वेदाचार्य—
‘एतद्वाक्यमाचार्यस्येति’ ॥ ५९ ॥

अब दोषों के उपसंहार करते हैं ।

हि. भा.—आचार्य (ब्रह्मगुप्त) कृत इस सिद्धान्त ग्रन्थ में सूर्य बिम्बादि प्रमाण-चन्द्र बिम्बादि प्रमाण - पृथिवी परिमाण और ग्रहयुति इन सबों को नहीं जानकर ज्योतिषी लोग इस तरह हठ से आग्रही की तरह बहुत विवाद करते हैं क्योंकि वेध और गणित में असमानता रहती है, इससे आचार्य अपनी प्रशंसा करते हैं ॥ ५६ ॥

इदानीमिति कर्तव्यतामाह ।

तन्त्रभ्रंशे प्रतिदिनमेवं विज्ञाय धीमता यत्नः ।

कार्यस्तस्मिन् यस्मिन् दृग्गणितैक्यं सदा भवति ॥ ६० ॥

सु. भा.—तन्त्रभ्रंशे सति तदीयतन्त्रगणनया दृग्विरोधे सति एवं पूर्वोक्तं प्रतिदिनं स्पष्टीकरणार्थं वेधादिना विज्ञाय तस्मिन् तन्त्रे बीजादिना तथा यत्नः कार्यो यथा दृग्गणितैक्यं भवति । एवं यस्मिन् तन्त्रे सदा दृग्गणितैक्यं भवति तदेवं तन्त्रमादरणीयमिति ।

अत्र चतुर्वेदाचार्यः—

‘मध्यस्थमवलम्ब्य स्वार्थं कुस्त इत्यर्थः’ ॥ ६० ॥

वि. भा.—तन्त्र भ्रंशे दृग्विरोधे सति प्रतिदिनमेवं पूर्वकथित स्फुटीकरणादिकं वेधादिना ज्ञात्वा तस्मिन् तन्त्रे बुद्धिमता बीज कर्मादि संस्कारेण तथा यत्नः कार्यो यथा तत्र सदा दृग्गणितैक्यं भवति । एवं करणेन यस्मिन् तन्त्रे दृग्गणिनयोः साम्यं भवेत्तदेव तन्त्रं सर्वजनमान्यं भवेत् ॥ ६० ॥

अब कर्तव्यता को कहते हैं ।

हि. भा.—तन्त्र के पतन में उसकी तन्त्र गणना से दृग्विरोध होने पर प्रत्येक दिन पूर्वोक्त स्पष्टीकरणादि को वेधादि के द्वारा समझकर उस तन्त्र में बीज कर्मादि संस्कार से वैसा यत्न करना चाहिये जिससे उसमें बराबर वेध और गणित में एकता हो, इस तरह जिस तन्त्र में दृग्गणितैक्य होता है वही तन्त्र आदरणीय होता है ॥ ६० ॥

इदानीं स्व सिद्धान्तमेवादरणीयं प्रतिपादयति—

चन्द्ररविग्रहोन्मुच्छायादिषु सर्वदा यतो ब्राह्मे ।

दृग्गणितैक्यं भवति स्फुटसिद्धान्तस्ततो ब्राह्मः ॥ ६१ ॥

सु. भा.—यतो ब्राह्मे ब्रह्मसिद्धान्ते मद्रचिते ऽस्मिन् तन्त्रे चन्द्र रविग्रहोन्मुच्छायादिषु सर्वदा दृग्गणितैक्यं भवति ततस्तस्मादयं ब्राह्मे मदीय एव स्फुटसिद्धान्त आदरणीय इति ॥ ६१ ॥

वि. भा.—यतः (यस्मात्कारणात्) ब्राह्मे (मदीय ब्राह्मस्फुटसिद्धान्ते) चन्द्रग्रहण-सूर्यग्रहण-चन्द्रच्छायादिषु सर्वदा दृग्गणितैक्यं भवति, ततः (तस्मान् कारणात्) ब्राह्मः (मदीयः) स्फुट सिद्धान्तः समादरणीयः ॥ ६१ ॥

अब अपने सिद्धान्त को ही आदरणीय कहते हैं ।

हि. भा.—क्योंकि हमारे सिद्धान्त ग्रन्थ में चन्द्रग्रहण-सूर्यग्रहण-चन्द्रच्छायादियों में सर्वदा दृग्गणितैक्य होता है इसलिये हमारा ही स्फुट सिद्धान्त आदरणीय है इति ॥ ६१ ॥

इदानीं गोलज्ञप्रशसामाह

गोलज्ञो जानात्येषां सर्वो दूषणानि कथितानि ।

आर्यभटाद्युक्तानां तन्त्राणां दूषणाध्याये ॥ ६२ ॥

सु. भा.—सर्वो गोलज्ञ इह दूषणाध्याये एषामार्यभटाद्युक्तानां तन्त्राणां कथितानि दूषणानि जानाति मूर्खाश्च प्राचीनतन्त्रदूषणेन मामुपहसन्तो निन्दयिष्यन्तीत्येवाचार्याशयः ।

अत्र चतुर्वेदाचार्यः—

‘गोलज्ञः सर्वेषामेव सर्वाणि दूषणानि वेत्तीत्यर्थः’ ॥ ६२ ॥

वि. भा.—सर्वो गोलज्ञः (गोलवेत्ता) आर्यभटकथितानामेषां तन्त्राणां कथितानि दूषणान्यत्र दूषणाध्याये जानाति मूर्खाश्च प्राचीन तन्त्राणां दोषकथनेन मां हसन्तो निन्दां करिष्यन्तीत्याचार्यस्याभिप्रायः ।

अत्र चतुर्वेदाचार्यः—‘गोलज्ञः सर्वेषामेव सर्वाणि दूषणानि वेत्ति’ इत्यर्थः ॥ ६२

अब गोलवेत्ता की प्रशंसा करने है ।

हि. भा.—सब गोलवेत्ता इस दूषणाध्याय में आर्यभट्ट से कथित इन तन्त्रों के दोषों को जानते हैं, अर्थात् हमारे द्वारा प्राचीन तन्त्रों के दोषोद्घाटन करने से मूर्ख लोग हमसे हुए हमारी निन्दा करेगे यह आचार्य के कहने का अभिप्राय है इति ॥ ६२ ॥

इदानीमुपसंहारमाह ।

इति कथिततन्त्रगणकान् पठितैरपि दूषणं करोत्यज्ञान् ।

तन्त्रपरीक्षार्याणां त्रिषष्टिरेकादशोऽध्यायः ॥ ६३ ॥

सु. भा.—इत्येवमयमार्याणां त्रिषष्टिस्तन्त्रपरीक्षानामैकादशोऽध्यायः पठितैर्दूषणैरपि कथिततन्त्रगणकान् आर्यभट्ट-श्रीषेण विष्णुचन्द्रानुयायिनोऽज्ञान् मूर्खान् करोति । खण्डनमाकर्ण्य ते विवर्णवदना मूर्खा इव भवन्तीत्यर्थः ॥ ६३ ॥

मधुसूदनसूनोदितो यस्तिलकः श्रीपृथुनेह जिष्णुजोक्ते ।

हृदि तं विनिधाय नूतनोऽयं रचितो दूषण के सुधाकरेण ॥

इति श्रीकृपालुदत्तसूनुसुधाकरद्विवेदिविरचिते ब्राह्मस्फुटसिद्धान्तनूतनतिलके तन्त्रपरीक्षाध्यायो नामैकादशोऽध्यायः ॥ ११ ॥

वि. भा.—इति (एवं) आर्याणां (आर्याछन्दसां) त्रिषष्टिस्तन्त्र परीक्षानामैकादशोऽध्यायः कथितदूषणैरपि कथिततन्त्रगणकान् (आर्यभट्ट श्रीषेण-विष्णुचन्द्रानुयायिनो गणकान्) मूर्खान् करोति । खण्डनं श्रुत्वा ते मूर्खा इव भवन्तीति ॥ ६३ ॥

इति श्री ब्राह्मस्फुटसिद्धान्ते दूषणाध्यायो नामैकादशोऽध्यायः ॥ ११ ॥

अब उपमहार को कहते हैं ।

हि. भा.—इस तरह तिरसठ आर्यछिन्दो का तन्त्र परीक्षा नामक ग्यारहवां अध्याय पूर्वकथित दोषों से कथित तन्त्र के ज्यौतिषियों (आर्यभट-श्रीषेण-विष्णुचन्द्र आदि गणकों) को सुख करता है अर्थात् दूषणाध्याय पूर्वकथित दोषों के द्वारा आर्यभट-श्रीषेण विष्णुचन्द्र आदि आचार्यों को सुख बनाता है ॥ ६३ ॥

इति ब्राह्मस्फुटसिद्धान्त में दूषणाध्याय नामक ग्यारहवां अध्याय समाप्त हुआ ॥ ११ ॥

प्राय उपर्युक्तानां प्रश्नानामेवोत्तराणि दातुं प्राचीनैः पाटी गणिताध्यायो विरचित इति तत्तत्पाटी गणिताध्यायावलोकनेन प्रतीयते । भास्कराचार्येणापि लीलावतीनामके स्वपाटीगणितग्रन्थे प्राय एतावतामेव प्राचीनोक्त प्रश्नानामुत्तराणि विधातुं विधयो वर्णिता इति ॥ १ ॥

हि. भा.—अब व्यक्त गणिताध्याय की व्याख्या करते हैं, उसमें पहले उसकी प्रशंसा करते हैं, जो व्यक्ति सङ्कलित आदि बीस परिकर्म (सङ्कलित-व्यवकलित, गुणन, भजन, वर्ग, वर्गमूल, घन, घनमूल, पञ्चजाति, त्रैराशिक, व्यस्तत्रैराशिक, पञ्चराशिक, सप्तराशिक, नवराशिक, ग्यारहराशिक, भाण्ड प्रतिभाण्ड (बदला बदली) तथा आठ व्यवहारों

(मिश्र व्यवहार, श्रेढी व्यवहार, क्षेत्रव्यवहार, खात व्यवहार, चिति व्यवहार, क्रकच व्यवहार, राशि व्यवहार, छायाव्यवहार) को अलग अलग जानते हैं वे गणक (ज्योतिषशास्त्र के ज्ञाता) हैं, सिद्धान्त शेखर में 'जानाति विंशतिमिमा' इत्यादि सस्कृत विज्ञान भाष्य में लिखित श्लोक से, ब्रह्मगुप्तकथित व्यक्तगणित को ही श्लोकान्तर से श्रीपति कहते हैं तथापि ब्रह्मगुप्तकथित और श्रीपति कथित व्यक्तगणिताध्याय के बीच परिकर्मों के विषय वर्णन में भेद है। और उन बीसों परिकर्मों के नाम भी बहुत भिन्न हैं। आठों मिश्र व्यवहारादियों में भी बहुधा भिन्नत्व है ही, क्या उन उन सामयिक गणितों में आवश्यकत्व वा अनावश्यकत्व को जानकर वैसा किया गया है इन बातों का विद्वान् लोग विचार करें। द्वितीयार्यभट्टरचित महामिद्धान्तग्रन्थ में अधोलिखित पाटी गणित प्रश्न है। जो 'सङ्कलित व्यवकलित गुणन भाग कृतिं घन त्वनयोः' इत्यादि संस्कृत विज्ञान भाष्य में लिखित दस श्लोकों से वर्णित है, प्रायः ऊपर कथित प्रश्नों के ही उत्तर के लिये प्राचीनाचार्यों ने पाटी गणिताध्याय की रचना की, ये बातें उनके पाटीगणिताध्याय को देखने से मालूम होती हैं, भास्कराचार्य ने भी अपने लीलावती नामक पाटीगणितग्रन्थ में प्रायः इन्हीं प्राचीनोक्त प्रश्नों के उत्तर के लिये विधियों का वर्णन किया है इति ॥ १ ॥

इदानीं भिन्न सङ्कलित व्यवकलितयोः करणसूत्रमाह ।

विपरीतच्छेदगुणा राश्योश्छेदांशकाः समच्छेदाः ।

सङ्कलितेऽंशा योज्या व्यवकलितेऽंशान्तरं कार्यम् ॥ २ ॥

सु. भा.—राश्योश्छेदांशका विपरीतच्छेदगुणा मिश्रच्छेदगुणा एव समच्छेदास्तुल्यहरा भवन्ति । शेषं स्पष्टार्थम् । 'अन्योन्यहाराभिहतौ हरांशौ राश्योः समच्छेदविधानमेवम्' इत्यादि भास्करोक्तमेतदनुरूपमेव ।

अत्र चतुर्वेदाचार्योक्तमुदाहरणम् ।

सत्रिभागं तथा सार्धं रूपं षड्भागसंयुतम् ।

एकीकृतं भवेत्किं स्वं रूपत्रयसमन्वितम् ॥

न्यासः

१	१	१
१	१	१
३	२	६

 यथोक्तकरणेन जातौ राशिः ॥७॥

अत्र चतुर्वेदाचार्यः । 'यच्च स्कन्दसेनाचार्येण श्रेढीन्यायेन सङ्कलितं प्रदर्शितं तत्सङ्कलनं क्षेत्र प्रदर्शनाय' । इत्यनेन स्कन्दसेनोऽपि कश्चित्प्राचीनो गणक इत्यवगम्यते ॥२॥

वि. भा.—द्वयो राश्योश्छेदांशका विपरीतच्छेदगुणा (परस्पर हर गुणाः) स्तदा समच्छेदाः (तुल्यहराः) भवन्ति, तुल्य हरेजातेऽशयोगः कार्यः, व्यवकलिते-
ऽंशान्तरं कार्यम् । भिन्नाङ्कानां योग वियोगार्थं समच्छेदी करणं सर्वे रेवाचार्यः
कथ्यते । सिद्धान्तशेखरे “परस्परच्छेदहतौ हरांशौ योगाय राश्योः सदृशच्छिदौ
स्तः । योगो वियोगश्च समच्छिदां हि” ज्ञेन श्रीपतिना तदेव कथ्यते । लीलावत्या
“अन्योन्य हाराभिहतौ हरांशौ राश्योः समच्छेदविधानमेवम्” मनेन भास्करेणापि
तदेव कथ्यते ।

अत्र चतुर्वेदाचार्योक्तमुदाहरणम् ।

सत्रिभागं तथा सार्धं रूपं षड्भागसंयुतम् ।

एकीकृतं भवेत्किं स्वं रूपत्रयसमन्वितम् ॥

न्यासः $१\frac{३}{४} + १\frac{३}{४} + १\frac{३}{४} = \frac{३}{४} + \frac{३}{४} + \frac{३}{४}$ विपरीतच्छेदगुणा इत्यादिना
 $\frac{३}{४} + \frac{३}{४} + \frac{३}{४} = \frac{३}{४} = ४$ अत्र रूपत्रयसमन्वितमित्यनेन योगफलम्
 $= ४ + ३ = ७ =$ राशिः ।

अत्रोपपत्तिः ।

$\frac{अ}{क}, \frac{ग}{घ}$ अनयोर्योगान्तरं कर्तव्यमस्ति, तदा कल्प्यते $\frac{अ}{क} = ल$ । $\frac{ग}{घ} = व$

अ = क × ल

ग = व × घ अत्र पक्षौ क गुणितौ तदा

अत्र पक्षौ घ गुणितौ तदा,

ग × क = व × घ × क

अ × घ = क × ल × घ

∴ अ × घ ± ग × क = क × ल × घ ± व × घ × क पक्षौ क × घ भक्तौ तदा

$\frac{अ \times घ \pm ग \times क}{क \times घ} = ल \pm व$ एतेनाऽचार्योक्तमुपपन्नमिति ॥ २ ॥

अब भिन्नाङ्क के सङ्कलित (योग) और व्यवकलित (अन्तर) के लिये कहते हैं ।

हि. भा.—दो भिन्न राशियों के हर और अंश को परस्पर हर से गुणने से दोनों राशियों में समच्छेदत्व होता है । समच्छेदत्व होने पर ही उन दोनों का अंशयोग करने से सङ्कलित होता है, और अंश का अन्तर करने से व्यवकलित होता है । भिन्नाङ्कों के योग और अन्तर के लिए समच्छेदी करण (समान हर करना) सब आचार्य कहते हैं । सिद्धान्त शेखर में ‘परस्परच्छेदहतौ हरांशौ ॥’ इत्यादि संस्कृत विज्ञान भाष्य में लिखित पद्य से श्री पति उसी विषय को कहते हैं । लीलावती में ‘अन्योन्य हाराभिहतौ’ इत्यादि से भास्कराचार्य भी उसी बात को कहते हैं ॥

यहाँ विज्ञान भाष्य में लिखित चतुर्वेदाचार्योक्त उदाहरण के अनुसार न्यास करने में
 $१ + ३ + १३ + १३ = ३ + ३ + ३$ आचार्योक्त 'विपरीतच्छेदगुणा' इत्यादि में $३ + ३ + ३$
 $= ३ = ४$, 'रूपत्रय समन्वित' इसमें $४ + ३ = ७ =$ योगफल $=$ राशि ।

उपपत्ति

$\frac{अ}{क}$, $\frac{ग}{घ}$ —इन दोनों राशियों का योग और अन्तर करना है । तब कल्पना करने में

$$\frac{अ}{क} = ल । ओर, \frac{ग}{घ} = व,$$

$$\therefore अ = ल \times क$$

यहां दोनों पक्षों को घ से गुणने से,

$$अ \times घ = ल \times क \times घ ।$$

$$ग = व \times घ$$

दोनों पक्षों को क
 में गुणा करने पर

$$ग \times क = व \times घ \times क$$

अतः अ. घ \pm ग. क $=$ ल. क. घ \pm व. घ. क दोनों पक्षों को क. घ. भाग देने में

$$\frac{अ. घ}{क. घ} \pm \frac{ग. क}{क. घ} = ल \pm व$$

इससे आचार्योक्त उपपन्न हुआ ॥२॥

इदानीं प्रत्युत्पन्ने करणसूत्रम् ।

रूपाणिच्छेदगुणान्यंशयुतानि द्वयोर्बहूनां वा ।

प्रत्युत्पन्नो भवतिच्छेदवधेनोद्धृतोऽश्वधः ॥ ३ ॥

सु० भा०—रूपाणि छेदगुणानि अंशयुतानि कार्याणि । एवं द्वयोर्वा बहूनां भिन्नानां सवर्णानं भवति । सवर्णानन्तरं भिन्नयोर्वा बहूनां भिन्नानामंशानां वध-
 इच्छेदानां वधेनोद्धृतः' फलं प्रत्युत्पन्नो गुणानफलं भवति । 'छेदघनरूपेण लवा
 धनर्णम्'— इत्यादि तथा 'लवा लवघनाश्च हरा हरघनाः' इत्यादि 'अंशाहन्तिच्छे-
 दवधेन भक्ता' इत्यादि च सर्व भास्करोक्तमेतदनुरूपमेव ।

अत्र चतुर्वेदाचार्योक्तोद्देशकः—

दशसार्धा भुजो यत्र कोटिः पङ्कभागसप्ततिः ।

तत्रायते फलं किं स्यात् क्षेत्रे शीघ्रं निगद्यताम् ॥

न्यासः । भु $३\frac{१}{२}$ । को $३\frac{१}{२}$ उक्तवज्जातः प्रत्युत्पन्नः १२२ $\frac{१}{२}$ । अन्योद्देशकः ।

मरिचानां पलं षड्भिर्द्यौः सार्धैः परैर्भवेत् ।

पलषड्विंशतेर्मूल्यं सङ्कर्षाय वद स्फुटम् ॥

वि. भा.—द्वयो राश्योर्वावहूनां राशीनां रूपाणि छेदगुणानि अंशयुतानि कार्याणि, ततोऽश्वघश्छेदवधेन भक्तस्तदा लब्धं प्रत्युत्पन्नो गुणफलं भवति । अत्र चतुर्वेदाचार्योक्तमुदाहरणम् । दश सार्धाभुजो यत्र कोटिः षड्भागसप्ततिः । तत्रायते फलं किं स्यात् क्षेत्रे शीघ्रं निगद्यताम् । न्यासः-भुजः=१० $\frac{१}{२}$ =३ $\frac{१}{२}$ । कोटिः=५ $\frac{१}{२}$ =३ $\frac{५}{४}$

तदा रूपाणिच्छेदगुणानीत्यादिना तथायते तदभुजकोटिघात इत्यादिना वाऽयतक्षेत्रफलम्=भु×को=३ $\frac{१}{२}$ ×३ $\frac{५}{४}$ =३×३५=३५ $\frac{५}{४}$ =१२२ $\frac{१}{२}$ =प्रत्युत्पन्नः । लीलावत्यां 'छेदघ्नरूपेषु लवाधनरूपमित्यादि' अंशाहतिश्छेदवधेन भक्ता' इत्यादि 'लवालवध्नाश्च हराहरघ्ना' इत्यादि भास्करोक्तानि सर्वाण्याचार्योक्त-सदृशान्येव सन्ति, आयतक्षेत्रस्य फलं किं भवतीत्यस्यात्राज्ञानादायतक्षेत्रसम्बन्धेन यदुदाहरणं चतुर्वेदाचार्येण दत्तं तदस्मभ्यं न रोचते इति विद्वद्भिर्विवेचनीयम् ॥३॥

अत्रोपपत्तिः ।

$$\frac{अ}{क} = \text{गुण्यः} = ल \quad | \quad \frac{ग}{घ} = \text{गुणकः} = व$$

$$\therefore अ = क \times ल \quad | \quad ग = व \times घ$$

$$\text{ततः } अ \times ग = क \times ल \times व \times घ$$

$$\text{पक्षौ } क \times घ \text{ भक्तौ तदा}$$

$$\frac{अ \times ग}{क \times घ} = ल \times व = \text{गुण्य} \times \text{गुणक} = \text{गुणफल}$$

एतेन 'छेदवधेनोद्धृतोऽश्वघ इत्याचार्योक्त', अंशाहतिश्छेदवधेन भक्त' इत्यादि भास्करोक्तं चोपपन्नं भवतीति ॥३॥

अब प्रत्युत्पन्न (भिन्नाङ्क गुणफल) के लिये कहते हैं ।

हि. भा.—दो राशियों के अथवा बहुत राशियों के रूप को हर से गुणाकर अंश जोडना तब अंशों के गुणफल को हर के गुणफल से भाग देने से फल प्रत्युत्पन्न (भिन्नाङ्क गुणफल) होता है । यहां चतुर्वेदाचार्योक्त उदाहरण के अनुसार न्यास करने से भुज=१० $\frac{१}{२}$, कोटि=५ $\frac{१}{२}$ =३ $\frac{५}{४}$

'रूपाणिच्छेदगुणानि' इत्यादि आचार्योक्त से आयत क्षेत्रफल=भु×को=३ $\frac{१}{२}$

$$\times ३\frac{५}{४} = \frac{७ \times ३५}{२} = \frac{२४५}{२} = १२२\frac{१}{२} = \text{प्रत्युत्पन्न} ।$$

लीलावती में 'छेदघनरूपेण लवाधनर्णमि' त्यादि 'अशाहनिच्छेदवधेनभक्ता' इत्यादि 'लवालवधनाश्च हराहरघना' इत्यादि भास्करोक्त आचार्योक्त 'रूपाणिच्छेदगुणानि' इत्यादि आचार्योक्त महेश ही है, आयतक्षेत्र का फल क्या होता है इसके अज्ञान में आयतक्षेत्र सम्बन्ध से जो उदाहरण चतुर्वेदाचार्य ने दिया सो मुझे ठीक नहीं मानूम होता है इस बात का विद्वान् लोग विचार करे ॥३॥

उपपत्ति ।

$$\frac{\text{अ}}{\text{क}} = \text{गुण्य} = \text{ल} \quad \frac{\text{ग}}{\text{घ}} = \text{गुणक} = \text{व}$$

$$\therefore \text{अ} = \text{ल} \times \text{क} \dots (१) \quad \text{ग} = \text{व} \times \text{घ} \dots (२),$$

अब (१) (२) इन दोनों का घात करने में $\text{अ} \times \text{ग} = \text{क. ल. व. घ}$
दोनों पक्षों को क. घ में भाग देने से

$$\frac{\text{अ. ग}}{\text{क. घ}} = \text{ल} \times \text{व} = \text{गुण्य} \times \text{गुणक} = \text{गुणनफल} \quad ।$$

इससे 'छेदवधेनोद्धृतांशवध' इत्यादि आचार्योक्त तथा 'अशाहनिच्छेदवधेनभक्ता' इत्यादि भास्करोक्त भी उपपन्न होता है ॥३॥

इदानीं भागहारे करणसूत्रमाह ।

परिवर्त्य भागहारच्छेदांशौ छेदसंगुणच्छेदः ।

अंशोऽंशगुणो भाज्यस्य भागहारः सर्वाणितयोः ॥४॥

सु. भा.—भागहारच्छेदांशौ भाजकस्य छेदांशौ परिवर्त्य भाज्यस्य छेदः परिवर्तितछेदसङ्गणच्छेदो भवति । एवं भाज्यस्यांशः परिवर्तितांशगुणोऽंशो भवति । एवं सर्वाणितयोर्द्वयोर्भिन्नयोर्भागहारो भवति । सर्वानं तु 'रूपाणि छेदगुणानि' इति विधिना । भास्करभागहारोऽप्येतदनुरूप एव । उद्देशकश्चतुर्वेदोक्तः—

यत्रायते फलं दृष्टं सार्धनेत्रयमेन्दवः ।

सार्धा दशभुजश्चैव कोटिस्तत्राभिधीयताम् ॥

न्यासः । क्षेत्रफलम् १२२ $\frac{१}{२}$ भुजः १० $\frac{१}{२}$ । उक्तवज्जाता कोटिः ११ $\frac{३}{४}$ । अत्र पुनश्चतुर्वेदाचार्यः । अन्ये पुनरिहापि त्रैराशिकात्मकमुदाहरणं ददति यथा—

रूपत्रिभागसंयुक्तं रूपलक्षं ददौ नृपः ।

दशभ्यो द्विजमुख्येभ्यः किमेकस्य धनं ततः ॥

इदानीं वर्गं मूले च करणसूत्रम् ।

वि. भा.—भागहारच्छेदांशौ (भाजकस्य हरांशौ) परिवर्त्य भाज्यस्य छेदः परिवर्तितच्छेद सङ्गुणश्छेदो भवति, तथा भाज्यस्यांशः परिवर्तितांश गुणोऽंशो भवति, तदा सर्वाण्यतोर्द्वयोर्भिन्नयोर्भागहारो भवति, सर्वाणं तु 'रूपाणि च्छेदगुणानि' इत्याचार्योक्तविधिना कर्तव्यम् ॥

यत्रायते फलं दृष्टं सार्धनेत्र यमेन्दवः ।

सार्धा दशभुजश्चैव कोटिस्तवाभिधीयम् ॥

उद्देशकश्चतुर्वेदाचार्योक्तः ।

न्यासः क्षेत्रफलम् = १२२ $\frac{१}{२}$, भुजः = १० $\frac{३}{२}$ = २ $\frac{१}{२}$

अथायत क्षेत्रफलम् = भुज × को = १२२ $\frac{१}{२}$ = २ $\frac{१}{२}$ × कोटि

अतः $\frac{१२२\frac{१}{२}}{२\frac{१}{२}} = \frac{\text{आयतक्षेत्रे}}{\text{भुज}} = \frac{२४५ \times २}{२ \times २१} = २४\frac{४}{२१} = ११३\frac{४}{२१} = ११३ =$

कोटिः ॥४॥

अत्रोपपत्तिः ।

$$\frac{\text{अ}}{\text{क}} = \text{भाज्यः} \quad \frac{\text{ग}}{\text{घ}} = \text{भाजकः} \quad \text{तदा} \quad \frac{\frac{\text{अ}}{\text{क}}}{\frac{\text{ग}}{\text{घ}}} = \frac{\text{भाज्य}}{\text{भाजक}} = \frac{\text{ल}}{\text{व}} \quad \frac{\text{अ}}{\text{घ}} = \frac{\text{ल}}{\text{क}} \quad \frac{\text{ग}}{\text{व}} = \frac{\text{क}}{\text{घ}}$$

$\frac{\text{अ}}{\text{क}} = \text{ल}, \frac{\text{ग}}{\text{घ}} = \text{व}$ अ = भाज्य × क = ल × क, ग = भाजक × घ = व × घ

पक्षौ घ गुणितौ तदा अ. घ = ल. क. घ. पक्षौ क गुणितौ तदा ग. क = व. घ. क

अतः $\frac{\text{अ. घ}}{\text{ग. क}} = \frac{\text{ल. क. घ}}{\text{व. क. घ.}} = \frac{\text{ल. क. घ}}{\text{व.}} = \frac{\text{भाज्य}}{\text{भाजक}}$ एतेन 'परिवर्त्य भागहा-

रच्छेदांशादित्याचार्योक्त' । छेदं लवं च परिवर्त्य हरस्य शेष इत्यादिभास्करोक्तं चोपपद्यते, अधोहरोर्ध्वांशवधं विदध्यादधोहरं चोर्ध्वहरेण हन्यात् । अधस्तनांशोर्ध्व-हराभिघातमूर्ध्वांशकेषु क्षिपभागजातावित्यादि सिद्धान्तशेखरे श्रीपत्युक्तमप्याचार्योक्तानुरूपमेवेति ॥४॥

अब भागहरण के लिये कहते हैं ।

ह. भा.—भाजक के हर और अंश को परिवर्तित कर भाज्य के हर को गुणने से

हर होता है। तथा भाज्य के अंश को परिवर्तित अंश से गुणने में अंश होता है, तब सर्वगित दोनों भिन्नाङ्कों का भागहार होता है, 'रूपाणिच्छेदगुणानि' इत्यादि आचार्योंक विधि से सर्वगणन करना चाहिये ॥

चतुर्वेदाचार्योंक उदाहरण—

जिस आयत क्षेत्र का फल है $१२२\frac{१}{२}$, भुज = $१०\frac{१}{२}$ = $२\frac{१}{२}$ उसमें कोटि प्रमाण क्या होगा ? आयतक्षेत्र का फल = भुज × कोटि = $१२२\frac{१}{२}$ = $२\frac{१}{२}$ × कोटि

$$\therefore \frac{१२२\frac{१}{२}}{२\frac{१}{२}} = \text{कोटि} = \frac{\text{आयतक्षेत्रफल}}{\text{भुज}} = \frac{२४५ \times २१}{२ \times २१} = \frac{२४५}{२१} = ११\frac{१४}{२१} \\ = ११\frac{२}{३} = \text{कोटि} ॥४॥$$

उपपत्ति ।

$$\frac{\text{अ}}{\text{क}} = \text{भाज्य} । \quad \frac{\text{ग}}{\text{घ}} = \text{भाजक} \quad \text{तब} \quad \frac{\frac{\text{अ}}{\text{क}}}{\frac{\text{ग}}{\text{घ}}} = \frac{\text{भाज्य}}{\text{भाजक}} = \frac{\text{ल}}{\text{व}}, \quad \text{यहां} \quad \frac{\text{अ}}{\text{क}}$$

= ल, $\frac{\text{ग}}{\text{घ}} = \text{व}$, अ = भाज्य × क = ल × क । ग = भाजक × घ = व × घ दोनों पक्षों को

क से गुणने से ग. क = व. घ. क दोनों पक्षों को घ से गुणने में अ. घ = ल. क. घ. ,

$$\text{अतः} \quad \frac{\text{अ. घ}}{\text{ग. क}} = \frac{\text{ल. क. घ}}{\text{व. क. घ}} = \frac{\text{ल}}{\text{व}} = \frac{\text{भाज्य}}{\text{भाजक}} \text{ इससे 'परिवर्त्यभागहारच्छेदां-}$$

गौ' इत्यादि आचार्योंक तथा 'छेदलव च परिवर्त्य हरस्यशेष.' इत्यादि भास्करोक्त भी उपपन्न हुआ, सिद्धान्तशेखर में 'अधोहरोर्ध्वास्य विदध्यादित्यादि' सरकृत विज्ञान भाष्य में लिखित उपपत्ति पद्य भी आचार्योंक के अनुरूप ही है ॥४॥

अत्र पुनश्चतुर्वेदाचार्यः ।

अन्ये पुनरिहापि त्रैराशिकात्पकमुदाहरणं ददन्ति । यथा—

“रूपत्रिभाग संयुक्तं रूपलक्षं ददौ नृपः ।

दशभ्यो द्विजमुख्येभ्यः किमेकस्य धनं वद ॥”

नृपः (राजा) रूपतृतीयांशयुक्तं रूपलक्षं श्रेष्ठदशभ्यो ब्राह्मणेभ्यो ददौ तदैकस्य ब्राह्मणस्य धनं किमिति वद ॥ गणितं स्पष्टमेव यथा, यदि दश ब्राह्मणानां धना १००००० + $\frac{१}{३}$ न्येतावन्ति सन्ति तदैकस्य ब्राह्मणस्य धनं किमित्यनुपातेन तद्धनप्रमाणं सुखेनागच्छतीति ॥४॥

यहा फिर चतुर्वेदाचार्य कहते हैं ।

हि. भा.—अन्य आचार्य लोग यहा भी त्रैराशिकात्मक उदाहरण देते हैं - जैसे किसी राजा ने दस ब्राह्मणों को एक का तृतीयांश युक्त एक लाख रुपया दिया तब एक ब्राह्मण का धन क्या होता है सो कहो । इसका गणित स्पष्ट है जैसे यदि दस ब्राह्मणों का धन १००००० + $\frac{1}{3}$ है तो एक का क्या इस अनुपात से एक ब्राह्मण का धन सुलभता ही से आजाता है ॥ ४

यत्र समे चतुस्रे (सम चतुर्भुजे) सप्तार्ध (सार्धत्रय) परिसंख्यया तुल्ये भुजकोटीस्ततस्तत्र क्षेत्रफलं किमिति कथ्यताम् । अत्रोत्तरार्थं न्यासः समचतुर्भुजस्य

भुजः = $3\frac{1}{2}$, कोटिः = $3\frac{1}{2}$ आयते (समचतुर्भुजे) भुजकोटिघातः फलमित्यनेन भुज \times कोटि = समचतुर्भुजफल = $(3\frac{1}{2}) \times (3\frac{1}{2}) = (\frac{7}{2}) \times (\frac{7}{2}) = \frac{49}{4}$ अर्थाद्भिन्नाङ्कस्य वर्गे क्रियमाणेऽंशवर्गो हरवर्गभक्तस्तदा भिन्नाङ्कवर्गो भवति तथा भिन्नाङ्कस्य मूलं हरमूलभक्तं तदा तद्भिन्नाङ्कस्य मूलं भवतीति । वर्गलक्षणं समद्विवधोवर्गं इति चतुर्वेदाचार्यः । लीलावत्यां 'समद्विघातः कृतिरुच्यते' इत्यादिना भास्करेण, सिद्धान्त शेषरे 'वर्गोऽभिघातः सदृगद्विगयोरित्यनेन श्रीपतिनापि तदेव कथ्यते ॥ ५॥

अथ भिन्नाङ्क के वर्ग और मूल को कहते हैं ।

हि. भा.—भिन्नाङ्क के अंश वर्ग को हर वर्ग से भाग देने से उस भिन्नाङ्क का वर्ग होता है । एवं भिन्नाङ्क के अंशमूल को हर के मूल से भाग देने से भिन्नाङ्क का मूल होता है । लीलावती में 'वर्गकृत्तुं घनविधौ तु घनौ विधेयौ' इत्यादि भास्करोक्त भी इसी के अनुरूप है, मित्रान्त शेषर में 'हरराशिर्वर्गं त्रिहृतांशकृतिः' इत्यादि से श्रीपति भी इसी बात को कहते हैं ॥

यहाँ चतुर्वेदाचार्योक्त उदाहरण यह है—

जिस समचतुर्भुज में मान का आधा भुज और कोटि है उस क्षेत्र का फल क्या होता है सो कहो । इस के उत्तर केलिये न्यास—समचतुर्भुज का भुज = $\frac{7}{2}$, कोटि = $\frac{7}{2}$, भुज और कोटि का घात करने से समचतुर्भुज (आयत क्षेत्र) का फल होता है, अतः समचतुर्भुज फल = $\frac{7}{2} \times \frac{7}{2} = \frac{49}{4}$ अर्थात् भिन्नाङ्क का वर्ग करना हो तो अंशवर्ग को हरवर्ग से भाग देने से उस भिन्नाङ्क का वर्ग होता है । एवं भिन्नाङ्क के मूल के लिये अंशमूल को हर के मूल से भाग देने से भिन्नाङ्क का वर्गमूल होता है । वर्ग का लक्षण चतुर्वेदाचार्य कर्त्ते है 'समद्विवधोवर्ग' अर्थात् समान दो अंशों के गुणन करने से उस अङ्क का वर्ग होता है । लीलावती में 'समद्विघातः कृतिरुच्यते' इससे भास्कराचार्य, तथा सिद्धान्त शेषर में 'वर्गोऽभिघातः सदृगद्विगयोः' इससे श्रीपति भी वही बात कहते हैं ॥५॥

$$\frac{अ \times न \times क}{१} + \frac{अ \times न (न-१) क}{१ \times २} + \frac{अ \times न (न-१) (न-२) क}{१ \times २ \times ३} + \dots$$

अत्र यदि न=२ तदा (अ+क)^२ = अ^२ + अ×२×क+क^२

यदि न=३ तदा (अ+क)^३ = अ^३ + अ^२×३×क+अ×३×क^२+क^३

एतावता 'स्थाप्योऽन्त्यवर्गो द्विगुणान्त्यनिघ्नेत्यादि वर्गोपपत्तिः 'स्थाप्यो

यदि $n=४$, तदोत्थापनेना $(अ+क)^४$ अस्यचतुर्घातस्वरूपं जायते एवमेव $n=५$, $n=६$, $n=७$, $n=८$तदोत्थापनेन $(अ+क)^५$, $(अ+क)^६$, $(अ+क)^७$ इत्यादीनां स्वरूपं जायते। परं पूर्वोक्ता श्रेढी कथमुत्पद्यते तदर्थं युक्तिग्रन्थान्ते प्रदर्शयिष्यत इति ॥ ६ ॥

अब घन करने के लिये कहते हैं।

हि. भा.—दो अङ्कों के योग का घन करने के लिये प्रथमाङ्क = अन्त्यसंज्ञक, द्वितीयाङ्क = उत्तर सज्ञक, तब पहले अन्त्य का घन स्थापन करना, उस के बाद अन्त्य वर्ग का तीन और उत्तर में गुणा देना उसके बाद उत्तर वर्ग का तीन में और अन्त्य से गुणा करना उसके बाद उत्तर का घन करना, सबों का योग करने से दो अङ्कों के योग का घन होना है यहाँ चतुर्वेदाचार्योक्त उदाहरण है कि किसी वापी के चारों भुज = २७ है, वेध भी २७ है तब उस वापी का घनफल क्या होता है सो कहो। यहा वापी का क्षेत्रफल = $२७ \times २७ = ७२९$, 'क्षेत्रफलं वेधगुणं' इत्यादि से क्षेत्रफल \times वेध = $७२९ \times २७ =$ वापी घनफल। चतुर्वेदाचार्य ने सब जगह क्षेत्रसम्बन्ध से जो उदाहरण दिये हैं वे मुझे ठीक नहीं मालूम होते हैं इस बात को विज्ञलोग विचार कर समझे ॥ ६ ॥

उपपत्ति

अ+क इसके घन के लिये 'समन्विघातघन' इस परिभाषा में $(अ+क)(अ+क)(अ+क) = (अ+क)^३$ खण्ड गुणन में $(अ^२+अ.क+अ.क+क^२)$ $(अ+क) = (अ^२+२अ.क+क^२)(अ+क) = अ^३+२अ.क+अ.क^२+अ.क+२अ.क^२+क^३ = अ^३+३अ.क+३अ.क^२+क^३ = (अ+क)^३$ इससे 'स्थाप्योऽन्त्य घन' इत्यादि आचार्योक्त उपपन्न होता है, 'स्थाप्योऽन्त्य वर्गो द्विगुणान्त्य निघ्ना' इत्यादि लीलावती में भास्करोक्त इसके अनुरूप ही है। प्राचीनाचार्यों ने केवल वर्ग (द्विघात) और घन (त्रिघात) के लिये विचार किया है। दो अङ्कों के योग के चतुर्घात-पञ्चघात आदि के लिये विचार नहीं किया है। नवीन लोगों ने दो अङ्कों के योग के इष्टाङ्कघात पर्यन्त कैसा रूप होता है इसके लिये एक श्रेढी

उत्पादन की है इसी को द्वियुक्त पद सिद्धान्त कहते हैं। जैसे श्रेढी का स्वरूप = $(अ+क)^n$

$$= अ^n + \frac{n-1}{1} अ^{n-1} क + \frac{n-2}{1 \times 2} अ^{n-2} क^२ + \frac{n-3}{1 \times 2 \times 3} अ^{n-3} क^३ + \dots$$

यहां यदि $n=२$ तब उत्थापन से $(अ+क)^२ = अ^२+२अ.क+क^२$ यदि, $n=३$ तब $(अ+क)^३ = अ^३+३अ.क+३अ.क^२+क^३$ इससे 'स्थाप्योऽन्त्य वर्गो द्विगुणान्त्य निघ्ना' इत्यादि वर्गोपपत्ति तथा 'स्थाप्यो घनोऽन्त्यस्य ततोऽन्त्यवर्ग' इत्यादि भास्करोक्त घनोपपत्ति उपपन्न होती है। यहां $n=४$ इष्टाङ्क है, यदि $n=४$ तब उत्थापन में $(अ+क)^४$ चतुर्घात

रूप होता है। इसी तरह $n=५$, $n=६$, $n=७$ इत्यादि मानने से उत्थापन देने से $(अ + क)^५$, $(अ + क)^६$, $(अ + क)^७$ इन सबों के स्वरूप निष्पन्न होता है। लेकिन पूर्वोक्त श्रेढी कैसे बनती है उसके लिए ग्रन्थान्त में युक्ति कही जायगी ॥ ६ ॥

ताऽस्ति किन्तु तत्रः परं ते स्पष्टीकरणं न कृतमिति ॥ ७ ॥

हि. भा. — यहा चतुर्वेदाचार्य का मत है कि बताई हुई घनराशि में प्रथम स्थान की
घन संज्ञा होती है । उसके पश्चात् विलोम रूप में दो स्थानों की अघन संज्ञा होती है । उसके
बाद फिर एक स्थान की घनसंज्ञा और दो स्थानों की अघन संज्ञा । इसी प्रकार पद की
समाप्ति तक यह क्रम चलता है । ऐसी स्थिति में मूत्र के नियमानुसार पहला भाजक घनमूल
का वर्ग त्रिगुणित कैसे होता है, यह बताना है । दूसरे अघन से जो प्राप्त होता है
उसका वर्ग घटाना चाहिये, किन्तु वह त्रिगुणित पहले प्रथम घन में उसके पश्चात् द्वितीय
घन में से घन को घटाने से घनमूल होता है ।

उदाहरणः १२१६७ संख्या का घनमूल २३ होता है, जैसा कि घनमूल की प्रक्रिया
में सिद्ध होता है । चिति (भाठा) का घनात्मक फल १२१६७ है, पार्श्व की ऊँचाई भी
बराबर है वहाँ घनात्मक फल का मूल घनमूलानयन की प्रक्रिया से = २३ है ।

उपपत्ति

यदि अ = य + २, तब इसका घन = अ^३ = (य + २)^३ = य^३ + ३य^२ + ६य + ८ ।
२^३ + २^२ यहां घनराशि के रूप में पहला अन्तिम अङ्क (य^३) घन है, इसके बाद अन्तिम
वर्ग त्रिगुणित और उपान्तिम का घात है, उसके बाद त्रिगुणित अन्तिम और उपान्तिम
का वर्ग घात है, उसके पश्चात् त्रिगुणित अन्तिम और उपान्तिम का वर्ग घात है, उसके
पश्चात् उपान्तिम का घन है । इसलिए अन्तिम घन में से जिसका घन घटे वह घटाना
चाहिए । उस त्रिगुणित वर्ग से अघन में भाग देकर जो लब्धि हो वह उपान्तिम अङ्क है ।
उसके पश्चात् उसके वर्ग त्रिगुणित उपान्तिम के घात को घटाने से जो शेष हो, उसमें से
उपान्तिम का घन घटाने से कुछ शेष न बचे तो उसको घनमूल समझना चाहिए ।

मेवेति ॥ ८ ॥

अब प्रथम प्रभागजाति और द्वितीय प्रभाग जाति के सवर्णन को कहते हैं ।

हि. भा.—तुल्य हरवाले अंशों के योग को हर से भाग देने से प्रथम जाति में सवर्णन होता है । तथा अंशों को अंश से गुण कर हरों के घात से भाग देने से द्वितीय प्रभाग जाति में सवर्णन होता है । लीलावती में ‘योगोऽन्तरं तुल्य हरांशकानां’ इत्यादि भास्करोक्त आचार्योक्त प्रथम प्रभाग जाति सवर्णन के अनुरूप ही है । तथा आचार्योक्त द्वितीय प्रभाग जाति सवर्णन जो है तदनुरूप ही लीलावती में ‘लवा लवघ्नाश्च हराहरघ्नाः’ इत्यादि भास्करोक्त है इति ॥ ८ ॥

यहाँ प्रथम प्रभाग जाति के लिए चतुर्वेदाचार्योक्त उदाहरण है जैसे—

न्यासः $\frac{1}{2} + \frac{1}{3} + \frac{1}{4} + \frac{1}{5}$ इन सबों का योग करने के लिये ‘विपरीतच्छेदगुणा’ इत्यादि आचार्योक्त से वा लीलावती में ‘अन्योन्य हाराभिहतौ’ इत्यादि भास्करोक्त से $\frac{1}{2} + \frac{1}{3} + \frac{1}{4} + \frac{1}{5} = \frac{13}{60} + \frac{1}{5} = \frac{13}{60} + \frac{12}{60} = \frac{25}{60} = \frac{5}{12} = 1 = \text{योगफल हुआ ॥ ८ ॥}$

अथवा लघुतमापत्य से गणित दिखानाते हैं ।

न्यास $\frac{1}{2} + \frac{1}{3} + \frac{1}{4} + \frac{1}{5}$ यहाँ २।६।१२।४ इन हरों को दो से अपवर्त्तन देने से
२ | २।६।१२।४ पुनः ३।६।२ इन को दो से अपवर्त्तन देने से २ | ३।६।२ फिर ३।३ इनको
१।३।६।२ | ३।३।१

तीन से अपवर्त्तन देने से ३ | ३।३।१ अब अपवर्त्तनाङ्कों के घात $२ \times २ \times ३ = १२$ को
१।१

शेष १।१।१ से गुणने से $१२ \times १ \times १ \times १ = १२$ इससे $\frac{1}{2} + \frac{1}{3} + \frac{1}{4} + \frac{1}{5}$ इन के हर अंग को गुणने से $\frac{1}{2} \times \frac{1}{3} + \frac{1}{3} \times \frac{1}{4} + \frac{1}{4} \times \frac{1}{5} + \frac{1}{5} \times \frac{1}{2} = \frac{1}{6} + \frac{1}{20} + \frac{1}{20} + \frac{1}{10} = \frac{1}{6} + \frac{1}{10} + \frac{1}{10} = \frac{1}{3} = १ = \text{योगफल हुआ ॥ ८ ॥}$

उपपत्ति ।

‘रूपाणिच्छेदगुणान्यंशयुतानि द्वयोर्बहूनां वा । प्रत्युत्पन्नो भवति च्छेदवधेनोद्धृतो
श्रावधः’ इस आचार्योक्त से अथवा ‘योगोऽन्तरं तुल्यहरांशकानां’ इत्यादि भास्करोक्त से उपपत्ति स्पष्ट है । ‘लवा लवघ्नाश्च हरा हरघ्ना’ इत्यादि वा ‘अंशा हतिश्छेदवधेन भक्ता’ इत्यादि भास्करोक्त से द्वितीय प्रभागजाति की उपपत्ति स्पष्ट है । सिद्धान्त शेखर में ‘प्रभाग जातौ तु सवर्णनाय छिदां लवानां च समाहतिः स्यात्’ यह श्रीपति की उक्ति भी इसी के अनुरूप है इति ॥ ८ ॥

तृतीय जाति में सवर्णन को कहते हैं ।

हि. भा.—ऊर्ध्वस्थित अंश को अंश से गुणने से तृतीय जाति में सवर्णन होता है । हर से हर को गुण देना और अपने अंश करके युत-ऊन हर से उपस्थित अंश को गुण देना तब अंशानुबन्ध और अंशापवाह में सवर्णन होता है । इसका सम्बन्ध आगे से है ॥ ९ ॥

उदाहरण

एक निर्भर एक दिन में एक वापी (पोखड़ा) को भरता है, द्वितीय निर्भर उसी वापी को एक दिन के आधा समय में भरता है, तृतीय निर्भर उसी वापी को एक दिन के चतुर्थांश समय में भरता है, चतुर्थ निर्भर उसी वापी को एकदिन के पञ्चमांश समय में भरता है, यदि एक ही समय में सब निर्भरों को खोल दिया जाय तब वे कितने समय में उस वापी को भरेगे ?

न्यास $\frac{1}{1} | \frac{1}{2} | \frac{1}{3} | \frac{1}{4}$ 'ऊर्ध्वांशावच्छेदगुणा' इस सूत्र के अनुसार $\frac{1}{1}$, $\frac{1}{2}$, $\frac{1}{3}$, $\frac{1}{4}$ इन सबों का योग करने से $\frac{1}{1} =$ सब निर्भरों से इतने पूरण दिन प्रमाण हुए । अब अनुपात करते हैं यदि $\frac{1}{1}$ इसमें एक दिन पाते हैं तो एक पूरण में क्या इस अनुपात से पूरणकालप्रमाण $\frac{1}{4}$ हुआ ॥ ९ ॥

उपपत्ति ।

एक निर्भर एक दिन में एक वापी को भरता है, द्वितीय निर्भर दिनार्ध में भरता है तो एक दिन में क्या इस अनुपात से एक दिन सम्बन्धी पूरण काल= $\frac{1}{2}$, यदि तृतीय निर्भर एक दिन के चतुर्थांश समय में उसी वापी को भरता है तो एक दिन में क्या इस अनुपात से एक दिन सम्बन्धी पूरण काल= $\frac{1}{3}$, यदि चतुर्थ निर्भर एक दिन के पञ्चमांश में उसी वापी को भरता है तो एक दिन में क्या इससे एक दिन सम्बन्धी उसका पूरण काल= $\frac{1}{4}$ सबों का योग= $\frac{1}{1}$ तब अनुपात करते हैं यदि $\frac{1}{1}$ इसमें एक दिन पाते हैं तब एक पूरण में क्या इस अनुपात से एकही समय में खोले गये सब निर्भरों से वापी संपूरण काल= $\frac{1}{4}$ । इससे आचार्योक्त सूत्र उपपन्न होता है । लीलावती में 'भजेच्छिदोशैरथ तैविमिश्रै' इत्यादि, भास्करोक्त सूत्र आचार्योक्त सूत्र के अनुरूप ही है ॥ ९ ॥

अथ छेदैश्छेदा गुणिता इत्यादे व्याख्या—

प्रथम द्वितीय तृतीय जातिभ्यो ये अन्ये परे द्वे जाती चतुर्थीपञ्चम्यौ तयोः स्ववर्णनार्थमधः स्थच्छेदैः (हरैः) उपरिस्थिता हरा गुणनीयाः स्वांशयुतोन्मैरैव हरैरुपरिस्था अंशा गुणनीयाः, अंशानुबन्धे स्वांशयुतैर्हरैरंशापवाहे स्वांशहीनं हरैरुपरिस्था अंशा गुणनीया इत्यर्थः । लीलावत्यां 'तलस्थहारेण हर निह्न्यात्स्वांशाधिकोनेन तु तेन भागान्' भास्करोक्तमिदमाचार्योक्तानुरूपमेव ।

उदाहरणं चतुर्वेदाचार्योक्तम् ।

$\frac{3}{8}$

$\frac{3}{8}$

$\frac{3}{8}$

$\frac{3}{8}$ तलस्थ हारेण हरं निह्न्यादित्यादिना

$$\frac{3}{8} \times \frac{७}{४} \times \frac{६}{३} \times \frac{५}{४} \times \frac{४}{३} \times \frac{३}{२} = \frac{३}{२} = ४ =$$

$\frac{3}{8}$ द्वितीयस्य धनम् = ४ ।

$\frac{3}{8}$ तृतीयार्थ न्यासः ।

$\frac{3}{8}$

$\frac{3}{8}$

$\frac{3}{8}$

$\frac{3}{8}$

$\frac{3}{8}$

$\frac{3}{8}$

$\frac{3}{8}$

$\frac{3}{8}$ तलस्थ हारेण हरं निह्न्यादि-

$$\text{त्यादिना } \frac{६ \times ८}{७} \times ७ \times \frac{६}{५} \times \frac{५}{४} \times \frac{४}{३} \times \frac{३}{२} = \frac{६ \times ८}{२} = ३ \times ८ = २४ = \text{तृतीयस्य धनम्} ।$$

अब अंशानुबन्धु और अशापाह के लिए कहते हैं ।

प्रथम-द्वितीय-तृतीय जातियो से परे जो दो 'चतुर्थी' और पञ्चमी' जातियां हैं उनके सवर्गान् लिए अधः स्थित हरो से उपस्थित हरो को गुणा देना, अपने अंश करके युत-ऊन उन्ही से उपरिस्थ अंशो को गुणा देना अर्थात् अशानुबन्ध में अपने अंश करके युत हरो से अंशापवाह मे अपने अंश करके हीन हरो से उपरिस्थ अंशो को गुणा देना । लीलावती में 'तलस्थ हारेण हर निहन्त्यात्' इत्यादि भास्करोक्त सूत्र आचार्योंक्तानुरूप ही है ।

यहां चतुर्वेदाचार्योंक्त उदाहरण यह है ।

किसी बनिये के छोटे लड़के ने अपने धन के चतुर्थांश को लेकर लाभ के लिए सात दिनों तक बाजार किया, प्रत्येक दिन तृतीयांश-चतुर्थांश-पञ्चमांश-षष्ठांश सप्तांशों से युत धन के आधे भाग को व्यापार में लगाया तब उसका धन प्रमाण कितना है सो कहो । एवं दूसरा लड़का एक रूप से तीसरा लड़का छः रूप से उसी तरह से बाजार गया तब उन दोनों के धन प्रमाण कितने कितने है सो कहो ।

उदाहरण के अनुसार न्यास करने से—

$\frac{1}{8}$ तलस्थ हारेण हरं निहन्त्यादित्यादि से

$$\begin{array}{l} \frac{1}{2} \frac{5 \times 7 \times 6 \times 5 \times 4 \times 3}{4 \times 7 \times 6 \times 5 \times 4 \times 3 \times 2} \\ \frac{1}{3} \\ \frac{1}{4} = \frac{5}{2} = 2 \text{ प्रथम का धन} \\ \frac{1}{5} \\ \frac{1}{6} \\ \frac{1}{7} \end{array}$$

द्वितीय के लिए न्यास

$$\begin{array}{l} \frac{1}{4} \text{ तलस्थ हारेण हर निहन्त्यादि त्यादि से} \\ \frac{1}{2} \frac{5 \times 7 \times 6 \times 5 \times 4 \times 3}{7 \times 6 \times 5 \times 4 \times 3 \times 2} = \frac{5}{2} = 2 \\ \frac{1}{3} \\ \frac{1}{4} \\ \frac{1}{5} \\ \frac{1}{6} \\ \frac{1}{7} \\ \frac{1}{8} \\ \frac{1}{9} \\ \frac{1}{10} \\ \frac{1}{11} \\ \frac{1}{12} \\ \frac{1}{13} \\ \frac{1}{14} \\ \frac{1}{15} \\ \frac{1}{16} \\ \frac{1}{17} \\ \frac{1}{18} \\ \frac{1}{19} \\ \frac{1}{20} \\ \frac{1}{21} \\ \frac{1}{22} \\ \frac{1}{23} \\ \frac{1}{24} \\ \frac{1}{25} \\ \frac{1}{26} \\ \frac{1}{27} \\ \frac{1}{28} \\ \frac{1}{29} \\ \frac{1}{30} \\ \frac{1}{31} \\ \frac{1}{32} \\ \frac{1}{33} \\ \frac{1}{34} \\ \frac{1}{35} \\ \frac{1}{36} \\ \frac{1}{37} \\ \frac{1}{38} \\ \frac{1}{39} \\ \frac{1}{40} \\ \frac{1}{41} \\ \frac{1}{42} \\ \frac{1}{43} \\ \frac{1}{44} \\ \frac{1}{45} \\ \frac{1}{46} \\ \frac{1}{47} \\ \frac{1}{48} \\ \frac{1}{49} \\ \frac{1}{50} \\ \frac{1}{51} \\ \frac{1}{52} \\ \frac{1}{53} \\ \frac{1}{54} \\ \frac{1}{55} \\ \frac{1}{56} \\ \frac{1}{57} \\ \frac{1}{58} \\ \frac{1}{59} \\ \frac{1}{60} \\ \frac{1}{61} \\ \frac{1}{62} \\ \frac{1}{63} \\ \frac{1}{64} \\ \frac{1}{65} \\ \frac{1}{66} \\ \frac{1}{67} \\ \frac{1}{68} \\ \frac{1}{69} \\ \frac{1}{70} \\ \frac{1}{71} \\ \frac{1}{72} \\ \frac{1}{73} \\ \frac{1}{74} \\ \frac{1}{75} \\ \frac{1}{76} \\ \frac{1}{77} \\ \frac{1}{78} \\ \frac{1}{79} \\ \frac{1}{80} \\ \frac{1}{81} \\ \frac{1}{82} \\ \frac{1}{83} \\ \frac{1}{84} \\ \frac{1}{85} \\ \frac{1}{86} \\ \frac{1}{87} \\ \frac{1}{88} \\ \frac{1}{89} \\ \frac{1}{90} \\ \frac{1}{91} \\ \frac{1}{92} \\ \frac{1}{93} \\ \frac{1}{94} \\ \frac{1}{95} \\ \frac{1}{96} \\ \frac{1}{97} \\ \frac{1}{98} \\ \frac{1}{99} \\ \frac{1}{100} \end{array}$$

तृतीय के लिए न्यास

$$\begin{array}{l} \frac{1}{4} \text{ तलस्थ हारेण हरं निहन्त्यात् इत्यादि से} \\ \frac{1}{2} \frac{6 \times 5}{7} \times \frac{7}{6} \times \frac{6}{5} \times \frac{5}{4} \times \frac{4}{3} \times \frac{3}{2} = \frac{6 \times 5}{2} = 3 \times 5 = 15 = \text{तृतीय धन} \\ \frac{1}{3} \\ \frac{1}{4} \\ \frac{1}{5} \\ \frac{1}{6} \\ \frac{1}{7} \\ \frac{1}{8} \\ \frac{1}{9} \\ \frac{1}{10} \\ \frac{1}{11} \\ \frac{1}{12} \\ \frac{1}{13} \\ \frac{1}{14} \\ \frac{1}{15} \\ \frac{1}{16} \\ \frac{1}{17} \\ \frac{1}{18} \\ \frac{1}{19} \\ \frac{1}{20} \\ \frac{1}{21} \\ \frac{1}{22} \\ \frac{1}{23} \\ \frac{1}{24} \\ \frac{1}{25} \\ \frac{1}{26} \\ \frac{1}{27} \\ \frac{1}{28} \\ \frac{1}{29} \\ \frac{1}{30} \\ \frac{1}{31} \\ \frac{1}{32} \\ \frac{1}{33} \\ \frac{1}{34} \\ \frac{1}{35} \\ \frac{1}{36} \\ \frac{1}{37} \\ \frac{1}{38} \\ \frac{1}{39} \\ \frac{1}{40} \\ \frac{1}{41} \\ \frac{1}{42} \\ \frac{1}{43} \\ \frac{1}{44} \\ \frac{1}{45} \\ \frac{1}{46} \\ \frac{1}{47} \\ \frac{1}{48} \\ \frac{1}{49} \\ \frac{1}{50} \\ \frac{1}{51} \\ \frac{1}{52} \\ \frac{1}{53} \\ \frac{1}{54} \\ \frac{1}{55} \\ \frac{1}{56} \\ \frac{1}{57} \\ \frac{1}{58} \\ \frac{1}{59} \\ \frac{1}{60} \\ \frac{1}{61} \\ \frac{1}{62} \\ \frac{1}{63} \\ \frac{1}{64} \\ \frac{1}{65} \\ \frac{1}{66} \\ \frac{1}{67} \\ \frac{1}{68} \\ \frac{1}{69} \\ \frac{1}{70} \\ \frac{1}{71} \\ \frac{1}{72} \\ \frac{1}{73} \\ \frac{1}{74} \\ \frac{1}{75} \\ \frac{1}{76} \\ \frac{1}{77} \\ \frac{1}{78} \\ \frac{1}{79} \\ \frac{1}{80} \\ \frac{1}{81} \\ \frac{1}{82} \\ \frac{1}{83} \\ \frac{1}{84} \\ \frac{1}{85} \\ \frac{1}{86} \\ \frac{1}{87} \\ \frac{1}{88} \\ \frac{1}{89} \\ \frac{1}{90} \\ \frac{1}{91} \\ \frac{1}{92} \\ \frac{1}{93} \\ \frac{1}{94} \\ \frac{1}{95} \\ \frac{1}{96} \\ \frac{1}{97} \\ \frac{1}{98} \\ \frac{1}{99} \\ \frac{1}{100} \end{array}$$

भागापवाहेऽपि चतुर्वेदाचार्योक्तमुदाहरणम् ।

अष्टौ पलानि वणिजा सित चन्दनस्य नीतानि चोत्तर गिरिं किल कान्यकुब्जात् ।
दानं च दत्तमपि पंचसुतेन मानस्यार्धत्रिपंचनवमाष्टसमं तदा किम् ॥

वि. भा.—केनापि वणिजा सितचन्दनस्य (श्वेतचन्दनस्य) अष्टौ पलानि का यकुब्ज-देशादुत्तरगिरिं नीतानि, तेन (वणिजा) पंचसु जनेषु धनस्यार्धं—
तृतीयांशं, पंचांशं, नवमांशं, अष्टमांशं दानं दत्त तदा तद्धनं कियदिति ॥
उदाहरणोक्त्या न्यासः

अब शून्य परिकर्म सम्बन्ध में विचार करते हैं ।

हि. भा.— आचार्य ने शून्य परिकर्म नहीं कहा है । सिद्धान्त शेखर में श्रीपति ने भी उन्हीं का अनुकरण किया है । लेकिन लीलावती में भास्कराचार्य ने शून्य परिकर्म कहा है जैसे कि उनके निम्न लिखित सूत्र है—

‘योगे खं क्षेपसमं वर्गादौ रवं खभाजितोराशिः’ इत्यादि संस्कृत विज्ञान भाष्य में लिखित श्लोकों को देखिये । इसका तात्पर्य है कि शून्य में जितना जोड़ा जाता है उतना (योजकाङ्क) ही रहता है, शून्यका वर्ग शून्य होता है शून्यका मूल, शून्यका घन, शून्यका घन-मूल शून्य होता है । जिस राशिको शून्यसे भाग दिया जाता है वह खहर कहलाती है इसीको

(१) सूर्योदय काले शङ्कु = ०, तेन दृज्या = त्रि $\therefore \frac{१२ \text{ त्रि}}{\text{शङ्कु}} = \frac{१२ \text{ त्रि}}{०} =$ छाया त्रिज्याया भिन्नत्वेऽपि सर्वत्रैव खहरत्वात् छायामानमनन्तं भवेदिति श्लोकात्तात्पर्यम् ।

अनन्त भी कहते हैं । किसी राशि को शून्य से गुणा करने से शून्य होता है । किसी राशि को शून्य से गुणा किया जाय और शून्य ही से भाग दिया जाय तो वह राशि प्रमाण ज्यों का त्यों रहता है । इसी तरह किसी राशि में शून्य जोड़ा जाय और घटाया जाय तो वह राशि ज्यों का त्यों रहती है ॥

उदाहरण ।

शून्य में पांच जोड़ने से क्या होता है । शून्यका वर्ग, वर्गमूल, घन, घनमूल क्या होता है ? पांच को शून्य से गुणा करने से क्या होता है, दश को शून्य से भाग देने से क्या होता है ?

न्यास ०, इसमें पांच जोड़ते हैं $० + ५ = ५$ । शून्य का वर्ग $= ० \times ० = (०)^2 = ०$
शून्य का वर्गमूल $= \sqrt{०} = ०$, शून्य का घन $= ० \times ० \times ० = (०)^3 = ०$ । घनमूल $= \sqrt[३]{०} = ०$, पांच को शून्य से गुणा करते से $५ \times ० = ०$, दश को शून्य से भाग देने से $\frac{१०}{०} = \text{खहर} = \text{अनन्त}$, ॥

उपपत्ति ।

शून्य का कुछ मान नहीं है इसलिये उसमें जितना जोड़ा जायगा या घटाया जायगा उतना ही होगा । शून्य के वर्ग घनादि भी वर्गादि की परिभाषाओं में शून्य ही होते हैं ; किसी राशि को शून्य से भाग देने से फल अनन्त के बराबर क्यों होता है इसके लिए दिचार करते हैं । भाज्य संख्या स्थिर रहने से उसको ज्यों ज्यों छोटे हर से भाग देंगे त्यों त्यों भागफल अधिक होगा, इसलिये हर का मान जब शून्य होगा तब लब्धि सर्वाधिक (अनन्त) होगी लेकिन वह लब्धि कितनी होगी नहीं कह सकते हैं इसलिए उसका नाम खहर रखा गया । ऋणात्मक राशि शून्य से भी छोटी है इसलिए जिस संख्या को शून्य से भाग देने से लब्धि अनन्त होती है, उसी संख्या को शून्य से अल्प ऋणात्मक राशि में भाग देने से लब्धि अनन्त से भी अधिक होती है ।

जैसे $-० > -य$, राशि $= य^२$ इसको शून्यसे भाग देनेसे $\frac{य^२}{०} = \text{लब्धि} = \text{अनन्त}$ । यदि

$\frac{य^२}{-य} = -य > \text{अनन्त}$ से ज्यादा इसीलिए पण्डित सुधाकर द्विवेदी ने बीजगणित की अपनी

उपपत्ति में ऋणात्मकराशि की प्रशंसा निम्न लिखित श्लोक से की है ।

‘अत्यल्पमानमुपलभ्य सकृत्प्रकृत्या मानं’ इत्यादि संस्कृतोपपत्ति लिखित श्लोक को देखिये ।

अब शून्य की कुछ विचित्रता दिखलाते हैं ।

यदि $य = २$ तब $य^२ - २^२ = ०$, वर्गान्तर योगान्तर घात के बराबर होता है इस

लिए $(y-r)(y+r)=0$ परन्तु $y-r=0 \therefore (y-r)(y+r)=0 \times (y+r)$
 $=0 \therefore y+r=0$ परन्तु $y+r$ यह शून्य के बराबर नहीं है इसलिए यहाँ सिद्ध हुआ
 कि दोनों शून्य बराबर नहीं हैं। अथवा देखिए $6-6=0$, तथा $3-3=0 \therefore \frac{6-6}{3-3}$

$$= \frac{0}{0} = \frac{6(1-1)}{3(1-1)} = \frac{6}{3} \text{ इससे प्रत्यक्ष देखने में आता है कि } \frac{0}{0} \text{ इसमें भाज्य के शून्य से}$$

हर के शून्य द्विगुणित है, अर्थात् इससे सिद्ध होता है कि प्रत्येक शून्य बराबर नहीं है।

लीलावती में 'शून्ये गुणके जाते खं हारश्चेत्' इत्यादि की उपपत्ति में किसी पण्डित ने व्यक्त वासना के लेखक के ऊपर आक्षेप किये हैं सो मुझे ठीक नहीं लगता है, क्योंकि पहले शून्यों में न्यूनाधिकता जो दिखलायी गई है सो गणित का वैचित्र्य है, वस्तुतः शून्यों का कुछ मान नहीं होता है इसीलिए व्यवहार में सब शून्यों को बराबर ही माना जाता है, इसलिए 'शून्ये गुणके जाते' इत्यादि भास्करोक्त युक्ति युक्त ही है और व्यक्त वासना में उसकी उपपत्ति लेखक का कथन भी ठीक ही है।

यहाँ प्रसङ्ग से शून्य परिकर्म के सम्बन्ध में गणित मञ्जरी में गरौशोक्त विषयो को कहते हैं। 'राशिः शून्य युतो नितो ह्यविकृतः शून्याहतः खं भवेत्' इत्यादि संस्कृतोपपत्ति में लिखित श्लोक को देखिए। इसका तात्पर्य यह है कि किसी संख्या में शून्य को जोड़ने से या घटाने से वह संख्या ज्यों की त्यों रहती है, किसी संख्या को शून्य से गुणा करने से गुणानफल शून्य होता है, किसी संख्या को शून्य से भाग देने से वह खहर कहलाती है, उसमें किसी तरह का विकार नहीं होता है, शून्य का वर्ग, वर्गमूल, घन, घनमूल शून्य होता है, खहर राशि में भिन्नाङ्क को जोड़ने या घटाने से उसमें विकार होता है, इससे गरौश दैवज्ञ ने बीज गणित में 'अस्मिन् विकारः खहरे न राशौ, इत्यादि भास्कराचार्योक्त में दोष दिखलाया है।

उनका उदाहरण निम्नलिखित है।

'चत्वारो वियुता युता विरहिताः' इत्यादि संस्कृतोपपत्ति में लिखित श्लोक को देखिये। इसका अभिप्राय है कि चार ४ में शून्य को घटाने से या जोड़ने से क्या होता है, चार को शून्य से गुणा करने से क्या होता है, चार को शून्य से भाग देने से क्या होता है, शून्य का वर्ग—घन—मूल क्या होता है, चार में साढ़े पाँच को जोड़ने या घटाने से क्या होता है, $\frac{4}{5} + \frac{1}{5} = \frac{5}{5} = 1$ समच्छेद से योग करने से ५, एवं $\frac{4}{5} - \frac{1}{5} = \frac{3}{5}$ इससे खहर राशि में विकार होता है यह गरौश दैवज्ञ कहते हैं।

'अस्मिन् विकारः खहरे न राशौ यद्भास्करीये गणिते प्रणीतम्' इत्यादि संस्कृतोपपत्ति लिखित श्लोकों को देखिये, इन श्लोकों से 'अस्मिन् विकारः खहरे न राशौ' इत्यादि भास्करोक्त का खण्डन करते हैं। पाटीसार में 'ननु यो येन भक्तोऽसौ तद्धरः स्यादतो न सत्' इत्यादि संस्कृतोपपत्ति में लिखित श्लोकों से खहर राशि द्वारा गरौशादि से जो विकार दिखलाया गया

है उसका खण्डन मुनीश्वर ने किया है जो कि बहुत युक्ति युक्त है । वस्तुतः खहर राजि में किसी संख्या को जोड़ने या घटाने से उस के खहन्त्व में जो कि अनन्तत्व का ज्ञापक है किमी तरह का विकार नहीं होता है, इसलिए गणेशादि आचार्यों ने भास्करोक्त का जो खण्डन किया है सो निर्युक्तिक है इस विषय को विज्ञ लोग विचार कर देखें ॥

$$= \frac{१ \text{ अङ्गुल}}{२० \times ३} = \frac{१}{६०}, \text{ दिनगतिरङ्गुलात्मिका} = \frac{\text{यवात्मिकैक दिनगति}}{८} = \frac{३२}{५ \times ८} = \frac{४}{५}$$

अनयोरन्तरेण $\frac{४}{५} - \frac{१}{६०} = \frac{४७}{६०}$ योजनाङ्गुलानि $१ \times ८००० \times ४ \times २४$ भक्तानि

$$\frac{८००० \times ४ \times २४}{\frac{४७}{६०}} = \frac{८००० \times ४ \times २४ \times ६०}{४७} = \frac{३२००० \times २४ \times ६०}{४७} =$$

$$\frac{१९२०००० \times २४}{४७} = \frac{४६०८००००}{४७} = ९८०४२५ \frac{२५}{४७} = \text{दिनानि इति ॥}$$

अब त्रैराशिकादियों के लिये कहते हैं ।

हि. भा.—त्रैराशिक में प्रमाण और इच्छा एक जातिक होती है, दोनों के बीच फल भिन्न जातिक होता है फल को इच्छा से गुण कर प्रमाण से भाग देने से इच्छा सम्बन्धी फल होता है ॥ १० ॥

प्रमाण और फलके घात को इच्छा से भाग देने से व्यस्तत्रैराशिक में फल होता है । पंचराशिक-सप्तराशिक नवराशिक एकादश राशियों में फल और हर को परस्पर पक्षनयन अर्थात् एक पक्ष के फल और हर को दूसरे पक्ष में ले जाना तथा दूसरे पक्ष के फल और हर को एक पक्ष में लाना, तब बहुराशिक घात को अल्पराशिकघात से भाग देने से फल होता है । लीलावती

में 'प्रमाणमिच्छा च समान जाती आद्यन्तयोस्तत्फलमन्यजाति । मध्येनदिच्छाहतमाद्य हन्' इत्यादि संस्कृत विज्ञान भाष्य में लिखित श्लोक, आचार्यों के सृष्टि ही है, लेकिन आचार्य ने व्यस्त त्रैशिक के लक्षण नहीं कहे हैं । इसका लक्षण भास्कराचार्य ने कहा है इति ॥ १०-११-१२ ॥

त्रैशिक के लिये चतुर्वेदाचार्यों उदाहरण ।

हि. भा.— कोई आठमी तीन दिन में एक सौ आठ गौ दान करता है तो तीन सौ नब्बे ३६० दिनों में कितनी गौ दान करेगा ।

यहां ३ दिन = प्रमाण है, १०८ = फल है, ३६० दिन = इच्छा है = १ वर्ष + १ मास यहां प्रमाण और इच्छा एक जाति के (दिनात्मक) हैं, और फल भिन्न जाति 'गौ' का है, अब प्रमाण और फल के घान को इच्छा में भाग देने से $\frac{१०८ \times ३६०}{३} = १४०४० =$ इच्छाफल हुआ ॥

दूसरा उदाहरण ।

जो पिपीलिका (पिल्लू) एक दिन में अपने पञ्चांग घटा कर आठ जी जाती है, वह तीन दिनों में एक अंगुल के बीसवें भाग में लौटती है । इस जाने और लौटने के क्रम से कितने समय में सौ योजन जायगी ?

चतुर्वेदोक्त परिभाषा यह है ८ यवोदर = १ अङ्गुल, २४ अंगुल = १ हाथ, ४ हाथ = १ धनुष, ८००० धनुष = १ योजन, 'यवोदरैरङ्गुलमष्टमं व्यैः' इत्यादि लीलावती में भास्करोक्त के अनुसार ही चतुर्वेदोक्त परिभाषा है । यवात्मक एक दिनगति = ८ — $\frac{८}{३} = \frac{३२}{३}$ एक दिन सम्बन्धी अंगुलात्मक निवृत्ति = $\frac{\text{तीन दिनों के निवृत्तिमान}}{३} = \frac{१ \text{ अंगुल}}{२० \times ३} = \frac{१}{६०}$ अंगुलात्मक दिनगति = $\frac{\text{यवात्मक एकदिनगति}}{८} = \frac{३२}{१ \times ८} = \frac{४}{५}$, इन दोनों के अन्तर

$\frac{४}{५} - \frac{१}{६०} = \frac{४७}{६०}$ से योजनाङ्गुल $(१ \times ८००० \times ४ \times २४)$ को भाग देने से $\frac{८००० \times ४ \times २४}{\frac{४७}{६०}}$
 $= \frac{८००० \times ४ \times २४ \times ६०}{४७} = \frac{३२००० \times २४ \times ६०}{४७} = \frac{१६२०००० \times २४}{४७}$
 $= \frac{४६०८००००}{४७} = ९८०४२५३\frac{३}{४७}$ दिन, यही उत्तर हुआ ॥ १०॥

व्यस्तत्रैराशिकसम्बन्धे कथ्यते ।

यत्रेच्छाया वृद्धिः फले ह्रासो वेच्छाया ह्रासे फलस्य वृद्धिर्भवेत्तत्र व्यस्तत्रै-
राशिकं बोध्यम् ॥

उदाहरणम् ।

षट्सौवर्णिका या भारस्तुलया संमितः पुरा ।

पंचसौवर्णिकायास्तु तथा किं स्याद्वद स्फुटम् ॥

वि. भा.—यदि षट् सौवर्णिकाया भारस्तुलया तुल्यस्तदा पंचसौवर्णिकाया
किं जातं तत्सम्बन्धि फलम् = $\frac{9 \times 4}{6}$ अत्रेच्छाया ह्रासः फलवृद्धिश्च दृश्यते

तेन प्रमाणफलयोर्घाति इच्छाभक्त स्तदा व्यस्तत्रैराशिके फलम् = $\frac{9 \times 6}{4} = \frac{9}{2}$

= $9 + \frac{1}{2}$ अत्र चतुर्वेदोक्तपरिभाषया $\frac{1}{2}$ = ४०० पलानि, तदा फलम् = १ भार +
४०० पलानि, चतुर्वेदोक्तपरिभाषा चेयम् 'षोडशभिर्यवैर्मर्षिकः, तैः षोडशभिः
सुवर्णं, तैश्चतुर्भिः पलं, पलसहस्रद्वयेन भारः, इति ॥ व्यस्तत्रैराशिकस्योदाहरणं
भास्करस्याप्यतीव सुन्दरमस्ति । आचार्येण व्यस्तत्रैराशिक संभावना कुत्र कुत्र
कदा भवतीति न प्रदर्शितं, भास्कराचार्येण 'इच्छावृद्धौ फले ह्रासो ह्रासे वृद्धिः
फलस्य तु' इत्यादिना तस्य स्पष्टीकरणं लीलावत्यां कृतम् ।

"इच्छाधिक्ये फलाल्पत्वं ज्ञायते यत्र निश्चितम् । इच्छाल्पत्वे फलाधिक्यं

$$\text{न्यासः } ५ \mid ६० \mid ९ \text{ तदा व्यस्तत्रैराशिकेन } \frac{५ \times ६०}{९} = \frac{३००}{९} = ३३ \frac{१}{३}$$

मानानि । लीलावत्यां 'सप्तादकेन मानेन राशौ न्यस्यस्यापिते । यदिमानज्ञत जातं तदा पंचादकेन किम्' भास्करोक्तोदाहरणानुरूपमेवेति ॥

प्राणिमूल्योदाहरणम् ।

कोकिलामरस कोमल कण्ठी नीलकण्ठनटिनीगटिनी चेत् ।

पोङ्गोन्मित समाशतपट्कं पंचविंशति समालभते किम् ॥

$$\text{न्यासः } \frac{६०० \times २५}{१६} \text{ अत्रेच्छाधिक्यं फलाल्पत्वमस्त्यनोऽत्र व्यस्तत्रैराशिक-}$$

$$\text{म् । व्यस्तत्रैराशिकेन } \frac{६०० \times १६}{२५} = २४ \times १६ = ३८४ \text{ निष्काः = मूल्यम् ।}$$

लीलावत्यां 'प्राप्नोति चेत्योऽश्वत्सरा स्त्री द्वात्रिंशतं विंशतिवत्सरा किम्' भास्करोक्तस्यास्यानुरूपमेव पूर्वयुक्तं प्राणिमूल्योदाहरणम् ॥

व्यस्तत्रैराशिकं कुत्र भवतीत्येनदर्थं लीलावत्यां 'जीवानां वयसो मौल्ये तौल्ये वर्णास्य हैमने । भागहारे च राशीनां व्यस्तं त्रैराशिकं भवेत्' भास्करोक्तमिति ॥११॥

अब व्यस्तत्रैराशिकके विषय में कहते हैं ।

हि. भा.— प्रमाण और इच्छा के मध्य में जो भिन्न जातिक फल है उस को प्रमाण से गुणा कर इच्छा से भाग देने से व्यस्त त्रैराशिक में फल होता है ।

उदाहरण ।

यदि छः सौवर्णिक का भार एक तोला होता है तो पांच सौवर्णिक का भार क्या होगा सो कहो ॥

$$\text{न्यास उदाहरण के अनुसार } \frac{१ \times ५}{६} \text{ यह प्रमाण और फल के घात को इच्छा से भाग}$$

देने से फल हुआ $\frac{1 \times 6}{4} = \frac{6}{4} = 1 + \frac{1}{2}$ यहां चतुर्वेदाचार्योक्त परिभाषा से $\frac{1}{2} = ४००$ पल, तब फल = १ भार + ४०० पल, चतुर्वेदोक्त परिभाषा यह है—१६ यवों के १ माषक १६ का माषक का १ सुवर्ण, ४ सुवर्ण का १ पल, तथा दो हजार २००० पलों का एक भार होता है। व्यस्तत्रैराशिक की सभावना कहा कहां पर होती है सो आचार्य ने नहीं कहा है। इसके विषय में लीलावती में 'इच्छा वृद्धौ फले ह्रासो ह्रासे वृद्धिः फलस्य तु' इत्यादि संस्कृत विज्ञान भाष्य में लिखित पद्यों से भास्कराचार्य ने स्पष्टीकरण किया है।

“इच्छाधिक्ये फलाल्पत्वं ज्ञायते यत्र निश्चितम्” इत्यादि संस्कृत विज्ञान भाष्य में लिखित पद्यों से गणितमञ्जरी में गणेश दैवज्ञ ने भास्कराचार्योक्त विषय ही लिखे हैं।

सुवर्ण तौल्य में उदाहरण।

जिस इष्ट मूल्य से बारह वर्णक सुवर्ण—सुवर्णतुल्य पाते हैं उसी मूल्य से पञ्चदश (पन्द्रह) वर्णक सुवर्ण कितना पावेंगे।

न्यास १२।१।१५ इससे लब्ध हुआ कर्ष = ०।माषा = १२। गुञ्जा ४ लीलावती में 'दशवर्ण सुवर्णं चेत्' इत्यादि भास्करोक्त उदाहरण के अनुरूप ही यह उदाहरण है।

धान्यराशि संख्या में उदाहरण।

किसी धान्यराशि को पांच द्रोण मान से मापन करने से यदि साठ मान होता है तो नौ द्रोण मान से मापन करने से क्या होगा ?

न्यास $\frac{६० \times ६}{५}$ यहां प्रमाण और मध्य फल के घात को इच्छा से भाग देने से $\frac{६०० \times ५}{६} = \frac{३०००}{६} = ३३\frac{३}{४}$ मान यही उत्तर हुआ। लीलावती में 'सप्तादकेन मानेन राशौ सस्यस्य मापिते' इत्यादि भास्करोक्त के अनुरूप ही यह उदाहरण है।

प्राणी मूल्य में उदाहरण।

यदि सोलह वर्ष की स्त्री छः सौ निष्क पाती है तो पच्चीस वर्ष की स्त्री क्या पावेगी ?

न्यास $\frac{६०० \times २५}{२५}$ यहां इच्छा की अधिकता है और फल की अल्पता है इसलिये यहां प्रमाण और फल के घात को इच्छा से भाग देने से $\frac{६०० \times १६}{२५} = २४ \times १६ = ३८४$ निष्क = मूल्य, लीलावती में 'प्राप्नोति चेत् षोडश वत्सरा स्त्री' इत्यादि भास्करोक्त

के अनुरूप ही यह उदाहरण है । व्यस्तत्रैराशिक कहां होता है इसके सम्बन्ध में नीलावती में 'जीवानां वयसो मौल्ये तौल्ये वरांस्य हैमने' इत्यादि से स्पष्टीकरण किया गया है ॥ ११ ॥

पञ्च राशिकादौ चतुर्वेदोक्तोदाहरणानि ।
शतस्य दशका वृद्धिस्त्रिभिर्मासैर्निरूपिता ।
पञ्चमास प्रयुक्तायाः पण्टेर्लाभो निगद्यताम् ॥

वि. भा.—यदि त्रिभिर्मासैः शतस्य दशका वृद्धिस्तदा पञ्च मासे पण्टे कियती वृद्धि रिति ॥

उदाहरणोक्त्या न्यासः ३ | ५ फलच्छिदामन्योन्यपक्षनयनमित्यादिना ३ ५
१०० | ६० १०० ६०
१० | १०

ततो बहुराशिजे वधे स्वल्पराशिवधभाजिते फलमित्यनेन $\frac{५ \times ६० \times १०}{३ \times १००} =$

$\frac{५ \times ६०}{३ \times १०} = \frac{६०}{३ \times २} = \frac{६०}{६} = १० = \text{फलम्} ।$

बहुराशिजे वधे स्वल्पराशिवधभाजिते फलमित्यस्योपपत्तिः ।

उपरि लिखितोदाहरणे यदि शतस्य त्रिभिर्मासैर्दशकालान्तर (वृद्धिः सौ दो वा) तदा षष्ठेः किमित्यनुपातेन त्रिमास सम्बन्धि षष्ठेः कालान्तरम् $= \frac{१० \times ६०}{१००}$ ततोऽनुपातो यदि त्रिषु मासेषु षष्ठेरित 'ानीनं त्रिमास सम्बन्धि कालान्तरं लभ्यते तदा पञ्चसु मासेषु किं जातं पञ्चमाससम्बन्धि तत्कालान्तरम् $= \frac{१० \times ६० \times ५}{१०० \times ३} = १०$ एतावता 'बहुराशिजे वधे स्वल्पराशि वध भाजिते फलं भास्करोक्तमिदं' बहुराशिवधोऽल्पवध हृत इत्याचार्योक्तश्चोपपद्यत इति ॥ अयमेवविधिः सप्तराशिकादावपि ज्ञेय इति ॥

पञ्चराशिकादियों के लिए चतुर्वेदाचार्योक्त उदाहरण

हि. भा.—तीन महीनों में सौ रुपये का सूद दस रुपये होता है तो पांच महीनों में साठ रुपये की कितनी वृद्धि (सूद) होगी ॥ उदाहरण के अनुरूप न्यास

३ | ५
१०० | ६०
१० |

'फलच्छिदामन्योन्य पक्षनयनं' इस से ३ | ५

१०० | ६० 'बहुराशिवधोऽल्पवध हृतः' इससे $\frac{५ \times ६० \times १०}{३ \times १००}$
१०

$$= \frac{५ \times ६०}{३ \times १०} = \frac{६०}{३ \times २} = \frac{६०}{६} = १० = \text{फल यही उत्तर है ॥}$$

‘बहुराशिवधोऽल्पवध हृत’ इसकी उपपत्ति ।

उपर्युक्त उदाहरण मे यदि सौ रुपये का तीन महीनों में कलान्तर (सूद) दस होता है तो साठ रुपये का क्या इस अनुपात से तीन महीना सम्बन्धी साठ रुपये का कलान्तर $= \frac{१० \times ६०}{१००}$ फिर अनुपात करते हैं यदि साठ रुपये का तीन मास सम्बन्धी यह कलान्तर पाते हैं तो पांच महीने में इस अनुपात से पांच महीना सम्बन्धी साठ रुपये का क्या कलान्तर हुआ $\frac{१० \times ६० \times ५}{१०० \times ३} = १०$ इससे आचार्योक्त ‘बहुराशिवधोऽल्पवध हृतः’ तथा भास्करोक्त ‘बहुराशिजेवधे स्वल्पराशिवध भाजित फलम्’ उपपन्न होता है ॥ सप्तराशिकादियों के लिये भी यही रीति समझनी चाहिये ॥

अत्र चतुर्वेदीक्तमन्यदुदाहरणम् ।

मासेन सन्निभागेन सार्धयास्त्रिशतेः फलम् ।

अध्यर्ध यदि वर्षेण सार्धषष्टेरिहोच्यताम् ॥

उदाहरणोक्त्या न्यासः $\frac{५}{३} \left| \begin{array}{l} १२ \\ १२१ \\ ३ \end{array} \right.$ फलच्छिदामन्योन्य पक्षनयनं
विधाय बहुराशिजे वधे स्वल्प
राशि वधभाजितेफलमिति

$$\frac{१२ \times १२१ \times ३ \times २ \times ३}{२ \times ४ \times ६१ \times २} = \frac{३ \times १२१ \times ३ \times ३}{१२२} = \frac{२७ \times १२१}{१२२} = \frac{३२६७}{१२२}$$

$$= २६ \frac{१०३}{१२२} \text{ इति ॥}$$

यहां अब चतुर्वेदीक्त दूसरा उदाहरण ।

यदि तृतीयांश सहित एक महीने में साढ़े तीस रुपये का फल (सूद) $\frac{३}{४}$ मिलता है तो एक वर्ष में साढ़े साठ रुपये का फल (कलान्तर-सूद) क्या होता है सो कहो ॥

उदाहरण के अनुसार न्यास $\frac{५}{३} \left| \begin{array}{l} १२ \\ १२१ \\ ३ \end{array} \right.$ ‘फलच्छिदामन्योन्य पक्षनयनं तथा बहुरा-
शिजेवधे ।

$$\text{स्वल्प राशिवध भाजिते फलम्} \text{ इससे } \frac{१२ \times १२१ \times ३ \times २ \times ३}{२ \times ४ \times ६२ \times २} = \frac{३ \times १२१ \times ३ \times ३}{१२२} =$$

$$\frac{२६ \times १२१}{१२२} = \frac{३२६७}{१२२} = २६ \frac{१०३}{१२२} \text{ यही उत्तर हुआ ॥}$$

अन्यान्यप्युदाहरणानि ।

इति परिकर्म विंशतिः समाप्ता

अब भाण्ड प्रति भाण्ड (एक चीज से दूसरी चीज के बदलने) के लिए कहने है ।

हि. भा.—भाण्ड प्रति भाण्ड (एक चीज से दूसरी चीज के बदलने) में मूल्य का विपर्यय (उल्टा पल्टा) होना है, और सब कुछ पूर्वोक्त 'दोनों पक्षों के हरे को परस्पर बदलना तथा फल को भी एक पक्ष में हमारे पक्ष में लेजाना' मद्दश ही समझना चाहिये । 'तथैव भाण्ड प्रति भाण्डकेऽपि' इत्यादि लीलावती में भास्करोक्त इसके अनुरूप ही है । 'प्राक् प्रथमस्थाने यौ मूल्य रागी तयोर्व्यत्यासः कार्यः इति चतुर्वेदाचार्यः' अर्थात् प्रथम स्थान में जो दोनों मूल्य राशि (दाम) हो उन दोनों को उलट पुलट करना चाहिए ॥

चतुर्वेदाचार्योक्त उदाहरण ।

यदि दस पैसे (पैसे) में एक सौ ग्राम मिलने है तथा आठ पैसे (पैसे) में एक सौ दाड़िम (अनार) मिलने है तो बीस ग्राम में कितने दाड़िम मिलेंगे ॥

उदाहरण के अनुसार न्याय करने से १० पैसे ८ पैसे
१०० = ग्राम १०० = दाड़िम
२० = ग्राम .

यहाँ मूल्यों (दामों) को बदलने तथा फल २० को द्वितीय पक्ष में लाने से $\frac{८}{१००} \times १००$ अब

'बहुराशिजे वधे स्वल्प राशि वध भाजिते फल' इससे $\frac{१० \times १०० \times २०}{८ \times १००} = \frac{१० \times २०}{८} = \frac{२००}{८}$
= २५ दाड़िम हुआ ॥ १३ ॥

उपपत्ति

यदि दस पैसे में सौ ग्राम पाने है तो आठ पैसे में क्या इस अनुपात से आठ पैसा सम्बन्धित ग्राम आये = $\frac{१०० \times ८}{१०}$ फिर अनुपात करते है यदि आठ पैसा सम्बन्धित ग्राम में आठ पैसा सम्बन्धित दाड़िम पाने हैं तो बीस ग्राम में क्या इससे बीस ग्राम सम्बन्धित दाड़िम प्रमाण आया $\frac{१०० \times २०}{१०० \times ८} = \frac{१०० \times १० \times २०}{१०० \times ८} = \frac{१० \times २०}{८} = \frac{२००}{८} = २५$ दाड़िम, यहाँ १०

मूल्यों में उलट पलट प्रत्यक्ष ही देखते हैं, और सब कुछ पूर्व सदृश ही है, इससे आचार्योक्त सूत्र उपपन्न हुआ ॥ १३ ॥

यहाँ परिकर्म विंशति समाप्त हुई

अथ मिश्रकव्यवहारः प्रारभ्यते ।

कालगुणितं प्रमाणं फलभक्तं व्येक गुणहतं कालः ।

स्वफलयुतरूपभक्तं मूलफलैक्यं भवति मूलम् ॥ १४ ॥

सु. भा.—प्रमाणं प्रमाणधनं कालगुणितं प्रमाणकालेन गुणितं ततः फलभक्तं प्रमाणफलेन भक्तं यल्लब्धं तद्व्येकगुणहतं यद्गुणं सकलान्तरं धनमपेक्षितं तेन व्येकेन हतं कालो भवति । तावत्कालपर्यन्तं दत्त धनं सकलान्तरं तद्गुणं भवति ।

 ८०० द्विशोध्य घटनप्रमाणम् = $३८\frac{२}{३}$ ॥१४॥

अब मिश्रक व्यवहार आरम्भ किया जाता है ।

हि. भा.—प्रमाण धन को प्रमाण काल से गुणाकर प्रमाण फल से भाग देने में जो लब्धि हो उसको एक हीन गुणक से गुणा देना अर्थात् यद् गुणित सकलान्तर धन अपेक्षित हो उस गुणक में एक घटा कर गुणने से काल होना है तावत्कालपर्यन्त दिया हुआ धन कलान्तर (मूद) महित तद्गुणित होना है ॥ १४ ॥

चतुर्वेदोक्त उदाहरण ।

यदि एक महीने में सौ रुपये का मूद छः द्रम्म होना है तो कितने काल में लगाया हुआ वह धन त्रिगुणित होना है सो कहो ।

यहां प्रमाण धन = प्रध, प्रमाण काल = प्रका । प्रयाग फल = प्रफ तब हिन्दी भाष्य में लिखित नियम के अनुसार क्रिया करने से $\frac{\text{प्रका. प्रध}}{\text{प्रफ}} = \frac{१ \times २००}{६} = \frac{१००}{३} =$ लब्धि,
 इस एक हीन गुणक से गुणने से $\frac{१००(३-१)}{३} = \frac{१०० \times २}{३} = \frac{२००}{३} = ६६\frac{२}{३}$ मास =
 काल । यहाँ गुणक = ३ ॥

दूसरा उदाहरण ।

यदि दो महीने में बीस रुपये का मूद पांच पण होता है तो कितने काल में १३ एतद्गुणित धन होगा सो कहो । पूर्ववत् क्रिया करने से $\frac{\text{प्रका. प्रध}}{\text{प्रफ}} = \frac{२० \times २०}{५} = ८$, इसको एक हीन गुणक से गुणा करने से $८ \times (\frac{३}{२} - १) = ८ \times \frac{१}{२} = ४$ मास । यहाँ गुणक है $\frac{३}{२} = १\frac{१}{२}$ ॥

उपपत्ति ।

कल्पना करने है अभीष्टमास = मा । तब अनुपात में इन महीनों में वृद्धि = $\frac{\text{प्रफ. मा}}{\text{प्रका}}$

इसमें प्रमाण धन जोड़ने से अभीष्ट गुणित मूलधन = गु. प्रध = $\frac{\text{प्रफ.मा}}{\text{प्रका}} + \text{प्रध} =$

$\frac{\text{प्रफ. मा} + \text{प्रध. प्रका}}{\text{प्रका}}$ छेदगम से मु. प्रध. प्रका = प्रफ.मा + प्रध. प्रका समशोधन करने से

गु. प्रध. प्रका - प्रध. प्रका = प्रध. प्रका (गु - १) = प्रफ. मा $\therefore \frac{\text{प्रध. प्रका (गु - १)}}{\text{प्रफ}} = \text{मा}$

इससे हिन्दी भाष्योक्त विषय उपपन्न हुआ ॥

सकलान्तर धन को रूप का तत्काल सम्बन्धी जो कलान्तर (सूद) हो उसको रूप में जोड़ कर जो हो उस से भाग देने से मूल धन होता है लीलावती में 'यद्वेष्ट कर्माख्य विधेस्तु मूल' इत्यादि भास्करोक्त इसके अनुरूप ही है ॥

उदाहरण ।

एक महीने में सौ रुपये को पांच रुपये सूद पर लगाया गया, दस महीनों में ३६ रुपये दिये गये तब मूलधन प्रमाण कहो ।

यहां कल्पना करते हैं इष्ट = १, दृश्य प्रमाण = ३६ है, तब दस महीनों में कल्पित इष्ट धन रूप = १ का क्या होगा ? $\left| \begin{array}{l} १० \\ १०० \\ ५ \end{array} \right|$ यहां 'फलच्छिदामन्योन्य पक्षनयन' इत्यादि से

$$\frac{१० \times १ \times ५}{१ \times १००} = \frac{१० \times ५}{१००} = \frac{५०}{१००} = \frac{१}{२} \text{ इसको रूपधन में जोड़ने से } १ + \frac{१}{२} = \frac{३}{२}, \text{ तब}$$

'इष्टा हतं दृश्य मनेन भक्त' इत्यादि से $\frac{\text{इष्ट} \times \text{दृश्य}}{\frac{३}{२}} = \frac{१ \times ३६}{\frac{३}{२}} = \frac{३६ \times २}{३} = \frac{७२}{३} = २४$ मूलधन यही उत्तर है ॥

दूसरा उदाहरण ।

किसी आदमी ने आठ सौ सुवर्ण ब्राह्मणार्थ पात्र निर्माण के लिए सुनार को दिये और कहा कि तुम गढ़ने का पारिश्रमिक पांच सैकड़ा सौवर्णिक लो । उस सुनार ने उस बात को स्वीकार कर लिया । गढ़े हुए सुवर्ण की संख्या कहो ॥

यहां कल्पना करते हैं इष्ट = १, दृश्य प्रमाण = ८०० = मिश्रधन, तब एक सौ पात्र निर्माण में उसका पारिश्रमिक पांच पाते हैं तो इष्ट एक में क्या इससे आया कल्पित इष्ट धन सम्बन्धी पारिश्रमिक $\frac{५ \times १}{१००} = \frac{१}{२०}$ इसको रूप (कल्पित इष्ट धन) में जोड़ने से $१ + \frac{१}{२०}$

$$= \frac{२१}{२०} \text{ अब 'इष्टाहतं दृष्टं' इत्यादि से } \frac{८०० \times १}{\frac{२१}{२०}} = \frac{८०० \times २०}{२१} = \frac{१६०००}{२१} = ७६१$$

+ $\frac{१६०००}{२१}$ घटित सुवर्णमान । इसको मिश्रधन में घटाने से घटन प्रमाण हुआ = ३८ $\frac{२३}{२५}$ ॥ १४ ॥

मिश्रान्तरे करणसूत्रम् ।

∴ $\frac{\text{मिध}}{\text{प्रक्षे} + \text{प्रक्षे} + \text{प्रक्षे} \dots} = \text{गु} = \frac{\text{मिध}}{\text{प्रक्षेपयोग}}$

$$\text{ततः } \frac{\text{मिध} \times \text{प्रक्षे}}{\text{प्रक्षेपयोग}} = \text{प्रथमधनम्} \mid \frac{\text{मिध} \times \text{प्रक्षे}}{\text{प्रक्षेपयोग}} = \text{द्वितीयधनम्}$$

एवमेव सर्वेषां धनानि, एतेनाऽऽचार्योक्त सूत्रमुपपद्यते, लीलावत्यां 'प्रक्षेपका मिश्रहता विभक्ताः प्रक्षेपयोगेन पृथक् फलानीति' भास्करोक्तमेतदनुरूपमेव । तथा सिद्धान्तशेखरे 'प्रक्षेपकान् मिश्रधनेन हन्यात् पृथक् फलाप्त्यर्थं विभजेत् स्वयुत्या' ऽनेन श्रीपतिनाप्याचार्योक्तानुरूपमेवोक्तम् । अत्र श्रीधराचार्योक्त मुदाहरणम्—

शतस्य लब्धवानेकः पञ्चशत्यास्तथापरः ।

फलमन्यः सहस्रस्य सहस्रे षट्शताधिके ॥

सर्वग्रामफले विद्वन् तत्रोत्पन्नं शतद्वयम् ।

ततः किं कस्य भागे स्यात् गणयित्वा निगद्यताम् ॥

न्यासः—प्रक्षेपकाः १००, ५००, १०००, मिश्रधनं लाभात्मकम्=२०० तदा सूत्रानुसारेण क्रियाकरणेन पृथक् पृथक् फलम्=३६, १३६, १२५ अथवा मिश्रधनम्=१८००, प्रक्षेपयोगः सर्वग्रामफल संज्ञकः=१६०० तदोक्तक्रियया पृथक् पृथक् फलम्=११२३, ५६२३, ११२५ । अत्रैव गणेश दैवज्ञोक्तमुदाहरणम् येषामाद्यधनानि वर्धयन्ति जां षष्टिस्त्यशीतिः शतं—विंशत्याढ्यशतं च मिश्रितधनैर्जातोद्यमस्तैर्यदा । चत्वारिंशदुपेतपञ्चशतकं लब्धं हि वाणिज्यतो वाणिज्येन विभज्य मित्रं सपदि प्रब्रूहि लाभान् पृथक् । उदाहरणोक्त्या न्यासः प्रक्षेपकाः=६०, ८०, १००, १२०, मिश्रधनम्=५४०, प्रक्षेपकाणां योगः=३६० तदा प्रक्षेपका मिश्र हताः (मिश्रधनगुणिताः) ३२४००, ४३२००, ५४०००, ६४८०० प्रक्षेपकाणां योगेना ३६० नेन भक्तास्तदा समागतानि धनानि=९०, ९२०, १५०, १८० एतानि स्वप्रक्षेपैरूनानि तदा जाता लाभाः=३०, ४०, ५०, ६० ।

अथवा मिश्रधनं=५४०, प्रक्षेपयोगेना ३६० नेन हीनं १८०=मिश्रधनम्, अनेन प्रक्षेपका गुणिताः १०८००, १४४००, १८०००, २१६०० प्रक्षेपक योगेना ३६० नेन भक्तास्तदा जाता लाभाः=३० । ४० । ५० । ६० ॥१६॥

पुनः मिश्रान्तर में कहते हैं ।

हि. भा.—प्रक्षेपक 'प्रक्षिप्यन्ते मिश्री क्रियन्ते ये ते प्रक्षेपकाः खण्डरूपाः' अर्थात् जो खण्डरूप पदार्थ मिलाये जाते हैं उनको प्रक्षेपक कहते हैं । मिश्रलाभ (मिश्रधन) में प्रक्षेपकों के योग द्वारा भाग देने से लो लब्धि होती है उससे प्रक्षेपकों को गुणने से पृथक् पृथक् लाभ होते हैं ॥१६॥

उदाहरण ।

एक मे नौ (नव) पर्यन्त मूल धनों से वरिष्क (वनियों) ने घोड़े खरीदे और ४६५ रुपये में बेच दिये तब प्रत्येक वनिये के पास कितना धन लाभ हुआ सो कहो ।

न्यास प्रक्षेपक=१ । २ । ३ । ४ । ५ । ६ । ७ । ८ । ९, मिश्रलाभ=४६५ = मिश्रधन । प्रक्षेपकों के योग=१+२+३+४+५+६+७+८+९=४५ इसमें मिश्र-धन को भाग देने से $\frac{४६५}{४५} = ११ =$ लब्धिः, इसमें प्रक्षेपकों को गुणने से ११ । २२ । ३३ । ४४ । ५५ । ६६ । ७७ । ८८ । ९९ यह क्रमशः नौ वनियों को लाभ हुआ ॥१६॥

उपपत्ति ।

प्रक्षेपक= प्रक्षे, प्रक्षे, प्रक्षे.....

प्रक्षे गु + प्रक्षे. गु + प्रक्षे. गु = मिध

= गु (प्रक्षे + प्रक्षे + प्रक्षे)..... = मिध

$\therefore \frac{\text{मिध}}{(\text{प्रक्षे} + \text{प्रक्षे} + \text{प्रक्षे})} = \text{गु} = \frac{\text{मिध}}{\text{प्रक्षेपयोग}}$

$\therefore \frac{\text{मिध. प्रक्षे}}{\text{प्रक्षेपयोग}} = \text{प्रथमधन} । \quad \frac{\text{मिध. प्रक्षे}}{\text{प्रक्षेपयोग}} = \text{द्वितीयधन, इसी तरह धन होत}$

है इससे आचार्योक्त सूत्र उपपन्न होता है । लीलावती में 'प्रक्षेपका मिश्रधना विभक्ता' इत्यादि भास्करोक्त भी उपपन्न होता है, भास्करोक्त 'प्रक्षेपका मिश्रधना' इत्यादि आचार्योक्त के अनु-रूप ही है । सिद्धान्त शेखर में 'प्रक्षेपकान् मिश्रधनेन हन्यात्' इत्यादि संस्कृत विज्ञान भाष्य में लिखित श्लोकोक्त विषय आचार्योक्तानुरूप ही है ।

यहाँ श्रीधराचार्योक्त उदाहरण है ।

एक व्यापारी ने सौ रुपये से व्यापार किया, दूसरे ने पाँच सौ से, तीसरे ने एक हजार रुपये से व्यापार किया । एक हजार छः सौ प्रक्षेपयोग में लाभ हुआ । २०० = लाभालम्बक मिश्रधन, तब प्रत्येक को कितना कितना लाभ हुआ सो कहो ।

न्यास प्रक्षेपक=१००, ५००, १०००, लाभालम्बक मिश्रधन=२०० तब पूर्वोक्त के अनुसार क्रिया करने से पृथक् पृथक् फल = $\frac{२५}{२}, \frac{१२५}{२}, १२५$, अथवा मिश्रधन=६०० प्रक्षेपकों के योग=१६००, तब उत्तवत् क्रिया करने से पृथक् पृथक् फल=११८ $\frac{१}{२}$, ५६२ $\frac{१}{२}$ ११२५ ॥

यहाँ गरुड दैवशोक्त उदाहरण भी है ।

जिन चार वनियों का मूलधन है ६०, ८०, १००, १२० उन सब वनियों ने धन

मिलकर व्यापार किया तो उससे लाभ हुआ ५४० तब प्रत्येक व्यापारी का लाभ घन पृथक् पृथक् कहे इति ॥

उदाहरण के अनुसार प्रक्षेपक = ६०, ८०, १००, १२० । मिश्रघन = ५४०, प्रक्षेप-योग = ३६० प्रक्षेपको का योग = ३६०, तब 'प्रक्षेपका मिश्रहता' इत्यादि से क्रिया करने से

$$\frac{\text{प्रक्षेप} \times \text{मिश्र}}{\text{प्रक्षेपयोग}} = \frac{६० \times ५४०}{३६०} = \frac{३२४००}{३६०} = ९०, \frac{८० \times ५४०}{३६०} = \frac{४३२००}{३६०} = १२०,$$

$$\frac{१०० \times ५४०}{३६०} = \frac{५४०००}{३६०} = १५०, \frac{१२० \times ५४०}{३६०} = \frac{६४८००}{३६०} = १८० \text{ इस तरह फल आये ।}$$

९०, १२०, १५०, १८० इनमें से क्रमशः प्रक्षेपकों को घटाने से पृथक् पृथक् लाभ प्राप्त हुआ ३०, ४०, ५०, ६० अथवा मिश्रघन = ५४०, प्रक्षेपकों के योग ३६० को मिश्रघन ५४० में से घटाने से १८० = मिश्रघन । तब पुनः प्रक्षेपकों को मिश्रघन से गुणने से १०८००, १४४००, १८०००, २१६०० प्राप्त हुए प्रक्षेपको के योग को ३६० से भाग देने से लाभ प्रमाण ३०, ४०, ५०, ६० हुए इति ॥ ११ ॥

ऊनाधिकोत्तरास्तद्युतो नया स्वफलमूनयुतमित्याचार्योक्तसूत्रार्धस्य कृते चतुर्वेदोक्त-मुदाहरणम् -

मठस्थानानि चत्वारि छात्राणां सम संख्यया ।

भोक्तुं संमन्त्रितान्यासन् दीक्षायां किल यज्वना ॥

पंचाध्वत्रिचतुर्थांशास्तेभ्यो भोक्तुं समागताः ।

एक द्वित्रिचतुर्युक्ता दृष्टाशीतिः सप्तप्तकाः ॥

स्वोत्तरैरथवा हीनाः सप्तषष्टिश्च तैश्शकाः ।

मठेभ्यश्छात्र संख्यां मे ब्रूहि ये चागता यतः ॥

प्रथमोदाहरणेऽधिकोत्तराः १ । २ । ३ । ४ एषां योगेन १० सप्ताशीति ८७ हीना ७७ = लब्धिर्ज्ञेया, प्रक्षेपकाः = $\frac{१}{२}, \frac{१}{३}, \frac{१}{४}$ ततः प्रक्षेपयोगहृतया लब्ध्येत्यादिना फलानि १२, ३०, २०, १५ एतानि स्वोत्तर १, २, ३, ४ युतानि १३, ३२, २३, १९ = समागता मठच्छात्र संख्याः द्वितीयोदाहरणे ऊनोत्तरयुतया लब्ध्या ६७ पूर्ववत् कृते समागताश्छात्र संख्याः ११ । २८ । १७ । ११

अब १६ वें श्लोक के उत्तरार्ध के लिये चतुर्वेदाचार्योक्त उदाहरण ।

छात्रों के चार मठस्थान (रहने के स्थान, छात्रावास) थे, किसी यज्ञ कर्त्ता ने इन मठों के सम संख्यक छात्रों को भोजन के लिये निमन्त्रण दिया, उनमें से पंचांश, आधे, तृतीयांश, चतुर्थांश छात्र भोजन के लिये आये, इनमें क्रमशः एक, दो, तीन, चार को जोड़ने से ८७ देखा गया, अथवा स्वोत्तरों १, २, ३, ४ से हीन सप्तसठ देखा गया तब मठ से भोजन के लिये आये हुए छात्रों की संख्या को कहे ॥

प्रथम उदाहरण में अधिकोत्तरों १, २, ३, ४ के योग १० को सतासी ८७ में हीन करने से ७७ लब्धि समझनी चाहिए, प्रक्षेपक = $\frac{1}{2}, \frac{1}{3}, \frac{1}{4}, \frac{1}{5}$ तब 'प्रक्षेपका मिश्रहता विभक्ता' इत्यादि से फल = १२, ३०, २०, १५ इनमें स्वोत्तर १, २, ३, ४ जोड़ने से १३, ३२, २३, १६ समागत मठ छात्र संख्या, द्वितीय उदाहरण में ऊनोत्तरयुत लब्धि ६७ + १० पूर्ववत् से क्रिया करने से भोजन के लिये समागत छात्र संख्या ११ । २८ । १७ । ११ ॥

अपि पदं गगनाग्निमितं तदा वद सखे गणितं गणितज्ञ मे ॥

न्यासः आदिः=१०, चयः=२०, गच्छः=३० तदाऽऽचार्योक्तमूत्रेण पूर्ववत्
गणितम्=सर्वधनम्=९००० ॥

अत्रोपपत्तिः ।

आदिः=आ । चयः=च, गच्छः=पदम्=प । सर्वधनम्=सध, तत्र उदा-
हरणोक्त्या आ + (आ + च) + (आ + २च) + (आ + ३च) + आ +
(प-१) च = सध अथवा

आ + च (प-१) + आ + च (प-२) + + आ = सध

द्वयोर्योगेन

२ सध = २ आ + च (प-१) + २ आ + च (प-१) पदपर्यन्तम्

= प { २आ + च (प-१) } पक्षौ द्वाभ्यां भक्तौ तदा

सध = $\frac{प \{ २आ + च (प-१) \}}{२}$ एतावताऽऽचार्योक्तं सम्यगुपपद्यते ।

अत्र आ + च (प-१) = अन्त्यधनम् । $\frac{२आ + च (प-१)}{२}$ = मध्यधनम् ।

मध्यध \times प = सर्वधनम् । सिद्धान्त शेषरे “व्येक गच्छचययोर्वधे मुखेनान्वितेऽन्त्य-
धनमादियुतं तत् । अर्धितं भवति मध्यमं धनं तत्पदधनमखिलं धनं भवेत्” श्री
पत्युक्तमिदमाचार्योक्तानुरूपमेव । लीलावत्यां ‘व्येक पदधनचयोमुखयुक् स्यादन्त्य-
धनं मुखयुक् दलितं तत् । मध्यधनम् पदसङ्गुणितं तत्सर्वधनं गणितं च तदु-
क्तम् ॥ भास्करोक्तमिदमाचार्योक्तानुरूपमेव विज्ञेयमिति ॥ १७ ॥

अब श्रेढी व्यवहार आरम्भ किया जाता है ।

हि. भा.— आदि-चय और गच्छके ज्ञान से अन्त्यधन-मध्यधन और सर्वधन के ज्ञान
के लिये विधि निम्नांकित है । पद में से एक घटाकर चय से गुणा करने से जो आता हो
उसमें आदि जोड़ने से अन्त्यधन होता है । अन्त्यधन में आदि जोड़ कर आधा करने से मध्यधन
होता है, मध्यधन को पद से गुणा करने से सर्वधन होता है ॥ १७ ॥

उदाहरण ।

यदि किसी आदमी ने प्रथम दिन में ब्राह्मण के लिये चार द्रम्म दिये और प्रत्येक दिन
पांच बढ़ाकर देने के लिये निश्चय किया तो बताओ उसने एक पक्ष (पन्द्रह दिनों) में
कितने द्रम्म दिये ?

न्यास आदि = ४ । चय = ५ । गच्छ = १५, तब पूर्व लिखित विधि से अन्त्यधन —
७४, मध्यधन = ३६ । सर्वधन = ५८५ इसी तरह सर्वत्र समझना चाहिए ॥ १७ ॥

उपपत्ति ।

आदि = आ । चय = च । गच्छ = पद = प । सर्वधन = सघ

तब उदाहरण के अनुसार आ + (आ + च) + (आ + २च) (आ + ३च) ... +
आ + (प - १) च = सघ अथवा आ + च (प - १) आ + च (प - २) + ... + आ = सघ

दोनों का योगकरने से

२ आ + च (प - १) + २ आ + च (प - १) पदपर्यन्त = २ सघ = प
{ २ आ + च (प - १) } = २ सघ \therefore सघ = $\frac{प \{ २ आ + च (प - १) \}}{२}$ यहाँ आ + च (प - १)
= अन्त्यधन । $\frac{२ आ + च (प - १)}{२}$ = मध्यधन । मध्यधन \times प = सर्वधन । इससे आचार्योक्त

उपपत्ति हुआ ॥ सिद्धान्त शेषर में ‘व्येकगच्छ चययोर्वधे’ इत्यादि संस्कृतोपपत्ति में लिखित
श्रीपत्युक्त पद्य तथा लीलावती में ‘व्येकपदधनचयो मुखयुक्’ इत्यादि संस्कृतोपपत्ति में
लिखित भास्करोक्त पद्य भी आचार्योक्तानुरूप ही है इति ॥ १७ ॥

अत्र चतुर्वेदाचार्यः । 'इदानीं द्विगुणत्रिगुणादिकोत्तरेण फलानयनं प्रदर्श-
नार्थं श्लोकत्रयमस्मदीयमेनावद्यथा'—

अत्र सर्वधनानयने मया यत्र यत्राऽऽचार्यं शब्द प्रयोगः कृतस्तत्र तत्र तेन चतु-
र्वेदाचार्यो बोध्य इति ॥

अब द्विगुणत्रिगुणादिक चय (गुणोत्तर श्रेढी) में फलानयन के लिये चतुर्वेदाचार्य कहते हैं ।

हि. भा.—विपम संख्यक गच्छ रहने से उसमें एक घटा कर गुणक स्थापन करना,
खम संख्यक गच्छ में उसको आधा करके वर्ग स्थापन करना, यह क्रिया गच्छ की समाप्ति तक
करनी चाहिये, अन्त्य से विपरीत (गुणक को दर्ग—वर्ग को गुणक मान कर) गुण वर्गज
फल (गुणक का पदघात) जो हो उस में से एक घटा देना चाहिये तब उसको एक रहित
गुणक से भाग देकर जो लब्धि हो उसको आदि से गुणा करने से गुणोत्तर श्रेढी में गणित
(सर्वधन) होता है इस तरह स्पष्ट विषय चतुर्वेदाचार्य के सूत्रों से नहीं होता है । लीलावती
में भास्करोक्त पद्यों से उपर्युक्त आशय स्पष्ट होता है ।

यहां चतुर्वेदाचार्योक्त दो उदाहरण हैं प्रथम उदाहरण यह है—जो किसी आदमी ने
पहले दिन में छः रुपये किसी को दिये—और दस दिनों तक त्रिगुण वृद्धि करके दिये तब
उसने कितना धन दिया सो कहो ॥

न्यास—आदि=६ । चय=३ । गच्छ=१० तब उपर्युक्त भाष्योक्त क्रिया से
गणित==१७४१४४=सर्वधन ॥

दसरा उदाहरण ।

जब एक आदमी ने किसी को प्रथम दिन साढ़ेतीन रुपये दिये, और तीन दिन तक $\frac{१}{२}$ गुणित वृद्धि करके दिये तब उसे कितना धन दिया गया सो कहो ॥

न्यास आदि= $३\frac{१}{२}=३\frac{१}{२}$ । चय= $\frac{१}{२}$ । गच्छ=३ तब पूर्ववत् क्रिया करने से सर्वधन
=२७३ हुआ ।

यहाँ भास्करोक्त उदाहरण यह है ।

किसी आदमी ने याचक के लिये प्रथम दिन में दो वराटक (कौड़ी) दी । तथा प्रत्येक दिन द्विगुण वृद्धि से देने के लिये प्रतिज्ञा की तो उसने एक महीने में कितना निष्क दिया सो कहो ।

न्यास आदि=२ । चय=२ । गच्छ=३०

भाष्योक्त स्थापन क्रम से $\frac{३०}{२}=१५$ वर्ग

$१५-१=१४$ गुणक

$\frac{१४}{२}=७$ वर्ग

$७-१=६$ गुणक

$\frac{६}{२}=३$ वर्ग

$३-१=२$ गुणक

$\frac{२}{२}=१$ वर्ग

$१-१=०$ गुणक

अब अन्त्य से विपरीत भाष्योक्त क्रिया से $\frac{\text{गुणवर्गजफल}-१}{\text{गु}-१} \times \text{आदि}$

= $\frac{१०७३७४१८२४-१}{२-१} \times २=२१४७४८३६४६$ वराटक=सर्वधन, अब इस से

निष्क=१०४८५७, द्रम्म=६, पण=६, काकिणी=२ वराटक=६=सर्वधन ॥

दूसरा उदाहरण ।

आदि=२ । चय=३ । गच्छ=७ तब पूर्ववत् स्थापनादि क्रिया करने से सर्वधन
=२१८६ हुआ ॥

उपपत्ति ।

उदाहरण के अनुसार आ+आ.गु+आ. गु^२+आ^३गु+.....सर्वधन=सब
दोनों पक्षों को गु गुणने से आ. गु+आ. गु^२+आ. गु^३+आ. गु^४.....=सब. गु

दोनों का अन्तर करने से

आ. गु^४—आ=आ (गु^४—१)=सघ. गु—सघ=सघ (गु—१)

दोनों पक्षों को गु—१ इससे भाग देने से $\frac{\text{आ (गु}^4-1\text{)}}{\text{गु}-1} = \text{सघ}$, यहां पद=४,

गुणवर्गफल=गु^४, इससे सिद्धान्त से खरोक्त 'स्थापयेत् समपदेर्धिते' इत्यादि संस्कृतोपपत्ति में लिखित पद्य उपपन्न होता है, लीलावती में 'विपमे गच्छेव्येके गुणकः स्थाप्यः' इत्यादि संस्कृतोपपत्ति में लिखित भास्करोक्त पद्य श्रीपत्युक्त सूत्र के अनुरूप ही है।

गणेश देवज्ञ भी 'गुणोनिरेके विपमाख्य गच्छे' इत्यादि संस्कृतोपपत्ति में लिखित पद्यों से श्रीपत्युक्त के अनुसार ही कहते हैं इति ॥

 $\frac{८ सध}{च} + \frac{(२ आ-च)^२}{च^२} = \frac{८ सध. च+(२ आ-च)^२}{च}$ पक्षयोर्मूल ग्रहणेन

२य+ $\frac{२ आ-च}{च} = \frac{\sqrt{८ सध. च+(२ आ-च)^२}}{च} = \frac{\sqrt{८ सध. च+शेष^२}}{च}$

= २ य + $\frac{\text{शेष}}{च} = \frac{\sqrt{८ सध. च+शेष^२}}{च}$ पक्षौ $\frac{\text{शेष}}{च}$ हीनौ तदा २य=

$\frac{\sqrt{८ सध. च+शेष^२}}{च} - \frac{\text{शेष}}{च} \therefore य = \frac{\sqrt{८ सध. च+शेष^२}-\text{शेष}}{२च}$ एतेनाऽचार्योक्तं

सम्यगुपपद्यते । सिद्धान्तशेखरे 'चयार्धभक्ते गणिता निदध्यात् गतोत्तरार्धं मुखमुत्तराप्तम् । कृत्तुकृतं तस्य पदं विहीनं प्राग्नाशिमूलेन च गच्छमाहुः' इति श्रीपत्युक्ते मूलमाचार्योक्तसूत्रमेव । लीलावत्यां भास्कराचार्येण श्रीपत्युक्तमेव किञ्चित्परिवर्त्य "श्रेढीफलादुत्तर लोचनघनाच्चयार्धवक्त्रान्तरवर्गयुक्तात् । मूलं मुखोनं चय-खण्डयुक्तं चयोद्धृतं गच्छमुदाहरन्ति" इति कथितम् । श्रीधराचार्येणापि "अष्टोत्तरगहनफलतो द्विगुणादिप्रचयविवरकृत्तियुक्तात् । मूलं द्विगुणं मुखोनं सचयं द्विचयोद्धृतं गच्छः" आचार्योक्तानुरूपमेवोक्तमिति ॥१८॥

अब गच्छानयन के लिये कहने है ।

हि. भा.—द्विगुणिन आदि में चय को घटाकर जो शेष रहें उसके वर्ग को सर्वधन चय और आठ के घात में जोड़कर मूल लेना, उस (मूल) में से शेष को घटाकर द्विगुणिन चय से भाग देने से गच्छ होता है ॥१८॥

यहां चतुर्वेदाचार्योक्त उदाहरण है ।

किसी चित (भाठा) में मुख में दस ईट है और पाच पाच की वृद्धि करके सौ ईट लगा तब उसमें पद (गच्छ) को कहो ।

उदाहरण के अनुसार न्यास आदि = १० । चय = ५ । सर्वधन = १०० = सघ

तब २ आ—च = शेष = २ × १० ५ = २० — ५ = १५ ∴ शेष² = २२५ ।

८ सघ × चय = ८ × १०० × ५ = ४००० ∴ ८ सघ. चय + शेष² = ४००० + २२५ = ४२२५, इसका मूल = ६५ $\frac{\text{मूल} - \text{शेष}}{२ \text{ चय}} = \frac{६५ - १५}{२ \times ५} = \frac{५०}{१०} = ५ = \text{गच्छ} ॥१८॥$

उपपत्ति ।

आदि = आ । चयः = च । सर्वधन = सघ, गच्छ प्रमाण = य, तब 'व्येक पदघनचयो मुखयुक्' इत्यादि से $\frac{\{(य - १) च + २आ\}}{२}$ य = सघ = $\frac{य². च - य. च + २आ. य}{२}$

दोनों पक्षों को दो से गुणा करने से य². च + २ आ. य - य. च = २ = सघ = य². च + य (२ आ—च) = २ सघ, दोनों पक्षों को चार से से गुणा करने से ४य². च + ४य (२ आ—च) = ८ सघ दोनों पक्षों को चय से भाग देने से ४य² + $\frac{४य (२ आ—च)}{च} = \frac{८सघ}{च}$ पुनः

दोनों पक्षों में $\left(\frac{२ आ—च}{च}\right)²$ जोड़ने से ४य² + ४य $\frac{(२ आ—च)}{च} + \frac{(२ आ—च)²}{च²}$
= $\frac{८ सघ}{च} + \frac{(२ आ—च)²}{च²} = \frac{८ सघ. च + (२ आ - च)²}{च²}$ दोनों पक्षों का मूल

$$\text{लेने से } २ य + \frac{२ आ - च}{च} = \frac{\sqrt{८ सध. च + (२ आ - च)^२}}{च} = \frac{\sqrt{८ सध. च + शेष^२}}{च}$$

$$२ य + \frac{शेष}{च} \text{ दोनों पक्षों में } \frac{शेष}{च} \text{ इसको घटाने से } \frac{\sqrt{८ सध. च + शेष^२}}{च} - \frac{शेष}{च} \\ = २ य. : \frac{\sqrt{८ सध. च + शेष^२}}{२ च} - \frac{शेष}{२ च} = \frac{\sqrt{८ सध. च + शेष^२} - शेष}{२ च} = य = गच्छ$$

इससे आचार्योक्त गच्छानयन उपपन्न हुआ । सिद्धान्त शेखर में “चयार्धभक्ते गरिणो निदध्या वृ” इत्यादि संस्कृतोपपत्ति में लिखित श्रीपत्युक्त सूत्र का मूल आचार्योक्त सूत्र ही है । श्री पत्युक्त ही को कुछ परिवर्तन कर लीलावती में भास्कराचार्य ‘श्रेढीफलादुत्तर लोचनघ्नात्’ इत्यादि संस्कृतोपपत्ति में लिखित श्लोक से’ गच्छानयन किया है इति ॥१८॥

इदानीं सङ्कलितैक्यानयनाय करण सूत्रम् ।

एकोत्तरमेकाद्यं यदीष्ट गच्छस्य भवति सङ्कलितम् ।

५।४।३।२।१

पद पर्यन्तमस्ति तेने (५+१) नि पद गुणिनं नदा सर्वेषां योगो भवेत्तथाकृते
५ (५+१) = २ सङ्कलितम् ∴ $\frac{५ (५+१)}{२} =$ सङ्कलितम्, एनेन भास्करोक्तं

सङ्कलितानयनं 'सैकपदघ्न पदार्थ' सम्यगुपपन्नम् ॥ अनेन विधिना यस्मात्कस्मा-
चिदप्यङ्कादेकवृद्धयङ्कानां सङ्कलितानयनं न भवत्यतस्तदर्थं विधिः प्रदर्श्यते ।
कल्प्यते योगमानम् = आ + (आ + १) + (आ + २) + (आ + ३) + (आ + ४) + ... प

= आ. प + $\frac{५ (५-१)}{२}$ एतेन सिद्धं यद्व्येक पदगुणितं पदार्थं पदगुणितेनाद्येन

युतं तदाऽभीष्टाङ्कतः पदपर्यन्तानामेकोत्तराणामङ्कानां योगो भवेदिति ॥

अब एक से लेकर पद पर्यन्त अङ्कों के योग (सङ्कलित) के लिये विधि कहते हैं ।

हि. भा.—पद पर्यन्त एकादि अङ्कों के योग को सङ्कलित कहते हैं । इसके लिये
आचार्य ने कोई विधि नहीं बताई है । गच्छ (पद) संख्या की अधिकता में योग करने की
क्रिया से सङ्कलितानयन के लिये बहुत श्रम होता है, सङ्कलितानयन के लिये लीलावती में
'सैक पदघ्नपदार्थमथैकाद्यङ्कयुतिः' यह भास्करोक्तरीति बहुत अच्छी है । आचार्य ने उदाहरण
भी नहीं दिये हैं इसलिये यहां भास्करोक्त उदाहरण ही हम देते हैं ।

उदाहरण

एक से लेकर नौ पर्यन्त अङ्कों के पृथक्-पृथक् सङ्कलित (योगफल) कहो ।

न्यास १।२।३।४।५।६।७।८।९ । भास्करोक्त सूत्र के अनुसार इन
सर्वों के पृथक्-पृथक् सङ्कलित १।३।१०।१५।२१।२८।३६।४५ यही उत्तर हुआ ।

उपपत्ति ।

यदि ५ = ५ तक एकादि अङ्कों को पद पर्यन्त क्रम से और उत्क्रम से स्थापन करने
से १।२।३।४।५ इन दोनों का योग करने से सब जगह ६।६।६।६।६
५।४।३।२।१

= ५ + १, परन्तु ५ + १, यह पद पर्यन्त है इसलिये ५ + १ इसको पद से गुणा देने में सर्वों
का योग हुआ ५ (५ + १) = २ सङ्कलित ∴ $\frac{५ (५+१)}{२} =$ सङ्कलित, इससे भास्करोक्त

सङ्कलितानयन उपपन्न होता है । सिद्धान्त शेखर में श्रीपति ने भी आचार्य ही की तरह इसके
लिये कोई विधि नहीं लिखी है ॥

यदि किसी अङ्क से पदपर्यन्त एकोत्तर अङ्कों का योग करना होगा तो पूर्वोक्त सङ्कलितानयन की रीति से नहीं होगा, इसलिये उसके लिये नियम लिखते हैं।

कल्पना करते हैं योगमान

$$= \text{आ} + (\text{आ} + 1) + (\text{आ} + 2) + (\text{आ} + 3) + (\text{आ} + 4) + \dots \text{प}$$

$$= \text{आ. } \text{प} + \frac{\text{प}(\text{प}-1)}{2} \quad \text{प} = \text{पद}$$

इससे सिद्ध हुआ कि एकोन पद से पदार्ध को गुणा कर जो हो उसमें पद गुणित आदि को जोड़ने से दृष्टाङ्क से लेकर पद पर्यन्त एकोत्तर अङ्कों के योगफल होता है ॥ १८ ॥

अथ सङ्कलितैक्यानयनार्थमुपपत्तिः ।

अथ कल्पते प. $^3\text{गु} + \text{प.}^2\text{गु}_1 + \text{प.गु}_2 = \text{सङ्कलितैक्यम्} = \text{संऐ}$

यदि प = १ तदा $\text{गु} + \text{गु}_1 + \text{गु}_2 = १ \therefore \text{गु} = १ - (\text{गु}_1 + \text{गु}_2) \dots \dots \dots (१)$

यदि प = २ तदा सङ्कलितैक्य स्वरूपे उत्थापनेन ८ $\text{गु} + ४ \text{गु}_1 + २ \text{गु}_2 = ४$

$$\therefore \text{गु} = \frac{४ - ४ \text{गु}_1 - २ \text{गु}_2}{८} \dots \dots \dots (२)$$

यदि प = ३ तदोत्थापनेन २७ $\text{गु} + ९ \text{गु}_1 + ३ \text{गु}_2 = १०$ समशोधनेन २७ $\text{गु} =$

$$१० - ९ \text{गु}_1 - ३ \text{गु}_2 \therefore \text{गु} = \frac{१० - ९ \text{गु}_1 - ३ \text{गु}_2}{२७} \dots \dots \dots (३)$$

ततः (१) (२) अनयोः समीकरणम् $१ - \text{गु}_1 - \text{गु}_2 = \frac{४ - ४ \text{गु}_1 - २ \text{गु}_2}{८}$

छेदगमेन ८-८ $\text{गु}_1 - ८ \text{गु}_2 = ४ - ४ \text{गु}_1 - २ \text{गु}_2$ समशोधनेन ४-६ $\text{गु}_1 = ४ \text{गु}_2$

$$\therefore \frac{४ - ६ \text{गु}_2}{४} = \text{गु}_1 \dots \dots \dots (क)$$

तथा (१) (३) एतयोः समीकरणम् $१ - \text{गु}_1 - \text{गु}_2 = \frac{१० - ९ \text{गु}_1 - ३ \text{गु}_2}{२७}$

छेदगमेन २७-२७ $\text{गु}_1 - २७ \text{गु}_2 = १० - ९ \text{गु}_1 - ३ \text{गु}_2$ समशोधनेन १७-२४ $\text{गु}_1 =$
१८ गु_2

$$\therefore \frac{१७ - २४ \text{गु}_2}{१८} = \text{गु}_1 \dots \dots (ख) \text{ ततोऽनयोः (क) (ख) समीकरणम्}$$

$$\frac{४ - ६ \text{गु}_2}{४} = \frac{२ - ३ \text{गु}_2}{२} = \frac{१७ - २४ \text{गु}_2}{१८} \text{ छेदगमेन } ३६ - ५४ \text{गु}_2 = ३४ - ४८ \text{गु}_2$$

समशोधनेन २ = ६ $\text{गु}_2 \therefore \frac{३}{६} = \frac{३}{६} = \text{गु}_2$ तत उत्थापनेन $\text{गु}_1 = \frac{१}{३}$, $\text{गु}_2 = \frac{१}{३}$ अत एभिः (गु , गु_1 , गु_2) सङ्कलितैक्यस्वरूपे उत्थापनेन $\frac{१}{३}$. $\text{प}^१ + \text{प}^१$. $\frac{१}{३} + \text{प. } \frac{१}{३} = \text{संऐ}$

$$\begin{aligned}
 &= \frac{p^3 + 3p^2 + 2p}{6} = \frac{p}{6} (p^2 + 3p + 2) = \frac{p}{6} \{ (p+2)(p+1) \} \\
 &= \frac{p}{3 \times 2} \{ (p+2)(p+1) \} \\
 &= \frac{(p+2)}{3} \frac{(p+1)}{2} p = \frac{(p+2)}{3} \times \text{सङ्कलित} = \text{सङ्कलितैक्यम्}
 \end{aligned}$$

एतेना 'तद्विद्युतगच्छगुणिन त्रिहृतमित्यादि' आचार्योक्तमिदमुपपन्नम् । लीलावत्यां 'मा द्विद्युतेन पदेन विनिघ्नी स्यात् त्रिहृता खलु सङ्कलितैक्यम्' भास्करोक्तमिदमाचार्योक्तानुरूपमेव । सिद्धान्त शेखरे 'द्विद्युक्तगच्छाभिहनं त्रिभक्तं मनस्विनः सङ्कलितैक्यमाहुः श्रीपत्युक्तमिदमप्याचार्योक्तानुरूपमेवेति ॥ १९ ॥

अब सङ्कलितैक्यानयन के लिये कहते हैं।

हि. भा.—एक से आरम्भ कर दृष्ट गच्छका एकोत्तर सङ्कलित जो होता है उसको दो युक्त गच्छ से गुणा कर तीन से भाग देने से सङ्कलितैक्य प्रमाण होता है। गच्छ (पद) पर्यन्त एकादि अङ्कों के योग का नाम सङ्कलित है उसके लिए आचार्य ने विधि नहीं लिखी है, सो ठीक नहीं है, क्योंकि गच्छ प्रमाण अधिक रहने से योग करने की क्रिया द्वारा सङ्कलित ज्ञान के लिये बहुत ही श्रम करना होगा, सङ्कलितानयन के लिए लीलावती में 'मैक पदघ्न पदार्थ मयैकाद्यद्युति.' इत्यादि भास्करोक्त रीति बहुत ही सुन्दर है, आचार्य ने उदाहरण भी नहीं दिये हैं इसलिये यहां भास्करोक्त उदाहरण देते हैं ।

एकादि से नौ पर्यन्त अङ्कों के पृथक् पृथक् सङ्कलित कहो, और उन्हीं अङ्कों के सङ्कलितैक्यो को कहो ॥

न्यास १। २। ३। ४। ५। ६। ७। ८। ९। भास्करोक्त सूत्र के अनुसार इनके पृथक् पृथक् सङ्कलित=१। ३। ६। १०। १५। २१। २८। ३६। ४५, तथा आचार्योक्त सूत्र के अनुसार उन्हीं अङ्कों के सङ्कलितैक्य=१। ४। १०। २०। ३५। ५६। ८४। १२०। १६५ ॥ १९ ॥

उपपत्ति

यदि पद=५ तब एकादि अङ्कों को पदपर्यन्त क्रम से और उत्क्रमसे स्थापन करने से १। २। ३। ४। ५ इनका योग करने से प्रत्येक स्थान में ६, ६, ६, ६, ६=५+१, यह ५। ४। ३। २। १

पद पर्यन्त है इसलिए ५+१ इसको पद से गुणा करने से स्वरों के योग होता है बैसा करने से $p(p+1) = 2$ सङ्कलित $\therefore \frac{p(p+1)}{2} =$ सङ्कलित, इससे भास्करोक्त सङ्कलितानयन उपपन्न होता है ॥

अब सङ्कलितैकधानयन के लिये उपपत्ति ।

यहाँ कल्पना करते हैं $p^3 गु + p^2 गु + p. गु$ सङ्कलितैक्य = संऐ । $p = प$

यदि $p = 1$ तब उत्थापन से $गु + गु + गु = 1$ समशोधन करने से $1 - (गु + गु)$
 $= 1 - गु - गु \dots (1)$

यदि $p = 2$ तब सङ्कलितैक्य स्वरूप में उत्थापन से $८गु + ४गु + २गु = ४$,
 $\therefore \frac{४ - ४गु - २गु}{८} = गु \dots (2)$

यदि $p = 3$ तब उत्थापन से $२७गु + ९गु + ३गु = १०$ समशोधन करने से
 $२७गु = १० - ९गु - ३गु \therefore \frac{१० - ९गु - ३गु}{२७} = गु \dots (3)$

अब (1) (2) इन दोनों के समीकरण करने से $1 - गु - गु = \frac{४ - ४गु - २गु}{८}$

छेदगम से $८ - ८गु - ८गु = ४ - ४गु - २गु$ समशोधन से $४ - ६गु = ४गु \therefore$
 $\frac{४ - ६गु}{४} = गु \dots (क)$ । तथा (1) (3) इन दोनों का समीकरण करने से $1 - गु -$

$गु = \frac{१० - ९गु - ३गु}{२७}$ छेदगम से $२७ - २७गु - २७गु = १० - ९गु - ३गु$ समशो-

धन करने से $१७ - २४गु = १८गु \therefore \frac{१७ - २४गु}{१८} = गु \dots (ख)$ अब (क) (ख) इन

दोनों का समीकरण करने से $\frac{४ - ६गु}{४} = \frac{२ - ३गु}{२} = \frac{१७ - २४गु}{१८}$ छेदगम से $३६ - ५४गु$

$= ३४ - ४८गु$ समशोधन करने से $२ = ६गु \therefore \frac{३}{६} = \frac{३}{६} = गु$ इससे उत्थापन देने से

$गु = \frac{३}{६}$, $गु = \frac{३}{६}$ अब $गु, गु, गु$ इन सबों से सङ्कलितैक्य के स्वरूप में उत्थापन से $\frac{३}{६} p^3$
 $+ p^2. \frac{३}{६} + p. \frac{३}{६} = सङ्कलितैक्य = संऐ = \frac{p^3 + ३p^2 + २p}{६} = \frac{p}{६} (p^3 + ३p^2 + २) =$

$\frac{p}{६} \{(p+२)(p+१)\} = \frac{p}{३ \times २} \{(p+२)(p+१)\} = \frac{p(p+१)}{२} \frac{(p+२)}{३}$

$= सङ्कलित \times \frac{(p+२)}{३} = सङ्कलितैक्य = संऐ$

इससे 'तद् द्वियुगच्छगुणितं' इत्यादि आचार्योंक्त सूत्र उपपन्न हुआ । लीलावती में 'सा द्वियुतेन पदेन विनिष्णी' इत्यादि भास्करोक्त तथा सिद्धान्त शेखर में 'द्वियुक्तगच्छाभिहतं त्रिभक्तं' यह श्रीपति कथित सङ्कलितैकधानयन आचार्योंक्त के अनुरूप ही है इति ॥ १६ ॥

इदानीं वर्गसङ्कलितघनसङ्कलितयोः करणसूत्रम् ।

द्विगुणपदसंकगुणितं तत् त्रिहतं भवति वर्गसङ्कलितम् ।

इति श्रेढीव्यवहारः ।

वि. भा.—तत् सङ्कलितं द्विगुणपदमैकगुणितं (रूपयुतं द्विगुणितं पदगुणितं)
त्रिभक्तं तदा वर्गसङ्कलितं (वर्गयोगो) भवति, तत्कृतिः (सङ्कलितस्य वर्गः) घन-
सङ्कलितं (घनयोगः) भवति, एषां समगोलकैश्चितयो भवन्तीति । आचार्यगोदा-
हरणं न दत्तमतो भास्करोक्तमुदाहरणं दीयते ।

'तेषामेव च वर्गैक्यं घनैक्यं च वदद्गुणम् ।

कृतिसङ्कलना मार्गे कुशला यदि ते मतिः ॥

तेषामेवैकादीनां तवान्तानां वर्गैक्यं घनैक्यं च किं भवतीति वद ।

न्यासः १ । २ । ३ । ४ । ५ । ६ । ७ । ८ । ९ सूत्रोत्तर्येषां वर्गैक्यम्
१ । ५ । १४ । ३० । ५५ । ९१ । १४० । २०४ । २८५ घनैक्यं च १ । ९ । ३६ ।
१०० । २२५ । ४४९ । ७८४ । १२९६ । २०२५ इति ॥२०॥

अत्रोपपत्तिः ।

कल्प्यते $p \cdot गु + p^2 \cdot गु + p \cdot गु =$ वर्गयोगः = वयो, यदि $p = १$ तदा $गु + गु +$
 $गु = १ \therefore गु = १ - (गु + गु) \dots (१)$

यदि $p = २$ तदोत्थापनेन $८गु + ४गु + २प = ५$, समशोधनेन $८गु = ५ -$
 $४गु - २गु \therefore गु = \frac{५ - ४गु - २गु}{८} \dots (२)$

यदि $p = ३$ तदोत्थापनेन $२७गु + ९गु + ३गु = १४$ समशोधनेन $२७गु = १४ -$
 $९गु - ३गु \therefore \frac{१४ - ९गु - ३गु}{२७} = गु \dots (३)$

(१) (२) अनयोः समीकरणम् $१ - (गु_1 + गु_2) = १ - गु_1 - गु_2$
 $= \frac{५ - ४गु_1 - २गु_2}{८}$ छेदगमेन $८ - ८गु_1 - ८गु_2 = ५ - ४गु_1 - २गु_2$ समशोधनेन

$$४गु_1 = ३ - ६गु_2 \therefore गु_1 = \frac{३ - ६गु_2}{४} \dots\dots\dots (क)$$

तथा (१) (३) अनयोः समीकरणम् $= १ - गु_1 - गु_2 = \frac{१४ - ९गु_1 - ३गु_2}{२७}$

छेदगमेन $२७ - २७गु_1 - २७गु_2 = १४ - ९गु_1 - ३गु_2$ समशोधनेन $१८गु_1 = १३ - २४गु_2 \therefore \frac{१३ - २४गु_2}{१८} = गु_1 \dots\dots\dots (ख)$

पुनरनयोः (क) (ख) समीकरणम् $= \frac{३ - ६गु_2}{४} = \frac{१३ - २४गु_2}{१८}$ छेदगमेन

$५४ - १०८गु_2 = ५२ - ९६गु_2$ समशोधनेन $२ = १२गु_2 \therefore \frac{२}{१२} = \frac{१}{६} = गु_2$ तत्
 उत्थापनेन $गु_1 = \frac{१}{३}$, $गु_2 = \frac{१}{६}$ अभिर्मानैर्वर्गयोगस्वरूपे उत्थापनेन $प^१. \frac{१}{३} + प^१. \frac{१}{६} +$
 $प. \frac{१}{६} =$ वर्गयोग $= \frac{१}{६} (प^१ \times २ + ३प^१ + प) = \frac{प}{६} (प^१ \times २ + ३प + १) =$

$$\frac{प}{६} \{ (प+१)(२प+१) \} = \frac{प}{२ \times ३} \{ (प+१)(२प+१) \} = \frac{प(प+१)(२प+१)}{२ \times ३}$$

$$= \text{सङ्कलित} \frac{(२प+१)}{३} = \text{वर्गयोगः}$$

इससे अचार्योक्त वर्गयोगानयन उपपन्न हुआ । लीलावत्यां 'द्विघ्नपदं कुर्युतं त्रिविभक्तं संकलितेन हतं कृतिभोगः' भास्करोक्तमिदं सिद्धान्तशेखरे 'संकलितं द्विगुणेन पदेन क्षमासहितेन हतं त्रिविभक्तम्' संकलितं कृतिजमिति श्री पट्युक्तं चाऽऽचार्योक्तानुरूपमेवेति ॥२०॥

अब वर्गयोग और घनयोग के लिये कहते हैं ।

हि. भा.— द्विगुणित पद से एक जोड़ देने से जो हो उसको सङ्कलित से गुणा कर तीन से भाग देने से वर्गयोग होता है तथा सङ्कलित के वर्ग के बराबर एकादि अङ्को का घनैक्य होता है ।

आचार्य ने उदाहरण नहीं दिया है इसलिये भास्कराचार्योक्त उदाहरण ही देते हैं ।

एक सौ नौ पर्यन्त अङ्कों का वर्गयोग और घनयोग क्या होता है सो कहो ।

न्यास १ । २ । ३ । ४ । ५ । ६ । ७ । ८ । ९ सूत्रानुसार क्रिया करने से इन सर्वो का वर्गयोग = १ । ५ । १४ । ३० । ५५ । ९१ । १४० । २०४ । २८५ । तथा सङ्कलितवर्ग = घनयोग = १ । ९ । ३६ । १०० । २२५ । ४४१ । ७८४ । १२९६ । २०२५ इति ॥२०॥

उपपत्ति ।

व्यपना करने है p . गु + p^2 . गु + p . गु = वर्गयोग = बयो.

यदि $p = 1$ तब गु + गु + गु = १. ∴ गु = १ - (गु + गु) = १ - गु, - गु, (१)

यदि $p = 2$ तब गु + ४ गु + २ गु = ५ समशोधन से ८ गु = ४ - ४ गु, - २ गु. ∴ गु = ४ गु - ४ गु - २ गु, ... (२)

यदि $p = 3$ तब उत्थापन से २७ गु + ६ गु + ३ गु = १४ समशोधन से २७ गु = १४ - ६ गु, - ३ गु. ∴ गु = $\frac{१४ - ६ गु, - ३ गु}{२७}$ (३)

(१) (२) इन दोनों का समीकरण करने से $१ - गु, गु = \frac{५ - ४ गु, - २ गु}{८}$ छेदगम से ८ - ८ गु, - ८ गु = ५ - ४ गु, - २ गु, समशोधन से ४ गु = ३ - ६ गु, ∴ गु = $\frac{३ - ६ गु,}{४}$ (क)

तथा (१) (३) इन दोनों का समीकरण करने से $१ - गु, - गु, = \frac{१४ - ६ गु, - ३ गु,}{२७}$ छेदगम से २७ - २७ गु, - २७ गु, = १४ - ६ गु, - ३ गु, समशोधन करने से १८ गु, = १३ - २४ गु, ∴ गु, = $\frac{१३ - २४ गु,}{१८}$ (ख)

अब (क) (ख) इन दोनों का समीकरण करने से $\frac{३ - ६ गु,}{४} = \frac{१३ - २४ गु,}{१८}$ छेदगम

से ५४ - १०८ गु, = ५२ - ६६ गु, समशोधन करने से २ = १२ गु, ∴ $\frac{२}{१२} = \frac{१}{६} = गु,$ हमसे उत्थापन करने से गु = $\frac{१}{३}$, गु, = $\frac{१}{६}$ अब इन सबो को वर्गयोग स्वरूप में उत्थापन देने से $p^2 \times \frac{१}{३} + p^2 \cdot \frac{१}{६} + p \cdot \frac{१}{६} = \text{वर्गयोग} = \frac{१}{६} (p^2 \times २ + ३p^2 + p) = \frac{p}{६} (p^2 \times २ + ३p + १)$

$= \frac{p}{६} \{ (p+१)(२p+१) \} = \frac{p}{२ \times ३} \{ (p+१)(२p+१) \} = \frac{p(p+१)}{२}$.

$\frac{(२p+१)}{३} = \text{सङ्कलित} \times \frac{(२p+१)}{३} = \text{वर्गयोग},$

इससे आचार्योक्त वर्ग योगानयन उपपन्न हुआ ।

लीलावती में 'द्विघनपदं कुयुत त्रिविभक्त' इत्यादि भास्करोक्त तथा मिदान्त शेखर में 'सङ्कलितं द्विगुणेन पदेन इत्यादि' श्रीपतिकथित वर्गयोगानयन आचार्योक्त के अनुरूप ही है इति ॥ २०। ।

घन संकलितं तत्कृति रेषां समगोल कैश्चित्तय इत्यस्योपपत्तिः

वि. भा.—तत्कृतिः (संकलित वर्गः) घन संकलितं (एकादीनामकानां) घन योगो भवतीति ॥ २० ॥

अत्रोपपत्ति ।

अत्र कल्प्यते पदम् = प । एकादीनामकानां घन योगार्थं । $(1)^3 + (2)^3 + (3)^3 + (4)^3 + \dots + प$ । विचारः क्रियते ।

द्वियुक् पद सिद्धान्तेन $प^3 - (प-1)^3 = ४प^2 - ६प + ४$ १ एवं
 $(प-1)^3 - (प-२)^3 = ४(प-1)^2 - ६(प-1) + ४$ १ एव-
 मेव $(प-२)^3 - (प-३)^3 = ४(प-२)^2 - ६(प-२) + ४$ १ एव-
 एवग्रेऽपि ।

सर्वेषां योगेन $प^3 = ४ \{प^2 + (प-1)^2 + (प-२)^2 + (प-३)^2 + \dots + 1^2\} - ६ \{प^2 + (प-1)^2 + (प-२)^2 + (प-३)^2 + \dots + 1^2\} + ४ \{प + (प-1) + (प-२) + \dots + 1\} - प = ४ घनयोग - ६ वर्गयोग + ४ संकलित - प$

ततः ४ घनयोग = $प^3 + प + प (प+1) (२प+१) - २प (प+१)$

= $प^3 + प + २प^2 + प^2 - प = प^3 + २प^2 + प^2$ पक्षौ चतुर्भिर्भक्तौ तदा

घनयोग = $\frac{प^3 + २प^2 + प^2}{४} = \left\{ \frac{प (प+१)}{२} \right\}^2$ एतेनोपपन्नमाचार्योक्तम् ।

लीलावत्यां 'संकलितस्य कृतेः सममेकाद्यङ्क घनैक्यमुदीरितमाद्यैरिति, भास्करोक्तमाचार्योक्तानुरूपमेव सिद्धान्त शेषरे 'संकलितं घनजं स्यात् संकलितस्य तथा कृतिरेव' ज्ञेन श्रीपतिनाप्याचार्योक्तमेव कथ्यत इति ॥ २० ॥

तत् संकलितं द्विपदसैकगुणितं द्विगुणं पदं कुयुतं यत् तेन गुणितं त्रिहृतं तदा वर्गसंकलितं वर्गयोगो भवेत् । तस्य संकलितस्य कृतिस्तत्कृतिर्धनसंकलितमेकादि घनयोगो भवेत् । एषां पूर्वप्रतिपादितप्रकाराणां समगोलकैर्लोष्टकादिभिश्चित्तयः प्रदर्श्याः । 'गोपालाङ्गनादि प्रत्ययार्थम्' इति चतुर्वेदाचार्यः । तद्यथा आ = १, उ = १, गच्छः = ३ अत्र त्रिपदेयं चितिः $\begin{array}{c} १ \\ १२ \\ १२३ \end{array}$ एवं त्रिके गच्छे वर्गाचितिः $\begin{array}{c} १ \\ ४ \\ ८ \end{array}$

घनचितिः $\begin{array}{c} १ \\ ५ \\ २० \end{array}$ समकन्दुकनिवेशेन समत्रिबाहूनि कार्याणि तदुपरि एकोनबाहूनि कन्दुक परिमाणानि निवेश्यानि । एवमुपरि एककन्दुकनिवेशो भवे-
 २० देव सर्वकन्दुकानां योगः संकलितसंकलितं भवेदेवमन्याश्चित्तयश्च विचिन्त्याः । चतुर्वेदाचार्येण सर्वत्र बोदाहरणादिकमद्भुतमेव कथं प्रतिपादिन मिति न जाने विज्ञा इति पश्यन्त्विति ॥ २० ॥

इति श्री ढीव्यवहारः समाप्तः ।

अब एकादि अङ्कों के घनयोग के लिये कहते हैं ।

हि. भा.—एकादि अङ्कों का जो सङ्कलित है उसका वर्ग एकादि अङ्कों का घन योग होता है ॥ २० ॥

उपपत्ति ।

कल्पना करते हैं पद = प । एकादि अङ्कों का घन योग $(१^३ + २^३ + ३^३ + ४^३ + \dots + प^३)$ के लिये विचार करते हैं ।

$$\begin{aligned} \text{द्वियुक् पद सिद्धान्त से } प^३ - (प-१)^३ &= ४ प^२ - ६ प + ४ \quad प-१ \text{ एवं} \\ (प-१)^३ - (प-२)^३ &= ४(प-१)^२ - ६(प-१) + ४ \quad (प-१) \text{ इसीतरह} \\ (प-२)^३ - (प-३)^३ &= ४(प-२)^२ - ६(प-२) + ४ \quad (प-२) \text{—१} \end{aligned}$$

इसीतरह आगे भी

$$\begin{aligned} \text{सबों का योग करने से } प^३ &= ४ \{ प^२ + (प-१)^२ + (प-२)^२ + \dots + १^२ \} - ६ \\ &\{ प^२ + (प-१)^२ + (प-२)^२ + \dots + १^२ \} + ४ \{ प + (प-१) + (प-२) + \dots + १ \} \\ \text{—प} &= ४ \text{ घनयोग—६ वर्गयोग + ४सङ्कलित—प,} \end{aligned}$$

अतः ४ घनयोग = $प^३ + प + प(प+१) + प(प+१) + \dots + प(प+१) = प^३ + प + २ प^२ + प^२ - प = प^३ + २ प^२ + प^२$ दोनों पक्षों को चार से भाग देने से घन योग $= \frac{प^३ + २ प^२ + प^२}{४} = \left\{ \frac{प(प+१)}{२} \right\}^२$ इससे आचार्यान्तों एकादि अङ्कों के सङ्कलित के वर्ग के बराबर एकादि अङ्कों का घनयोग होता है 'उपपन्न हुआ । लीलावती में 'सङ्कलितस्य कृतेः सम' इत्यादि से भास्कराचार्य भी आचार्योक्त के अनुरूप ही कहते हैं । सिद्धान्त शेखर में श्री पति भी इसी बात को कहते हैं ॥ २० ॥

इति श्रेढीव्यवहार समाप्त हुआ ॥

सङ्कलितज्ञानेन तत्पदज्ञानार्थ विधिः ।

$$\text{सैकपदघनपदार्थमथैकाद्यङ्कयुतिरित्यादिना सङ्कलितम्} = \text{सं} = \frac{प(प+१)}{२} =$$

$\frac{प^३ + प}{२} \mid प = \text{पदम् पक्षौ द्वाभ्यां गुणिता २ सं} = प^३ + प \text{ पुनः पक्षौ चतुर्भिर्गुणिता}$
तदा ८ सं = $४प^३ + ४प$ पक्षयोरुपयोजनेन ८ सं + १ = $४प^३ + ४प + १$ पक्षयोर्मूल ग्रहणेन $\sqrt{८ सं + १} = २प + १ \therefore \sqrt{\frac{८ सं + १ - १}{२}} = प$ एतेन सङ्कलितज्ञानेन तत्पदानयनं जातमिति ॥

अब सङ्कलित ज्ञान से उसके पदज्ञान के लिये नियमार्थ विचार ।

$$\text{'सैकपदघ्नपदार्धमयैकाद्यङ्कयुनिः'} \text{ इससे सङ्कलित स्वरूप} = \frac{प (प+१)}{२} = \frac{प^१+प}{२} ।$$

प=पद दोनों पक्षों को आठ से गुणा करने से $८ सं = ४ (प^१+प) = ४प^१ + ४प$ दोनों पक्षों में रूप जोड़ने से $८ सं + १ = ४ प^१ + ४प + १$ मूल लेने से $\sqrt{८ सं + १} = २ प + १$

$$\therefore \sqrt{\frac{८ सं + १ - १}{२}} = प \text{ इससे पदानयन हो गया ॥}$$

अथ विषमाङ्कानां योग ज्ञानार्थ विधिः ।

$$\text{यथा यो} = \text{विषमाङ्क योगः} = १ + ३ + ५ + \dots \dots \dots प$$

यदि पदम् = ३ तदैकतः पञ्चपर्यन्तं विषमाङ्कानां क्रमेणोत्क्रमेण च स्थापनेन १ । ३ । ५ एतयोर्योगकरणेन सर्वत्रैव ६ । ६ । ६ = २ प इति पद पर्यन्तमस्त्यतः (२ प) $प = ६ + ६ + ६ = २ प$ यो = २ प \therefore यो = प एतेन सिद्धम् यद्यत्पदपर्यन्तं विषमाङ्कानां योगोऽपेक्षितस्तत्पद वर्गसमस्तद्योगो भवेदिति ॥ विषमाङ्कयोगज्ञानेन तत्पदज्ञानं सुलभमेव यतः—विषमाङ्कयोगः = प मूलग्रहणेन $\sqrt{\text{यो}} = प$ एतेन सिद्धम् यद्विषमाङ्कयोगस्य यन्मूलं तत्सममेव तत्पदं भवतीति ॥

अब विषमाङ्कों के योग ज्ञानार्थ नियम कहते हैं ।

$$\text{जैसे विषमाङ्क योग} = \text{यो} = १ + ३ + ५ + ७ + ९ + \dots \dots \dots प$$

यहाँ यदि पद = ३ तब पद पर्यन्त विषमाङ्कों को क्रम से और उत्क्रम से स्थापन करने से १ । ३ । ५ इन दोनों के योग करने से प्रत्येक स्थान में ६ । ६ । ६ = २ प, यह पद पर्यन्त है इसलिये इसको पद से गुणा करने (२ प) $प = २ प^१ = ६ + ६ + ६ = प$ पद पर्यन्त विषमाङ्कयोग $\times २ \therefore प^१ = \text{विषमाङ्कयोग} = \text{यो}$ इससे सिद्ध हुआ कि जिस पद तक विषमाङ्कों का योग अपेक्षित हो उस पद के वर्ग के बराबर विषमाङ्कों का योग होता है ॥ विषमाङ्कों के योगज्ञान से उसका पद ज्ञान सुलभ ही है जैसे विषमाङ्कयोग = प मूल लेने से $\sqrt{\text{यो}} = प$ अर्थात् योग के मूल के बराबर पद होता है यह सिद्ध हुआ ॥

समाङ्कानां योगज्ञानार्थ विधिः ।

$$\text{समाङ्कयोगः} = \text{यो} = २ + ४ + ६ + ८ + १० \dots \dots \dots प$$

यदि पदम् = ३ तदा पद पर्यन्तं समाङ्कानां क्रमेणोत्क्रमेण च स्थापनेन २ । ४ । ६ एतयोर्योगेन सर्वत्रैव ८ । ८ । ८ = २ प + २ इति पद पर्यन्तमस्त्यतः $प (२ प + २) = २ प^१ + २ प = २ यो \therefore यो = प^१ + प \therefore$ सिद्धम् ।

अब समाङ्को के योगज्ञान के लिए नियम कहते हैं ।

जैसे समाङ्को के योग = यो = २ + ४ + ६ + ८ + प

यदि प = ३ तब पद पर्यन्त समाङ्कों को क्रम से और उत्क्रम से स्थापन करने से ३ । ४ । ५ उन दोनों के योग करने से प्रत्येक स्थान में ८ । ८ । ८ = २५ + २ यह पद पर्यन्त है इसलिए २५ + २ इसको पद से गुणा करने से (२५ + २) प = २५^२ + २५ = ७ यो
 ∴ यो = प^२ + प ∴ सिद्ध हुआ कि पदवर्ग में पद जोड़ देने से पद पर्यन्त समाङ्कों का योग मान होता है ॥

अथ समाङ्कानां वर्ग योगार्थ नियमः ।

$$\begin{aligned}\text{योगः} &= (२)^२ + (४)^२ + (६)^२ + (८)^२ + (१०)^२ + \dots \text{प} \\ &= ४ + १६ + ३६ + ६४ + १०० \dots \dots \dots \\ &= ४ (१ + ४ + ९ + १६ + २५) \div \dots \dots \dots\end{aligned}$$

= ४ × एकादशङ्कानां वर्गयोगः । एतेन सिद्धं यदेकादीनामङ्कानां वर्गयोग-
 श्रुतिभिर्गुणितास्तदा द्वयादि समाङ्कानां वर्गयोगो भवेदिति ॥

अब समाङ्को के वर्गयोग ज्ञान के लिये विधि दिखलाते हैं ।

$$\begin{aligned}\text{जैसे योग} &= (२)^२ + (४)^२ + (६)^२ + (८)^२ + \dots \text{प} \\ &= ४ + १६ + ३६ + ६४ + \dots \dots \dots \\ &= ४ + ४ \times ४ + ४ \times ६ + ४ \times १६ + \dots \dots \dots \\ &= ४ (१ + ४ + ६ + १६) + \dots \dots \dots\end{aligned}$$

= ४ × एकादि अङ्कों का वर्गयोग । इससे सिद्ध हुआ कि एकादि अङ्कों के वर्ग-
 योग को चार से गुणा करने से दो आदि समाङ्को का वर्गयोग प्रमाण होता है ॥

अथ गुणोत्तर श्रेणी-सम्बन्धे कश्चिद्विचारः ।

गुणोत्तर श्रेण्या स्वरूपम् = १ + ३ + (३)^२ + (३)^३ + (३)^४ + (३)^५ + प

अत्र श्रेण्या (३) मेतस्योत्तरोत्तरं हरमानं वर्धते यदा तस्या (हर्मानस्य)
 नन्तत्वं तदैतस्याः श्रेण्या योगफलं किम् । अत्र चयः = ३ गुणः । गुणवर्गज-

फलं व्येकं व्येकं गुणोद्धृतमित्यादिना योगफलम् = $\frac{१ \times \{(३)^प - १\}}{३ - १}$ अत्रादिः

= १ । हरस्याऽनन्तत्वे (३)^प = ० तदा योगफलं = $\frac{-१}{+३ - १} = \frac{-१}{-२} = २$ इदमेवो-
 त्तरमिति ॥ (१)

अब गुणोत्तर श्रेढी के सम्बन्ध में कुछ विचार करते हैं ।

गुणोत्तर श्रेढी का स्वरूप = $1 + \frac{1}{2} + (\frac{1}{2})^2 + (\frac{1}{2})^3 + (\frac{1}{2})^4 + \dots$

यहाँ चय = $\frac{1}{2}$ गुणित । आदि = 1 । पद = प

इस श्रेढी में $\frac{1}{2}$ का हरमान उत्तरोत्तर बढ़ता गया है, जब हर का मान अनन्त होगा तब श्रेढी का फल क्या होगा ।

‘गुणावर्गजफल व्येकं व्येकगुणोद्धृतं’ इत्यादि से योगफल = सर्वधन =

$\frac{1 \times \{(\frac{1}{2})^p - 1\}}{\frac{1}{2} - 1} = \frac{(\frac{1}{2})^p - 1}{-\frac{1}{2}}$ जब हर का मान अनन्त होगा तब $(\frac{1}{2})^p$ यह शून्य के

बराबर होगा तब योगफल = $\frac{-1}{-\frac{1}{2}} = 2$ यही उत्तर हुआ ॥.....(२)

(१) अत्रैवानन्तपदगुणोत्तरश्रेढ्या आदिधनम् = 1 । तदुत्तरपद योगतुल्य-
मन्यधनं तदा श्रेढीधनानि कथय ।

कल्प्यते द्वितीय धनम् = $\frac{\text{तृतीयध}}{1 - \text{गु}}$ तदा $\frac{\text{तृध}}{\text{द्विध}} = 1 - \text{गु}$ परन्तु $\frac{\text{तृध}}{\text{द्विध}} = \text{गु}$

गु = 1 - गु. ∴ २गु = 1 पक्षौ द्वाभ्यां भक्तौ तदा गु = $\frac{1}{2}$ । ततः श्रेढीधनमानानि
1, $\frac{1}{2}$, $(\frac{1}{2})^2$, $(\frac{1}{2})^3$, $(\frac{1}{2})^4$, $(\frac{1}{2})^5$, वा 1, $\frac{1}{2}$, $\frac{1}{4}$, $\frac{1}{8}$, $\frac{1}{16}$, $\frac{1}{32}$, इत्युत्तरम् ।

(२) यही अनन्त पद गुणोत्तर श्रेढी का आदिधन = 1, उसके चय और पद के योग के बराबर अन्य धन है तब श्रेढी का धनमान क्या होगा ?

यहाँ कल्पना करते हैं द्वितीयधन = $\frac{\text{तृतीयध}}{1 - \text{गु}}$ तब $\frac{\text{तृध}}{\text{द्विध}} = 1 - \text{गु}$ लेकिन $\frac{\text{तृध}}{\text{द्विध}} = \text{गु}$

∴ 1 - गु = गु समान जोड़ने से 1 = गु + गु = २ गु ∴ $\frac{1}{2} = \text{गु}$ ।

∴ श्रेढीधनमान 1, $\frac{1}{2}$, $(\frac{1}{2})^2$, $(\frac{1}{2})^3$, $(\frac{1}{2})^4$, $(\frac{1}{2})^5$, ...

वा 1, $\frac{1}{2}$, $\frac{1}{4}$, $\frac{1}{8}$, $\frac{1}{16}$, $\frac{1}{32}$, ... यही उत्तर हुआ ।

यदि क = ३ + ३३ + ३३३ + पद पर्यन्तं तदैतस्याः श्रेढ्या योगफलं किम्
क = ३ + ३३ + ३३३ + पदपर्यन्त ।

= ३ (१ + ११ + १११ + पदपर्यन्त) । नबभिर्गुणनेन भजनेन च

= $\frac{३ \times ६}{६} (१ + ११ + १११ + \dots \text{पदपर्यन्त}) = \frac{३}{६} (६ + ६६ + ६६६ + \dots \text{पदपर्यन्त})$

= $\frac{३}{६} \{ (१० - १) + (१०^2 - १) + १०^3 - १ + \dots \}$

= $\frac{३}{६} \{ (१० + १०^2 + १०^3 + \dots \text{पदपर्यन्त}) - १ - १ - १ - \dots \text{पदपर्यन्त} \}$

= $\frac{३}{६} \{ (१० + १०^2 + १०^3 + \dots \text{पदपर्यन्त}) - ५ \}$

गुणवर्गजफलं व्येकं व्येकगुणोद्धृतमित्यादिना

$$\frac{३}{६} \left\{ \frac{१० (१०-१)}{१०-१} - प \right\} = \frac{३}{६} \left\{ \frac{१० (१०-१)}{१०-१} - प \right\} = \text{योगफलम् ।}$$

यदि क = ४ + ४४ + ४४४ + ... पदपर्यन्त, तदैतस्याः श्रेढ्या योगफल किमित्यानीयते
क = ४ + ४४ + ४४४ + पद पर्यन्त = ४ (१ + ११ + १११ + पदपर्यन्त)

$$\begin{aligned} \text{अत्रापि नवभिर्गुणेन भजनेन च } \frac{४ \times ६}{६} (१ + ११ + १११ + \text{पदपर्यन्त}) \\ = \frac{४}{६} (६ + ६६ + ६६६ + \text{पदपर्यन्त}) \\ = \frac{४}{६} \{ (१०-१) + (१०^२-१) + (१०^३-१) + \text{पदपर्यन्त} \} = \frac{४}{६} \\ \{ १० + १०^२ + १०^३ + प-प \} \end{aligned}$$

ततो व्येक व्येकगुणोत्तरमित्यादिना श्रेढ्या योगफलम् =

$$\frac{४}{६} \left\{ \frac{१० (१०-१)}{१०-१} - प \right\} = \frac{४}{६} \left\{ \frac{१० (१०-१)}{९} - प \right\} = \text{योगफलम् ।}$$

$$\begin{aligned} \text{एवमेव } ५ + ५५ + ५५५ + \text{पदपर्यन्तम्} \\ ६ + ६६ + ६६६ + \text{पदपर्यन्तम्} \\ ७ + ७७ + ७७७ + \text{पदपर्यन्तम्} \\ + \text{पदपर्यन्तम्} \\ + \text{पदपर्यन्तम्} \end{aligned}$$

आसां श्रेढीनां योगफलपूर्वं विधिनैव समागच्छन्तीनि ।

यदि क = ३ + ३३ + ३३३ + ... पदपर्यन्त, तब हम श्रेढी का योगफल क्या होगा ?

$$\begin{aligned} \text{क} &= ३ + ३३ + ३३३ + \text{पदपर्यन्त} = \\ &= ३(१ + ११ + १११ + \text{पदपर्यन्त}) \end{aligned}$$

तो से गुणा करने से और भाग देने से

$$\begin{aligned} \frac{३ \times ६}{६} (१ + ११ + १११ + \text{पदपर्यन्त}) &= ३ \\ (६ + ६६ + ६६६ + \text{पदपर्यन्त}) & \\ = \frac{३}{६} \{ (१०-१) + (१०^२-१) + (१०^३-१) + \} &= \frac{३}{६} \\ \{ १० + १०^२ + १०^३ + \text{पदपर्यन्त} - प \} & \end{aligned}$$

गुण वर्गजफलं व्येक व्येक गुणोद्धृत इत्यादि से

$$\frac{2}{3} \left\{ \frac{10(10-1)}{10-1} - 10 \right\} = \frac{2}{3} \left\{ \frac{10(10-1)}{10-1} - 10 \right\} = \text{योगफल,}$$

यही उत्तर हुआ ।

यदि $k = 1 + 11 + 111 + \dots$ पदपर्यन्त, तब इस श्रेणी का योगफल क्या होगा ?

$$k = 1 + 11 + 111 + \dots \text{पदपर्यन्त,}$$

$$= 1(1 + 11 + 111 + \dots \text{पदपर्यन्त})$$

यहां नौ से गुणा करने से और भाग देने से

$$\frac{9 \times 1}{9} (1 + 11 + 111 + \dots \text{पदपर्यन्त})$$

$$= 9(1 + 11 + 111 + \dots \text{पदपर्यन्त})$$

$$= 9 \{ (10-1) + (10^2-1) + (10^3-1) + \dots \}$$

$$= 9 \{ 10 + 10^2 + 10^3 + \dots \text{पदपर्यन्त} - 1 \}$$

$$= 9 \left\{ \frac{10(10^p-1)}{10-1} - 10 \right\}$$

$$= 9 \left\{ \frac{10(10^p-1)}{10-1} - 10 \right\} = \text{श्रेणी का योगफल ।}$$

इसी तरह $1 + 11 + 111 + \dots$ पदपर्यन्त

$1 + 11 + 111 + \dots$ पदपर्यन्त

$1 + 11 + 111 + \dots$ पदपर्यन्त

$\dots + \dots$,

$\dots + \dots$,

इन श्रेणियों का भी योगफल उपर्युक्त विधि से सुगमता से ही सिद्ध होता है ॥

अधोलिखितश्रेण्या योगफलं किम् ?

$$\text{यदि } k = \frac{1}{1 \times 2} + \frac{1}{2 \times 3} + \frac{1}{3 \times 4} + \frac{1}{4 \times 5} + \dots \text{पदपर्यन्तम् ।}$$

$$\text{अत्राऽद्यधनम्} = \frac{1}{1 \times 2} = 1 - \frac{1}{2}$$

$$= \sqrt{(स - अ) (स - क) (स - ग) (स - घ)} \text{ एतेनाऽऽचार्योक्तं श्रीपत्युक्तं}$$

भास्करोक्तं च चतुर्भुजफलानयन मुपपन्नम् ।

परञ्च पूर्वमुपपत्तौ आ + गा = १८० स्वीकृतम् । चतुर्भुजे संमुख कोणयोर्योगः
= १८० केवलं वृत्तान्तर्गतचतुर्भुज एव भवति तेनाऽऽचार्य श्रीधराचार्य श्रीपत्यादि
कथितं विषमचतुर्भुज फलानयनं न सूक्ष्ममिति प्रत्यक्षमेवोपपत्त्या सिद्धम् । केवलं
भास्कराचार्येण ज्ञातं यच्चतुर्भुजफलानयनं यदन्यैः कृतं तत्सूक्ष्मं न भवति तेनैव
हेतुना लीलावत्यां “सर्वदोयुतिदलं चतुः स्थितमित्यादौ” मूलमस्फुट फलं चतुर्भुजे
भास्करेण कथितम् ॥२१॥

अथ कस्य चतुर्भुजस्य फलं महत्तमम् भवतीति विचार्यते ।

$$\text{अथ पूर्वोपपत्तौ आका गाघा चतुर्भुजफलम्} = \frac{\text{अ. घ. ज्याआ}}{२} +$$

$\frac{\text{क. ग. ज्याआ}}{२}$ कस्यापि पदार्थस्य महत्तमत्वे परमन्यूनत्वे च चलनं कलनं रीत्या

तदीया तात्कालिकगतिः शून्यसमा भवति । यदि चतुर्भुजस्य फलं महत्तमं स्यात्तदा
पक्षयोस्तात्कालिकगतिग्रहणेन $\frac{\text{अ. घ. कोज्याआ}}{२} + \frac{\text{क. ग. कोज्यागा}}{२} = ०, (१)$

परन्तु “भू संमुखालोद्भव कोटि शिञ्जिनी दोर्घातगुण्या त्रिगुणार्धभक्ता । दोर्वर्ग-
योगो रहितस्तया स्यादाधारवर्गोऽस्य पदं मही च” विशेषोक्तं नानेन “भुजवर्गयुति
भूमिवर्गोनाभुजघातहृत् । दलिता त्रिभुजस्यास्रकोटिज्या युग्मविस्तृतौ” इत्यादिना
वा अ^२ + घ^२ + २ अ. घ. कोज्याआ = क^२ + ग^२ + २ क. ग. कोज्यागा ।

पक्षयोस्तात्कालिक गतिग्रहणेन ।

अ. घ. ज्याआ = क. ग. ज्यागा यतः स्थिराङ्कानां तात्कालिक गतयः = ० ।
तथा कोटिज्यायास्तात्कालिकगतिज्या भवति ।

$$\text{अतः } \frac{\text{क. ग. ज्यागा}}{\text{ज्याआ}} = \text{अ. घ. अनेन } (१) \text{ समीकरणमुत्थापनेन}$$

$$\frac{\text{क. ग. कोज्याआ ज्यागा}}{२ ज्याआ} + \frac{\text{क. ग. कोज्यागा}}{२} = \frac{\text{क. ग. कोज्याआ. + ज्यागा + क. ग. कोज्यागा. ज्याआ}}{२ ज्याआ} = ० \text{ ह्येदगमेन क. ग.}$$

$$\text{कोज्याआ. ज्यागा. + क. ग. कोज्यागा. ज्याआ} = ०$$

$$= \text{क. ग. (कोज्याआ. ज्यागा + कोज्यागा. ज्याआ)}$$

$$= \text{क. ग. ज्या (आ + गा)} = ० \therefore \text{ज्या (आ + गा)} = \frac{०}{\text{क. ग.}}$$

$\therefore \text{आ + गा} = १८०$ एतेन सिद्धं यदेकाधारे विद्यमानेष्वनेकेषु चतुर्भुजेषु यस्मिंश्चतुर्भुजे
संमुखकोणयोर्योगमार्धांश १८० समस्तस्यैव फलं महत्तमं (सर्वाधिकं) भवतीति ।

अथ क्षेत्रव्यवहार आरम्भ किया जाता है ।

हि. भा.—त्रिभुज और चतुर्भुज के संमुख भुजों के योगार्ध के घात करने से त्रिभुज और चतुर्भुज का फल स्थूल होता है । संमुखभुजों के योगार्धघात चतुर्भुज के लिये स्थूल फल हो सकता है परन्तु त्रिभुज में तो तीन ही भुजाएँ हैं इसलिये इस में संमुख भुजाभाव है अतः एक तरफ के भुजद्वय योग को तृतीयभुज में गुणा करने में नाम मात्र का स्थूल त्रिभुज फल होता है । त्रिभुज और चतुर्भुज के भुजों के योगार्ध को क्रमशः तीन और चार स्थानों में स्थापन करता, पृथक् पृथक् अपने अपने भुजों को हीन करके घात करना नव मूल लेने से क्रमशः त्रिभुज और चतुर्भुज का सूक्ष्मफल होता है ॥२१॥

त्रिभुज फलानयन के लिये उपपत्ति ।

यहाँ सम्कृतोपपत्ति में लिखित (१)चित्र को देखिये । आकाश त्रिभुज है जिसका फलानयन करना है । काशा = अ । आशा = क भूमिः आका = ग । गा बिन्दुने आका भुजके ऊपरलम्ब = गान, तब भुज कृत्यन्तर भूद्वय तीन युता भूः' इत्यादि, आचार्योक्त अगिम २२ वें श्लोक में अथवा लीलावती में 'त्रिभुजे भुजयोगान्तरदन्तर गुणः' इत्यादि, भास्करोक्त सूत्रमें लघ्वावाधा =

$$\frac{ग}{२} \cdot \frac{(अ+क)(अ-क)}{२ग} = \frac{ग^२ - (अ+क)(अ-क)}{२ग}$$

गोत्र और अन्तर का घात वर्गान्तर के बराबर होता है इसलिये $\frac{ग^२ - (अ^२ - क^२)}{२ग} =$ लघ्वावाधा, अथ 'स्वावाधावर्गोनाद्-

भुज वर्गात्' इत्यादि आचार्योक्त से अथवा 'स्वावाधा भुज कृत्योगान्तर मूलम्' इत्यादि भास्करोक्त से लम्ब^२ = क^२ - $\left\{ \frac{ग^२ - (अ^२ - क^२)}{२ग} \right\}^२$ वर्गान्तर योगान्तर घात के बराबर

होने से $\left\{ क + \frac{ग^२ - (अ^२ - क^२)}{२ग} \right\} \cdot \left\{ क - \frac{ग^२ - (अ^२ - क^२)}{२ग} \right\} =$ लम्ब^२

$$= \frac{(क^२ + २कग + ग^२ - अ^२) \{अ^२ - (क^२ - २(कग + ग^२))\}}{४ग^२}$$

$$= \frac{\{(क+ग)^२ - अ^२\} \cdot \{अ^२ - (क-ग)^२\}}{४ग^२} \text{ 'लम्बगुण भूम्यर्धम्' इत्यादि में फलवर्ग}$$

$$= \frac{\{(क+ग)^२ - अ^२\} \cdot \{अ^२ - (क-ग)^२\}}{४ग^२} \times \frac{ग^२}{४}$$

$$= \frac{\{(क+ग)^२ - अ^२\} \cdot \{अ^२ - (क-ग)^२\} (अ+क+ग)}{१६ग^२} \cdot \frac{(क+ग-अ)}{२}$$

$$\frac{(अ+क-ग)}{२} \cdot \frac{(अ+ग-क)}{२} = \text{फल}^२ \text{ । यहाँ यदि } \frac{अ+क+ग}{१} = \text{स तब}$$

$$स-अ = \frac{क+ग-अ}{२}, स-ग = \frac{अ+क-ग}{२}, स-क = \frac{अ+ग-क}{२} \text{ उत्थापन से फल}^२ = स.$$

$$(स-अ) (स-ग) (स-क) \text{ मूल लेने से फल} = \sqrt{स (स-अ) (स-क) (स-ग)}$$

इससे सूक्ष्म त्रिभुज फलानयन उपपन्न होता है ।

अब विषम चतुर्भुज के सूक्ष्म फलानयन के लिए विधि लिखते हैं ।

सूक्ष्म चतुर्भुज फलानयन के लिये आचार्य ने जो विधि बतलाई है उस में त्रिभुज की चर्चा नहीं है लेकिन उस विधि से त्रिभुज ही का फल सूक्ष्म आता है जो कि उपर्युक्त उपपत्ति से स्पष्ट है । सिद्धान्त शेखर में 'भुज समास दलं हि चतुः स्थित इत्यादि, श्रीपत्युक्त चतुर्भुज फलानयन आचार्योक्तानुरूप ही है लेकिन श्रीपति प्रकार में त्रिभुज की चर्चा है । श्रीधराचार्य भी इसी तरह कहते हैं । श्रीपति श्रीधराचार्य ने जो चतुर्भुज फलानयन किया है सो सूक्ष्म नहीं है इसीलिये लीलावती में 'चतुर्भुजस्यानियतौ हि वर्णौ' इत्यादि संस्कृतोपपत्ति में लिखित पद्यों से भास्कराचार्य ने बहुत पूर्वाचार्योक्त चतुर्भुज फलानयन की स्थूलता दिखलाई है ।

अब आचार्योक्त विधि से क्यों विषम चतुर्भुज फलानयन सूक्ष्म नहीं होता है तदर्थ विचार करते हैं । संस्कृतोपपत्ति में लिखित (ख) चित्र को देखिये ।

$$\begin{aligned} \text{आकागा त्रिभुज में आगा} &= क, \text{ कागा} = अ, \text{ आका} = ग, \text{ का बिन्दु से आगा भुज के} \\ \text{ऊपर लम्ब} &= \text{कान तब 'लम्ब गुण भूम्यर्ध' इत्यादि से त्रिभुजफल} = \frac{\text{आगा} \times \text{कान}}{२} \\ &= \frac{\text{कान} \times \text{कान}}{२}, \text{ परन्तु कानगा त्रिभुज में अनुपात में कान} = \text{लम्ब} = \frac{\text{कागा. ज्यागा}}{\text{त्रि}} \\ &= \frac{\text{अ. ज्यागा}}{१} \text{ यहां त्रिज्या} = १ \text{ ग्रहण करते हैं तब उत्थापन से त्रिभुजफल} \\ &= \frac{\text{अ. क. ज्यागा}}{२} \text{ इससे यह सिद्ध हुआ कि त्रिभुज में दो भुजों के घातार्ध को भुज-} \\ &\text{द्वयान्तर्गत कोण की ज्या से गुणने से त्रिभुजफल होता है ॥} \end{aligned}$$

आका गाधा विषमचतुर्भुज है जिसका फलानयन अपेक्षित है यहां संस्कृतोपपत्ति में लिखित (प) चित्र को देखिये । आका = अ । कागा = क, गाधा = ग, आधा = घ, काधाकर्ण = न
आकाधा त्रिभुजफल + कागाधा त्रिभुजफल = आकागाधा चतुर्भुजफल, उपरि प्रदर्शित त्रिभुज फलानयन से $\frac{\text{अ. घ. ज्यागा}}{२} + \frac{\text{क. ग. ज्यागा}}{२} = \text{चतुर्भुजफल}$ । यदि यहां आ + गा = १८० माना जाय तब आ = १८० - गा ∴ ज्याआ = ज्यागा (कोणज्या और कोणोन भाषाशज्या

$$\text{के बराबर होने में) इसलिये चतुर्भुजफल} = \frac{\text{अ.घ. ज्याआ} + \text{क.ग. ज्याआ}}{२} =$$

$$\frac{\text{ज्याआ (अ.घ + क.ग)}}{२}$$

अब 'भू समुत्पन्नोद्भू कोटि शिञ्जती' इत्यादि विशेषोक्त सूत्र से
 $\text{अ}^२ + \text{घ}^२ = २$ अ. घ. कोज्याआ = $\text{न}^२$ तथा $\text{क}^२ + \text{ग}^२ = २$ क. ग कोज्याआ = $\text{न}^२$, लेकिन
 $\text{आ} = १८० - \text{गा}$ \therefore कोज्याआ = - कोज्यागा \therefore $\text{अ}^२ + \text{घ}^२ = २$ अ. घ. कोज्याआ =
 $\text{क}^२ + \text{ग}^२ = २$ क. ग. कोज्याआ इसलिये $\frac{\text{क}^२ + \text{ग}^२ - (\text{अ}^२ + \text{घ}^२)}{२ \text{ अ. घ} + २ \text{ क. ग}} = \text{कोज्याआ}$ लेकिन

$$\text{त्रि- कोज्याआ} = \text{ज्याआ} = १ - \text{कोज्याआ} = १ - \left\{ \frac{\text{क}^२ + \text{ग}^२ - (\text{अ}^२ + \text{घ}^२)}{२ \text{ अ. घ} + २ \text{ क. ग}} \right\}^१ \text{ परन्तु}$$

वर्गान्तर योगान्तर घात के बराबर होता है इसलिये

$$\left\{ १ + \frac{\text{क}^२ + \text{ग}^२ - (\text{अ}^२ + \text{घ}^२)}{२ \text{ अ. घ} + २ \text{ क. ग}} \right\} \cdot \left\{ १ - \frac{\text{क}^२ + \text{ग}^२ - (\text{अ}^२ + \text{घ}^२)}{२ \text{ अ. घ} + २ \text{ क. ग}} \right\}$$

$$= \left\{ \frac{२ \text{ अ. घ} + २ \text{ क. ग} + \text{क}^२ + \text{ग}^२ - (\text{अ}^२ + \text{घ}^२)}{२ \text{ अ. घ} + २ \text{ क. ग}} \right\}.$$

$$\left\{ \frac{२ \text{ अ. घ} + २ \text{ क. ग} - \text{क}^२ - \text{ग}^२ - (\text{अ}^२ + \text{घ}^२)}{२ \text{ अ. घ} + २ \text{ क. ग}} \right\} = \frac{(\text{क} + \text{ग})^२ - (\text{अ} - \text{घ})^२}{२ \text{ अ. घ} + २ \text{ क. ग}}$$

$$\times \left\{ \frac{(\text{अ} + \text{घ})^२ - (\text{क} - \text{ग})^२}{२ \text{ अ. घ} + २ \text{ क. ग}} \right\} \text{ वर्गान्तर योगान्तर घात के बराबर होता है इसलिये}$$

$$\frac{(\text{क} + \text{अ} + \text{ग} - \text{घ}) (\text{क} + \text{ग} + \text{घ} - \text{अ}) (\text{अ} + \text{क} + \text{घ} - \text{ग}) (\text{अ} + \text{ग} + \text{घ} - \text{क})}{४ (\text{अ. घ} + \text{क. ग})^२}$$

= ज्या^२आ । यदि यहां $\text{अ} + \text{क} + \text{ग} + \text{घ} = २$ स तब,

$$\text{क} + \text{अ} + \text{ग} - \text{घ} = २ \text{ स} - २ \text{ घ} = २ (\text{स} - \text{घ}),$$

$$\text{क} + \text{ग} + \text{घ} - \text{अ} = २ \text{ स} - २ \text{ अ} = २ (\text{स} - \text{अ}) \text{ अ} + \text{क} + \text{घ} - \text{ग} = २ \text{ स} - २ \text{ ग}$$

$$= २ (\text{स} - \text{ग}), \text{ अ} + \text{ग} + \text{ग} - \text{क} = २ \text{ स} - २ \text{ क} = २ (\text{स} - \text{क}) \text{ तब उत्थापन से}$$

$$\frac{२ (\text{स} - \text{अ}) \cdot २ (\text{स} - \text{क}) \cdot २ (\text{स} - \text{ग}) \cdot २ (\text{स} - \text{घ})}{४ (\text{अ. घ} + \text{क. ग})^२} = \text{ज्या}^२ \text{आ} ।$$

$$= \frac{१६ (\text{स} - \text{अ}) (\text{स} - \text{क}) (\text{स} - \text{ग}) (\text{स} - \text{घ})}{४ (\text{अ. घ} + \text{क. ग})^२}$$

$$= \frac{४ (\text{स} - \text{अ}) (\text{स} - \text{क}) (\text{स} - \text{ग}) (\text{स} - \text{घ})}{(\text{अ. घ} + \text{क. ग})^२} = \text{ज्या}^२ \text{आ मूल लेने से}$$

$$\frac{२}{\text{अ. घ} + \text{क. ग}}$$

$\times \sqrt{(स - अ) (स - क) (स - ग) (स - घ)} = ज्याआ ।$ अब इस से उत्थापन देने से

$$\text{चतुर्भुजफल} = \frac{\text{ज्याआ} (अ. घ + क. ग)}{२} = \sqrt{(स - अ) (स - क) (स - ग) (स - घ)}$$

इससे आचार्योक्त श्रीपत्युक्त तथा भास्करोक्त चतुर्भुज फलानयन उपपन्न हुआ ।

परन्तु उपरिलिखित उपपत्ति में आ + ग = १८० स्वीकार किया गया है, संमुख कोणद्वय योग = १८० केवल वृत्तान्तर्गत चतुर्भुज में होता है इसलिये आनीत चतुर्भुज फल वृत्तान्तर्गत चतुर्भुज का वास्तव फल हुआ, साधारण विषम चतुर्भुज के लिये वह फल स्थूल है इसलिये आचार्य श्रीपति श्रीधराचार्य कथित विषम चतुर्भुजफलानयन स्थूल ही है जिसको वे लोग सूक्ष्म कहते हैं सूक्ष्म नहीं है । केवल भास्कराचार्य इस बात को समझे कि उपरि लिखित विषम चतुर्भुज फलानयन सूक्ष्म नहीं होता है इसलिये लीलावती में अपने चतुर्भुज फलानयन श्लोक में 'मूलमस्फुटफलं चतुर्भुजे' पूर्वोक्त रीति से आनीत फल को 'अस्फुट फल अर्थात् स्थूल फल' कहा है ॥२१॥

किस चतुर्भुज का फल महत्तम (सर्वाधिक) होता है इसके लिये विचार करते हैं ।

$$\text{उपरि लिखित उपपत्ति में आकागाचा चतुर्भुजफल} = \frac{\text{अ. घ. ज्याआ}}{२} + \frac{\text{क. ग. ज्यागा}}{२}$$

किसी पदार्थ के परमत्व में और परमन्यूनत्व में चलन कलन रीति से उसकी तात्कालिक गति शून्य के बराबर होती है यदि चतुर्भुज का फल महत्तम है तब दोनों पक्षों के तात्कालिक गति ग्रहण करने से $\frac{\text{अ. घ. कोज्याआ}}{२} + \frac{\text{क. ग. कोज्यागा}}{२} = ० \dots (१)$ परन्तु 'भूसमुखा-सोद्भकोटि शिञ्जिनी' इत्यादि सस्कृतोपपत्ति में लिखित, विशेषोक्त सूत्र से $अ^२ + घ^२ + २ \text{ अ. घ. कोज्याआ} = क^२ + ग^२ + २ \text{ क. ग. कोज्यागा}$ ।

दोनों पक्षों के तात्कालिक गति ग्रहण करने से

अ. घ. ज्या आ = क. ग. ज्यागा क्योंकि स्थिराङ्को की गति = ० होती है, तथा कोटिज्या की तात्कालिक गति ज्या होती है ।

$$\therefore \text{अ. घ} = \frac{\text{क. ग. ज्यागा}}{\text{ज्याआ}} \text{ इससे (१) इसको उत्थापन करने से}$$

$$\frac{\text{क. ग. कोज्याआ. ज्यागा}}{२ \text{ ज्या आ}} + \frac{\text{क. ग. कोज्यागा}}{२}$$

$$= \frac{\text{क. ग. कोज्याआ. ज्यागा} + \text{क. ग. कोज्यागा. ज्याआ}}{२ \text{ ज्याआ}} = ० \text{ छेदगम से क. ग. कोज्याआ}$$

$$\text{ज्यागा} + \text{क. ग. कोज्यागा, ज्याआ} = ०$$

=क. ग (कोज्याआ. ज्यागा+कोज्यागा. ज्याआ)=क. ग. ज्या (आ+गा)=०

∴ ज्या (आ+गा) = $\frac{0}{\text{क.ग.}}$ = ० इनलिये आ+गा = १८० इससे सिद्ध होता

है कि एक आधार पर अनेक चतुर्भुजों के रहने से जिस चतुर्भुज का संमुखकोण द्वय योग एक सौ अस्सी अंग १८० होता है उसी (वृत्तान्तर्गतचतुर्भुज) का फल महत्तम होता है क्योंकि (वृत्तान्तर्गत चतुर्भुज ही का समुखकोणद्वय योग १८० के बराबर होता है ॥२१॥

इदानीमावाधादिज्ञानाय कर्ग मूत्रम् ।

१० - ० = १० अर्धिते जातेऽऽवाधे ५ । ५ आवाधावर्गं हीनाद् भुजवर्गात् (१३)^२

-(५)^२ = १६९ - २५ = १४४ मूलं = १२ = लम्बः ।

अत्रोपपत्तिः ।

(क)

अकग त्रिभुजमस्ति यस्य भुजौ अक, अग, कग

= भूमिः । अ बिन्दुतः कग भुजोपरिलम्बः = अप,

कप = लघ्वावाधा, पग = बृहदावाधा । अग = बृहद्-

भुजः । अक = लघुभुजः । तदा अकप त्रिभुजे कर्ण

कोट्योर्वर्गान्तरं भुजवर्गः = अक^२ - अप^२ = कप^२

अगप त्रिभुजे कर्णकोट्योर्वर्गान्तरं भुजवर्गः = अग^२ - अक^२ = पग^२

अनयोरन्तरं

अग^२ - अक^२ = पग^२ - कप^२ वर्गान्तरस्य योगान्तरघातसमत्वात्
अग^२ - अक^२ = (पग + कप) (पग - कप) = कग (पग - कप) = भू × (वृहदावाधा
- लब्धावाधा) = भू × आवाधान्तर

ततः $\frac{\text{अग}^2 - \text{अक}^2}{\text{भू}} = \text{आवाधान्तर}$ । वृहदावाधा + लब्धावाधा = पग
+ कप = कग = भूमि = भू ।

ततः संक्रमणेन $\frac{\text{भू} - \text{आवाधान्तर}}{२} = \text{लब्धावाधा}$, तथा $\frac{\text{भू} + \text{आवाधान्तर}}{२} = \text{वृहदावाधा}$ ।

एतेनाऽऽचार्योक्तमुपपन्नम् । लीलावत्यां 'त्रिभुजे भुजयोर्योगस्तदन्तरगुणो भुवा हृतो लब्ध्या । द्विष्ठा भूरुनयुता दलिताऽऽवाधे तयोः स्याताम् । स्वावाधा भुजकृत्योरन्तरमूलं प्रजायते लम्बः' भास्करोक्तमिदं सिद्धान्तशेखरे 'बाहुवर्गविवर-द्विनिघ्नभूमक्तवर्जितयुते स्वभूदले । तेऽवधे हि भवतोऽवधा भुजा वर्गजान्तर-पदं तु लम्बकः, श्रीपत्युक्तमिदं चाऽऽचार्योक्तानुरूपमेव । 'द्विसम त्रिभुजक्षेत्रे त्रयोदश स्युर्भुजद्वये दण्डाः । दशभूरस्यावाधे वदावलंबं चे'ति महावीराचार्योक्तमुदाहरण-माचार्योक्तमेवास्ति । अन्यदुदाहरणं च 'विषम त्रिभुजस्य भुजा त्रयोदश प्रतिभुजा तु पञ्चदश । भूमिश्चतुर्दशास्य हि किं गणितं चावलम्बकावाधे ॥'

इदमेवोदाहरणं चतुर्वेदाचार्येणाऽन्योद्देशकरूपेण प्रदर्शितमस्ति । इदमे-वोदाहरणं श्रीधराचार्येण 'एको भुजस्त्रयोदश पञ्चदशान्यस्त्रिबाहुनि क्षेत्रे । चतुरधिकादशभूमिर्द्वादशलम्बः कियद्गणितम्' त्रिशतिकायां प्रदत्तमस्ति, लीलावत्यां 'क्षेत्रे मही मनुमिता त्रिभुजे भुजौ तु यत्र त्रयोदशतिथिप्रमितौ च यस्य । तत्रावलम्बकमिति कथयावधे च क्षिप्रं तथा च समकोष्ठमिति फलाख्याम् ।' भास्करोक्तमिदमुदाहरणमपि तथैवास्ति 'कर्णस्त्रयोदश स्यात् पञ्चदशान्यो मही द्विसप्तैव । विषमत्रिभुजस्य सखे फलसंख्या का भवेदस्य' इत्यार्यभटीयतन्त्रटीका-कारस्य बृहद्भास्करीय-लघुभास्करीय ग्रन्थद्वयरचयितुर्भास्करस्योदाहरणं दृष्ट्वा ऽनन्तरं सर्वेराचार्यैस्तदनुसारमेव स्वस्वग्रन्थे लिखितमित्यनुमीयते । आवाधादि ज्ञानार्थमाचार्योक्तविधिरेव गणितमञ्जरीकारेण गणेशेना । "भुजान्तरैक्याभिह-तिर्धैरित्री भक्ता फलेनोनयुता धरित्री । दलीकृता लम्बनिपात बाह्वोर्मध्ये कुखण्डे

भवतोऽवधाख्ये । भुजावधायोगवियोगघात मूलप्रमाणो गदिनोऽवलम्बः । जनेन कथित इति ॥२२॥

अथ आवाधा आदि के जनार्थ विधि कहते हैं ।

हि. भा.—विषम त्रिभुज में दोनों भुजों के वर्गान्तर को भू (आधार) में भाग दे कर जो लब्धि हो उसको भू में हीन और युत करके आधा करने में दोनों आवाधायें होती हैं । भुज और आवाधा के वर्गान्तर का मूल लम्ब प्रमाण होता है ॥२२॥

चतुर्वेदाचार्योक्त उदाहरण ।

जिस त्रिभुज के दोनों भुज = १३ है, भूमि = १० उस त्रिभुज में आवाधा और लम्ब का प्रमाण क्या होगा ? दोनों भुजों का वर्गान्तर = $(13)^2 - (10)^2 = 169 - 100 = 69$ इसको भू १० में भाग देने में लब्धि = $\frac{69}{10} = 6.9$ इसको भू में हीन और युत कर करने में $10 - 6.9 = 3.1$ $10 + 6.9 = 16.9$ आधा करने में दोनों आवाधाओं के प्रमाण ५।५ हुए । भुज और आवाधा का वर्गान्तर = $(13)^2 - (5)^2 = 169 - 25 = 144$ इसका मूल = १२ = लम्ब प्रमाण है ॥२२॥

उपपत्ति ।

संस्कृतोपपत्ति में (क) चित्र देखिये । अलग विषम त्रिभुज है जिसकी दोनों भुजाएँ अक, अग, है । कग = भूमि, अ बिन्दु में कग भूमि के ऊपर लम्ब = अघ, है । कप = लघ्वा-वाधा, पग = बृहदावाधा, अग = बृहद्भुज, अक = लघुभुज । तब अकप त्रिभुज में कर्ण और कोटि का वर्गान्तर = भुजवर्ग = अक^२ — अघ^२ = कप^२ एव अगप त्रिभुज में कर्ण और कोटि का वर्गान्तर भुजवर्ग = अग^२ — अघ^२ = पग^२ दोनों का अन्तर करने में अग^२ — अक^२ = पग^२ — कप^२ वर्गान्तर योग, अन्तर घात के बराबर होता है इसलिये अग^२ — अक^२ = (पग + कप) (पग — कप) = भू (बृहदावाधा — लघ्वावाधा) = भुजवर्गान्तर = भू × आवाधान्तर
 $\therefore \frac{\text{भुजवर्गान्तर}}{\text{भू}} = \text{आवाधान्तर}$ । बृहदावाधा + लघ्वावाधा = आवाधायोग = भू । तब

सकल गणित से $\frac{\text{भू} - \text{आवाधान्तर}}{2} = \text{लघ्वावाधा}$, $\frac{\text{भू} + \text{आवाधान्तर}}{2} = \text{बृहदावाधा}$ ।

इसमें आचार्योक्त उपपत्ति हुआ । लीलावती में 'त्रिभुजे भुजयोर्योगस्तदन्तरगुणः' इत्यादि संस्कृतोपपत्ति में लिखित श्रीपति का कथन आचार्योक्त के अनुरूप ही है ।

'द्विसमत्रिभुजक्षेत्रे त्रयोदश स्युः' इत्यादि महावीराचार्योक्त उदाहरण आचार्योक्त उदाहरण ही है । अन्य उदाहरण 'विषम त्रिभुजस्य भुजा त्रयोदश' इत्यादि संस्कृतोपपत्ति में लिखित को चतुर्वेदाचार्य ने अन्योद्देशक रूप में दिखलाया है । इसी उदाहरण को श्रीधराचार्य ने 'एको भुजस्त्रयोदश पञ्चदशान्यः' इत्यादि त्रिगणितिका में लिखा है । लीलावती में

‘क्षेत्रे महीमनुमिता त्रिभुजे भुजौ तु’ इत्यादि भास्करोक्त उदाहरण भी वेसा ही है । आवाधादि ज्ञान के लिये गणित मञ्जरी में ‘भुजान्तरैक्याभिहतिर्धरित्री’ इत्यादि संस्कृतोपपत्ति में लिखित पद्यों से गणेश दैवज्ञ ने आचार्योक्त रीति ही लिखी है इति ॥२२॥

इदानीं चतुर्भुजे कर्णलम्बज्ञानाय करणसूत्रम् ।

अविषमचतुरस्रभुजप्रतिभुजवधयोर्युतेः पदं कर्णः ।

कर्णकृतिर्भूमुखयुतिदलवर्गोना पदं लम्बः ॥ २३ ॥

सु. भा.—अविषमचतुरस्रं वर्गक्षेत्रमायतं समानान्तरचतुर्भुजं यत्र भुजत्रयं समानं तच्चतुर्भुजं चेति चतुर्वेदाचार्योक्तिः । आचार्योक्तविधिना वर्गायतयोरेव कर्णलम्बसिद्धिरन्यत्र स्थूलौ कर्णलम्बौ भवत इति रेखागणितेन स्फुटम् । व्याख्या चातिसुगमेति ॥ २३ ॥

वि. भा.—अविषमचतुरस्रं वर्गक्षेत्रमायतं समानान्तरचतुर्भुजं यत्र भुजत्रयं समानं तच्चतुर्भुजं चेति चतुर्वेदाचार्योक्तिः । आचार्योक्त प्रकारेण वर्गक्षेत्रायतक्षेत्रयोरेव कर्णलम्बयोर्ज्ञानं भवितुमर्हति, अन्यचतुर्भुजेषु कर्णलम्बौ न वास्तविकौ भवत इति रेखागणितविदां स्फुटमेवेति ॥२३॥

अत्रोपपत्तिः ।

वर्गक्षेत्रे सर्वे भुजाः समाना भवन्ति, कोणचतुष्टयं च समकोणसमम्, तेन संमुख भुजयोर्घातस्तद्वर्गो भवतोऽतो भुजप्रतिभुजयो (संमुखभुजयोः) घातयोगस्य मूलं कर्णो भवेदेव । एवमायतक्षेत्रेऽपि, अत्र लम्बानयनमपि सुगममेवेति ॥२३॥

अब चतुर्भुज में कर्ण और लम्ब के ज्ञानार्थ कहते हैं ।

हि. भा.—अविषमचतुर्भुज से वर्गक्षेत्र, आयतक्षेत्र समानान्तरचतुर्भुज और जिस चतुर्भुज में तीन भुज बराबर हैं वे भी लिये जाते हैं । यह चतुर्वेदाचार्य कहते हैं । आचार्योक्त विधि से वर्गक्षेत्र और आयत क्षेत्र का ही कर्ण और लम्ब ज्ञान ठीक हो सकता है अन्य चतुर्भुजों में उस प्रकार से कर्ण और लम्ब वास्तविक नहीं होता है ॥२३॥

उपपत्ति ।

वर्गक्षेत्र में सब भुज बराबर होते हैं, और चारों कोण समकोण होने हैं, इसलिये संमुख भुजद्वय का घात करने से उसका वर्ग होता है, अतः संमुख संमुखभुजद्वय घात योग के मूल लेने से कर्ण प्रमाण होता है आयतक्षेत्र में भी यही युक्ति है । यहां लम्बानयन भी स्पष्ट ही है इति ॥२३॥

इदानीं जान्यत्रिभुजे भुजकोटिकर्णानयनार्थं विधिः कथ्यते ।

कर्णकृतेः कोटिकृतिं विशोध्य मूलं भुजो भुजस्य कृतिम् ।

प्रोह्य पदं कोटिः कोटिबाहुकृतियुतिपदं कर्णः ॥२४॥

मु. भा.—स्पष्टार्थम् । 'तन्कृत्योर्योगपदं कर्णं' इत्यादि भास्करोक्तमेतदनु-
रूपमेव ।

अत्रोपपत्तिः ।

रेखागणित प्रथमाध्यायमपनचत्वारिंशन्प्रतिज्ञया नकुटा ॥२॥

वि. भा.—कर्णवर्गः कोटिवर्गं विशोध्य मूलं ग्राह्यं तदा भुजो भवेत्, कर्ण-
वर्गाद् भुजवर्गं विशोध्य तन्मूलं ग्राह्यं तदा कोटिर्भवेत् ।

कोटिभुजयोर्वर्गयोगमूलं कर्णो भवतीति ॥२॥

अत्रोपपत्तिः ।

यत्र त्रिभुजे एकः कोणः समकोणस्तज्जान्यत्रिभुजम् । तत्र समकोण-
संमुखभुजः कर्णः, समकोणसंलग्नभुजयोर्मध्ये एकोभुजसंज्ञकोज्या कोटिसंज्ञिका ।
यथा

अकग त्रिभुजमस्ति यत्र अकग कोणः समकोणः = ९०
तदा अग = कर्णः । कग = भुजः । अक = कोटिः । अत्र
 $\sqrt{\text{कर्ण}^2 - \text{कोटि}^2} = \text{भुज}$, $\sqrt{\text{कर्ण}^2 - \text{भुज}^2} = \text{कोटि}$:
 $1 \text{ कोटि}^2 + \text{भुज}^2 = \text{कर्ण}^2$ । इति कथं भवति तदर्थं
युक्तिरुच्यते ।

किमप्येकं वृत्तमस्मि यद्ग्यानः = तम. के = वृत्त
केन्द्रम् । केन = वृत्तव्यासार्थम् = कम । तम = इष्ट-
चापम् = चा नर = ९०, $\therefore ९० - तम = मर = ९०$
—चा = चापकोटिः । मज = चापज्या । केज = चापको
टिज्या = मच, $\angle ज = ९०$ केम = त्रिज्या, तदात्र
केमज जात्य त्रिभुजे $1 \text{ चापज्या}^2 + \text{चापकोटिज्या}^2$
= त्रि भविष्यति । यथा ज्या (मन + मर) ज्या (नर) = त्रि = ज्या (चाप + चापको)
तदा 'चापयोरिष्टयोर्दोर्ज्ये' मिथः कोटिज्यकाहते' इत्यादिना
चापज्या × चापकोज्या + चापकोज्या × चापज्या
त्रि

$$= \frac{\text{चापज्या} \times \text{चापज्या} + \text{चापकोज्या} \times \text{चापकोज्या}}{\text{त्रि}} = \text{ज्या } (९०) = \text{त्रि}$$

$$= \frac{\text{चापज्या}^2 + \text{चापकोज्या}^2}{\text{त्रि}} = \text{त्रि} \therefore \text{चापज्या}^2 + \text{चापकोज्या}^2 = \text{त्रि}^2 \text{ मूलैः}$$

$\sqrt{\text{चापज्या}^2 + \text{चापकोज्या}^2} = \text{त्रि}$ । अतः सिद्धं यज्जात्यत्रिभुजे भुजकोटिवर्गयोगस्य मूलं कर्णो भवति । ततः $\sqrt{\text{त्रि}^2 - \text{चापज्या}^2} = \text{चापकोज्या}$ । वा $\sqrt{\text{त्रि}^2 - \text{चापकोज्या}^2} = \text{चापज्या}$, एतेनाऽचार्योक्तमुपपद्यते । लीलावत्यां 'तत्कृत्यो-र्योगपदं कर्णोदोः कर्णवर्गयोर्विवरान्मूलं कोटिरित्यादि' भास्करोक्तमाचार्यो-क्तानुरूपमेवेति ॥२४॥

अब जात्य त्रिभुज में भुज कोटि और कर्ण के ज्ञान के लिये नियम कहते हैं ।

हि. भा.—कर्णवर्ग में से कोटिवर्ग को घटा कर मूल लेने से भुज होता है, कर्ण वर्ग में से भुज वर्ग को घटाकर मूल लेने से कोटि होती है । और भुज तथा कोटि का वर्गयोग मूल कर्ण होता है ॥२४॥

उपपत्ति ।

संस्कृतोपपत्ति में लिखित (१) क्षेत्र को देखिये । जिस त्रिभुज में एक कोण होता है वह जात्य त्रिभुज कहलाता है उसमें समकोण के संमुख भुजकर्ण कहलाता है, समकोण सलग्न भुजद्वय में एक भुज है, दूसरा भुजकोटि है । जैसे अकग त्रिभुज है जिसमें अकग कोण समकोण = ९० है, तब अग = कर्ण, कग = भुज, अक = कोटि ।

यहां $\sqrt{\text{कर्ण}^2 - \text{कोटि}^2} = \text{भुज}$, $\sqrt{\text{कर्ण}^2 - \text{भुज}^2} = \text{कोटि}$, $\sqrt{\text{कोटि}^2 + \text{भुज}^2} = \text{कर्ण}$ यह क्यों होता है इसके लिये युक्ति लिखते हैं । संस्कृतोपपत्ति में लिखित (२) क्षेत्र को देखिये, कोई एक वृत्त है जिसका व्यास = नस, के = वृत्तकेन्द्र, केन = वृत्तव्यासार्ध = कम = त्रिज्या । नम = इष्टचाप = चा, नर = ९०, $\therefore ९० - \text{नम} = \text{मर} = ९० - \text{चा} = \text{चापकोटि}$ । मज = चापज्या, केज = चापकोटिज्या, $\angle \text{ज} = ९०$, तब केमज जात्य त्रिभुज में $\sqrt{\text{चापज्या}^2 + \text{चापकोटिज्या}^2} = \text{त्रि}$, होगा । यहां चापज्या = भुज है, चापकोटिज्या = कोटि है, त्रिज्या कर्ण है, ज्या (मन + मर) = ज्या (नर) = त्रि = ज्या (चा + चापको) तब 'चापयो-रिष्टयोर्दोष्ये मिथः कोटिज्यकाहते' इत्यादि से $\frac{\text{चापज्या} \times \text{चापकोज्या} + \text{चापकोज्या} \times \text{चापज्या}}{\text{त्रि}}$

$$= \frac{\text{चापज्या} \times \text{चापज्या} + \text{चापकोज्या} \times \text{चापकोज्या}}{\text{त्रि}} = \text{ज्या } (९०) = \text{त्रि}$$

$$= \frac{\text{चापज्या}^2 + \text{चापकोज्या}^2}{\text{त्रि}} \therefore \text{चापज्या}^2 + \text{चापकोज्या}^2 = \text{त्रि}^2 \text{ मूल लेने से}$$

$\sqrt{\text{चापज्या}^2 + \text{चापकोज्या}^2} = \text{त्रि}$ । इससे सिद्ध हुआ कि ज्ञात्य त्रिभुज में मुज और कोटि का वर्ग योग मूल कर्ण के बराबर होता है ।

अतः $\sqrt{\text{त्रि}^2 - \text{चापज्या}^2} = \text{चापज्या}$, वा $\sqrt{\text{त्रि}^2 - \text{चापकोज्या}^2} = \text{चापकोज्या}$, इसमें आचार्योक्त उत्पन्न हुआ । नीलावनी में 'लम्बकोज्योऽपि पद कर्णोदो, कर्णवर्गयोर्विपरान्' इत्यादि भास्करोक्त आचार्योक्त के अनुन्त ही है ॥२४॥

इदानीं लम्बकर्णयोर्वर्ध्वधिर खण्डानयनार्थमाह ।

कर्णयुतावूर्ध्वधिरखण्डे कर्णवलम्बयोगे वा ।

स्वावाधे स्वयुतिहूने द्विधा पृथक् कर्णलम्बगुणे ॥ २५ ॥

मु० भा०—आकागाथा—चतुर्भुजे आजा, काना लम्बो, आगा, काधा कर्णो । कर्णयुतिः चाविन्दौ । काचा, चाधा, काधा कर्णस्य, आचा, चागा, आगाकर्णान्योर्ध्वधिरखण्डे । तत्र घामा, माना तथा मागा, मात्रा आवाधे । चामा चाविन्दोरगधारेपरि लम्बः । एव लम्बकर्णयुतौ दाविन्दौ थाविन्दौ च, घाजा, जाना तथा तागा, जाना क्रमेण आवाधे । तेनायमर्थः । स्वावाधे कर्णगुणे स्वयुतिहूने स्वावाधायुतिहूने कर्णयुतावूर्ध्वधिरखण्डे भवतः । एवं स्वावाधे लम्बगुणे स्वावाधायुतिहूने कर्णवलम्बकयोगे ऊर्ध्वधिरखण्डे भवतः ।

अत्रोपपत्तिः ।

उपरिलिखितक्षेत्रतः साजात्यानुपातेन स्फुटा ॥२५॥

= $\frac{\text{कर्ण. आवाधा}}{\text{आवाधायोग}} = \text{घन} = \text{घक कर्णधिर खण्डम्} । \text{ तथा } \frac{\text{कघ. नर}}{\text{घच}}$

= $\frac{\text{कर्ण आवाधा}}{\text{आवाधायोग}} = \text{कन} = \text{घक कर्णोर्ध्व खण्डम्} । \text{ एवमेव लम्बकर्ण योगबिन्दौ}$
लम्बोर्ध्वधिरखण्डे अनुपातेन भवत इति ॥२५॥

अब लम्ब और कर्ण के ऊर्ध्वधर खण्डानयन के लिये कहते हैं ।

हि. भा. — अपनी आवाधाओं को कर्ण से गुणाकर कर्ण से भाग देने से दोनों कर्णों के योग बिन्दु में कर्ण का ऊर्ध्व खण्ड और अधर खण्ड होता है, एवं अपनी आवाधाओं के लम्ब से गुणाकर अपनी आवाधायोग से भाग देने से कर्ण और लम्ब के योग बिन्दु में लम्ब का ऊर्ध्वखण्ड और अधरखण्ड होता है ॥२५॥

उपपत्ति ।

यहां संस्कृतोपपत्ति में लिखित (क) क्षेत्र को देखिये । जैसे अकगघ चतुर्भुज में अप, कच दोनों लम्ब हैं, तथा अग, कघ दोनों कर्ण हैं, दोनों कर्णों का योग बिन्दु = न, इस न बिन्दु में अग कर्ण का ऊर्ध्वखण्ड = अन, और अधर खण्ड = नग है, कघ कर्ण का ऊर्ध्वखण्ड = नक है, अधरखण्ड = नघ है और मग, मप तथा घग, मच आवाधायें हैं । न बिन्दु से घग आधार के ऊपर लम्ब नम है, इसी तरह लम्ब और कर्ण के योग बिन्दु (ट, और य) में घप, पच तथा चग, पच आवाधायें हैं तब अपग, नमग दोनों त्रिभुजों के सजातीयत्व से अनुपात करते हैं $\frac{\text{अ. पग}}{\text{पग}} = \frac{\text{कर्ण आवाधा}}{\text{आवाधायोग}} = \text{नग} = \text{अग कर्णधिरखण्ड तथा अपग, अनज}$

दोनों त्रिभुजों के सजातीयत्व से $\frac{\text{अग. नज}}{\text{पग}} = \frac{\text{कर्ण. आवाधा}}{\text{आवाधायोग}} = \text{अन} = \text{अग कर्णोर्ध्व-}$

खण्ड इसी तरह $\frac{\text{कघ. घन}}{\text{घच}} = \frac{\text{कर्ण. आवाधा}}{\text{आवाधायोग}} = \text{घन} = \text{घक कर्ण के अधर}$

(तोत्रे का खण्ड)

$$\text{तथा } \frac{\text{कत्र तर}}{\text{धव}} = \frac{\frac{1}{\text{कर्ग.}} \cdot \frac{1}{\text{अ.वाधा.}}}{\text{अ.वाधायोग}} = \text{कन} = \text{प्रक कर्ग के ऊर्ध्व (ऊपर का) खण्ड;}$$

एतां तद्वत् लम्ब और कर्ग के योग विन्दु में लम्ब का ऊर्ध्वखण्ड और अधरखण्ड अनुपात में होता है इति ॥ २५ ॥

इदानीं चतुर्भुजोपरिगत वृत्तस्य व्यासज्ञानार्थमाह ।

अविषम पाद्वर्धभुजगुणः कर्णो द्विगुणावलम्बरुधिभक्तः ।

हृदयं विषमस्य भुजप्रतिभुज कृतियोगमूलार्थम् ॥ २६ ॥

सू० भा०—वर्गक्षेत्रे तथाऽऽयते कर्ग एव व्यास इति स्फुटम् । अत्राविषमेन तद् समलम्बचतुर्भुजम् यत्र कर्गो भुजौ द्वौ च तुल्यौ उच्यते । तेनायमर्थः । कर्गः पाद्वर्धभुजेन गुणो द्विगुणावलम्बरुधिभक्तः फल हृदयं चतुर्भुजोपरिगतवृत्तस्य व्यासार्थं भवेत् । विषमचतुर्भुजे यत्रोपरिगतवृत्तं भवितुमर्हति तत्र भुजप्रतिभुजयोर्वर्गयोगमूलार्थं हृदयं व्यासार्थं भवेत् ।

अत्रोपपत्तिः ।

तुल्यभुजसमलम्बचतुर्भुजे वर्गक्षेत्रेण त्रिभुजद्वयमेकवृत्तान्तर्गतम् । अत एव त्रिभुजोपरिगतवृत्तव्यास एवान्यत्रिभुजोपरिगतवृत्तस्य वा चतुर्भुजोपरिगतवृत्तस्य व्यासो भवति । एकस्मिन् त्रिभुजे कर्गः पाद्वर्धभुजा भुजौ च लम्ब एव लम्बः । अतो रेखागणित पट्टाध्यायेन त्रिबाहुकवर्हिर्गन्तवृत्तव्यासदलं किलेन्यादिना व्यासद = $\frac{\text{क} \times \text{पाभु}}{२ \text{ ल}}$ । वृत्तान्तर्गते विषमचतुर्भुजे यत्र भुजप्रतिभुजयोरर्थात् संमुखभुजयोरुपरि चापयोर्योगः परिध्यर्धसममन्त्रैवाऽऽचार्यमने व्यासदलज्ञानं भवति यतस्तत्रैव भुजाभ्यां प्रतिभुजसमपूर्णां ज्यादानेन तदुपरिगाचापयोगस्य परिध्यर्धसमत्वात् तदुत्पन्नकोणः समकोणस्तदग्रगता रेखा कर्णश्च व्यासो भवति नान्यथेति सुधोभिर्भूतं विचिन्त्यम् ॥ २६ ॥

विः भा०—वर्गक्षेत्रे आयते च कर्ग एव तदुपरिगतवृत्त व्यासः । अत्राविषमेन समलम्बचतुर्भुजं दोष्यम् । यत्र कर्गो भुजौ द्वौ च तुल्यौ, कर्गः पाद्वर्धभुजेन गुणो द्विगुणावलम्बरुधिभक्तः फल हृदयमर्थात् चतुर्भुजोपरिगत वृत्तस्य व्यासार्थं भवेत् । विषम चतुर्भुजे यत्र तदुपरिगतवृत्तं भवितुमर्हति तत्र भुज प्रति भुजयोर्वर्गयोग मूलार्थं हृदयं (व्यासार्थं) भवेत् ॥ २६ ॥

अत्रोपपत्तिः ।

तुल्य भुज समलम्बचतुर्भुजे कर्णवशेन त्रिभुजद्वयमेक वृत्तान्तर्गतं भवति, तेन त्रिभुजोपरिगत वृत्तव्यास एव चतुर्भुजोपरिगत वृत्तव्यासो भवति, एकस्मिन् त्रिभुजे कर्णः पार्श्वभुजौ, लम्ब एव लम्बः । तदा त्रिबाहुकवहिल्लेन वृत्त व्यासदलमित्यादिना $\frac{\text{कर्ण पार्श्वभुज}}{२ \text{ लम्ब}} = \text{व्यासार्धम्}$ । वृत्तान्तर्गते विषमचतुर्भुजे यत्र भुज प्रतिभुजयोरर्थात् संमुखभुजयोरुपरि चापयोर्योगः परिध्यर्धसमस्तत्रैवाऽऽ-चर्यमतेन व्यासार्धज्ञानं भवति । यतस्तत्रैव भुजाग्रात् प्रतिभुजसमपूर्णं व्यादानेन तदुपरिगचापयोगस्य परिध्यर्धसमत्वात् तदुत्पन्नकोणः समकोणस्तदग्रगता रेखा कर्णश्च व्यासो भवति नान्यथेति ॥ २६ ॥

अब चतुर्भुजोपरि गत वृत्त के व्यासार्धज्ञान के लिए कहते हैं ।

हि. भा.—वर्ग क्षेत्रोपरिगत वृत्त का व्यास उसका कर्ण ही होता है, आयत क्षेत्र में भी ऐसा ही होता है, आचार्योक्त पद्य में अविषम शब्द से समलम्ब समानान्तर चतुर्भुज समझना चाहिये जहाँ दोनों कर्ण दोनों भुज बराबर हैं । कर्ण को पार्श्वस्थ भुज से गुणा कर द्विगुणित लम्ब से भाग देने से चतुर्भुजोपरिगत वृत्त का व्यासार्ध होता है । विषम चतुर्भुज में जिसमें उसके ऊपर वृत्त हो सकता है उसमें भुज और प्रतिभुज (संमुख भुज) के वर्गयोग मूल का आधा व्यासार्ध होता है ॥ २६ ॥

उपपत्ति ।

तुल्यभुज सम लम्ब चतुर्भुजमें कर्णवश से जो त्रिभुजद्वय होता है वह त्रिभुज द्वय एक ही वृत्तान्तर्गत होता है इसलिए त्रिभुजोपरिगत वृत्त व्यास ही चतुर्भुजोपरिगत वृत्तव्यास होता है, एक त्रिभुज में कर्ण-पार्श्वभुज और भुज, लम्ब लम्ब ही है तब 'त्रिबाहुक वहिल्लेन वृत्त व्यास दल' इत्यादि संशोधकोक्त से $\frac{\text{कर्ण पार्श्वभुज}}{२ \text{ लम्ब}} = \text{व्यासार्धं}$, वृत्तान्तर्गत चतुर्भुज में जहाँ कि संमुख दोनों भुजों के ऊपर चापद्वय का योग परिध्यर्ध (१८० अंश) के बराबर होता है वही पर आचार्य मत से व्यासार्धज्ञान होता है, क्योंकि वहीं पर भुजाग्र से संमुख भुजतुल्य पूर्णव्या दान देने से उसका उपरिगत चापयोग परिध्यर्ध के बराबर होता है, उससे उत्पन्न कोण समकोण होता है, उसका अग्रगत रेखा (कर्ण) व्यास होता है, इससे अन्यथा नहीं होता है ॥ २६ ॥

इदानीं त्रिभुजोपरिगतवृत्तव्यासार्धज्ञानार्थमाह ।

त्रिभुजस्य वधो भुजयोर्द्विगुणितलम्बोद्धृतो हृदयरज्जुः ।

सा द्विगुणा त्रिचतुर्भुजकोणस्पृग्वृत्तविष्कम्भः । २७ ॥

सु. भा.—स्पष्टार्थमुपपत्तिश्चोपरिगप्रकारेण स्फुटा ॥२७॥

वि. भा.—त्रिभुजे भुजद्वयघातार्थं भुजद्वययोगविन्दुन आधारोपरिलम्बेन भक्तं तदा तदुपरि (त्रिभुजोपरि) गतवृत्तव्यासार्थं भवति । द्विगुणी करणेन वृत्त-
व्यासो भवतीति ॥ २७ ॥

अत्रोपपत्तिः ।

आकागा त्रिभुजमस्ति यदुपरिगित वृत्तस्य केन्द्रम् = के
केका = केगा = व्यासार्धम् = य
काना = अ, आगा = क, आका = ग

रेखागणितयुक्त्या परिधिर्लघ्न आ कोणात्
केन्द्रलघ्न के कोणो द्विगुणो भवति । तदा 'भुज मध्य-
गता जीवा क्षुण्णा दोष्णोर्वधेन सा । दलिता त्रिभुजस्य

स्यात् फलमित्यादि' विशेषोक्त सूत्रेण आकागा त्रिभुज फलम् = $\frac{\text{क. ग. ज्या आ}}{२}$

$\frac{\text{क. ग. ज्या के}}{२}$ । काकेगा समद्विबाहुक त्रिभुजे के बिन्दुनः कागा भुजोपरिलम्बः

= केन, तदा कान = गान = $\frac{\text{अ}}{२}$, तथा < काकेन = < गाकेन = $\frac{\text{के}}{२}$

काकेन त्रिभुजेऽनुपातेन $\frac{१ \times \text{कान}}{\text{काके}} = \frac{\text{कान}}{\text{काके}} = \frac{\text{अ}}{२ \text{ य}} = \text{ज्या के}$ तत उत्थापनेन

त्रिभुजफलम् = $\frac{\text{अ. क. ग}}{४ \text{ य}}$, आ बिन्दुनः कागा आधारोपरिलम्बः = ल, तदा लम्ब

गुणं भूम्यर्धमित्यादिना त्रिभुजफलम् = $\frac{\text{अ. ल}}{२}$, अतस्त्रिभुजफलयाः समीकरणम्

$\frac{\text{अ. क. ग}}{४ \text{ य}} = \frac{\text{अ. ल}}{२}$ पक्षौ द्वाभ्यां गुणितौ तदा $\frac{\text{अ. क. ग}}{२ \text{ य}} = \text{अ. ल छेदगमेन अ. क. ग}$
= २ अ. य. ल

∴ य = $\frac{\text{अ. क. ग}}{२ \text{ अ. ल}} = \frac{\text{क. ग}}{२ \text{ ल}}$ एतेनाऽऽचार्योक्तपद्यमुपपत्तम् । 'त्रिबाहुक दहिल-

ग्नवृत्तव्यासदलं किल । भुजयोगहृतेः खण्डाल्लम्बाप्तेन समं भवेत्' इति मशोधको
(पं. बापूदेव शास्त्री) क्तमप्युपपद्यते । सिद्धान्त शेखरे 'त्रिबाहुनः पार्श्वं भुजा वधार्थं
लम्बेन भक्तं हृदयस्य रज्जुः' श्री पत्युक्तमिदमाचार्योक्तानुरूपमेवेति ॥ २७ ॥

अब त्रिभुजोपरिगतवृत्त व्यासार्ध के ज्ञानार्थ कहते हैं।

हि. भा.—त्रिभुज के दो भुजों के घातार्ध को दोनों भुजों के योग बिन्दु से आधार के ऊपर जो लम्ब होता है उससे भाग देने से त्रिभुजोपरिगत वृत्त का व्यासार्ध होता है, इस को द्विगुणित करने से वृत्तव्यास होता है ॥२६॥

उपपत्ति ।

यहां संस्कृतोपपत्ति में लिखित (क) क्षेत्र को देखिये। आकागा त्रिभुज है जिसके उपरिगतवृत्तका केन्द्र = के है, केका = केगा = व्यासार्ध = य, कागा = अ, आगा = क, आका = ग, रेखागणित की युक्ति से परिधि लग्न आ कोण केन्द्रलग्न के कोण का आधा होता है, तब 'भुजमध्यगता जीवा' इत्यादि संस्कृतोपपत्ति में लिखित विशेषोक्त सूत्र से आकागा त्रिभुज फल

$$= \frac{\text{क. ग. ज्याआ}}{२} = \frac{\text{क. ग. ज्या} \frac{\text{के}}{२}}{२}, \text{ काकेगा समद्विबाहुक त्रिभुज में के बिन्दुसे कागा}$$

$$\text{भुज के ऊपर लम्ब} = \text{केन}, \text{ तब कान} = \text{गान} = \frac{\text{अ}}{२}, \text{ तथा } < \text{काकेन} = \angle \text{गाकेन} = \frac{\angle \text{के}}{२}$$

$$\text{काकेन त्रिभुज में अनुपात से } \frac{१ \times \text{कान}}{\text{का के}} = \frac{\text{कान}}{\text{का के}} = \frac{\text{अ}}{२ य} = \text{ज्या } \frac{\text{के}}{२} \text{ तब उत्था-}$$

$$\text{पन से त्रिभुजफल} = \frac{\text{अ क. ग}}{४ य} \text{ आ बिन्दु से कागा आधार के ऊपर लम्ब} = \text{ल}, \text{ तब}$$

$$\text{'लम्बगुणं भूम्यर्ध' इत्यादि से त्रिभुजफल} = \frac{\text{अ. ल}}{२}, \text{ दोनों त्रिभुज फलों के समीकरण से}$$

$$\frac{\text{अ. क. ग}}{४ य} = \frac{\text{अ. ल}}{२} \text{ दोनों पक्ष को २ से गुणने पर } \frac{\text{अ. क. ग.}}{२ य} = \text{अ. ल. छेदगम से अ. क. ग.}$$

$$= \text{अ. ल. २य, } \therefore \text{ य} = \frac{\text{अ. क. ग.}}{२. \text{अ. ल.}} = \frac{\text{क. ग.}}{२ ल} \text{ इससे आचार्योक्त उपपन्न हुआ ।}$$

“त्रिबाहुकबहिलग्नवृत्तव्यासदल” इत्यादि संस्कृतोपपत्तिमें लिखित सशोधकोक्त पद्य भी उपपन्न होता है। सिद्धान्त शेखर में ‘त्रिबाहुनः पार्श्वभुजावधार्य’ यह श्रीपत्युक्त त्रिभुजोपरिगतवृत्त-व्यासार्धनियन आचार्योक्त के अनुरूप ही है ॥२७॥

इदानीं विषमचतुर्भुजस्य कर्णयोरानयनार्थमाह ।

कर्णाश्रितभुजघातैक्यमुभयथाऽन्योन्य भाजितं गुणयेत् ।

योगेन भुज प्रति भुजवधयोः कर्णो पदे विषमे ॥२८॥

सु० भा०—स्पष्टार्थ आस्करलीलावतीतः । अनेन प्रकारेण वृत्तान्तर्गत

चतुर्भुजस्यैव कर्णौ भवत इत्येवमर्थं मञ्जोविता भास्करलीलावती
दृष्टव्या ॥२८॥

वि. भा.—कर्णयोरश्रिते ये भुजे तयोर्यो
घानन्तयोरैक्यं (योगः) अर्थात् उभयपार्श्वे
कर्णाश्रितौ यौ यौ भुजौ तयोस्तयोर्भुजयोः
पृथक् पृथक् यौ घातौ तयोरैक्यं विधेयम् ।
एवमन्य कर्णस्यापि तत् द्विधा परस्परं भाजितं
कायम् । भुजप्रति भुजवधगोः (नन्मुख संमुखभुज घानयोः) योगेन गुणयेत्, तयोः
पदे (मूले) ये तौ विषमचतुर्भुजे कर्णौ भवेतामिति ।

अत्रोपपत्तिः ।

आकागाघा विषमचतुर्भुजमस्मिन्, यस्य भुजचतुष्टयेभ्यः कर्णद्वयाऽऽनयत-
मभीष्टमस्मिन्, कल्प्यते आका=अ, कागा=क, गाघा=ग, आघा=घ, काघा-
कर्णः=य, आगाकर्णः=र । तदा आकाघा त्रिभुजे, 'भूमंभूखास्रोद्भव कोटि
शिञ्जिनी दोर्वानगुण्या त्रिगुणार्धभक्ता । दोर्वर्गयोगो रहितस्तया स्यादाचार
वर्गोऽस्य पदं महीचै' नि विशेषोक्त सूत्रेण ।

अ^२+घ^२—२ अ. घ. कोज्याआ=य^२ एवमेव कागाघा त्रिभुजेऽपि क^२+
ग^२—२ क. ग. कोज्यागा=य^२ ततः समचोवनादिना $\frac{अ^२+घ^२-य^२}{२ अ. घ.}$ = कोज्याआ,

तथा $\frac{क^२+ग^२-य^२}{२ क. ग.}$ कोज्यागा यदि आ+गा=१८० तदा आ=१८०—गा

∴ कोज्याआ=कोज्या (१८०—गा) = -कोज्यागा ∴ $\frac{अ^२+घ^२-य^२}{२ अ. घ.}$

= $\frac{क^२+ग^२-य^२}{२ क. ग.} = \frac{-क^२-ग^२+य^२}{२ क. ग.}$ छेदगमेन अ^२.क.ग+घ^२.क.ग-य^२.क.ग. =

-क^२.अ. घ-ग^२.अ.घ+य^२.अ.घ समयोजनेन अ.^२क.ग+घ.^२क.ग+क.^२अ.घ+
ग.^२अ.घ=य^२ अ.घ+य^२क.ग=य^२ (अ. घ+क. ग)=अ. ग. (अ.क+ग.घ)+
क. घ (अ. क+ग. घ)=(अ. क+ग. घ) (अ.ग+क. घ)=य^२ (अ. घ+क.ग)

∴ $\frac{(अ.क+ग. घ)(अ. ग+क.घ)}{अ. घ+क. ग} = य^२ मूलेन $\sqrt{\frac{(अ.क+ग.घ)(अ.ग+क.घ)}{अ. घ+क. ग}}$$

= य एवमेव $\sqrt{\frac{(अ. ग+क. घ)(अ. घ+क. ग)}{अ. क+ग. घ}} = र$, एतेनाऽऽचार्योक्तमुपपद्यते ।

परं पूर्वं आ, गा संमुख कोणयोर्योगः=१८० इति स्वीकृत्य कर्णाद्वयानयनं कृतं संमुख कोणयोर्योगः समकोणद्वयसमानो वृत्तान्तर्गतं चतुर्भुज एव भवत्यतः सिद्धं यदानीतं कर्णाद्वयमानं वृत्तान्तर्गतं चतुर्भुजस्यैवार्थादाचार्योक्तसूत्रेण वृत्तान्तर्गतं चतुर्भुजस्यैव कर्णानयनं वास्तवं भवितुमर्हति, नहि साधारण विषम चतुर्भुजस्य । सिद्धान्तं देखरे “कर्णान्त-संश्रित-भुजाहृतिसयुतिर्या भक्ता परस्परमसौ गुणयेत् द्विधा ताम् । युत्या भुज प्रति भुजा वधयोः पदे तु कर्णाविमौ हि विषमाख्य चतुर्भुजस्य” श्रीपत्यु-क्तमिदं विषम चतुर्भुजकर्णानयन माचार्योक्तानुरूपमेव लीलावत्यां भास्करेण त्वा-चार्योक्त पद्यमेवाऽक्षरशो लिखितं तत्खण्डनं च कृतम् ॥ २८ ॥

अब विषम चतुर्भुज में चारों भुजों से कर्णाद्वय के आनयन को कहते हैं ।

हि. भा.—उभय पार्श्व में कर्णाश्रित जो दो दो भुज हैं उन उन दोनों भुजों के पृथक् पृथक् घात का योग करना, इसी तरह दूसरे कर्ण का भी करना चाहिये, उसको दो जगह परस्पर भाजित करना अर्थात् भाजक स्थान में रखना, और संमुख संमुख भुजघात योग से गुणा करना, दोनों का मूल लेने से विषम चतुर्भुज में दोनों कर्णों का मान होता है ॥२८॥

उपपत्ति ।

यहां संस्कृतोपपत्ति में लिखित (क) क्षेत्र को देखिये । आकागाघा विषय चतुर्भुज है जिसके चारों भुजों से दोनों कर्णों का आनयन करना अभीष्ट है । कल्पना करते हैं आका=अ, कागा=क, गाघा=ग, आघा=घ, काघा कर्णः=य, आगा कर्णः=र, तब ‘भूसंमुखा-स्रोद्भवकोटिशिञ्जिनी’ इत्यादि संस्कृतोपपत्ति में लिखित विशेषोक्त पद्य से आकाघा त्रिभुज में अ^२+घ^२—२ अ. घ. कोज्याआ=य^२, इसी तरह कागाघा त्रिभुज में भी क^२+ग^२—१ क. ग. कोज्यागा=य^२ । समशोधनादि से $\frac{अ^२+घ^२-य^२}{२ अ. घ} = कोज्याआ,$

तथा $\frac{क^२+ग^२-य^२}{२ क. ग} = कोज्यागा$ यदि आ+गा=१८० तब आ=१८०—गा

∴ कोज्याआ=कोज्या (१८०—गा)=—कोज्यागा

$$\therefore \frac{अ^२+घ^२-य^२}{२ अ. घ} = -\frac{क^२+ग^२-य^२}{२ क. ग} = \frac{-क^२-ग^२+य^२}{२ क. ग} \text{ छेदगम से}$$

अ^२. क. ग+घ^२. क. ग—य^२. क. ग=—क^२ अ. घ ग^२. अ. घ+य^२. अ. घ
दोनों पक्षों में समान जोड़ने से अ^२. क. ग+घ^२. क. ग+क^२. अ. घ=ग^२. अ. घ+य^२. क. ग=य^२ (अ. घ+क. ग)=अ. ग (अ. क+ग. घ)+क. घ
(अ. क+ग. घ)=(अ. क+ग. घ) (अ. ग+क. घ)=य^२ (अ. घ+क. ग)

∴ (अ. क+ग. घ) (अ. ग+क. घ) = य^२ मूल लेने से
अ. घ+क. ग

$\sqrt{\frac{(अ. क+ग. घ) (अ. ग+क. घ)}{अ. घ+क. ग}} = य$ ।

इसी तरह $\sqrt{\frac{(अ. ग+क. घ) (अ. घ+क. ग)}{अ. क+ग. घ}} = र$ इसमें आचार्योक्त उपपन्न हुआ ।

लेकिन पहले आ, सा समुच्च कोण द्वय योग = १८० स्वीकार कर दोनों कर्णों का आनयन किया गया है । समुच्च कोण द्वय का योग दो समकोण के बराबर केवल वृत्तान्तर्गत चतुर्भुज ही में होता है अतः सिद्ध हुआ कि पहले जो दोनों कर्णों का मान लगाया गया वह वृत्तान्तर्गत चतुर्भुज ही का है अर्थात् आचार्योक्त सूत्र में वृत्तान्तर्गत चतुर्भुज ही का कर्णनियन वास्तव हो सकता है, साधारण विषम चतुर्भुज का नहीं हो सकता है । मिडान्त शेखर में 'कर्णान्त-संश्रितभुजाहनिमयुनिर्या' इत्यादि मस्कृतोपपत्ति में लिखित श्लोक में श्रीपति ने विषम चतुर्भुज का कर्णनियन आचार्योक्त के अनुरूप ही किया है । लीलावती में भास्कराचार्य ने आचार्योक्त कर्णनियन दिखला कर उसका खण्डन किया है ॥ २८ ॥

इदानीं विषमचतुर्भुजे लम्बानयनार्थमाह ।

विषमचतुरस्रमध्ये विषमत्रिभुजद्वयं प्रकल्प्य पृथक् ।

कर्णद्वयेन पूर्ववदावाधे लम्बकौ च पृथक् ॥ २९ ॥

सु. भा.—कर्णभुजौ भुजौ भूरेव भूगिति त्रिभुजद्वयं भवति । ज्ञेयं स्पष्टार्थम् । 'चतुर्भुजान्तस्त्रिभुजेऽवलम्बः प्राग्वद्भुजौ' इत्यादि भास्करोक्तमेतदनुरूपमेव । अत्र विषमचतुर्भुजे चतुर्वेदाचार्येण गद्यमयं यदुदाहरणं प्रदर्शितं तदेव भास्करोक्तं 'द्विपंचाशन्मितव्येकचत्वारिंशन्मितौ भुजौ' इत्यादि पद्येनोपबद्धमिति ॥ २९ ॥

वि भा.—विषमचतुर्भुजे कर्णद्वयवशेन पृथक् त्रिभुजद्वयं भवति. तत्र पूर्ववदावाधे लम्बकौ च भवनः । यथैक त्रिभुजे कर्णभुजौ भुजौ तथा भूच्च भूस्तदा त्रिभुजे भुजयोर्गोणस्तदन्तर गुणो भुवाहृत इत्यादिनाऽऽवाधे विहिते भवतस्ततः 'स्वावाधाभुज कृत्योरन्तर मूल प्रजायते लम्बः' भास्करोक्तं तानेन लम्बज्ञानं भवेत् द्वितीयकर्णवशेन यत्त्रिभुजमुत्पद्यते तत्राप्येव मेव लम्बज्ञानं भवेत् । लीलावत्यां 'चतुर्भुजान्तस्त्रिभुजेऽवलम्बः प्राग्वद्भुजौ कर्णभुजौ महीभूरिति' भास्करोक्तमाचार्योक्तानुरूपमेवास्ति, अस्योपपत्तिरपीयमेव बोध्येति ॥ २९ ॥

अब विषम चतुर्भुज में लम्बानयन के लिये कहते हैं ।

हि. भा.—विषम चतुर्भुज में कर्णद्वय से जो त्रिभुज बनता है उस में दोनों आवा-

घायें और लम्ब विदित होता है, जैसे कर्ण और भुज दोनों भुज तथा भू (आधार) इन तीनों भुजों से जो त्रिभुज बनता है उस में त्रिभुजे भुजयोर्योगस्तदन्तर गुणः' इत्यादि से दोनों आवाधाये विदित हो जायगी, 'तब स्वावाधा भुजकृत्योरन्तरमूल प्रजायते लम्बः' इससे लम्बज्ञान होजायगा । लीलावती में 'चतुर्भुजान्तस्त्रिभुजेऽवलम्बः' इत्यादि भास्करोक्त लम्ब-ज्ञान विधि आचार्योक्त के अनुरूप ही है, इसकी उपपत्ति भी यही समझनी चाहिये ॥२६॥

इदानीं विषमचतुर्भुजे कर्णद्वय योगतः कर्णोर्ध्वाधरखण्डयोरानयनार्थमाह ।

विषम भुजान्तस्त्रिभुजे प्रकल्प्य कर्णौ भुवौ तदावाधे ।

पृथगूर्ध्वाधरखण्डे कर्णयुतौ कर्णयोरधरे ॥३०॥

सु. भा.—विषमभुजान्तविषमचतुर्भुजान्तः कर्णौ भूस्तल्लग्नभुजौभुजौ । एवं द्वे त्रिभुजे परिकल्प्य कर्णयुतौ पृथक् कर्णयोरूर्ध्वाधरखण्डे पूर्वोक्तक्षेत्रयुत्तथा साध्ये । कर्णयोरधरे इत्यस्याग्रे सम्बन्धः । विषमचतुर्भुजे यदा कर्णौ परस्परं लम्बरूपौ तदैवाचार्योक्तप्रकारेणोह कर्णयोरूर्ध्वाधरखण्डे सिद्धे भवतो नान्यथेति क्षेत्रयुत्तथा-सर्व स्फुटम् ॥३०॥

वि. भा.—विषमभुजान्तः (विषमचतुर्भुजमध्ये) कर्णौ भूस्तल्लग्नभुजौ भुजाविति भुजत्रयैरूपन्नमेकं त्रिभुजम् द्वितीय कर्ण सम्बन्धेनैवं द्वितीयं त्रिभुजं भवति, एवं द्वे त्रिभुजे प्रकल्प्य कर्णयुतौ (कर्णयोर्योग बिन्दौ) पृथक् कर्णयोरूर्ध्वाधर खण्डे साध्ये । कर्णयोरधरे इत्यस्याग्रिमश्लोकेन सम्बन्ध इति ॥३०॥

अत्रोपपत्तिः ।

आकागाघा विषमचतुर्भुजमस्ति, यस्य आका=अ, कागा=क, गाघा=ग, आघा=घ इति भुजाः सन्ति, आगाकर्णः=र, काघा कर्णः=य, अत्र यदिकर्णौ परस्परं लम्बरूपौ स्तस्तदा आगाघा त्रिभुजे घा बिन्दुतो आगा कर्ण भूमौ लम्बः=घान आन, गान आवाधे

घान=य कर्णोर्ध्वखण्डम्, कान=अधरखण्डम् कर्णद्वय योग बिन्दुः=न, गान=र कर्णोर्ध्व खण्डम् । आन=अधर खण्डम् । तदोक्त त्रिभुजे 'त्रिभुजे भुजयोर्योगस्तदन्तर गुण इत्यादि' भास्करोक्तसूत्रेण आन, गान आवाधे विदिते भवतस्तथा घान लम्बमान मपि विदितं भवेत् । एवं आकागा त्रिभुजे 'त्रिभुजे भुजयोर्योग इत्यादि-नैव' कान लम्बमानं य कर्णस्याधर खण्डं विदितं भवेत् । एतावतेति सिद्धयति

यद्यदा कर्णद्वयं परस्परं लम्बरूपं भवेत्तदैवाऽऽचार्योक्त प्रकारेण कर्णयो ऊर्ध्वधर खण्डयोरानयं भवितुं मर्हन्ति नान्यथेति ॥३०॥

अब विषमचतुर्भुज में कर्णद्वय योग बिन्दु में कर्णों के ऊर्ध्वखण्ड और अधरखण्ड के आनयन के लिये कहते हैं ।

हि. भा.—विषम चतुर्भुज में कर्णरूप भू (आधार) और तल्लयन भुजद्वय से एक त्रिभुज बनना है, द्वितीय कर्ण सम्बन्ध में भी द्वितीय त्रिभुज होता है, इन तरह दो त्रिभुजों के सम्बन्ध में कर्णयोग बिन्दु में पृथक् पृथक् दोनों कर्णों के ऊर्ध्वधर खण्ड माधन करना चाहिये ॥३०॥

उपपत्ति ।

यहां मस्कृतोपपत्ति में लिखित (क) क्षेत्र को देखिये । आकाशाद्या विषम चतुर्भुज है, जिनके आका = अ, कागा = क, गाधा = ग, आया = घ, भुज है, काधा कर्ण = य, आगा कर्ण = र, यहाँ यदि दोनों कर्ण परस्पर लम्ब रूप है तब आगाधा त्रिभुज में घा बिन्दु से आगा कर्ण भूमि पर लम्ब = घान. आन. गान आवाधाण है । घान = कर्णोर्ध्वखण्ड, कान = अधः खण्ड, दोनों कर्णों का योग बिन्दु = न, गान = र कर्णोर्ध्वखण्ड, आन = अधः खण्ड, तब उक्त त्रिभुज में 'त्रिभुजे भुजयोर्योऽन्तर्गतगुणः' इत्यादि भास्करोक्त सूत्र से आन, गान दोनों आवाधाये विदिन होगी, और घान लम्ब मान भी विदिन होगा, इसी तरह कान लम्बमान (य कर्ण का अधर खण्ड) विदिन होगा, इसमें यह सिद्ध होता है कि यदि चतुर्भुज में दोनों कर्ण परस्पर लम्बरूप है तब ही आचार्योक्त प्रकार से दोनों कर्णों के ऊर्ध्वखण्ड और अधः खण्ड का आनयन हो सकता है, अन्यथा नहीं ॥ ३० ॥

इदानीं विषमचतुर्भुजे मध्य लम्बोर्ध्वधरखण्डज्ञानार्थमाह ।

त्रिभुजे भुजौ तु भूमिस्तल्लम्बो लम्बकाधर खण्डम् ।

ऊर्ध्वमवलम्बखण्डं लम्बकयोगार्धमधरोनम् ॥ ३१ ॥

सु. भा.—कर्णयोर्ये अधरे खण्डे ते एव वस्मिन्नपि त्रिभुजे भुजौ कल्प्यौ । भूमिस्तु चतुर्भुजे या सैव । ततस्तल्लम्बो यस्तदेव लम्बकाधरं मध्यलम्बकाधरं खण्डं भवेत् । चतुर्भुजलम्बयोर्योगार्धं पूर्वादिताधरखण्डोनमूर्ध्वमवलम्बखण्डं भवेत् । एवं चतुर्भुजलम्बयोरन्तरे यद्भूमिखण्डं तन्मध्ये एव कर्णयुतिनो मध्यलम्बः पतेत् तदैवाचार्यप्रकारेणैव मध्यलम्बोर्ध्वखण्डसिद्धिर्नान्यथेति ॥३१॥

वि. भा.—कर्णयोर्ये अधरे खण्डे ते एव त्रिभुजे भुजौ, भूमिस्तु चतुर्भुजस्य या सैव तदैतद् भुजत्रयरूपेण त्रिभुजे यो लम्बतदेव लम्बकाधरं (मध्यलम्बका-

धरमयत्किर्णद्वय योग बिन्दुतो भूम्युपरिलम्बरूपं) खण्डं भवेत् । लम्बकयोगार्ध (चतुर्भुजस्य लम्बयोर्योगार्ध) समानोत्तेन लम्बकाधरखण्डेन हीनं कार्यं तदा मध्य-लम्बोर्ध्वखण्डं भवेत् ॥ ३१ ॥

अत्रोपपत्तिः ।

पूर्वश्लोकोपपत्तौ लिखित-आकागाघा-चतुर्भुजे कर्णयोर्योग बिन्दुः=न, आन, कान क्रमेण आगा, काघा कर्णयोरधरखण्डे, तदा आनका त्रिभुजे त्रिभुजे भुजयोरित्यादिना' न बिन्दुतो आका भूमौ यो लम्बस्तज्ज्ञानं भवेत्तदेव मध्य-लम्बकाधरं खण्डम् । गा, घा बिन्दुभ्यां आका भूमौ यौ लम्बौ तौ चतुर्भुजीय लम्बौ, एतयोर्योगार्ध मध्यलम्बकाधर खण्डेन हीनं तदा मध्यलम्बोर्ध्व खण्डं भवेत् । परमिति तदैव भवितुमर्हति यदा वर्धितमध्यलम्बकेन गाघा रेखाऽर्धिता भवेन्नान्यथा, तथा च चतुर्भुजीय लम्ब द्वयमूलयोर्मध्ये एव यदि कर्णद्वय योग बिन्दुतो भूम्युपरिलम्ब (मध्यलम्ब) मूलं पतेत्तदैवाऽऽचार्यं प्रकारेणैवं मध्यलम्बोर्ध्व खण्डज्ञानं भवितुमर्हति नान्यथेति ॥ ३१ ॥

अब विषम चतुर्भुज में मध्य लम्ब के ऊर्ध्वाधर खण्डो के ज्ञान के लिये कहते हैं ।

हि. भा. —दोनों कर्णों के जो अधर खण्ड है वे दोनों भुज और चतुर्भुज की भूमि, इन तीनों भुजों से उत्पन्न त्रिभुज में जो लम्ब होता है वही दोनों कर्णों के योग बिन्दु से भूमि के ऊपर लम्ब मध्यलम्ब के अधर खण्ड है । चतुर्भुज के दोनों लम्बों (मुखरेखा के दोनों प्रान्त बिन्दुओं से भूमि के उपर लम्बद्वय) के योगार्ध में मध्य लम्बके अधरखण्ड को घटाने से मध्यलम्ब का ऊर्ध्व खण्ड होता है ॥ ३१ ॥

उपपत्ति ।

पूर्व श्लोक की उपपत्ति में लिखित आकागाघा चतुर्भुज में दोनों कर्णों के योगबिन्दु =न, आन, कान क्रम से आगा, काघा दोनों कर्णों के अधर खण्ड है, तब आनका त्रिभुज में 'त्रिभुजे भुजयोर्योगः' इत्यादि से न बिन्दु से आका भूमि के ऊपर लम्ब का ज्ञान होगा वही मध्यलम्ब के अधर खण्ड है । गा, घा दोनों बिन्दुओं से आका भूमि के ऊपर जो लम्ब-द्वय होता है वे चतुर्भुज के दोनों लम्ब है, इन दोनों लम्बों के योगार्ध में मध्य लम्ब के अधर खण्ड को घटाने से मध्यलम्ब का ऊर्ध्व खण्ड होता है, लेकिन यह तब ही हो सकता है जबकि वर्धित मध्यलम्बाधरखण्ड से गाघा रेखा अर्धित होगी, अन्यथा नहीं, तथा चतुर्भुज के दोनों लम्ब मूलों के मध्य ही में यदि दोनों कर्णों के योग बिन्दु से भूमि के ऊपर लम्ब-मूल पतित होगा तबही आचार्योक्त इस प्रकार से मध्यलम्ब का ऊर्ध्वखण्ड ज्ञान हो सकता है अन्यथा नहीं इति ॥ ३१ ॥

इदानीं सूची क्षेत्रार्थमाह ।

कर्णविलम्बक युतौ खण्डे कर्णविलम्बयोरधरे ।

अनुपातेन तदूने ऊर्ध्वं सूच्यां सपाटायाम् ॥ ३२ ॥

सु. भा.—सपाटायाम् मपीटायाम् सूच्यामनुपातेन कर्णविलम्बकयुतौ कर्णविलम्बयोरधरे खण्डे माध्ये कर्णविलम्बमाने तदूने तयोरूर्ध्वं खण्डे भवतः ।

अत्र चतुर्वेदाचार्येण त्रैराशिकेन यत् सर्वं माधिव तदेव भास्करेण सूत्रत्वेनोपनिबद्धम् । भास्करेण स्वसूत्रे नामान्तरमात्रमेव कृतम् । यथा चतुर्वेदाचार्येण यस्य पाटमंजा कृता तस्यैव भास्करेण पीठमंजा । एवं सूचीक्षेत्रानुपातो भास्करलीलावतीतः स्फुटः किं ग्रन्थगोख्येणेति । चतुर्वेदाचार्येण सूचीक्षेत्रे तदेवोदाहरणं लिखितं यद्भास्करेण 'द्विपञ्चाशन्मिनव्येकचत्वारिंशन्मिनौ भुजौ'—इत्यादि विषमचतुर्भुजे लिखितम् । अत्र लम्बादयो भिन्ना भवन्ति तेनात्र भुजादीन् पञ्चगुणान् कृत्वा भास्करेण सूचीक्षेत्रोदाहरणमुपनिबद्धमिति भास्करस्य कल्पना वस्तुतस्तु चतुर्वेदोक्तैव ॥३२॥

वि. भा.—सपाटायाम् (मपीटायाम्) सूच्यां (सूची क्षेत्रे) कर्णविलम्बकयोगं विन्दावनुपातेन कर्णविलम्बकयोरधरे खण्डे माध्ये, तदूने (कर्णविलम्बकाधरहीने) कर्णविलम्बकमाने तयोरूर्ध्वं खण्डे भवेताम् । पुनः पुनराचार्येण कर्णविलम्बकयोरूर्ध्वधिर खण्डजानमस्वन्वे पूर्वोक्तमेव कथ्यते, न किमपि वैशिष्ट्यम् । अत्र चतुर्वेदाचार्येणानुपातेन यत्सर्वं माधिवं भास्करेण तदेव सूत्ररूपेण कथितम् । भास्करेण स्वसूत्रे केवलं नामान्तरमात्रमेव कृतम् । चतुर्वेदोक्तपाटमंजाया भास्करोक्तपीठमंजा, एव सूचीक्षेत्रानुपातो लोलावतीतः स्फुटः । चतुर्वेदाचार्येण सूची क्षेत्रे तदेवोदाहरणं लिखितं यद्भास्करेण 'द्विपञ्चाशन्मिनव्येकचत्वारिंशन्मिनौ भुजौ' इत्यादि विषमचतुर्भुजे लिखितम् । अत्र लम्बादयो भिन्ना भवन्ति, तेन भुजादीन् पञ्चगुणान् कृत्वा भास्करेण सूचीक्षेत्रोदाहरणं रचितम् । भास्करीय कल्पना वस्तुतस्तु चतुर्वेदोक्तैव बोध्येति ॥ ३२ ॥

अब सूची क्षेत्र के विषय में कहते हैं ।

हि. भा.—सपाट सूची में अनुपात से कर्ण और लम्ब के योग विन्दु में कर्ण और लम्ब का अधर खण्ड साधन करना चाहिये, कर्णमान में कर्ण के अधर खण्ड को घटाने से कर्ण का ऊर्ध्व खण्ड होता है लम्ब मान में लम्ब के अधर खण्ड को घटाने से लम्ब का ऊर्ध्व खण्ड होता है ।

यहां चतुर्वेदाचार्येण त्रैराशिक से जिन विषयों का साधन किया है उन्ही विषयों को भास्क-

राचार्य सूत्र रूप में लिखते हैं । भास्कराचार्य ने अपने सूत्र में केवल नामान्तर मात्र किया है । जैसे चतुर्वेदाचार्य ने जिसका नाम पाट रखा है उसी का नाम भास्कराचार्य ने पीठ रखा है । सूचीक्षेत्रमें अनुपात सब है तथा भास्करीय लीलावती से स्पष्ट है । चतुर्वेदाचार्य ने सूचीक्षेत्रमें वही उदाहरण लिखे हैं जो विषम चतुर्भुज में भास्कराचार्य ने 'द्विपञ्चाशन्मितव्येक चत्वारिंशन्मितौ भुजौ' इत्यादि लिखे हैं यहां लम्ब आदि भिन्न होते हैं । इसलिये भुज आदि को पांच से गुणित कर भास्कराचार्य ने सूचीक्षेत्र के उदाहरण की रचना की, वस्तुतः भास्करोक्त कल्पना चतुर्वेदाचार्योक्त ही है ॥३२॥

इदानीमिष्टाभ्यां भुजकोटि कर्णानियनार्थमाह ।

कृतियुतिरसदृशराश्योर्बाहुर्घातोद्विसङ्गुणो लम्बः ।

कृत्यन्तरमसदृशयो द्विगुणं द्विसमत्रिभुजभूमिः ॥३३॥

सु० भा०—द्विसमत्रिभुजं समद्विबाहुकं त्रिभुजम् । समद्विबाहुनि शिरः कोणादाधारोपरिलम्बवशेन जात्यत्र्यस्रद्वय समानं भवेत् तत्र भुजो द्विगुणः समद्विबाहुभूमिर्भवेदत एतदनुरूपमेव भास्करोक्तम्—'इष्टयोराद्वति द्विघ्नी कोटिवर्गान्तरं भुजः' इत्यादि ।

अत्रोपपत्तिः ।

द्वयो राश्योर्युतिवर्गस्यान्तरवर्गस्य चान्तरं चतुर्गुणाघातसमं भवतीति कल्पितौ वर्गात्मकौ राशी इ^१, इ^२ । अनयोर्योगः कर्णः = इ^१ + इ^२ । भुजः = इ^१ - इ^२ । अनयोर्वर्गान्तरस्य ४ इ^१ × इ^२ अस्य मूलं कोटिः = २इ^१ × इ^२ ॥ ३३ ॥

वि. भा.—असमानराशिद्वययोर्वर्गयोगः कर्णो भवति, यद्यप्याचार्येण राश्योर्वर्गयोगः किं भवतीति न कथ्यते तथापि तदाशयः स एव । राश्योर्घातो द्विगुणितो भुजो भवति, राश्योर्वर्गान्तरं लम्बो (कोटिः) भवति, द्विगुणितो भुजो द्विसम त्रिभुजस्य (समद्विबाहुकस्य त्रिभुजस्य) भूमि (आधारः) भवेत् ।

अत्रोपपत्तिः ।

कल्प्येते राशी इ, इ, अनयोर्वर्गयोगः = इ^२ + इ^२ = कर्णः । तयोरेवर्गान्तरं इ^१ - इ^२ = कोटिः, तदा कर्ण^२ - कोटि^२ = भुज^२ = (इ^१ + इ^२)^२ - (इ^१ - इ^२)^२ = इ^४ + २ इ^३ × इ^२ + इ^४ - (इ^४ - २ इ^३ × इ^२ + इ^४) = ४ इ^३ × इ^२ मूलेन २ इ × इ = भुजः, एतेनाऽऽचार्योक्तमुपपद्यते ।

समद्विबाहुकत्रिभुजे शिरः कोणादाधारोपरि लम्बवशेन जात्यत्रिभुजद्वयं

समानं भवति तत्र तद्भुजो द्विगुणस्तदा समद्विवाहोर्भूमिर्भवेत् । इष्टयोगहति-
द्विघ्नी कोटिरित्यादि भास्करोक्तमेतदनुरूपमेव ॥३३॥

अब दो इष्टों में भुज, कोटि और कर्ण माधन के लिये विधि कहते हैं ।

हि. भा — दो राशियों का वर्गयोग कर्ण होता है, उन्ही दोनों राशियों की वर्गान्तर कोटि होती है. दोनों राशियों का द्विगुणित घात भुज होता है ॥३३॥

उपपत्ति ।

कल्पना करने हैं प्रथमराशि = इ, द्वितीयराशि = इ, इन दोनों का वर्गयोग = इ^२ + इ^२ = कर्ण उत्तरी दोनों के वर्गान्तर इ^२ - इ^२ = कोटि तब कर्ण^२ - कोटि^२ = भुज^२ = (इ^२ + इ^२)^२ - (इ^२ - इ^२)^२ = इ^४ + इ^४ + २ इ^४ - इ^४ + २ इ^४ - २ इ^४ = ४ इ^४. इ^४ मूल लेते में २ इ. इ = भुज इसमें आचार्योक्त उपपन्न होता है । सम-द्विवाहक त्रिभुज में शिरः कोण में आधार के ऊपर लम्ब करने में लम्ब में दोनों तरफ जो त्रिभुज बनते हैं वे दोनों बराबर होते हैं, उनके भुज को द्विगुणित करने में समद्विवाहक त्रिभुज भी भूमि होती है । आचार्योक्त श्लोक में यह त्रिषय जो लिखा गया है सो अप्रसङ्ग के कारण निरर्थक मान्य होता है । आचार्योक्त भुजकोटि कर्णानयन के अनुरूप ही लीलावती में 'इष्टयोगहति द्विघ्नीकोटि वर्गान्तरं भुजः' इत्यादि भास्करोक्त है इति ॥ ३३ ॥

इदानीमभीष्टजात्यद्वयेन विषमत्रिभुजानयनार्थं विधिमाह ।

इष्टद्वयेन भक्तो द्विष्टवर्गः फलेष्टयोगार्थं ।

विषमत्रिभुजस्य भुजाविष्टोनफलार्थयोगो भूः ॥ ३४ ॥

मु. भा.—इष्टवर्गों द्विधा स्थाप्यः । एकत्रैकेनेष्टेनापगत्रान्येनेष्टेन भक्तः । फलेष्टयोगार्थं विषमत्रिभुजस्य भुजौ भवतः । इष्टोनफलार्थं आवाधे भवनोऽस्तयो-
योगो विषमत्रिवाहोर्भूभवतीति ।

अत्रोपपत्तिः ।

इष्टो लम्बः प्रकल्पितः स च लम्बादुभयनो ये जात्ये तयोः कोटिस्तद्वर्गो भुजकर्णवर्गान्तरसमोऽनो द्वाविष्टौ जात्यद्वये भुजकर्णान्तरसमौ प्रकल्पितौ । तनो 'वर्गान्तरं राशिवियोग भक्तम्'—इत्यादिना भुजकर्णयुतिः सिध्यति । ततः सङ्क्रमणेन भुजकर्णौ । अत्र भुजावेव लम्बादुभयत आवाधे अतस्तयोयोगो विषमत्रि-
वाह्याधारो भवतीति ॥३४॥

वि. भा.—इष्टवर्गों द्विधा (स्थान द्वये) स्थाप्यः, इष्टद्वयेन भक्तः पृथक् पृथक्

यत्फलं तस्येष्टद्वयस्य च क्रमशो योगार्धे विषमत्रिभुजस्य भुजौ भवतः । इष्टोन-
फलार्धे तस्य त्रिभुजस्यावाधे भवतः, तयोरावाधयोर्योगो तस्य (विषम त्रिभुजस्य)
भूर्भवतीति ॥ ३४ ॥

अत्रोपपत्तिः ।

इष्टो लम्बः प्रकल्पितः, लम्बादुभयपार्श्वे ये जात्ये तयोः स लम्बः कोटिः,
लम्ब^२ = को^२ = क^२ — भु^२ प्रथम जात्यस्य कर्णः = क, भुजः = भु । द्वितीयजात्यस्य
कर्णः = क, भुजः = भु, प्रथम जात्यस्य कृते कल्प्यते इष्टम् = क — भु । द्वितीय
जात्यस्य कृते इष्टम् = क — भु । तदा वर्गान्तरं राशिवियोगभक्तमित्यनेन
 $\frac{क^२ - भु^२}{क - भु} = क + भु, \frac{क^१ - भु^१}{क - भु} = \frac{१}{२} क + \frac{१}{२} भु$ ततः संक्रमणेन

$$\left. \begin{aligned} \frac{क + भु + क - भु}{२} &= \frac{२ क}{२} = क = \frac{फल + इ}{२} \\ \frac{क + भु - (क - भु)}{२} &= \frac{२ भु}{२} = भु = \frac{फल - इ}{२} \end{aligned} \right\}$$

$$\frac{क + भु + क - भु}{२} = \frac{२ क}{२} = क = \frac{फल + इ}{२}$$

$$\frac{क + भु - (क - भु)}{२} = \frac{२ भु}{२} = भु = \frac{फल - इ}{२}$$

अत्र लम्बादुभयभागे भुजा (भु, भु) वेवावाधेस्तोऽस्तयोर्योगो विषम-
त्रिभुजस्य भू (आधारः) भवतीति आचार्यैर्गता वता न किमपि विशिष्टं वस्तु
कथ्यते, गणित वैचित्र्यमपि नास्त्यत्रेति ॥ ३४ ॥

अब असीष्ट दो जात्य त्रिभुजो से विषम त्रिभुजानयन के लिये कहते हैं ।

हि. भा.—इष्ट वर्ग को दो स्थानों में दो इष्टों से भाग देने से जो पृथक् फल हो
उसका और दोनों इष्टों का क्रमशः योग करके आधा करने से विषम त्रिभुज के दोनों भुज
होते हैं, दोनों फलों में दोनों इष्टों को घटाकर आधा करने से विषम त्रिभुज की दोनों
आवाधायें होती हैं, दोनों आवाधाओं का योग उस त्रिभुज की भू (आधार) होती है ॥ ३४ ॥

उपपत्ति ।

कल्पना करते हैं इष्ट = लम्ब, लम्ब से दोनों तरफ जो दो जात्य त्रिभुज बनते हैं

उनकी वह (लम्ब) कोटि है, लम्ब^२ = कोटि^२ = कर्ण^२ भुज^२ । प्रथमजात्य त्रिभुज का कर्ण = क । भुज = भू, द्वितीय जात्य का कर्ण = क भुज = भू, तब वर्गान्तर शक्ति वियोगभक्त

$$\text{हमसे } \frac{\text{कर्ण}^2 - \text{भुज}^2}{\text{कर्ण} - \text{भुज}} = \frac{\text{वर्ग} - \text{भू}^2}{\text{कर्ण}} = \text{कर्ण} = \text{फल} = \frac{\text{कोटि}^2}{\text{भुज}} \text{ तथा } \frac{\text{कर्ण} - \text{भुज}^2}{\text{कर्ण} - \text{भुज}} =$$

$\frac{\text{कर्ण}^2 - \text{भुज}^2}{\text{कर्ण} - \text{भुज}} = \text{कर्ण} + \text{भुज}$ फल, अब कर्ण और भुज के योगान्तरवत् से संक्रमण गणित

$$= \frac{\text{कर्ण} + \text{भुज} + \text{कर्ण} - \text{भुज}}{2} = \frac{\text{कर्ण} + \text{भुज} + \text{कर्ण} - \text{भुज}}{2} = \frac{2 \text{ कर्ण}}{2} = \text{कर्ण} = \frac{\text{फल} + 2}{2}$$

$$= \frac{\text{फल} + 2}{2} \text{ यहाँ कर्ण + भुज } \frac{(\text{कर्ण} - \text{भुज})}{2} = \frac{2 \text{ भुज}}{2} = \text{भुज} = \frac{\text{फल} - 2}{2} ।$$

$$\frac{\text{कर्ण} + \text{भुज} - (\text{कर्ण} - \text{भुज})}{2} = \frac{2 \text{ भुज}}{2}$$

$$= \text{भुज} = \frac{\text{फल} - 2}{2} \text{ यहाँ लम्ब से दोनों तरफ आनीय दोनों भुज ही दोनों आवाधाय है}$$

इनलिये दोनों आवाधायों का योग विषम त्रिभुज की भु (आधार) होनी है । आचार्य इस से किसी विधिष्ट वस्तु को नहीं कहते है ॥ ३४ ॥

इदानीं जात्यद्वयेनायनानयनाय सूत्रमाह ।

इष्टस्य भुजस्य कृतिर्भक्तोनेष्टेन तद्दलं कोटिः ।

आयतचतुरस्रस्य क्षेत्रस्येष्टाधिका कर्णः ॥ ३५ ॥

आयत चतुर्भुजस्य कर्णवशेन जात्यत्रिभुजद्वयं भवति, तत्रायतस्य भु^२ =
क^२—को^२ वर्गान्तरस्य योगान्तरघात समत्वात् भु^२ = (क—को). (क+को) अत्र
यदि क—को = इष्टम् कल्प्यते तदा तेन पक्षौ भक्तौ $\frac{\text{भु}^2}{\text{क—को}} = \frac{\text{भु}^2}{\text{इ}} = \text{क+को}$ ततः

संक्रमणेन $\frac{\text{भु}^2}{\text{इ}}—इ = \text{क+को}—इ = \text{क+को}—(\text{क—को}) = \text{क+को}—\text{क+को} = २\text{को}$

∴ $\frac{\frac{\text{भु}^2}{\text{इ}}—इ}{२} = \text{को}$ । तथा $\frac{\text{भु}^2}{\text{इ}} + इ = \text{क+को} + (\text{क—को}) = २\text{क}$ पक्षौ द्वाभ्यां

भक्तौ तदा $\frac{\frac{\text{भु}^2}{\text{इ}} + इ}{२} = \text{कर्णः}$ । एतेनाऽऽचार्योक्तमुपपद्यते, लीलावत्यां 'इष्टो भुजस्त-
त्कृतिरिष्ट भक्तौत्यादि' भास्करोक्तमाचार्योक्तानुरूपमेवेति ॥ ३५ ॥

अब दो जात्य त्रिभुज से आयत चतुर्भुजानयन को कहते हैं ।

हि. भा.—भुज वर्ग को इष्ट से भाग देकर जो फल हो उसमें से इष्ट को घटाकर
आधा करने से आयत चतुर्भुज की कोटि होती है, उस कोटि में इष्ट को जोड़ देने से आयत
चतुर्भुज का कर्ण होता है ॥ ३५ ॥

उपपत्ति ।

आयत चतुर्भुज के कर्णवश से दो जात्य त्रिभुज होते हैं, उनमें त्रिभुज का भुजवर्ग
या आयत का भु^२ = क^२—को^२ परन्तु वर्गान्तर योगान्तर घात के बराबर होता है अतः
भु^२ = (क—को). (क+को) यहाँ यदि क—को = इष्ट माना जाय तब उससे दोनों पक्षों
को भाग देने से $\frac{\text{भु}^2}{\text{क—को}} = \frac{\text{भु}^2}{\text{इ}} = \text{क+को}$ तब संक्रमण गणित से $\frac{\text{भु}^2}{\text{इ}}—इ = \text{क+को}—इ$

= क+को—(क—को) = क+को—क+को = २ को ततः $\frac{\frac{\text{भु}^2}{\text{इ}}—इ}{२} = \text{को}$ । इस कोटि

में इष्ट जोड़ने से $\frac{\frac{\text{भु}^2}{\text{इ}}—इ}{२} + इ = \frac{\frac{\text{भु}^2}{\text{इ}}—इ+२इ}{२} = \frac{\frac{\text{भु}^2}{२}+इ}{२} = \text{कर्ण}$ इससे आचार्योक्त

मूत्र उपपन्न होता है । लीलावती में 'इष्टोभुजस्तत्कृति रिष्ट भक्ता' इत्यादि भास्कराचार्योक्त आचार्योक्त के अनुरूप ही है ॥ ३५ ॥

इदानीं समान लम्ब चतुर्भुजानयनाय सूत्रमाह ।

आयतकर्णो बाहू भुजकृतिरिष्टेन भाजितेष्टोना ।

द्विहृता कोट्यधिका भूर्मुखमूना द्विसम चतुरस्रे ॥ ३६ ॥

मु. भा.—द्विसमचतुर्भुज समानलम्बचतुर्भुज यत्र भुजौ समौ तस्मिन् कस्याप्यायतन्य कर्णो बाहू कल्प्यौ । आयतभुजस्य कृतिरिष्टेन भक्तेष्टोना च कर्णव्या ततो द्विहृता कार्या । साऽऽयतकोट्यधिका समानलम्बचतुर्भुजस्य भूर्भवति सैवायतकोट्यूना समानलम्बचतुर्भुजस्य मुखं भवति ।

अत्रोपपत्तिः ।

यत्रायते घाता=जागा कोटिः ।

आना=काजा भुजः । आघा=कागा कर्णः । तद्वदेन समानलम्बे कर्ण-मिती भुजौ जातौ । अत्र आगा—गाना=३ ।

आगानाजात्ये आना=आयतन्य भुज एव भुजः ततो 'भुजाद्वर्गितात् कोटि-कर्णान्निराप्तम्'—इत्यादिना गाना प्रमाणं भवति ततः गाता+घाता=गाघा । गाता—जागा=ताजा=आका । अत्र उपपन्नम् ॥३६॥

वि. भा.—द्विसमचतुरस्रगव्देन समानलम्ब चतुर्भुजं बोध्यं यस्मिन् भुज-द्वयं समं तस्मिन् कस्याप्यायतचतुर्भुजस्य बाहू (भुजौ) प्रकल्प्यौ, आयतचतुर्भुज-भुजकृति-रिष्टेन भक्ता-इष्टेन हीना च कार्या, द्विहृता (द्वाभ्यां भक्ता) साऽऽयत कोट्यधिका कार्या तदा समलम्ब चतुर्भुजस्य भू (आधारः) भवति, तत्रैवायत कोट्यूना तदा समलम्ब चतुर्भुजस्य मुखं भवतीति ॥ ३६ ॥

अत्रोपपत्तिः ।

यस्मिन्नायते क्षेत्रे घन = कोटिः=नग, तथा कत = भुजः = खन, तदा कथ कर्णः = खग कर्ण, तदायतक्षेत्र भुजकोटिवशेन कथ, खन-कर्णतुल्यौ समानलम्ब चतुर्भुजे भुजौ जातौ, कग-

तग = इष्टं कल्पितम् । कतग त्रिभुजे कत = भुजः । तग = कोटिः । कग = कर्णः, तदा

$\frac{\text{कत}^1}{\text{कग-तग}} = \frac{\text{भु}^1}{\text{कर्ण-कोटि}} = \text{क} + \text{को} = \frac{\text{भु}^1}{\text{इ}} \text{ ततः संक्रमणेन } \frac{\frac{\text{भु}^1}{\text{इ}} - \text{इ}}{2}$
 $= \text{कोटि} = \text{तग}, \text{अत्र कोटावायतक्षेत्रस्य कोटियोजनेन तग} + \text{तघ} = \text{गघ} = \text{समान-}$
 $\text{लम्ब चतुर्भुजस्य भूः । तथा तस्यामेव कोटावायत क्षेत्रस्य कोटिर्हीना तदा तग}$
 $-\text{नग} = \text{नत} = \text{समान लम्बस्य मुखम् ॥ एतावताऽऽचार्योक्तमुपपद्यते इति ॥ ३६ ॥}$

अब समान लम्ब चतुर्भुज के आनयन के लिये कहते हैं ।

हि. भा.—जिस समान लम्बचतुर्भुज में दो भुज बराबर हैं वे किसी आयत क्षेत्र के दो भुजों के बराबर होते हैं । आयत चतुर्भुज के भुजवर्ग को इष्ट से भाग दे कर जो फल हो उसमें से इष्ट को घटा कर दो से भाग देने से जो लब्धि हो उसमें आयत की कोटिको जोड़ने से समलम्ब चतुर्भुज की भू (आधार) होती है, उसी लब्धि में आयत की कोटि को घटाने से समलम्ब चतुर्भुज का मुख होता है ॥ ३६ ॥

उपपत्ति ।

यहाँ संस्कृतोपपत्ति में लिखित (१) क्षेत्र को देखिये । जिस आयत क्षेत्र में घत = नग = कोटि, है तथा कत = खन = भुज, है तब कघ कर्ण = खग कर्ण, उस आयतक्षेत्र के भुज और कोटि वश से कघ; खन कर्णों के बराबर समान लम्ब गतुर्भुज में दो भुज हो गये, कतग त्रिभुज में कत = भुज, तग = कोटि, कग = कर्ण, कग - तग = कर्ण - कोटि = इष्ट कल्पना

की तब $\frac{\text{कत}^2}{\text{कग-तग}} = \frac{\text{भु}^2}{\text{कर्ण-कोटि}} = \text{क} + \text{को} = \frac{\text{भू}^2}{\text{इ}}$ अब सक्रमण गणित से

$\frac{\frac{\text{भु}^2}{\text{इ}} - \text{इ}}{2} = \text{कोटि} = \text{तग}, \text{इसमें आयत क्षेत्र की कोटि को जोड़ने से तग} +$

तघ = गघ = समानलम्ब चतुर्भुज की भू = आधार, तथा उसी कोटि में आयत क्षेत्र की घटा देने से तग - नग = नत समान लम्ब चतुर्भुज का मुख, इससे आचार्योक्त उपपन्न हुआ ॥ ३६ ॥

इदानीमायतेन त्रिसमभुज चतुर्भुजानयनार्थमाह ।

कर्णकृतिस्त्रिसमभुजास्त्रयश्चतुर्थो विशोध्यकोटि कृतिम् ।

बाहुकृतेस्त्रिगुणाया यद्यधिकोभूर्मुखं हीनः ॥ ३७ ॥

सु. भा.—यत्र समानलम्बचतुर्भुजे द्वौ भुजौ भूमिर्वा मुखमिति त्रयं मिथः समं तत् त्रिसमभुजचतुर्भुजमुच्यते । तत्राभीष्टायतकर्णकृतिरेव त्रिसमभुजा भवन्ति ।

त्रिगुणाया आयतभुजकृतेरायतकोटिकृतिं विशोध्य शेषसमश्चतुर्थो बाहुर्ज्ञेयः । सच त्रिसमभुजाधिकस्तदा भूर्हीनस्तदा मुखं भवतीति स्फुटम् ।

अत्रोपपत्तिः ।

आचार्यैर्गौकजात्यस्य भुजकोटी इष्टौ प्रकल्प्य ३३ सूत्रेण साधित-
मन्यजान्यम् ।

तद्वशेनेह समलम्बचतुर्भुजं
विरच्यते ।

$$\begin{aligned} \text{तत्र आघा} &= \text{आका} = \text{कागा} = \text{भु}^3 + \text{को}^3 = \text{फ}^3 \\ \text{घाता} &= \text{जागा} = \text{भु}^3 - \text{को}^3 \end{aligned}$$

अनः घागा = घाता + ताजा + जागा = ताजा + २घाता = आका + २ घाता
= $\text{भु}^3 + \text{को}^3 + २(\text{भु}^3 - \text{को}^3) = \text{भु}^3 + \text{को}^3 + २\text{भु}^3 - २\text{को}^3 = ३\text{भु}^3 - \text{को}^3$ । अत्र
यदि $३\text{भु}^3 - \text{को}^3 > \text{फ}^3$ तदा $३\text{भु}^3 - \text{को}^3$ भूगन्यथा मुखं कल्प्यम् ॥

$$\begin{aligned} \text{अथ यदा} \quad & ३\text{भु}^3 - \text{को}^3 > \text{फ}^3 \\ & > \text{भु}^3 + \text{को}^3 \\ \text{वा} \quad & २\text{भु}^3 > २\text{को}^3 \\ \text{वा} \quad & \text{भु}^3 > \text{को}^3 \end{aligned}$$

अनो यदा $\text{भु} > \text{को}$ तदा घागा भू मानमन्यथा मुखं ज्ञेयमिति ॥

वि. भा.—यस्मिन् समानलम्बचतुर्भुजे भुजद्वयं भूमिर्वा मुखमिति त्रयं परस्परं तुल्यं तत् त्रिसमभुजचतुर्भुजं कथ्यते । तस्मिन् अभोष्टायत क्षेत्रस्य कर्णवर्ग एव त्रिसम भुजा भवन्ति, त्रिगुणितायत भुजवर्गादायत कोटिवर्गं विशोध्य शेष-
तुल्यश्चतुर्थो भुजो बोध्यः । सो हि यदि त्रिसम भुजाविकस्तदा भूर्भवति, यदि हीनस्तदा मुखं भवतीति ॥३७॥

अत्रोपपत्तिः ।

अत्राऽऽचार्येण 'कृतियुतिरसदृशराश्यो रित्यादि ३३ सूत्रेण' क जातस्य भुजकोटी इष्टौ प्रकल्प्या-
न्य जात्यं साधितम् । तद्वशादिह समलम्ब चतुर्भु-
जस्य रचना क्रियते । तत्र कष = कख = त्वग
= $\text{भु}^2 + \text{को}^2 = \text{क}^2$ तथा घत = नग = $\text{भु}^2 - \text{को}^2$
तदा घग = घत + तन + नग = तन + २ घत

=कख + २ घत = भु^२ + को^२ + २ (भु^२ - को^२) = भु^२ + को^२ + २ भू^२ - २ को^२ = ३ भू^२ - को^२, यदि ३ भू^२ - को^२ > क^२ तदा ३ भू^२ - को^२ भूरन्यथा मुखं कल्पनीयम् ।

यदि ३ भू^२ - को^२ > क^२ वा > भु^२ + को^२ तदा २ भू^२ > २ को^२ वा भु > को एतेन सिद्धं यद्यदा भु > को तदा घग भूमान मन्यथा मुखं बोध्यमिति ॥३७॥

अब आयत क्षेत्र से त्रिसमभुज चतुर्भुज के आनयन के लिये कहते हैं ।

हि. भा.—जिस समानलम्ब चतुर्भुज में दो भुज और भूमि अथवा मुख ये तीनों परस्पर तुल्य हो वह त्रिसमभुज चतुर्भुज कहलाता है । उसमें अभीष्ट आयत क्षेत्र का कर्णवर्ग ही त्रिसम भुज होता है । त्रिगुणित आयत क्षेत्र के भुजवर्ग में आयत कोटिवर्ग को घटा कर शेष जो रहे उसको चतुर्थभुज समझना चाहिये । वह यदि त्रिसमभुज से अधिक हो तब भूमि प्रमाण होता है, यदि हीन (अल्प) हो तो मुख होता है ॥३७॥

उपपत्ति ।

यहां संस्कृतोपपत्ति में लिखित (१) क्षेत्र को देखिये । यहाँ आचार्य ने 'कृतियुतिर-सहसारादयोः' इत्यादि ३३ सूत्र से एक जात्य त्रिभुज के भुज और कोटि को इष्ट मान कर अन्य जात्य त्रिभुज का साधन किया है उसके वश से समलम्ब चतुर्भुज की रचना करते हैं ।

यहां कथ = कख = खग = भु^२ + को^२ = क^२, तथा घत = नग = भू^२ - को^२

तब घग = घत + तन + नग = तन + २ घत = कख + २ घत = भु^२ + को^२ + २ (भू^२ - को^२) = भु^२ + को^२ + २ भू^२ - २ को^२ = ३ भू^२ - को^२, यदि ३ भू^२ - को^२ > क^२ तब ३ भू^२ - को^२ इसको भूमि समझना चाहिये, अन्यथा मुख मानना चाहिये । यदि ३ भू^२ - को^२ > क^२ वा > भु^२ + को^२ तब २ भू^२ > २ को^२ वा भु > को इससे सिद्ध होता है कि जब भु > को तब घग भू मान होगा, अन्यथा मुख होगा इति ॥ ३७ ॥

इदानीं जात्यद्वयतो विषमचतुर्भुजानयनार्थमाह ।

जात्यद्वयकोटिभुजाः पर कर्ण गुणा भुजाश्चतुर्विधमे ।

अधिको भूर्मुखहीनो बाहुद्वितयं भुजावन्यौ ॥ ३८ ॥

सु. भा.—स्पष्टार्थम् । 'अभीष्टजात्यद्वय बाहुकोटयः परस्परं कर्णहता भुजा इति' इत्यादि सर्व भास्करोक्तमेतदनुरूपमेव । यत्र विषमचतुर्भुजे कर्णौ परस्परं लम्बरूपौ तस्यैव जात्यद्वयतो भुजा भवन्तीति क्षेत्रयुत्तया स्फुटम् ॥३८॥

वि. भा.—जात्यद्वयस्य कोटि भुजाः परस्परकर्णगुणितास्तदा विषम चतुर्भुजे भुजा भवन्ति, तेष्वधिको भूर्भवत्यल्पश्च मुखं, अन्यौ द्वौ भुजौ भुजद्वयं भवतीति ॥ ३८ ॥

अत्रोपपत्तिः ।

अत्र कल्प्यते भीष्टजात्य त्रिभुज द्वयं यत्र प्रथमस्य भुजः=भु, कोटिः=को, कर्णः=क, द्वितीयस्य भुजः=भु कोटिः=को, कर्णः=क, प्रथमस्य भु, को, क पृथक् पृथक् द्वितीयस्य भु, को आभ्यां गुणनेन ये जात्यत्रिभुज द्वये भवतस्ते प्रथमस्य सजानीये, एवं द्वितीयस्य भु, को, क (भुजकोटि कर्णः) पृथक् पृथक् भु, को आभ्यां गुणनेन ये जान्य त्रिभुजद्वये भवतस्ते द्वितीयजात्यस्य सजानीये भवतः, एतावता त्रिभुजचतुष्टयं जायते ।

चतुर्णां जात्यत्रिभुजानां संयोगेन विषम चतुर्भुजं जायते ।

एतत्स्वरूपदर्शनेन सिद्धयति यद्यस्मिन् विषमचतुर्भुजे कर्णौ परस्परं लम्बरूपौ भवतस्तस्यैव चतुर्भुजस्याचार्योक्तप्रकारेण भुजा भवन्ति, तत्र तत्कल्पिता भीष्टजात्यद्वयत एव कर्णोक्तानं भवन्ति, सिद्धान्त शेषरे “जात्ययोः श्रुतिहताः परस्परं क्षेत्रयोरिह हि बाहुकोटयः । तेषु भूमिरधिकोऽल्पको मुखं शेषकं तु विषमस्य दोह्वयम्” श्रीपत्युक्तमिदमाचार्योक्तानुरूपमेवास्ति, लीलावत्यां

‘अभीष्टजात्यद्वयबाहुकोटयः परस्परं कर्णहता भुजा इति’ भास्करोक्तमिदमप्या-
चार्योक्तानुरूपमेव, तस्मिन् चतुर्भुजे कर्णद्वयमानं किं भवति तदाचार्येण श्री
पतिना च नोक्तं भास्कराचार्येण तत्कथितमिति ।। ३८ ।।

अब दो जात्य त्रिभुज से विषम चतुर्भुजानयन को कहते हैं ।

हि. भा.—अभीष्ट दो जात्य त्रिभुज के भुज और कोटि को परस्पर कर्ण से गुणा
करने से विषम चतुर्भुज के भुज होते हैं उनमें अधिक भू होती है, लघु मुख होता है, और
अन्य दोनों भुज होते हैं ।

उपपत्ति ।

कल्पना करते हैं इष्ट दो जात्य त्रिभुज, जिनमें प्रथम का भुज=भु, कोटि=को,
कर्ण=क, एवं द्वितीय का भुज=भु, कोटि=को, कर्ण=क, । भु, को, क इनको भु, को
इनसे गुणा करने से जो दो जात्य त्रिभुज बनेंगे वे प्रथम जात्य त्रिभुज के सजातीय होंगे ।
एवं भु को, क इनको पृथक्-पृथक् भु, को इनसे गुणा करने से जो दो जात्य त्रिभुज बनेंगे
वे द्वितीयजात्य त्रिभुज के सजातीय होंगे । इस तरह से चार त्रिभुज होते हैं, संस्कृतोपपत्ति
में चारों त्रिभुजों के (स्वरूप को देखिये, इन चारों त्रिभुजों के संयोग से विषम चतुर्भुज
बनता है उसका स्वरूप संस्कृतोपपत्ति में देखिये । विषम चतुर्भुज का स्वरूप
देखने से सिद्ध होता है कि जिस विषम चतुर्भुज में दोनों कर्ण परस्पर लम्बरूप हों
उसी चतुर्भुज के आचार्योक्त प्रकार से भुज होते हैं, उसमें कल्पित इष्ट जात्य त्रिभुजद्वय से
ही कर्ण का ज्ञान होता है, सिद्धान्त शेखर में ‘जात्ययोः श्रुतिहताः परस्पर’ इत्यादि
संस्कृतोपपत्ति में लिखित श्लोक से । श्रीपतिने आचार्योक्त के अनुरूप ही कहा है । लीलावती
में ‘अभीष्ट जात्यद्वय बाहुकोटयः’ इत्यादि भास्करोक्त भी आचार्योक्त के अनुरूप ही है, लेकिन
उक्त चतुर्भुज में दोनों कर्णों का मान क्या होता है सो आचार्य और श्रीपतिने भी नहीं कहा
है, भास्कराचार्य ‘बाह्वोर्वधः कोटिवधेन युक्’ इत्यादि से कहे हैं ।। ३८ ।।

इदानीं कोट्येक देशेन युते कर्णे भुजे च दृष्टे कोटि कर्णं ज्ञानार्थमाह ।

इष्ट गुणकारगुणितो गिर्युच्छ्रायः पुरान्तरमनष्टम् ।

द्वियुत गुणकार भाजितमुत्पातोऽन्यस्य समगत्योः ।। ३९ ।।

सु. भा.—अत्र चतुर्वेदाचार्यः । ‘इहोदाहरणम् । कस्यापि पर्वतस्याग्रं

'द्विनिघ्नतालोच्छ्रिति संयुतं यत्सरोऽन्तरमित्यादि' भास्करोक्तमुपपद्यते ॥३९॥

अब कोटि के एक प्रदेश से युत कर्ण तथा भुज के ज्ञान से कोटि

और कर्ण के ज्ञान के लिये कहते हैं ।

हि. भा.—पर्वत की ऊँचाई को इष्ट गुणक से गुणा करने से पुरान्तर (पर्वत और
नगर का अन्तर) होता है दोनों की गति बराबर होने के कारण उस पुरान्तर को गुण-
कार में दो जोड़कर भाग देने से दूसरे का उत्पात (उड्डीनमान) होता है, अर्थात् किसी
पर्वत के अग्र पर दो तपस्वी रहते थे, उन में सिद्ध पुरुष आकाश गामी थे । वे पर्वत के अग्र
से ऊपर कुछ दूर जाकर कर्णमार्ग से नगर में गये, द्वितीय सिद्ध-पर्वत के अग्र से नीचे आकर
पैदल ही नगर में गये, दोनों की गति बराबर थी तब पर्वत के अग्र से प्रथम सिद्ध का कितना
उत्पत्तन हुआ यह ज्ञातव्य है । किसी पर्वत के उच्छ्राय = पउ इसको इष्ट गुणकार से गुणने
से पर्वत और नगर का अन्तर होता है इसी को पुरान्तर 'पुअ' कहते हैं, इसको इष्ट गुण-
कार में दो जोड़कर भाग देने से जो फल हो वही उन सिद्ध पुरुषों के उत्पात योजन होते
हैं । पर्वत की उच्छ्रिति में इस उत्पात को जोड़ने से कोटि होती है । पर्वत और नगर का
अन्तर (पुरान्तर) भुज है, इन दोनों का वर्गयोग मूल कर्ण (पुर और उत्पाताग्र के तिर्यक्

अन्तर) होता है। जैसे पर्वत की उच्छ्रिति=१२ है, इसको इष्ट गुणकार ४ से गुणा करने में ४८=पर्वत और नगर का अन्तर हुआ, इसी को गुणकार में दो जोड़कर ४+२=६ में भाग देने में ४८÷६=८=उत्पन्न हुआ। पर्वत की उच्छ्रिति में इसको जोड़ने से १२+८=२० कोटि हुई। कोटि^२+भुज^२=कर्ण^२= (२०)^२+(४८)^२=४००+२३०४=२७०४, इसका मूल=५२=कर्ण, कोटि के नीचे वाला खण्ड और भुज का योग=१२+४८=६०=एक सिद्ध का चलन मार्ग प्रमाण, कोटि के ऊपर के खण्ड (उत्पन्न) और कर्ण का योग=५२-८=६०=द्वितीय सिद्ध का चलन मार्गप्रमाण, नीलावनी में 'वृक्षाद्वस्त्रतोच्छ्रयान्' इत्यादि भास्करोक्त उदाहरण भी इसी के अनुरूप है ॥ ३६ ॥

उपपत्ति ।

पर्वत की उच्छ्रिति=पउ, इसको इष्ट गुण कारसे गुणा करनेमें पुरान्तर होता है पउ.इ=पुरान्तर पुत्र=मरोऽन्तर=मअ, तब 'द्विनिष्प तालोच्छ्रिति संयुत यत्' इत्यादि भास्करोक्त सूत्र में उत्पन्न =उड्डीनमान= $\frac{\text{ताउ. मअ}}{२ \text{ ताउ} + \text{मअ}} = \frac{\text{पउ पुत्र}}{२ \text{ पउ} + \text{इ. पउ}} = \frac{\text{पुत्र}}{२ + \text{इ}}$, ताउ=पउ कल्प्यते। इसमें आचार्योक्त उपपन्न होता है।

भास्करोक्त प्रकार की उपपत्ति के लिये समगति=ताउ+मअ=कर्ण+उड्डीन मान = कर्ण+उ दोनों में तालोच्छ्रिति (ताउ) जोड़ने में ताउ+मअ+ताउ=२ ताउ+मअ=कर्ण+उ+ताउ=कर्ण+को तब 'भुजादूर्वागनात्कोटि कर्णान्तराप्त' इत्यादि से $\frac{\text{भु.}^2}{\text{कर्ण} + \text{को}} = \text{क. को} = \frac{\text{मअ}^2}{२\text{ताउ} + \text{मअ}} \therefore \text{कोटि} = \frac{(२ \text{ ताउ} + \text{मअ})^2 - \text{मअ}^2}{२ (२ \text{ ताउ} + \text{मअ})}$
 $= \frac{४ \text{ ताउ}^2 + ४ \text{ ताउ. मअ} + \text{मअ}^2 - \text{मअ}^2}{२ (२ \text{ ताउ} + \text{मअ})} = \frac{४ \text{ ताउ}^2 + ४ \text{ ताउ. मअ}}{२ (२ \text{ ताउ} + \text{मअ})}$
 $\frac{२ \text{ ताउ}^2 + \text{ताउ. मअ}}{२ \text{ ताउ} + \text{मअ}}$ इसमें से तालोच्छ्रिति को घटाने से $\frac{२ \text{ ताउ}^2 + २ \text{ ताउ. मअ}}{२ \text{ ताउ} + \text{मअ}}$
 $-\text{ताउ} = \frac{२ \text{ ताउ}^2 + २ \text{ ताउ. मअ} - २ \text{ ताउ}^2 - \text{ताउ. मअ}}{२ \text{ ताउ} + \text{मअ}} = \frac{\text{ताउ. मअ}}{२ \text{ ताउ} + \text{मअ}}$
 =उ, इससे 'द्विनिष्प तालोच्छ्रिति संयुत यत्' इत्यादि भास्करोक्त उपपन्न होता है इति ॥ ३६ ॥

अब वृत्तक्षेत्र गणित प्रारम्भ किया जाता है ।

वृत्तक्षेत्र के परिधि और वृत्तफल के आनयन को कहते हैं ।

हि. मा. — व्यास को तीन से गुणा करने से व्यवहारोपयुक्त (स्थूल) परिधि होती है, तथा वृत्तव्यासार्ध वर्ग को तीन से गुणा करने से वृत्तक्षेत्र का स्थूल फल होता है । व्यासवर्ग को दस से गुणा कर मूल लेने से सूक्ष्म परिधि होती है, तथा व्यासार्ध वर्ग के वर्ग को दस से गुणा कर मूल लेने से सूक्ष्म वृत्तक्षेत्र फल होता है ॥४०॥

उपपत्ति

यहाँ संस्कृतोपपत्ति में लिखित (क) क्षेत्र को देखिये । वृत्तपरिधिज्ञान के लिये पहले वृत्तव्यास का आनयन करते हैं । वृत्तपरिधि में कोई न बिन्दु लेकर उस बिन्दुको केन्द्रमान

कर इष्ट कर्कट में एकवृत्त बनाता, वह वृत्तवृत्तपरिधि में जरा लम्बा वह २ बिन्दु है। नश=वृत्तव्यास, के- वृत्तकेन्द्र कर्कट के दोनों अग्रों का अन्तर सापत्न करने में विदित है, इस-
लिये तर चाप विदित है, उस चाप की पूर्णांश्या (तर), २५= व्या. तप=उत्क्रमश्या, ये सब
उद्योत्पत्ति विधि में विदित है, < दशम- १०, =३ दशम तर दोनो त्रिभुजों के मजानीयन्त्र
के कारण अनुमान करने है $\frac{तर \times तर}{तप} = \frac{तर^2}{तप} = \frac{पूर्णांश्या^2}{२५ \times उत्क्रमश्या}$ - तप=वृत्तव्यास, इस

में इष्टवृत्तपरिधि का व्यास ज्ञात हो गया, इसमें 'वदामे द्वन्द्वपरिधिं विहृतेऽथ शैले।' इत्यादि
भास्करोक्त प्रकार से स्थूल वृत्तपरिधि = $\frac{२५ \times व्या}{९}$ यथा २५ = ३ स्वल्पान्तर में लेने हैं

तब ३ \times व्या = स्थूलवृत्त परिधि, तथा 'वृत्तक्षेत्रे परिधि गुणित व्यास दत्त, फल' इस भास्करोक्त
प्रकार से वृत्तफल = $\frac{परिधि \times व्या}{४}$, परन्तु परिधि = ३ व्या इत्यर्थे वृत्तक्षेत्रफल = $\frac{३ व्या \times व्या}{४}$
= $\frac{३ व्या^2}{४} = ३ \left(\frac{व्या}{२} \right)^2$ इसमें आचार्योंक्त पूर्वार्थ उपपन्न हुआ। 'वदामे भनन्दादिन

हते विभक्तौ खडाग सूर्यः' इस भास्करोक्त प्रकार से सूक्ष्मवृत्तपरिधि = $\frac{व्या \times ३६५७}{१८५०}$ - व्या
 \times तीन में कुछ अधिक, वर्ग करने में सूक्ष्म वृत्तपरिधि^२ = व्या^२ \times (तीन में कुछ अधिक),
= व्या^२ \times १०, मूल लेने में सूक्ष्मवृत्तपरिधि = $\sqrt{व्या^2 \times १०}$ यथा आचार्यने (तीन में कुछ
अधिक)^२ = १०, ग्रहण किया है। तथा वृत्तफल = $\frac{प. व्या}{४}$ वर्ग करने में $\frac{प^2 \times व्या^2}{१६} =$ सूक्ष्म

वृत्तक्षेत्रफल परन्तु प^२ = १० व्या^२ $\therefore \frac{१० व्या^2 \times व्या^2}{१६} = \frac{१० व्या^4}{१६} =$ सूक्ष्म वृत्त क्षेत्र फ^२

मूल लेने से सूक्ष्म वृत्तक्षेत्रफल = $\sqrt{\left(\frac{व्या}{२} \right)^4 \times १०}$ इसमें आचार्योंक्त सूक्ष्म वृत्त क्षेत्र
फलानयन उपपन्न हुआ ॥ मिथिलान्तर शेषर में 'विच्छिन्न वर्गे दशभिर्विनिश्चिते' इत्यादि सम्बन्धो-
परति में निश्चित श्रीपत्युक्त सूक्ष्मवृत्त परिध्यानयन तथा सूक्ष्मवृत्त क्षेत्रफलानयन आचार्योंक्त
के अनुरूप ही है। व्यास में परिधि के आनयन में आचार्य (ब्रह्मगुप्त), सूर्य मिथिलान्तरार,
श्रीधराचार्य और श्रीपति का एक रूप ही है, सब कोई वृत्तव्यास वर्ग को दस में गुणा कर
मूल लेने से सूक्ष्म परिधि कहते हैं। लेकिन तवीन लोग कहते हैं कि व्यास वर्ग को दस में
कुछ कम ही गुणाकाङ्क से गुणा कर मूल लेने में सूक्ष्म परिधि होती है। सौर वामना में
दस गुणा ही ठीक है दश कमलकर का कथन युक्ति शून्य है। अपने गूढार्थ प्रकाश में
रङ्गनाथ ने दश गुणाकाङ्क को स्थूल कहा है। सौरभाष्य में तृप्ति द्वारा भी व्यास को तीन से
कुछ अधिक से गुणा करने में वृत्त परिधि होती है, वहाँ तीन में कुछ अधिक का वर्ग दस लिया
है। सभी प्राचीनाचार्यों ने 'व्यास वर्ग को दस में गुणा कर मूल लेने से सूक्ष्म वृत्त परिधि होती

है कहा है। नवीन लोगों का कहना है कि दस गुणकाङ्क नहीं लेना चाहिए। दस से अल्प ही गुणकाङ्क लेना उचित है, ये बाने सूर्य सिद्धान्त की मुधावर्षिणी टीका में म. म. सुधाकर द्विवेदी कहते हैं। व्यास और परिधि के सम्बन्ध स्थिर नहीं है। इसलिये व्यास से परिधि का आनयन वा परिधि में व्यास का आनयन किसी तरह ठीक नहीं हो सकता है, व्यास और परिधि के सम्बन्ध स्थिर क्यों नहीं है इसके लिये हमारी 'वटेश्वर सिद्धान्त की' टीका देखनी चाहिए।

वृत्त क्षेत्र फलानयन के लिये उपपत्ति ।

यहाँ संस्कृतोपपत्ति में लिखित (ख) क्षेत्र को देखिये। पहले आचार्योंक्त वृत्तक्षेत्र-फलानयन के लिये, 'वृत्तक्षेत्रे परिधि गुणित व्यास पादः फलं' इस भास्करोक्त प्रकार की सहायता ली गयी है, लेकिन भास्करोक्त प्रकार की कथा युक्ति है यह दिखलाते हैं।

के=वृत्तकेन्द्र, न=अत्यन्त छोटी संख्या, वृत्तपरिधि को न संख्या से भाग देने से फल अत्यन्त ही छोटा होगा अर्थात् वृत्त का जो अत्यन्त छोटा खण्ड होगा वह रेखारूप ही होगा, उन अत्यन्त अल्प वृत्त खण्डों के दोनो प्रान्तों में वृत्तकेन्द्र से रेखाये लाने से अनेक त्रिभुज (न संख्यक) एक ही तरह (समान) के बनते हैं उनमें एक त्रिभुज के फल साधन करके न संख्या में गुणा कर देने से सब त्रिभुजों का (वृत्त क्षेत्र फल) हो जायगा, इसलिये एक त्रिभुज का फल साधन करते हैं। 'लम्ब गुण भूम्यर्ध त्रिभुजे स्पष्टं फलं भवति' इस भास्करोक्त प्रकार से एक त्रिभुज का फल $= \frac{1}{2} n \times \frac{\text{व्या}}{2} = \frac{प. व्या}{4 n}$ यहाँ $\frac{प}{n} = \text{भूमि}, \frac{\text{व्या}}{2} =$

लम्ब, इस त्रिभुज फल को न संख्या से गुणा करने से वृत्त क्षेत्र फल $= \frac{प. व्या}{4}$ इससे भास्क-

रोक्त वृत्त क्षेत्र फलानयन उपपन्न होता है, इसी की सहायता से पहले वृत्तक्षेत्रफलानयन किया गया है, पहले जो सूक्ष्म वृत्त परिधि और सूक्ष्म वृत्त क्षेत्र फल दिखलाया गया है जिनको आचार्य सूक्ष्म कहते हैं वे सूक्ष्म नहीं है। क्योंकि जिन साधनों से साधित है वे साधन ठीक नहीं हैं ॥ ४० ॥

इदानी जीवा व्यासयोरानयनार्थमाह ।

वृत्ते शरोन गुणिताद् व्यासाच्चतुराहतात् पदं जीवा ।

ज्यावर्गश्चतुराहतशरभक्तः शरयुतो व्यासः ॥ ४१ ॥

सु. भा.—स्पष्टार्थम् । 'ज्याव्यासयोगान्तरधातमूलम्'—इत्यादि भास्करोक्तमेतदनुरूपमेव ॥४१॥

वि. भा.—वृत्ते शरेण ऊनो गुणितश्चव्यासस्तस्मात्पुनश्चतुराहतात्

(चतुर्भिर्गुणितान्) पदं । मूलः जीवा भवति । ज्या (जीवा) वर्गश्चतुर्गुणित
शरभक्तः शरयुतं सदा व्यासो भवेदिति ॥ ४९ ॥

अत्रोपपत्तिः ।

पञ्च-दृष्ट्वापम्, एतच्चतुर्गुणितं पूर्णज्या-पदं ज्या, अत्र ज्यायन्देन

पूर्णज्याबोद्धा, तज्ज-वृत्तव्यासः । नर-

शर-तज्ज, केर-व्यासार्धम्-केर, पर-

ज्याधर्मम्, केर-व्यास-शर-केर-विभक्तेर-केर-

-केर-पर-वर्गान्तरस्य संशान्तरघात-

समन्वयान् केर-केर-केर-केर-केर-केर-

केर-केर-केर-पर-रज-नर-तज्ज-

नर-नर-व्यास-शर-शर- $\left(\frac{ज्या}{२}\right)^२$

(व्यास-शर), शर = $\frac{ज्या}{४}$,

∴ (व्यास-शर) . शर × ४ = ज्या^२ मूलग्रहणेन $\sqrt{(व्यास-शर) . शर \times ४}$

= ज्या अथवा रेखागणितेन नर . रज = पर . रज = शर . (व्यास-शर)

= $\left(\frac{ज्या}{२}\right)^२ = \frac{ज्या^२}{४}$ ततः शर (व्यास-शर) ४ = ज्या^२ मूलेन

$\sqrt{शर (व्यास-शर) \times ४} = ज्या$ ।

अथ शर (व्यास-शर) × ४ = ज्या^२ पक्षौ ४ शर भक्तौ तदा $\frac{ज्या^२}{४ शर}$

= व्यास-शर पक्षौ शर युक्तौ तदा $\frac{ज्या^२}{४ शर} + शर = व्यास$ । एतेनाचार्योक्त-

मुपपद्यते, सिद्धान्तशेखरे 'वृत्तव्यासादिष्टवागेन तिष्ठनाद् वेदैः क्षुण्णाद् यन्पद ज्या

भवेत्तत् । जीवार्धवर्गं शरवर्गयुक्तं शरोद्धृते व्यासमुपगन्तिवृत्ते, श्रौपत्युक्तमिदमाचार्यो-

क्तानुरूपमेव । लीलावत्यां 'व्यासाच्छरोनाच्छर मङ्गुणाच्च मूलं द्विनिष्पन्नं भवतीह

जीवा । जीवार्धवर्गं शरभक्तयुक्तं व्यास प्रमाणं भवतीहवृत्ते' भास्कराचार्योक्त

मपीदमाचार्योक्तानुरूपमेवास्तीति ॥ ४९ ॥

अब जीवा और व्यास के आनयन के लिये कहते हैं ।

हि. भा.—वृत्त में व्यास में से शर को घटाकर और शर से गुणाकर जो हो उसको

चार में गुणाकर मूल लेने में जीवा होती है । ज्यावर्ग को चतुर्गुणित कर से भाग देने में जो लब्धि हो उसमें घन जोड़ने में व्यास होता है ॥ ४१ ॥

उपपत्ति ।

यत्रा संस्कृतोपपत्ति में निखित (१) क्षेत्र को देखिये । यत्र = इष्टचाप है, इस चाप की पूर्णज्या = पर = ज्या यद्वा ज्या में पूर्णज्या समझनी चाहिये, नज = वृत्तव्यास, नर = शर = लज्ज. केप = व्यासार्ध = केज, पर = ज्यार्ध, केर = $\frac{\text{ज्या}}{२}$ — शर; केपर त्रिभुज में कप — केर = पर वर्गान्तर योगान्तर घात के बराबर होता है ।

इमलिये (केप + केर). (केप - केर) = (केज + केर). (केन - केर) = पर^२

= रज. नर = (नज - नर). नर = (व्यास - शर). शर = $\left(\frac{\text{ज्या}}{२}\right)^२$

= (व्यास - शर). शर = $\frac{\text{ज्या}^२}{४}$

∴ (व्यास - शर). शर × ४ = ज्या^२

मूल लेने से $\sqrt{(व्यास - शर). शर \times ४} = ज्या$ ।

अथवा रेखागणित से नर. रज = पर. रज = शर (व्यास - शर)

= $\left(\frac{\text{ज्या}}{२}\right)^२ = \frac{\text{ज्या}^२}{४}$ । पर = रज.

∴ शर (व्यास - शर) × ४ = ज्या^२

मूल लेने से $\sqrt{\text{शर (व्यास - शर)} \times ४} = ज्या$ ।

शर (व्यास - शर) × ४ = ज्या^२

दोनों पक्षों को ४ शर से भाग देने से व्यास - शर = $\frac{\text{ज्या}^२}{४ \text{ शर}}$

दोनों पक्षों में शर जोड़ने से व्यास = $\frac{\text{ज्या}^२}{४ \text{ शर}} + \text{शर}$ इससे आचार्योक्त उत्पन्न

होता है ।

सिद्धान्त शेखर में 'वृत्तव्यासादिष्ट वारौन निघ्नात्' इत्यादि संस्कृतोपपत्ति में लिखित श्रीपत्युक्त आनयन आचार्योक्त के अनुरूप ही है । लीलावती में 'व्यासाच्छरोनाच्छरसङ्गुणान्' इत्यादि संस्कृतोपपत्ति में लिखित भास्कराचार्योक्त भी आचार्योक्त के अनुरूप ही है ॥ ४१ ॥

इदानीं ज्याव्यासाभ्यां शरानयनार्थमाह ।

म्यात् । समखात फलव्यंशः सूची खाते फलं भवति' भास्करोक्तमिदमाचार्योक्तानु-

रूपमेवास्तीति ॥ ४४ ॥

अब खात व्यवहार प्रारम्भ किया जाता है ।

उसमें पहले खात फलानयन के लिये कहते हैं ।

हि. भा.—क्षेत्रफल को वेध से गुणा करने से समखातफल होता है, उसको तीन से

भाग देने से सूची घन फल होता है अर्थात् जिस खात के मुख में जितने दैर्घ्यादि है उतने तल में रहने से वह समखात कह लाता है उसके घन फल को तीन से भाग देने से सूचकार खात का घनफल होता है ॥

यहाँ चतुर्वेदाचार्योक्त उदाहरण है ।

किसी वापी (वावली) की दीर्घता (लम्बाई) तीस हाथ है, विस्तार आठ हाथ उस वापी के भीतर चार, पाँच छः सात, आठ नुज खण्डो से पाँच खात (खत्ता) है, खातों के क्रम से वेध ६, ७, ७, ३, २, है तब उन खातों के समरज्जु प्रमाण कहो ।

यहाँ विज्ञान भाष्य में लिखित (१) चित्र को देखिये । यहाँ मुखतल भुजैक्य व से ३६ । ३५ । ४२ । २१ । १६ । है इन सबों के योग को एकाग्र ३० से भाग देने $\frac{१५०}{३०} = ५ = \text{समरज्जु}$, क्षेत्रफल = विस्तार \times दैर्घ्य = $८ \times ३० = २४०$ इस क्षेत्रफल समरज्जु से गुणा करने से सम्पूर्ण खात का घनफल १२०० हुआ ॥

विस्तार दैर्घ्य वेधों (तीनों) में केवल एक में वैषम्य रहने पर त्रिशतिका में धराचार्य का उदाहरण । किसी पुष्करिणी की लम्बाई १६ हाथ है, विस्तार = ५ हाथ वेध, २, ३, ४ हाथ है तब उसका फल क्या होगा । न्यास २।३।४ वेध, वेधों की समिति $= \frac{२+३+४}{३} = \frac{९}{३} = ३$, यहाँ स्थान संख्या = ३ है, विस्तार \times दैर्घ्य = $५ \times १६ = ८० = \text{क्षेत्रफल}$, इसको वेध से गुणा करने से $८० \times ३ = २४० = \text{खातफल}$ ।

दूसरा उदाहरण

जिस खात का दैर्घ्य = १२ हाथ है, वेध = ८ हाथ है, विस्तार ३ । ४ । ५ हाथ उस खात का फल कहो । विस्तृति सममिति $= \frac{३+४+५}{३} = \frac{१२}{३} = ४$ । विस्तार \times दैर्घ्य = $४ \times १२ = ४८$ इसको वेध से गुणा करने से $४८ \times ८ = ३८४ = \text{खात फल}$ हुआ ॥

विस्तार दैर्घ्य वेध इन तीनों में वैषम्य रहने पर भास्करोक्त उदाहरण है ।

जिस खात की विस्तृति = ६ । ५ । ७ हाथ है, दैर्घ्य = १० । ११ । १२ हाथ वेध = २ । ४ । ३ हाथ है, उस खात के घनहस्तमान क्या होगा । यहाँ स्थान संख्या = ३ विस्तृति योग = $६+५+७ = १८$ इसको स्थान संख्या से भाग देने से $\frac{१८}{३} = ६ = \text{विस्तृति सममिति}$, दैर्घ्य योग = $१०+११+१२ = ३३$ इसको स्थान संख्या से भाग देने से $\frac{३३}{३} = ११ = \text{दैर्घ्य सममिति}$, वेध योग = $२+४+३ = ९$ स्थान संख्या से भाग देने से $\frac{९}{३} = ३ = \text{वेध सममिति}$ ।

विस्तार \times दैर्घ्य $= ६ \times ११ = ६६ =$ क्षेत्रफल, इसको वेध से गुणा करने से $६६ \times ३ = १९८ =$ खात की घन हस्त संख्या खात व्यवहार में गणित सार संग्रह में महावीराचार्य ने बहुत विस्तार के साथ कहा है इति ॥४४॥

उपपत्ति ।

संस्कृतोपपत्ति में लिखित (१) क्षेत्र को देखिये । कखग सूची घनफल साधन के लिये उसके वेध (कज) को २ संख्यक विभाग करने से प्रथम खण्ड का मान $= \frac{\text{वे}}{२}$, द्वितीय खण्डमान $= \frac{२ \text{ वे}}{२}$, इत्यादि सब खण्डित क्षेत्रों के विस्तार और दैर्घ्य साधन कर क्रम से क्षेत्रफल होते हैं ।

प्रथम क्षेत्र फ $= \frac{\text{मुफ.}}{२}$, द्वितीय क्षेत्र फ $= \frac{४ \text{ मुफ.}}{२}$ इसी तरह आगे भी, तब 'क्षेत्रफलं वेध गुणं' इससे $\frac{\text{वे}}{२}$ वेध में क्षेत्रों के घनफल होते हैं, प्रथम क्षेत्र घनफ $= \frac{\text{मुफ. वे}}{२^३}$, द्वितीय क्षेत्र घनफ $= \frac{\text{मुफ. वे. ४}}{२^३}$ इसी तरह आगे भी, सब घनफलो का योग करने से $\frac{\text{वे. मुफ.}}{२^३} (१ + ४ + ९ + \dots + २^३)$ 'द्विघ्नपदं कुयुतं त्रिविभक्त' इत्यादि से $१ + ४ + ९ + \dots + २^३$ इसका स्वरूप लेकर उत्थापन देने से $\frac{\text{मुफ. वे}}{२^३} \times \frac{(२२+१)(२+१)२}{६} = \frac{\text{मुफ. वे}}{२^३} \times \frac{२२^३+३२+१}{६} = \text{मुफ.वे} \left(\frac{१}{३} + \frac{१}{२२} + \frac{१}{६२२} \right)$ यहां २ का मान ज्यों-ज्यों बढ़ेगा त्यों-त्यों मपग क्षेत्र छोटा होता जायगा, और आनीत घनफल वास्तव सूचीघनफल के आसन्न होगा, २ मान आदि परमाधिक अर्थात् अनन्त के बराबर होगा तब वह फल भी वास्तव सूची घनफल ही होगा ।

२ मान के अनन्त रहने से $\frac{१}{२२} + \frac{१}{६२२} = ०$, इसलिये सूची घनफल $= \frac{\text{मुफ. वे}}{३}$ इससे आचार्योक्त उपपन्न हुआ । लीलावती में 'क्षेत्रफल वेधगुणं' इत्यादि संस्कृतोपपत्ति में लिखित श्लोक से भास्कराचार्य ने आचार्योक्त के अनुरूप ही कहा है ॥ ४४ ॥

 \end{aligned}$$

अत्राऽऽचार्यपिक्षया भास्करोक्तं स्पष्टं मस्ति, आचार्योक्तौ स्फुटता नास्ति । सिद्धान्तशेखरे “खातस्य तद्योग भुवां स्फुटानां क्षेत्रोद्भवानां च युतिः फलम् । षड्द्व्यूता वेधसमाहता स्यादघनाभि धानं गणितं सुसूक्ष्मम्” श्रीपत्युक्तमिदमेव भास्करोक्तस्य बीजमिति ॥४५-४६॥

इति खात व्यवहारः समाप्तः

अब खातान्तर के लिये कहते हैं ।

हि. भा.—जिस खात में मुखबाहु सब भिन्न तरह के हैं तथा तलबाहु सब भी भिन्न तरह के हैं वहां मुखबाहु और तलबाहु का योगार्ध करना, दूसरी तरफ भी इसी तरह करना, तब दोनों योगार्ध का घात करने से क्षेत्रफल होता है, उसको वेध से गुणा करने से व्यावहारिक खातफल होता है । मुखभुज से जो फल होता है और तलभुज से भी जो फल हो उन दोनों के योगार्ध को वेध से गुणा करने से औत्र सन्नक खातफल होता है । औत्रफल में से व्यवहारफल को घटाकर तीन से भाग देने से जो लब्धि हो उसको व्यवहार फल में जोड़ने से सूक्ष्म वापी घनफल होता है ॥४५-४६॥

चतुर्वेदोक्त उदाहरण ।

चतुर्भुजाकार समान वापी (वावली) के मुखबाहु १० हाथ है, तलबाहु ६ है, और वेध=३० तब उस वापी में व्यवहारफल, औत्रफल और सूक्ष्म खातफल कहो ।

सूत्रोक्त के अनुसार गणित करते हैं । यहां मुखबाहु=१०, तलबाहु=६ । दोनों का योगार्ध $= \frac{१६}{२} = ८$ । दूसरी तरफ भी ८ इन दोनों का घात करनेसे $८ \times ८ = ६४ =$ क्षेत्रफल ।

इसको वेध से गुणा करने से $१६० =$ व्यवहार फल हुआ । मुखफल $= १००$, तलफल $= ३६$, दोनों का योगार्ध $= \frac{१०० + ३६}{२} = \frac{१३६}{२} = ६८$, इसको वेध से गुणा करने से $२०४ =$ औत्रफल हुआ । औत्रफ—व्यवहारफ $= १२०$ इसको तीन से भाग देने से लब्धि $= ४०$ इसको व्यवहार फल में जोड़ने से $१६६० =$ सूक्ष्मवापी घनफल हुआ इति ।

उपपत्ति ।

यहां संस्कृतोपपत्ति में लिखित (१) क्षेत्र को देखिये । इस वापी में आधा=अ, घाता=क, गाघा=ग, दाता=घ, वेध=वे, तब आचार्य प्रकार से व्यवहार फल $= \frac{अ+क}{२} \times \frac{ग+घ}{२}$, वे औत्रफल $= \frac{अ. ग+क. घ}{२} \times वे$, सूक्ष्मफल $=$ व्यफ $+$ $\frac{औफ-व्यफ}{२} = \frac{वे}{३} \left\{ \frac{(अ+क)(ग+घ)}{२} + \frac{२(अ. ग+क. घ)-(अ+क)(ग+घ)}{२ \times ३} \right\} = \frac{वे}{६} \{ (अ+क)(ग+घ) + अ. ग+क. घ \}$ इससे भास्करोक्त प्रकार उपपन्न हुआ ।

लीलावती में

‘मुखज तलज तद्युतिज क्षेत्र फलैवध’ इत्यादि संस्कृतोपपत्ति में लिखित भास्करोक्त पद्य है ।

उनके उदाहरण भी हैं ।

मुख में विस्तार = १० हाथ, दैर्घ्य = १२ हाथ । तल में उसका आधा अर्थात् विस्तार = ५ हाथ, दैर्घ्य = ६ हाथ, वेध = ७ हाथ, मुखज क्षेत्रफल = १२०, तलज क्षेत्रफल = ३०, युतिजक्षेत्रफल = २७०, इन सबों का योग = ४२०, इसको छः से भाग देने से समफल = ७० इसको वेध से गुणा करने से घनफल ४९० हुआ ।

भास्करोक्त प्रकार की उपपत्ति ।

जिस खात में मुख का विस्तार और दैर्घ्य से तल का विस्तार और दैर्घ्य अधिक है वहां तल के दैर्घ्य और विस्तार से अपने अपने संमुख धरातल द्वय के समानान्तर धरातल करने से एक चतुर्भुजाधार सूची होती है, उसके दोनों बगल में त्रिभुजरूप दो खातक्षेत्र होते हैं । तलचतुर्भुजाधार में सम खात क्षेत्र होता है, ये चार क्षेत्र बनते हैं । इन सब क्षेत्रों के घनफलों का योग करने से वास्तवखात घनफल होता है ।

कल्पना करते हैं मुखविस्तार = अ, तलविस्तार = क, मुखदैर्घ्य = ग, तलदैर्घ्य = घ

वेध = वे, तब चतुर्भुजाधार सूची घनफल = $\frac{(अ-क) (ग-घ)}{३} \times वे$, त्रिभुजरूप दोनों

खातक्षेत्रों का घनफल $\frac{(अ-क). घ. वे}{२}$, $\frac{(ग-घ) क. वे}{२}$, तलक्षेत्राधार समखातफल

= क. घ. वे इन सब फलों का योग करने से वास्तवखातघनफल =

$$\frac{(अ-क) (ग-घ). वे}{३} + \frac{(अ-क). घ. वे}{२} + \frac{(ग-घ). क. वे}{२} + क. घ. वे$$

$$= \frac{वे}{६} \{ २ (अ-क) (ग-घ) + ३ (अ-क) + ३ (ग-घ) + ६ क. घ \}$$

$$= \frac{वे}{६} (२ अ. ग + २ क. घ + क. ग + अ. घ)$$

$$= \frac{वे}{६} (मुखक्षेफ + तलक्षेफ + अ. ग + क. घ + क. ग + अ. घ)$$

$$= \frac{वे}{६} \{ मुखक्षेत्रफ + तलक्षेफ + ग (अ + क) + घ (अ + क) \}$$

$$= \frac{वे}{६} \{ मुखक्षेत्रफ + तलक्षेफ + (अ + क) (ग + घ) \}$$

$$= \frac{वे}{६} (मुखक्षेत्रफ + तलक्षेत्रफ + युतिजक्षेत्रफ) \text{ इससे भास्करोक्त उपपन्न हुआ ।}$$

सिद्धान्त शेखर में 'खातस्य तद्योगभुवां स्फुटानां' इत्यादि संस्कृतोपपत्ति में लिखित श्लोक से श्रीपति भास्करोक्त के अनुसार ही कहा है लेकिन भास्कराचार्य ने श्रीपत्युक्त ही का अनुकरण किया है इति ॥४५-४६॥

खात व्यवहार समाप्त हुआ ।

अथ चितिव्यवहारः प्रारभ्यते ।

इति ॥४७॥

इति चिति व्यवहारः

अब चिति व्यवहार प्रारम्भ किया जाता है। पहले चिति (भाठा) के लिये कहते हैं।

हि. भा.—चिति (भाठा) के अग्र में और तल में जो पृथुत्व (मोटाई) है उन दोनों के योगार्ध को औच्य (ऊँचाई) वेध से गुणा करने से आकृतिफल होता है, फिर उसको औच्य सम्बन्धी दीर्घता से गुणा करने से चिति का घनफल होता है। इस चिति घनफल को इष्टका के घनफल से भाग देने से इष्ट का प्रमाण होता है। आचार्योक्त चिति व्यवहार के सदृश ही “लीलावती में भास्करोक्त त्रिशतिका में श्रीधराचार्योक्त गणित सार संग्रह में महावीराचार्योक्त सिद्धान्तशेखर में श्रीपत्युक्त चिति व्यवहार है ॥ ४७ ॥

यहाँ चतुर्वेदाचार्योक्त उदाहरण है।

किसी चिति के तल में ५ हाथ है, मुख में तीन ३ हाथ है, सो १०० हाथ लम्बाई है, सात हाथ वेध है तब उस चिति का घनफल क्या होगा ?

न्यास तल में ५ हाथ, मुख में ३ हाथ, १०० हाथ = लम्बाई = दैर्घ्य, ७ हाथ = वेध आचार्योक्त सूत्र के अनुसार मुख और तल के योगार्ध $\frac{५+३}{२} = \frac{८}{२} = ४$ इसको दैर्घ्य से गुणा करने से $४ \times १०० = ४००$, इसको वेध से गुणा करने से $४०० \times ७ = २८०० =$ चिति का घनफल।

लीलावती में भास्करोक्त उदाहरण स्पष्ट है।

इष्टका का दैर्घ्य १८ अंगुल है, विस्तार १२ अंगुल, वेध ३ अङ्गुल, इसका घनफल क्या होगा ? चिति का विस्तार ५ हाथ है, दैर्घ्य ८ हाथ है, ऊँचाई (वेध) तीन ३ हाथ है, इस चिति का घनफल क्या होगा ?

न्यास इष्टका का अंगुलात्मक दैर्घ्य = १८, हस्तात्मक दै० = $\frac{१८}{२} = ९$, अंगुलात्मक विस्तार = १२ हस्तात्मक वि० = $\frac{१२}{२} = ६$, अंगुलात्मकवेध = ३, हस्तात्मकवे० = $\frac{३}{२} = १\frac{१}{२}$, इष्ट का क्षेत्रफल = $\frac{३}{२} \times \frac{६}{२} = \frac{९}{२}$ इसको वेधसे गुणा करने से $\frac{९}{२} \times \frac{३}{२} = \frac{२७}{४} =$ इष्टका घनफल, चितिका क्षेत्रफल = $५ \times ८ = ४०$ इसको वेधसे गुणा करनेसे $४० \times ३ = १२०$ चितिका घनफल, चिति के घनफल को इष्टका के घनफल से भाग देने से $\frac{१२०}{\frac{२७}{४}} = \frac{१२० \times ४}{२७}$

$= ४० \times १४ = २५६० =$ इष्टका संख्या, स्तर संख्या = २४॥

यहाँ दूसरे का भी उदाहरण है।

इष्टका का दैर्घ्य चौबीस अंगुल है, विस्तार बारह अंगुल है, उच्छ्राय (वेध) छः अंगुल

है चिति का दैर्घ्य छः हाथ है, तीन हाथ विस्तार है, आधा हाथ वेध है, तब इष्टका का घनफल, इष्टका संख्या, वेदी घन हस्तमान क्या होगा ?

पूर्ववत् क्रिया करने से वेदी घन हस्तमान = ६, इष्टका घनफल = $\frac{1}{2}$, इष्टका संख्या = ७२॥

उपपत्ति

चिति के अग्र में और तल में जो पृथुत्व है, उनका योगार्धं मध्यममान (मोटा मोटी) से चिति का पृथुत्व होता है, इसके वशसे चिति का घनफल तथा इष्टका का घनफल साधन करके अनुपात करते हैं यदि इष्टका घनफल में एक इष्टका पाते हैं। तो चिति के घनफल में क्या इससे इष्टका की संख्या आजायगी इति ॥४७॥

चिति व्यवहार समाप्त हुआ

इति क्राकचिक व्यवहारः समाप्तः

अब क्राकचिक व्यवहार प्रारम्भ किया जाता है ।

हि. भा.—काष्ठादि विदारण (चीरना) के लिये उपयुक्त शस्त्र (आरा) को क्रक-च कहते हैं तत्सम्बन्धी व्यवहार को क्राकचिक व्यवहार कहते हैं । काष्ठ के विस्ताराङ्गुल और दैर्घ्याङ्गुल के घात को दारणमार्ग (जितने स्थान में एक रूप से चीरना अभीष्ट हो उसकी संख्या) से गुणाकर ४२ (बयालीस) से भाग देने से फल किष्कवङ्गुल होता है । काष्ठ की मृदुता और कठिनाता वश से आचार्य भिन्न भिन्न हस्तात्मक फल साधन करते हैं । शाकादियों में हस्तवर्गाङ्गुल = ४२ × ६६, शालमली (सेमर) में = ४२ × २००, बीजक में = ४२ × १२०, शाल सरलादियों में = ४२ × १००, खदिरादियों में = ६४ × ४२ सब जगह अङ्गुलात्मक फल को ४२ (बयालीस) से भाग देने से फल किष्कवङ्गुल होते हैं उनको काष्ठ विशेष में अपने अपने हर से भाग देने से कर्म कार सम्बन्धी हस्तकर्म होता है । एक हस्तकर्म का जो मूल्य होता है उससे गुणा करने से सब हस्तकर्मों का होता है ॥

यहाँ चतुर्वेदाचार्य का उदाहरण है ।

किसी बीज वृक्ष काष्ठ का दैर्घ्य १० हाथ है, विस्तार ६ अङ्गुल हैं, दारण मार्ग = ७ है, कर्ममूल्य ८ पण है तब पण संख्या (अर्थात् शिल्पी को कितने पैसे दिये गये) कहो ?

न्यास-काष्ठ विस्ताराङ्गुल = ६, दैर्घ्य = १० हाथ = २४० अङ्गुल, इन दोनों का घात करने से १४४०, इसको मार्ग संख्या से गुणा करने से १००८०, इसको बयालीस से भाग देने से फल = २४०, इतने किष्कवङ्गुल हुए । बीज वृक्ष है इसलिए इन किष्कवङ्गुलों को एक सौ बीस १२० से भाग देने से लब्धि = २ कर्म संख्या हुई, इसको कर्म मूल्य ८ से गुणा करने से पण संख्या १६ हुई, इतने पण शिल्पी को दिये गए ॥

दूसरे का उदाहरण ।

किसी खादिर (खैर) काष्ठ का दैर्घ्य बारह हाथ है । एक हाथ की चौथाई $\frac{१}{४}$ पिण्ड है । दारण मार्ग = ५ है तब उसका गणित (फल) कहो ।

दैर्घ्य × पिण्ड = $१२ \times \frac{१}{४} = ३$ । इसको दारण मार्ग से गुणा करने से $३ \times ५ = १५$ हस्तात्मक काष्ठ गणित हुआ ॥ सिद्धान्त शेखर में 'आयाम पिण्डाङ्गुल घात राशौ

काष्ठस्य मार्गः' इत्यादि संस्कृत विज्ञान भाष्य में लिखित पद्यों से श्रीपति का क्राकचिक व्यवहार त्रिशतिका में श्रीधराचार्य का-गरुडसारसंग्रह में महावीराचार्य का—लीलावतीमें भास्कराचार्य का आचार्योक्त क्राकचिक व्यवहार के अनुरूप ही है । भास्कराचार्य ने मूल्य नियम के लिए 'इष्टकाचिति दृषन्चिति' इत्यादि संस्कृत विज्ञान भाष्य में लिखित श्लोक से विशेष कहा है ॥ ४८-४९ ॥

उपपत्ति ।

यदि किसी काष्ठ के अग्र और मूल के पिण्ड में वैषम्य हो तो दोनों पिण्डों के योगार्ध के बराबर मध्यम मान से उसका पिण्ड मान होता है । बहुत स्थानों के पिण्डों में वैषम्य रहने से सब स्थानों के पिण्डों के योग को स्थान संख्या से भाग देने से मध्यममान से पिण्ड मान होता है । इस पिण्ड और दैर्घ्य का घात करने से फल होता है । काष्ठ चीरने के समय सूत्र गिरा कर दारण मार्ग ठीक कर उस प्रति चिन्हित मार्ग से काष्ठ को कर्मकार चीरता है । पूर्वागत फल काष्ठ के एक पट्ट का अङ्गुलात्मक है । उसको काष्ठ के दारण मार्ग से गुणा करने से सब पट्टों का फल होगा ॥ ४८-४९ ॥

इति क्राकचिक व्यवहार समाप्त हुआ ॥

अथ राशि व्यवहारः प्रारभ्यते ।

 मुपपन्नम् 'समावनी संस्थित धान्यराशेः षडंशजा या परिधेः कृतिश्च । समुच्छे-
 येणाभि हता फलं' श्रीपत्युक्तमिदं 'परिधि षष्ठे वर्गिते वेधनिघ्ने घनगणितकराः
 स्युः' इति भास्करोक्तं चाप्युपपद्यते इति ॥५०॥

अब राशि व्यवहार आरम्भ किया जाता है ।

हि. भा.—शूक धान्य राशि में परिधि का नवमांश वेध होता है । स्थूल (मोटा)
 धान्य राशि में परिधि का दशमांश वेध होता है । अणु (सूक्ष्म) धान्य राशि में परिधि का
 एकादशांश (ग्यारहवां भाग) वेध होता है । वेध को परिधि के षष्ठांश के वर्ग से गुणा
 करने से धान्य राशि का घनफल होता है । शिद्धान्तशेखर में 'समावनी संस्थित धान्यराशेः'
 इत्यादि संस्कृत भाष्य में लिखित श्लोक से समानीत धान्य राशि घनफल को मगध देशीय
 खारी कहते हैं । 'धान्यादिके यद्धनहस्तमानं शास्त्रोदिता मागधखारिका सा' इससे
 भास्कराचार्य भी 'पूर्वः प्रमाणी कृतमस्ति यस्मात्' इत्यादि संस्कृत भाष्य में लिखित पद्य से
 गणेश ने भी उसको मगध देशीय खारी ही कहा है । किन्तु आचार्य (ब्रह्मगुप्त) ने इस विषय
 में कुछ नहीं कहा है । राशिव्यवहार आचार्योक्त राशि व्यवहार के अनुरूप ही श्रीधराचार्य
 श्रीपति भास्कराचार्य का राशि व्यवहार है ।

लीलावती में भास्करोक्त उदाहरण है ।

स्थूल धान्य राशि परिधि = ६० = अणुधान्य राशि परिधि = शूकधान्य राशि परिधि,
 स्थूल धान्यराशि का वेध = $\frac{परिधि}{१०}$, शूकधान्य राशि का वेध = $\frac{परिधि}{६}$, अणुधान्य
 राशि का वेध = $\frac{परिधि}{११}$ — तब इन धान्य राशियों का घनफल क्या होगा ?

स्थूल धान्य राशिमान ज्ञान के लिये न्यास—धान्य राशि परिधि = ६०, वेध =
 $\frac{परिधि}{१०} = ६$ तब सूत्र के अनुसार परिधि का षष्ठांश = $\frac{६०}{६} = १०$, इसके वर्ग १०० को वेध
 ६ से गुणा करने से $१०० \times ६ = ६०० =$ स्थूलधान्य राशि का घनफल हुआ ।

शूक धान्य राशि मान ज्ञान के लिये—न्यास. धान्य राशि परिधि=६०, वेध

$$= \frac{\text{परिधि}}{६} = \frac{६०}{६} = \frac{२०}{३}$$
 तब सूत्र के अनुसार परिधि ६० षष्ठांश १० के वर्ग को
 वेध से गुणा करने से $१०० \times \frac{२०}{३} = २००० = ६६६\frac{२}{३}$ = शूकधान्यराशिघनफल ।

अणुधान्य राशिमान ज्ञान के लिये न्यास - धान्यराशि परिधि=६०, वेध= $\frac{\text{परिधि}}{११}$
 $= \frac{६०}{११}$ तब सूत्र के अनुसार परिधि षष्ठांश १० वर्ग को वेध से गुणा करने से $१०० \times \frac{६०}{११}$
 $= \frac{६०००}{११} = ५४५\frac{५}{११}$ = अणुधान्यराशि घनफल ।

दूसरे का भी उदाहरण है ।

धान्यराशि की परिधि=३६ है, वेध ४ चार है तब उसका घनफल क्या होगा ?
 पूर्ववत् परिधि षष्ठांश के वर्ग को वेध से गुणा करने से $३६ \times ४ = १४४$ = घनफल
 हुआ ॥५०॥

उपपत्ति ।

धान्य स्थिति वश से धान्य राशि सूच्याकार होती है । उसके आधार वृत्त परिधि
 के नवमांशादि भाग उनके वेध होते हैं यह प्रत्यक्ष उपलब्धि से निश्चय किया गया । 'वृत्तक्षेत्रे
 परिधि गुणित व्यासपादः फलं' इस भास्करोक्त से वृत्तक्षेत्र फल= $\frac{\text{प. व्या}}{४}$, 'द्वाविंशतिघ्ने

विहृतेऽथशैलैः' इस व्यास से परिध्यानयन के विलोम से व्यास= $\frac{७५}{२२} = \frac{५}{३}$ स्वल्पान्तर

से इससे उत्थापन करने से वृत्तक्षेत्रफल= $\frac{\text{प. व्या}}{४} = \frac{\text{प. प}}{४ \times ३} = \frac{५^३}{१२}$. 'क्षेत्रफलं वेधगुणं'

इत्यादि से तथा 'समखातफलत्र्यंशः' इत्यादि से सूच्याकार धान्यराशिका फल =
 $\frac{५^३}{१२} \times \frac{\text{वेध}}{३} = \frac{५^३}{३६} \times \text{वे} = \left(\frac{५}{६}\right)^३ \cdot \text{वे}$ इससे आचार्योंक्त उपपन्न हुआ । तथा
 'समावनी संस्थित धान्यराशेः' इत्यादि संस्कृतोपपत्ति में लिखित श्रीपति श्लोक, 'परिधिषष्ठे
 वर्गिते वेधनिघ्ने' यह भास्करोक्त भी उपपन्न हुआ इति ॥५०॥

इदानीं भित्यन्तर्बाह्यकोण संलग्नधान्यराशिप्रमाणानयनार्थमाह ।

द्विचतुः सत्र्यंशगुणो भित्यन्तर्बाह्यकोणगः परिधिः ।

शूक धान्य राशिमानानयनाय ।

पूर्ववत् क्षेत्रत्रयस्य स्वस्वगुणगुणितपरिधिः = ६० । वेधः = ३०, फलानि
३३ ३/४, १६६ ३/४, ५०० सिद्धान्तशेखरे “द्विचतुः सत्रिभागघ्ने भित्त्यन्तर्बाह्यकोणगे ।

परिधौ क्रमशः प्राग्वत् स्वगुणाप्तं भवेत् फलं" श्रीपत्युक्तमिदमाचार्योक्तानुरूपमेवास्ति । एतदानयनस्य सर्वथैकरूपमेव त्रिशतिकायां श्रीधराचार्यस्य, लीलावत्यां भास्कराचार्यस्यास्ति । यथा भास्कराचार्योक्तमानयनम् । द्विवेद सत्रिभागैकनिघनात् तु परिधेः फलम् । भित्त्यन्तर्बाह्यकोणस्थराशेः स्वगुणभाजितम् ॥५१॥

अत्रोपपत्तिः

भित्त्यन्तः संलग्न धान्यराशेः परिधिर्वास्तव परिधेरर्धतुल्यः । अन्तः कोणस्थितस्य धान्यराशेः परिधिर्वास्तवपरिधि चतुर्थशितुल्यः । बाह्यकोणसंलग्न धान्यराशेः परिधिर्वास्तव परिधेः पादोनैक तुल्यस्तेनोक्तपरिधित्रयमानं द्विवेदसत्रिभागैकेनक्रमशो गुणितं सद्वास्तवः परिधिर्भवेत् । ततः पूर्ववद्यत्फलं तत् द्विवेद सत्रिभागैकेन क्रमशो भक्तं तदा वास्तवं तत्फलं भवतीत्येतावताऽऽचार्योक्तमुपपन्नम् ॥५१॥

इति राशि व्यवहारः

अब भित्ति के अन्तर्गत भित्ति के अन्तः कोणस्थ तथा बाह्यकोणस्थ धान्यराशि प्रमाणा-
नयन के लिये कहते हैं ।

हि. भा.—भित्ति के पार्श्व संलग्न धान्यराशि परिधि को दो से गुणा करने से वास्तव परिधिमान होता है इससे पूर्ववत् जो फल हो उसको दो से भाग देने से उस धान्य राशि का घनफल होता है । भित्ति के अन्तः कोणस्थित धान्य राशि परिधि को चार से गुणा करने से वास्तव परिधि मान होता है । इससे पूर्ववत् जो फल हो उसको चार से भाग देने से उस धान्य राशि का घनफल होता है । भित्ति के बाह्यकोणस्थ धान्यराशि-
परिधि को ५ इससे गुणा करने से वास्तव परिधि मान होता है, इससे पूर्ववत् जो फल हो उसको ५ इससे भाग देने से उस धान्य राशि का घनफल होता है । ॥५१॥

भास्करीय लीलावती में इसका उदाहरण है ।

भित्ति संलग्न धान्यराशि परिधि = ३०, अन्तःकोणस्थित धान्यराशिपरिधि = १५,
बाहिःकोणस्थित धान्यराशिपरिधि = ४५, तब इन सबों के घन हस्तमान पृथक् पृथक् कहो ॥

गणित दिखलाते हैं ।

भित्ति संलग्नधान्यराशि परिधि = ३० इसको दो से गुणा करने से ६० = वास्तव परिधि, अन्तः कोणस्थित धान्यराशि परिधि = १५, इसको चार से गुणा करने से ६० = वास्तवप, बाह्यकोणस्थ धान्यराशि परिधि = ४५ इसको ५ इससे गुणा करने से ६० =

वास्तव परिधि । इन सबों का वेध = ६ इन सबों से फल तुल्य ही ६०० खारी, आता है, इसको अपने अपने गुणकों से भाग देने से क्रम से पृथक् पृथक् घनफल हुआ ३०० । १५० । ४५०॥

अणुधान्यराशि मानानयन के लिये ।

पूर्ववत् क्षेत्रत्रय के अपने अपने गुणक से गुणित परिधि = ६०, वेध = $\frac{६०}{१५}$ इससे फल = २७२ $\frac{४}{५}$, १३६ $\frac{४}{५}$, १०६ $\frac{४}{५}$ ॥

शूक धान्य राशिमानानयन के लिये ।

पूर्ववत् क्षेत्र त्रय के अपने गुणक से गुणित परिधि = ६० । वेध = $\frac{\text{परिधि}}{६} = \frac{६०}{६}$
= २० $\frac{२०}{३}$ इन से फल ३३३ $\frac{१}{३}$, १६६ $\frac{२}{३}$, ५०० ॥ सिद्धान्त शेखर में 'द्विचतुः सत्रिभागघ्ने भित्त्यन्तर्बाह्यकोणगे' इत्यादि संस्कृत विज्ञान भाष्य में लिखित श्लोक से श्रीपति ने आचार्योक्त के अनुरूप ही कहा है । त्रिशतिका में श्री घराचार्य ने और लीलावती में भास्कराचार्य ने भी सर्वथा आचार्योक्त के अनुरूप ही कहा है ॥ ५१ ॥

उपपत्ति ।

भित्ति के अन्तः संलग्न धान्यराशि के परिधिमान वास्तव परिधि के आधे के बराबर होता है । अन्तः कोणस्थित धान्यराशि परिधि के चतुर्थांश तुल्य होती है । बाह्यकोण संलग्न धान्यराशि परिधि वास्तव परिधि के $\frac{३}{४}$ भाग के बराबर होती है । अतः उक्त परिधि त्रय मानों को क्रम से दो, चार, $\frac{३}{४}$ इन अंकों से गुणा करने से वास्तव परिधि मान होता है, इस परिधि से पूर्ववत् जो फल हो उन फलों को क्रम से दो चार और $\frac{३}{४}$ इन अङ्कों से भाग देने से उन धान्यराशियों का वास्तव घनफल होता है इससे आचार्योक्त उपपन्न हुआ ॥ ५१ ॥

इति राशि व्यवहार समाप्त हुआ

$$\therefore \frac{\frac{\text{दि}}{२}}{\text{दिनगत शेषांश}} = १ + \frac{\text{इछा}}{\text{इशं}} \text{ पक्षौ रूपहीनौ तदा } \frac{\frac{\text{दि}}{२}}{\text{दिनगतशेषांश}} - १$$

$$= \frac{\text{इछा}}{\text{इशं}} \text{ पक्षौ इशं गुणितौ तदा } \left(\frac{\frac{\text{दि}}{२}}{\text{दिनगतशेषांश}} - १ \right) \times \text{इशं}$$

= इछा ।

अत्र १२ = इशं कल्पनीयः । एतावतेष्टकालतश्छायायानयनमुपपन्नम् ॥

(१) अस्योपपत्तिः ।

यदि मध्यच्छायया हीनो द्वादशेष्टच्छाया योगो द्वादश तुल्यस्तदा दिनार्धं तुल्या इष्ट घटिका भवन्ति, मध्यच्छाया हीन द्वादशेष्टच्छाया योगो यदि केनचिदिष्टा-
ङ्केन समस्तदा का इष्टघटिकाः ।

$$\text{इति व्यस्तानुपातेनेष्ट घटिकाः} = \frac{१२ \times \frac{\text{दि}}{२}}{१२ + \text{इछा} - \text{मछा}} = \frac{६ \text{ दि}}{१२ + \text{इछा} - \text{मछा}}$$

एतेनोपपन्नम् । परमिदमिष्ट घटिकानयनं न समीचीनमित्यनुपात स्वरूप दर्शनेनैव स्फुटं भवति । एतद्वलेन साधितमाचार्योक्तेष्टकालानयनमपि सुतरां स्थूलमिति विज्ञेयम् ॥ ५२ ॥

अब छायाधिकार प्रारम्भ किया जाता है ।

छाया से इष्टकाल ज्ञान के लिये तथा इष्टकाल से छाया ज्ञान के लिये कहते हैं ।

हि. भा.—छाया के शङ्कुभाग (छाया को शङ्कु से भाग देने से जो फल हो) में एक जोड़कर जो हो उससे दिनार्ध में भाग देने से फल पूर्वकपाल में दिनगत और पश्चिम-कपाल में दिन शेष होता है । तथा इससे विपरीत (उल्टा) दिनार्ध को दिनगतावयव से वा दिनशेषाश से भाग देने से जो लब्धि हो उसमें से एक घटाकर शङ्कु से गुणा करने से छाया होती है ॥

यहां चतुर्वेदाचार्य कहते हैं यह आचार्योक्त निष्प्रयोजन (निरर्थक) है निरक्ष देश में भी छायायनयन वा कालानयन नहीं सिद्ध होता है । चतुर्वेदाचार्य का यह कथन ठीक नहीं है क्योंकि आचार्योक्त प्रकार से इष्ट कालानयन वा छायायनयन होता ही है, यद्यपि उनके आनयन में स्थूलता है तथापि व्यवहारोपयुक्त है । इसलिये आचार्योक्तानयन निष्प्रयोजन (निरर्थक) है यह चतुर्वेदाचार्य का कथन अनादरणीय है । त्रिशतिका में श्रीधराचार्य ने इसी तरह आनयन किया है । सिद्धान्त शेखर में 'द्विनिघ्नशङ्कुवन्वित भा विभक्ते' इत्यादि संस्कृत भाषा में लिखित पद्य से, श्रीपति ने श्रीधराचार्योक्त के अनुरूप ही कहा है ।

बराहमिहिराचार्य ने छाया से इष्टकालानयन के लिये 'दिनं सरामैरधिकं यदल्पं रसेन पक्त्या निहतं शराप्तम्' इत्यादि संस्कृत भाष्य में लिखित पद्यों से) नियम बतलाया है ॥

उपपत्ति

(क) 'षड्घ्नेऽथवा द्युमाने छिन्ने सद्वादशैः' इत्यादि संस्कृतोपपत्ति में लिखित पञ्चसिद्धान्तिकास्थ बराहमिहिरोक्त सूत्र से दिनगत शेष घटी = $\frac{६ \text{ दि}}{१२ + इछा} - मछा$
यहां दि = दिनमान, इछा = इष्टच्छाया, मछा = मध्यच्छाया, १२ = द्वादशशङ्कु-शङ्कु । यदि मध्यच्छाया शून्य मानी जाय तो दिनगत

शेष घटी = $\frac{६ \text{ दि}}{१२ + इछा}$ हरभाज्य को दो से गुणा करने से

$\frac{१२ \text{ दि}}{२ (१२ + इछा)} =$ दिगशेष हर और भाज्य को बारह १२ से भाग देने से

$\frac{\text{दि}}{२ (१ + इछा)} =$ दिनगत शेष घ, यहां १२ = इष्टशङ्कु

$\frac{\text{दि}}{२}$

∴ $\frac{२}{१ + इछा}$ = दिनगत शेष, इससे आचार्योक्त इष्ट कालानयन
इशं

उपपन्न हुआ ।

$$\text{अब } \frac{\frac{\text{दि}}{२}}{१ + \frac{\text{इच्छा}}{\text{इशं}}} \text{ दिनगत शेष, छेदगम से } \frac{\text{दि}}{२} = \text{दिनगत शेषांश}$$

$$\left(१ + \frac{\text{इच्छा}}{\text{इशं}}\right) \therefore \frac{\frac{\text{दि}}{२}}{\text{दिनगतशेषांश}} १ + \frac{\text{इच्छा}}{\text{इशं}} \text{ दोनों पक्षों में रूप घटाकर}$$

इष्टशङ्कु से गुणा करने से $\left(\frac{\frac{\text{दि}}{२}}{\text{दिनगत शेषांश}} - १ \right)$ शङ्कु = इच्छा; इससे इष्टकाल से छायानयन उपपन्न हुआ ।

(क) इसकी उपपत्ति ।

यदि मध्यच्छाया रहित द्वादश और इष्टच्छाया योग बारह के बराबर होता है । तो दिनार्धतुल्य इष्टघटी होती है । मध्यच्छाया रहित द्वादश और इष्टच्छाया योग जब किसी

इष्टाङ्क के बराबर होगा तब इष्ट घटी क्या होगी ? इस व्यस्तानुपात से $\frac{१२ \times \text{दि}}{१२ + \text{इच्छा} - \text{मछा}}$

$= \frac{६ \text{ दि}}{१२ + \text{इच्छा} - \text{मछा}} = \text{इष्टघटी, इससे उत्पन्न हुआ । लेकिन यह इष्ट घटयानयन ठीक}$

नहीं है यह बात अनुपात स्वरूप देखने ही से स्पष्ट है । इसके बल से साधित आचार्योंक्त इष्ट-कालानयन अत्यन्त स्थूल समझना चाहिये इति ॥ ५२ ॥

इदानीं छायानयनार्थमाह ।

दीपतल शङ्कुतलयोरन्तरमिष्ट प्रमाणशङ्कुगुणम् ।

जयोः साजात्यात् $\frac{१२. भू}{\text{छाया}} = \text{दीपौच्यम्}$ । एवं तपन, कशन त्रिभुजयोः साजात्या

दनुपातेन $\frac{१२. भू}{\text{छाया}} = \text{दीपौच्यम्}$ । एतावताऽऽचार्योक्तमुपपन्नम् । लीलावत्यां

“छायाग्रयोरन्तरसङ्गुणा भा छाया प्रमाणान्तरहृद् भवेद् भूः । भूशङ्कुघातः प्रभया विभक्तः प्रजायते दीपशिखौच्यमेवमिति” भास्करोक्तमाचार्योक्तानुरूपमेवेति विद्वद्भिर्ज्ञेयम् ॥५४॥

अब छाया प्रदीपान्तर तथा दीपौच्यानयन के लिये कहते हैं ।

हि. भा.—छाया को छायाग्रान्तर से गुणा कर छायान्तर से भाग देने से भू प्रमाण होता है, भू और शङ्कु के घात को छायान्तर से भाग देने से दीपौच्य होता है ॥ ५४ ॥

उपपत्ति ।

यहां संस्कृतोपपत्ति में लिखित (१) क्षेत्र को देखिये । मज = शङ्कु = १२ । जर = छाया, शर = भू, तप = शङ्कु = १२ । पन = छाया । शन = भूः । कश = दीपौच्य ।

कशर, मजर दोनों त्रिभुजों के सजातीयत्व से अनुपात करते हैं $\frac{\text{छाया. दीउ}}{१२} = \text{भू.}$ । तथा

कशन, तपन दानो त्रिभुजों के सजातीयत्व से अनुपात करते हैं $\frac{\text{छाया. दीउ}}{१२} = \text{भू.}$ । दीउ =

दीपौच्य । दोनों भू के अन्तर करने से भू—भू=रन = छायाग्रान्तर =

$\frac{\text{छाया. दीउ} - \text{छाया. दीउ}}{१२} = \frac{\text{दीउ. (छाया—छाया)}}{१२} = \frac{\text{दीउ. छायाग्रान्तर.}}{१२}$ छेदगम से

छायाग्रान्तर. १२ = दीउ. छायाग्रान्तर $\therefore \frac{\text{छायाग्रान्तर. १२}}{\text{छायाग्रान्तर}} = \text{दीउ}$ इससे भू स्वरूप में

उत्थापन से भू = $\frac{\text{छाया. छायाग्रान्तर. १२}}{१२. \text{छायाग्रान्तर}} = \frac{\text{छाया. छायाग्रान्तर}}{\text{छायाग्रान्तर}}$ । तथा

$\text{भू} = \frac{\text{छाया. छायाग्रान्तर. १२}}{\text{छायाग्रान्तर. १२}} = \frac{\text{छाया. छायाग्रान्तर}}{\text{छायाग्रान्तर}}$ । तथा नजर, कशर दोनों त्रिभुजों के

सजातीयत्व से अनुपात करते हैं $\frac{१२. \text{भू}}{\text{छाया}} = \text{दीपौच्य}$ । एव तपन, कशन त्रिभुजों के

सजातीयत्व से अनुपात करते हैं $\frac{\text{भू. १२}}{\text{छाया}} = \text{दीपौच्य}$ । इससे आचार्योक्त उपपन्न हुआ ।

लीलावती में 'छायाग्रयोरन्तर सङ्गुणा भा' इत्यादि सस्कृतोपपत्ति में लिखित पद्यों से भास्कराचार्य ने आचार्योक्त के अनुरूप ही कहा है इति ॥५४॥

इदानीं प्रत्युत्पन्नादौ विशेषमाह

गुणकार खण्ड तुल्य गुण्यो गोमुत्रिकाकृतो गुणितः ।

सहितः प्रत्युत्पन्नो गुणकारक भेदतुल्यो वा ॥५५॥

सु. भा.—गुणकारस्यैकदशादिस्थानीयखण्डतुल्यो गुण्यः स्थाप्य स्ततस्तैः खण्डैर्गोमुत्रिकाकृतो गुणितः सहितः प्रत्युत्पन्नो गुणनफलं भवति । अर्थात् तैः खण्डैः पृथगुण्यो गुणितो यथास्थानकं सहितो गुणनफलं भवति । वा गुणकार भेदतुल्यो गुणकारखण्डतुल्यो गुण्योऽधोऽधः स्थाप्यस्तैः खण्डैर्गुणितः सहितः प्रत्युत्पन्नो भवति । अत्र गुणकारस्य यथेच्छरूपविभागात्मकः खण्डो ज्ञेय इति । 'गुण्यस्त्वधोऽधो गुणखण्डतुल्यः' इत्यादि भास्करोक्तमेतदनु रूपमेव ॥ ५५ ॥

वि. भा.—गुणयितुं योग्यो गुण्यः । येनाङ्केन गुण्यते स गुणकः । गुणकस्य यन्मितानि खण्डानि क्रियन्ते तन्मितेषु स्थानेषु गुण्यः स्थाप्यः, तैः खण्डकैः पृथक् गुण्यो गुणितः सर्वेषां योगश्च कार्यस्तदा प्रत्युत्पन्नो गुणनफलं भवति ।

अत्रोपपत्तिः ।

गुणानफलं हि योग विशेषोऽर्थाद् गुणकस्य संख्यकस्थानेषु गुण्यं स्थापयित्वा सर्वेषां योगकरणेन तद्गुणानफलं भवति । यथा गुण्यः=८ । गुणकः=५ अत्र गुणकसंख्यकस्थानेषु गुण्यस्य स्थापनेन ८+८+८+८+८=८ (१+१+१+१+१)=८×५=४० । अत्र गुण्यः=गु । गुणकः गुणक तदा गुणान फलम्=गु×गुणक, यदि गुणकः=य+र+ल तदा गुणानफलम्=गुण्य-गुणक=गु (य+र+ल)=गु×य+गु. र+गु. ल, अथवा यदि गुण्य=य+र+ल तदा गुणानफ=गुण्य.गुणक=गुणक (य+र+ल)=गुणक. य+गुणक. र+गुणक. ल एतेनाऽऽचार्योक्तमुपपन्नम् । गुण्यस्त्वधोऽधो गुणखण्डतुल्यस्तैः खण्डकैः संगुणितो युतो वेति' लीलावत्या भास्करोक्तानुरूपमेवोपपद्यते च । आचार्येण साधारणगुणानप्रकारः कथं नोक्त इति त एव ज्ञातुं शक्नुवन्ति, श्रोपति भास्करादिभिः स्वस्वग्रन्थे प्रथमं स एव प्रकारोऽभिहितः । यथा सिद्धान्तशेखरे “विन्यस्य गुण्यं गुणाकाख्यराशेरधः कपाटद्वयसन्धियुक्त्या । उत्सार्य हन्यात् क्रमतोऽनुलोमं विलोममाहो उत तत्स्थमेव” इति श्रोपत्युक्तप्रकारः । गुणकस्योत्सारणतः कपाटसन्धिवदस्य रूपं लक्ष्यतेऽतः प्राचीनैरिदं कपाटसन्धिगुणानं कथ्यते । लीलावत्यां ‘गुण्यान्त्यमङ्कं गुणकेन हन्यादुत्सारितेनैवमुपान्त्यमादी’ नित्येन भास्करेण प्रथममयमेव गुणानविधिः कथितः । भास्करोक्तं मुदाहरणं च । ‘बाले बालकुरङ्गलोलनयने लीलावति प्रोच्यतां पञ्चत्रयेकमिता दिवाकरगुणा अङ्काः कति स्युर्यदि । रूपस्थानविभागखण्डगुणाने कल्यासि कल्याणिनीति’ मुनीश्वरोक्तमुदाहरणम् । ‘यस्यास्तिमुद्राः शरसप्तदस्त्रा धनं हि यत्तत्त्वगुणं कृतं तत् । व्यापारतस्तेन कतीत्यवैहि चेद् गौणमार्गे दृढता तवास्ते । न्यासः—गुण्यः=२७५, गुणकः=२५ कपाटसन्धिना गुणिते तिर्यग् मार्गेण योगे कृते जातं गुणानफलम्=६८७५

गणित सारे महावीराचार्योक्तं मुदाहरणम् ।

नन्दाद्युतुशरचतुस्त्रिद्वन्द्वैकं स्थाप्यमत्र नवगुणितम् । आचार्यमहावीरैः कथितं नरपाल कण्ठिकाभरणम्, न्यासः गुण्यः=१२३४५६७९, गुणकः=९ गुणिते जातम्=११११११११ इदं कण्ठाभरणं सप्तशं कथ्यते ॥५५॥

अब प्रत्युत्पन्नादि में विशेष कहते हैं ।

हि. भा.—जो अङ्क गुणे जाते हैं वे गुण्य कहलाते हैं, जिन अङ्कों से गुणे जाते हैं वे गुणक कहलाते हैं । गुणक के जितने खण्ड किये जाय उतने स्थानों में गुण्य को रख कर उन खण्डों से गुणा कर योग करने से गुणान फल होता है ।

उपपत्ति ।

गुणक की संख्या तुल्य स्थानों में रख कर योग करने से गुणानफल होता है जैसे गुण्य=८, गुणक=५ यहाँ गुणक संख्यक स्थानों में गुण्य को स्थापन करने से ८+८+८+८+८

+८=८×१+८×१+८×१+८×१+८×१ तुल्य गुणक को पृथक् करने से
 ८ (१+१+१+१+१+१)=८×५=४०, यहाँ गुण्य=गु । गुणक=गुणक तब गुणन-
 फल=गुण्य×गुणक । यदि गुणक=य+र+ल तब गुणनफल=गुणक.गु=गु (य+र
 +ल)=गु×य+गु×र+गु×ल, इससे आचार्योक्त सूत्र उपपन्न होता है । आचार्य ने
 साधारण गुणनप्रकार क्यों नहीं लिखा नहीं कह सकते हैं । श्रीपति—भास्कर आदि आचार्यों
 ने अपने अपने ग्रन्थ में उसी प्रकार को कहा है । जैसे सिद्धान्त शेखर में 'विन्यस्य गुण्य गुण-
 काख्य राशेः' इत्यादि श्रीपति प्रकार है, लीलावती में 'गुण्यान्त्यमङ्क गुणकेन हन्यात्' इत्यादि
 से भास्कराचार्य ने भी उसी प्रकार को कहा है । भास्करोक्त उदाहरण भी 'बाले बाल
 कुरङ्ग लोलनयने लीलावति' इत्यादि सस्कृतोपपत्ति में लिखित पद्यों से है । मुनीश्वरोक्त
 उदाहरण भी है जैसे 'यस्यास्तिमुद्राः वर सप्तदन्ना' इत्यादि संस्कृतोपपत्ति में लिखित श्लोक
 इसके अनुसार न्यास गुण्य=२७५, गुणक=२५ गुणा करने से गुणनफल=६८७५ ।

गणित सार में महावीराचार्योक्त उदाहरण ।

'नन्दाद्यतुशरचतुः' इत्यादि संस्कृतोपपत्ति में लिखित श्लोक के अनुसार गुण्य=१ २
 ३ ४ ५ ६ ७ ८, गुणक=६, गुणा करने से गुणनफल=१ १ १ १ १ १ १ १ १
 इति ॥५५॥

इदानीं प्रकारान्तरेणाह ।

गुण्यो राशिर्गुणकार राशिनेष्टाधिकोनकेन गुणः ।

गुण्येष्टवधोनयुतो गुणकेऽभ्यधिकोनके कार्यः ॥ ५६ ॥

सु. भा.—स्पष्टार्थम् । 'इष्टोनयुक्तेन गुणेन निघ्नः' इत्यादि भास्करोक्तमे-
 तेतदनुरूपमेव ॥५६॥

वि. भा.—इष्टेन युतेन हीनेन गुणकेन गुणितो गुण्य इष्ट गुणित गुण्येन
 हीनो युतश्च कार्यस्तदा गुणनफलं भवतीति ।

अत्रोपपत्तिः ।

गुण्य×गुणक=गुणनफलम् । अथ गुणक ± इ ङ इ=गुण । इ=इष्टम्
 तदा गुणनफलम्=गुण्य (गुणक ± इ ङ इ)
 =गुण्य (गुणक ± इ) ङ गुण्य×इ
 एतावताऽऽचार्योक्तमुपपन्नम् । लीलावत्या 'इष्टोनयुक्तेन गुणेन निघ्नो-
 ऽभीष्टं गुण्यान्वितं वर्जितोवेति' भास्करोक्तमेतदनुरूपमेव ।

गुण्यगुणकयोर्धृतिर्यदगुणनफलं तच्छुद्धं न वेत्येतदर्थं शोधनप्रकारः ।
 रेखयोः संयोगेन यद्रूपं भवति तत्र वामभागे गुण्याङ्कानां योगो नवभक्तो यो शेषः

स्थाप्य गुणकाङ्कानां योगो नवभक्तः शेषो दक्षिण भागे स्थाप्यः । गुणनफलाङ्कानां योगो नवभक्तः शेषोऽधो भागे स्थाप्यः । वामभागे दक्षिणभागे च स्थापितयोरङ्कयोर्धार्तो नवभक्तः शेषोऽर्धभागे स्थाप्य एवं सति यदूर्ध्वधोभागस्थापितयोरङ्कयोः साम्यं भवेत्तदा गुणनफलं शुद्धमेवास्तीति बोध्यम् । यथा गुण्यः=२४८, गुणकः=४८, गुणनफलम्=११९०४

गुण्याङ्कानां योगो १४ नवभक्तः शेषम्=१
गुणकाङ्कानां योगो १२ नवभक्तः शेषम्=३
गुणनफलाङ्कानां योगो १५ नवभक्तः शेषम्=६
वाम भागे दक्षिणभागे च स्थापितयोरङ्कयोर्धार्तो
१५ नवभक्तः शेषम् =६,

अत ऊर्ध्वधो भागस्थयोरङ्कयोः साम्ये जाते गुणनफलं शुद्धमेवेति ॥५६॥

अब प्रकारांतर से गुणन विधि को कहते हैं ।

हि. भा.—इष्टयुत और इष्ट रहित गुणक से गुण्य को गुणा करना उसमें इष्ट गुणित गुण्य को क्रमशः हीन और युत करने से गुणन फल होता है ॥

उपपत्ति

गुण्य × गुणक = गुणनफल । गुणक ± इ ± इ = गुणक, तब गुणनफल = गुण्य (गुणक ± इ ± इ), यहाँ इ = इष्ट है = गुण्य (गुणक ± इ) ± गुण्य × इ, इससे आचार्योक्त उपपन्न हुआ । लीलावती में 'इष्टोनयुक्तेन गुणेन निघ्नोऽभीष्टघ्न गुण्यान्वितं वर्जिवा' यह भास्करोक्त आचार्योक्त के अनुरूप ही है ॥

गुण्य और गुणक के घात करने से जो गुणनफल होता है

वह शुद्ध है या नहीं इसका शोधन प्रकार ।

दो रेखाओं के संयोग से जैसा आकार बनता है उसमें वाम भाग में गुण्य के अङ्कों के योग को नौ से भाग देकर जो शेष रहे उसको स्थापन करना । गुणक के अङ्कों के योग को नौ से भाग देकर जो शेष रहे उसको दक्षिण भाग में स्थापित करना, गुणनफल के अङ्कों के योग को नौ से भाग देकर शेष को अधो भाग में स्थापित करना, वाम भाग में स्थापित अङ्क और दक्षिण भाग में स्थापित अङ्कों के घात को नौ से भाग देकर शेष को ऊर्ध्व भाग में स्थापित करना । यदि ऊर्ध्व भाग में स्थापित अङ्क और अधो भाग में स्थापित बराबर हो तब गुणनफल को शुद्ध समझना चाहिए अन्यथा नहीं । जैसे यहाँ संस्कृतोपपत्ति में लिखित चित्र को देखिए । गुण्य=२४८, गुणक = ४८, गुणनफल = ११९०४, गुण्य के अङ्कों के योग १४ को नौ से भाग देने से शेष=५, गुणकाङ्कों के योग १२ को

नौ से भाग देने से शेष = ३ । गुणनफलाङ्कों के अङ्कों के योग १५ को नौ से भाग देने से शेष = ६, वामभाग और दक्षिण भाग में स्थापित अङ्कों के घान १५ को नौ से भाग देने से शेष = ६, अतः ऊर्ध्वभाग और अधोभाग के अङ्को में तुल्यत्व होने के कारण गुणनफल-शुद्ध है ॥ ५६ ॥

इदानीं भागहारे विशेषमाह ।

छेदेनेष्टयुतोनेनाप्तं भाज्यादनष्टमिष्टगुणम् ।

प्रकृतिस्थच्छेदहतं लब्ध्या युत हीनकमनष्टम् ॥ ५७ ॥

सु. भा.—भाज्यादिष्टयुतोनेन छेदेन हरेण यदाप्त तदनष्टं स्थाप्यमेकत्रेष्टगुणं प्रकृतिस्थच्छेदहतमुदाहरणो यः स्वाभीष्टश्छेदस्तेन हृतम् । अत्र या लब्धिस्तयाऽनष्टं क्रमेण युतं हीनं च वास्तवा लब्धिः स्यात् । इष्टाधिके छेदे युतमिष्टोने छेदे हीनमनष्टं कार्यमित्यर्थः ।

अत्रोपपत्तिः ।

कल्प्यते । भाज्यः = भा । छेदः = हा । इष्टम् = ई । तदा वास्तवा लब्धिः =
 $\frac{\text{भा}}{\text{हा}}$ । इष्टयुतोनेन हारेण लब्धिः = $\frac{\text{भा}}{\text{हा} + \text{इ}}$ द्वयोरन्तरम् = $\frac{\text{भा}}{\text{हा} \pm \text{इ}}$ $\frac{\text{भा}}{\text{हा}}$
 $= \text{भा} \left(\frac{1}{\text{हा} + \text{इ}} - \frac{1}{\text{हा}} \right) = \frac{\pm \text{भाइ}}{\text{हा} (\text{हा} \pm \text{इ})} = \pm \frac{\text{आ. इ}}{\text{हा}}$
 अत्र $\frac{\text{भा}}{\text{हा} \pm \text{इ}}$ अस्याप्तसंज्ञा कृता । अत इष्टाधिके छेदे $\frac{\text{भा}}{\text{हा} + \text{इ}} - \frac{\text{भा}}{\text{हा}}$
 $= \text{आ} - \frac{\text{भा}}{\text{हा}} = - \frac{\text{आ. इ}}{\text{हा}}$ ।
 $\therefore \frac{\text{भा}}{\text{हा}} = \text{आ} + \frac{\text{आ. इ}}{\text{हा}}$ । इष्टोने छेदे आ — $\frac{\text{भा}}{\text{हा}} = + \frac{\text{आ. इ}}{\text{हा}}$
 $\therefore \frac{\text{भा}}{\text{हा}} = \text{आ} - \frac{\text{आ. इ}}{\text{हा}}$ अत्र उपपद्यते ॥ ५७ ॥

वि. भा.—भाज्यात् इष्टयुतोनेन छेदेन (हरेण) भक्ताद्यल्लब्धं तदनष्टं स्थाप्यमेकत्रेष्टगुणं प्रकृतिस्थच्छेदहतं (येन हारेण भाज्यो विभाज्यस्तेन भक्तं) या लब्धितयाऽनष्टं क्रमेण युतं हीनं च कार्यं तदा वास्तवा लब्धिः स्यात् (इष्टाधिके हरे युतमिष्टोने हरे हीनं कार्यमिति) ॥ ५७ ॥

अत्रोपपत्तिः ।

कल्प्यते भाज्यः = भा, हारः = हा, इष्टम् = इ, तदा $\frac{\text{भाज्य}}{\text{हार}} = \frac{\text{भा}}{\text{हा}}$ वास्तवलब्धिः ।

इष्टयुतोनेन हारेण भाज्ये भक्ते $\frac{\text{भा}}{\text{हा} \pm \text{इ}} = \text{लब्धिः}$ । अस्याप्तसंज्ञा कृता, अतः

$$\text{इष्टाधिके हरे } \frac{\text{भा}}{\text{हा} + \text{इ}} - \frac{\text{भा}}{\text{हा}} = \text{आप्त} - \frac{\text{भा}}{\text{हा}} = \frac{-\text{आप्त. इ}}{\text{हा}} \text{ अतः समशोधनेन } \frac{\text{भा}}{\text{हा}} \\ = \text{आप्त} + \frac{\text{आप्त. इ}}{\text{हा}} \text{ इष्टोने हरे आप्त} - \frac{\text{भा}}{\text{हा}} = \frac{\text{आप्त. इ}}{\text{हा}} \therefore \frac{\text{भा}}{\text{हा}} = \text{आप्त} - \frac{\text{आप्त. इ}}{\text{हा}}$$

एतावताऽऽचार्योक्तमुपपन्नम् ॥ सिद्धान्त शेषरे 'भाज्यस्याधः स्थापयेत् भाजकं च येन क्षुण्णं भाज्यराशेरपैति । लब्धिः सा स्यादेवमन्त्याद्विलोमं भागादाने ह्याक्षयाद् भाज्यराशेः' अत्रोदाहरणं गणेशदैवज्ञोक्तम् । तत्त्वशीतकिरणाः शरनेत्रैर्भाजिता कति भवन्ति वदाशु । बाण पाणि कु गुणा अपि तत्त्वैर्भाजिता कति च चारू विचारे ॥ न्यासः भाज्यः = ३१२५, भाजकः = २५ तदा सूत्रोक्त्या भागफलम् = ११५ अथवा भाज्यः = १२५, भाजकः = २५ तदा सूत्रोक्त्या भागफलम् = ५ ॥ लीलावत्यां 'भाज्याद्धरः शुद्धयति यद् गुणाः स्यादन्त्यात्फलं तत् खलु भागहारे' भास्करोक्तमिदं श्रीपत्युक्तानुरूपमेव, एतयोः (श्रीपतिभास्करयोः) राचार्ययोः कथनमतीवस्पष्टमस्ति, आचार्येण तु गुणानविधौ 'इष्टोनयुक्तेन गुणेन निघ्नोऽभीष्टघनगुण्यान्वितवर्जितो वा' यादृशो विधिस्तादृश एव भागहररोऽपि प्रदर्शितः, एतावता किमपि वैशिष्ट्यं न जातं साधारणभागहारविधिर्नोक्त इति ॥ ५७ ॥

अब भाग हरण में विशेष कहते हैं ।

हि. भा. — भाज्य में इष्ट युत और इष्ट रहित भाजक से भाग देकर जो लब्ध हो उसको अनष्ट स्थापन करना, एक जगह इष्ट से गुणा कर हर से (भाज्य को जिस हर से भाग देना है) भाग देने से जो लब्धि हो उसको पूर्वाक्त अनष्ट स्थापित लब्धि में क्रम से युत और हीन करने से वास्तव लब्धि होती है; (हर के इष्ट से अधिक रहने से युत करना, अल्प रहने से हीन करना) इति ॥ ५७ ॥

उपपत्ति ।

$$\text{भाज्यः} = \text{भा}, \text{हारः} = \text{हा}, \text{इष्टम्} = \text{इ}, \text{तब } \frac{\text{भाज्य}}{\text{हार}} = \frac{\text{भा}}{\text{हा}} = \text{वास्तव लब्धि},$$

इष्टयुतोनेन हार से भाज्य को भाग देने से लब्धि = $\frac{\text{भा}}{\text{हा} \pm \text{इ}}$ इसकी आप्त संज्ञा है, इसलिये

$$\text{इष्टाधिक हर में } \frac{\text{भा}}{\text{हा} \pm \text{इ}} - \frac{\text{भा}}{\text{हा}} = \text{आप्त} - \frac{\text{भा}}{\text{हा}} = \frac{-\text{आप्त. इ}}{\text{हा}} \text{ समशोधन करने से } \frac{\text{भा}}{\text{हा}}$$

$$= \text{आप्त} + \frac{\text{आप्त. इ}}{\text{हा}} \text{ हर के इष्ट से अल्प रहने से आप्त} - \frac{\text{भा}}{\text{हा}} = \frac{\text{आप्त. इ}}{\text{हा}}$$

$$\therefore \frac{\text{भा}}{\text{हा}} = \text{आप्त} - \frac{\text{आप्त. इ}}{\text{हा}} \text{ इससे आचार्योक्त उपपन्न हुआ । सिद्धान्तशेखर में.}$$

‘भाज्यस्याधः स्थापयेत् भाजक च’ इत्यादि संस्कृतोपपत्ति में लिखित श्लोक से श्रीपति ने तथा लीलावती में ‘भाज्याद्धरः शुद्धयति यद्गुणः स्यात्’ इत्यादि से भास्कराचार्य ने भी जिस तरह स्पष्टी करण किया है उस तरह आचार्योक्त नहीं है भास्कराचार्योक्त श्रीपत्युक्त के अनुरूप ही है। भागहरण के लिए आचार्य ने साधारण विधि न कह कर विशेष विधि ही कही है। उदाहरण गणेश दैवज्ञोक्त है जैसे—

‘तत्त्वशीत किरणाः शरनेत्रैः’ इत्यादि संस्कृतोपपत्ति में लिखित श्लोक है। न्यास भाज्य = १२५ भाजक = २५ तब श्रीपत्युक्त सूत्र के अनुसार क्रिया करने से लब्धि = ५। अथवा भाज्य = ३१२५, भाजक = २५ तब पूर्ववत् क्रिया करने से लब्धि = ११५, आचार्योक्त विधि में कुछ विशिष्टता नहीं है केवल क्रिया बाहुल्य है इति ॥५७॥

इदानीं गुणने पुनर्विशेषमाह ।

गुण्यश्छेदफलवधो गुणकहृतो गुण्यभाजितो गुणकः ।

छेदोद्धृतः फलं गुण्यगुणवधः फलहृतश्छेदः ॥ ५८ ॥

सु. भा.—गुणनफलं केनचिदभीष्टेन छेदेन हृतं लब्धं फलसंज्ञं ज्ञेयम् । अतश्छेदफलवधो गुणनफलं भवत्येवातः स वधो गुणकहृतो गुण्यो गुण्यभाजितो गुणकश्च भवति । एवं गुण्यगुणवधो गुणनफलं स छेदोद्धृतः फलं फलहृतश्छेदो भवतीति सर्वं स्फुटम् ॥५८॥

वि. भा.—गुणनफलं केनचिदिष्टेन छेदेन (हरेण) भक्तं लब्धं फलसंज्ञम् । अतो हरफलयोर्वधो गुणनफलं भवेदेव वधः (गुण्य गुणक घातः) गुणक हृतस्तदा गुण्यो भवति, वधो गुण्यभाजितस्तदा गुणको भवति, तथा गुण्यगुणवधः (गुणन-फलं) छेदोद्धृतः (हारभक्तः) फलं भवति, फलेन भक्तस्तदा छेदो (हरो) भवतीति ॥५८॥

अत्रोपपत्तिस्तु व्याख्ययैव स्फुटेति ॥५८॥

अब फिर गुणन में विशेष कहते हैं ।

हि. भा.—गुणन फल को किसी इष्ट छेद से भाग देने से जो लब्धि हो वह फल संज्ञक है। अतः छेद और फल का वध गुणन फल होगा ही, वध (गुण्य और गुणक के घात) को गुणक से भाग देने से गुण्य होता है, और गुण्य से भाग देने से गुणक होता है, तथा गुण्य और गुणक के वध (गुणनफल) को छेद से भाग देने से फल होता है, और फल से भाग देने से छेद होता है। इन बातों को कहने की कोई आवश्यकता नहीं थी, इन सबों को हम निरर्थक समझते हैं ॥५८॥

उपपत्ति भी हि. भा. से स्पष्ट ही है ॥५८॥

इदानीं पुनर्विशेषमाह ।

गुण्य गुणकारयोश्छेदलब्धयोर्द्यदि द्वयोर्द्वयोर्नाशोः ।

तेषां दृश्यौ व्यस्तौ कृत्वा तत्स्थानयोश्चेष्टौ ॥५६॥

सु. भा.—यदि गुण्यगुणकारयोर्वा छेदलब्धयोर्द्वयोर्द्वयोर्नाशो भवति तदा तेषां मध्ये यौ दृश्यौ तौ व्यस्तौ कृत्वा तत्स्थानयोश्चेष्टौ प्रकल्प्यौ । एतदुक्तं भवति । यौ दृश्यौ तावदृश्यौ कल्प्यौ दृष्टस्थानयोश्चेष्टावन्यौ राशी कर्त्तव्यौ । करणं च यथा । छेदफलयोर्नाशे गुण्यगुणकौ छेदफले कल्प्ये । ततश्छेदफलवध इष्टेन गुण्यकल्पितेन गुणककल्पितेन वा विभजनीयं फलं द्वितीयो भवत्येवमवशेषयोरपि । इयं व्याख्या चतुर्वेदोक्ता ॥५९॥

वि. भा.—अस्य व्याख्या चतुर्वेदोक्ता यथा यदि गुण्य गुणकारयोर्वा छेदलब्धयोर्द्वयोर्द्वयोर्नाशो भवति तदा तेषां मध्ये यौ दृश्यौ तौ व्यस्तौ कृत्वा तत्स्थानयोश्चेष्टौ प्रकल्प्यौ । एतदुक्तं भवति । यौ दृश्यौ तावदृश्यौ कल्प्यौ दृष्टस्थानयोश्चेष्टावन्यौ राशी कर्त्तव्यौ । करणं च यथा । छेदफलयोर्नाशे गुण्यगुणकौ छेदफले कल्प्ये । ततश्छेदफलवध इष्टेन गुण्यकल्पितेन गुणककल्पितेन वा विभजनीयं फलं द्वितीयो भवत्येवमवशेषयोरपि भवतीति ॥५९॥

अब पुनः विशेष कहते हैं ।

हि. भा.—यदि गुण्य और गुणकार में वा छेद और लब्धि में दो दो का नाश हो तब उन सबों में जो दृश्य है उनको उलटा कर उनके स्थान में इष्टद्वय कल्पना करना, जो दृश्यद्वय है उनको अदृश्यद्वय कल्पना करना दृष्टस्थानद्वय में इष्ट अन्य राशिद्वय करना चाहिये । छेद और फल के नाश में गुण्य और गुणक को छेद और फल कल्पना करनी चाहिये । तब छेद और फल के बध को गुण्य कल्पित इष्ट से भाग देने से फल द्वितीय होता है अर्थात् गुण्य कल्पित इष्ट से भाग देने से गुणक कल्पित इष्ट होता है और गुणक कल्पित इष्ट से भाग देने से गुण्य कल्पित इष्ट होता है इति ॥५६॥

इदानीं पुनर्विशेषमाह ।

गुण्यं गुणकारं वा गुणयेच्छेदेन भागहारस्य ।

गुण्यगुणकारराशयोश्छेदगुणो भागहारश्च ॥६०॥

सु. भा.—यदा कोऽपि गुण्यो वा गुणको भवेत् तदा तं भागहारस्य छेदेन गुणयेत् फलं गुण्यो वा गुणकः कल्प्यः । एवं गुण्यगुणकारराशयोर्द्वयोश्छेदस्तेन भागहारश्च गुणो भागहारो भवति । एतदुक्तं भवति यदि कस्यापि भिन्नो गुण्यो

वा गुणकस्तस्य भागहारश्च भिन्नस्तदा गुण्यस्य गुणकस्य वा लवो गुण्यो वा गुणकसंज्ञः । एवं भागहारस्य लवो भागहारसंज्ञः कल्प्यस्तदाऽयं विधिभिन्नभाग-
हारविधिनोत्पद्यते । अत एवात्र चतुर्वेदाचार्यः । ‘परिवर्त्य भागहारच्छेदांशावि-
त्यनेनार्यासूत्रेण गतार्थेयमार्यास्तो न व्याख्यात मिति’ ॥६०॥

वि. भा.—यदि गुण्यो गुणकारो वा भवेत्तदा त भागहारस्य च्छेदेन गुणयेत् फलं गुण्यो गुणकारो वा कल्प्यः तथा गुण्यगुणकराश्रयोर्यश्छेदस्तेन भागहारो गुणो भागहारो भवति । एतदुक्तं भवति । यदि कस्यापि भिन्नो गुण्यो वा गुणको भवेत्तस्य भागहारश्च भिन्नस्तदा गुण्यस्य गुणकस्य वा लवो गुण्यो वा गुणसंज्ञः । भागहारस्य लवो भागहारसंज्ञः कल्प्यस्तदाऽयं विधि-
भिन्नभागहारविधिनोत्पद्यते । अत एवात्र चतुर्वेदाचार्यः—‘परिवर्त्य भागहार
च्छेदांशावित्यनेनार्या सूत्रेण गतार्थेयमार्यास्तो न व्याख्यातमिति’ ॥६०॥

अब पुनः विशेष कहते हैं ।

हि. भा.—यदि कोई गुण्य या गुणक हो तो उसको भागहार के छेद से गुणाकर फल को गुण्य या गुणक कल्पना करना । तथा गुण्य और गुणक राशि के छेद से भागहार को गुणा करनेसे भागहार को गुणा करनेसे भागहार होता है । यदि किसी का गुण्य वा गुणक भिन्न हो उसका भागहार भी भिन्न हो तो गुण्य वा गुणक का लव (अंश) गुण्य संज्ञक वा गुणक संज्ञक होता है । भागहार का लव भागहार संज्ञक होता है तब यह विधि भिन्न भागहार विधि से होती है इति ॥६०॥

इदानीं पुनर्विशेषमाहः ।

अच्छेदस्य छेदं रूपं कृत्वाऽन्यदुक्तवत्सर्वम् ।

अपवर्त्यो छेदगुणौ तुल्येनेष्टेन गुण्यौ वा ॥ ६१ ॥

सु. भा.—अच्छेदस्याभिन्नस्य रूपं छेदं कृत्वाऽन्यत् सर्वमुक्तवत् कार्यम् । एवं छेदगुणौ केनापि तुल्येनेष्टेन संभवे सत्यपवर्त्यौ वा गुण्यौ ततस्ताभ्यां कर्मणि न कश्चिद्विकार इति सर्वं स्फुटम् ॥६१॥

वि. भा.—अच्छेदस्य (अभिन्नराशेः) रूपमेकं छेदं (हरं) कृत्वाऽन्यत्सर्वं पूर्ववत् कार्यम् । तथा छेद गुणौ केनापि तुल्येनेष्टेनापवर्त्यौ वा गुणानीयौ ततोऽग्रे क्रियाकरणे न कोऽपि दोष आगच्छति, भास्करार्येणापि लीलावत्यां ‘समेन केनाप्यप-
वर्त्यं हारभाज्यौ भजेद्वा सति सम्भवे तु’ कथ्यते इति ॥ ६१ ॥

अब पुनः विशेष कहते हैं ।

हि. भा.—अभिन्नराशि (पूर्णाङ्क) में एक हर देकर पूर्ववत् अन्य सब कुछ करना

चाहिये । तथा छेद और गुणक को किसी तुल्य इष्टाङ्क से अपवर्तन देकर वा गुणा कर आगे कर्म करने में किसी तरह विकार नहीं आता है । लीलावती में 'समेन केनाप्यपवर्त्य हार-भाज्यौ' इत्यादि से भास्कराचार्य इसी बात को कहते हैं इति ॥ ६१ ॥

इदानीं सकल विकलावर्गानयनार्थमाह ।

स्वविकलषष्ठ्यंशगुणः सकलस्त्रिशोद्धृतो विकलवर्गः ।

प्रक्षेप्यः सकलकृतौ वर्गघनौ द्वित्रितुल्यवधौ ॥ ६२ ॥

सु. भा.—यत्र राशौ कला विकला चेति द्वयं वर्तते तस्य वर्गार्थं कलाराशिः सकलसंज्ञो विकलाराशिश्च स्वविकलस्तत्कलाषष्ठ्यंशश्च कथ्यते । अथ सकलो राशिः स्वविकल एव षष्ठ्यंशः स्वविकलषष्ठ्यंशस्तेन गुणास्त्रिशोद्धृतः फलं विकलवर्गसंज्ञो भवति स सकलस्य कृतौ वर्गे प्रक्षेप्यो योज्यस्तदा राशेर्वर्गो भवेत् । अथ वर्गघनलक्षणमाह । द्वित्रितुल्यवधौ क्रमेण वर्गघनौ भवत इति प्रसिद्धौ ।

अत्रोपपत्तिः ।

कल्प्यते कस्मिन्नपि राशौ कलाः = क । विकलाः = वि । तदा कलात्मकः स राशिः = $k + \frac{वि}{६०}$ ।

अस्य बीजगणितरीत्या वर्गः = $k^2 + \frac{२ क वि}{६०^२} + \frac{वि^२}{६०^२} = k^2 + \frac{क. वि}{३०}$
 + $\frac{वि^२}{६०}$ - आचार्येणान्तिभं खण्डं रूपाल्पत्वात् त्यक्तम् । ततो जातो वर्गः = k^2
 + $\frac{क. वि}{३०}$ । अत उपपन्नं मूलोक्तम् ॥ ६२ ॥

वि. भा.—यस्मिन् राशौ कला-विकला चेति द्वयं वर्तते तस्य वर्गकरणार्थं कलाराशिः सकल संज्ञो विकलाराशिश्च स्वविकलस्तत्कलाषष्ठ्यंशश्च कथ्यते । अथ सकलो राशिः स्वविकल एव षष्ठ्यंशः स्वविकलषष्ठ्यंशस्तेन गुणास्त्रिशोद्धृतः फलं विकलवर्गसंज्ञो भवति स सकलस्य वर्गे योज्यस्तदा राशेर्वर्गो भवेत् ॥ अथ वर्गघनयोर्लक्षणमाह । समानाङ्कयोर्घातस्तद्वर्गः समानाङ्कत्रयस्य घातस्तद्घन इति, सिद्धान्तशेखरे 'वर्गोऽभिघातः सदृशद्विराद्योर्घनः समानत्रितयस्य घातः' जनेन श्रीपतिना, लीलावत्यां 'समद्विघातः कृतिरुच्यते' 'समत्रिघातश्च घनः प्रदिष्टः' आभ्यां भास्करेण चाचार्योक्त वर्गघनलक्षणयोरनुरूपमेव कथ्यते ॥ ६२ ॥

अत्रोपपत्तिः ।

कल्प्यते कस्मिन्नपि राशौ कला = क, विकला = वि, तदा कलात्मकः स राशिः = $k + \frac{वि}{६०}$, (विकलानां कला षष्ठ्या इत्युक्तेर्विकलानां षष्ठ्या एका कला) । तदा स्थाप्योऽन्त्यवर्गो द्विगुणान्त्यनिघ्ना इत्यादि भास्करोत्तथा कलात्मकराशिवर्गः = $\left(k + \frac{वि}{६०}\right)^2 = k^2 + \frac{२ क. वि}{६०} + \left(\frac{वि}{६०}\right)^2 = k^2 + \frac{क. वि}{३०} + \left(\frac{वि}{६०}\right)^2$ अत्र $\left(\frac{वि}{६०}\right)^2 < १$ तस्मादाचार्येण तस्यक्तम् । तदा कलात्मक-राशिवर्गः = $k^2 + \frac{क. वि}{३०}$, एतावताऽऽचार्योक्तमुपपन्नम् ॥ ६२ ॥

अब कला सहित विकला के वर्गानयन के लिये कहते हैं ।

हि. भा.—जिस राशि में कला और विकला दोनों हैं उसका वर्ग करने के लिये कला राशि सकल सन्नक और विकला राशि स्वविकल संज्ञक है । सकल राशि को स्वविकल से गुणा कर तीस से भाग देकर जो फल होता है वह विकलवर्गसंज्ञक होता है इसको सकल के वर्ग में जोड़ देने से राशि का वर्ग होता है ॥ वर्ग और घन के लक्षणों को कहते हैं । समान दो अङ्कों का घात उस अङ्क का वर्ग कहलाता है । एवं समान तीन अङ्कों का घात उस अङ्क का घन कहलाता है । सिद्धान्त शेखर में 'वर्गोऽभिघातः सदृश द्विराशयोः' इत्यादि से श्री पति, तथा लीलावती में 'समद्विघातः कृतिरुच्यते-समत्रिघातश्च घनः प्रदिष्टः' इससे भास्कराचार्य भी आचार्योक्त के अनुरूप ही कहा है इति ॥

उपपत्ति ।

किसी राशि में कला = क । विकला = वि, तब कलात्मक वह राशि = $k + \frac{वि}{६०}$ (साठ विकला की एक कला होती है इस नियम से) तब 'स्थाप्योऽन्त्यवर्गो द्विगुणान्त्यनिघ्ना इत्यादि भास्करोक्त सूत्र से कलात्मकराशि वर्ग = $\left(k + \frac{वि}{६०}\right)^2 = k^2 + \frac{२ क. वि}{६०} + \left(\frac{वि}{६०}\right)^2 = k^2 + \frac{क. वि}{३०} + \left(\frac{वि}{६०}\right)^2$ यहां $\left(\frac{वि}{६०}\right)^2 < १$ इसलिये आचार्य ने इसको छोड़ दिया, तब कलात्मक राशि वर्ग = $k^2 + \frac{क. वि}{३०}$ इससे आचार्योक्त उपपन्न हुआ ॥ ६२ ॥

इदानीं वर्गार्थमाह ।

राशेरूनं द्विगुणं बहुतरगुणमूनकृतियुतं वर्गः ।

राशेरिष्टयुतोनाद्वयः कृतिर्वेष्टकृतियुक्तः ॥ ६३ ॥

सु. भा.—राशेरूनमूनस्थानीयाङ्कमर्थादिकस्थानीयमङ्कद्विगुणं बहुतरगुणं बहुतरस्थानीयैरङ्कैर्गुणमूनकृतिपुतं च यथास्थानकमेवं वर्गो भवेत् । एतदुक्तं भवति । आदिवर्गः स्थाप्यः परेऽङ्का द्विगुणादिनिघ्नाश्च स्थाप्यास्तत आदि त्यक्त्वा पुनस्तथैव क्रिया कार्या । एवं वर्गो भवेत् । ‘स्थाप्योऽन्त्यवर्गो द्विगुणान्त्य-निघ्नाः’ इत्यादिभास्करोक्तमेतदनुरूपमेव । भास्करेणान्त्यतः क्रिया कृतेहाचार्येणा-दित एवेत्येव विशेषः । राशेरिष्टयुतोनाद्वध इत्यादि स्पष्टार्थम् । ‘इष्टोनयुग्राशिवधः कृतिः स्यात्’ इत्यादि भास्करोक्तमेतदनुरूपमेव ॥६३॥

वि. भा.—राशेरूनमूनस्थानीयाङ्कमर्थादिकस्थानीयमङ्कं द्विगुणं बहुतरगुणं बहुतरस्थानीयैरङ्कैर्गुणमून वर्गयुतं यथास्थानकं तदा वर्गो भवेत् । अर्थादादिवर्गः स्थाप्योऽपरे ऽङ्काद्विगुणादिगुणिताः कार्यास्तत आदि व्यक्त्वा पुनस्तथैव क्रिया कार्या तदा वर्गो भवेत् । इष्टयुतोनाद्वधे इष्टवर्गयुक्तो वा कृति (वर्गः) भवेदिति ॥

अत्रोपपत्तिः ।

कल्प्यते राशिः = $k = g + c$ तदा वर्ग परिभाषया क. $k = k^2 = (g + c)$. $(g + c) = g^2 + g.c + g.c + c^2 = g^2 + 2g.c + c^2$, यदि $k = g + c + c$, तदाप्येवमेव, एतावताऽऽचार्योक्त पूर्वार्धमुपपन्नम् । लीलावत्यां ‘स्थाप्योऽन्त्यवर्गो द्विगुणान्त्यनिघ्ना’ इत्यादि भास्करोक्तमेतदनुरूपमेवास्ति, किन्तु भास्करेणान्त्यतः क्रिया कृता, आचार्येणादितः क्रियाकृतेत्येतावानेव भेदः ।

परार्धोपपत्तिः ।

राशिः = k , इष्टम् = h , इष्टयुत राशिः = $k + h$, इष्टरहित राशिः = $k - h$, अनयोर्घातः $(k + h)(k - h)$ योगान्तर घातस्य वर्गान्तर समत्वात् $(k + h)(k - h) = k^2 - h^2$ पक्षौ h^2 युतौ तदा $(k + h)(k - h) + h^2 = k^2$ एतेनो-पपन्नमाचार्योक्तम् । लीलावत्यां ‘इष्टोनयुग्राशिवधः कृतिः स्यादित्यादि’ भास्करोक्त-मेतदनुरूपमेवास्तीति ॥ ६३ ॥

अब वर्ग के लिए कहते हैं ।

हि. भा.—जिन अङ्कों (राशि) का वर्ग करना है उनके दो या तीन आदि खण्ड करना चाहिये तब आदि का वर्ग स्थापन करना पर अङ्को को द्विगुणित आदि से गुणा देना, आदि को छोड़कर पुनः इसी तरह क्रिया करने से राशि वर्ग होता है । वा राशि में इष्ट को जोड़कर और राशि में इष्ट को घटाकर जो हो उन दोनों के घात में इष्टवर्ग जोड़ने से राशि-वर्ग होता है ॥ ६३ ॥

पूर्वार्ध की उपपत्ति ।

यदि राशि = क = ग + घ तब वर्ग की परिभाषा से $क = क^2 = (ग + घ)$.
 $(ग + घ) = ग^2 + ग. घ + घ. घ + घ^2 = ग^2 + २ग. घ + घ^2$, यदि $क = ग + घ + च$, तो
 भी इसी तरह होता है इससे आचार्योक्त उपपन्न हुआ । लीलावती में 'स्थाप्योऽन्त्यवर्गो
 द्विगुणान्त्य निघ्ना' इत्यादि भास्करोक्त भी आचार्योक्त के अनुरूप ही है, किन्तु भास्कराचार्य
 ने अन्त्याङ्क से क्रिया की है, आचार्य ने आदि से क्रिया की है, इनका ही भेद है ॥

परार्ध की उपपत्ति ।

राशि = क । इष्ट = इ, इष्टयुतराशि = क + इ, इष्ट रहित राशि = क - इ, इन दोनों
 का घात करने से $(क + इ). (क - इ)$ योगान्तर घात वर्गान्तर के बराबर होता है इसलिये
 $(क + इ). (क - इ) = क^2 - इ^2$ दोनों पक्षों में $इ^2$ जोड़ने से $(क + इ). (क - इ) + इ^2$
 $= क^2 = राशि^2$ इससे आचार्योक्त उपपन्न हुआ । लीलावती में 'इष्टोनयुग्राशिवधः कृतिः
 स्यात्' इत्यादि भास्करोक्त भी इसी के अनुरूप है इति ॥ ६३ ॥

इदानीं द्वयो राश्योर्वर्गयोगस्य वर्गान्तरस्य च पदानयनार्थमाह ।

इष्टाल्पराशिवर्गो युक्तोनावितरविकलवर्गाम्ब्याम् ।

= १९६ + २० = २१६ । अल्पराशिर्वर्गो द्विगुणोत्तरराशिना भक्तो लब्धं निरग्रम् = ६ । अनेन युतो द्विगुणोत्तरराशिः = ३६ अनेन पूर्वयोगोऽयं २१६ भक्तो लब्धं पूर्वागतनिरग्रलब्धसममेव । तेन युतश्छेदः ३६ जातः ४२ अस्यार्धं जातं वर्गयोगमूलम् = २१ वा लब्ध ६ मितरराशि १५ युतं तदा तदेव वर्गयोगमूलम् = २१ । एवमन्तरवर्गपदानयनं च कार्यम् ॥

अत्रोपपत्तिः ।

कल्प्यते लघुराशिः=अ । सविकलेतर राशिः कलात्मकः=इ+ $\frac{\text{वि}}{६०}$

तदैतयोर्वर्गयोगो वा वर्गान्तरम्=इ^२+ $\frac{२इ.वि}{६०}$ ± अ^२ स्वल्पान्तरात् ।

वा $इ^३ \pm अ^३ + वि^३ = इ^३ \pm (अ^३ \pm वि^३)$ अस्य मूलम् $= इ \pm \frac{अ^३}{२इ} = इ \pm ल$ इदं तदैव स्याद्यदि $२ इ \pm ल$ इदं ल गुणं $(२ इ \pm ल)$ ल $अ^३ \pm वि^३$ अनेन सम स्यात्तदा ल $= \frac{अ^३ \pm वि^३}{२ इ \pm ल}$, अतस्तदा $२ इ \pm २ ल$ एतदर्थं वा $इ \pm ल$ इदमासन्नमूलं भवेदिति ॥६४-६५॥

अब दो राशियों के वर्गयोग और वर्गान्तर के पदानयन के लिये कहते हैं।

हि. भा.—जहां एक राशि अल्प हो और अन्य सविकल हो वहां यदि उन दोनों का वर्गयोग पदानयन अपेक्षित हो तो अल्पराशि वर्ग में ६२ सूत्र से आये हुए इतर विकल वर्ग को जोड़ देना योग होता है, अल्प राशि वर्ग को द्विगुणेतर राशि से भाग देने से जो लब्ध हो उसको द्विगुणेतर राशि से जोड़ कर उस योग में भाग देना लब्ध जैसे पूर्व फल के बराबर हो, तब छेद लब्ध युत द्विगुणेतर राशि होती है इसमें फल जोड़ कर आधा करने से वर्गयोग पद होता है इसी तरह वर्गान्तर पदानयन के लिये पूर्वोक्त विधि में योग स्थान में ऊन ग्रहण करना चाहिये।

जैसे दो राशि १४ ॥ १५ ॥ ४० है, यहां अल्प राशि १४ वर्ग १९६ में ६२ सूत्रागत इतर विकलवर्ग $= \frac{१४ \times २ \times ४०}{६०} = २०$ जोड़ने से $१९६ + २० = २१६ = \text{योग}$ ।

अल्पराशि वर्ग में द्विगुणेतर राशि से भाग देने से निरग्रलब्धि $= ६$ इसको द्विगुणेतर राशि में जोड़ने से ३६ हुआ, इससे पूर्वागत योग २१६ में भाग देने से लब्ध पूर्वागत निरग्रलब्ध के बराबर ही हुआ। उससे छेद को जोड़ने से $३६ + ६ = ४२$ इसका आधा $= २१ =$ वर्गयोगपद वा लब्ध ६ में इतर राशि १५ जोड़ने से वही वर्ग योग पद २१ होता है इसी तरह वर्गान्तर पदानयन करना चाहिये।

उपपत्ति।

कल्पना करते हैं लघुराशि $= अ$ । सविकलेतर राशि कलात्मक $= इ + \frac{वि}{६०}$
तब इन दोनों का वर्गयोग वा वर्गान्तर $= इ^३ + \frac{२ इ. वि}{६०} \pm अ^३$ स्वल्पान्तर से वा $इ^३ \pm अ^३ + वि^३ = इ^३ \pm (अ^३ \pm वि^३)$ इसका मूल $= इ \pm \frac{अ^३}{२इ} = इ \pm ल$, यह तब ही हो सकता है यदि $२ इ \pm ल$ इसको ल से गुणा करने से $(२ इ \pm ल)$ ल, से $अ^३ \pm वि^३$ इसके बराबर हो। तब ल $= \frac{अ^३ \pm वि^३}{२ इ \pm ल}$, अतः तब $२इ \pm २ल$ इसका आधा $इ \pm ल$ यह आसन्न पद होता है इति ॥६४-६५॥

इदानीमध्यायोपसंहारमाह ।

दिङ् मात्रमेतदन्यज्ज्योत्पत्तौ कुट्टके च कथयिष्ये ।

सङ्कलितादिष्वार्या षट्षष्टिर्द्वादशोऽध्यायः ॥ ६६ ॥

सु. भा.—स्पष्टार्थम् ।

मधुसूदनसूनुनोदितो यस्तिलकः श्री पृथुनेह जिष्णुजोक्ते ।

हृदि तं विनिधाय नूनतोऽयं रचितो व्यक्तिविधौ सुधाकरेण ॥

इति श्री कृपालु दत्तसुतसुधाकरद्विवेदिविरचिते ब्राह्मस्फुटसिद्धान्तनूतनतिलके
गणिताध्यायो नाम द्वादशोऽध्यायः ॥ १२ ॥

इति श्री ब्राह्मस्फुटसिद्धान्त में बारहवां अध्याय समाप्त हुआ ।

ब्राह्मस्फुटसिद्धान्तः

प्रश्नाध्यायाः

तत्र तावन्मध्यगत्युत्तराध्यायः

अत्रादौ तदारम्भप्रयोजनमाह ।

प्रश्नाध्यायान् वक्ष्यामि सोत्तरान् गणकबुद्धिबुद्धिकरान् ।

यंज्ञातैस्तन्त्रविदामाचार्यो भवति बुद्धिमताम् ॥ १ ॥

सु. भा.—यैः प्रश्नैर्ज्ञातैर्बुद्धिमतां तन्त्रविदां मध्ये गणक आचार्यो भवति ।
शेषं स्पष्टार्थम् ॥१॥

वि. भा.—गणक बुद्धि वर्धकान्—उत्तर सहितान् प्रश्नाध्यायान् वक्ष्यामि
यैः (प्रश्नैः) ज्ञातैर्बुद्धिमतां तन्त्रविदां मध्ये गणक आचार्यो भवति ॥१॥

अथ प्रश्नाध्याय आरम्भ किया जाता है ।

उनमें पहले मध्यगत्युत्तराध्याय है, प्रश्नाध्याय के आरम्भ करने के प्रयोजन को कहते हैं ।

हि. भा —ज्योतिषियों की बुद्धि को बढ़ाने वाले उत्तर सहित प्रश्नाध्याय को मैं कहता हूं, जिन प्रश्नों की समझ से ज्योतिषी लोग बुद्धिमान् तन्त्रज्ञों के बीच में आचार्य होते हैं ॥१॥

इदानीं प्रश्नानाह ।

अधिभासकैः सविकलैर्दृष्टै र्युगयातमवमरात्रैर्वा ।

द्युगणेन वा युगगतं यो वेत्ति स कालतन्त्रज्ञः ॥२॥

सु० भा०—सविकलैः साधिशेषकैरधिभासकैर्दृष्टैर्यो युगगतं वेत्ति । वा

सविकलैः सावमशेषैरवमरात्रैरुनाहैर्दृष्ट्यो युगगतं वेत्ति । वा द्युगरोनाहर्गणेन दृष्टेन यो युगगतं वेत्ति स कालनन्त्रजः सिद्धान्तविदिति । एवमत्र प्रश्नत्रयम् ॥२॥

वि. भा.—सविकलैः सशेषैः (अधिशेष सहितैः) अधिमासकैर्दृष्ट्यो युगगतं वेत्ति, वा सशेषैः (अवमशेषसहितैः) अवमरात्रैः (क्षयाहैः) दृष्ट्यो युगगतं वेत्ति । वा द्युगरोन (अहर्गणेन) दृष्टेन यो युगगतं वेत्ति स कालनन्त्रजः (ज्योतिः सिद्धान्त-पण्डितः) अस्तीति । अत्र प्रश्नत्रयमस्ति ।

प्रथमप्रश्नोत्तरार्थं युक्तिः ।

गतसौर दिनेभ्यः साधिशेषा गताधिमासाः = $\frac{\text{युगाधिमास. गतसौरदिन}}{\text{युसौरदि}}$

= गताधिमास + $\frac{\text{अधिशेष}}{\text{युसौरदि}}$ पक्षौ 'युसौरदि' गुणिता तदा युगाधिमास . गतसौरदि
= युसौरदि . गताधिमा + अधिशेष, पक्षौ 'युगाधिमा' भक्तौ तदा गतसौरदि
= $\frac{\text{युसौरदि. गताधिमास} + \text{अधिशेष}}{\text{युगाधिमास}}$ अत्र युगशब्देन सर्वत्र कल्पो ग्राह्यः । एतावता

युगरवि दिवसैर्गुणिता गताधिमासाः स्वशेषसंयुक्ताः ।

भक्ता युगाधिमासैः फलं युगादेर्गता दिवसाः ॥ ११ ॥
इत्युपपद्यत इति ।

अब प्रश्नों को कहते हैं ।

हि. भा.—अधिशेष सहित अधिमास को जानकर जो युगगत को जानते हैं, वा अवमशेष सहित क्षयाह को जानकर युगगत को जानते हैं, वा अहर्गण जानकर जो युगगत को जानते हैं वे ज्योतिः सिद्धान्त के पण्डित हैं । यहां तीन प्रश्न हैं ।

प्रथम प्रश्न के उत्तर के लिये युक्ति ।

गतसौर दिन से अधिशेष सहित गताधिमास = $\frac{\text{युगाधिमा. गतसौरदि}}{\text{युसौरदि}}$ =

गताधिमा + $\frac{\text{अधिशेष}}{\text{युसौरदि}}$ दोनों पक्षों को 'युसौरदि' गुणा करने से युगाधिमा . गतसौरदि
= युसौरदि . गताधिमा + अधिशेष, दोनों पक्षों को 'युगाधिमा' भाग देने से गतसौरदि
= $\frac{\text{युसौरदि. गताधिमा} + \text{अधिशेष}}{\text{युगाधिमा}}$ यहाँ युग से सब जगह कल्प ग्रहण करना चाहिये । इससे
'युगरवि दिवसैर्गुणिता ॥ ११ ॥' इत्यादि संस्कृतोपपत्ति में लिखित पद्य उपपन्न होता है ॥

१. अस्य सुधाकरभाष्यं १३३ तमे पृष्ठे द्रष्टव्यम् ।

अथ द्वितीय प्रश्नस्योत्तरार्थं युक्तिः ।

सशेषगतावमतोऽनुपातेन गतचान्द्रदिनानयनं स्पष्टमेव । अधिमासस्य सौरत्वे चान्द्रत्वे चाधिशेषं तुल्यमेव स्यादिति 'सौरेभ्यः साधितास्ते चेदधिमासा' इत्यादि वासना भाष्ये भास्करोक्तेः सौरदिनेभ्यश्चान्द्रदिनेभ्यश्च गताधिमासाः समा एव भवन्ति तच्छेषमपि सममेव । एकत्र युगसौरदिनहरोऽन्यत्र युगचान्द्रदिनहरः । ततश्चान्द्रदिनेभ्यः समा गतैर्गताधिमासैर्दिनीकृतैश्चान्द्रदिवसा रहितास्तदा गतसौरदिनानि भवन्ति येभ्यः पुनर्गताधिमासाहर्गरोष्टग्रहाद्यं सुखेन ज्ञायते ।

गतसौरदिनेभ्यः साधिशेषा गताधिमासाः = $\frac{\text{युगाधिमास. गतसौदि}}{\text{युसौदि}}$
 = गताधिमा + $\frac{\text{अधिसे}}{\text{युसौदि}}$ छेदगमेन युगाधिमा. गसौदि = युसौदि . गताधिमा + अधिसे; पक्षयोः '३० युगाधिमा . गताधिमा' योजनेन युगाधिमा . गसौदि + ३० युगाधिमा . गताधिमा = युसौदि . गताधिमा + अधिसे + ३० युगाधिमा . गताधिमा = युगाधिमा (गतसौदि + गताधिमादि) = गताधिमा (युसौदि + युगधिमादि) + अधिसे = युगाधिमा . गचांदि = गताधिमा . युचांदि + अधिसे (१)

एतेन 'अधिमासस्य चान्द्रत्वे सौरत्वे चाधिशेषं तुल्यमेव स्यात्' भास्करोक्तमिदमुपपद्यते । तथा (१) अत्र समीकरणे युगाधिमासगताधिमासाधिशेषेषु स्थानेषु युगावमगतावमावमावशेष ग्रहाणां क्रियेत तदा—

गुणितानि चान्द्र दिवसैर्गतावमानि स्वशेषसहितानि ।

विभजेद्गुणावमैः फलमनष्टमधिमासकैर्गुणितम् ॥ १२ ॥

हृतमिन्दुदिनैर्लब्धाधिमासदिवसैर्विहीनकमनष्टम् ।

युगयातदिनाद्यधिमास दिनगरोष्टग्रहाद्यमतः ॥ १३ ॥^१

आचार्योक्तं चोपपद्यते ।

अब द्वितीय प्रश्न के उत्तर के लिये युक्ति ।

हि. भा.—सशेषगतावम से अनुपात से गत चन्द्र दिनानयन स्पष्ट ही है । गत सौर दिन से साधिशेषगताधिमास = $\frac{\text{युगाधिमा. गसौदि}}{\text{युसौदि}}$ = गताधिमा + $\frac{\text{अधिसे}}{\text{युसौदि}}$ छेदगम से युगाधिमा . गसौदि = युसौदि . गताधिमा + अधिसे, दोनों पक्षों में ३० युगाधिमा . गताधिमा जोड़ने से युगाधिमा . गसौदि + ३० युगाधिमा . गताधिमा = युसौदि . गताधिमा + ३० युगाधिमा . गताधिमा + अधिसे = युगाधिमा (गतसौदि +

१. अनयोः सुवाकरभाष्यं ६३४ तमे पृष्ठे द्रष्टव्यम् ।

गताधिमादि) = गताधिमा (युसौदि + युगाधिमादि) + अधिशे = युगाधिमा . गचांदि = गताधिमा . युचांदि + अधिशे . (क)

अतः यहां सौर और चान्द्र से गताधिमास तुल्य ही आते हैं और अधिशेष भी समान ही आता है; इससे भास्करोक्त 'अधिमासस्य चान्द्रत्वे सौरत्वे चाधिशेष तुल्यमेव स्यात्' उपपन्न होता है । तथा (क) समीकरण में यदि युगाधिमास के स्थान में युगावस, गताधिमास के स्थान में गतावस, और अधिशेष स्थान में क्षय शेष ग्रहण किया जाय तो 'गुणितानि चान्द्र दिवसैः' इत्यादि संस्कृतोपपत्ति में लिखित आचार्योक्त पद्य उपपन्न होते हैं ॥१२-१३॥

अथ तृतीय प्रश्नस्योत्तरार्थं युक्तिः ।

यदि युगकुदिनैर्युगचान्द्रदिनानि लभ्यन्ते तदाऽहर्गणेन किं समागच्छन्ति गतचान्द्रदिनानि, पुनरनुपातो यदि युगचान्द्रदिनैर्युगाधिमासा लभ्यन्ते तदा गतचान्द्रदिनैः किं फलं गताधिमासास्तत्स्वरूपम् = $\frac{\text{युगाधिमा गचांदि}}{\text{युचांदि}}$ = गताधिमा, एतद्दिनीकृतं गतचान्द्रदिने विहीनं तदा युगगतसौरदिनानि भवन्तीनि — अहर्गणा नयनविलोमेन कल्पगतानयनमस्तीति, एतेन

द्युगरोन्दु दिवसघातात् कुदिनाप्तमवोयुगाधिमासगुणम् ।

शशिदिनभक्तं फलमासदितोनं युगगतदिनानि ॥ १४ ॥'

आचार्योक्तमिदमुपपद्यते ।

अब तृतीय प्रश्न के उत्तर के लिये युक्ति ।

यदि युग कुदिन में युगचान्द्रदिन पाते हैं तो अहर्गण में क्या इस अनुपात से गतचान्द्र दिन आते हैं $\frac{\text{युचांदि. अहर्गण}}{\text{युगकु}}$ = गतचांदि, पुनः अनुपात करते हैं, यदि युगचान्द्रदिन में युगाधिमास पाते हैं । तो गतचान्द्रदिन में क्या इससे गताधिमास आते हैं $\frac{\text{युगाधिमा गचांदि}}{\text{युचांदि}}$ = गताधिमा, इस को दिन बना कर अर्थात् तीस से गुणा कर गतचान्द्र दिन में से घटाने से युगगत सौर दिन होते हैं । इससे 'द्युगरोन्दुदिवसघातात् ॥१४॥' इत्यादि संस्कृतोपपत्ति में लिखित आचार्योक्त पद्य उपपन्न होता है अहर्गणानयन का विलोम कल्पगतानयन है इति ।

इदानीमन्यान् प्रश्नानाह ।

अवमानि यः सविकलैरधिमासैरधिकमासकानवमैः ।

ग्रहमिष्टं वा लाभ्यां यो वेत्ति स कालतन्त्रज्ञः ॥३॥

१. अस्य सुधाकरभाष्यं ९३४ तमे पृष्ठे द्रष्टव्यम् ।

सु. भा.—यः सविकलैः साधिशेषैरधिमासैरवमानि गतावमानि वेत्ति । वा यः सावमशेषैरवमैर्गताधिमासकान् वेत्ति । वा ताभ्यामधिशेषावमशेषाभ्यामिष्टं मध्यग्रहं वेत्ति, स एव कालतन्त्रज्ञः । एवमत्र प्रश्नत्रयम् ॥ ३ ॥

वि. भा.—यः सविकलैः (अधिशेष सहितैः) अधिमासैरवमानि(गतावमानि) वेत्ति वा योऽवमशेषसहितैरवमैर्गताधिमासान् वेत्ति, वा ताभ्यामधिशेषावमशेषाभ्यामिष्टं ग्रहं (मध्यमग्रहं) वेत्ति, स सिद्धान्तविदस्ति अत्र प्रश्नत्रयमस्ति ॥

प्रथम द्वितीयप्रश्नयोरुत्तरार्थं युक्तिः ।

यदि युगाधिमासैर्युगावमानि लभ्यन्ते तदा सशेषगताधिमासैः किं समागच्छन्त्यवमानि । एवमेव सशेषावमेभ्यो गताधिमासानयनं चेति ॥

तृतीय प्रश्नोत्तरार्थं युक्तिः ।

कल्प्यते-अहर्गण प्रमाणम् = य, तदाऽनुपातेन गतावमानि = $\frac{य.युअव-क्षशे}{युकु}$

अहर्गणे सयोजनेन जातानि गतचान्द्रदिनानि = $\frac{य (युकु + युअव) - क्षशे}{युकु}$

= $\frac{य. युचांदि - क्षशे}{युकु}$ एभ्योऽनुपातेन सशेषा गताधिमासाः = $\frac{युगाधिमा.गतचांदि}{युचांदि}$

= $\frac{युगाधिमा. युचांदि. य - युगाधिमा. क्षशे}{युचांदि. युकु}$ = गताधिमा + $\frac{अधिशे}{युचांदि}$ छेदगमेन

युगाधिमा. युचांदि. य - युगाधिमा . क्षशे = गताधिमा . युचांदि-युकु + अधिशेयुकु, समयोजनेन युगाधिमा. युचांदि . य = गताधिमा . युचांदि . युकु + अधिशे . युकु + युगाधिमा . क्षशे, पक्षौ युचांदि भक्तौ तदा युगाधिमा. य = गताधिमा. युकु + अधिशे. युकु + युगाधिमा. क्षशे

= गताधिमा. युकु + स्पष्टाधिशे,
युचांदि

∴ य = $\frac{गताधिमा. युकु + स्पष्टाधिशे}{युगाधिमा}$, अत्र $\frac{अधिशे.युकु + युगाधिमा.क्षशे}{युचांदि}$

= स्पष्टाधिशे ।

अहर्गणज्ञानेन मध्यमाधिकारोक्त 'अहर्गणान्मध्यग्रहानयनं विधिनेष्ट मध्यम-ग्रहाः सुखेनैव समागच्छन्तीति । एतावता

गुणमधिमासक शेषं युगकुदिनै रवमशेषमधिमासैः ।

तद्युतिरिन्दुदिनहताधिमास शेषं स्फुटं भवति ॥ १५ ॥'

१. अस्य सुधाकरभाष्यं ६३५ तमे पृष्ठे द्रष्टव्यम् ।

भूदिनगताधिमामकघातः स्पष्टाधिमामशेषयुतः ।

भक्तो युगाधिमासैर्ग्रहगणः पूर्ववन्मध्याः ॥ १६ ॥'

अधिमामशेषयुग कुदिनैरवमशेष च युगाधिमासैर्गुणनीयं तयोर्युतियुग-
चान्द्रदिनैर्भवता फल स्फुटाधिशेषसज्ञक भवति, युगकुदिन गताधिमामघातः
स्फुटाधिशेषयुतो युगाधिमासैर्भक्तो लब्धमहर्गगो भवेत् । ततोमध्यमाधिकारोक्त-
वदिष्टमध्यमग्रहा भवन्ति' आचार्योक्तमुपपद्यते ।

अब अन्य प्रश्नों को कहते हैं ।

हि. भा.—जो व्यक्ति शेष सहित अधिमास से अवम को जानते हैं । वा अवमशेष
सहित अवमों से गताधिमास को जानते हैं । वा उन दोनों से (अधिशेष और अवमशेष)
इष्टग्रह (मध्यमग्रह) को जानते हैं वे ज्योतिःसिद्धान्तवेत्ता है । यहां तीन प्रश्न है । प्रथम
और द्वितीय प्रश्न के उत्तर के लिये उपपत्ति । यहां अनुपात करते है । यदि युगाधिमास मे
युगावम पाते है तो शेष सहित गताधिमास मे क्या इससे गतावम आते है । इसी तरह अनुपात
से शेष सहित अवम से गताधिमासानयन होता है ॥

तृतीय प्रश्न के उत्तर के लिये उपपत्ति ।

कल्पना करते हैं अहर्गण प्रमाण = य, तब अनुपात से गतावम = $\frac{य. यु अव - क्षे}{युकु}$
इसको अहर्गण में जोड़ने से गत चान्द्र दिन = $\frac{य (युकु + यु अव) - क्षे}{युकु.}$ = $\frac{य. युचादि क्षे}{युकु}$
इससे अनुपात से गताधिमास = $\frac{युगाधिमास. गचादि}{युचादि}$ = $\frac{युगाधिमा. युचादि. य - युगाधिमा. क्षे}{युचादि. युकु}$
= गताधिमा + $\frac{अधिशे}{युचादि}$ छेदगम से युगाधिमा. युचादि. य - युगाधिमा. क्षे = गताधिमा.
युचादि. युकु + अधिशे. युकु, दोनों पक्षों मे युगाधिमा. क्षे जोड़ने से युगाधिमा. युचादि. य =
गताधिमा. युचादि. युकु + अधिशे. युकु + युगाधिमा. क्षे, दोनों पक्षों को युचादि से भाग देने
से युगाधिमास. य = गताधिमा. युकु + $\frac{अधिशे. युकु + युगाधिमा. क्षे}{युचादि}$ = गताधिमा. युकु +
स्पष्टाधिशे । यहां $\frac{अधिशे. युकु + युगाधिमा. क्षे}{युचादि}$ = स्पष्टाधिशेष ।

∴ य = $\frac{गताधिमा. युकु + स्पष्टाधिशे}{युगाधिमा}$ अहर्गण ज्ञान से मध्यमाधिकारोक्त 'अहर्गणा-

न्मध्य ग्रहानयनं' विधि द्वारा सुगमता से मध्यम ग्रह ज्ञान हो जायगा । इससे 'गुणमधिमासक-

१. अस्य सुचाकरभाष्यं ६३५ तमे पृष्ठे द्रष्टव्यम् ।

शेषम् ॥ १५-१६ ॥' इत्यादि संस्कृतोपपत्ति में लिखित आचार्योक्त पद्य उपपन्न हुआ । आचार्योक्त पद्यों का अभिप्राय है कि अधिमास शेष को युग कुदिन से और अवम शेष को युगाधिमास से गुणाकर दोनों के योग को युगचान्द्रदिन से भाग देने से लब्ध स्फुटाविशेषसंज्ञक होता है । युगकुदिन और गताधिमास के घात में स्फुटाविशेष जोड़कर युगाधिमास से भाग देने से लब्ध अहर्गण होता है । उससे मध्यमाधिकारोक्तवत् मध्यमग्रह ज्ञान होता है इति ।

इदानीमन्यान् प्रश्नानाह ।

द्युगणं विना ऽधिमासावमैर्विना दिनगणेन चन्द्रार्को ।

ताभ्यां विना स्फुटतिथिं यो वेत्ति स कालतन्त्रज्ञः ॥ ४ ॥

सु. भा.—योऽधिमासावमैर्विनाऽहर्गणं वेत्ति । वा दिनगणेन विना चन्द्रार्को वेत्ति । वा ताभ्यां चन्द्रार्काभ्यां विना स्फुटतिथिं वेत्ति स कालतन्त्रज्ञः । एवमत्र प्रश्नत्रयम् ॥४॥

वि. भा —योऽधिमासावमैर्विना द्युगणं (अहर्गणं) जानाति, वा दिनगणेन (अहर्गणेन) विना चन्द्रार्को (चन्द्रसूर्यो) जानाति, वा ताभ्यां (चन्द्रार्काभ्यां) विना स्फुटतिथिं जानाति स सिद्धान्तविदिति । अत्र प्रश्नत्रयमस्ति ॥

प्रथम प्रश्नोत्तरार्थमुपपत्तिः ।

यदि युगसौरमासैर्युगचान्द्रमासा लभ्यन्ते तदा गनचान्द्रमासतुल्यैः सौरमासैः किं लब्धा निरग्रा अमान्ते गतचान्द्रमासास्ते त्रिशद्गुणिता अमान्तादग्रे यावन्ति चान्द्र दिनानि तैर्युता तदेष्टदिने गतचान्द्रदिनानि जातानि, ततो यदि युग चान्द्रमासैर्युगकुदिनतुल्योऽहर्गणस्तदागतचान्द्रदिनैः किं लब्धं तिथ्यन्ते सावयवः सावनाहर्गणो भवति । शेषत्यागेन सूर्योदये निरग्रः सावनाहर्गणो भवेत् । अभीष्टवारार्थं 'अभीष्टवारार्थमहर्गणश्चेदित्यादि' भास्करोक्तचाऽहर्गणः सैको वा निरेकः स्फुटतिथिदिनार्थं कार्यं इति । एतेन

अब अन्य प्रश्नों को कहते हैं ।

हि. भा.—राश्यादिक शनि को तीन से गुणाकर देते हैं उसमें से चन्द्र राश्यादि को
घटाकर अन्य ग्रहभगण राश्यादि से भाग देने से लब्ध राशियों को जोड़ने से मङ्गल होते
हैं । उन्हीं अन्य भगण राश्यादियों को रवि में वा गुरु (बृहस्पति) में से घटाने से चन्द्रोच्च
होता है तब अन्यभगण क्या हैं ॥ ५ ॥

इदानीमन्यौ प्रश्नावाह ।

द्वित्रिगुणयो रवीन्द्रोर्युतिः कुजेनाऽन्यभगणलब्धेन ।

राश्यादिनाऽधिका गुरुरूना शनिरन्यभगणाः के ॥ ६ ॥

सु. भा.—द्विगुणो रविस्त्रिगुणश्चन्द्रोऽनयोर्युतिः कुजेनोनाऽन्यभगणलब्धेन
राश्यादिनाऽधिका तदा गुरुर्भवति । अथ तेनैव राश्यादिनोना तदा शनिर्भवति ।
एवमन्यभगणाः के सन्तीति प्रश्नद्वयम् ॥६॥

वि. भा.—द्विगुणो रविस्त्रिगुणश्चन्द्रोऽनयोर्युतिः कुजेनोनाऽन्यभगण लब्धेन
राश्यादिनाऽधिका तदा गुरुर्भवति । अथ तेनैव राश्यादिनोना तदा शनिर्भवति
तदाऽन्य भगणाः के सन्तीति प्रश्नद्वयम् ।

एषां प्रश्नानामुत्तरार्थमुपपत्तिः ।

यदि युग ग्रहभगणा इष्ट गुणकुदिनैर्युता वा हीनास्तदा तेभ्योपि राश्या-
दिको ग्रहः स एव भवति यतस्तेऽहर्गणगुणाः कुदिनैर्हृता इष्टसमभगणाधिकोनाः
पूर्वभगणा भवन्ति भगणशेषं तु पूर्वसममेव । अतोऽत्रेष्टगुणा गुणानां ग्रहभगणा-
नामैक्यान्तरं कुदिनाधिकं तदा कुदिनैस्तक्ष्यं शेषमेव ग्रहभगणाः कल्प्या येभ्यो
राश्यादिर्ग्रहोऽभीष्ट गुण गुणग्रह योगान्तरसम एवोत्पद्यते । अथान्यभगणग्रहो
यदा स्वं तदाऽन्यभगणयुतः शेष इष्टग्रहभगणसमोऽतस्तदा शे+अभ=इभ

∴ अभ=इभ—शे=इभ+युकुदि—शे । एवं यदाऽन्यभगणभवः खेटश्चरणं
तदा शे—अभ=इभ ∴ अभ=शे—इभ=शे+युकुदि—इभ, एतेन पूर्वोक्तं

प्रश्नानामुत्तरं जातम् । (१) सिद्धान्त शेषरे

“त्रिघ्नः पतङ्गतनयो विधुना विहीनश्चक्रादिनाऽन्य भगणोत्थफलेन युक्तः । भौमः फलेन रहितः सविता गुरुर्वा चन्द्रोच्चमन्यभगणा वद के भवन्ति ॥ द्वाभ्यां त्रिभिर्गुणितयो रविशोतरश्म्योर्थेणः कुजेन रहितोऽपरचक्रलब्ध्या । राश्याद्यया समधिको गुरुखनितः स्यान् पातङ्गिरन्यभगणा गणितज्ञ के ते ॥” श्लोकद्वयेन श्रीपतिनाऽऽचार्योक्तं ‘त्रिगुणः शनिरिन्दून’ इत्यादि तथा ‘द्वित्रि गुणयो रवीन्द्रो-र्युतिरित्यादि’ आर्याद्वयमेवोक्तमिति । पूर्वोक्तोपपत्त्या “अभिमनगुणकारै स्ताडितानां ग्रहाणां भगणयुतिवियुक्ती प्रश्नवन् सविधाय अवनिदिनविभक्ते शेषहीनाधिकां-स्तान् कुरुत कुदिवसांश्चेदन्यलब्धं धनर्णम् ॥ स्वं क्षयो भवति चान्यफलं चेदिष्ट श्वेतभगणास्तु धनर्णम् । तत्र तान्त्रिक विधाय यथावत् ज्ञायतेऽन्य भगण-प्रमितिः सा” सिद्धान्त शेषरस्य श्रीपत्युक्त श्लोक द्वयमुपपद्यत इति ॥ श्रीपत्युक्तं ‘इष्ट गुणकारगुणितग्रहभगणैक्यान्तरमित्यादि’ आचार्योक्तनानुरूपमेवेति ॥

अब दो और प्रश्नों को कहते हैं ।

हि. भा.—रविको दो से गुणाकर और चन्द्र को तीन से गुणाकर जो हो उन दोनों की युति में मङ्गल को घटा देते हैं और अन्य भगण लब्ध फल को जोड़ देने से गुरु होते हैं । उसी युति में अन्यभगण से लब्धराश्यादि को घटाने से शनि होते हैं तो अन्यभगण क्या है ॥

इन प्रश्नों के उत्तर के लिए उपपत्ति ।

यदि युगग्रह भगण में इष्ट गुणित कुदिन को जोड़ते हैं वा घटाते हैं तो उनसे राश्यादिक ग्रह वही होते हैं क्योंकि उनको ग्रहर्णम् से गुणा कर कुदिन से भाग देने तथा इष्ट सम भगण को जोड़ने वा घटाने से पूर्वभगण होते हैं भगणशेष पूर्व के समान ही है । इसी-लिये यहाँ इष्ट गुण गुणित ग्रह भगणों का योग और अन्तर कुदिन से अधिक हो तो कुदिन से भाग देना, शेष को ग्रहभगण कल्पना करना जिनसे राश्यादिक ग्रह अभीष्ट गुण गुणित ग्रह योगान्तर के समान ही हो । अन्य भगण ग्रह यदि धन है तब शेष में अन्य भगण जोड़ने से इष्टग्रहभगण के समान होता है । इसलिये तब शे + अभ = इभ

∴ अभ = इभ — शे = इभ + युकुदि — शे । एव जब अन्यभगणोत्पन्न ग्रह ऋण है तब शे — अभ = इभ ∴ अभ = शे — इभ = शे + युकुधि — इभ. यही उत्तर हुआ ।

सिद्धान्त शेषर में “त्रिघ्नः पतङ्गतनयो विधुना विहीनः” इत्यादि संस्कृतोपपत्ति में लिखित पद्यों से श्रीपति ने आचार्योक्त ‘त्रिगुणः शनिरिन्दून इत्यादि’ तथा ‘द्वित्रि गुणयोरवी-

(१) एतेन “इष्टगुणकारगुणितग्रहभगणैक्यान्तरं यथाऽभिहितम् ।

कृत्वा कुदिनै विभजेत् शेषोन युतानि कुदिनानि ॥

यद्यन्यभगणलब्धं धनर्णमिष्टग्रहस्य युगभगणैः ।

अन्यफलमृण धनं चेद्वनयुतान्यन्य युग भगणाः ॥” आचार्योक्तमित्युपपद्यते ।

न्द्वोर्युतिः' इत्यादि श्लोक द्वयोक्त विषय को ही कहा है । तथा पूर्वोपपत्ति से 'अभिमत गुणकारै स्ताडितानां ग्रहाणां' इत्यादि सस्कृतोपपत्ति मे लिखित श्रीपत्युक्त पद्य उपपन्न होता है यह आचार्योक्त के अनुरूपही है ॥ ६ ॥

इदानीमन्यान् प्रश्नानाह ।

इष्टौदयिकानश्चिन्न्यौदयिकान् वा करोति यो मध्यान् ।

मध्यार्कं गुणकैर्गुणमिष्टं मध्यं स तन्त्रज्ञः ॥ ७ ॥

सु. भा.—य इष्टौदयिकान् इष्टग्रहोदयकालिकान् मध्यान् ग्रहान् करोति । वाऽश्विन्यौदयिकान् अश्विन्युदयकालिकान् मध्यान् ग्रहान् करोति । वा मध्यार्कं कैरपि गुणकैर्गुणमिष्टं मध्यं ग्रहं करोति स तन्त्रज्ञः । एवमत्र प्रश्नत्रयम् ॥ ७ ॥

अत्रोपपत्तिः ।

भास्करोक्ताहर्गणानयनवत्स्पष्टेति । यथा गताब्दा द्वादशगुणा वर्षादौ गताः सौरमासा जाताः, ते गत चान्द्रमासतुल्यैर्गतसौरमासैर्युक्ताः क्रियन्ते तर्हि दर्शान्तः संक्रान्त्यवधयः सौरा मासा जाताः । ततोऽनुपातेन लब्धाधिमासैः सशेषैः

सहितास्ते गतसौरमासास्तत्रत्याः सावयवाश्चान्द्रा मासा भवन्ति । तत्र चेद् दर्श-
संक्रान्त्यन्तरमानमधिशेषसमं शोध्यते तदा दशान्ति चान्द्रा मासा भवन्ति । अतः
केवलेन निरवयवाधिसमानेन युक्तास्ते सौरा मासा दर्शान्ति चान्द्रा मासा
भवन्ति ततस्ते त्रिंशद्गुणा गततिथियुतास्तिथ्यन्ते गतचान्द्रदिवसा भवन्ति, ततो
युगचान्द्रदिवसैर्युगावमानि लभ्यन्ते तदा गतचान्द्रदिवसैः किमित्यनुपातागतैः
क्षयतिथिभिरुनिताश्चान्द्रदिवसास्तिथ्यन्ते सावनदिवसाः स्युः । ततस्तिथ्यन्त-
सूर्योदयान्तर्वर्तिना ऽवमशेषेण युक्तास्तिथ्यन्तकालिकसावनदिवसाः सूर्योदये
सावनाहर्गणो भवेदिति । इह स्थूलतिथ्यानयने यस्यां तिथौ यो वारः स चेदहर्गणेन
न तदा सैको वा निरेकोऽहर्गणः कार्यं इत्यनुक्तमपि बुधैर्ज्ञेयमिति ॥ सिद्धान्त शेखरे
“कल्पातीतसमागणोऽर्क गुणितश्चैत्रादिमासान्वितः । खान्तिघ्नः सतिथिः पृथक्
च पठितैः क्षुरणोऽधिमासैर्हृतः । तिग्मांशोदिवसैः खरामगुणितैर्लब्धाधिमासैर्युतो
द्विः कल्पावमताडितः शशिदिनैर्भक्तश्च कल्पोद्भवैः सम्प्राप्तावमवर्जितो दिनगणः”
श्रीपत्युक्तमिदमहर्गणानयनमाचार्योक्तानुरूपमेव । आचार्येण युगसम्बन्धेन साधितं
श्रीपतिना कल्पसम्बन्धेनैतावानेव भेद इति ॥ १९ ॥

अब प्रकारान्तर से अहर्गणानयन को कहने है ।

हि. भा.—गत दिवस (गत चान्द्र दिन तुल्य सौर दिन) को पठित अधिमास से
गुणा कर पठित सौर दिन से भाग देकर लब्धाधिमास को सौरमास में जोड़ने से चान्द्रमास
होते हैं । चान्द्रमास को तीस से गुणा कर गत चान्द्र दिन जोड़ देना चाहिये, उन चान्द्रदिनों
को दो जगह स्थापन करना । एक जगह पठित अवम दिन से गुणा कर युग चान्द्र दिन से भाग
देकर लब्ध क्षयतिथि को पूर्वस्थापित चान्द्रदिनों में से घटाने से सावनाहर्गण होता है ॥६१॥

उपपत्तिः ।

गत वर्ष को बारह से गुणा करने से वर्षादि में गतसौर मास होते हैं । उनमें गत
चान्द्रमास तुल्य गत सौरमास को जोड़ने से दशाग्रि से सक्रान्ति पर्यन्त सौरमास होते हैं । तब
अनुपातागत सशेष अधिमास को गत सौर मास में जोड़ने से सावयव चान्द्रमास होते हैं ।
उनमें यदि दर्श (अमावास्या) और सक्रान्ति के अन्तर्गत अधिशेष को घटा देते हैं तो दशान्ति
में चान्द्रमास होते हैं । अतः उन सौर मास में केवल निरवयवाधिसमास को जोड़ने से दशान्ति
में चान्द्रमास होते हैं । इन चान्द्रमासों को तीस से गुणाकर गततिथि जोड़ने से तिथ्यन्त में
चान्द्रदिन होते हैं, तब युग चान्द्रदिन में युगावम पाते हैं तो समागत चान्द्रदिन में क्या इस
अनुपात से लब्धक्षयतिथि को चान्द्रदिनों में से घटाने से तिथ्यन्त में सावनाहर्गण होता है ।
तिथ्यन्त और सूर्योदय के अन्तरक्षय शेष को तिथ्यन्त कालिक सावनाहर्गण में जोड़ने से
सूर्योदय कालिक सावनाहर्गण होता है ॥ सिद्धान्त शेखर में ‘कल्पातीत समागणोऽर्कगुणितः’
इत्यादि पद्यों से श्रीपति ने भी इसी तरह अहर्गणानयन किया है इति ॥ १६ ॥

विद्वद्भिर्ज्ञेयम् ॥

अब अधिमासशेष और अवम शेष में चन्द्र और सूर्य का आनयन करते हैं ।

हि. भा.—चैत्रादि से जितने चान्द्रमास गत हैं उतने सौरमास (रविराशि) भी और
जितने चान्द्र दिन हैं उतने रविभाग कल्पना की गयी, वहाँ अवमशेष सावनावयवादि से जो
चान्द्र दिनावयव होता है उसके बराबर रविभाग औदयिक के लिये जोड़ दिया गया, चान्द्र
दिनावयव के लिये अनुपात करते हैं । यदि कल्प सावन दिन में कल्प चान्द्र दिन पाते हैं तो
क्षय शेषावयव $\frac{\text{क्षये}}{\text{कक्षादि}}$ में वधा इस अनुपात से आगया चान्द्र दिनावयव = $\frac{\text{क्षये}}{\text{कक्षादि}}$ इस
दिनादि को चैत्रादि गत मास दिनादि में जोड़ कर जो हो उसको रवि कल्पना करना । यह
रवि तत्स्थित चान्द्र और सौर का अन्तर (अधिमास शेषोत्पन्न रविराश्यादि चालन तुल्य)
अधिक हुआ अतः उसको घटाने से वास्तव मध्यम रवि होता है । गणितागत चान्द्राधिशेष में
अवम शेषोत्पन्न चान्द्रदिनतुल्य सौरदिनावयवोत्पन्न अधिशेष को जोड़ने से वास्तवाधिशेष
होता है । पूर्वागत अवमशेष सम्बन्धी चान्द्रदिनावयव = $\frac{\text{क्षये}}{\text{कक्षादि}}$ इसको कल्पाधिमास

से गुणा कर कल्पसौर दिन से भाग देने से लब्ध तज्जनित अधिशेष = $\frac{\text{कक्षमा. क्षये}}{\text{कक्षादि. कक्षादि}}$
= $\frac{\text{कक्षमा. क्षये}}{\text{कक्षादि}} = \frac{\text{फ}}{\text{कक्षादि}}$, पूर्व गणितागत अधिशेष = $\frac{\text{अधिशे}}{\text{कक्षादि}}$ दोनों के योग करने से

वास्तवाधिशेष = $\frac{\text{अधिशे} + \text{फ}}{\text{कक्षादि}}$ एतत् सम्बन्धी सौर राश्यादि (यदि कल्पचान्द्रमास में कल्प सौर

दिन पाते हैं तो इष्टाधिमास तुल्य चान्द्रमास में क्या लब्ध सौर दिन = $\frac{\text{अधिशे} + \text{फ}}{\text{कक्षादि}}$ इसको

सौर से भाग देने से राश्यादि = $\frac{\text{अधिशे} + \text{फ}}{३० \text{ कक्षांमा}} = \frac{\text{अधिशे} + \text{फ}}{\text{कक्षादि}} = \frac{\text{अधिशे} + \text{फ}}{\text{कक्षादि}} = \text{अधिशेफ}$

कल्पितरवि में से इसको घटाने से औदयिक रवि होते हैं। इसमें तत् स्थित वारह गुणित कल्पित रवि के समान चान्द्रावयव को जोड़ने से चन्द्र होते हैं। इससे 'गुणिताद्युगाधिमासैर्युग-भूदिवसैर्हतात्' इत्यादि संस्कृतोपपत्ति में लिखित आचार्योंक्त पञ्च उपपन्न होता है, आचार्योंक्त पञ्चों का अभिप्राय यह है कि अवमशेष को युगाधिमास से गुणाकर युग कुदिन से भाग देने से जो फल हो उसको अधिमास शेष में जोड़ कर जो हो उसको अधिशेष कल्पना करना। इस अधिशेष से वक्ष्यमाण विधि से रवि और चन्द्र को जानना चाहिए। अधिमास शेष को युग चान्द्र दिन से भाग देना और अवम शेष को युग कुदिन से भाग देना, इस तरह पृथक् पृथक् जो लब्ध हो उनका क्रम से मास और दिनादि स्थापन करना अर्थात् अधिमास शेष से जो लब्धि हो उसका मासादिक ग्रहण करना चाहिए और अवमशेष से जो लब्धि हो उसका दिनादिक ग्रहण करना चाहिए। चैत्रादि से गतमास-दिन जो है उनमें पूर्वागत अवम शेष लब्धि को जोड़ कर पृथक् स्थापित करना चाहिए एक जगह तेरह से गुण देना चाहिए, दोनों जगहों में अधिमास लब्धि को घटा देने से क्रम से मध्यम रवि और चन्द्र होते हैं। सिद्धान्तशेखर में 'कल्पाधिमास गुणितादवमावशेषात्' इत्यादि संस्कृतोपपत्ति में लिखित श्रौपति प्रकार भी आचार्योंक्त के सदृश ही है ॥ २०-२१-२२ ॥

इदानीं तृतीय प्रश्न (रविचन्द्राभ्यां विना य. स्फुट तिथिं वेत्ति)

स्योत्तरार्थमुपपत्तिः ।

पूर्वोक्त रविचन्द्रानयनप्रकारेणाभीष्टदिने सूर्योदये चैत्रादितः सावयव-चान्द्रमासादिः = मा + दि + क्षशेल, रविः = मा + दि + क्षशेल — अधिमास, चन्द्रश्च = १३ (मा + दि + क्षशेल) — अधिमास, स्वस्व मन्दोच्चस्य विशोधनेन केन्द्रानयनं जायते, ततो रवि स्व फल संस्कृतं स्वफलसंस्कृताच्चन्द्राद्विशोध्य स्पष्टरवि-चन्द्रान्तरं जातम् । तत् द्वादशभक्तं स्पष्टं चान्द्रं मासादि स्यात् । एवं द्वादशभक्तं रविमन्दफलं व्यस्तं द्वादशभक्तचन्द्रफलं च दिनादि यथागतं मध्यम चान्द्रमासा-दिकेऽस्मिन् मा + दि + क्षशेल संस्कृतं भवति । एव तिथेर्भुक्तं घट्यात्मकं लङ्कायां चान्द्रात्मकं जातम् । सावनघट्यर्थमेकस्मिन् सावनदिने रविचन्द्रगत्यन्तरं द्वादश भक्तं फलं चान्द्रं प्रसाध्यानुपातो यद्येतच्चान्द्रावयवेन सावनाः षष्ठिघटिका लभ्यन्ते तदा तिथि विकलेन किं लब्धा लङ्कायां स्फुटाः सावनास्तिथिभुक्तघटिकास्तत्र देशान्तरभुजान्तरचरसंस्कारेण स्वदेशे स्फुटार्कोदये स्फुटा स्थितिभुक्तघटिका भवन्तीति ॥ एतेनाचार्योंक्ताः २३, २४, २५ तमाः श्लोका उपपद्यन्ते ।

अब तृतीय प्रश्न (रवि और चन्द्र के बिना स्फुट तिथिज्ञान) के उत्तर के लिये उपपत्ति ।

हि. भा. - पूर्वोक्त रवि चन्द्रानयन प्रकार से अभीष्ट दिन में सूर्योदय काल में चैत्रादि से सावयव चान्द्रमासादि = मा + दि + क्षशेल । रवि = मा + दि + क्षशेल — अधिमास । तथा चान्द्र = १३ (मा + दि + क्षशेल) — अधिमास इन दोनों में से अपने अपने मन्दोच्च को घटाने

से केन्द्रानयन उपपन्न होता है । अपने फल से संस्कृत रवि को अपने फल से संस्कृत चन्द्र में से घटाकर स्फुट रवि और स्फुट चन्द्र के अन्तरांश साधन करना उसको बारह से भाग देने से स्फुट चान्द्र मासादि प्रमाण होता है । एव द्वादश भक्त रविमन्द फल को व्यस्त (उल्टा), द्वादश भक्त चन्द्रफल दिनादि यथागत मध्यम चान्द्रमासादि 'मा+दि+क्षेपल' में संस्कृत होता है । इस तरह तिथि का घटघात्मक भुक्त (भुक्तघटी) लङ्का में चान्द्रात्मक हुआ । सावन घटी के लिये एक सावन दिन में रवि और चन्द्र के गत्यन्तर को बारह से भाग दे कर चान्द्रात्मक फल साधन कर अनुपात करते हैं यदि इस चान्द्रावयव में सावन साठ घटी पाते हैं तब तिथि विकल (तिथिशेष) में क्या इस अनुपात से लब्ध लङ्का में स्फुट सावन तिथि भुक्त घटी प्रमाण आया । इसमें देशान्तर-भुजान्तर तथा चर के संस्कार करने से स्वदेश में स्फुटार्कोदयकाल में स्फुट तिथिभुक्त घटी होती है । इससे 'गतमासदिनावमशेषलब्धियोगात् ॥ २३-२५ ॥' इत्यादि संस्कृतोपपत्ति में लिखित आचार्योंक्त पद्य उपपन्न होते हैं ।

इदानीं रविचन्द्राभ्यां विना यः स्फुटतिथिं वेत्तीत्यस्योत्तरमाह ।

गतमासदिनावमशेष लब्धियोगात् त्रयोदशगुणाच्च ।

सु. भा.—गतमास दिनावमशेषलब्धियोगः पूर्वसाधितः कल्पितो रविस्तस्मात् पूर्वागतमासाद्यधिशेषलब्धियुतरविमन्दोच्चं शोधयम् । त्रयोदशगुणात् तस्मात् कल्पितरवेस्तदधिशेषलब्धियुतचन्द्रमन्दोच्चं शोधयम् । एवं क्रमेण रविचन्द्रयोः केन्द्रे भवतस्ततः पृथक् स्पष्टाधिकारविधिना तयोरंशात्मके फले साध्ये । ते च द्वादशोद्धृते फले दिनादिके ग्राह्ये । मास दिनावमशेषलब्धियुतौ कल्पितरवौ सौरं दिनादिकलं व्यस्तं धनमृणं कार्यम् । फलं धनं तदा ऋणं चेहृणं तदा धनं कार्यमित्यर्थः । ऐन्दवं चान्द्रवं दिनादिकलं चानुलोमं यथागतं तथैव देयम् । एवं मासाश्चैत्रादयश्चान्द्रा दिनानि च तिथयो गताः । घटिकादि-वर्तमानतिथेर्विकलं भुक्तघटी प्रमाणं तच्च षष्टिगुणं कार्यम् । तस्माद् द्वादशहृत-रविचन्द्रगत्यन्तरेणाप्ता या घटिकास्तासु देशान्तरं घटघात्मकमनुलोमं यथागतं देयम् । आर्कफलमर्कमन्दफलसम्बन्धि कालात्मकं भुजान्तरं च यथागतं देयं तथा-ऽऽवश्चरासवश्च गोलवशाद् धनमृणं च देयाः । एवं वर्तमानतिथेः स्फुटा सावना भुक्तघटिका भवन्तीति ।

अत्रोपपत्तिः ।

पूर्वोक्त रविचन्द्रानयनप्रकारेण सूर्योदयेऽभीष्टदिने चैत्रादितः सावयवं चान्द्रमासादि = मा + दि + क्षशेल । रविः = मा + दि + क्षशेल - अधिमास । चन्द्रः = १३ (मा + दि + क्षशेल) - अधिमास । स्वस्वमन्दोच्चं विशोध्य केन्द्रानयनमुपपद्यते । ततो रविं स्वफलसंस्कृतं स्वफलसंस्कृताच्चन्द्राद्विशोध्य स्पष्टरविचन्द्रान्तरं साधितं तद् द्वादशहृतं स्पष्टं चान्द्रं मासादि स्यात् । एवं द्वादशहृतं रविमन्दफलं व्यस्तं द्वादशहृतचन्द्रफलं च दिनादि यथागतं मध्यमचान्द्रमासादिके ऽस्मिन् मा + दि + क्षशेल संस्कृतं भवति । एवं तिथेर्भुक्तं घटघात्मकं लङ्कायां चान्द्रात्मकं जातम् । सावनघटघर्थमेकस्मिन् सावनदिने रविचन्द्रगत्यन्तरं द्वादशहृतं फलं चान्द्रं प्रसाध्यानुपातो यद्येतच्चान्द्रावयवेन सावनाः षष्टिघटिका लभ्यन्ते तदा तिथि विकलेन किं लब्धा लङ्कायां स्फुटाः सावनास्तिथिभुक्तघटिका स्तत्र देशान्तरभुजान्तरचरसंस्कारेण स्वदेशे स्फुटाकोदये स्फुटास्तिथिभुक्ता घटिका भवन्तीति सर्वं स्फुटम् ॥२३-२५॥

वि. भा.—गतमासदिनावमशेषलब्धियोगः पूर्वं साधितः । कल्पितो रविस्तस्मात्पूर्वगतमासाद्यधिशेषलब्धियुतरविमन्दोच्चं शोध्यम् । त्रयोदशगुणात् तस्मात् कल्पितरवेस्तदधिशेषलब्धियुतचन्द्रमन्दोच्चं शोध्यम् । एवं क्रमेण रविचन्द्रयोः केन्द्रे भवतस्ततः पृथक् स्पष्टाधिकारोक्त विधिना तयोरंशात्मके फले साध्ये । ते च द्वादशोद्धते फले दिनादिके ग्राह्ये । मासदिनावमशेषलब्धियुतौ कल्पितरवौ सौरं दिनादि फलं व्यस्तं धनमृणं कार्यम् । फलं धनं तदा ऋणं चेदृणं तदा धनं कार्यम् । चान्द्रं दिनादि फलं चानुलोमं यथागतं तथैव देयम् । एवं मासाश्चैत्रादयश्चान्द्रा दिनानि च तिथयो गताः । घटिकादिवर्तमानतिथेर्विकलं भुक्तघटी प्रमाणं तच्च षष्टिगुणं कार्यम् । तस्मात् द्वादशहृतरविचन्द्रगत्यन्तरेणाप्ता या घटिकास्तासु देशान्तरं घटघात्मकमनुलोमं (यथागतं) देयम् । अर्कमन्दफलसम्बन्धि कलात्मकं भुजान्तरं च यथागतं देयं तथा चरासवश्च गोलवशाद् धनमृणं च देयाः । एवं वर्तमानतिथेः स्फुटाः सावना भुक्त घटिका भवन्तीति ॥ २३-२५ ॥

अब रविचन्द्र के बिना स्फुटतिथि के ज्ञाता को इसका उत्तर ।

हि. भा.—गतमास दिन अवमशेषलब्धियों के योग पहले साधित हैं, कल्पित रवि में से पूर्वागत मासाद्यधिशेष लब्धियुत रवि मन्दोच्च को घटा देना चाहिये । तेरह गुणित उस कल्पित रवि के अधिशेषलब्धियुत रविमन्दोच्चको घटाना इस क्रम से रवि और चन्द्र का केन्द्र उपपन्न होता है । केन्द्रवश से पृथक् स्पष्टाधिकारोक्त विधि से दोनों के अंशात्मक फल साधन करना । उन दोनों को बारह से भाग देकर दिनानि फल ग्रहण करना चाहिये । मास दिन अवमशेष लब्धि के योग (कल्पितरवि) में सौर दिनादि फल को व्यस्त (उल्टा) धनऋण करना चाहिये । फल धन रहने से ऋण करना और ऋण रहने से धन करना

चाहिए। चान्द्रदिनादिफल को अनुलोम (यथागत) देना चाहिये। इस तरह चैत्रादि चान्द्रमास और गत तिथि होनी हैं। वर्तमान तिथि के जो भुक्त घटी प्रमाण है उस को साठ से गुणा करना, उसमें रवि और चन्द्र के गत्यन्तर को बारह से भाग देकर जो लब्ध घटी हो उसमें घटद्यात्मक देशान्तर को अनुलोम (यथागत) देना (संस्कार) चाहिये। रवि के मन्दफल सम्बन्धी कलात्मक भुजान्तर को भी यथागत देना चाहिये तथा चरासु को भी गोलवर्ग से घन और ऋगुण करना चाहिये। तब वर्तमान तिथि की स्फुट सावन भुक्त घटी होती है।

इदानी विशेषमाह।

अवम विकलं नु सावनमेभिः परिकल्पितं यतश्चान्द्रम्।

नार्यभटाद्यैः प्रश्नो मध्यान्यत्वात् ततो ज्ञातः ॥ २६ ॥

सु. भा.—नु इति वितर्कं निश्चये वा। अवमविकलमवमशेषं गणितयुक्त्या सावनमस्ति परन्तु एभिरार्यभटाद्यैर्यनस्तदवमशेषं चान्द्रं परिकल्पितं ततस्तस्मात् कारणादार्यभटाद्यैर्यं प्रश्नो न ज्ञातो मध्यान्यत्वादवमशेषजात्यन्यत्वात् तद्वशाद्-विचन्द्रयोर्मध्ययोरन्यत्वात् स्थूलत्वादिति ॥ २६ ॥

वि. भा.—नु वितर्कं निश्चये वा। अवमशेषं गणितयुक्त्या सावनात्मकमस्ति परन्त्वेभिरार्यभटाद्यैस्तदवमशेषं यतश्चान्द्रं परिकल्पितं ततः (तस्मात्कारणात्) आर्यभटाद्यैर्यं प्रश्नो न ज्ञातो मध्यान्यत्वात् अवमशेषजात्यन्यत्वात् तद्वशाद्विचन्द्रयोरन्यत्वात् स्थूलत्वादिति ॥ २६ ॥

अब विशेष कहते हैं।

हि. भा.—गणित युक्ति से अवमशेष सावनात्मक है परन्तु आर्य भटादि आचार्यों ने जिसलिये उस अवमशेष की चान्द्र कल्पना की है उस कारण से आर्य भटादि इस प्रश्न को नहीं समझे, अवमशेष के भिन्न जातिक होने से उस के वश से मध्यम रवि और चन्द्र में भी स्थूलता होगी, इसलिये आर्य भटादि नहीं समझ सके ॥ २६ ॥

इदानीमिष्टादेकस्मान्मध्यग्रहादग्यान् मध्यान् यो वेत्तीत्यस्योत्तरमाह।

ज्ञातभगणादिभुक्तं सविकलमिष्टयुगभगणसङ्गुणितम्।

ज्ञातयुगभगणभक्तं मध्यो भगणादिफलमिष्टः ॥ २७ ॥

णसंगुणितं ज्ञातयुगभगणभक्तं भगणादिकलमिष्टो मध्यो ग्रहो भवेत् । 'साध्य-
स्य चक्रैर्गुणितः प्रसिद्धः' इत्यादि भास्करोक्तमेतदनुरूपमेव ।

अत्रोपपत्तिः ।

त्रैराशिकेन स्फुटा ॥२७॥

वि. भा.—ज्ञातग्रहस्य यत्संशेषं भगणादि भुक्तं तदिष्ट ग्रहयुगभगण सङ्गु-
णितं ज्ञातग्रहस्य युगभगणेन भक्तं तदा भगणादिकलमिष्टो मध्यग्रहो भवेदिति
॥ २७ ॥

अत्रोपपत्तिः ।

यदि युगकुदिनैर्ज्ञातग्रहयुगभगणा लभ्यन्ते तदाऽहर्गणेन किं समाग-
च्छति ज्ञातग्रहस्तत्स्वरूपम् = $\frac{\text{ज्ञातग्रह युगभगण.अहर्गण}}{\text{युगकुदि}}$, एवं यदि युगकुदिनै-
रिष्टग्रह (साध्यग्रह) युगभगणा लभ्यन्ते तदाऽहर्गणेन किं समागच्छति त्रिष्टग्रहस्त-
त्स्वरूपम् = $\frac{\text{इष्टग्रह युगभगण.अहर्गण}}{\text{युगकुदि}}$ अनयोः सम्बन्धः = $\frac{\text{ज्ञातग्रहयुगभगण}}{\text{इष्टग्रह युगभगण}}$
= $\frac{\text{ज्ञातग्रह}}{\text{इष्टग्रह}}$ छेदगमेन ज्ञातग्रहयुगभगण . इष्टग्रह = इष्टग्रहयुगभगण . ज्ञातग्रह,

∴ $\frac{\text{इष्टग्रह युगभगण.ज्ञातग्रह}}{\text{ज्ञातग्रह युगभगण}} = \text{इष्टग्रह}$ एतावताऽऽचार्योक्तं मुपपन्नम् ।

सिद्धान्त शिरोमणौ 'साध्यस्य चक्रैर्गुणितः प्रसिद्धो भक्तो निजैः स्यादथवा
प्रसाध्यः' भास्करोक्तमिदमाचार्योक्तानुरूपमेव, सिद्धान्तशेखरे 'अविदितग्रहपर्यय-
सङ्गुणो सभगणो विदिते कृतलिप्तिके । विदितकल्पजचक्रविभाजिते भवति
चाऽविदितः स कलादिकः' 'श्रीपत्युक्तमिदमक्षरश आचार्योक्तानुरूपमेवेति विज्ञ-
श्चिन्त्यम् ॥ २७ ॥

अब एक मध्यम ग्रह से अन्य मध्यग्रहों के जान के लिये कहते हैं ।

हि. भा.—ज्ञात ग्रह का भुक्त जो संशेष भगणादि है उसको इष्ट ग्रह (साध्यग्रह)
के युगभगण से गुणा कर ज्ञात ग्रह के युगभगण से भाग देने से भगणादि फल इष्टमध्यम
ग्रह होते हैं ॥ २७ ॥

उपपत्ति ।

यदि युग कुदिन में ज्ञात ग्रह के युगभगण पाते हैं तो अहर्गण में क्या इस से ज्ञात
ग्रह आते हैं ?

ज्ञातग्रयुगभगण. अहर्गण
युकुदि

= ज्ञातग्रह । एवं यदि युगकुदिन में इष्टग्रह (साध्यग्रह) का

युगभगण पाते हैं तो अहर्गण में क्या इस से इष्ट ग्रह आते हैं इष्टग्रयुगभगण. अहर्गण
युकुदि

= इष्टग्रह । इन दोनों के सम्बन्ध = ज्ञातग्रयुगभगण = ज्ञातग्रह इष्टग्रयुगभगण = इष्टग्रह छेदगम से ज्ञातग्रयुग-

भगण. इष्टग्रह = इष्टग्रयुगभगण. ज्ञातग्रह ∴ इष्टग्रयुगभगण ज्ञातग्रह = इष्टग्रह । इस से आचा-

र्योक्त उपपन्न हुआ । सिद्धान्त शेखर में 'अविदित ग्रह पर्यय सगुरौ' इत्यादि संस्कृतोपपत्ति में लिखित श्रीपति के इष्ट ग्रहानयन अक्षरशः आचार्योक्त के अनुरूप है सिद्धान्त शिरोमणि में 'साध्यस्य चक्रगुणितः प्रसिद्धो भक्तो निजः स्यादथवा प्रसाध्यः' यह भास्करोक्त भी आचार्योक्त के अनुरूप ही है इति ॥ २७ ॥

इदानीमनन्तरोक्त प्रश्ने विशेषमाह ।

इष्टाहतभक्तानां द्व्यादीनां संयुतेर्द्वयोरथवा ।

इष्टगुणकारगुणयोर्विभक्तयोर्वान्तरादथवा ॥ २८ ॥

सु० भा०—द्व्यादीनां ग्रहाणामिष्टाहतानां भक्तानां वा संयुतेरथवा द्वयोर्ग्रहयोरिष्टगुणकारगुणयोर्वा भक्तयोः संयुतेरथवा तेषामिष्टाहतभक्तानां वा तयोरिष्टाहतभक्तयोरन्तराद्वा पूर्ववदिष्टो मध्यग्रहः साध्यः । यथेष्टाहतभक्तानां युतिरन्तरं वा दृष्टं भवेत् तथा तद्भगणानामिष्टाहतग्रहयोगान्तरं कृत्वा ततस्तेन योगान्तरेण दृष्टमिष्टाहतग्रहयोगान्तरं लभ्यते तदेष्टग्रहभगणैः किं लब्धं भगणादिर्मध्य इष्टो भवेत् ॥ २८ ॥

वि. भा.—द्व्यादीनां ग्रहाणामिष्टाहतानां भक्तानां वा संयुतेरथवा द्वयोर्ग्रहयोर्ग्रहयोरिष्टगुणकारगुणयोर्वा भक्तयोः संयुतेरथवा तेषामिष्टाहतभक्तानां वा तयोरिष्टाहतभक्तयोरन्तराद्वा पूर्ववदिष्टो मध्यग्रहः साध्यः यथेष्टाहतभक्तानां युतिरन्तरं वा दृष्टं भवेत् तथा तद्भगणानामिष्टाहतभक्तानां योगान्तरं कृत्वा ततस्तेन योगान्तरेण दृष्टमिष्टाहतग्रह योगान्तरं लभ्यते तदेष्टग्रहभगणैः किं लब्धं भगणादिर्मध्य इष्टो भवेदिति ॥ २८ ॥

अत्रोपपत्तिः ।

यद्यनेनेष्टगुणकारगुणितयोर्ग्रहभगणयोर्योगेनान्तरेण वा ज्ञेयग्रहयुगभगणा लभ्यन्ते तत्तथा गुणितयोर्मण्डलादि विलिप्तान्त्ययोगेनान्तरेण वा किमिति ज्ञेयग्रहो लभ्यते । एवं बहूनां योगे अन्तरेऽपि त्रैराशिकम् । तथा इष्टहारकभक्तयो-

ग्रहमध्यमयो र्योगोऽन्तरं वा इच्छाराशिः, ज्ञेयग्रहभगणाः फलराशिः तयोरेवेष्ट हारकभक्तभगणर्योगोऽन्तरं वा प्रमाणराशिः ज्ञेयग्रहमध्यमिच्छाफलम् । एवं बहूनामपि चिन्तनीयम् ॥

सिद्धान्तशेखरे “द्वित्र्यादयस्तत्त्वभिमतैर्गुणैर्विनिघ्ना भक्ता हरैरथ खगा वियुता युता वा । योगेऽन्तरं तदभिबोध्य करोत्यभीष्टान् खेटान् स तन्त्र विदुषां तिलकत्वमेति” श्रीपत्युक्त प्रश्नोत्तरं तेनैवा “इष्टाहतानामथवा हूतानां द्वयोर्बहूनां वियुते युते वा । अथैकतस्तद्भगणेषु तद्वत् कृत्वानुपातात् शुचराः प्रसाध्याः” ज्ञेन कृतं यच्चाऽऽचार्योक्त ‘इष्टाहत भक्तानामित्यादेः’ पुनरुक्तिमिवेति विद्वद्भिश्चिन्त्यम् ॥

अब अनन्तरोक्त प्रश्न में विशेष कहते हैं ।

हि. भा.—इष्ट से गुणित वा भक्त दो आदि ग्रहों की संयुति से अथवा इष्ट गुणकार से गुणित वा भक्त दो ग्रहों की संयुति से अथवा इष्ट गुणित वा भक्त उन सर्वां के अन्तर से वा इष्ट गुणित वा इष्ट भक्त उन दोनों के अन्तर से पूर्ववत् इष्टमध्यम ग्रह साधन करना ॥२८॥

उपपत्ति ।

यदि इष्ट गुणकार से गुणित दो ग्रहों के भगण योग वा अन्तर में ज्ञातव्य ग्रह के युगभगण पाते हैं तो उसी तरह गुणित मण्डलादि विलिप्तान्त योग में अन्तर में क्या इस अनुपात से ज्ञातव्य ग्रह (साध्यग्रह) आते हैं । बहुत ग्रहों के योग में वा अन्तर में इसी तरह त्रैराशिक होता है । सिद्धान्त शेखर में ‘इष्टाहतानामथवा हूतानां’ इत्यादि पद्य से श्रीपति ने आचार्योक्त ‘इष्ट हत भक्तानां’ इत्यादि के अनुरूप ही कहा है इति ॥ २८ ॥

इदानीमनन्तरोक्त प्रश्नस्य प्रकारान्तरेणोत्तरमाह ।

ज्ञातैक भगण भुक्तिस्तद्भगणाप्ता तदिष्ट भगणोभ्यः ।

भगणादि सविकलं सविकलेष्ट भगणादि गुणमिष्टः ॥ २९ ॥

सु. भा.—ज्ञातग्रहो यावता कालेनैकं भगणं भुङ्क्ते तावता कालेन तदिष्टभगणोभ्यो ज्ञेयग्रहभगणोभ्यो ज्ञेयग्रहो यद्भगणादि सविकलं भुङ्क्ते तज्ज्ञातैक-भगणभुक्तिर्भवति । सा च भुक्तिस्तदिष्टभगणोभ्यस्तद्भगणाप्ता भवति । अर्थाच्चिदि ज्ञात भगणैरिष्टग्रहभगणास्तदैकज्ञातभगणेन किमित्यनुपातेन ज्ञेयस्यैकभगणभुक्ति-भगणादि सविकलं भवति । इदं भगणादि सविकलं भुक्तिमात्रं सविकलेष्टभगणा-दिगुणं ज्ञातग्रहस्याभीष्टदिने यद्भगणादि सविकलं मानं तेन गुणं तदेषो ज्ञेयो मध्यग्रहो भवेदित्यर्थः ।

अत्रोपपत्तिः ।

ज्ञातग्रहस्यैकेन भगणेन यद्येकभगणभुक्तिसमो ज्ञेयग्रहो भवति तदेष्टज्ञातग्रहभगणादिभिः किमिति जातो भगणादिज्ञेयग्रह इति ॥२९॥

वि. भा.—ज्ञातग्रहो यावता कालेनैकं भगणं भुङ्क्ते तावता कालेन ज्ञेयग्रहभगणेभ्यो ज्ञेयग्रहो यद्भगणादि सशेष भुङ्क्ते तज्ज्ञातैकभगणभुक्तिर्भवति । सा च भुक्तिस्तदिष्टभगणेभ्यस्तद् भगणाप्ता भवति । तावता ज्ञेयग्रहस्यैकभगणभुक्तिमानं सशेषेष्टभगणादिगुणितं तदेष्टो ज्ञेयो मध्यम ग्रहः स्यादिति ॥

अत्रोपपत्तिः ।

यदि ज्ञातग्रहयुगभगणैर्ज्ञेयग्रहयुगभगणा लभ्यन्ते तदैकेन भगणेन क इति ज्ञातस्यैक भगणभुक्तिः स्यात् । ततो यद्येकेन ज्ञातभगणेन एतावती गतिस्तदा तद्गत भगणैः सविकलैः (सशेषैः) केति ज्ञेयग्रहो भवेदिति । एतेनाचार्योक्तमुपपन्नं भवति । सिद्धान्त शेखरे “विज्ञात कल्पभगणैर्विहृतेषु माध्यमक्रेषु यद्भगणपूर्वक माप्यतेऽत्र । ज्ञातग्रहः सभगणो गुणितस्तु तेन साध्यग्रहो भवति वा भगणादिकोऽसौ ॥” श्रीपत्युक्तमिदमाचार्योक्तानुरूपमेवेति ॥ २९ ॥

अब अनन्तरोक्त प्रश्न के उत्तर को प्रकारान्तर से कहते हैं ।

हि. भा.—ज्ञात ग्रह जितने काल में एक भगण को भोग करते हैं उतने काल में ज्ञेय ग्रह भगणों से ज्ञेय ग्रह जो सशेष भगणादि भोग करते हैं वह ज्ञात ग्रह की एक भगण भुक्ति होती है, वह भुक्ति इष्ट (ज्ञेयग्रह) भगण से भक्त होती है, ज्ञेयग्रह के एक भगण भुक्तिमान को सशेष इष्ट भगणादि से गुणा करने से मध्यमज्ञेयग्रह होते हैं इति ॥ २९ ॥

उपपत्ति ।

यदि ज्ञातग्रह युगभगण में ज्ञेयग्रह युगभगण पाते हैं तो एक भगण में क्या इस अनुपात से ज्ञातग्रह की एक भगण भुक्ति होती है । पुनः अनुपात करते हैं यदि एक ज्ञात भगण में इतनी गति पाते हैं तो सशेष तद्गत भगण में क्या इससे ज्ञेय ग्रह आते हैं । इससे आचार्योक्त उपपन्न होता है । सिद्धान्त शेखर में ‘विज्ञातकल्पभगणैर्विहृतेषु’ इत्यादि संस्कृतोपपत्ति में लिखित श्लोक से श्रीपति ने आचार्योक्त के अनुरूप ही कहा है इति ॥ २९ ॥

इदानीमिष्टान्मध्यग्रहाद्यो मध्यतिथिं वेत्तीत्यस्योत्तरमाह ।

शशिदिनं गुणं सविकलं यद्भुवतं मण्डलादि तद्भगणैः ।

विभजेत्फलं सविकलास्तिथयः प्राग्बत्स्फुटीकरणम् ॥ ३० ॥

सु० भा०—इष्टग्रहस्य मण्डलादि भगणादि सविकलं सशेषं यद्भुक्तं ज्ञात-
मस्ति । तद्युगशशिदिनगुणं तद्भूगणैर्ज्ञातग्रहभगणैर्विभजेत् फलं मध्यमाः सविकला-
स्तथयो भवन्ति ततः प्राग्वत् २३-२५ सूत्रयुक्त्या स्फुटीकरणं कार्यम् ।

अत्रोपपत्तिः ।

त्रैराशिकेन यदीष्टग्रहयुगभगणैर्युगचान्द्रदिनानि तदा तद्भुक्तभगणादिना
किं लब्धा अभीष्टचान्द्राहाः सावयवा मध्यमास्तथयस्ततः स्फुटीकरणं प्राग्वदि-
त्यादि स्फुट मिति ॥३०॥

वि. भा.—इष्टग्रहस्य सशेषं मण्डलादि (भगणादि) यद्भुक्तं विदितमस्ति
तद्युगचान्द्रदिनैर्गुणितं ज्ञातग्रहभगणैर्विभजेत्फलं सशेषा मध्यमास्तथयो भवेयु-
स्ततः पूर्ववत् (२३-२५ सूत्रानुसारेण) स्फुटीकरणं कार्यमिति ॥ ३० ॥

अत्रोपपत्तिः ।

यदीष्टग्रहयुगभगणैर्युगचान्द्रदिनानि लभ्यन्ते तद्भुक्तभगणा (ज्ञातग्रह
भगणादिना) दिना किं लब्धाः सावयवा अभीष्ट चान्द्रदिवसा मध्यमास्तथयस्ततः
पूर्ववत् (२३-२५ सूत्रोक्त्या) स्फुटीकरणं विधेयमिति । ३० ॥

अब इष्टमध्यमग्रह से मध्यम तिथ्यानयनार्थ प्रश्न के उत्तर को कहते हैं ।

हि. भा.—इष्टग्रह का सशेष भगणादि भुक्त जो ज्ञात है उसको युगचान्द्र दिन से
गुणाकर ज्ञात ग्रह भगण से भाग देने से लब्ध सशेष मध्यम तिथि होती है उससे पूर्ववत्
(२३-२५ सूत्रोक्त युक्ति से) स्फुटीकरण करना चाहिये ॥ ३० ॥

उपपत्ति ।

यदि इष्ट ग्रह युग भगण में युगचान्द्र दिन पाते हैं तो ज्ञात ग्रह भुक्त भगणादि में
इस अनुपात से लब्ध अभीष्ट चान्द्र दिन (सावयव मध्यमतिथि) आया, इससे पूर्ववत् स्फुटी-
करण करना चाहिये ॥ ३० ॥

इदानीमिष्टान्मध्याद्रवीन्दुपातैर्विना यश्चन्द्रग्रहणं वेत्तीत्यस्योत्तरमाह ।

दत्त्वा स्पष्ट सपातचन्द्रो ज्ञातव्यस्ततः शरः साध्यः । शरवशात् बिम्बादि ज्ञानेन सूर्य
चन्द्र पार्तैर्विना चन्द्रग्रहणं विदितं भवति ॥ ३१ ॥

अत्रोपपत्तिः ।

यदीष्ट ग्रहयुगभगणैः सशेष भगणादीष्टग्रहो लभ्यते तदा युगीयपातभगण-
चन्द्रभगणयोर्योगे किं फलं भगणादिकः सपात चन्द्रो भवेत् । अत्र भगणान्
विहाय राश्यादिमध्यमसपातचन्द्रे यथागतदेशान्तरादिसंस्कारेण स्पष्टसपातचन्द्रो
ज्ञेयस्ततस्त्रिज्यया यदि चन्द्रस्य परमशरज्या लभ्यते तदा सपात चन्द्रभुजज्यया
किमित्यनुपातेन चन्द्रस्येष्टशरज्या समागच्छति, अस्याश्चापं चन्द्रस्येष्टशरो भवेत् ।
शरवशाद्विम्बादिज्ञानं सुगममेव, एतेन सूर्यचन्द्रपार्तैर्विना चन्द्रग्रहणज्ञानं
भवेदेवेति ॥ ३१ ॥

अब रविचन्द्र और पात के बिना इष्ट मध्यम ग्रह से चन्द्र ग्रहण ज्ञान
सम्बन्धी प्रश्न के उत्तर को कहते हैं ।

हि. भा.—मध्यमसपातचन्द्र में यथागत देशान्तरादि संस्कार कर स्पष्ट सपात चन्द्र
ज्ञान कर इससे शर साधन करना चाहिये, अर्थात् युग में पठित पातभगण और चन्द्रभगणों
का योग कर उससे सशेष भगणादि इष्ट ग्रह को गुणा कर इष्टग्रह युगभगण से भाग देने से
फल भगणादि सपात चन्द्र होते हैं । इसमें भगण को छोड़कर राश्यादि मध्यम सपातचन्द्र में
यथागत देशान्तर मन्दफलादि को संस्कार कर स्पष्ट सपात चन्द्र का ज्ञान करना चाहिये
उससे शर साधन करना चाहिये, शरवश से बिम्बादि ज्ञान सुलभ ही है । इस तरह सूर्य चन्द्र
और पात के बिना चन्द्रग्रहण ज्ञात होता है इति ॥ ३१ ॥

उपपत्ति ।

यदि इष्ट ग्रह युगभगण में संशेष भगणादि इष्टग्रह पाते हैं तो युगपातभगण-चन्द्र-

भगण के योग में क्या इस अनुपात से भगणादिक सपातचन्द्र आते हैं । इसमें भगणों को जोड़कर राश्यादि मध्यम सपात चन्द्र में यथागत देशान्तरादि को संस्कार करने से स्पष्टस पातचन्द्रज्ञान होता है तब अनुपात करते हैं यदि त्रिज्या में चन्द्र की परमशरज्या पाते हैं तो सपात चन्द्रभुजज्या में क्या इस अनुपात से चन्द्र की इष्टशरज्या आती है इसके चाप करने से चन्द्र के इष्टशर होते हैं । शरवश से बिम्बादि ज्ञान सुगम ही है । इससे सूर्य-चन्द्र और पात के बिना ही चन्द्र ग्रहण ज्ञान होता है इति ॥ ३१ ॥

इदानीं मध्यम सूर्यादिवमशेषाच्चमध्यमचन्द्रानयनमाह ।

कुदिनहृतमवमशेषं द्वादशभिर्गुणितमाप्तमंशाद्यम् ।

द्वादशगुणतिथ्यंशैर्युतं धनं भास्करे चन्द्रः ॥ ३२ ॥

सु. भा.—अवमशेषं द्वादशभिर्गुणितं युगकुदिनहृतमाप्तमंशाद्यं ग्राह्यम् । तद् द्वादशगुणतिथ्यंशैर्युतं यद्भवेत् तद्भास्करे मध्यमरवौ धनं कार्यमेवं मध्यमचन्द्रो भवति ।

अत्रोपपत्तिः ।

२० सूत्रोपपत्त्याऽभीष्टदिने सूर्योदये सावयवाश्चान्द्राहाः = इति + $\frac{\text{क्षश}}{\text{युकुदि}}$
एते द्वादशगुणा रविचन्द्रान्तरांशा भवन्ति ते रवौ क्षिप्यन्ते चन्द्रो भवतीत्युपप-
न्नम् ॥ ३२ ॥

वि. भा.—अवमशेषं द्वादशभिर्गुणितं युगकुदिनभक्तं लब्धमंशाद्यं यत्तद्-
द्वादशगुणतिथ्यंशैर्युतं तद् भास्करे (मध्यम रवौ) धनं कार्यं तदा मध्यमचन्द्रो
भवेदिति ॥ ३२ ॥

अत्रोपपत्तिः ।

अभीष्ट दिने सूर्योदये सावयवाश्चान्द्रदिवसाः = इति + $\frac{\text{अवमशे}}{\text{युकुदि}}$, एते द्वादश
गुणितास्तदा रवि चन्द्रान्तरांशाः = $१२ \left(\text{इति} + \frac{\text{अवमशे}}{\text{युकुदि}} \right) = १२ \text{ इति} + \frac{१२ \text{ अवमशे}}{\text{युकुदि}}$
= चन्द्र - रवि, $\therefore १२ \text{ इति} + \frac{१२ \text{ अवमशे}}{\text{युकुदि}} + \text{रवि} = \text{चन्द्रः}$ । एतावताऽऽचार्योक्तमुप-
द्यते । सिद्धान्त शेखरे “महीदिनैर्द्युक्षयशेषतः फलंदिनादि तत्तत्तिथिभिः समन्वितम् ।

तेनार्क निघ्नेन गृतो रविः गती हीनोऽनकेष्विन्दुरथोऽगदीधितिः ॥” श्रीपत्युक्त
मिदमाचार्योक्तानुरूपमेवेति विज्ञैर्ज्ञेयम् ॥ ३२ ॥

अब मध्यम सूर्य और अथम शेष ने मध्यम चन्द्रानयन को कहते हैं ।

हि. भा.—अथम शेष को बारह ने गुणाकर युगकुदिन से भाग देने से लब्ध जो
अंशादि हो उसमें बारह गुणित निष्पन्न को जोड़ने से जो हो उसको मध्यम रवि में जोड़ने
से मध्यम चन्द्र होते हैं ॥ ३२ ॥

उपपत्ति ।

इष्टदिन में सूर्योदय काल में सावयव चान्द्रदिन = इति + $\frac{\text{अवमशे}}{\text{युकुदि}}$ इसको बारह से
गुणा करने से रवि और चन्द्र के अन्तरांश होते हैं १२ (इति + $\frac{\text{अवमशे}}{\text{युकुदि}}$) = १२ इति +
 $\frac{१२ \text{ अवमशे}}{\text{युकुदि}} = \text{चन्द्र} - \text{रवि}$

∴ १२ इति + $\frac{१२ \text{ अवमशे}}{\text{युकुदि}}$ + रवि = चन्द्र. इससे आचार्योक्त उत्पन्न हुआ । सिद्धान्त
शेखर में ‘महीदिनैर्द्युक्षय शेषतः फलं’ इत्यादि संस्कृतोपपत्ति में लिखित श्रीपत्युक्त मध्यम
चन्द्रानयन आचार्योक्त के अनुरूप ही है इति ॥ ३२ ॥

इदानीं प्रकारान्तरेण मध्यमचन्द्रानयनमाह ।

द्युगणं युगाधिमासैर्गुणितं युगभूदिनैर्भजेत् ।

भगणादिमध्यमार्कत्रयोदशगुणाधिकं चन्द्रः ॥३३॥

सु. भा.—अहर्गणं युगाधिमासैर्गुणितं युगभूदिनैर्भजेत् । लब्धं भगणादि-
ग्राह्यम् । तन्मध्यमार्क त्रयोदशगुणाधिकमर्थात् त्रयोदशगुणमध्यार्कसहितं चन्द्रो
भवेत् ।

अत्रोपपत्तिः ।

युगरविमासाः = १२ युरभ ।

युगाधिमासाः = युचामा—युरमा

= युचभ—युरभ—१२ युरभ

= युचभ—१३ युरभ

∴ युचभ = युगाधिया + १३ युरभ ।

एते चन्द्रभगणा अहर्गणगुणा युगकुदिनगुणा भगणादिचन्द्रो भवेत् । तत्र प्रथम खण्डे युगाधिमाससमयुगभगणोद्भवं भगणादि फल द्विकीयखण्डे त्रयोदशगुणार्कस्तयोयोगे चन्द्रो भवतीत्युपपद्यते ॥३३॥

वि. भा.—अहर्गणं युगाधिसंयुगं युगकुदिनैर्भक्तं लब्धं भगणादिकलं यत्तत् त्रयोदश गुणितरवौ योजित तदा चन्द्रो भवेदिति ॥३३॥

अत्रोपपत्तिः ।

भवन्ति शशिनोमासाः सूर्येन्दुभगणान्तरमिति सूर्यसिद्धान्तोक्तेः युचांमा = युचंभ—युरभ, रविमासोनितास्तेषु शेषाः स्युरधिमासका इत्युक्तेः युगाधिमास = युचांमा—युगरविमास = युचंभ—युरभ—युरविमास, परन्तु १२ युरभ = युरविमास
∴ युगाधिमास = युचंभ—युरभ—१२ युरभ = युचंभ—१३ युरभ, एतेन 'इन्दु-मण्डलगुणेन्दुसङ्गुणब्रध्नचक्र विवरेऽधिमासकाः', इति भास्करोक्तमुप पन्नम् ।

∴ युगाधिमास + १३ युरभ = युचंभ, ततः $\frac{\text{युचंभ} \times \text{अहर्गण}}{\text{युकुदि}} = \text{भगणादिचन्द्रः} =$

$$= \frac{(\text{युगाधिमा} + १३ \text{ युरभ}) \text{अहर्गण}}{\text{युकुदि}} = \frac{\text{युगाधिमा. अहर्गण} + १३ \text{ युरभ. अहर्गण}}{\text{युकुदि}}$$

$$= \frac{\text{युगाधिमा. अहर्गण}}{\text{युकुदि}} + १३ \text{ भगणादिरवि} = \text{भगणादिचन्द्रः} । \text{ एतावताऽऽचार्योक्त-}$$

 मुपपन्नम् ।

सिद्धान्तशेखरे “अहर्गणाच्चाधिकमासनिघ्नात् कुट्टूद्भूतान्मण्डल पूर्वकेण । विस्वाहतोऽर्कः सहितो विधुरिति” श्रीपत्युक्तमाचार्योक्तानुरूपमेवेति ॥ ३३ ॥

अब प्रकारान्तर से मध्यम चन्द्रानयन को कहते हैं ।

हि. भा.—अहर्गण को युगाधिमास से गुणाकर युग कुदिन से भाग देने से जो लब्ध भगणादि हो उसको तेरह गुणित रवि में जोड़ने से चन्द्र होते हैं ॥ ३३ ॥

उपपत्ति ।

‘भवन्ति शशिनोमासाः सूर्येन्दु भगणान्तरम्’ इस सूर्य सिद्धान्तोक्ति से युचांमा = युचंभ—युरभ, ‘रविमासोनिता स्तेषु शेषाः स्युरधिमासका’ इस से युगाधिमास = युचांमा—युरविमास = युचंभ—युरभ—युरविमास परन्तु १२ युरभ = युरविमास ∴ युगाधिमास = युचंभ—युरभ—१२ युरभ = युचंभ—१३ युरभ, इससे ‘इन्दु मण्डल गुणेन्दु सङ्गुण’ इत्यादि भास्करोक्त उपपन्न होता है । अतः युगाधिमा + १३ युरभ = युचंभ तब अनुपात करते हैं ।

युचंभ. अहर्गंगा = भगणादिचन्द्र = $\frac{(\text{युगाधिमा} + १३ \text{ युग्म}) \text{ अहर्गंगा}}{\text{युकुदि}}$

= $\frac{\text{युगाधिमा.अहर्गंगा} + १३ \text{ युग्म.अहर्गंगा}}{\text{युकुदि}} = \frac{\text{युगाधिमा.अहर्गंगा}}{\text{युकुदि}} + १३ \text{ भगणादिरवि} =$

भगणादिचन्द्र इसमें आचार्योक्त उपपन्न होता है । सिद्धान्त जेवर में 'प्रहर्गंगाच्चाधिकमास-
निष्ठात्' इत्यादि सस्कृतोपपत्ति में निहित श्रीपति प्रकार आचार्योक्त के अनुरूप ही है
इति ॥३३॥

इदानीं त्रिगुणाः शनिरिन्दून इत्यादि प्रश्नानामुत्तरमाह ।

इष्टगुणकारगुणितग्रहभगणैक्यान्तरं यथाऽभिहितम् ।

कृत्वाकुदिनैर्भजेत् शेषोनयुतानि कुदिनानि ॥३४॥

यद्यन्यभगणलब्धं धनंमिष्टग्रहस्य युगभगणैः ।

तदा शे — अम = इभ

∴ अम = शे — इभ = शे + युकुदि — इभ । अत उपपद्यत आचा-
र्योक्तम् ॥३४-३५॥

वि. भा.—उद्देशकालापे यथेष्ट गुणगुणानां ग्रहाणां योगान्तरमभिहितं भवेत् । तथेष्ट गुणगुणानां तेषां युगभगणानामैकान्तरं कार्यम् । एवं स राशिर्यदि युगकुदिनाधिकस्तदा तं युगकुदिनैभिजेत् अत्र फलं प्रनोजनाभावस्त्याज्यं शेषमेव ग्राह्यम् । अन्यभगणलब्धराश्यादिफलं यदि धनं तदा युगकुदिनानि शेषोनानि यदि ऋणां तदाशेषयुतानि कार्याणि, एवं यानि तानि यद्यन्यभगणफलमृणं तदेष्टग्रहस्य दृष्टग्रहस्य युगभगणैरूनानि यद्यन्यभगणफलं धनं तदा युतानि कार्याणि एवमन्य-भगणाभवति 'उद्देश कालापवदेवकार्यं योगान्तराद्यं ग्रहपर्यायानाम्' भास्करोक्त-मिदमेतदनुरूपमेवेति ॥३४-३५॥

अत्रोपपत्त्यर्थं त्रिगुणः शनिरिन्दूनोऽन्यभगणलब्धैरित्यादि पञ्चमश्लोकस्थले द्रष्टव्यमिति ।

अब 'त्रिगुण शनिरिन्दून्' इत्यादि प्रश्नो का उत्तर कहते हैं ।

हि. भा.—उद्देश कालाप में जिस प्रकार दृष्टगुण से गुणित ग्रहों का योगान्तर कहा गया है, उसी प्रकार दृष्टगुण से गुणित उन युगभगणों का ऐक्यान्तर करना चाहिए । इस प्रकार यदि वह राशि युगकुदिन से अधिक हों तो उसको युगकुदिन से भाग दें । प्रयोजन के न होने के कारण फल छोड़कर शेष को ही ग्रहण करना चाहिए । दूसरे भगण से प्राप्त राश्यादिफल यदि धन हो, तो युगकुदिन में से शेष को घटा दें । यदि राश्यादिफल ऋण हो, तो उसे युगकुदिन में जोड़ दें । इस प्रकार जो फल उपलब्ध हों उनको यदि अन्य भगणफल ऋण हो तो दृष्ट दृष्टग्रह के युगभगण से घटा दें, और यदि अन्यभगण फल धन हो तो युगभगण में जोड़ दें । इस प्रकार अन्यभगण होते हैं ।

"उद्देशकालापवदेव कार्यं योगान्तराद्यं ग्रहपर्यायानां" इत्यादि भास्करोक्त आचार्योंक्त के अनुरूप ही है ॥ ३४-३५ ॥

इदानीं प्रथमद्वितीय प्रश्नयो (इष्टौदयिकानश्विन्यौदयिकान् वा मध्यान् यः करोति) उत्तरमाह ।

भदिनानि ग्रहभगणैरूनानि सावनदिनानि ।

इष्टाश्विन्यौदयिकाः स्वसावनैः पूर्ववन्मध्याः ॥ ३६ ॥

सु. भा.—ग्रहभगणैरूनानि भदिनानि सावनदिनानि ग्रहसावनदिनानि भवन्ति । ततः स्वसावनैः पूर्ववदिष्टाश्विन्यौदयिका मध्या ग्रहा भवन्ति । अर्थाद्य-दीष्टग्रहौदयिका ग्रहाः साध्यास्तदेष्टग्रहग्रहसावनाहर्गणतो यद्यश्विन्यौदयिका स्तदेष्टभदिनतो मध्याग्रहाः पूर्ववत् साध्या इति । 'भभ्रमास्तु भगणैर्विवर्जिता यस्य कुदिनानि तानि वा—' इत्यादि भास्करोक्तमेतदनुरूपमेवेति ॥३६॥

वि भा — ग्रह भगणैस्त्वानि (रश्मिगतानि) भदिनानि ग्रहमावननितानि भवन्ति, ततः स्व सावने पूर्ववदिष्टाश्विन्यौदयिका मध्या ग्रहाः स्युरर्थाद्यदीष्ट-ग्रहादयिका गता अपेक्षानान्देष्टग्रहमायनाहर्गंगो यच्चश्विन्यौदयिका ग्रहा अपेक्षानान्देष्टभदिनतो मध्यग्रहा पूर्ववन्माध्या । यस्य भगणैर्यो ग्रह आनीयते स तस्यैवोदयकालिको भवति । नक्षत्रपरिवर्त्तनराशीतो नक्षत्रौदयिकालिको भवति तथा मत्थश्विनी नक्षत्रागता प्रथमं तदुदयकालिको ग्रहो भवति । अस्मादश्विन्यौ-दयिकाद् भगणात् यस्यादयाः शोधयन्ते शेषस्तस्यैव मध्यमो भवतीति ।

अत्रोपपत्तिः ।

यदि युगकुदिने युग स्वोदया लभ्यन्ते तदाऽहर्गणोऽनेन किं जाता गत स्वोद-याप्तिः । ततो यदि युगकुदिनैर्युग नक्षत्रभगणोत्पन्ना ग्रहा लभ्यन्ते तदाऽहर्गणोऽनेन किमिति यातनक्षत्र परिवर्त्तोत्पन्नग्रहः । ततो यदि युगनक्षत्रभगणोत्पन्नग्रहे युग-स्वोदयशोधनेन युगग्रहभगणा लभ्यन्ते तदिष्टनक्षत्रभगणोत्पन्नग्रहे इष्टग्रह-स्वोदयशोधनेन क जान इष्टग्रह इति, सिद्धान्त शेषरे 'अहर्गणो स्वोदय संगुणो हूते क्वहर्गताः स्युः स्वरोदयाः फलम् । तद्वृत्ततो भूममम्भो ग्रहः प्रजायते मध्यम खेचरोऽथवा ज्यं शीघ्रत्युक्तः प्रकारोऽस्तीति ॥ ३६ ॥

अब प्रथम और द्वितीय प्रश्न के उत्तर को कहते हैं ।

हि. भा.— भदिन में ग्रह भगण को घटाने से ग्रह सावन दिन होते हैं । तब अपने सावन से पूर्वत् इष्ट अश्विनी नक्षत्रोदय कालिक मध्यम ग्रह होते हैं अर्थात् इष्टग्रहोदय कालिक ग्रहानयन करना हो तो इष्ट ग्रह सावना हर्गंग से यदि अश्विनी नक्षत्रोदय कालिक ग्रहा-नयन करना हो तो इष्ट भदिन से पूर्ववत् मध्यमग्रह साधन करना ॥ ३६ ॥

उपपत्ति ।

यदि युग कुदिन में युग स्वोदय पाते हैं तो अहर्गण में क्या उस अनुपात से गतस्वो-दय आता है । तब फिर अनुपात करने हैं यदि युग कुदिन में युग नक्षत्र भगणोत्पन्न ग्रह पाते हैं तो अहर्गण में क्या इस से गत नक्षत्र परिवर्त्तोत्पन्न ग्रह आते हैं । पुनः अनुपात करते हैं यदि युगनक्षत्र भगणोत्पन्न ग्रह में युग स्वोदय को घटाने से युगग्रह भगण पाते हैं तब इष्ट नक्षत्र भगणोत्पन्न ग्रह में इष्टग्रह स्वोदय घटाने से क्या इसमें ग्रह आते हैं । सिद्धान्त शेखर में 'अहर्गणो स्वोदय संगुणो हूते' इत्यादि संस्कृतोपपत्ति में लिखित श्लोक से श्रीपति कथित प्रकार है इति ॥ ३६ ॥

इदानीं तृतीय प्रश्नो (गुणकैर्गुणं मध्यार्कमिष्टं मध्यं यो वेत्ति)त्तरमाह ।

रवि भगणाप्तं लिप्तादि सविकलं ज्ञेय मण्डलेभ्यो यत् ।

मध्यार्कं सविकलं कला संगुणितं ज्ञेय मध्यकलाः ॥ ३७ ॥

सु. भा.—ज्ञेयमण्डलेभ्यो ज्ञेयग्रह युगभगणोभ्यो रविग्रह भगणाप्तं यल्लिप्तादि फलं तेन मध्यार्कं सकलकला संगुणितं मध्यार्कस्य सविकलेन शेषेण याः कला अर्थाद्रविकलात्मकमानेन गुण तदा ज्ञेयग्रहस्य मध्यस्य कलाः स्युरिति ।

अत्रोपपत्तिः ।

त्रैराशिकेन यदि रविग्रहभगणौर्मध्यमा रविकला लभ्यन्ते तदा ज्ञेयग्रह युगभगणौः किं लब्धा ज्ञेयमध्यकलाः = $\frac{\text{मरक} \times \text{ज्ञेयुभ}}{\text{युरभ}} = \text{मरक} \times \frac{\text{ज्ञेयुभ}}{\text{युरभ}}$ । अत उपपद्यते ॥ ३७ ॥

वि. भा.—ज्ञेय ग्रह युगभगणोभ्यो रवि युगभगण भक्तं लब्धं यत्कलादि फलं तेन मध्यार्कं सविकल (सशेष) कला संगुणितं (रविकलात्मकमानेन संगुणितं) तदा ज्ञेय ग्रहस्य कला भवन्तीति ॥ ३७ ॥

अत्रोपपत्तिः ।

यदि रवि युगभगणौर्मध्यमा रविकला लभ्यन्ते तदा ज्ञेय ग्रह युगभगणौः किं जाताज्ञेयग्रहमध्यकलाः = $\frac{\text{मरक} \times \text{ज्ञेयग्रहयुभ}}{\text{युगरविभ}} = \text{मरक} \times \frac{\text{ज्ञेयग्रहयुभ}}{\text{युगरविभगण}}$ एतावताऽऽचार्योक्तमुपपन्नम् ।

अब तृतीय प्रश्न (गुणक गुणित मध्यार्क से इष्ट मध्यमग्रहानयन) के उत्तर को कहते हैं ।

हि. भा.—ज्ञेय ग्रह युग भगण से रवि युग भगण में भाग देने से जो कलादि लब्ध हो उस से सशेष मध्यार्क कला (रविकलात्मक मान) को गुणा करते से ज्ञेयग्रह कला होती है ॥ ३७ ॥

उपपत्ति ।

यदि रवि युग भगण में मध्यम रवि कला पाते हैं तो ज्ञेय ग्रह युग भगण में क्या इस अनुपात से ज्ञेय ग्रह मध्य कला = $\frac{\text{मरक. ज्ञेयग्रह युगभ}}{\text{युगरविभ}} = \text{मरक} \times \frac{\text{ज्ञेयग्रहयुभ}}{\text{युगरविभ}}$ इस से आचार्योक्त उपपन्न हुआ ॥ ३६ ॥

इदानीं पाताननुलोमगमनित्यादेस्तस्मात् ।

पातो वाऽनुलोमगस्तदा ज्ञेयग्रहस्य चक्रेण (भगणपरिवर्त्तेन) ऊनितानां (रहि-
तानां) क्षितिदिनानां (युग कुदिनानां) यः प्रकरः (समूहः) तस्य शेषः स्वचक्रैः (ज्ञेयग्रह
चक्रत्वेन निरूपितैः) प्राग्वन्निष्पन्नोऽयं ग्रहोऽनुलोमो विलोमः स्यात् द्युराशिरहितैः
(इष्टाहर्गणहीनैः) कुदिनैः (युगकुदिनैः) स्वचक्रैश्च (स्वभगणैश्च) पूर्ववत् कृतो-
मध्यो विलोमगोऽनुलोमगः स्यादिति ॥ ३९ ॥

अब प्रकारान्तर से उत्तर को कहते हैं ।

हि. भा.—अहर्गण रहित युग कुदिन का जो शेष (गम्य अहर्गण) है उससे और
ग्रह के युगभगण से अनुपात द्वारा पूर्ववत् साधित ग्रह यदि स्वभावतः अनुलोमगतिक रहते
हैं तो विलोम गति होते हैं । स्वभाव से विलोमगतिक ग्रह अनुलोमगतिक होते हैं ॥ ३९ ॥

उपपत्ति ।

युगकुदिन—ग्रहर्गण = गम्याहर्गण, एमसे और ग्रहयग भगण मे साधित भगणादि
 ग्रह = ग्रहयुगभगण (युग कुदिन—ग्रहर्गण) = ग्रहयुगभगण — ग्रहयुगभगण. ग्रहर्गण — यहाँ
 युग कुदिन युग कुदिन
 भगणों को छोड़ कर राग्यादिक ग्रह लेने है तो वह चक्र शुद्ध ही आता है इसलिये स्वभावतः
 यदि ग्रह अनुलोम गति होते हैं, तो विलोमगति होते हैं । और स्वभावतः यदि विलोमगति
 होते हैं तो अनुलोमगति होने हैं । सिद्धान्त शेखर मे 'चक्रोन्नतक्षितिदिनप्रकरादशेषः' इत्यादि
 संस्कृतोपपत्ति मे लिखित ब्लोक से श्रीपति ने आचार्योक्त के अनुरूप ही कहा है इति ॥३६॥

इदानीं तृतीय प्रश्नस्यो (शन्याद्यैर्विपरीतैर्दिवस वारं वेत्तीत्यस्य) उत्तरमाह ।

कल्पदिनसप्तकवधात् कल्पगताहर्गणोनकाच्छेषात् ।

सप्तहृताहिनवारः शेषः शन्यादिको भवति ॥ ४० ॥

सु. भा.—कल्पदिनसप्तकवधात् कल्पकुदिनसप्तघातात् किं विशिष्टात्
 कल्पगताहर्गणेनोक्त काद्यः शेषस्तस्मात् सप्तहृतात् शेषः शन्यादिको दिनवारो
 भवति । अर्थाद्वेत्तवन्तरं शनिः शनेरनन्तरं शुक्र इति विपरीत गणनया दिनवारो
 भवति ।

अत्रोपपत्तिः ।

सप्ततष्टोऽहर्गणो यदि शे, तथा सप्तकष्टो ७ ककुदि—अह । अयं शे कल्प्यते
 तदा शे = ७—शे, । अतो—शे, ऽस्माद्या रव्यादितः क्रमगणना सैव ७—अशे,
 अस्मात् शन्यादेर्विपरीतगणना । यथा यदि शे, = १ तदा क्रमगणनया वर्तमानः
 सोमवारस्तथा शे = ६ । अस्मात् । रविः । शनिः । शुक्रः । गुरुः । बुधः । कुजः ।
 इति विपरीत गणनया वर्तमानः सोम एव जातः ॥४०॥

वि. भा.—कल्पगताहर्गणेन रहितात् कल्पकुदिनसप्तघाताद्यः शेषस्तस्मात्
 सप्तभक्ताच्छेषः शन्यादिको दिनवारो भवत्यर्थाद्विशनिशुक्रादि विपरीत गणनया
 दिनवारो भवतीति ॥ ३९ ॥

अत्रोपपत्तिः ।

सूत्रोक्त्या “७ ककुदिन—अहर्गणोऽयं सप्तभक्तः शेषं = शे कल्प्यते, तथाऽह-
 र्गणः सप्तभक्तः शेषं = शे कल्प्यते तदा शे = ७—शे अतोऽस्मात् शन्यादेर्विपरीत-
 गणनया या भवति सैवाशेऽस्माद्व्यादितः क्रमगणनया भवति । यथा यदि शे = १
 तदा शे = ६ अस्माद्विपरीतगणनया रविः, शनिः, शुक्रः, गुरुः, बुधः, मङ्गलः, वर्त-

मानो धारः सामो जातः । शे^१ अस्मात् क्रमगणनया वर्त्तमानो वारः सोम एवा-
गच्छत्यत आचार्योक्तं युक्तियुक्तमिति ॥

अथ तृतीय प्रश्न (शनि आदि ग्रहों की विलोम गणना से
दिवसवार को जानना) के उत्तर को कहते हैं ।

हि. भा.—कल्प कुदिन और सात के घात में कल्पगत ग्रहगण को घटाने से जो
शेष रहे उसको सात से भाग देने से शेष शनि आदि दिनवार होता है अर्थात् रवि, शनि,
शुक्र, आदि विपरीत गणना से दिनवार होता है ॥

उपपत्ति ।

आचार्योक्त सूत्र के अनुसार ७ ककुदि—ग्रहगण इसको सात से भाग देने से शेष
= शे । तथा ग्रहगण को सात से भाग देने से शेष = शे, तब शे = ७—शे इसलिए शे इससे
रवि आदि क्रमगणना से जो होता है वही ७—शे इससे शनि आदि विपरीत गणना से
होता है । जैसे यदि शे = १ तो क्रम गणना से वर्त्तमान सोमवार होता है तथा शे = ६ इससे
रवि, शनि, शुक्र, गुरु, बुध, कुज इस विपरीत गणना से भी वर्त्तमान सोमवार ही हुआ
इति । ४० ॥

भावाद्विजयादितो गणना कृता सूर्य सिद्धान्तेऽपि विजयादिवर्षाणामुत्प्लेखः सांहिनि-
कोक्त समान एवेति सुधियो विभावयन्तु ॥ ४१ ॥

अब प्रथम द्वितीय और तृतीय प्रश्नों के उत्तर को कहते हैं ।

हि. भा.—रवि और चन्द्र के भगण योग को दो से गुणा करने से व्यतिपात और
वैधृत होते हैं अर्थात् रवि और चन्द्र के भगण योग में जितने भगण हैं उनको द्विगुणित
करने से जो होगा उतने व्यतिपात और वैधृत होंगे । गुरु के भगण को बारह से गुणा कर
वर्त्तमान गुरु राशियों को जोड़ने से गुरु वर्ष होते हैं ॥ ४१ ॥

उपपत्ति ।

यदि रवि और चन्द्र का योग छः राशि के बराबर होता है तो वे (रवि-चन्द्र) भिन्न
अयन स्थित और एक गोल स्थित होते हैं । जैसे यदि उनमें से एक = १ रा, तो दूसरा =
५ रा, एवं दोनों के प्रमाण योग छः राशि के बराबर १।५ ॥ २।४ ॥ ३।३ ॥ ४।२ यहाँ
दोनों (रवि-चन्द्र) के भुज बराबर होने से स्थानीय क्रान्ति तुल्य होती है इसलिये इसको
व्यतिपात योग कहते हैं । शुभ फल को विशेष (अत्यन्त) रूप से नास करता है इसलिये
इसका नाम व्यतिपात योग है ॥

यदि रवि और चन्द्र का योग बारह राशि के बराबर होता है तो वे दोनों भिन्न गोल
स्थित और एक अयनस्थित होते हैं । जैसे यदि उन दोनों में से एक = १ रा है, तो दूसरे =
११ रा, एवं उन दोनों के प्रमाण १।११ ॥ २।१० ॥ ३।९ ॥ ४।८ ॥ ५।७ ॥ ६।६ ॥ ७।५ यहाँ दोनों
के भिन्न गोल है और अयन एक है । यहाँ दोनों के भुज बराबर होने से रविक्रान्ति के
बराबर चन्द्रस्थानीय क्रान्ति होगी इसलिये इसको वैधृत नाम का योग कहते हैं । मङ्गल कार्य
को विशेषरूप से अवरोध करता है इसलिये इसका नाम वैधृत योग है ॥

उपर्युक्त रवि और चन्द्र का योग छः राशि होने से व्यतिपात योग और बारह राशि
होने से वैधृत योग होता है एवं रवि-चन्द्र का योग एक भगण में दो बार होता है इसलिये
योग भगण को दो से गुणा करने से जो होगा उतने ही गत व्यतिपात और वैधृत होंगे ॥

यद्यपि मुहूर्तकल्पदुमादि ग्रन्थों में स्पष्ट गुरु राशि सञ्चार वश से भी गुरुवर्षानयन हैं
तथापि प्राचीन बराहमिहिरादि सब आचार्यों ने मध्यम गुरु राशि सञ्चारवश ही से गुरुवर्षानयन
किया है । सिद्धान्त शिरोमणि में ‘बृहस्पतेर्मध्यमराशि भोगात्’ इत्यादि संस्कृतोपपत्ति में लिखित
भास्करोक्ति से तथा ‘मध्यगत्या भभोगेन गुरोर्गौरव वत्सराः’ इस लघुवशिष्ट सिद्धान्तोक्ति
से मध्यममान से गुरु का एकराशि भोगकाल गुरु का एक एक वर्ष होता है । मृत्तचमि से गुरु

के सम्पूर्ण राशि भोग ज्ञान के लिये गुरु के गनभगण को बारह से गुणाकर वर्त्तमान राशि सख्या जोड़ने से गुरुवर्ष होने है । सूर्य सिद्धान्त में भी इसी तरह गुरुवर्षानयन है जैसे “द्वादशघनागुरोर्योना भगणावर्त्तमानकैः । राशिभिः सहिताः शुद्धाः पष्ट्या स्युर्विजयादयः ॥” सहिताकार ने शुभाशुभफलज्ञान के लिये गुरुवर्ष साठ कहे है जैसे किसी का पद्य है “कल्यादितो मध्यमजीव भुक्ता ये राशयः पष्टिद्वनावर्गैराः” इत्यादि ग. कृ. नोपपत्ति में लिखित है सृष्ट्यादि में विजय नाम का वर्ष था. उसलिये विजयादि से गणना की है । सूर्य सिद्धान्त में भी विजयादि वर्षों के उल्लेख साहित्यिकोक्त समान ही है, लेकिन आचार्य ने विजयादिवर्षों की चर्चा नहीं की है ॥४१॥

इदानीं चतुर्थपञ्चमप्रश्नयोरुत्तरार्थमाह ।

आद्यग्रहपरिवर्त्ति विशेषिताः स्वोच्चनीचपरिवर्त्ताः ।

भगणान्तरं द्वियोगाः कार्यास्त्रै राशिकेन गताः ॥४२॥

सु. भा.—आद्यग्रहपरिवर्त्तिः पाठपठिता ग्रहभगणास्ते स्वोच्चभगणविशेषिता अन्तरितास्ते स्वोच्चनीचपरिवर्त्ताः स्वकेन्द्रभगणाः स्युः । खेचरोच्चभगणान्तरोन्मिताः सन्ति मन्दचलकेन्द्रपर्यया—’ इति भास्करोक्तमेतदनुरूपमेव । एवं द्वयोर्ग्रहयोर्युगभगणानामन्तरं युगे द्वियोगा द्वयोर्ग्रहयोर्योगाः स्युः । ततस्त्रै राशिकेनेष्टकाले युगकुदिनैर्भगणान्तरतुल्या योगास्तदाहर्गणेन किमिति लब्धा गता योगाः कार्याः ।

अत्रोपपत्तिः ।

केन्द्रानयनस्यातिसुगमा । कल्पे भगणान्तरसमा एव ग्रहयोर्योगा भवन्ति । उभयो प्राग्गमनात् इति ॥४२॥

वि. भा.—आद्यग्रहपरिवर्त्ति (पाठपठित ग्रहभगणाः) (स्वोच्चभगणः) विशेषिताः (अन्तरिताः) तदा स्वोच्चनीचपरिवर्त्तिः (स्वकेन्द्रभगणाः) स्युः । तथा द्वयोर्ग्रहयोर्युगभगणान्तरं युगे तयोर्ग्रहयोर्योगाः स्युः । ततस्त्रै राशिकेन गता योगा भवन्तीति ॥ ४२ ॥

अत्रोपपत्तिः ।

ग्रहोच्चान्तरं केन्द्रम्, एतदेवान्तरं प्रतिवर्ष वर्धनेन युगे ग्रहभगणोच्च भगणयोरन्तरतुल्यं भवत्यतो ग्रहयुगभगणानामुच्चयुगभगणानामन्तरं समा ग्रहकेन्द्र भगणाः सिद्धाः । सिद्धान्तशिरोमणौ “खेचरोच्चभगणान्तरोन्मिताः सन्ति मन्द चल केन्द्र पर्ययाः” भास्कराचार्येण कथितमिदमाचार्योक्तानुरूपमेव । तथा द्वयोरेकदिशं गच्छतोर्ग्रहयोः प्रतिदिनं गत्यन्तरतुल्यमेवान्तरं भवति, इदमेवान्तरं

वधित्वा युगे ग्रहयोर्युग भगणान्तरं भवति तत्तुल्या एव तयोर्युगे योगा भवन्ति । ततोऽनुपातेन 'युगकुदिनैर्ग्रहयोर्भगणान्तरतुल्या योगास्तदाऽहर्गणेन किमिति' ष्टकाले गतायोगा समागच्छन्तीति ॥ ४२ ॥

अब चतुर्थ और पञ्चम प्रश्न के उत्तर के लिये कहते हैं ।

हि. भा.—पाठ पठित ग्रह भगण और स्वोच्च भगण (ग्रहोच्च भगण) का अन्तर ग्रह का केन्द्र भगण होता है । तथा दो ग्रहों के युगीय भगणान्तर तुल्य युग में इन दोनों ग्रहों का योग होता है उस से त्रैराशिक से इष्टकाल में गत योग लाना चाहिये इति ॥

उपपत्ति ।

ग्रह और उच्च का अन्तर केन्द्र है । यही अन्तर बढ़ते बढ़ते युग में ग्रहभगण और उच्च भगण का अन्तर तुल्य होता है अतः ग्रह और उच्च का युग भगणान्तर तुल्य ग्रह केन्द्र भगण सिद्ध हुआ । सिद्धान्त शिरोमणि में 'खेचरोच्च भगणान्तरोन्मिताः सन्ति मन्दचल-केन्द्र पर्ययाः' इस से भास्कराचार्य ने भी आचार्योक्त के अनुरूप ही कहा है । एवं एक दिशा में चलते हुए दो ग्रहों का प्रत्येक दिन गत्यन्तर तुल्य ही अन्तर होता है, यही अन्तर बढ़ते बढ़ते युग में दोनों ग्रहों के भगणान्तर के बराबर होता है, एतत्तुल्य ही युग में दोनों ग्रहों का योग होता है । इस से अनुपात करते हैं यदि युग कुदिन में दो ग्रहों का भगणान्तर तुल्य योग पाते हैं तो अहर्गण में क्या इस से इष्टकाल में गतयोग आते हैं ॥ ४२ ॥

इदानीं प्रथम द्वितीय प्रश्नयो (सावनमासाब्दाधिपौ यो वेत्तीत्यनयोः)

उत्तरमाह ।

द्युगणात् त्रिशद्वभक्ताद्यल्लब्धं द्विगुणितं सरूपं तत् ।

सप्तविभक्तं शेषः सावनमासाधिपोऽर्कादिः ॥ ४३ ॥

षष्टिशतत्रयभक्तात् कल्पगताहर्गणात् फलं त्रिगुणम् ।

सैकं सप्तविभक्तं सावन वर्षाधिपोऽर्कादिः ॥ ४४ ॥

सु. भा.—त्रिशद्वभक्तादहर्गणाद्यल्लब्धं तद् द्विगुणितं सैकं च कार्यम् । ततः सप्तविभक्तं शेषोऽर्कादिः सावनमासाधिपो भवति । एवं कल्पगताहर्गणाद् षष्ट्यधिकशतत्रयभक्ताद्यत्फलं तत् त्रिगुणं सैकं च कार्यम् । ततः सप्तविभक्तं शेषोऽर्कादिः सावनवर्षाधिपो भवति ।

अत्रोपपत्तिः ।

दिनत्रिशतैकः सावनमासो भवति अतोऽहर्गणस्त्रिशता हृतो लब्धा गताः सावनमासास्ते द्विसङ्गुणा कृता यतस्त्रिशदिनात्मके सावनमासे सप्ततष्टे द्वयमव-

शिष्यते । वर्त्तमानमागपत्यर्थं भेदाः कृतान्नतः सप्ततष्टे मामाधिपतिरर्कादिर्भवति यत् कल्पादा मागपतिरर्कं आसीत् । एवं पण्यधिकशतत्रयदिनैरेकः सावनोब्दः परिगृह्यतः प्राचीनैर्गणनस्यैदिनैर्होतुर्गणो लब्धा गताब्दास्त्रिमङ्गुणा यतः पण्यधिकशतत्रयदिनात्मक एकस्मिन् सावनाब्दे सप्ततष्टे त्रयमवशिष्यते । वर्त्तमानाब्दपार्थ द्विसङ्गुणाः सैकाः कृताः । शेषोपपत्तिरिति मुगमा । प्रसिद्धसूर्यसिद्धान्तेऽप्ययमेव प्रकारः ॥ ४३-४४ ॥

वि. भा.—त्रिशद्भक्तादहर्गणाद्यल्लब्धं तत् द्विगुणितं सैकं च कार्यम् ततः सप्तभक्तं शेषो रव्यादिकः सावनमासपतिर्भवति । एवं कल्पगताहर्गणात् षष्ट्यधिकशतत्रयभक्ताद्यल्लब्धं तत् त्रिगुणितं सैकं च कार्यम् । ततः सप्तभक्तं शेषो रव्यादिकः सावनवर्षपतिर्भवतीति ॥ ४३-४४ ॥

अथोपपत्तिः ।

माससंख्यया दिनत्रिशता वर्षसंख्यया दिनपण्यधिकशतत्रयेण यद्येको मासो वर्षं च लभ्यते तदाहर्गणेन किं प्रथमं स्थाने लब्धा गताः सावनमासा द्वितीयं स्थाने च लब्धानि गतानि सावन वर्षाणि । एकस्मिन् सावनमासे त्रिशद्दिनात्मके सप्तभक्ते द्वयमवशिष्यतेऽतो गतमाससंख्या द्विगुणितास्तदा गत मासपा भवन्ति, वर्त्तमानाधिपत्यर्थं रूपयोजनं कार्यम्, ततः सप्तभक्ते मास पतयो भवन्ति । एकस्मिन् सावनवर्षे पण्यधिकशतत्रयदिनात्मके सप्तभक्ते त्रयमवशिष्यतेऽतो गतवर्षसंख्या त्रिगुणिता तदा गतवर्षपा भवन्ति, वर्त्तमानाधिपत्यर्थं रूपयोजनं कार्यम् । ततः सप्ततष्टे वर्षपा भवन्ति । सृष्ट्यादौ मासपतिर्वर्षपतिश्च रविरेवाऽऽसीदतोऽत्रापि रव्यादितो गणना समुचिता । सूर्यसिद्धान्ते “मामाब्ददिनसंख्याप्तं द्वित्रिंशत् रूपं संयुतम् सप्तोद्भूतावशेषौ तु विज्ञेयी मासवर्षौ” ज्ञेन मासपतिवर्षपत्यो रानयनमाचार्योक्तं सदृशमेवास्ति, सिद्धान्तं शेखरे ‘सावनाब्दपतिमत्र चतुर्थं मासनाथमपि विद्धि तृतीयम्’ ज्ञेन श्रीपतिना कथ्यते यदर्कवारे कल्पारम्भ आसीत् ततः सावन वर्षं प्रमाणे षष्ट्यधिकशतत्रयदिनात्मके सप्तभक्ते त्रयमवशिष्यते ततोऽर्काच्चतुर्थः सावन वर्षपतिर्भवति । त्रयाणां गतत्वाद् वर्त्तमानस्य चतुर्थत्वात् । तथा त्रिशद्दिनात्मके मासप्रमाणे सप्तभक्ते द्वयमवशिष्यते ततश्च द्वौ गतौ वर्त्तमानस्तु-तीयो मासपतिर्भवति ॥ ४३-४४ ॥

अब प्रथम और द्वितीय प्रश्नों (सावन मासपति और वर्ष पति ज्ञान)

के उत्तर के लिये कहते हैं ।

हि. भा.—अहर्गण को तीस से भाग देकर जो लब्ध हो उसको द्विगुणित कर जोड़ कर जो हो उसमें सात से भाग देने से शेष रवि आदि सावन मासपति होते हैं । एवं कल्प-

गताहर्गण को तीन सौ साठ से भाग देने से जो लब्ध हो उसको तीन से गुणा कर एक जोड़ देना चाहिये, उसमें सात से भाग देने से शेष रवि आदि सावन वर्षपति होने हैं ॥ ४३-४५ ॥

उपपत्ति ।

यदि तीस दिन के एक महीने में एक मास पाते हैं तो अहर्गण में क्या इस अनुपात से लब्ध गत सावनमास आता है, तीस दिन के एक सावन मास में सात से भाग देने से शेष दो रहता है इसलिये गत सावन मास संख्या को दो से गुणा करने से गत मासपति होते हैं, वर्तमान मास पति के लिये उसमें एक जोड़ना चाहिये तब सात से भाग देने से मासपति होते हैं । एवं तीन सौ साठ दिन के एक सावन वर्ष में एक वर्ष पाते हैं तो अहर्गण में क्या इस अनुपात से लब्ध गत सावन वर्ष आता है । तीन सौ साठ दिन के एक सावन वर्ष में सात से भाग देने से तीन शेष रहता है इसलिये गत वर्ष संख्या को तीन से गुणा करने से गत वर्ष-पति होते हैं, वर्तमान वर्षपति के लिये एक जोड़कर सात से भाग देने से वर्षपति होते हैं । सृष्ट्यादि काल में मासपति और वर्षपति रवि ही थे इसलिये यहाँ भी रव्यादि से गणना करना समुचित है । इससे आचार्योक्त उपपन्न होता है । मूर्यसिद्धान्त में 'मासाब्ददिन संख्याप्तं द्वित्रिघ्न' इत्यादि संस्कृतोपपत्ति में लिखित श्लोक से मासपति और वर्षपति के आनयन आचार्योक्त के सदृश ही है ॥ ४३-४४ ॥

इदानीं तृतीय प्रश्न (होरेषां यो वेत्तोत्यस्य) स्योत्तरार्थमाह ।

अर्कोनलग्नहोराः पञ्चगुणाः सविकला यदि सरूपाः ।

सप्तविभक्ताः शेषोदिनपाद्यः कालहोरेषः ॥ ४५ ॥

सु. भा—अर्कोनलग्नेन होराः साध्याः अर्कस्य भोग्यकालो लग्नभुक्तकालो मध्योदयार्चंषां योगो घट्यात्मक इष्टकाल स च सार्धद्विभक्तो लब्धा होरा भवन्ति यतो घटीद्वयं सार्धं होरेति जातकज्ञानां सिद्धान्तः । लब्धा होराः पञ्चगुणा यदि होराः सविकलाः सावयवास्तदा पञ्चगुणा ये कृतास्ते सरूपाः कार्याः । अन्यथा पञ्चगुणा एव ग्राह्याः । ततस्ते सप्तविभक्ताः शेषो दिनपाद्यः काल होरेषो भवति । अर्थाद् दिनवारादिक्रमगणनया कालहोरेषो भवतीति ।

अधोपपत्तिः ।

प्रथमा होरा दिनपते द्वितीया दिनपतेः षष्ठस्यैव षष्ठः षष्ठः कालहोरेषो भवति । अतो द्वयोर्होरेषोरन्तरं पञ्च । अतो होराः पञ्चगुणाः सर्वे वारा भवन्ति यदि होराः सावयवास्तदा वर्तमानहोरेषानयनार्थं ते पञ्चगुणाः सैकाः कार्याः । ततः सप्ततष्टे दिनाद्धोरेषो भवतीति ।

अत्र चतुर्वेदानां पौर्णमासीनलग्नभागाः पञ्चदशहृता होरा भवन्तीति काललवान् सार्धद्विघटीभवान् पञ्चदशलवान् प्रकल्प्य क्षेत्रांशान्तरैरकलग्नान्तरभागैरनुपातः कृतः स च गणितगुक्तितो न युक्त इति विद्वद्भिर्विचारणीयम् ॥४५॥

वि. भा.—अर्कोनलग्नेन होरानाध्या अर्थान् 'अर्कस्य भोग्यस्तनु भुक्तयुक्तो मध्योदयादयः समयो विलग्नान्' इति भास्करोक्तेरर्कस्य भोग्यकालः । लग्नस्य भुक्तकालो रविलग्नयोर्मध्ये राश्युदयाश्चर्यां सर्वेषां योगो घट्यात्मक इष्टकालः । सार्ध घटीद्वय होरा प्रमागमिनि फलितज्ञा. स्वीकुर्वन्ति । तत इष्टकालः सार्धद्वि भुक्तो होरा भवन्ति लब्धाहोराः पञ्चगुणा यदि होराः सविकला (सशेषाः) स्तदा पञ्चगुणितहोराः सैका कार्याः, अन्यथा पञ्चगुणा एव ग्राह्याः । ततस्ते सप्तभक्ताः शेषोदितवागटि क्रमगणनया कालहोरेणो भवतीति ॥४५॥

अत्रोपपत्तिः ।

प्रथमा होरा दिनपतेर्भवन्ति, ततः पष्ठो द्वितीयहोरेण एव ततः पष्ठस्तृतीयहोरेणो भवति, एव पष्ठः पष्ठः कालहोरेणो भवत्यतो द्वयोः कालहोरेणोन्तरं पञ्च । तस्माद्धोराः पञ्चगुणाः सर्वे वारा भवन्ति, यदि होराः सशेषास्तदा वर्तमानकालहोरेणोन्तरार्थं पञ्चगुणाः सैकाश्च कार्याः, ततः सप्तभक्ताग्नदा दिनपात् क्रमात् कालहोरेणो भवतीति, मूलतश्चिन्तामणी "वारादर्धटिका द्विघ्नाः स्वाक्षहृच्छेषवर्जिताः । सैकास्तष्टानगैः कालहोरेणो दिनपात् क्रमात्" रामाचार्योक्तमिदं कालहोरेणोन्तरमक्षरश आचार्योक्तानुरूपमेव । अत्र चतुर्वेदाचार्येणार्कोन लग्नभागा पञ्चदशहृता होरा भवन्तीति काललवान् सार्धद्विघटीभवान् पञ्चदशलवान् प्रकल्प्य क्षेत्रांशान्तरैरकलग्नान्तरभागैरनुपातः कृतः स च न युक्त इति विद्वद्भिर्विचारणीयम् । सिद्धान्तशेखरे "अर्कोनलग्नस्य गृहाणि होराद्विघ्नानि ताः पञ्चगुणाः सशेषाः । चेद्रूपयुक्ता दिनपादयस्तं होराधिनाथाः क्रमशो भवेयुः" श्रीपत्युक्तमिदमाचार्योक्तानुरूपमेवेति बोध्यम् ॥४५॥

अत्र तृतीय प्रश्न (होरेणोन्तरं) के उत्तर को कहते हैं ।

लग्न में रवि को घटाकर जो हो उससे होरा साधन करना चाहिये । 'अर्कस्यभोग्यस्तनुभुक्तः' इत्यादि भास्करोक्ति से रवि के भोग्यकाल, लग्न के भुक्त काल, रवि और लग्न के अन्तर में राश्युदय, इन सबों का योग घट्यात्मक इष्ट काल होता है । अर्द्धाई २½ = ५ घटी की होरा होती है यह जातक पण्डितों का सिद्धान्त है इष्ट घटी को अर्द्धाई से भाग देने से लब्धि होरा होती है । यदि होरा सशेष हो तो पांच से गुणाकर सैक करना चाहिये । केषाभाव में केवल पांच से गुणा करना चाहिये, उसमें सात से भाग देने से केषाङ्क के बराबर दिन पति आदि काल होरेण होते हैं इति ॥४५॥

उपपत्ति ।

प्रथम होराधिपति दिनपति होते हैं । द्वितीय होराधिपति दिनपति से छठे ग्रह होते हैं । इसी तरह छठे-छठे ग्रह काल होरेश होते हैं । यहां दो काल होरेश का अन्तर पांच है इसलिए होरा को पांच से गुणा करने से सब वार (दिन) होते हैं । यदि होरा सजेप हो तो वर्तमानकाल होरेशज्ञानार्थ होरा को पांच से गुणा कर एक जोड़ देना चाहिये अन्यथा (शेषाभाव में) केवल पांच से ही गुणा करना चाहिये, तब सात से भाग देने से जेपाङ्क के समान दिनपतिक्रम से काल होरेश होते हैं ॥ इससे आचार्योक्त उपपन्न हुआ । सिद्धान्त शेखर में 'अर्कोनलग्नस्यगृहाणि होरा' इत्यादि सस्कृतोपपत्ति में लिखित श्लोक से, श्रीपति ने आचार्योक्तकाल होरेशानयन के अनुरूप ही काल होरेशानयन किया । मुहूर्तचिन्तामणि में 'वारादेर्घटिका द्विघ्नाःस्वाक्षहृच्छेषवर्जिताः' इत्यादि सस्कृतोपपत्ति में लिखितश्लोक से रामाचार्य ने भी आचार्योक्त के अनुरूप ही काल होरेशानयन किया है, इति ॥४५॥

इदानीं मासवर्षपत्यादौ विशेषमाह ।

अब मासपति आदि में विशेष कहते हैं ।

हि. भा.—मासपति तीसरे तीसरे होते हैं अर्थात् यदि मास पति रवि है तो अन्य
मासपति भौम होंगे, इसी तरह तीसरे तीसरे मास पति होते हैं । एवं सावन वर्ष पति चौथे-
चौथे होते हैं, वार पति अनन्तर होते हैं अर्थात् रवि के बाद सोम-सोम के बाद भौम इसी
तरह । होरेण छठे छठे होते हैं, होरेणानयन में मतान्तर को कहते हैं । दिन गत घटी को
दो से गुणाकर पाँच से भाग देने से दिन पति क्रम से होरेण होते हैं । यह अन्यमत सर्व

सम्मत नहीं है। क्योंकि इस मत में जितनी होरा होती हैं उतने ही बार क्रम से होरेश होते हैं षष्ठ क्रम (छठे छठे) क्रम से नहीं होते हैं इति ॥४६॥

उपपत्ति ।

तीस दिन का एक महीना होता है इसलिये मास संख्या (३० दिन) में सात से भाग देने से शेष दो रहता है इसलिये तीसरे तीसरे मास पति होते हैं यह सिद्ध हुआ क्योंकि वो गत है, वर्तमान तृतीय है। एवं एक सावन वर्ष में दिन संख्या ३६० तीन सौ साठ है इसमें सात से भाग देने से शेष तीन रहता है अतः चौथे चौथे वर्ष पति होते हैं यह सिद्ध हुआ, क्योंकि तीन गत है, वर्तमान चतुर्थ है। तथा रवि दिन में प्रथम काल होरेश रवि ही है, द्वितीय काल होरेश रवि से छठे ग्रह, उससे छठे ग्रह तृतीय काल होरेश होते हैं इसी क्रम से आगे भी समझना चाहिये। दिनान्तर में तत्तद्दिन पति ही प्रथम होरेश होते हैं, द्वितीय होरेश उससे छठे ग्रह इत्यादि। सिद्धान्त शेखर में 'सावनाब्दपतिमत्र चतुर्थमासनाथमपि विद्धि तृतीयम्' इत्यादि संस्कृतोपपत्ति में लिखित श्लोक से, श्रीपति ने आचार्योक्त के अनुरूप ही कहा है। सूर्यसिद्धान्त में दिन, वर्ष, मास, होरा इनके अधिपति ज्ञान के लिये ग्रह कक्षा स्थिति वश से है जैसे 'मन्दादधः क्रमेण स्युश्चतुर्था दिवसाधिपाः' इत्यादि संस्कृतोपपत्ति में लिखित श्लोकों के अनुसार, कक्षाक्रम से शनैश्चर से अश्वः क्रम से चौथे चौथे ग्रह दिनपति होते हैं। सिद्धान्त शिरोमणि में 'भूमेः पिण्डः शशाङ्कजकवि रवि कुजेज्याकिनक्षत्रकक्षा वृत्तैः' इस भास्करोक्ति के अनुसार कक्षा क्रम इस प्रकार है. च।बु।शु।रा।भो।गु।श उपर्युक्त सूर्य सिद्धान्तोक्त के अनुसार शनैश्चर से अश्वः क्रम से चौथे रवि प्रथम दिनपति, उससे चौथे चन्द्र द्वितीय दिनपति, उससे चौथे भौम (मङ्गल) तृतीय दिन पति इसी तरह आगे भी समझना चाहिये। शनैश्चर से अश्वः क्रम से तृतीय तृतीय ग्रह वर्षपति होते हैं जैसे यदि प्रथम वर्षपति शनैश्चर है तो उससे तृतीय भौम उससे तृतीय शुक्र इत्यादि वर्ष पति होते हैं। चन्द्र से ऊर्ध्व क्रम से मासों के अधिपति होते हैं, जैसे प्रथम मासपति चन्द्र, द्वितीय मास पति बुध, तृतीय शुक्र इत्यादि। शनैश्चर से अश्वोऽधः क्रम से होरेश होते हैं। प्रथम होरेश शनि, द्वितीय शुक्र, तृतीय भौम इत्यादि। सूर्योदय से अढ़ाई अढ़ाई दण्ड की एक काल होरा होती है प्रथम काल होरेश चारेश ही होते हैं द्वितीयादि होरेश पूर्वोक्त प्रकार से समझना चाहिये। यहाँ प्रचीन कारिका भी है। 'बार प्रवृत्ति समयात् इत्यादि' संस्कृतोपपत्ति में लिखित श्लोक है इति ॥४६॥

इदानीं चतुर्थं प्रश्न (इष्टमध्यसंयोगा निष्टैर्गुरौयुतोना निष्ठान्
यो वेत्तीत्यस्य) स्योत्तरमाह ।

गच्छधनमिष्टगुणितैर्धनैर्युतोनां पृथक् पृथक् सहितम् ।

गुणकयुतोनपदद्वतं सर्वधनमतोऽवशेषाणि ॥ ४७ ॥

इदानीमध्यायोपसंहारमाह ।

मध्योत्तर मेकोनार्या पञ्चाशत् त्रयोदशोऽध्यायः ।

ज्ञात्वैवं तन्त्र विदामाचार्यो भवति मध्यगतौ ॥ ४८ ॥

सु. भा.—स्पष्टार्थम् ॥

मधुसूदनसूनोदितो यस्तिलककः श्री पृथुनेह जिष्णुजोक्ते ।

हृदि तं विनिधाय नूतनोऽयं रचितो मध्यगतौ सुधाकरेण ॥

इति श्री कृपालुदत्तसूनुसुधाकरद्विवेदि विरचिते ब्राह्मस्फुटसिद्धान्तनूतन-
तिलके मध्यगत्युत्तराध्यायस्त्रयोदशः ॥ १३ ॥

इति ब्राह्मस्फुट सिद्धान्ते मध्यगति प्रश्नोत्तराध्यायस्त्रयोदशः ॥ १३ ॥

अब चतुर्थ प्रश्न के उत्तर को कहते हैं ।

हि. भा.—एक जातीय सब इष्टग्रहों का योग गच्छधन (सर्वधन) संज्ञक है । उस

सर्वधन में दृष्टगुण गुणित प्रथम घट को घटाने है या जोड़ने है जब जो होता है सो विदित है । एवं उसी सर्वधन में उगी गुणक से गुणित द्वितीय घट को घटाने से जो होता है सो भी विदित है । एवं उगी गुणक से गुणित सब अभीष्ट घटों को उगी सर्वधन में घटाकर या उसमें जोड़कर जो-जो सख्या प्राप्ती है वे भी पृथक्-पृथक् विदित है । धन सब पृथक् पृथक् ग्रहमान है । जितने अभीष्ट घट है वे पद या गच्छमान है । गच्छ धन में दृष्ट गुणित धनो (ग्रहमानो) को युत ऊत करने से जो होता है व्यक्त है । पृथक् पृथक् उगको सहित (जोड़ना) करना चाहिये । गुणक युत-ऊत पद में भाग देना अर्थात् जिस गुणक से गुणित ग्रहमान को सर्वधन में युत-ऊत किया गया है उस गुणकसे युत-ऊत पद को करना चाहिये । उससे भाग देने में लब्ध सर्वधन (गच्छ धन) होता है । उसमें अवशेष पृथक् पृथक् ग्रहमान जाने जाते हैं इति ॥ ४७ ॥

उपपत्ति ।

कल्पना करते हैं । ग्रहमान $ग्र_1, ग्र_2, ग्र_3, ग्र_4, \dots$, दृष्ट गुणकार = $ड$,
सर्वधन = $स$, युत ऊत करने में संख्या $द_1, द_2, \dots$,

$$नब $द_1 = स \pm द. ग्र_1$$$

$$द_2 = स \pm द. ग्र_2$$

$$द_3 = स \pm द. ग्र_3$$

$$\vdots$$

$$\text{सबों को योग करने में } द_1 + द_2 + द_3 + \dots = प. स \pm द. (ग्र_1 + ग्र_2 + \dots) \\ = प. स \pm द. स = स(प \pm द)$$

$$\therefore \frac{द_1 + द_2 + द_3 + \dots}{प \pm द} = स \text{ इससे आचार्योक्त उपपन्न हुआ ।}$$

$$\text{अथ. } द_1 = स \pm द. ग्र_1 \therefore ग्र_1 = \frac{द_1}{स \pm द.} \text{ इस तरह सब ग्रहों के मान होते हैं ।}$$

अब अध्याय के उपसंहार को कहते हैं ।

उच्चास आर्याछिन्द श्लोकों से सम्बद्ध मध्यमाधिकार प्रश्नों के उत्तरों को समझकर गणक मध्यगति में तन्त्र ज्ञाताओं में आचार्य होते हैं, यह तेरहवां अध्याय है इति ॥ ४८ ॥

इति श्री ब्राह्मस्फुट सिद्धान्त में मध्यगति प्रश्नोत्तराध्याय तेरहवां अध्याय समाप्त हुआ ॥

ब्राह्मस्फुटसिद्धान्त

अथ स्फुटगत्युत्तराध्यायः

ब्राह्मस्फुटसिद्धान्तः

७

अथ स्फुटगत्युत्तराध्यायः

तत्रादौ प्रश्नानाह ।

भुजभागैः कोटिज्यां कोट्यंशैः करोति बाहुज्याम् ।

कोटिं भुजेन बाहुं कोट्या वा स्फुटगतिज्ञः सः ॥ १ ॥

सु. भा.—यो भुजभागैः कोटिज्यां करोति । कोट्यंशैश्च बाहुज्यां करोति । भुजेन भुजज्यया कोटिं कोटिज्यां करोति । कोट्या कोटिज्यया वा बाहुं भुजज्यां करोति स स्फुटगतिज्ञः स स्फुटगतिं जानातीत्यर्थः । एवमत्र प्रश्नचतुष्टयम् ॥१॥

वि. भा.—यो भुजभागैः (भुजांशैः) कोटिज्यां जानाति, कोट्यंशैश्च बाहुज्यां (भुजज्यां) जानाति । भुजेन (भुजज्यया) कोटिं (कोटिज्यां) जानाति, कोट्या (कोटिज्यया) बाहुं (भुजज्यां) जानाति, स स्फुटगतिं जानातीति । अत्र प्रश्न चतुष्टयमस्ति ॥१॥

अब स्फुटगत्युत्तराध्याय प्रारम्भ किया जाता है ।

उसमें पहले प्रश्नों को कहते हैं ।

हि. भा.—जो व्यक्ति भुजांश से कोटिज्या को जानते हैं (१) । कोट्यंश से भुजज्या को जानते हैं (२) । भुजज्या से कोटिज्या को जानते हैं (३) । कोटिज्या से भुजज्या को जानते हैं (४) । वे स्फुट गति को जानते हैं । यहाँ चार प्रश्न हैं ॥ १ ॥

इदानीमन्यान् प्रश्नानाह ।

परमफल केन्द्रविद्यः करोति कोटिज्यया स्फुटं कर्णम् ।

कर्णात् कोटिं कोट्या बाहुं वा स्फुटगतिज्ञः सः ॥२॥

सु. भा.—यः परमफलकेन्द्रविद् गणकः कोटिज्याया केन्द्रकोटिज्याया स्फुटं कर्णं शीघ्रकर्णं करोति भुजफलं विनये । कर्णान् कोटि केन्द्र कोटिज्यां यः करोति । कोट्या केन्द्र कोटिज्याया वा बाहु केन्द्र भुजज्या करोति स स्फुटगतिज्ञः । एवमत्र प्रश्नचतुष्टयम् ॥ २ ॥

वि. भा.—यः परमफलकेन्द्रविद् (अन्त्यफलज्या-केन्द्रज्याविज्ञः) गणकः कोटिज्याया (शीघ्रकेन्द्रकोटिज्याया) स्फुटं कर्णं (शीघ्रकर्णं) भुजफलं विनये जानाति । कर्णाच्छीघ्रकेन्द्रकोटिज्यां जानाति, वा कोट्या (शीघ्रकेन्द्र कोटिज्याया) बाहुं (केन्द्र भुजज्यां) जानाति स स्फुटगतिज्ञोऽस्तीति । अत्र प्रश्नचतुष्टयमस्ति ॥ २ ॥

अब अन्य प्रश्नों को कहते हैं ।

हि. भा.—जो अन्त्यफलज्या और केन्द्रज्या के जाता गणक भुजफल विना शीघ्र केन्द्र कोटिज्या से स्फुट कर्ण (शीघ्रकर्ण) को जानने हैं, कर्ण से शीघ्र केन्द्र कोटिज्या को जानते हैं । वा शीघ्र केन्द्र कोटिज्या से केन्द्र भुजज्या को जानते हैं वह स्फुट गतिज्ञ है ॥ २ ॥

इदानीमन्यान् प्रश्नानाह ।

केन्द्रभुजकोटिजीवापरमफलज्ञः करोति यः कर्णम् ।

स्वोच्चं सफलं स्पष्टं करोति यः स्फुटगतिज्ञः सः ॥ ३ ॥

सु. भा.—यः केन्द्रभुजज्या-केन्द्रकोटिजीवा परमफलज्ञः कर्णं शीघ्रं वा मन्दं करोति । स्वोच्चं सफलं स्पष्टं च यः करोति अर्थात्मन्दस्पष्टं स्फुटं ग्रहं च यः करोति स स्फुटगतिज्ञः । एवं मन्दशीघ्रभेदेनात्र प्रश्नचतुष्टयम् ॥ ३ ॥

वि. भा.—यः केन्द्रभुजज्या केन्द्रकोटिज्याऽन्त्यफलविज्ञः कर्णं (शीघ्रकर्णं मन्दकर्णं वा) जानाति, स्वोच्चं सफलं स्पष्टं च यो जानाति सः स्फुटगतिज्ञोऽस्तीति । अत्र मन्दशीघ्र भेदेन प्रश्न चतुष्टयमस्ति ॥ ३ ॥

अब अन्य प्रश्नों को कहते हैं ।

हि. भा.—जो केन्द्र भुजज्या-केन्द्रकोटिज्या और अन्त्य फलज्या का जाता शीघ्र कर्ण वा मन्दकर्ण को जानता है फल सहित अपने उच्च को जो जानता है । वह स्फुटगतिज्ञ है यहां मन्द और शीघ्र के भेद से चार प्रश्न हैं ॥ ३ ॥

इदानीमन्यान् प्रश्नानाह ।

शु. गणात् स्फुटं ग्रहं यो भुजकोटिज्ये फले विना ज्याभिः ।

ज्याभिर्विना फलधनुः करोति वा स्फुटगतिज्ञः सः ॥ ४ ॥

सु० भा०—अहर्गणादेव यः स्फुटं मन्दशीघ्रफलादिसंस्कृतं ग्रहं करोति । ज्याभिः पठितैर्ज्याखण्डैर्विना यो भुजकोटिज्ये फले भुजकोटिफले च करोति । एवं ज्याभिर्विना यः फलचापं ज्यायाश्चापं वा करोति । स एव स्फुटगतिज्ञः । एवमत्र प्रश्नचतुष्टयम् ॥४॥

वि. भा.—योऽहर्गणात् मन्द शीघ्रफलादि संस्कृतं ग्रहं जानाति, यो ज्याभि (पठितैर्ज्याखण्डैः) विना भुजकोटिज्येफले भुजकोटिफले च जानाति । तथा ज्याभिर्विना फलचापं ज्यायाश्चापं जानाति सः स्फुटगतिज्ञोऽस्तीति । अत्र प्रश्नचतुष्टयमस्ति ॥ ४ ॥

अब अन्य प्रश्नों को कहते हैं ।

हि. भा.—जो व्यक्ति अहर्गण से मन्द फल-शीघ्रफलादि संस्कृत स्फुट ग्रह को जानता है, पठित ज्याखण्ड विना भुजज्या और कोटिज्या तथा (भुजफल और कोटिफल) को जानता है । तथा ज्याविना फलचाप अर्थात् ज्या के चाप को जानता है वह स्फुटगतिज्ञ है । यहाँ चार प्रश्न हैं ॥ ४ ॥

इदानीमन्यान् प्रश्नानाह ।

इष्टाश्विन्यौदयिकान् करोति मध्यान् ग्रहान् स्पष्टान् ।

स्वोच्च स्फुटैर्ग्रहं यः करोति वा स्फुटगतिज्ञः सः ॥ ५ ॥

सु. भा.—इष्टग्रहौदयिकान् मध्यान् ग्रहान् यः स्पष्टान् करोति । अश्विन्यौदयिकान् मध्यान् वा यः स्पष्टान् करोति । वा यः स्वोच्चस्फुटैर्मन्दोच्चशीघ्रोच्च स्फुटग्रहैर्यो ग्रहं मध्यग्रह करोति स स्फुटगतिज्ञः । एवमत्र प्रश्नत्रयम् ॥५॥

वि. भा.—य इष्टग्रहौदयिकान् मध्यान् ग्रहान् स्पष्टान् करोति, अश्विन्यौदयिकान् मध्यान् यः स्पष्टान् करोति, वा स्वोच्चस्फुटैः (मन्दोच्च शीघ्रोच्च) स्फुट ग्रहैर्मध्यमं ग्रहं करोति स स्फुटगतिज्ञः । अत्र प्रश्नत्रयमस्ति ॥

हि. भा.—जो व्यक्ति इष्टग्रहोदय कालिक मध्यमग्रह को स्पष्ट करते हैं । अश्विन्यौदयिक मध्यम ग्रह को जो शीघ्रोच्च स्फुट करते हैं । वा मन्दोच्च शीघ्रोच्च स्फुट ग्रहों से मध्यम ग्रह को जानते हैं वह स्फुटगति के पण्डित हैं । यहाँ तीन प्रश्न हैं ॥ ५ ॥

इदानीमन्यान् प्रश्नानाह ।

संक्रान्तेराद्यन्तौ ग्रहस्य यो राशिभूतिथि करणान्तान् ।

व्यतिपाताद्यन्तौ वा यो वेत्ति स्फुटगतिज्ञः सः ॥ ६ ॥

सु. भा.—यो ग्रहस्य सङ्क्रान्तेरागन्ता वेत्ति । ग्रहस्य राशिभस्य नक्षत्रस्या-
शन्तो वेत्ति । तिथेरागन्तो वेत्ति । कर्गगन्ताशन्तो वेत्ति । वा व्यतिपातस्याद्यन्तो
वेत्ति ग्रथात् सर्वेषां मन्थिमानं यो वेत्ति स स्फुटगतिजः । एवमत्र प्रश्न-
पञ्चरम् ॥६॥

वि. भा.—यः संक्रान्तेरागन्तो राश्यन्तात् नक्षत्रान्तात् तिथि करणान्तात्
जानाति, वा व्यतिपाताद्यन्तो जानाति स स्फुटगतिजोऽग्नीनि ॥ ६ ॥

अब ग्रह प्रश्नों को करने हैं ।

हि. भा.—जो व्यक्ति ग्रह संक्रान्ति के आदि और ग्रह को जानने हैं । राश्यन्त,
नक्षत्रान्त, तिथ्यन्त, कर्गगन्त को जानने हैं वा व्यतिपात-वैभूत को जानने हैं वह स्फुटगति के
पण्डित हैं ॥६॥

इदानीं प्रथम श्लोकान्तर्गतं प्रश्नचतुष्टयानामुत्तराध्याह्न ।

व्यासदलमितरजीवा भुजकोट्यंशोत्क्रमज्यया हीनम् ।

कोटि भुजज्या व्यासार्धकृतिविशेषात् पदं चान्या ॥७॥

सु. भा.—व्यासदलं भुजोत्क्रमज्यया हीनं शेषमितरजीवा कोटिजीवा स्यात्
कोट्युत्क्रमज्यया हीनं व्यासदलं शेषमितरजीवा भुजज्या भवेत् । एवं कोटिज्या
व्यासार्धवर्गान्तरात् भुजज्या स्याद्भुजज्या व्यासार्धवर्गान्तराच्च पदमन्या कोटिज्या
स्यादिति ।

अथोपपत्तिर्ज्योत्पत्त्या स्फुटा ॥७॥

वि. भा.—व्यासदलं (वृत्त व्यासार्ध) भुजांशोत्क्रमज्यया हीनं तदेतरजीवा
(कोटिज्या) स्यात् । कोट्यंशोत्क्रमज्यया हीनं व्यासार्धमितरजीवा (भुजज्या)
स्यात् । तथा कोटिज्या व्यासार्धयोर्वर्गान्तरान्मूलमन्या (भुजज्या) स्यात् । भुजज्या
व्यासार्धयोर्वर्गान्तरान्मूलमन्या (कोटिज्या) स्यादिति ॥७॥

अत्रोपपत्तिः

के—वृत्तकेन्द्रम् । मप=वृत्तव्यासः । केम == व्यासार्धम्=त्रिज्या=त्रि ।
नम=भुजांशाः । मश=९०, ९०—नम = ९०—भुजांश = नश = कोट्यंश ।
नर=भुजज्या, रम=भुजांशोत्क्रमज्या—भुजज्या । नय=केर=कोटिज्या, शय=

कोट्यंशोत्क्रमज्या = कोउज्या, तदा केम—रम
= त्रि—भुजज्या = केर = कोटिज्या । तथा
केश = व्यासार्धम् = त्रिज्या = त्रि । केश—शय
= त्रि—कोट्युत्क्रमज्या = केय = भुजज्या =
त्रि—कोउज्या ।

एतावता प्रथम प्रश्नद्वयोत्तरं जातम् ।
तथा केनर त्रिभुजे $\sqrt{\text{केन}^2 - \text{केर}^2} = \text{नर}$
= भुजज्या = $\sqrt{\text{त्रि}^2 - \text{कोटिज्या}^2}$ वा केन^२
—नर^२ = केर^२ = त्रि^२ — भुजज्या^२ = कोटिज्या^२ ∴ $\sqrt{\text{त्रि}^2 - \text{भुजज्या}^2} = \text{कोटिज्या}$ ।

एतेनान्यप्रश्नद्वयोत्तरमपि जातम् । एवं प्रश्नचतुष्टयोत्तराणि जातानीति ।
सिद्धान्तशेखरे “त्रिशिञ्जिन्या वर्गे भुजकृतिविहीने कृतपदे भवेत्कोटिः कोट्याः
कृतिविरहिते मूलमपि दोः । त्रिमौर्वीकोट्यंशोत्क्रमगुणविहीना भुजगुणो भुजांश-
व्यस्तज्यारहितपदजीवा तदितरा ॥” श्रोतव्युक्तमिदमाचार्योक्तानुरूपमेवेति ॥७॥

प्रथम चार प्रश्नों के उत्तरों को कहते हैं ।

हि. भा.—वृत्तव्यासार्ध में भुजांशोत्क्रमज्या को घटाने से कोटिज्या होती है । तथा
व्यासार्ध में कोट्यंशोत्क्रमज्या को घटाने से भुजज्या होती है । व्यासार्ध और कोटिज्या का
वर्गान्तर मूल भुजज्या होती है । तथा व्यासार्ध और भुजज्या का वर्गान्तर मूल कोटिज्या
होती है इति ॥७॥

उपपत्ति ।

यहाँ संस्कृतोपपत्ति में लिखित (क) क्षेत्र को देखिये । के = वृत्तकेन्द्र । मप = वृत्तव्यास,
केम = व्यासार्ध = त्रिज्या = त्रि, मशचाप = ६०, नम = भुजांश, ६०—नम = नश = ६०—भुजांश
= कोट्यंश नर = भुजज्या = केय, नय = केर = कोटिज्या, रम = भुजांशोत्क्रमज्या = भुउज्या,
शय = कोट्यंशोत्क्रमज्या = कोउज्या, तब केम—रम = केर = त्रि—भुउज्या = कोटिज्या ।
तथा केश = व्यासार्ध = त्रि, केश—शय = केय = त्रि—कोट्युत्क्रमज्या = त्रि—कोउज्या
= भुजज्या, इससे प्रथम दो प्रश्नों (१) (२) का उत्तर हो गया । केनर त्रिभुज में केन^२
—केर^२ = नर^२ = भुजज्या^२ ∴ $\sqrt{\text{केन}^2 - \text{केर}^2} = \sqrt{\text{त्रि}^2 - \text{कोटिज्या}^2} = \text{नर} = \text{भुजज्या}$ वा
केन^२ — नर^२ = केर^२ = त्रि^२ — भुजज्या^२ = कोटिज्या^२ ।

∴ $\sqrt{\text{त्रि}^2 - \text{भुजज्या}^2} = \text{कोटिज्या}$, इससे अवशिष्ट (३) (४) प्रश्नों के उत्तर
सिद्ध हुए, इस तरह पूर्वोक्त चारों प्रश्नों के उत्तर सम्पन्न हो गये ॥ सिद्धान्त शेखर में

‘त्रिगिञ्जिन्या यगे भुज कृषिपिभे’ इत्यादि संस्कृतोपपत्ति मे निम्निल्लोक से, श्रीपति ने
आचार्योक्त के प्रकरण ही इत्यादि र्था ॥ ७ ॥

एदानीं द्वितीय इत्येकान्तर्गतं प्रश्नानामुत्तराण्युवाह ।

कोटि^१+केज्या^१=शीघ्र कर्ण^१=(केकोज्या±अंफज्या)^१+केज्या^१=केकोज्या^१±२ केकोज्या.
अंफज्या+अंफज्या^१+केज्या^१=केकोज्या^१+केज्या^१±२ केकोज्या. अंफज्या+अंफज्या^१
=त्रि^१+अंफज्या^१±२ केकोज्या. अंफज्या=शीकर्ण^१, मूल लेने से
√त्रि^१+अंफज्या^१±२ केकोज्या. अंफज्या=शीकर्ण, इससे आचार्योक्त स्पष्ट कर्णनियन
उपपन्न हुआ । सिद्धान्त शेखर में ‘कोटिज्यया द्विगुणितान्त्यफलोत्थजीवा’ इत्यादि
संस्कृतोपपत्ति में लिखित श्रीपति प्रकार तथा सिद्धान्त शिरोमणि में ‘अन्त्य फल त्रिमौर्व्यो-
र्वर्गव्य राशेरन्त्य फल द्विनिष्पन्त्या कोटिज्यया युतोनात् पदं’ यह भास्करोक्त प्रकार आचार्योक्त
के अनुरूप ही है इति ॥८॥

इदानीं कर्णात्कोटिमित्यादेरुत्तरमाह ।

त्रिज्यान्त्यफलकृतियुतेः कर्णकृतेश्चान्तरेऽवशेषं यत् ।

द्विगुणान्त्यफलहृतं तत् कोटिज्या बाहुजीवातः ॥९॥

सु. भा.—त्रिज्यान्त्यफलज्या वर्गयोगस्य कर्णवर्गस्य चान्तरे यदवशेषं तद्द्वि-
गुणान्त्यफलज्यया हृतं लब्धं तत्कोटिजीवा केन्द्रकोटिज्या स्यादत उत्तप्रकारेण
कोटिज्यावर्गोनात् त्रिज्यावर्गात् पदमित्यनेन बाहुजीवा केन्द्रज्या स्यादित्यर्थः ।

अत्रोपपत्तिः । कर्णानियनवैपरीत्येन सुगमेति ॥ ९ ॥

वि भा. — त्रिज्यान्त्यफलज्ययोर्वर्गयोगस्य कर्गवर्गस्य चान्तरे यच्छेषं तत् द्विगुणितान्त्यफलज्यया भक्तं कोटिज्या स्यान् अनो बाहुजीवा (केन्द्रज्या) स्यादिति ॥९॥

अत्रोपपत्तिः -

पूर्वोक्त कर्गानियनप्रकारेण त्रि^३ + अ^२ फज्या^२ = २ केकोज्या. अ^२ फज्या = शीकर्ग^२ = कर्ग^२, समशोधनेन २ के कोज्या. अ^२ फज्या = कर्ग^२ ~ (त्रि^३ + अ^२ फज्या^२)
 ∴ $\frac{\text{कर्ग}^2}{2 \text{ अ फज्या}} = \text{केकोज्या ततः, } \sqrt{\text{त्रि}^2 - \text{केकोज्या}^2} = \text{केन्द्रज्या,}$

एतेनाऽऽचार्योक्तमुपपन्नम् । सिद्धान्तशेखरे “योगस्त्रिजीवाऽन्त्यफलोत्थकृत्योस्तस्यान्तरं यत्सह कर्गकृत्या । भक्तं द्विनिघ्नान्त्यफलज्या तन् स्यान् कोटिजीवाऽथ ततो भुजज्या” श्रीपत्युक्त मिदमथर्ग्य आचार्योक्तानुरूपमेवेति ॥९॥

अब कर्ग से केन्द्र कोटिज्या को जानना इत्यादि प्रश्नों के उत्तर को कहते हैं ।

हि. भा. — त्रिज्या और अन्त्य फलज्या के वर्गों योग और कर्ग वर्ग के अन्तर करने से जो शेष रहे उसको द्विगुणित अन्त्यफलज्या से भाग देने से कोटिज्या होती है, इससे केन्द्रज्याज्ञान होता है ॥९॥

उपपत्ति ।

पूर्वोक्त कर्गानियन प्रकार से त्रि^३ + अ^२ फज्या^२ = २ केकोज्या, अ^२ फज्या = कर्ग^२ समशोधन करने से कर्ग^२ ~ (त्रि^३ + अ^२ फज्या^२) = २ केकोज्या . अ^२ फज्या
 ∴ $\frac{\text{कर्ग}^2}{2 \text{ अ फज्या}} = \text{केकोज्या, } \therefore \sqrt{\text{त्रि}^2 - \text{केकोज्या}^2} = \text{केन्द्रज्या, इससे}$

आचार्योक्त उपपन्न हुआ । सिद्धान्त शेखर में ‘योगस्त्रिजीवान्त्यफलोत्थकृत्योः’ इत्यादि संस्कृतोपपत्ति में लिखित श्रीपति प्रकार आचार्योक्त के अनुरूप ही है इति ॥ ९ ॥

इदानीं प्रतिवृत्तभङ्गीमाह ।

कक्षामण्डलतुल्य प्रतिमण्डलमध्यमवनि मध्यात् खे ।

तत्स्वोच्चनीचवृत्त व्यासार्धेऽभिमुखमुच्चस्य ॥ १० ॥

प्रतिमण्डलस्य परिधौ मध्यमभुक्त्या स्फुटग्रहो भ्रमति ।

मन्दोच्चादनुलोमं शीघ्रात् प्रतिलोममवनिस्थः ॥ ११ ॥

स्पष्टं पश्यति यस्मात् मध्याद्वनाधिकं स्वकक्षायाम् ।

तस्मात्तदन्तरफलमूलां धनं वा ग्रहे मध्ये ॥ १२ ॥

सु. भा.—खे आकाशे स्वोच्चस्याभिमुखमवनिमध्यात् तत् स्वोच्चनीचवृत्त-
व्यासार्धेऽन्त्यफलज्याग्रे कक्षामण्डलतुल्यस्य प्रतिमण्डलस्य मध्यं केन्द्रं भवतीति ।
अवनिस्थो भूगर्भस्थो द्रष्टा । स्वकक्षायां कक्षामण्डले भवत्ये । शेषं स्पष्टार्थम् ।
'त्रिभज्यकासमितकर्कटकेन'—इत्यादि भास्करोक्त मेतदनुरूप मेवेति ॥१०-१२॥

वि. भा.—खे (आकाशे) स्वोच्चाभिमुखं—अवनि मध्यात् (भूकेन्द्रात्) तत्स्वो-
च्चनीच व्यासार्धे (अन्त्यफलज्याग्रे) कक्षामण्डलतुल्यस्य प्रतिवृत्तस्य मध्यं (केन्द्रं)
भवति । प्रतिवृत्त परिधौ मन्दोच्चादनुलोमं शीघ्रोच्चात् प्रतिलोमं (विलोमं) मध्य-
गता स्फुटग्रहो भ्रमति, अवनिस्थः (भूगर्भस्थो द्रष्टा) स्वकक्षायां (कक्षावृत्ते भव-
त्ये) यस्मात्कारणात् मध्यमग्रहात् न्यूनाधिकं स्पष्टग्रहं पश्यति तस्मात् कारणा-
त्तदन्तरफलं मध्ये ग्रहे ऋणं धनं क्रियते । अर्थात् कक्षावृत्ते स्फुटमध्यग्रहयोरन्तरं
फलम् तच्च मध्यग्रहात् स्फुटग्रहेऽग्रस्थे धनं पृष्ठस्थे च ऋणम् । तत्र मन्दोच्चात्
मध्यमग्रहपर्यन्तं मन्दकेन्द्रं मन्दस्पष्टग्रहात् शीघ्रोच्चपर्यन्तं च शीघ्रकेन्द्रमिति
केन्द्रयोः स्वरूपवैपरीत्येन मन्दशीघ्रकर्मणोः फलयोर्धनर्णतावैपरीत्यम् ॥१०-१२॥

अब प्रतिवृत्तभङ्गी को कहते हैं ।

हि. भा.—आकाश में अपने उच्च के संमुख भूकेन्द्र से अन्त्यफलज्याग्र पर कक्षावृत्त
के तुल्य प्रतिवृत्त का केन्द्र होता है । प्रतिवृत्त परिधि में मन्दोच्च से अनुलोम (क्रमिक) और
शीघ्रोच्च से विलोम मध्यगति से स्फुटग्रह भ्रमण करता है । भूगर्भस्थित द्रष्टा (दर्शक) जिस
कारण से अपने कक्षावृत्त में (भवलय में) मध्यम ग्रह से न्यूनाधिक स्पष्ट ग्रह को देखते
हैं इस कारण से उन दोनों का अन्तर फल मध्यमग्रह में ऋण और धन किया जाता है अर्थात्
कक्षावृत्त में स्फुटग्रह और मध्यमग्रह का अन्तर फल है, मध्यमग्रह से स्फुट ग्रह आगे रहे तो
वह फल धन होता है, और मध्यमग्रह से स्फुटग्रह पीछे रहे तो फल ऋण होता है । मन्दोच्च
से मध्यमग्रह पर्यन्त मन्दकेन्द्र है और मन्द स्पष्टग्रह से शीघ्रोच्च पर्यन्त शीघ्रकेन्द्र है, इन
दोनों केन्द्रों के स्वरूप वैपरीत्य के कारण मन्द कर्म और शीघ्र कर्म में फलद्वय की धन-
र्णता में वैपरीत्य होता है इति ॥१०-१२ ॥

इदानीं स्पष्टां कोटिमाह ।

अन्त्यफलज्याग्रात् स्यात् पदयोराद्यन्तयोत्परिकोटिः ।

द्वितृतीययोरधस्तात् तदन्तरैवच ततः कोटिः ॥ १३ ॥

सु. भा.—कोटिः प्रतिमण्डलीयकेन्द्रकोटिज्या । ततस्तस्मात् तदन्तरैवचं
केन्द्रकोटिज्यान्त्यफलज्ययोराद्यन्तयोः पदयोरैवचं कवर्चादौ त्वन्तरं कोटिः स्पष्टा

कोटिः प्रतिमण्डलीयग्रहोन्मात् कक्षावृत्तकेन्द्रगतिर्यग्रेणावधिलम्बरूपा कोटिः स्यादित्यर्थः । 'मध्यस्थरेखे किलवृत्तयोर्ये' इत्यादि भास्करोक्तमेतदनुकूमेव ।

अत्रोपपत्त्यर्थं भास्करगोलाध्यायस्य छेदकाधिकारे द्रष्टव्यः ॥१३॥

वि. भा.—आद्यन्तयो. पदयोः (मकरादि केन्द्रे) कोटिः (प्रतिवृत्तीय केन्द्रकोटिज्या) अन्त्यफलज्याग्रादुपरि भवति तस्मात्कारणान् केन्द्रकोटिज्यान्त्यफलज्य-योर्योगः, द्वितीयपदयोः (कवर्गादि केन्द्रे) प्रत्यफलज्याग्रात्केन्द्रकोटिज्याऽवस्ता-द्भवति तस्मात्तयोरन्तरं कोटिः (स्पष्टाकोटिः) प्रतिवृत्तस्थग्रहात् कक्षामध्यगतियग्रे-खापर्यन्त लम्बरूपा स्यात् ॥ सिद्धान्तशेखरे 'नीचोच्चसंज्ञवल्यस्य च विस्तरार्धं कोटिज्यकाज्यफलजेन गुणेन कार्या । युक्तोन्मीलनगहिता च पदक्रमेणेति' श्रीपत्युक्तमिदं, सिद्धान्तशिरोमणौ 'मध्यस्थरेखे किलवृत्तयोर्ये तदन्तरालेऽन्त्यफल-स्य जीवेत्यादि' भास्करोक्तं चाचार्योक्तानुरूपमेवेति ॥ १३ ॥

अब स्पष्टा कोटि को कहते हैं ।

हि. भा — प्रथम पद और चतुर्थपद (मकरादि केन्द्र) में प्रतिवृत्तीय केन्द्र कोटिज्या अन्त्य फलज्याग्र से ऊपर होती है उमानिये केन्द्र कोटिज्या और अन्त्यफलज्या का योग करने से स्पष्टा कोटि होती है । और द्वितीय-तृतीय पदों (कवर्गादि केन्द्र) में अन्त्यफलज्याग्र से केन्द्र कोटिज्या नीचे होती है इसलिए उन दोनों के अन्तर करने में स्पष्टा कोटि (प्रतिवृत्तस्थ ग्रह से कक्षावृत्तकेन्द्रगतियग्रेखापर्यन्त लम्बरूप) होती है । सिद्धान्तशेखर में 'नीचोच्च संज्ञ-वल्यस्य च विस्तरार्ध' इत्यादि मस्कृत वि. भा. में लिखित श्लोक में श्रीपति तथा सिद्धान्त-शिरोमणि में 'मध्यस्थ रेखे किलवृत्तयोर्ये तदन्तरालेऽन्त्यफलस्यजीवा' इत्यादि से भास्करा-चार्य भी आचार्योक्त के अनुरूप ही कहते हैं इति ॥ १३ ॥

इदानीं तृतीयश्लोकान्तर्गतप्रश्नानामुत्तरारण्यह ।

कोट्यन्त्यफलज्यैक्यं मकरादावन्तरं कुलीरादौ ।

मेतदनुरूपमेव ।

अत्रोपपत्तिः । इहाचार्येण प्रथमं स्पष्टकेन्द्रभुजज्या साधिता ततः प्रति-
मण्डल पदवशेन स्पष्टकेन्द्रमानमानीतम् । तत् स्वमन्दोच्चे क्षेप्यं मन्दस्फुटो भवति

शीघ्रोच्चात् त्यजेत्तदा स्फुटग्रहः स्यादिति ॥ सिद्धान्तशेखरे 'बाहुज्या त्रिभजीवया विनिहता कर्णोद्धृता काष्ठिता तादृक् पूर्वपदे भपदक पतिता षड्भान्विता प्रोज्झिता । चक्रादुक्तपदक्रमेण भवति स्पष्टोच्चयोरन्तरं मन्दोच्चे विनियोजयेदपन-
येच्छीघ्रोच्चतः स्यात् स्फुटः ॥' श्रीपत्युक्तमिदमाचार्योक्तानुरूपमेवेति ॥१७-१८॥

अब केन्द्रभुज कोटिजीवा परमफलज जो स्वोच्च और स्फुट ग्रह को जानते हैं इस प्रश्न के उत्तर को कहते हैं ।

हि. भा.—त्रिज्या को भुजज्या से गुणा कर कर्ण से भाग देने से जो लब्ध हो उस का चाप स्पष्टग्रह और शीघ्रोच्च का अन्तर होता है, ॥ १७-१८ ॥

उपपत्ति ।

यहाँ संकृतोपपत्ति में लिखित (क) क्षेत्र को देखिये । उ=शीघ्रोच्च । म=मन्द-
स्पष्टग्रह । मंउ=शीघ्र केन्द्र । मर=शीघ्रकेन्द्रज्या=शीकेज्या, स्प=स्पष्टग्रह । स्पउ=स्पष्ट
केन्द्र । भू=भूकेन्द्र, भूम=शीघ्रकर्ण, स्पन=स्पष्टकेन्द्रज्या, भूस्प=त्रिज्या=त्रि, तब भूमर,
भूस्पन दोनों त्रिभुजों के सजातीयत्व से अनुपात करते हैं $\frac{\text{शीकेज्या.त्रि}}{\text{शीघ्रकर्ण}} = \text{स्पकेज्या}$, इसका चाप
=स्पष्टकेन्द्र = स्पष्टग्रह और शीघ्रोच्च का अन्तर । मन्द कर्म में शीघ्रकेन्द्रज्यास्थान में मन्दकेन्द्र
ज्या और शीघ्रकर्णस्थान में मन्दकर्ण ग्रहण करने से पूर्ववत् अनुपात से फल मन्दस्पष्ट केन्द्रज्या
आती है, चाप करने से मन्दस्पष्टग्रह और मन्दोच्च का अन्तर होता है । यदि मन्द केन्द्र प्रथम
पद में है तो अन्तर (मन्दस्पष्टग्रह और मन्दोच्च के अन्तर) को मन्दोच्च में जोड़ने से मन्द-
स्पष्टग्रह होते हैं द्वितीय पद में उस अन्तर कोछः राशि में से घटाकर शेष को मन्दोच्च में
जोड़ना चाहिए । तृतीय पद में उस अन्तर में छः राशि जोड़ना चाहिए । चतुर्थ पद में उस
अन्तर को बारह राशि में से घटाकर शेष को मन्दोच्च में जोड़ने से मन्द स्पष्टग्रह होते हैं ।
इस मन्द स्पष्टग्रह से शीघ्रकेन्द्रादि साधन कर पूर्वोक्तानुपात से $\frac{\text{शीकेज्या. त्रि}}{\text{शीघ्रकर्ण}} = \text{स्पकेज्या}$,
साधनकर चाप करने से स्पष्टग्रह और शीघ्रोच्च का अन्तर होता है प्रथम पद में इस अन्तर
को शीघ्रोच्च में घटाने से स्फुटग्रह होते हैं, द्वितीय में उस अन्तर को छः राशि में से घटाकर
शेष को शीघ्रोच्च में घटाना चाहिए । तृतीय पद में उस शीघ्रोच्च में से छः राशि घटा देना
चाहिए । चतुर्थपद में उस अन्तर को बारह राशि में घटाकर शेष को शीघ्रोच्च में घटाने से
स्फुटग्रह होते हैं सिद्धान्त शेखर में 'बाहुज्या त्रिभजीवया विनिहता कर्णोद्धृता' इत्यादि सस्कृ-
तोपपत्ति में लिखित श्लोक से श्रीपति ने आचार्योक्त के अनुरूप ही कहा है ॥ १७-१८ ॥

अब अहर्गण से स्फुटग्रह को जानना है (प्रथम प्रश्न) उसको उत्तर को कहने है ।

हि. भा.—कल्प कुदिन में कल्पग्रहभगण पाते हैं तो ग्रहगण में क्या इस अनुपात में
 शेषगतभगण आता है, यहां गतभगणों के प्रयोजन नहीं है इसलिए उसको छोड़ देने है,
 शेष (भसणशेष) —मण्डल शेष कहलाता है, उस में सजातीय उच्च भगण शेष को घटाने में
 शेष केन्द्रभगण शेष होता है उसको चार में गुणा कर कल्प कुदिन में भाग
 देने में जो लब्ध होते हैं वे गत पद होते हैं, शेष को बीबीग में गुणा कर कल्पकुदिन में भाग
 देने से जो लब्ध होते हैं तत्संन्यक्त जीवागत होती है, शेष को ज्यान्तर में गुणा कर कल्पकु-
 दिन से भाग देने से जो लब्ध हो उसको गतज्या में जोड़ने में अभीष्ट केन्द्रज्या होती है,
 पदक्रम से गत-एष्य-गत एष्य में केन्द्रज्या साधन करना, अर्थात् प्रथम पद में गत में, द्वितीय
 पद में एष्य में, तृतीय पद में गत से, चतुर्थपद में एष्य में ज्या साधन करना, हर (कल्प-
 कुदिन) के चतुर्थांश के बराबर एक पद होता है, चारों पदों में एष्य-गत-एष्य-गत भुजक्रम
 से कोटिज्या साधन करना । अर्थात् प्रथम पद में एष्य में, द्वितीय पद में गत में, तृतीय पद
 में एष्य से, चतुर्थपद में गत से कोटिज्या साधन करना, केन्द्रज्या में पूर्ववत् रवि और चन्द्र
 के भुजफल साधन करना चाहिये । तथा कुजादि ग्रहों का मन्दफल साधन करना चाहिये ।
 छेद (कल्पकुदिन) को फल चाप कला में गुणा कर चक्र कला में भाग देने में जो लब्ध हो
 वह मान्दफल वा शैघ्रफल भगणशेष जानीय होता है । उसको पूर्ववत् केन्द्रगोलवश में
 ग्रह भगण शेष में ऋण-धन करने में स्फुट भगण शेष होता है, उसमें राश्यात्मक स्फुटग्रह
 साधन करना चाहिये इति ॥२०-२२॥

उपपत्ति ।

आचार्य ने भगण शेष ही से केन्द्रादि साधन किया है तब अनुपात करते है यदि एक भगण मे चार पद पाने हैं तो भगणशेष मे क्या इससे पद आते है $\frac{४ \times \text{भसे}}{\text{ककुदि}}$, एवं यदि एकपद मे ५४०० कला पाते है तो गत वा गम्य पद में क्या इससे लब्ध गतकला, गम्य कला, आती है, दो सी पचीस २२५ से भाग देने से ज्या संख्या = $\frac{\text{गत वा गम्य} \times ५४००}{\text{ककुदि} \times २२५}$
 = $\frac{\text{गत वा गम्य} \times २४}{\text{ककुदि}}$ इससे ज्यादिश्रों का आनयन सुगम ही है । फलकला को चक्रकला

से भाग देने से भगणात्मक फलकला = $\frac{\text{फक}}{\text{चक}} = \frac{\text{फक. ककुदि}}{\text{चक. ककुदि}} = \frac{\text{फक ककुदि}}{\text{चक ककुदि}}$
 = लब्ध , इस तरह भगणशेष मे संस्कार योग्य सन्च्छेद भगणात्मक फल हुआ ।
 इसमें आचार्योक्त उपपन्न हुआ । सिद्धान्तशेखर मे ‘द्युचरभगणशेषात् स्वस्वतुङ्ग प्रसृत सद्यभगण निघ्न’ इत्यादि संस्कृतोपपत्ति मे लिखित पद्यो मे श्रीपति ने आचार्योक्त के अनुरूप ही कहा है इति ॥२०-२२॥

इदानीं ज्याभिर्विना भुजकोटिज्ये तत्फले च यः करोतीत्यस्यो (द्वितीय-तृतीय प्रश्नयोः) उत्तरमाह ।

भुजकोट्यंशोनगुणा भार्धाशास्तच्चतुर्थभागोनैः ।

$$\text{कोटिज्या} = \frac{(१८० - को) को}{१०१२५ - (१८० - को) को} \quad \text{लब्धिः त्रि पक्षौ अफज्यागुणिनी}$$

गुणितौ त्रि भक्तौ तदा $\frac{\text{कोटिज्या} \cdot \text{अफज्या}}{\text{त्रि}} = \text{कोटिफलः} = \text{लब्धिः, अफज्या, एतेना-}$
चार्योक्तं सर्वमुपपन्नम् ॥ सिद्धान्त शेषरे “दोः कोटिभागरहिनाभिद्वयाः सनाग-
चन्द्रास्तदीयचरणोनशरार्कदिग्भिः । ते व्यासखण्डगुणिता विद्वताः फले नृ ज्ञ्या-
भिर्विनैव भवतो भुजकोटिजीवे ॥” श्रीपत्युक्त प्रकारस्यास्य सूत्रमानार्योक्त सूत्र-
मेवेति ॥ २३-२४ ॥

अब विनाज्या के भुजज्या, कोटिज्या और भुजफल तथा कोटिफल
ज्ञान के लिये प्रश्नों के उत्तर को कहते हैं ।

हि. मा.—जिस भुजांश वा कोट्यंश की जीवा अपेक्षित है उसको (भुजांश वा कोट्यंश) एक सौ अस्सी १८० में से घटा देना और गुण देना चाहिए, जब जो हो उसको उसी के चतुर्थांश हीन १०१२५ इससे भाग देना चाहिए । भागफल (लब्धि) को त्रिज्या से

गुणा करने से भुजज्या और कोटिज्या होती है। तथा उसी लब्धि को अन्त्यफलज्या से गुणा करने से विना ज्याखण्ड के भुजफल और कोटिफल होता है इति ॥ २३-२४ ॥

उपपत्ति

यदि त्रिज्या में भुजज्या पाते हैं तो द्विगुणित त्रिज्या में क्या इस अनुपात से द्विगुणित त्रिज्या में भुजज्या आती है $\frac{\text{ज्याभु. २ त्रि}}{\text{त्रि}} = २ \text{ ज्याभु.}$ अतः किसी व्यासार्ध में

द्विगुणित भुजाश की जो पूर्णज्या होती है वही द्विगुणित उस व्यासार्ध में भुजज्या होती है। साठ ६० व्यासार्ध में द्विगुणित भुजांग की पूर्णज्या साधन के लिये स्वल्पान्तर से ३ व्यास = परिधि = ३६०। चक्रांश में चक्रतुल्य चापीय मान पाते हैं तो द्विगुणित भुजांश में क्या लब्ध चापमान = २ भु। तब 'चापोन निघ्न परिधिः प्रथमाह्वयः स्यात्' इत्यादि भास्कर प्रकार से ११० व्यास में द्विगुणित भुजाश पूर्णज्या हुई। १२० त्रिज्या में भुजज्या =

$$\begin{aligned} & \frac{(३६० - २ भु) २ भु \times ४ \times १२०}{३६० \times ४ - (३६० - २ भु) २ भु} = \frac{(१८० - भु) भु \times १६ \times १२०}{३६० \times ३६० \times ४ - (१८० - भु) भु \times ४} \\ & = \frac{(१८० - भु) भु \times १२०}{६० \times ३६० \times ४ - (१८० - भु) भु} = \frac{(१८० - भु) भु \times १२०}{४५ \times ४५ \times ४ - (१८० - भु) भु} \\ & = \frac{(१८० - भु) भु \times १२०}{१०१२५ - (१८० - भु) भु} \end{aligned}$$

पाते हैं तो इष्ट त्रिज्या में क्या इससे इष्ट त्रिज्या में भुज्या = $\frac{(१८० - भु) भु. त्रि}{१०१२५ - (१८० - भु) भु}$

= लब्धि × त्रि. दोनों पक्षों को अन्त्यफलज्या से गुणा कर त्रिज्या से भाग देने से $\frac{\text{भुजज्या} \times \text{अंफज्या}}{\text{त्रि}} = \text{भुजफल} = \text{लब्धि} \times \text{अंफज्या}$ । इसी तरह कोटिज्या =

$\frac{(१८० - को) को. त्रि}{१०१२५ - (१८० - को) को} = \text{लब्धि} \times \text{त्रि. दोनों पक्षों को अन्त्यफलज्या से}$

गुणाकर त्रिज्या से भाग देने से $\frac{\text{कोज्या. अंफज्या}}{\text{त्रि}} = \text{कोटिफल} = \text{लब्धि} \times \text{अंफज्या}$, इससे

आचार्योक्त उपपत्ति हुआ। सिद्धान्त शेखर में 'दोः कोटि भागरहिताभिहताः खनागचन्द्रा' इत्यादि संस्कृतोपपत्ति में लिखित श्लोक से श्रीपति ने आचार्योक्त के अनुरूप ही कहा है। अस्तुतः श्रीपति प्रकार का मूल आचार्योक्त सूत्र ही है इति ॥ २३-२४ ॥

इदानीमिष्टज्यायान्ध्रापानयनमा ।

इष्टज्या संगुणिताः पञ्चकयमनैरुत्तुचन्द्रमम् ।

इष्टज्यापादयुतव्यासार्धविभाजिता लब्धम् ॥ २५ ॥

नवति कृतेः प्रोह्य पदं नवतेः संशोध्य शेषभागकला ।

एवं धनुरिष्टाया भवति ज्याया विना ज्याभिः ॥ २६ ॥

सु. भा.—इष्ट ज्याया यः पादश्चतुर्थांशस्तेन युज्य व्यासार्धं पञ्चकयि तेन विभाजिताः । शेष स्पष्टम् ।

अत्रोपपत्तिः । पूर्वं प्रकारेण

$$\text{ज्या} = \frac{(१८० - \text{चा}) \text{चा.त्रि.}}{१०१२५ - \frac{(१८० - \text{चा}) \text{चा}}{४}} = \frac{\text{या त्रि.}}{१०१२५ - \frac{\text{या}}{४}} \quad \text{यदि}$$

$$\begin{aligned} \text{या} &= (१८० - \text{चा}) \text{चा} \quad | \quad \text{अतश्छेदगमेन ज्या} \times ४०५०० = \text{ज्या. या} \\ &= ४ \text{ त्रि. या, ततो या} = \frac{\text{ज्या} \times ४०५००}{\text{ज्या} + ४ \text{ त्रि.}} = \frac{१०१२५ \text{ ज्या}}{\text{त्रि.} + \frac{\text{ज्या}}{४}} \end{aligned}$$

$$= \text{ल} = (१८० - \text{चा}) \text{चा} = १८० \text{ चा} - \text{चा}^2$$

$$\text{समशोधनेन चा}^2 - १८० \text{ चा} + \text{ल} = ०$$

$$\therefore \text{चा} = ९० \pm \sqrt{९०^2 - \text{ल}}$$

$$\text{आचार्येणाल्पं चापं गृहीतं तेन चा} = ९० - \sqrt{९०^2 - \text{ल}}$$

अत उपपन्नं सर्वम् ॥ २५-२६ ॥

वि. भा.—१०१२५ एते अङ्का इष्टज्या गुणिता इष्टज्याया यश्चतुर्थांशस्तेन युतं व्यासार्धं यद् भवति तेन विभाजिता लब्धं नवतिवर्गाद्विशोध्य मूलं प्राप्य तन्नवतेः संशोध्य शेषभागकला इष्टाया ज्याया ज्याभिर्विना धनु (चापं) भवतीति ॥ २५-२६ ॥

अत्रोपपत्तिः ।

$$\text{पूर्वश्लोकोपपत्त्या ज्या} = \frac{(१८० - \text{चा}) \text{चा. त्रि.}}{१०१२५ - \frac{(१८० - \text{चा}) \text{चा}}{४}} = \frac{\text{य. त्रि.}}{१०१२५ - \frac{\text{य}}{४}} \quad \text{अत्र}$$

(१८०—चा) चा = य कल्प्यते । ततश्छेदगमेन ज्या $\times ४०५००$ —ज्या . य = ४ त्रि य
 $\therefore \frac{\text{ज्या} \times ४०५००}{\text{ज्या} + ४ \text{ त्रि}} = \text{य} = \frac{१०१२५ \text{ ज्या}}{\text{त्रि} + \frac{\text{ज्या}}{४}} = \text{ल} । \text{य} = (१८०—चा) चा =$

$१८० \times चा - चा^२ = \text{ल समशोधनेन } चा^२ - १८० चा + \text{ल} = ०$ ततः $चा^२ - १८० चा = ० - \text{ल} ।$ पक्षौ $(९०)^२$ युतौ तदा $चा^२ - १८० चा + (९०)^२ = ९०^२ - \text{ल}$, मूल ग्रहणेन
 $चा - ९० = \sqrt{(९०)^२ - \text{ल}} \therefore चा = ९० \pm \sqrt{(९०)^२ - \text{ल}}$ आचार्येणाल्पमेव चापं
 गृहीतम् तेन $चा = ९० - \sqrt{(९०)^२ - \text{ल}}$ एतेनाचार्योक्त मुपपन्नम् ॥ सिद्धान्त शेषरे
 “इष्टज्या विनिहताः शरभास्कराणां ज्यापादयुक्तं त्रिगुणेन हृताः फलं तत् ।
 त्यक्त्वा खनन्द कृतिः पदमभ्युनन्दभागाच्च्युतं भवति धन्व विना ज्याकाभिः ॥

श्रीपत्युक्तमिदमाचार्योक्तानुरूपमेव ।

एतत्सूत्रस्य मूलमाचार्योक्तसूत्रमेवेति ॥ २५-२६ ॥

अब इष्टज्या से चापानयन को कहते हैं ।

हि. भा.—१०१२५ इन अङ्को को इष्टज्या से गुणा कर इष्टज्या की चतुर्थांशयुत त्रिज्या से भाग देने से जो लब्ध हो उसको नव्वे ९० के वर्ग से में घटाकर मूल लेना उसको नव्वे में से घटाने से शेष ज्याविना इष्टज्या का चाप होता है ॥ २५-२६ ॥

उपपत्ति ।

$$\text{पूर्वश्लोकोपपत्ति से ज्या} = \frac{(१८० - चा) चा. त्रि}{१०१२५ - (१८० - चा) चा} = \frac{\text{य. त्रि}}{१०१२५ - \text{य}} \quad \text{यहां}$$

(१८०—चा) चा = य कल्पना करते हैं । तब छेदगम से ज्या $\times ४०५००$ —ज्या $\times \text{य} = ४$
 त्रि. य $\therefore \frac{\text{ज्या} \times ४०५००}{\text{ज्या} + ४ \text{ त्रि}} = \text{य} = \frac{१०१२५ \text{ ज्या}}{\text{त्रि} + \frac{\text{ज्या}}{४}} = \text{ल} = (१८० - चा) चा =$

$१८० \times चा - चा^२$ समशोधन से $चा^२ - १८० चा + \text{ल} = ० \therefore चा^२ - १८० चा = -\text{ल}$
 दोनों पक्षों में $(९०)^२$ जोड़ने से $चा^२ - १८० चा + (९०)^२ = (९०)^२ - \text{ल}$, मूल लेने से $चा - ९० = \sqrt{(९०)^२ - \text{ल}}$, $\therefore चा = ९० \pm \sqrt{(९०)^२ - \text{ल}}$ यहां आचार्य ने अल्पमान ही को लिया है । तब $चा = ९० - \sqrt{(९०)^२ - \text{ल}}$, इस से आचार्योक्त उपपन्न हुआ ॥ सिद्धान्त शेषर में ‘इष्टज्या विनिहताः शरभास्कराणां’ इत्यादि संस्कृतोपपत्ति में लिखित श्लोक से श्रीपति ने आचार्योक्त के अनुरूप ही कहा है । वस्तुतः श्रीपत्युक्त सूत्र का मूल आचार्योक्त सूत्र ही है इति ॥ २५-२६ ॥

इदानीं मिष्टग्रहोदयिकान् मध्यान् स्पष्टान् यः करोति तन्मन्त्रेण ॥

इष्टोदयिकभुजान्तरमिनवत् स्फुटमध्यमान्तरकलाभिः ।

वि. भा. मध्यमाकोदयकालिका ग्रहा भुजान्तरगंस्कारेण निरक्षे स्फुटाकोदयकालिकाः क्रियन्ते । पुनः रविचरासुभिः स्वदेशे स्फुटाकोदयकालिका क्रियन्ते । एवमिष्ट मध्यस्फुटग्रहान्तरकलाभिः (तन्मन्द फलकलासुभिः) तदुत्थामवः (मन्दफलकलासवः) रविवदिष्टोदयिकभुजान्तरं साध्यं तथा रविवदिष्टग्रहचरासुभिः स्वचालनफलं साध्यं तत्संस्कारेण स्वदेशे स्पष्टेष्टग्रहोदयिकाले ग्रहा भवन्तीति । यथाश्विन्योदयिका (भोदयिकालिकाः) स्पष्टग्रहा अपेक्षितास्तदा भव्य (नक्षत्रस्य) फलाभावाद्भुजान्तरं न भवतीति ॥ अत्र चतुर्वेदाचार्य 'अथाश्विन्योदयिकास्तच्चरदलकर्म न कर्तव्यमत्राश्विनी ग्रहणं मेषादिकं विषुवदुपलक्षणार्थमन्यथा सर्वामामेव नक्षत्रयोगताराणां स्वचरदलघटिका भिन्नास्तद्भेदात् स्वदेशे तदुदया अपि भिन्नाः स्युस्तस्मादाचार्येण यत् कल्पादौ नाक्षत्रं सावनं प्रवृत्तं तस्य चरदलकर्मनिषेधः कृतोऽन्यथाश्विनी योगताराया युगादाबुदयाभाव एव स्यादेवमन्यासां योज्यमिति, एतया व्याख्यया भुजान्तरचरकर्मगोनिषेधो भवति । 'न' इत्यस्य भुजान्तरेऽन्वय इति ॥ २७ ॥

अब इष्टग्रहोदयिकालिक मध्यम ग्रहको जो स्पष्ट करने है उस प्रदन के उत्तर को कहते हैं ।

हि. भा.— मध्यमाकोदयिकग्रहभुजान्तर सरकार से निरक्ष से स्फुटाकोदय

कालिक किये जाते हैं फिर चरासु से स्वदेश में स्फुटाकौदय कालिक ग्रह होते हैं । एवं इष्ट मध्यम और स्पष्टग्रह की अन्तर कलो (उसकी मन्दफल कला) त्पन्नासु से रवि की तरह भुजान्तर साधन करना तथा रवि की तरह इष्टग्रह चरासु से स्वचालन फल साधन कर उस के संस्कार से स्वदेश में स्पष्ट इष्टग्रहोदय कालिक ग्रह होते हैं । यदि अश्विन्यौदयिक स्पष्टग्रह अपेक्षित हो तब नक्षत्र के फलाभाव के कारण भुजान्तर नहीं होता है इति ॥ २७ ॥

इदानीं स्वोच्चस्फुटैर्यो मध्यमं ग्रहं करोतीत्यस्योत्तरमाह

स्वोच्चाद्विशोध्य कृत्वा प्राग्वत् फलमृणधनं विपर्यस्तम् ।

कार्यमनष्टस्पष्टे पुनः पुनर्निश्चलो मध्यः ॥ २८ ॥

सु० भा०—स्फुटग्रहं स्वोच्चाद्विशोध्य केन्द्रं कृत्वा प्राग्वत् फलं मान्दं शैर्घ्र्यं च साध्यम् । तदनष्टस्पष्टे पृथक् स्थापितस्पष्टग्रहे विपर्यस्तमृणधनं कार्यं यदि धनं तदा ऋणमृणं च धनं कार्यमित्यर्थः । एवं पुनः पुनरसकृद्वा निश्चलः स्थिरी-भूतस्तदा स एव मध्यो ज्ञेय इति ।

अत्रोपपत्तिः । स्पष्टीकरणविपरीतक्रियया सुगमा 'स्फुटग्रहं मध्यखणं प्रकल्प्य कृत्वा फले मन्दचले यथोक्ते' इत्यादि भास्करोक्तमेतदनुरूपमेव । अत्र छेद्यकयुक्तया स्फुटग्रहोऽनं शीघ्रोच्चं स्फुटकेन्द्रं ततस्त्रिज्यया स्फुटकेन्द्रज्या तदाऽन्त्यफलज्यया किं लब्धा सकृदेव स्फुटा शीघ्रफलज्या । तच्चापं शीघ्रफलं स्फुटं वास्तवमेव । अथाचार्योक्तस्पष्टीक्रिया क्रमतो यदा मन्दोच्चोऽनं स्फुटग्रहं केन्द्रतः पुनः पुनस्तदेव मन्दफलभागच्छेत् तदैव क्रियावसानः । अथोपान्तिमस्पष्टग्रहाद्यन्मन्दफलं तदेवोपान्तिमसमान्त्यस्पष्टग्रहान्चातो मन्दोच्चोऽनं स्फुटग्रहकेन्द्रतः सकृदेव वास्तवं मन्दफलं भवति भास्करादिना व्यर्थमेवासकृद्विधिविहित इति सुधीभिर्भृशं विचिन्त्यम् ॥ २८ ॥

वि. भा.—स्फुटग्रहं स्वोच्चाद्विशोध्य केन्द्रं कृत्वा पूर्ववन्मान्दं शैर्घ्र्यं च फलं साध्यम् । तत् पृथक् स्थापितस्पष्टग्रहे विपरीतमृणधनं कार्यं यदि धनं तदा ऋणमृणं चेत् धनं कार्यम् । एवं पुनः पुनरसकृद्वा निश्चलः (स्थिरी भूतः) तदा स एव मध्यग्रहो ज्ञेय इति ॥ २८ ॥

अत्रोपपत्तिः ।

शीघ्रोच्चं स्फुटग्रहेण हीनं तदा स्फुटकेन्द्रं भवति । तदा त्रिज्यया स्फुटकेन्द्रज्या लभ्यते तदाऽन्त्यफलज्यया किं लब्धा स्फुटफलज्या, एतस्याश्चापं कार्यं तदा स्फुटं वास्तवं शीघ्रफलं भवति, एतद्वशेन सकृदेव स्पष्टग्रहान्मध्यमग्रहज्ञानं भवेत् । आचार्योक्तरीत्या मन्दोच्चेन हीनं स्फुटग्रहं केन्द्रतो यदा पुनः पुनस्तदेव

मन्दफलमागच्छेत्तदैव क्रियाममाप्तिः । अथोपान्तिमस्पष्टग्रहाद्यन्मन्दफलं विरो-
पान्तिमतुल्यान्त्यस्पष्टग्रहाच्चातो मन्दोच्चोत्तमस्फुटग्रहकेन्द्रतः सचदेव मन्दफल-
वास्तवं भवति । सिद्धान्त निरोमणा 'स्फुट ग्रह मध्यमग प्रकल्प्य कृत्वा फले मन्द-
चले यथोक्त' भास्करोक्तमिदमानार्थोक्तानुरूपमेव । अमकृतमंगोऽज्ञायमानता
नास्ति, भास्करादिभिर्योह्यसकृद्विधिः प्रतिपादितः न निरर्थक एवेति ॥ २८ ॥

अब स्वोच्च और स्फुट ग्रह से मध्यम ग्रह को जो जानने है उस ग्रह के उत्तर को कहते हैं ।

हि. भा.—अपने उच्च में से स्फुट ग्रह को घटाने से स्फुट केन्द्र होता है, उस से पूर्वार्ध
मन्दफल और शीघ्रफल साधन करना, उनको पृथक् स्थापित स्पष्ट ग्रह में प्रपरीत ऋण धन
करना यदि धन फल है तो ऋण करना यदि ऋण है तो धन करना, एवं बार बार करना
चाहिये जब तक स्थिरीभूत हो अर्थात् एक ही ग्रह आवे तब तब करना चाहिये तब वही
मध्यमग्रह होते हैं इति ॥ २८ ॥

उपपत्ति

शीघ्रोच्च में से स्फुटग्रह को घटाने से स्फुट केन्द्र होता है । तब अनुमान करने है यदि
त्रिज्या में स्फुट केन्द्रज्या पाते हैं तो अन्त्यफलज्या में तथा उस से स्फुट फलज्या आती है,
इसके चाप करने से वास्तव शीघ्रफल होता है, उस के वश से सकृत् प्रकार ही से स्फुटग्रह से
मध्यम ग्रह ज्ञान हो जायगा । आचार्योक्त रीति से मन्दोच्चोत्तम स्फुटग्रह केन्द्र में जब पुनः पुनः
वही मन्द फल आवे तब ही क्रिया की समाप्ति होती है । उपान्तिम स्पष्टग्रह में जो मन्दफल
होता है वही उपान्तिम तुल्य अन्त्य स्पष्ट ग्रह से भी होता है । एमन्तिम मन्दोच्चोत्तम स्फुटग्रह
केन्द्र से सकृत् ही मन्द फल वास्तव होता है । सिद्धान्त निरोमणा में 'स्फुट ग्रह मध्यमग
प्रकल्प्य' इत्यादि भास्करोक्त प्रकार आचार्योक्त के अनुरूप ही है । यहाँ अमकृत् कर्म की
जरूरत नहीं है भास्करादि आचार्यों ने जो अमकृत् कर्म किये हैं भी निरर्थक है इति ॥ २८ ॥

इदानीं ग्रहस्य संक्रान्तेराद्यन्तो यो वेत्तीत्यस्योत्तरमाह ।

मानार्थात् षष्टिगुणाद् भुक्तिहृतान्नाडिकादिलब्धेन ।

राश्यन्तात् प्रागादिः पश्चावन्तोऽर्क संक्रान्तेः ॥ २९ ॥

सु. भा.—लब्धेन नाडिकादिना राश्यन्तात् प्रागर्कमङ्कान्तेरादिः पश्चा-
दन्तः समाप्तिरिति । शेषं स्पष्टम् ।

अत्रोपपत्तिः । 'षष्टिघ्न बिम्बं ग्रहभुक्तिभक्तम्'—इत्यादि भास्कर विधिना
स्फुटा ॥ २९ ॥

वि. भा.—मानार्धात् षष्टिगुणितात् स्फुटरविगत्या भक्तान्नाडिकादि लब्ध-
फलेन रविसंक्रान्तेः, राश्यन्तात् पूर्वमादिः पश्चादन्तोऽर्थाद्वेः संक्रमण राशे राश्य-
न्तरगमनं, सूर्यः स्वमण्डले पूर्वार्धेन पूर्वराश्यन्तं त्यजति उत्तरार्धेनोत्तरराशेः पूर्व-
भागं विशतीति ॥ २९ ॥

उपपत्तिः।

यदि स्फुटरविगतिकलाभिः षष्टिघटिका लभ्यन्ते तदा सूर्यबिम्बार्धं कलाभिः
किं यद्घट्यात्मकं फलं समागतं तेन राश्यन्तात् प्राक् रविसंक्रान्तेरादिः, पश्चादन्तः
(समाप्तिः) इति । सिद्धान्तशेखरे 'षष्टिघ्नं सूर्यबिम्बं स्फुटगतिविहृतं सोऽर्कसं-
क्रान्तिकालः, अनेन श्रीपतिना सिद्धान्तशिरोमणौ 'षष्टिघ्न बिम्बं ग्रहभुक्ति-
भक्तमित्यादिना' भास्करेण चाचार्योक्तानुरूपमेव कथितमिति ॥ २९ ॥

अब ग्रह संक्रान्ति के आदि और अन्त को जो जानते हैं इस प्रश्न के
उत्तर को कहते हैं ।

हि. भा.—सूर्य बिम्बार्ध को साठ से गुणाकर स्फुट रविगति से भाग देने से जो
नाडिकादि (दण्डादि) फल हो उससे रवि संक्रान्ति के राश्यन्त से पहले आदि और राश्यन्त
के पश्चात् समाप्ति होती है; रवि एक राशि छोड़कर दूसरी राशि में जाते हैं उसी को रवि
संक्रान्ति कहते हैं । रवि अपने मण्डल में पूर्वार्ध से पूर्वराश्यन्त को त्याग करते हैं और
उत्तरार्ध से पर राशि के पूर्व भाग में प्रवेश करते हैं इति ॥ २९ ॥

उपपत्ति ।

यदि स्फुट रवि गति कला में साठ घटी पाते हैं तो सूर्य बिम्बार्धकला में क्या इस
अनुपात से जो घट्यात्मक फल आता है उससे राश्यन्त से पहले रवि संक्रान्ति के आदि और
पश्चात् अन्त (समाप्ति) होता है ॥ सिद्धान्तशेखर में 'षष्टिघ्नं सूर्यबिम्बं स्फुटगतिविहृतं
सोऽर्कसंक्रान्ति कालः' इससे श्रीपति तथा सिद्धान्तशिरोमणि में 'षष्टिघ्नबिम्बं ग्रह भुक्ति-
भक्तम्' इत्यादि से भास्कराचार्य ने भी आचार्योक्त के अनुरूप ही कहा है ॥ २९ ॥

इदानीं संक्रान्तिकालमाह ।

संक्रान्ति पुण्यकालो यत्तलब्धं नाडिकादि तद्विगुणम् ।

स्नानजपहोमदानादिकोऽत्र धर्मो विशिष्टफलः ॥ ३० ॥

सु. भा.—स्पष्टार्थम् ॥ ३० ॥

वि. भा.—पूर्वं यन्नाडिकादिफलं (स्फुटरवि गति कलाभिः षष्टिघटिकास्तदा

सूर्यबिम्बार्धकलाभिः) किमित्यनुपातेन, समागत तद्दिग्गुणित तार्थं यदा संक्रान्ति पुण्यकालो भवत्यर्थाद्विविबिम्बस्य पूर्वपाली यदा राश्यादी समागत प्रति नतोऽनन्तर यावता कालेन परपाली राश्यादावायाति तावान् कालः संक्रान्ति पुण्यकालः । मुहूर्तचिन्तामणौ 'संक्रान्तिकालादुभयत्र नाङ्किका पुण्या मता पोडश पोडशाङ्गणोः' अनेन रामाचार्येण संक्रान्तिपुण्यकालः कथ्यते । सिद्धान्तशेखरे मोडकं संक्रान्तिकालः पुण्यः स्मृत्यादिपूक्तः, अनेन श्रीपतिना, भास्कराचार्येणापि 'संक्रान्तिना पोडशित धर्मकृत्यो रवेस्तु ताः पुण्यतमाः' अनेन रविसंक्रान्तिकालग्यातीव विविष्टफलजनकत्वं कथितम् । अत्र(रविसंक्रान्ति काले) स्नानजपहोमदानादिको धर्मो विविष्टफलदो भवति, अन्येषां ग्रहाणां संक्रान्तिकालपुण्यफलप्रदो नास्ति नूनतस्तत्सम्बन्धे केनाप्याचार्येण न किमपि कथितम् । रविसंक्रान्तिकालस्य पुण्यफलजनकत्वे सर्वेषामाचार्याणामैकमत्यमस्ति ॥३०॥

अब संक्रान्ति काल को कहते हैं ।

हि. भा. — पहले जो नाङ्किकादि (स्फुटरविगति कला में माप पड़ो पाते हैं वे रवि बिम्बार्ध कला में क्या) उस अनुपात में आगे हुए फल को दिग्गुणित करने से संक्रान्ति पुण्य काल होता है अर्थात् रविविम्ब की पूर्व पाली जब राश्यादि में प्रवेश करती है उसके बाद जितने काल में परपाली राश्यादि में आती है वह काल संक्रान्ति पुण्यकाल है । मुहूर्तचिन्तामणि में 'संक्रान्तिकाला दुभयत्र नाङ्किकाः पुण्या मता पोडश पोडशाङ्गणोः' इससे रामाचार्येण संक्रान्ति पुण्यकाल कहा है । सिद्धान्त शेखर में 'मोडकं संक्रान्तिकालः, पुण्यः स्मृत्यादिपूक्तः' इससे श्रीपति तथा भास्कराचार्य ने भी 'संक्रान्तिना पोडशित धर्मकृत्यो रवेस्तु ताः पुण्यतमाः' इससे संक्रान्तिकाल अतीव विविष्ट फल प्रद होता है कहा है । रविसंक्रान्तिकाल में स्नान-जप-होम-दानादिक करने से विविष्ट फल होता है । अन्य ग्रहों के संक्रान्तिकाल पुण्य फल प्रद नहीं है इसलिये उनके सम्बन्ध में किसी भी आचार्य ने कुछ नहीं कहा है उक्त ॥ ३० ॥

इदानीं भतिथिकरणाद्यन्तौ यो वेत्तीत्यस्योत्तरमाह ।

एवं नक्षत्रान्तात् तिथिकरणान्ताच्छशिप्रमाणार्थात् ।

षष्टिगुणाद्विशिंशिनोर्भुक्त्यन्तरलब्धघटिकाभिः ॥ ३१ ॥

सु. भा.—एवं शशिप्रमाणार्थात् शशिविम्बार्धात् षष्टिगुणात् शशिभृन्ति-
हृताल्लब्धनाड्यादिना नक्षत्रान्तात् प्राक् नक्षत्रप्रवेशः पञ्चाक्ष तिवृत्तिः । शेषं
स्पष्टार्थम् ।

अत्रोपपत्तिः । 'शशितनु विकलाभ्यश्चन्द्रभुक्तये' इत्यादिभास्कर विधिना
स्फुटा ॥३१॥

वि. भा.—चन्द्रबिम्बार्धात् षष्टिगुणात् चन्द्रगत्या भक्ताद्यन्नाड्यादि फलं समागच्छति तेन नक्षत्रान्तात्पूर्वं तन्नक्षत्रप्रवेशः पश्चान्निवृत्तिः । एवं षष्टि गुणाच्चन्द्र-बिम्बार्धाद्विचन्द्रगत्यन्तरं भक्ताद्यन्नाड्यादि फलं समागच्छति तत्करणातिथ्योःप्रान्तं स्यात् । सिद्धान्तशेखरे 'षष्टिघ्ने चन्द्रबिम्बेऽप्युडुकरणातिथिप्रान्तमन्तं युतेर्वा चान्द्रद्या भुक्तयेन्दुभान्वोर्गंतियुतिवियुतिभ्यां क्रमान्नाडिकादि' श्रीपत्युक्तमिदमाचार्योक्तानु-रूपमेव केवलं विष्कम्भादेयोंगसम्बन्धेऽधिकोऽस्ति श्रीपत्युक्तौ सिद्धान्तशिरोमणी 'शशितनु विकलाभ्यश्चन्द्रभुक्तयेन्दु भान्वोरित्यादिना' भास्करेणाप्याचार्योक्तानुरूप-मेव कथितमिति ॥ ३१ ॥

अब भतिथि करणो के आदि अन्त को जो जानते हैं इस प्रश्न के उत्तर को कहते हैं ।

हि भा.—चन्द्र बिम्बार्ध को साठ से गुणा कर चन्द्रगति से भाग देने से जो नाड्या-दिक फल होना है उससे नक्षत्रान्त से पहले नक्षत्र प्रवेश होता है और पश्चात् निवृत्ति होती है, एवं चन्द्रबिम्बार्ध को साठ में गुणा कर रवि और चन्द्र के गत्यन्तर से भाग देने से जो नाड्यादिक फल होता है वह करण और तिथि का प्रान्त होता है । सिद्धान्तशेखर में 'षष्टिघ्ने चन्द्रबिम्बेऽप्युडुकरणा तिथि प्रान्तमन्तं युतेर्वा चान्द्रद्या भुक्तयेन्दु भान्वोर्गंतियुति वियुतिभ्यां क्रमान्नाडिकादि' यह श्रीपत्युक्त आचार्योक्त के अनुरूप ही है, केवल विष्कम्भादियोग के विषय में आचार्योक्त से अधिक है, आचार्य ने विष्कम्भादि योग की चर्चा नहीं की है । सिद्धान्त शिरोमणि में 'शशितनु विकलाभ्यश्चन्द्रभुक्तयेन्दुभान्वोः' इत्यादि से भास्कराचार्य भी उन्हीं बातों को कहते हैं इति ॥ ३१ ॥

इदानीं विशेषमाह ।

संक्रान्तिस्थो यावत् करोति मिश्रं फलं ग्रहस्तावत् ।

यस्मात् तस्माद्विष्टे राद्यन्तौ परिहरति लोकः ॥ ३२ ॥

सु. भा.—यस्माद्यावद्ग्रहः सङ्क्रान्तिस्थस्तावदुभयो राश्योर्विम्बैक देशगत-त्वान्मिश्रफलं करोति तस्मात्लोको जनो विष्टेर्भद्राया आद्यन्तौ शुभकर्मणि परि-हरति यतस्तावत् तत्प्रवृत्तिरनिष्टाय भवति । आचार्यसमये विष्कम्भादिसप्तवि-शतियोगानां प्रचारो नास्तीति प्रतिभाति । स्पष्टाधिकारे योगानयनाभावादिहापि सत्सन्धेरप्रतिपादनाच्च । आचार्यसमये व्यतिपातवैधृतयोरेव रविचन्द्रक्रान्ति साम्येन महानिष्टोत्पादकत्वाच्चर्चाऽऽसीदत् एवाग्निमार्याभिस्तत्साधनं वक्ष्यतीति ॥ ३२ ॥

अब विशेष कहते हैं ।

हि. भा.—जिस कारण से ग्रह जब तक सक्रान्ति में रहते हैं तब तक दोनों राशियों में विम्ब के एक प्रदेश के प्रवेश के कारण मिश्र (मिला हुआ) फल हो रहा है । परन्तु वे लोग भद्रा के आदि और अन्त को शुभकर्मों में त्याग करते हैं । स्पष्टाधिकार में गिरहभाशि योगों के आनयन नहीं हैं, यहाँ भी उनके सम्बन्ध में कुछ चर्चा नहीं की गई है । हमें अनुमान किया जाता है कि आचार्य के ग्रन्थ रचना समय में उन योगों का प्रचार नहीं था, केवल बहुत ही अनिष्ट फल देने वाले व्यतीपात और वैधृत की चर्चा उस समय में ही इति ॥ ३२ ॥

इदानीं व्यतीपाताद्यन्तौ यो वेत्तीत्यस्योत्तरं कथयितुं प्रथमं तत्त्वक्षणां कथ्यते ।

चक्रार्धेऽर्कशशियुतौ भिन्नायनयोरपक्रमसमत्वे ।

रविशशिनोः सममधुघृतयोगाद्विषदो व्यतीपातः ॥ ३३ ॥

सु. भा.—अर्कशशियुतौ चक्रार्धे राशिपट्टकेऽर्थात् राशिपट्टकामन्ते भिन्नायनयो रविशशिनोरपक्रमसमत्वे सममधुघृतयोगाद्विषदो व्यतीपातो भवति । यथा सममधुघृतयोगेन विषदः पदार्थं विशेष उत्पद्यते तथा रविशशिनोः क्रान्तिमास्येन जगति विषदोऽनिष्ट फलदो व्यतीपातो विशेषेणात्यन्तं शुभफलं पानयति विनाशयतीति योगविशेष उत्पद्यते ॥ ३३ ॥

वि. भा.—रविचन्द्रयोर्योगे चक्रार्धे (राशिपट्टके) भिन्नायनस्थयोऽन्त्ययोगपक्रमसमत्वे (क्रान्तिसाम्ये) सममधुघृतयोगाद्विषदो व्यतीपातो भवति । यथा सममधुघृतयोगेन विषदः पदार्थं उत्पद्यते तथैव रविचन्द्रयोः क्रान्तिसाम्येन संमारे विषदोऽनिष्टफलदो व्यतीपातो भवति । विशेषेणात्यन्तं शुभफलं पानयति नाशयति इति व्यतीपातो नाम योगविशेष इति । यद्यप्यस्य लक्षणादिकं प्रस्ताध्याय एव पूर्वं मया प्रतिपादितं तथाप्यत्र कथ्यते । अत्रोपपत्तिः—रविचन्द्रयोर्योगः षड्राशितुल्यस्ती भिन्नायनस्थावेकगोलस्थौ च भवतः यथा यद्येकः = १ रा, तदा परः = ५ रा, एवं द्वयोः प्रमाणे षड्राशितुल्ये योगे १ । ५ ॥ २ । ४ ॥ ३ । ३ ॥ ४ । २ अत्र द्वयोर्भुजयोरुत्पत्त्यात् तयोः स्थानीये क्रान्तिसमये अतोऽत्र व्यतीपात इति, सिद्धान्त शेखरे "भवनदलसमासे क्रान्तिसाम्ये रविचन्द्रोर्नियतमयनभेदे गोलयोर्दिक् समत्वे । दिनमणिमणिनीलात् सोमसूर्याश्मयोगादपि दहन इवाशु स्याद् व्यतीपातनामा ॥"

अनेन श्रीपतिना सूर्यसिद्धान्ते “विपरीतायनगतौ चन्द्रार्कौ क्रान्ति लिप्तिकाः । समास्तदा व्यतीपातो भगणार्धं तयोर्युतौ ॥” अनेन, सूर्य सिद्धान्तकारेणापि तदेव कथ्यते । सूर्य सिद्धान्ते तन्मङ्गलनाशने हेतुमाह ।

“तुल्यांशुजालसम्पर्कात् तयोस्तु प्रवहाहतः ।

तदृक् क्रोधभवो वह्निर्लोकाभावाय जायते ॥”

तयोः क्रान्तिसाम्यकालिकयो रविचन्द्रयोस्तुल्यकिरणजालसंयोगात् तयो-
मिथो दृष्टिभ्यां क्रोधभवो वह्निः (अग्निः) प्रवहवायुनाऽऽहतो लोकानां विनाशाय
जायत इति ॥ ३३ ॥

व्यतीपात के आदि और अन्त को जानने वाले के लिए अब पहले व्यतीपात
का लक्षण कहते हैं ।

हि. भा.—रवि और चन्द्र का योग छः राशि होने से दोनों भिन्न अयन में होते हैं और एक गोल में, वहाँ दोनों के प्रमाण = १ । ५ ॥ २ । ४ ॥ ३ । ३ ॥ ४ । २ यहां दोनों के भुज बराबर होने से स्थानीय क्रान्ति बराबर है इसलिये व्यतीपात सम्भव है । मङ्गल कार्य को विशेष रूप से नाश करता है इसलिये इसका नाम व्यतीपात है । जैसे समान मधु और घृत के संयोग से विषद पदार्थ उत्पन्न होता है वैसे ही रवि और चन्द्र के क्रान्ति साम्य से व्यतीपात संसार में विषद (अनिष्टफलद) होता है । यद्यपि इसके लक्षण आदि सब कुछ पहले ही (प्रश्नाध्याय में) हम लिख चुके हैं तथापि तहाँ प्रश्नोत्तरार्थ के लिये पुनः लिखते हैं । उपर्युक्त क्रान्ति साम्य दिखाना ही उपपत्ति भी है । सिद्धान्त शेखर में ‘भवनदलसमासे क्रान्ति-साम्ये रवीन्द्रोः’ इत्यादि संस्कृतोपपत्ति में लिखित श्लोक से श्रीपति ने भी आचार्योक्त के अनुरूप ही कहा है । सूर्य सिद्धान्त में भी ‘विपरीतायनगतौ चन्द्रार्कौ क्रान्तिलिप्तिका’ इत्यादि से सूर्य सिद्धान्तकार तथा सिद्धान्त शिरोमणि में ‘व्यतीपातोऽयनभेदे गौलैकत्वे ऽर्कचन्द्रयोः क्रान्तयोः’ इत्यादि से भास्कराचार्य ने भी आचार्योक्त के अनुरूप ही कहा है । उसके मङ्गलनाश में कारण को सूर्य सिद्धान्त में इस तरह कहा गया है ‘तुल्यांशुजालसम्पर्कात्-योस्तु प्रवहाहतः’ इत्यादि संस्कृतोपपत्ति में लिखित श्लोक से इसका तात्पर्य यह है कि क्रान्ति साम्य कालिक रवि और चन्द्र के तुल्य किरण समूह के संयोग से दोनों की परस्पर दृष्टि से क्रोधोत्पन्न अग्नि प्रवह वायु से प्रेरित होकर लोगों के विनाश के लिये होती है इति ॥ ३३ ॥

इदानीं वैधृतलक्षणमाह ।

चक्रे वैधृतमेकायनस्थयोः क्रान्तिजीवयोः साम्ये ।

इन्धनरविमणियोगादग्निवद्भूनाधिककलाम्यः ॥ ३४ ॥

सु. भा.—एवं रविशशियुतो चक्रे राशिद्वादशकेऽर्धाद्राशिद्वादशकामन्त्रे एकायनस्थयो रविशशिनोः क्रान्तिजीवयोः साम्ये चेन्धनरविमग्नियोगादग्निवद्वैधृतं भवति । यथा रविमग्नियोगतो दूरस्थेऽपीन्धनेऽग्निरुत्पद्यते तथा रविनो दूरेऽपि शशिनि क्रान्तयोः साम्यादग्निवद्वैधृतमुत्पद्यत इति । ऊनाधिककलाभ्य इत्यस्याग्रं सम्बन्ध इति ॥ ३४ ॥

वि. भा.—रविचन्द्रयोर्योगे राशिद्वादशके एकायनस्थयो रविचन्द्रयोः क्रान्तिजीवयोस्तुल्ये चेन्धनरविमग्नियोगादग्निवद्वैधृतं भवति । रविमग्नियोगतो दूरस्थेऽपीन्धने यथाऽग्निरुत्पद्यते तथा रविनो दूरस्थेऽपि चन्द्रे क्रान्तिमाभ्यार्द्राग्निवद्वैधृतमुत्पद्यत इति । ऊनाधिक कलाभ्य इत्यस्याग्रं सम्बन्धः ।

अत्रोपपत्तिः ।

यदा रविचन्द्रयोर्योगो द्वादश राशिसमस्तदा तौ भिन्नगोलग्रावेकायनगती स्याताम् । यथा यद्येकः = १ रा, तदा परः = ११ रा, एवंनयो. २ । १० ॥ ३ । १ ॥ ४ । ८ ॥ ५ । ७ ॥ ६ । ६ ॥ ७ । ५ अत्र भुजयोर्मूल्यत्वाद्वाक्रान्तिगमा चन्द्रस्थानीयक्रान्तिर्भवितुमर्हन्त्यतोऽस्य नाम वैधृतयोगः । विमग्नयोग मङ्गल ध्रियते अवरोध्यत इति विधृतः । विधृत एव वैधृतः । सूर्यमग्नद्वान्ते “एकायन गतो म्यानां सूर्याचन्द्रमसो यदा । तद्युतौ मण्डले क्रान्त्योस्तुल्यत्वे वैधृताह्वयः” सिद्धान्तशेखरे “अयन कृत समत्वे गोलयोर्भिन्नदिक्त्वेदिनकर शशियोगे नक्रतुन्ये च जाते । तदपम-समतायां मङ्गलोन्मूलनार्थं विपमिव मधुसर्पिसाम्यतो वैधृतः स्यात् ॥ श्रीपत्यक्तमिदं चाचार्योक्तसदृशमेवेति । अस्य लक्षणादिकं पूर्वमेव प्रश्नाध्याये मया लिखितं अत्रैतत्सम्बन्धे प्रश्नस्तदुत्तरमप्यस्त्यतोऽत्रापि लिखितमिति ॥ ३४ ॥

अब वैधृत के लक्षण को कहते हैं ।

हि. भा.—रवि और चन्द्र के योग बारह राशि के बराबर होने के कारण दोनों के एक अयन में स्थित होने पर दोनों की क्रान्तिज्या के तुल्य होने से रविमग्नियोग में दूरस्थ मकरी रहने पर भी जैसे अग्नि की उत्पत्ति होती है वैसे ही रवि में चन्द्र के दूर रहने पर भी क्रान्ति साम्य से अग्निवद् वैधृतोत्पत्ति होती है इति ॥ ३३ ॥

उपपत्तिः ।

जब रवि और चन्द्र का योग बारह राशि के बराबर होता है तो दोनों भिन्न गोल में और एक अयन में होते हैं जैसे यदि एक = १ रा, है तो दूसरा ११ रा, इस तरह दोनों का प्रमाण = २ । १० ॥ ३ । ६ ॥ ४ । ५ ॥ ५ । ७ ॥ ६ । ६ ॥ ७ । ५ यहाँ दोनों के भुज बराबर होने के कारण रवि क्रान्ति के बराबर चन्द्र की स्थानीय क्रान्ति होती है इसलिये इसका

नाम वैधृत योग है। मङ्गल कार्य को विशेषरूप से रोकता है इसलिये इसका नाम वैधृत पड़ा। सूर्यसिद्धान्त और सिद्धान्त शेखर सिद्धान्त शिरोमणि आदि ग्रन्थों में भी इसी तरह कहा गया है। इसके लक्षणादि पहले प्रश्नाध्याय में लिख चुके हैं। यहां इसके सम्बन्ध में प्रश्न और उसका उत्तर आचार्य ने लिखा है इसलिये यहां हमने भी लिखा है इति ॥ ३४ ॥

इदानीं रविचन्द्रयोश्चक्रचक्रार्धतुल्ययोगकाले रविचन्द्रपातानामानयनमाह ।

भुजैक्यलब्धदिवसैरवीन्दुपाता युतोनकाः स्वफलैः ।

अर्कक्रान्तिज्या धनुरिन्दोर्विक्षेपयुक्तोनम् ॥३५॥

सु. भा.—यदा रविशशियोगो भार्वाच्चक्राच्च न्यूनो वाधिको भवति । तदा न्यूनाधिककलाभ्यो भुतचैक्येन रविशशियोगेन ये लब्धा दिवसास्तैः स्वफलैः स्वचालनफलैर्न्यूने रवीन्दुपाता युता अधिके चोनाश्चक्रार्ध कालिका वा चक्रकालिका रवीन्दुपाता भवन्ति । ततस्तात्कालिकार्क क्रान्तिज्याधनुरर्क क्रान्तिर्भवति । इन्दोः क्रान्तिज्याधनुस्तद्विक्षेपयुक्तोर्न दिगैक्ये युतं दिग्भेदे हीनमेवं तत्क्रान्तिर्भवति ॥ ३५ ॥

वि. भा.—रविचन्द्रयोर्योगो यदा षड्राशिभ्यो द्वादशराशिभ्यश्च न्यूनोऽधिको वा भवेत्तदा न्यूनाधिककलाभ्यो रविचन्द्रगतियोगेन वा (रविचन्द्रयोरगति योगेनैकं दिनं लभ्यते तदा न्यूनाधिककलाभ्यः किमिति) नेनानुपातेन ये दिवसा समागच्छेयुस्तैः स्वचालनफलैर्न्यूने रवीन्दुपाता युता अधिके च हीनास्तदा चक्रार्ध (षड्राशि) कालिकाश्चक्र (द्वादशराशि) कालिका वा रविचन्द्रपाता भवन्ति । ततस्तात्कालिक रविक्रान्तिज्या साध्या तच्चापं रविक्रान्तिर्भवेत् । चन्द्रक्रान्तिचापं तच्छर युक्तोर्न (दिक् साम्ये युतं दिग्भेदे हीनं) तदा तत्क्रान्तिर्भवेत् । सिद्धान्तशेखरे “तपनशशिसमासे चक्रचक्रार्धहीनाधिकतरकलिकास्तद्भुक्तियोगेन भक्ताः । फलमिह दिवसाद्यं स्यात् क्रियन्तेऽनुपातात् स्वफलयुतविहीनाः सूर्यशीतांशुपाताः” श्रीपत्युक्तमेवमेवास्तीति ॥ ३५ ॥

अब जिस समय रवि और चन्द्र का योग छः राशि और बारह राशि होता है उस काल में रवि-चन्द्र और पात के साधन करते हैं ।

हि. भा.—रवि और चन्द्र का योग छः राशि और बारह राशि से न्यून वा अधिक हो तब न्यूनाधिक कलाओं से और दोनों के गतियोग से (रवि और चन्द्र के गति योग से एक दिन पाते हैं तो न्यूनाधिक कला में क्या) इस अनुपात से जो लब्ध दिन हो उन अपने चालन फलों से न्यून में रवि-चन्द्र और पात में जोड़ना अधिक में हीन करना तब चक्रार्ध कालिक रवि चन्द्र और पात होते हैं । इस रवि से उनकी तात्कालिक क्रान्तिज्या साधव

करना उस का चाप रवि की तात्कालिक क्रान्ति होती है । एवं चन्द्र क्रान्ति चाप में उमके
 शर को युक्त और हीन (दिक् साम्य में युक्त और दिग्भेद में हीन) करने में उन की क्रान्ति
 होती है । सिद्धान्तशेखर में 'तत्र तदगणितसाम्ये चरुचक्रार्थहीनान्तरात् रविः' इत्यादि श्रीपति
 प्रकार आचार्योक्त प्रकार के मट्टन ही है । श्रीपति ने केवल रवि और चन्द्र की क्रान्ति
 की चर्चा नहीं की है आचार्य ने रवि और चन्द्र की क्रान्ति के माधन भी किये हैं (पृ. १३५)।

इदानीं पानस्य भावाभावमाह ।

त्रिनवगृहेन्दुक्रान्तिर्मेघतुलादौ दिवाकरक्रान्तेः ।

अब चन्द्र के शर रहने में विशेष कानन है ।

हि. भा.—रवि और चन्द्र के क्रान्ति के दिक्मास्य में व्यतिपात योग होता है ।
दिग्भेद में वैधृत योग होता है, ‘व्यति पातोऽप्यन भेदे गोलैकत्वे’ इत्यादि भास्करोक्त इसके
अनुरूप ही है । यदि चन्द्र की क्रान्ति दिग्भेद में उत्पन्न हो अर्थात् चन्द्र की स्थानीय क्रान्ति
ही दिग्भेद में चन्द्रशर में घटे तब यदि चन्द्र की क्रान्ति रवि क्रान्ति में न्यून हो तब न्यून
ठीक है, लेकिन तब यदि चन्द्र क्रान्ति रवि क्रान्ति में अधिक हो तब भी न्यून ही कल्पना
करना उस के क्षयत्व के कारण ; सिद्धान्त शेखर में ‘नयति शशिशरश्चेत् रवां दिशं क्रान्ति-
चापं’ इत्यादि विज्ञान भाष्य में लिखित श्रीपति कथित विषय आचार्योक्त के अनुरूप ही है
शिष्य धीवृद्धिदतन्त्र में ‘कल्प्योऽधिकोऽप्यूनक एव चान्द्रः इत्यादि’ लल्लोक्त आचार्योक्त के
सदृश ही हैं इति ॥ ३७ ॥

अब पात के गतागतत्व को कहते हैं ।

हि. भा.—यदि चन्द्र की मेष तुलादिस्थ (विषम पदीय) क्रान्ति रवि क्रान्ति से
न्यून हो तब पात एष्य होता है, यदि अधिक हो तो पात व्यतीत (गत) होता है । कर्क
मकरादि (समपद) में चन्द्र क्रान्ति रहने से विपरीत जानना चाहिये अर्थात् ऊन में गत और
अधिक में एष्य होता है इति ॥३८॥

उपपत्ति ।

यदि यहां गोलायन सन्ध्यन्त पद ग्रहण करते हैं तब गोलयुक्ति से गतागत सम्भव
ठीक होता है क्योंकि तब ही विषम पदस्थ चन्द्र क्रान्ति के न्यून रहने पर आगे चालन से
रवि क्रान्ति के बराबर चन्द्रक्रान्ति होगी, समपद में पीछे से चालन करने से रविक्रान्ति
के बराबर चन्द्र क्रान्ति होती है । विषम पद में आगे क्रान्ति बढ़ती है । सम पद में पीछे से
क्रान्ति बढ़ती है । जहां दक्षिण क्रान्ति का अभाव होता है वहां प्रथम गोल सन्धि है । उसके
बाद परम उत्तर स्पष्ट क्रान्ति पर्यन्त प्रथम विषम पद है । प्रथम विषम पदान्त ही को
प्रथमायन सन्धि कहते हैं । वहां से स्पष्टक्रान्त्यभाव पर्यन्त प्रथम सम पद है । प्रथम सम-
पदान्त द्वितीय गोल सन्धि है । वहां से परम दक्षिण स्पष्ट क्रान्ति पर्यन्त द्वितीय विषम पद
है । उसका पदान्त द्वितीय विषम सन्धि कहती जाती है । वहां से दक्षिण स्पष्टक्रान्त्यभाव
पर्यन्त द्वितीय समपद है । यहां आचार्य ने यद्यपि रवि और चन्द्र का गोलायन सन्ध्यानयन नहीं

किया है तथापि गणित स्कन्ध में उसका ज्ञान करने में आसानी करना ही चाहिए। यदि चन्द्र की स्थानीय क्रान्ति घर में से घट जाय अर्थात् जहाँ स्थान क्रान्ति और घरों अन्तर में स्पष्ट क्रान्ति होती है। तब यदि घर ही में चन्द्र की स्थान क्रान्ति विद्यमान हो तब अपचय और स्पष्ट क्रान्ति के विभेदसे स्थानीय चन्द्र पद में परागत्य समझना चाहिए। स्थान क्रान्ति के उपचय में स्फुट क्रान्ति का अपचय, स्थान क्रान्ति के अपचय में स्पष्ट क्रान्ति का उपचय इसलिये उपचय अपचय के भेद में स्थानीय पद में चन्द्र विम्ब परागत्य होता ही है। स्थान पद सम में रहने से विम्ब पद विषम में होगा। यहाँ चन्द्र को चक्र विचार करने है। विषम पद में चन्द्र क्रान्ति उपमित होती है। जैसे जैसे ग्रह आगे जाते हैं वैसे वैसे उसकी क्रान्ति विषम पद में बढ़ती है। प्रथम पद और तृतीय पद की गोन मान्य ही आदि है। उभयों आगे तीन राशि पर क्रान्ति का परमत्व होता है। उभयों विषम पद में जैसे जैसे ग्रह आगे जाते हैं वैसे वैसे क्रान्ति बढ़ती है। तीन राशि के बाद द्वितीय गोन मान्य परम पद है। इसमें जैसे जैसे ग्रह आगे जाते हैं वैसे वैसे क्रान्ति बढ़ती है। जो चतुर्थ पद भी। इसलिये विषम पद में स्थित चन्द्र की क्रान्ति यदि रवि क्रान्ति में बड़ी होती है तब आगे चन्द्र को चालन करने में चन्द्र की क्रान्ति अधिक बड़ी होती है। जैसे जैसे पीछे चन्द्र को चालित करते हैं चन्द्र की क्रान्ति ऊन ही होती है। उभयों इस रवि क्रान्ति के साथ साम्य गत ही कहा जायगा। सम पद में चन्द्र क्रान्ति यदि रवि क्रान्ति में छोटी हो तब पीछे चालित चन्द्र की क्रान्ति बड़ी होती है। इसलिये बड़ी रवि क्रान्ति के साथ साम्य गत ही होता है। इन लक्षणों से भिन्न में क्रान्ति साम्य एव्य होता है। इसलिये गत-गम्य लक्षण ठीक है। रवि और चन्द्र का गोनायन सन्ध्यायन भास्कराचार्य ने किया है, रवि गोलायन सन्धि ज्ञान भास्करोक्त ठीक नहीं है। चन्द्रगोन सन्धि के लिये विचार करने हैं। यहाँ संस्कृतोपपत्ति में लिखित (क) क्षेत्र को देखिये। नमः नादीवृत्त। पास्थानमे = क्रान्तिवृत्त। पान = विमण्डल। मेमस्थापा = चन्द्रपान। < स्थानमे = परमक्रान्ति = प। < स्थापान = चन्द्रपरमघर = श। < पानमे = १८० - चन्द्रपरमक्रान्ति। संस्थापा = अयनांशोनितपात = पा। तब 'त्रिज्या गुणाद्वरणि' कोटिगुणान् इत्यादि से त्रि^१ कोज्याचंपकां—त्रि. कोज्याप. कोज्याश

ज्याप. ज्याश = कोज्यापा

∴ कोज्याचंपकां = त्रि. कोज्याप. कोज्याश—ज्याप. कोज्यापा. ज्याश

त्रि. कोज्याप. कोज्याश ज्याप. कोज्यापा. ज्याश

यहाँ मकरादिचन्द्र में अयनांश पाल रहने से उसकी कोटिज्या घन अन्यथा ऋण समझना चाहिये। प्राचीन कोज्या चंपकां इसके चाप को नब्बे में घटाने से चन्द्र की परम क्रान्ति होती है। संपान त्रिभुज में न बिन्दु से क्रान्ति-वृत्त के ऊपर नस्था लम्ब करने से स्था = चन्द्रगोल सन्धि। तब कोशानुपात से ज्यानसे = ज्यापा. ज्याश, नसं के बराबर भुजांश में विषुवांश = संस्था, यहाँ में मेघादिते क्रमगणना

ज्याचंपकां

सै सं पर्यन्त रवि गोल सन्धि है । मेषादि छः राशि में व्ययनाशोनिता पात के रहने से रवि गोल सन्धि में सस्या चाप को घटाने से अन्यथा जोड़ने से चन्द्रगोल सन्धि होती है । इस से 'परेषु जीवा व्ययनांशपातकोटिज्यकाधनी' इत्यादि संशोधकोक्त उपपन्न होता है । सूर्य-सिद्धान्त में "अथौजपदगस्येन्दोः क्रान्तिर्विक्षेपसंस्कृता । यदि स्यादधिका भानोः क्रान्तेः पातो गतस्तदा ॥ ऊना चेत्स्यात् तदा भावी वाम युग्मपदस्य च । पदान्यत्व विधोः क्रान्तिर्विक्षे-पाच्चेद्विशुध्यति ॥" इति सूर्य सिद्धान्तकारोक्त, शिष्यधीवृद्धिदत्तत्रे "अयुग्मजश्चान्द्रमसो-ऽपमश्चेदपक्रमाद् भानुमतोऽधिकः स्यात् । समोद्भवो वापि लघुस्तदेतो निपातकालो भविता ज्यथास्तः" यह लल्लोक्त, सिद्धान्त शिरोमणि में 'ओज पदेन्दुक्रान्तिर्महनी' इत्यादि भास्करोक्त ये सब एक रूप ही है । भास्कराचार्य आदि प्राचीनाचार्य चन्द्रगोल सन्धि साधन कर उसमें तीन राशि (नवत्यश) जोड़कर चन्द्रायन सन्धि कहते हैं । नाडीवृत्त और विमराडल के सम्पातोपरिगत कदम्बप्रोतवृत्त क्रान्तिवृत्त का सपात बिन्दु चन्द्र गोल सन्धि है । नाडी-वृत्त और विमण्डल के सपात को केन्द्र मानकर नवत्यश से जो वृत्त होता है वह क्रान्तिवृत्त में जहां लगता है वह बिन्दु प्राचीनायन सन्धि है क्योंकि चन्द्रगोल सन्धि में नवत्यश जोड़ने से वही बिन्दु होता है, चन्द्रगोल सन्धि से वह बिन्दु नवत्यशान्तर पर है । परन्तु वह नवत्य-शोत्पन्न वृत्त क्रान्ति वृत्त के ऊपर लम्ब नहीं है इसीलिये वह वास्तव चन्द्रायनसन्धि बिन्दु नहीं हो सकता है । नवत्यशोत्पन्नवृत्त नाडीवृत्त में जहां लगता है तदुपरि गत कदम्ब प्रोतवृत्त क्रान्तिवृत्त का सम्पात बिन्दु वास्तव चन्द्रायन सन्धि बिन्दु है, अतः प्राचीनोक्त चन्द्रायन सन्धि सर्वथा युक्ति शून्य है इति ॥ ३८ ॥

अब जिस काल में रवि और चन्द्र का योग छः राशि होता है उस काल से गत
और गम्य क्रान्ति साम्य काल ज्ञान के लिये कहते हैं ।

हि. भा.—रविक्रान्ति और चन्द्र क्रान्ति भिन्न दिशा की रहें तो दोनों का योग, एक
दिशा में दोनों के योग का अन्तर व्यतीपात योग में प्रथम राशि संज्ञक होता है । एक दिशा
में दोनों क्रान्ति का योग, भिन्न दिशा में अन्तर वैधृत पात में प्रथम राशि है । इस तरह
इष्ट घटी से प्राप्त फल से युत और हीन से द्वितीय राशि साधन करना अर्थात् कोई इष्ट

घटी कल्पना कर उस से चन्द्र-रवि-पात की गतियों को गुणा कर साठ से भाग देकर जो कलादि लब्ध हो गत-गम्य पात काल में उस कलादि फल-को रवि-चन्द्र और पात में घन ऋण कर कर के तब उस काल में भी रवि और चन्द्र की क्रान्ति लाकर पूर्ववत् द्वितीय राशि साधन करना । यदि राशि (प्रथम राशि और द्वितीय राशि) एष्य (भावि) वा गत हो तब दोनों के अन्तर अन्यथा अर्थात् उन दोनों राशियों में एक गत हो और अन्य एष्य हो तो दोनों का योग छेद (हर) होता है । किस का हर होता है सो कहते हैं । इष्ट घटिका और प्रथम राशि के घात का हर होता है अर्थात् पूर्वकल्पित इष्टघटी गुणित प्रथमराशि का हर होता है । पूर्वकल्पित इष्टघटीगुणित प्रथमराशि को छेद- (हर) से भाग देने से लब्ध फल घटी कर के पात मध्य होता है । प्रथम राशिवश से गत और भविष्य पात मध्य समझना चाहिये ॥ सिद्धान्त शेखर में 'क्रान्त्योर्योगो विसदृश दिशोरन्तरं' इत्यादि श्रीप-त्युक्त सब कुछ आचार्यों के अनुरूप ही है । सिद्धान्त शिरोमणि में 'तत्क्रान्त्योरेकदिशोरन्तर मैक्यं' इत्यादि भास्करोक्त सब कुछ श्रीपत्युक्त के अनुरूप ही है । पाताधिकार में लल्ल-ब्रह्म-शुप्त-श्रीपति आदि आचार्यों के व्यतीपात और वैधृत के भावाभाव में गत गम्यत्व में भी बहुत व्यभिचार होता है ये बातें बहुधा कही हैं, ये सब वहीं देखना चाहिये इति॥ ३९-४१ ॥

इदानीं पाताद्यन्तकालमाह ।

तात्कालिकैर्घ्रहैरसकृदिष्टघटिकाफलोनयुक्तैस्तैः ।

प्राग्वत्प्रथमश्छेदः प्रमाणयोगार्धलिप्तानाम् ॥ ४२ ॥

आचार्योक्तस्योपपत्तिः ।

यदा स्पष्टक्रान्त्यन्तरं मानैक्यार्धसमं तदा पातादिः पातान्तश्च बिम्बैक-
देशज क्रान्त्योः साम्यात् ततोऽनुपातो यदि छेदसमक्रान्त्यन्तरेणोष्ट घटिकास्तदा
मानैक्यार्धेन किं लब्धा असकृद्विधिना स्फुटा नाड्य इति ॥४२-४६ ॥

अब पाताद्यन्त काल को कहते हैं ।

हि. भा.—पूर्व कथित रीति के अनुसार इष्ट घटी फल से ऊन-युक्त रवि-चन्द्र और
राहु से असकृत् प्रकार से पातमध्यकाल होता है । पूर्ववत् प्रथम साधन करना, तथा छेद
साधन करना, इष्ट घटी से गुणित मानैक्यार्ध कला को प्रथम से भाग देने से जो फल घटी
हो उस से आदि और अन्त होता है अर्थात् पात मध्यकाल से पूर्व आदि और पात
मध्यकाल से आगे अन्त होता है । ब्राह्म सिद्धान्त (ब्राह्म स्फुट सिद्धान्त) से अन्य तन्त्रों में
व्यतिपात और वैधृत का आनयन नहीं है । सिद्धान्त शेखर में “स्थितिरभिमत नाडी ताडिते
मानयोगे प्रथमविभजिते” इत्यादि विज्ञान भाष्य में लिखित श्लोक भीपत्युक्त प्रकार है ।
सिद्धान्त शिरोमणि में ‘मानैक्यार्धं गुणितं स्पष्ट घटीभिर्विभक्तमाद्येन’ इत्यादि वि. भा. में
लिखित श्लोक भास्करोक्त है । भास्कराचार्य इस प्रसंग में ‘तावत्समत्वमेव क्रान्त्योर्विवरं
भवेत्तावद्’ इत्यादि-भी कहते हैं ।

उपपत्ति ।

जब स्पष्ट क्रान्त्यन्तर मानैक्यार्ध के समान होता है तब पातादि- बिम्ब के एक प्रदेश-

शीय क्रान्ति के साम्य (तुल्यता) से पातान्त होता है । तब अनुपात करते हैं यदि छेद तुल्य क्रान्त्यन्तर में इष्ट घटी पाते हैं तो मानैक्यार्ध में क्या लब्ध असकृत् विधि से स्फुट घटी होती है इति ॥ ४२-४३ ॥

इदानीं कियत्कालपर्यन्तं पातफलमित्याह ।

रवि बिम्बमेकमार्गाच्छशि बिम्बापक्रमे भवति यावत् ।

तावत्फलं तदुक्तं तदभावे तत्फलाभावः ॥ ४४ ॥

सु. भा.—एकमार्गादिकाहोरात्राद्यावच्छेषपक्रमे रविबिम्बं भवति । अर्थाद्यावत् क्रान्त्योर्विवरं मानैक्यार्धादल्पं भवति तावत्बिम्बैकदेशजक्रान्त्योः साम्यात् तत् फलमुक्तं महर्षिभिरतस्तदभावे तत्फलाभावो वेदितव्य इति । अतो यावत् क्रान्तिसाम्यं तावदेव तस्य फलं वाच्यं तेन यस्मिन् दिने पातस्तत् समयं दिनं न दुष्टमिति फलितम् ॥ ४४ ॥

वि. भा. — रविबिम्बं चन्द्रबिम्बस्य स्पष्टक्रान्तौ यावत्कालपर्यन्तमेकमार्गाद्भवत्यर्थाद्रविबिम्बं चन्द्रस्पष्टक्रान्त्या सह यावत्कालपर्यन्तं एकमार्गं (एकस्मिन्नहोरात्रवृत्ते) ऽर्थाद्यावत्क्रान्त्यन्तरं मानैक्यार्धादल्पं भवति तथा सति बिम्बैकदेशज क्रान्त्योः साम्यं भवतीत्यर्थः तावत्कालपर्यन्तं तत्फलं (पातसंज्ञातफलं) कथितं फलादेशकृद्भिर्मुनिभिः । तदभावेऽर्थाद्रविबिम्बस्य चन्द्रस्पष्ट क्रान्त्या सहैकमार्गावस्थानाभावे तत्फलस्याप्यभावो भवति ॥ सिद्धान्तशेखरे “भानोर्बिम्बं तुहिनकिरणापक्रमेणैकमार्गं यावत्तावन्मुनिभिर्दितः सम्भवस्तत्फलस्य । तस्याभावे भवति नियतं तत्फलस्याप्यभावो यत्रोद्वाहादिषु पुनरिह द्युत्रयं नैवदुष्टम् ॥” श्री पत्युक्तमिदमाचार्योक्तानुरूपमेव, केषुचित्फलग्रन्थेषु व्यतीपातवैधृतयोः सतोस्तद्दिनं तत्पूर्वदिनं परदिनं चेति दिनत्रयं माङ्गलिककार्ये निषिद्धमिति कैश्चिदुक्तं तत्परिहारार्थं श्रीपतिना कथ्यते द्युत्रयं नैवदुष्टमर्थात् पातस्थितिकाले यात्रोद्वाहादिषु मङ्गल कार्येषु द्युत्रयं (दिनत्रयं) दुष्टं नैवेति । सूर्यं सिद्धान्ते “आद्यन्तकालयोर्मध्यः कालो ज्ञेयोऽतिदारुणः । प्रज्वलज्ज्वलनाकारः सर्वकर्मसु गर्हितः ॥ एकायनगतं यावदकर्कन्दोर्मण्डलान्तरम् । सम्भवस्तावदेवास्य सर्वकर्म विनाशकृत् ॥ स्नानदानजपश्चाद्धव्रतहोमादिकर्मभिः । प्राप्यते सुमहच्छ्रेयस्तत्कालज्ञानतस्तथा ॥” एवं कथितं सूर्यसिद्धान्तकारेण, एतद्व्यारव्या—पातस्याद्यन्त कालयोर्मध्यः कालो यः सोऽतिदारुणः प्रज्वलद्गहनाकारः सर्वं कर्मसु निन्दितो ज्ञेयः । यावद्रविचन्द्रयोर्मराडलान्तरमेकायनगतमेकस्थानगतमर्थात्समानक्रान्त्युत्पादकं मराडलस्पर्शरूपं केन्द्राभिप्रायेण क्रान्त्यन्तरं मानैक्यार्धसमं तावदेवास्य सम्भवो बिम्बैकदेशज क्रान्त्योः साम्यात् । अयं कालः सर्वकर्म विनाशकारको ज्ञेयः । अत्र पातकाले स्नान-

दानजपश्राद्धव्रतहोमादिकर्मभिर्महत्कल्याणं प्राप्यते । तस्य पातस्य कालं ज्ञानतस्तथैवमहत्कल्याणं प्राप्यते गणकैरिति ॥ ४४ ॥

अब कितने काल तक पात होता है सो कहते हैं ।

हि. भा.—जब तक रविबिम्ब स्पष्टक्रान्ति के साथ एक मार्ग (एक ग्रहोरात्रवृत्त में) होता है अर्थात् जब तक क्रान्त्यन्तर मानैकवार्षिक से अल्प होता है उस स्थिति में बिम्ब के एक प्रदेश जनित क्रान्ति का साम्य (तुल्यता) होता है । तावत्काल पर्यन्त उसका फल (पात जनित फल) फलादेश कारक मुनियों से कथित है । उसके अभाव में अर्थात् चन्द्रबिम्ब स्पष्टक्रान्ति के साथ रविबिम्ब के एकमार्गावस्थानाभाव में उसके फल का भी अभाव होता है । सिद्धान्त शेखर में “भानोर्बिम्बं तुहिनकिरणापक्रमेणैकमार्गं” इत्यादि विज्ञान भाष्य में लिखित श्लोक से श्रीपति ने आचार्योक्त के अनुरूप ही कहा है । किन्ती-किसी फल ग्रन्थ में व्यतीपात और वैधृत योग में तीन दिनों (व्यतीपात वैधृत सम्भव दिन, उसमें पूर्व दिन और परदिन) को शुभ कार्यों में निषिद्ध कहा गया है उसके परिहार के लिये श्रीपति कहते हैं कि पातस्थिति काल में यात्रा-विवाह आदि मङ्गल कार्यों में तीन दिन दुष्ट नहीं है अर्थात् क्रान्ति साम्य ही तक उसका फल होता है । सूर्य सिद्धान्त में ‘आद्यन्तकालयोर्मध्यः कालो ज्ञेयोऽति दारुणः’ इत्यादि विज्ञान भाष्य में लिखित श्लोकों से इस तरह कहा गया है कि पात का आदि और अन्त का मध्य काल अति भयङ्कर और प्रज्वलित अग्नि के आकार का होता है सब शुभ कर्मों में निन्दित होता है । जब तक रवि और चन्द्र का मराडलान्तर एक स्थानगत होता है अर्थात् समान क्रान्तिजनक मराडल स्पर्शरूप (केन्द्राभिप्रायिक क्रान्त्यन्तर मानैकवार्षिक के बराबर) होता है तब ही तक इसका सम्भव होता है क्योंकि बिम्बिक देशज क्रान्ति बराबर है । यह काल सब कर्मों का विनाश कारक होता है । इस पात काल में स्नान-दान-जप-श्राद्ध-व्रत-होम आदि कर्मों से बहुत कल्याण प्राप्त होता है । उस पातकाल ज्ञान से गणकों को भी उसी तरह बहुत कल्याण प्राप्ति होती है क्योंकि लोगों के उस काल के आदेश गणक ही करते हैं इति ॥ ४४ ॥

इदानीं कक्षायां विशेषमाह ।

ग्रह कक्षयैव तुल्या कक्षया तन्मन्दपातानाम् ।

यस्मात् तस्मान्न पृथक् कक्षा कल्प्या खलोच्चाद्या ॥ ४५ ॥

सु. भा.—स्पष्टार्थम् । ‘ग्रहस्य कक्षैव हि तुङ्गपातयोः’ इत्यादि भास्करोक्त मेतदनुरूपमेव ॥ ४५ ॥

वि. भा.—यस्मात्कारणात् ग्रह कक्षया तुल्यैव ग्रहमन्दोच्चानां पातानां च कक्ष्याऽस्ति, तस्मात्कारणात् शीघ्रोच्चाद्या कक्षा पृथक् न कल्प्येति ॥ ‘ग्रहस्य कक्षैव हि तुङ्गपातयोरित्यादि’ भास्करोक्तमेतदनुरूपमेवास्तीति ॥ ४५ ॥

अब कक्षा में विशेष कहते हैं ।

हि. भा.—जिस हेतु से ग्रह कक्षा के बराबर ही उनके मन्दोच्च और पातों की कक्षा है इसलिये शीघ्रोच्चादि कक्षा पृथक् कल्पना नहीं की गई है इति ॥ ४५ ॥

इदानीं वक्ष्यमाणाध्यर्धार्धक भोग नक्षत्राणामानयने कारणमाह ।

पौलिशरोमकवासिष्ठसौरपैतामहेषु यत् प्रोक्तम् ।

तन्नक्षत्रानयनं नार्यभटोक्तं तदुक्तिरतः ॥ ४६ ॥

सु. भा.—पौलिशरोमकवासिष्ठसौरपैतामहेषु पंचसिद्धान्तेषु यन्नक्षत्रानयनं सूक्ष्मं प्रोक्तं तदार्यभटोक्तं नास्ति । अतस्तदुक्तिरुचिताऽस्ति । तन्नक्षत्रानयनमारम्भार्हमित्यर्थः ।

अत्र चतुर्वेदाचार्यः । 'पंचसिद्धान्तानुसारेण मयैतद्वक्ष्यमाणं तन्नक्षत्रानयनमुपनिबद्धयते स्वमनीषिकयेत्यर्थः' ॥ ४६ ॥

वि. भा.—पौलिश-रोमक-वासिष्ठ-सौर-पैतामहेषु सिद्धान्तेषु यन्नक्षत्रानयनं कथितं तदार्य भटोक्तं नास्ति अतस्तेषामुक्तिः समीचीनास्ति तस्मात्सूक्ष्मनक्षत्रानयनमारम्भकरणयोग्यमिति ॥ वासिष्ठः (वासिष्ठ सिद्धान्तः) सौरः (सूर्यसिद्धान्तः) पैतामहः (ब्राह्म सिद्धान्तः)

अब अर्धधार्धिक भोग नक्षत्रों के आनयन में कारण कहते हैं ।

हि. भा.—पौलिशसिद्धान्त-रोमकसिद्धान्त-वासिष्ठसिद्धान्त-सूर्यसिद्धान्त-ब्राह्मसिद्धान्त-इन सिद्धान्तों में जो नक्षत्रानयन कहे गये हैं वे आर्यभट कथित नक्षत्रानयन नहीं है, इसलिये उन सबों की उक्ति (कथन) उचित है अतः सूक्ष्मनक्षत्रानयन करना चाहिये इति ॥ ४६ ॥

इदानीमध्यर्धादीनां नक्षत्राणां संख्यामाह ।

अर्धधार्धानि भवन्ति षड् नक्षत्राण्युद्धर्धार्धानि ।

पञ्चदश समक्षेत्राण्यभिजिद् भोगो भवत्येकः ॥ ४७ ॥

सु. भा.—षट् नक्षत्राण्यर्धधार्धभोगानि सार्धैकभोगानि । षडुद्धर्धानि नक्षत्राण्यर्धान्यर्धभोगानि । पंचदश नक्षत्राणि समक्षेत्राण्येकभोगानि । एवं सप्तविंशति नक्षत्रेभ्योऽपरश्चैकोऽभिजिद्भोगो भवति वर्तत इति ॥ ४७ ॥

वि. भा.—षड् नक्षत्राण्यर्धधार्धान्यर्धार्धान्यर्धार्धयुक्तचन्द्रगतितुल्यभोगात्मकानि

$$\text{सर्वयोगकलाः} = २७ \text{ च ग}$$

चक्रकलाभ्यः शुद्धा सर्वयोगकला जाता अभिजिद्भोगकलास्तद्दिनगतिः = चक्र - २७ च ग । इयं कल्पकुदिनगुणाश्चक्रकलाभक्ता जाता । कल्पेऽभिजितो भगणाः = ककु - २७ कचभ । शेषोपपत्तिर्भास्करसूक्ष्मनक्षत्रायन विधिनास्फुटा ॥ ५०-५२ ॥

वि. भा.—शशिनः (चन्द्रस्य) मध्यगतिकला अर्धवर्षिक (३, १, १) गुणास्तदाऽध्यर्धसमनक्षत्राणां भोगकलाः स्युः । तदैक्योनाः (तेषां कथितानां सर्वेषां नक्षत्राणां ये भोगास्तै रहिता मण्डललिप्ताः (भगणकलाः २१६००) कार्याः शेषोऽभिजितो भोगो भवेत् । वा शशाङ्कभगणाः (कल्प चन्द्रभगणाः) त्रिघनगुणाः (सप्त विंशत्या गुणाः) कल्पदिनेभ्यः (कल्पकुदिनेभ्यः) संशोध्याः शेषमभिजितः कल्पभगणाः स्युः । तद्भगणैर्यो दिनभोगः (यदि कल्पकुदिनैरभिजितः कल्पभगणा लभ्यन्ते तदैकेन दिनेन किमित्यनुपातेन समागता कलात्मिका दिनगतिः) सोऽभिजितो भोगो भवेत् । ग्रहभुक्तकला भोगलिप्तोनाः (ग्रहकलासमूहान्नक्षत्रभोगकला विशोध्याः) तदा भानि भवन्ति । ग्रहभुक्तकलाभ्यो यावतां नक्षत्राणां भोगकलाः शुद्धा भवन्ति तावन्ति गत नक्षत्राणि, शेषाः कला वर्तमाननक्षत्रस्य गतकलास्तास्तद्भोगकलाभ्यः शुद्धास्तदा गम्यकला भवन्ति । तदा ग्रहगतिकलाभिरेकं दिनं लभ्यते तदा गतगम्यकलाभिः किमित्यनुपातेन गतगम्यदिनानि भवन्ति ॥ ५०-५२ ॥

अत्रोपपत्तिः ।

$$\text{षडध्यर्धभोगकलानामैक्यम्} = \frac{३ \text{ चंग}}{२} \times ६ = ३ \text{ चंग} \times ३ = ९ \text{ चंग}$$

$$\text{षडध्यर्धभोगकलानामैक्यम्} = \frac{\text{चंग}}{२} \times ६ = ३ \text{ चंग}$$

पञ्चदशैक भोगकलानामैकधम् = चंग × १५

सर्वेषां योगः = ९ चंग + ३ चंग + १५ चंग = २७ चंग = सर्वनक्षत्रभोगः
चक्रकलाभ्यः शुद्धाः सर्वनक्षत्रभोगसंख्यास्तदाभिजिद् भोगकलास्तद्दिनगतिः =
चक्र—२७ चंग ततः कल्पेऽभितो भगणाः = $\frac{(\text{चक्र}-२७ \text{ चंग}) \text{ ककुदि}}{\text{चक्रकला}}$

ककुदि—२७ कल्पचंभगण एतेनाचार्योक्तमुपपन्नम् । सिद्धान्त शेखरे
“चक्राणि वा शशभृतस्त्रिघनाहतानि शोध्यानि भूदिनचयादवशेषचक्रैः । स्यादे-
कवासरभवा कलिकागतिर्या सा वैश्ववैष्णवभमध्यगधिष्य भुक्तिः ॥ इष्टग्रहस्य
कलिकानिकराद्विशोध्या नक्षत्रभोगकलिका ग्रहभुक्तभानि । शेषात्तु भोग्यकलिका
पतितात्तु गम्यं ताभ्यां भवन्ति गतगम्यदिनानि भुक्त्या ॥” इति श्रीपतेः पद्यद्वयं
“सर्वर्क्षभोगो नितचक्रलिप्ता वैश्वाग्रतः स्यादभिजिद्भभोग” इत्यादि भास्कोक्तं
च सर्वमाचार्योक्तस्य सर्वथैव समानार्थकमिति ॥ ५०-५२ ॥

अब अभिजित् नक्षत्र के भोगानयन और ग्रहभुक्त नक्षत्रानयन को कहते हैं ।

हि. भा.—चन्द्रमध्यगति कला को $\frac{३}{२}$, $\frac{१}{२}$, १ इन से गुणा करने से अर्धघ, अर्ध,
सम नक्षत्रों की भोग कला होती है । सब नक्षत्रों की जो भोग कला है उनको भगण कला
में से घटाने से जो शेष रहता है वह अभिजित् भोग है । वा कल्प चन्द्र भगण सत्ताइस से
गुणा कर कल्पकुदिन में से घटाने से शेष अभिजित् का कल्प भगण होता है, इन भगणों से
जो दिन भोग (कल्प कुदिन में यदि अभिजित् का कल्प भगण पाते हैं तो एक दिन में क्या इस
अनुपात से लब्ध कलात्मक दिनगति) होता है वह अभिजित् भोग होता है । ग्रहकलासमूह
में से नक्षत्र भोग कला को घटाने से नक्षत्र होते हैं, अर्थात् ग्रहभुक्त कला में जितने नक्षत्रों की
भोग कला शुद्ध हो उतने गतनक्षत्र होते हैं, शेषकला वर्तमान नक्षत्र की गत कला है उसको
नक्षत्र भोग कला में से घटाने से गम्य कला होती है । तब ग्रहगति कला में एक दिन पाते हैं
तो गत-गम्य कला में से क्या इस अनुपात से गतदिन और गम्यदिन होते हैं ॥ ५०—५२ ॥

उपपत्ति ।

छः अर्धघ भोगकला नक्षत्रों का ऐक्य = $\frac{३ \text{ चंग}}{२} \times ६ = ३ \text{ चंग} \times ३ = ९ \text{ चंग}$

छः अर्धभोग कला नक्षत्रों का ऐक्य = $\frac{\text{चंग}}{२} \times ६ = \text{चंग} \times ३$

पन्द्रह एक भोग (समान भोग) कलानक्षत्रों का ऐक्य = चंग × १५

सबों का योग = सर्वनक्षत्र भोग कला = ९ चंग + ३ चंग + १५ चंग = २७ चंग

इसको चक्र कला में से घटाने से शेष अभिजित् भोगकला = चक्र — २७ चंग, तब अनुपात से कल्प में अभिजित् का भगण = $\frac{(\text{चक्र} - २७ \text{ चंग}) \text{ ककुदि}}{\text{चक्र}} = \text{ककुदि} - २७ \times \text{कल्पचंभगण}$

इससे आचार्योक्त उपपन्न हुआ । सिद्धान्त शेखर में 'चक्राणि वा गजभूतस्त्रिघना हृतानि' इत्यादि 'इष्टग्रहस्य कलिकानिकराद्विशोष्या' इत्यादि विज्ञान भाष्य में लिखित श्रौपत्युक्त पद्य द्वय तथा 'सर्वर्क्षभोगोनितचक्रलिप्तावैश्वाग्रतः' इत्यादि भास्करोक्त भी सर्वथा आचार्योक्त के समानार्थक है इति ॥ ५०-५२ ॥

इदानीं यैरभिजिद्भोगो न कथितस्तान् दूषयति ।

भफलं प्रोक्तमभिजितो मङ्गलयात्रासु संहिताकारैः ।

यैस्तद्भोगो नोक्तस्ते गणकाः संहिता बाह्याः ॥ ५३ ॥

सु० भा०—स्पष्टार्थम् ॥ ५३ ॥

वि. भा.—मङ्गलकार्ये यात्रासु च संहिताकारैरभिजिन्नक्षत्रफलं कथितमस्ति । यैर्गणकैस्तद् भोगो न कथितस्ते (गणकाः) संहिताबाह्याः (संहिताऽनभिज्ञाः) सन्तीति ॥ ५३ ॥

हि. भा.—मङ्गल कार्य में यात्राओं में संहिताकार ने अभिजित् नक्षत्र के फल कहे हैं । जिन गणकों ने अभिजित् नक्षत्र के भोग को नहीं कहा है वे संहिता शास्त्र से बाहर हैं अर्थात् संहिता शास्त्र को नहीं जानते हैं इति ॥ ५३ ॥

इदानीमार्यभटं दूषयति ।

अध्यर्धादिक्षेत्राणि संहितास्वभिहितानि गर्गाद्यैः ।

यस्मादुद्धूनि तस्मान्नार्यभटोक्तं तदानयनम् ॥ ५४ ॥

सु. भा.—यस्माद् गर्गाद्यैः स्वसंहितास्वध्यर्धाधिसमक्षेत्राण्युद्धून्यभिहितानि तस्मादिदं सूक्ष्मनक्षत्रानयनमेव समीचीनमत आर्यभटोक्तं तदानयनं स्थूलनक्षत्रानयनं न समीचीनमित्यध्याहार्यम् ॥ ५४ ॥

वि. भा.—यस्मात् कारणात् गर्गाद्यैराचार्यैः स्वसंहितासु-अध्यर्धाधिसम-क्षेत्राण्युद्धूनि कथितानि तस्मात् इदं सूक्ष्मनक्षत्रानयनमेव युक्तियुक्तम् अत आर्य-भटोक्तं स्थूलनक्षत्रानयनं न समीचीनमिति ॥ ५४ ॥

अब आर्य भटोक्त मे दोष दिखाते हैं ।

हि. भा.—जैसा कि गर्गादि आचार्यों ने अध्यर्ध-अर्ध-सम नक्षत्रों को कहा है यह सूक्ष्म नक्षत्रानयन ही समीचीन है, आर्य भटोक्त स्थूल नक्षत्रानयन ठीक नहीं है इति ॥५४॥

इदानीमध्यायोपसंहारमाह ।

आर्याणां पञ्चाशच्चतुर्भिरधिका चतुर्दशोऽध्यायः ।

स्फुटगत्युत्तरमन्यान् दिशाऽनयाऽभ्युपगमेत् प्रश्नान् ॥ ५५ ॥

सु. भा.—अनया दिशाऽनेन पूर्वप्रतिपादितमार्गेणान्यान् प्रश्नान् गणको-
ऽभ्युपगमेज्जानीयादिति । शेषं स्पष्टार्थम् ॥ ५५ ॥

मधुसूदन सूनुनोदितो यस्तिलकं श्रीपृथुनेह जिष्णुजोक्ते ।

॥ ५४ ॥

इति श्री ब्राह्मस्फुटसिद्धान्ते स्फुटगत्युत्तराध्यायश्चतुर्दशः समाप्तः ।

अब अध्याय के उपसंहार को कहते हैं ।

हि. भा.—चौवन आर्याओं से स्फुटगत्युत्तर नामक चौदहवां अध्याय है, इन पूर्व
कथित भाग से भिन्न अन्य प्रश्नों को भी गणक समझें इति ॥ ५५ ॥

इति ब्राह्मस्फुटसिद्धान्त में स्फुटगत्युत्तर नामक चौदहवां अध्याय समाप्त हुआ ।

ब्राह्मस्फुटसिद्धान्तः

त्रिप्रश्नोत्तराध्यायः

ब्राह्मस्फुटसिद्धान्तः

त्रिप्रश्नोत्तराध्यायः

अथ त्रिप्रश्नोत्तराध्यायः प्रारम्भ्यते । तत्र प्रथमं दिक् सम्बन्धि प्रश्नमाह ।

योऽङ्गः पूर्वापरयोस्तुल्यच्छायाङ्गुलाग्रयोर्बिन्दू ।

वीक्ष्य क्रान्त्यक्षांशैर्विना दिशो वेत्ति गणकः सः ॥ १ ॥

सु. भा.—यो दिवसस्य पूर्वापरकपालयोस्तुल्यच्छायाङ्गुलाग्रयोः । जल-समीकृतक्षितिगते वृत्ते पश्चिमकपाले केन्द्रस्थशङ्कोरछायाग्रं यत्र विंशति पूर्व-कपाले च यतो निः सरति तौ बिन्दू वीक्ष्य क्रान्त्यक्षांशैर्विना दिशः पूर्वापरादीन् वेत्ति स एव गणक इत्यहं मन्ये इति ॥ १ ॥

वि. भा.—यो दिनस्य पूर्वापरयोः (पूर्वपश्चिमकपालयोः) तुल्यच्छायाङ्गु-लाग्रयोः (जलेन समीकृते भूमिपृष्ठे मध्यान्हच्छायाऽधिकैः शङ्क्वङ्गुलैरेकं क्षितिजसंज्ञकं वृत्तं विलेख्यं तस्य केन्द्रे स्थापितस्य शङ्कोरछायाग्रं पूर्वकपालेपश्चि-मकपाले च यत्र स्पृशेत्) इति बिन्दू (बिन्दुद्वयं) दृष्ट्वा क्रान्त्यक्षांशैर्विना (क्रान्त्य-क्षांशज्ञानमन्तरा) दिशः (पूर्वापश्चिमादीन्) जानाति सः गणको (ज्योतिः शास्त्रज्ञः) ऽस्तीति ॥ १ ॥

अथ त्रिप्रश्नोत्तराध्याय प्रारम्भ किया जाता है ।

उसमें पहले दिशा सम्बन्धी प्रश्न को कहते हैं ।

हि. भा.—जो व्यक्ति दिन के पूर्वकपाल में और पश्चिम कपाल में तुल्य छायाङ्गु-लाग्र अर्थात् जल से समान की हुई भूमि में मध्यान्हच्छाया से अधिक शङ्क्वङ्गुल से एक क्षितिज संज्ञकवृत्त लिखकर उसके केन्द्र में स्थापित शङ्कु के छायाग्र (पूर्वकपाल में और पश्चिम कपाल में जहाँ स्पर्श करता है) बिन्दुद्वय को देखकर क्रान्ति और अक्षांश के बिना पूर्व-पश्चिमादि दिशाओं को जानते हैं वे ज्योतिःशास्त्रज्ञ हैं इति ॥ १ ॥

इदानीमन्यान् प्रश्नानाह ।

त्रिच्छायाग्रज्ञो यः क्रान्त्यक्षार्कविना दिशो भ्रमणम् ।

छायाग्रस्य दिनार्धच्छायां वा वेत्ति गणकः सः ॥ २ ॥

सु. भा.—यस्त्रिच्छायाग्रज्ञः क्रान्त्यक्षार्कविना दिशो वेत्ति । छायाग्रस्य भ्रमणं भाभ्रमरेखां वेत्ति । वा दिनार्धच्छायां मध्याह्नच्छायां वेत्ति स एव गणकः । एवमत्र प्रश्नत्रयम् ॥ २ ॥

वि. भा.—यस्त्रिकालिकच्छायाग्रपण्डितः क्रान्तिज्ञानं विना, अक्षांशज्ञानं विना रविज्ञानं विना दिशः (पूर्वपश्चिमादीन्) जानाति, छायाग्रस्य भ्रमणमर्थान् छायाभ्रमणं जानाति, वा मध्याह्नकालिकच्छायां जानाति सो गणकोऽस्तीति, अत्र प्रश्नत्रयमस्ति ॥ २ ॥

अब अन्य प्रश्नों को कहते हैं ।

हि. भा.—जो तीन कालिक छायाग्र के ज्ञाता क्रान्तिज्ञान विना, अक्षांशज्ञान विना और रविज्ञान विना पूर्व पश्चिम आदि दिशाओं को जानते हैं, छायाभ्रमण को जानते हैं । वा मध्याह्न कालिक छाया को जानते हैं वे ज्योतिःशास्त्र के पण्डित हैं । यहाँ तीन प्रश्न हैं ॥ २ ॥

इदानीमन्यान् प्रश्नानाह ।

यश्छायाग्रं दृष्ट्वा क्रान्त्यक्षज्ञो दिशो विजानाति ।

शङ्कुच्छायाभ्रमणे दिग्ज्ञो वा वेत्ति गणकः सः ॥ ३ ॥

सु. भा.—यः क्रान्त्यक्षज्ञश्छायाग्रमेकमेव दृष्ट्वा दिशो विजानाति । वा यो दिग्ज्ञः शङ्कुभ्रमणं वा छायाभ्रमणं वेत्ति स एव गणकः । एवमत्र प्रश्नत्रयम् ॥ ३ ॥

वि. भा.—यः क्रान्त्यक्षज्ञः केवलं छायाग्रं ज्ञात्वा दिशः (पूर्वपश्चिमादीन्) जानाति, वा यो दिग्ज्ञः (दिक्ज्ञाता) शङ्कुभ्रमणं छायाभ्रमणं वा जानाति सो गणकोऽस्तीति । अत्र प्रश्नत्रयमस्ति ॥ ३ ॥

अब अन्य प्रश्नों को कहते हैं ।

हि. भा.—जो क्रान्ति और अक्षांश के ज्ञाता केवल छायाग्र को जान कर दिशाओं

को जानते हैं वा जो दिशाओं के ज्ञाता शङ्कुभ्रमण वा छायाभ्रमण को जानते हैं वे ज्योतिः शास्त्र के पण्डित हैं । यहाँ तीन प्रश्न हैं ॥ ३ ॥

इदानीमन्यान् प्रश्नानाह ।

दृष्ट्वा विषुवच्छायां लम्बाक्षज्ये करोति यो बहुधा ।

मध्यच्छायार्कज्ञोऽक्षांशान् यो वेत्ति गणकः सः ॥ ४ ॥

सु. भा.—यो विषुवच्छायां पलभां दृष्ट्वा बहुधा बहुभिः प्रकारैर्लम्बाक्षज्ये करोति । लम्बज्यामक्षज्यां च करोति । एवं यो मध्यच्छायार्कज्ञोऽक्षांशान् वेत्ति स एव गणकः । एवमत्र प्रश्नत्रयम् ॥ ४ ॥

वि. भा.—यो विषुवच्छायां (पलभां) ज्ञात्वा बहुप्रकारैर्लम्बज्यामक्षज्यां च जानाति, यो मध्यच्छाया-रविज्ञाता च अक्षांशान् जानाति सो गणकोऽस्तीति । अत्र प्रश्नत्रयमस्ति ॥ ४ ॥

अब अन्य प्रश्नों को कहते हैं ।

हि. भा.—जो पलभा के ज्ञाता बहुत प्रकारों से लम्बज्या और अक्षज्या को जानते हैं । तथा जो मध्यच्छाया और रवि के ज्ञाता अक्षांश को जानते हैं वे ज्योतिः शास्त्र के पण्डित हैं । यहाँ तीन प्रश्न हैं ॥ ४ ॥

इदानीमन्यान् प्रश्नानाह ।

यश्चरखण्डकलङ्कोदयान् विजानाति लग्नमुदयैः स्वैः ।

लग्नाद् घटिकाश्छायां गतशेषनताच्च गणकः सः ॥ ५ ॥

सु. भा.—यश्चरखण्डानि जानाति । लङ्कोदयान् जानाति । स्वैरुदयैः स्वदेशोदयैर्लग्नं विजानाति । लग्नाद् घटिका इष्टघटिका जानाति । गताद्दिनगता-च्छायां जानाति । शेषाद्दिनशेषाच्छायां जानाति । वा नतान्तकालाच्छायां विजानाति स एव गणकः । एवमत्र सप्त प्रश्नाः ॥ ५ ॥

वि. भा.—यश्चरखण्डकान् जानाति, लङ्कादेशीयराश्यादयमानानि जानाति, स्वैरुदयैः (स्वदेशीयराश्यादयमानैः) लग्नं जानाति, लग्नज्ञानात् इष्टघटिकां जानाति, दिनगतात् छायां जानाति, दिनशेषाच्च छायां जानाति, नतकालाच्च छायां जानाति सो गणकोऽस्तीति । अत्र सप्त प्रश्नाः सन्तीति ॥ ५ ॥

अब अन्य प्रश्नों को कहते हैं ।

हि. भा.—जो व्यक्ति चरखण्डों को जानते हैं । लकादेशीय राशियों के उदयमान को जानते हैं, स्वदेशीय राश्यादय मानों से लग्न को जानते हैं, लग्नज्ञान से इष्टकाल को जानते हैं । दिन गत से छाया को जानते हैं, दिन शेष से छाया को जानते हैं । तथा नतकाल से छाया को जानते हैं वे ज्योतिः शास्त्र के पण्डित हैं । यहां सात प्रश्न हैं ॥ ५ ॥

इदानीमन्यान् प्रश्नानाह ।

गत शेषनता घटिकाश्छायातोऽभीष्टदिनदलच्छायाम् ।

बहुधा क्रान्त्यर्काक्षान् दृष्ट्वा यो वेत्ति गणकः सः ॥ ६ ॥

सु. भा.—यः क्रान्त्यर्काक्षान् दृष्ट्वा बहुधा गतघटिकाः शेषघटिका नत-
घटिकाश्च वेत्ति । वा छायात इष्टकालच्छायातो बहुधाऽभीष्ट दिनदले छायां वेत्ति
स एव गणकः । एवमत्र चत्वारः प्रश्नाः ॥ ६ ॥

वि. भा.—यः क्रान्त्यर्काक्षान् दृष्ट्वा (क्रान्ति रविमक्षांशं च ज्ञात्वा) बहुधा
गतघटिकाः शेषघटिका नतघटिकाश्च जानाति, वा इष्टच्छायात इष्ट दिनार्धकाले
छायां बहुधा जानाति सो गणकोऽस्तीति । अत्र प्रश्न चतुष्टयमस्ति ॥ ६ ॥

अब अन्य प्रश्नों को कहते हैं ।

हि. भा.—जो व्यक्ति क्रान्ति-रवि और अक्षांश को जानकर अनेक प्रकार से दिन गत
घटी, दिनशेषघटी और नतघटी को जानते हैं, वा इष्टच्छाया से इष्ट दिनार्धकाल में अनेक
प्रकार से छाया को जानते हैं वे गणक (ज्योतिर्वित्) हैं । यहां चार प्रश्न हैं ॥ ६ ॥

इदानीमन्यान् प्रश्नानाह ।

क्रान्तिज्ञः सममण्डलशंकुकर्णं च योऽवलम्बज्ञः ।

जानाति कोणशंकुच्छाया घटिकाः स तन्त्रज्ञः ॥ ७ ॥

सु. भा.—यः क्रान्तिज्ञः सममण्डलशङ्कुं जानाति । योऽवलम्बज्ञः सम-
मण्डलकर्णं च जानाति । कोणशङ्कुं कोणशङ्कुच्छायां कोणवृत्तप्रवेशे घटिकाश्च
जानाति स एव तन्त्रज्ञः सिद्धान्तज्ञ इति । एवमत्र पंच प्रश्नाः ॥ ७ ॥

वि. भा.—यः क्रान्ति वेत्ता समशंकुं जानाति यो लम्बांशवेत्ता सम-
मण्डलकर्णं (समवृत्तकर्णं) जानाति, कोणशंकुं, कोणशंकुच्छायां, कोणवृत्तस्थे
रवौ घटिकाश्च जानाति स ज्योतिषसिद्धान्त पण्डितोऽस्तीति ॥ अत्र पञ्च प्रश्नाः
सन्तीति ॥ ७ ॥

अब अन्य प्रश्नों को कहते हैं ।

हि. भा.—जो क्रान्ति के ज्ञाता समशंकु को जानते हैं । जो लम्बांश वेत्ता समवृत्त को जानते हैं, कोणशंकु को जानते हैं, कोणशंकुच्छाया को जानते हैं । कोणवृत्त प्रवेश में घटी को जानते हैं वे ज्योतिष सिद्धान्त के पण्डित हैं, । यहां पांच प्रश्न हैं ॥ ७ ॥

इदानीमन्यान् प्रश्नानाह ।

शंकुतलप्राच्यपरान्तरद्वयं वीक्ष्य यो विजानाति ।

विषुवच्छायामेकं दृष्ट्वाऽऽदित्यं च गणकः सः ॥ ८ ॥

सु. भा.—शङ्कुतलप्राच्यपरान्तरं भुजः । यो भुजद्वयं वीक्ष्य विषुवच्छायां पलभां विजानाति । एकमेव भुजं दृष्ट्वा विषुवच्छायामादित्यमकं च विजानाति स गणकः । एवमत्र प्रश्नत्रयम् ॥ ८ ॥

वि. भा.—शंकुतलपूर्वपररेखयोरन्तरं भुजोऽस्ति, यो भुजद्वयं ज्ञात्वा पलभां विजानाति एकं भुजं ज्ञात्वा पलभां रविं च विजानाति स गणकोऽस्तीति । अत्र प्रश्नत्रयमस्ति ॥ ८ ॥

अब अन्य प्रश्नों को कहते हैं ।

हि. भा.—शंकुतल और पूर्वपर रेखा का अन्तर भुज है । जो व्यक्ति दो भुजों को जान कर पलभा को जानते हैं । एवं एक भुज को जान कर पलभा को जानते हैं तथा रवि को जानते हैं वे ज्योतिष शास्त्र के पण्डित हैं इति । यहां तीन प्रश्न हैं ॥ ८ ॥

इदानीमन्यान् प्रश्नानाह ।

पातालशंकुमुदयेऽस्ते वा दृग्ज्यां रवेर्विजानाति ।

दृक्पातालशंकोः पृथक् तले वा स तन्त्रज्ञः ॥ ९ ॥

सु. भा.—यो रवेः पातालशङ्कुमधः शङ्कुं विजानाति । उदयेऽस्ते वा यो रवेर्दृग्ज्यामग्रां विजानाति । दृक्शङ्कुर्दिवोर्ध्वशङ्कुः । पातालशङ्कुर्निशि रवेरधः शङ्कुः । तयोः पृथक् पृथक् तले शङ्कुतले च वा यो विजानाति स एव तन्त्रज्ञ इति । एवमत्र प्रश्नचतुष्टयम् ॥ ९ ॥

वि. भा.—यो रवेः पातालशंकुं (अधः शंकुं) विजानाति । उदयेऽस्ते वा रवेर्दृग्ज्यां विजानाति, दृक् शंकुः (दिनोर्ध्वशंकुः) पातालशंकुः (रात्रौ रवेरधः शंकुः)

तयोः शङ्खोः पृथक् तले (शङ्कुतले) वा यो जानाति स तन्त्रज्ञो (ज्योतिषसिद्धान्तज्ञो) ऽस्तीति । अत्र प्रश्न चतुष्टयमस्ति ॥ ९ ॥

अब अन्य प्रश्नों को कहते हैं ।

हि. भा.—जो व्यक्ति रवि के अघःशङ्कु को जानते हैं । उदय काल में वा अस्त काल में रवि की दिग्ग्या को जानते हैं । दिन में उर्ध्वशङ्कु तल, रात्रि में अघः शङ्कुतल को पृथक् जो जानते हैं वे ज्योतिष सिद्धान्त वेत्ता हैं इति । यहा चार प्रश्न हैं ॥ ६ ॥

इदानीमन्याम् प्रश्नानाह ।

दिनगतशेषप्राणैरिष्टार्को दिनदलान्नतैरथवा ।

भवति सममण्डले यैर्यस्तान् कथयति स तन्त्रज्ञः ॥ १० ॥

सु. भा.—यैदिनगतप्राणैर्दिनशेषप्राणैरथवा दिनदलान्नतैः प्राणैरिष्टार्कः सममण्डले भवति प्रविशति तान् प्राणान् यः कथयति स एव तन्त्रज्ञः । एवमत्र प्रश्नत्रयम् ॥ १० ॥

वि. भा.—यैदिनगतप्राणैः, दिनशेषप्राणैः । अथवा दिनदलान्नतैः प्राणैः, इष्टार्कः सममण्डले प्रविशति तान् प्राणान् यः कथयति स तन्त्रज्ञोऽस्ति । अत्र प्रश्न त्रयमस्ति ॥ १० ॥

अब अन्य प्रश्नों को कहते हैं ।

हि. भा.—जो व्यक्ति दिनगत प्राण से, दिनशेष प्राण से, अथवा दिनार्ध से, नतप्राण से इष्टकालिक रवि सम मण्डल में प्रवेश करते हैं उन प्राणों को कहते हैं वे ज्योतिः शास्त्र-वेत्ता हैं इति । यहां तीन प्रश्न हैं ॥ १० ॥

इदानीमन्याम् प्रश्नानाह ।

सममण्डलगः प्राणैर्दिनगतशेषैर्नतैर्दिनार्धाद्वा ।

यैर्भवति ज्ञात्वा तान् योऽर्कं कथयति स तन्त्रज्ञः ॥ ११ ॥

सु. भा.—यैदिनगतप्राणैः शेषप्राणैर्दिनार्धाद्वा नतैः प्राणैरर्कः सममण्डलगो भवति तान् ज्ञात्वा यो ऽर्कं कथयति स एव तन्त्रज्ञ इति । एवमत्र प्रश्नत्रयम् ॥ ११ ॥

वि. भा.—यैदिनगत प्राणैः । दिनशेषप्राणैः । वा दिनार्धान्नतैः प्राणैः रविः सममण्डलगो भवति तान् प्राणान् ज्ञात्वा यो रविं कथयति स तन्त्रज्ञोऽस्तीति ॥ अत्र प्रश्नत्रयमस्ति ॥ ११ ॥

अब अन्य प्रश्नों को कहते हैं ।

हि. भा.—जो व्यक्ति दिनगत काल, दिन शेषकाल वा दिनार्ध से नत काल से रवि सममण्डलगत होते हैं उन कालों को जानकर रवि को कहते हैं वे तन्त्रज्ञ है । यहाँ तीन प्रश्न है ॥ ११ ॥

इदानीमन्यान् प्रश्नानाह ।

यः सममण्डलशङ्कुं कर्णं वा वीक्ष्य सूर्यमानयति ।

रविसममण्डलशङ्कुजोऽक्षं कथयति स तन्त्रज्ञः ॥ १२ ॥

सु. भा.—यः सममण्डलशङ्कुं वीक्ष्य सूर्यमानयति । सममण्डलकर्णं वीक्ष्य सूर्यमानयति । अथवा यो रविं सममण्डलशङ्कुं च ज्ञात्वा ऽक्षं कथयति स एव तन्त्रज्ञः । एवमत्र प्रश्नत्रयम् ॥ १२ ॥

वि. भा.—यः समशङ्कुं ज्ञात्वा रविं कथयति, वा समकर्णं ज्ञात्वा रविं कथयति, अथवा रविं समशङ्कुं च ज्ञात्वाऽक्षांशं कथयति स तन्त्रज्ञोऽस्तीति । अत्र प्रश्नत्रयमस्ति ॥ १२ ॥

अब अन्य प्रश्नों को कहते हैं ।

हि. भा.—जो व्यक्ति समशङ्कु को जानकर रवि को कहते हैं वा समकर्ण को जान कर रवि को कहते हैं । अथवा रवि और समशङ्कु को जान कर अक्षांश को कहते हैं वे तन्त्रज्ञ है इति । यहाँ तीन प्रश्न है ॥ १२ ॥

इदानीमन्यान् प्रश्नानाह ।

रविलग्नान्तरघटिका विनोदयैर्लग्नमिष्टघटिकाभिः ।

वेत्ति चरार्धादक्षं योऽर्कज्ञो वा स तन्त्रज्ञः ॥ १३ ॥

सु. भा.—स्वदेशोदयैर्विना यो रविलग्नान्तरघटिका वेत्ति वा स्वदेशोदयैर्वि-
नेष्टघटिकाभिर्लग्नं वेत्ति । वा योऽर्कज्ञश्चरार्धादक्षं वेत्ति स एव तन्त्रज्ञः । एवमत्र प्रश्नत्रयम् ॥ १३ ॥

वि. भा.—य उदयै (स्वदेशीयराश्यादयैः) विना रविलग्नान्तरघटीप्रमाणं जानाति । वा स्वदेशीयराश्यादयैर्विना इष्ट घटीभिर्लग्नं जानाति । वा रविं ज्ञात्वा चरखण्डतोऽक्षांशं जानाति स तन्त्रज्ञोऽस्तीति । अत्र प्रश्नत्रयमस्ति ॥ १३ ॥

अब अन्य प्रश्नों को कहते हैं ।

हि. भा.—जो व्यक्ति स्वदेशीय राश्युदय के बिना रवि और लग्न की अन्तर घटी को जानते हैं, वा स्वदेशीय राश्युदय के बिना इष्टकाल से लग्न को जानते हैं । वा रवि को जानकर चर खण्ड से अक्षांश को जानते हैं वे तन्त्रज्ञ हैं । यहां तीन प्रश्न हैं ॥ १३ ॥

इदानीमन्यान् प्रश्नानाह ।

अक्षचरार्धज्ञोऽर्कं छायातो यश्चरार्धमिष्टायाः ।

इष्टचरार्धादथवा छायां कथयति स तन्त्रज्ञः ॥ १४ ॥

सु. भा.—योऽक्षचरार्धज्ञोऽर्कं कथयति । यश्छायातः पलभात इष्टायाः पलभायाश्चरार्धं कथयति । अथवा इष्टचरार्धात् छायां विपुवच्छायां कथयति स एव तन्त्रज्ञः । एवमत्र प्रश्नत्रयम् ॥ १४ ॥

वि. भा.—योऽक्षांशं चरार्धं च ज्ञात्वा रविं कथयति । वा छायातः (पलभातः) इष्टायाः पलभायाश्चरखण्डं कथयति अथवा इष्टचरार्धात् छायां (पलभां) कथयति स तन्त्रज्ञोऽस्तीति । अत्र प्रश्नत्रयमस्ति ॥ १४ ॥

अब अन्य प्रश्नों को कहते हैं ।

हि. भा.—जो व्यक्ति अक्षांश और चरार्ध को जानकर रवि को कहते हैं । वा पलभा से इष्ट पलभा के चरार्ध को कहते हैं । अथवा इष्ट चरार्ध में पलभा को कहते हैं वे तन्त्रज्ञ हैं । यहां तीन प्रश्न हैं ॥ १४ ॥

इदानीमन्यान् प्रश्नानाह ।

मध्यच्छायातोऽक्षविदानयति रविं दिवाकरज्ञोऽक्षम् ।

योऽप्रार्कज्ञो लम्बाक्षांशान् कथयति स तन्त्रज्ञः ॥ १५ ॥

सु. भा.—योऽक्षविदक्षांशज्ञो मध्यच्छायातो रविमानयति । दिवाकरज्ञश्च मध्यच्छायातोऽक्षमानयति । वा योऽप्रार्कज्ञो लम्बाक्षांशान् कथयति स एव तन्त्रज्ञः । एवमत्र प्रश्नत्रयम् ॥ १५ ॥

वि. भा.—योऽक्षं जानाति, अक्षांशं च वेत्ति, मध्यच्छायातश्च सूर्य मानयति । रविं ज्ञात्वा मध्यच्छायातः योऽक्षमानयति । अथवा योऽप्रार्कं ज्ञात्वा लम्बाक्षांशश्च कथयति, स एव तन्त्रं ज्योतिः शास्त्रं जानातीति । एवमत्र प्रश्नत्रयमस्ति ॥ १५ ॥

हि. भा.—जो व्यक्ति अक्ष को जानकर मध्यच्छाया से सूर्य का आनयन कर लेता है । रवि को जानकर मध्यच्छाया से जो अक्षानयन करता है तथा अग्रार्क को जानकर अक्षांश और लम्बांश को बतला देता है । वही ज्योतिषशास्त्र का ज्ञाता है । इस प्रकार यहां तीन प्रश्न हैं ॥ १५ ॥

इदानीमन्यान् प्रश्नानाह ।

उदयेऽस्तमये वाऽग्रां वेत्ति दिनार्धं नतोन्नतज्ये यः ।

ताभिर्विषुवच्छायाऽक्षज्या लम्बान् स तन्त्रज्ञः ॥ १६ ॥

सु. भा.—य उदये वा ऽस्तमये ऽर्कं दृष्ट्वा ऽग्रां वेत्ति । वा दिनार्धं नतो-
न्नतज्ये नतज्यामुन्नतज्यां च वेत्ति । ताभिरग्रानतोन्नतज्याभिर्विषुवच्छायाक्षज्या
लम्बान् यो वेत्ति स एव तन्त्रज्ञः । एवं प्रश्नत्रयमेवात्र ॥ १६ ॥

वि. भा.—य उदये वाऽस्तमये रविं ज्ञात्वाऽग्रां जानाति, वा दिनार्धकाले
नतज्यामुन्नतज्यां च जानाति । ताभिरग्रानतोन्नतज्याभिः पलभाऽक्षज्या लम्बान्
जानाति स तन्त्रज्ञोऽस्तीति । अत्र प्रश्नत्रयमस्ति ॥ १६ ॥

अब अन्य प्रश्नों को कहते हैं ।

हि. भा.—जो व्यक्ति उदय काल में वा अस्तकाल में रविको जानकर अग्रा को
जानते है । वा दिनार्धकाल में नतज्या और उन्नतज्या को जानते हैं, तथा उन नतज्या और
उन्नतज्या से पलभा, अक्षज्या और लम्बज्या को जानते है वे तन्त्रज्ञ है । यहां तीन प्रश्न हैं
॥ १६ ॥

इदानीमन्यान् प्रश्नानाह ।

यश्चरदलं विना स्वे दिनरात्र्यर्धं करोति वा ताभ्याम् ।

अक्षावलम्बकौ वा ऽनस्तमयार्कान् स तन्त्रज्ञः ॥ १७ ॥

सु. भा.—यश्चरदलं विना स्वे दिनरात्र्यर्धं करोति । वा ताभ्यां दिनरात्र्य-
र्धाभ्यां यो ऽक्षावलम्बकौ करोति । वा ऽनस्तमयार्कान् सदोदितार्कान् यः करोति
स एव तन्त्रज्ञः । एवमत्र प्रश्नत्रयम् ॥ १७ ॥

वि. भा.—यश्चरार्धं विना स्वकीये दिनार्धं जानाति । वा ताभ्यां (दिनरा-
त्र्यर्धाभ्यां) अक्षांशलम्बान्शौ जानाति वाऽनस्तमयरविं सदोदितरविं करोति
स तन्त्रज्ञोऽस्तीति । अत्र प्रश्नत्रयमस्ति ॥ १७ ॥

अब अन्य प्रश्नों को कहते हैं ।

हि. भा.—जो व्यक्ति बिना चरार्ध (चरखण्ड) के अपने दिनार्ध और रात्र्यर्ध को जानते हैं । वा उन दिनार्ध और रात्र्यर्ध से अक्षांश और लम्बाई को जानते हैं वा अनन्मय (उदित) रवि को सदोदित रवि करते हैं वे तन्त्रज्ञ हैं । यद्वा तीन प्रश्न हैं ॥ १७ ॥

अथ केषां प्रश्नानामुत्तराणि सन्तीत्याह ।

आर्यानिवकोक्तानां प्रश्नानामुत्तरं चतुः षष्ट्या ।

आर्याणां प्रश्नोक्त्या शेषप्रश्नोत्तरोक्तिरतः ॥ १८ ॥

सु. भा.—आर्यानिवकोक्तानां प्रश्नानां 'योऽह्णः पूर्वा परयोः' इत्यादीनां 'पृथक्कृतत्वे वा स तन्त्रज्ञः' इत्यन्तानामुत्तराणि प्रश्नोक्त्या त्रिप्रश्नाधिकारोक्त्याऽऽर्याणां चतुः षष्ट्या प्रदिपादितानि । अत्रोऽत्र शेष प्रश्नोक्तिरुचितेति । त्रिप्रश्नाध्याये षट्षष्टि रार्याः सन्ति अतोऽत्र 'षट्षष्ट्या' इति पाठः साधुः ॥ १८ ॥

वि. भा.—आर्यानिवककथितानां प्रश्नानां 'योऽह्णः पूर्वापरयोस्तुल्यच्छाया-अयोर्बिन्दू' इत्यारभ्य 'पातालशङ्कुमुदयेऽस्ते वा हज्यां रवे विजानानी' त्यन्तानामुत्तराणि त्रिप्रश्नाधिकारोक्त नियमेनाऽऽर्याणां चतुःषष्ट्या कथितान्यतोऽत्र शेषाणां प्रश्नानां कथनमुचितमेव । अत्राध्याये षट्षष्टिरार्याः सन्त्यतः 'चतुःषष्ट्या' स्थाने 'षट्षष्ट्या' पाठः समुचित इति ॥ १८ ॥

अब यहाँ 'किन प्रश्नों के उत्तर हैं' कहते हैं ।

हि. भा.—'योऽह्णः पूर्वापरयोस्तुल्यच्छायाअयोर्बिन्दू' इति त्रिप्रश्नोक्त राध्याय के आरम्भ से 'पाताल शङ्कु मुदये ऽस्ते वा हज्यां इत्यादि' तक नौ आर्यायों के उत्तर त्रिप्रश्नाधिकारोक्ति द्वारा चौंसठ (६४) आर्यायों में कथित है । इसलिये अवशिष्ट प्रश्नों का कथन भी उचित ही है । इस अध्याय में छियासठ (६६) आर्याएं हैं इसलिये 'आर्यानिवकोक्तानां प्रश्नानामुत्तरं चतुः षष्ट्या' यहाँ चतुःषष्ट्या (चौंसठ ६४) के स्थान पर 'षट्षष्ट्या' (छियासठ ६६) ऐसा पाठ समुचित है ॥ १८ ॥

अथैषां प्रश्नानामुत्तराणि प्रतिपाद्यंते ।

दिनगतशेषप्राणैरित्यादि प्रश्नत्रयोत्तरमाह ।

ऽसौ तिथिः निपतति शेषः सोऽपि कालो नताख्यः” श्रीपत्युक्तमिदमक्षरस्य आचार्यो-
क्तानुरूपमेवेति ॥ १९-२० ॥

अब इन प्रश्नों के उत्तर को कहते हैं ।

दिनगतशेष प्राणैरित्यादि तीनों प्रश्नों के उत्तर को कहते हैं ।

हि. भा.—त्रिज्या को बारहगुणित क्रान्तिज्या से गुणाकर पलभा गुणितद्युज्या से भाग देने से जो लब्ध हो उसके चाप में चरासु को जोड़ने से जो हो उतने दिनगत शेष में रवि सममराडल में प्रवेश करते हैं । वा पन्द्रह घटी में लब्धचाप कला को घटाने से जो शेष नत घटी रहती है उतने में रवि सम मराडल में प्रवेश करते हैं ॥ १९-२० ॥

उपपत्ति ।

पलभा भुज । द्वादश कोटि, पलकर्ण—कर्ण इन तीनों में एक अक्ष क्षेत्र है, क्रान्तिज्या भुज, कुज्योन तद्धृति कोटि, समशङ्कु कर्ण, इन तीनों में द्वितीय अक्ष क्षेत्र है । दोनों अक्ष क्षेत्र सजातीय हैं इसलिये अनुपात करते हैं । यदि पलभाभुज में द्वादश कोटि पाते हैं तो क्रान्तिज्या भुज में क्या इससे कुज्योन तद्धृति आती है उसका स्वरूप = $\frac{१२ \times \text{क्राज्या}}{\text{पभा}}$,

रविगत ध्रुव प्रोतवृत्त नाडीवृत्त के सम्पात बिन्दु से पूर्वापर सूत्र पर लम्ब रेखा सूत्र कहलाती है, भूकेन्द्र रविगत रेखा त्रिज्या, सूत्र के मूल से, भूकेन्द्र तक रेखा सूत्र कोटिज्या, इन तीनों भुजाओं (त्रिज्या = कर्ण, सूत्र = भुज, सूत्रकोटिज्या = कोटि) से एक त्रिभुज बना, तथा सममराडलाहोत्रवृत्त के सम्पात बिन्दु से निरक्षोदयास्त सूत्र के ऊपर लम्बकुज्योनतद्धृति है, अहोरात्र वृत्त के गर्भ केन्द्र से सममराडलाहोरात्रवृत्तसम्पातगता रेखा द्युज्या है, अहोरात्र-वृत्त गर्भ केन्द्र से कुज्योन तद्धृति मूलगत रेखा, इन तीनों भुजाओं (द्युज्या = कर्ण, कुज्योनतद्धृति = भुज, अहोरात्र वृत्तगर्भकेन्द्र से कुज्योन तद्धृति मूलगत रेखा = कोटि) में उत्पन्न द्वितीय त्रिभुज बना, दोनों त्रिभुज सजातीय हैं । इसलिए अनुपात करते हैं यदि द्युज्या में कुज्योनतद्धृति पाते हैं तो त्रिज्या में क्या इस अनुपात से सूत्र आता है उसका स्वरूप = $\frac{\text{कुज्योनतद्धृति} \times \text{त्रि}}{\text{द्यु}}$

कुज्योनतद्धृति को उत्थापन देने से $\frac{१२ \times \text{क्राज्या} \times \text{त्रि}}{\text{पभा} \times \text{द्यु}} = \text{सूत्र}$, इसके चाप में चरासु को

जोड़ने से सममराडल प्रवेशकाल में गत वा एष्य दिनगत उन्नत कालसंज्ञक होता है । पन्द्रह घटी में सूत्रचाप को घटाने से वहाँ की नत घटी होती है । इससे आचार्योक्त उपपन्न होता है । सिद्धान्त शेखर में ‘रविभिरपममौर्व्या चाहता भत्रयज्या’ इत्यादि संस्कृतोपपत्ति लिखित श्लोक से श्रीपति ने आचार्योक्त के अनुरूप ही कहा है इति ॥ १९-२० ॥

इदानीं सममराडलगः प्राणैर्दिनशेषैरितिप्रश्नद्वयस्योत्तरमाह ।

उदयसममराडलान्तरघटिकाज्यां लम्बकाहतां गुणयेत् ।

अक्षज्यया हृताऽन्त्यक्रान्त्या व्यासार्धसङ्गुणया ॥ २१ ॥

लब्धधनुरिनोऽजादौ कर्कषादौ यदि विशोध्य चक्रार्धात् ।

अत्रोपपत्तिः । आचार्येण प्रथममुन्नतकालज्या स्थूलेष्टहृतिः कल्पिता ।

ततोऽक्षक्षेत्रानुपातेन सममण्डलप्रवेशे समशङ्कुः = $\frac{\text{ज्यालं} \times \text{इह}}{\text{त्रि}}$ । क्रान्तिज्या =

$\frac{\text{ज्याअ} \times \text{ज्यालं} \times \text{इह}}{\text{त्रि} \times \text{त्रि}}$ । रविभुजज्या = $\frac{\text{ज्याअ} \times \text{ज्यालं} \times \text{इह}}{\text{ज्याजि} \times \text{त्रि}}$ इष्टहृतिस्थाने

यद्युन्नतकालज्या = ज्याउ गृह्यते तदा स्थूलभुजज्या = $\frac{\text{ज्याअ} \times \text{ज्यालं} \times \text{ज्याउ}}{\text{ज्याजि} \times \text{त्रि}}$

सूक्ष्मभुजज्या = $\frac{\text{ज्याअ} \times \text{ज्यालं} \times \text{इह}}{\text{ज्याजि} \times \text{त्रि}}$ ∴ $\frac{\text{स्थूलभुजज्या}}{\text{सूक्ष्मभुजज्या}} = \frac{\text{ज्याउ}}{\text{इह}}$ । ∴ सूक्ष्म-

भुजज्या = $\frac{\text{इह} \times \text{स्थूलभुजज्या}}{\text{ज्याउ}}$ । अतः पुनः पुनरिष्टहृतिवशेनासकृत् सूक्ष्मभुजज्या

भवतीत्युपपन्नम् । अथ यदि सूत्रम् = ज्याअ । तदाऽक्षक्षेत्रयुक्त्या चरज्या = ज्याच = $\frac{\text{वि} \times \text{ज्याक्रा} \times \text{त्रि}}{१२ \times \text{द्यु}}$ । ज्याअ = $\frac{१२ \times \text{ज्याक्रा} \times \text{त्रि}}{\text{वि} \times \text{द्यु}}$ ∴ $\frac{\text{ज्याच}}{\text{ज्याअ}} = \frac{\text{वि}^२}{१२^२}$ । ततः

$\frac{\text{ज्याअ} + \text{ज्याच}}{\text{ज्याअ} - \text{ज्याच}} = \frac{\text{स्प } ३ (\text{अ} + \text{च})}{\text{स्प } ३ (\text{अ} - \text{च})} = \frac{\text{पक}^२}{१२^२ - \text{वि}^२}$ अतः स्प ३ (अ - च)

= $\frac{\text{स्प } \frac{1}{2} \text{ उका } (१२^१ - \text{वि}^१)}{\text{पक}^१}$ । अनेन स्पर्शरेखाखण्डतः सूत्रांशचरांशान्तर्गतं सकृदेव व्यक्तं भवति । तद्योगार्धमुन्नतकालदलं व्यक्तमेव । ततश्चरज्यादिकं सर्वं व्यक्तं भवति सकृद्विधिनैवातो 'या स्याद्रवेरुन्नतकालजीवा' इत्यादिभास्करोक्त प्रकार आचार्योक्त प्रकारसम एव ॥ २१-२३ ॥

वि. भा.—सूर्योदयाद्यावता कालेन रविः सममराडलं प्रविशति सकाल उन्नत कालस्तस्य ज्यां (उन्नतकालज्यां) लम्बज्या गुणिताक्षज्यया गुगयेत् । व्यासार्धेन (त्रिज्यया) गुणितयाज्यक्रान्त्या (जिनज्यया) भक्ता लब्धस्य चापं कार्यं तन्मेषादिकेन्द्रे प्रश्ने सति इनो (सूर्यः) भवति स्थूलः । यदि कर्कर्यादौ राशित्रये (द्वितीयपदे) प्रश्नस्तदा तच्चापं षड्भाद्विशोध्यं तदा रविः स्यात् । तुलादिराशिषट्के रवेः सममराडलप्रवेशाभावात्तत्र प्रश्न एव निरर्थकः तज्ज्या (रविभुजज्या) तदुदयसममराडलान्तरासुज्यया (तद्रवेश्वरासुभिर्हीनस्योन्नतकालस्य ज्याया) इष्ट-हृत्येत्यर्थः सङ्गुणा, तदुदयसममराडलान्तरासुज्या (उन्नतकालज्यया) भक्ता लब्धस्य चापं यत् सः पदवशेन सूक्ष्मः सूर्यो भवति । पुनः 'तज्ज्या तदुदयसममराडलान्तरासुज्ययेत्यादिना' सूर्यः साध्यः एवमसकृत्कर्मणा दिनस्य गतशेषाभिर्घटिकाभिर्निश्चितः सूर्यो भवतीति ॥ २१ ॥

अत्राचार्येणोन्नतकालज्या स्थूलेष्टहतिः कल्पिता, ततोऽग्राममशङ्कुतद्धृति-भिर्भुजत्रयैरुत्पन्नमेकमक्षक्षेत्रम् । अक्षज्या लम्बज्या त्रिज्येति भुजत्रयैश्चोत्पन्नं द्वितीयमक्षक्षेत्रम् । एतयोः क्षेत्रयोः सजातीयत्वादानुपातेन समशङ्कुः = $\frac{\text{लंज्या} \times \text{इह}}{\text{त्रि}}$

ततः क्रान्तिज्या = $\frac{\text{अज्या} \times \text{समशङ्कु}}{\text{त्रि}}$ अत्र समशङ्कोरुत्थापनेन अज्या. लंज्या. इह त्रि. त्रि.

अथ $\frac{\text{त्रि} \times \text{क्रांज्या}}{\text{त्रिज्या}} = \text{रविभुजज्या}$, अत्र क्रान्तिज्याया उत्थापनेन

$\frac{\text{त्रि. अज्या. लंज्या. इह}}{\text{त्रि. त्रि. जिज्या}} = \frac{\text{अज्या. लंज्या. इह}}{\text{त्रि. जिज्या}} = \text{रविभुजज्या}$ । परन्त्वत्र पूर्वमेवोन्न-

तकालज्या स्थूलेष्टहतिः कल्पितास्त इष्टहतिस्थाने उन्नत कालज्या ग्रहणेन स्थूल-रविभुजज्या = $\frac{\text{अज्या. लंज्या. उज्या}}{\text{त्रि. जिज्या}}$, सूक्ष्मरविभुजज्या = $\frac{\text{अज्या. लंज्या. इह}}{\text{त्रि. जिज्या}}$

अतः $\frac{\text{स्थूल रविभुज्या}}{\text{सूक्ष्म रविभुज्या}} = \frac{\text{उज्या}}{\text{इह}}$ ततः सूक्ष्म रवि भुजज्या = $\frac{\text{इह} \times \text{स्थूल रवि भुज्या}}{\text{उज्या}}$

अतः पुनः पुनरिष्टहतिवशेनासकृत्कर्मणा सूक्ष्मरविभुजज्या भवतीति । एतावता-ऽऽचार्योक्तनुपपन्नम् । सिद्धान्तशेखरे "कालेन येन समवृत्तमुपैति भानुः । स्वादुद-

गमाद् भवति तस्य हि या क्रमज्या । सा ताडिता पलगुरेण च लम्बकेन चान्त्यापमाभिहतभ्रितयज्ययाऽऽप्ता ॥ तच्चापं स्याद्दिनमणिरजात् कर्कटात् षड्भशुद्धं तज्ज्या पूर्वोन्नतजनितया जीवया ताडनीया । भाज्या मौर्व्या दिनकर-चरप्राणहीनोन्नतस्य प्राग्वच्चापं नियतमसकृत्कर्मणा भानुरेव” श्रीपत्युक्तमिदमाचार्योक्तानुरूपमेवेति ॥ २१-२३ ॥

अब ‘सममण्डलगः प्राणोदिनशेषः’ इन दोनों प्रश्नों के उत्तर को कहते हैं ।

हि. भा.—उदय और सममण्डल के अन्तर घटी उन्नत काल है, उन्नतकालज्या को अक्षज्या और लम्बज्या से गुणाकर जिनज्या गुणित त्रिज्या से भाग देने जो लब्ध हो उसका चाप भेषादि तीन राशि (प्रथम पद) में प्रश्न रहने से रवि होते हैं । यदि कर्कादि तीन राशि (द्वितीय पद) में प्रश्न रहे तो उस चाप को छः राशि में से घटाने से स्थूल रवि होते हैं । तुल्यादि छः राशिओं में सममण्डल प्रविष्ट नहीं होता है इसलिये वहाँ प्रश्न ही निरर्थक है । स्थूल रवि भुजज्या को उन्नत कालज्या से भाग देना और प्रश्न सममण्डलासुक्रमज्या से गुणा करना इस तरह लब्ध के चाप से पदवश से सूक्ष्म रवि होते हैं । स्थूल रवि से चरज्या आदि सब से जो इष्ट हति होती है वही प्रश्न सममण्डलासुक्रमज्या कहलाती है । पुनः ‘तज्ज्या तदुदय सममण्डलान्तरासुज्यया’ इत्यादि से रवि का साधन करना, इस तरह दिन की गतशेष घटिकाओं से असकृत्कर्म द्वारा निश्चित सूर्य होते हैं इति ॥ २१-२३ ॥

उपपत्ति ।

यहाँ आचार्य ने पहले उन्नत कालज्या को इष्टहति कल्पित किया है । तब अग्रा, समशङ्कुतद्धति इन तीनों भुजाओं से उत्पन्न एक अक्ष क्षेत्र है, तथा अक्षज्या, लम्बज्या-त्रिज्या इन तीनों भुजाओं से उत्पन्न द्वितीय अक्ष क्षेत्र है, ये दोनों अक्ष क्षेत्र सजातीय हैं इसलिये अनुपात करते हैं $\frac{\text{लंज्या. इह}}{\text{त्रि}} = \frac{\text{समशङ्कु.}}{\text{त्रि}}$ तथा $\frac{\text{क्रांज्या}}{\text{त्रि}} = \frac{\text{अज्या. समशङ्कु.}}{\text{त्रि}}$

यहाँ समशङ्कु को उत्थापन देने से $\frac{\text{क्रांज्या}}{\text{त्रि. त्रि}} = \frac{\text{अज्या. लंज्या. इह}}{\text{त्रि. त्रि. जज्या}}$, तथा $\frac{\text{त्रि. क्रांज्या}}{\text{जज्या}} =$

रविभुजज्या, इसमें क्रान्तिज्या को उत्थापन करने से $\frac{\text{त्रि. अज्या. लंज्या. इह}}{\text{त्रि. त्रि. जज्या}} =$

$\frac{\text{अज्या. लंज्या. इह}}{\text{त्रि. जज्या}} = \text{रविभुजज्या}$ यदि यहाँ इष्टहति के स्थान में उन्नत कालज्या ग्रहण की

जाय तब स्थूल रविभुजज्या $= \frac{\text{अज्या. लंज्या. उज्या}}{\text{त्रि. जज्या}}$, सूक्ष्मरविभुजज्या $= \frac{\text{अज्या. लंज्या. इह}}{\text{त्रि. जज्या}}$

अतः $\frac{\text{स्थूलरविभुज्या}}{\text{सूक्ष्मरविभुज्या}} = \frac{\text{उज्या}}{\text{इह}}$ तब सूक्ष्म रविभुजज्या $= \frac{\text{इह} \times \text{स्थूलरविभुज्या}}{\text{उज्या}}$ इससे बार

वार इष्टहृति वश से असकृत् कर्म द्वारा सूक्ष्मरविभुज्या होती है; इसमें आचार्योक्त उपपन्न हुआ । सिद्धान्तशेखर में 'कालेन येन समवृत्तमुपति भानुः' इत्यादि सस्कृतोपपत्ति में लिखित श्लोकों से श्रीपति ने आचार्योक्त के अनुरूप ही कहा है इति ॥ २१-२३ ॥

अब ‘उदयैविना यो रविलग्नान्तरघटिकां वेत्ति’ इस प्रश्न के उत्तर को कहते हैं ।

हि. भा.—रविभुजज्या और लग्नभुजज्या से पृथक् पृथक् निरक्षोदयज्या और चर-
ज्या साधनकर चाप करने से निरक्षोदयासु और चरामु ले आकर मकरादि में दोनों के
अन्तर कवर्चादि में दोनों का योग करने से रविलिप्ता और लग्न की लिप्ता मेपादि राशित्रय
(प्रथमपद) में स्वदेशीय राश्युदयासु होती है । कवर्चादि राशित्रय (द्वितीय पद) में उस
असु को छः राशियों में से घटाना चाहिए, तुलादि राशित्रय (तृतीय पद) में उस असु में
छः राशि जोड़ना चाहिये । मकरादि राशित्रय (चतुर्थ पद) में उस असु को बारह राशि में से
घटाने से स्वदेशीय राश्युदयासु होती है । तब लग्नोदयासु में से राश्युदयासु को घटाना, यदि
नहीं घटे तो लग्नोदयासु में चक्र कला सहित कर उसमें राश्युदयासु को घटाने से रवि और
लग्न की स्फुट अन्तरामु होती है इति ॥ २९-३१ ॥

उपपत्ति ।

राश्यादि बिन्दु जब निरक्षक्षितिज में आता है उसके बाद जितने काल में राश्यन्त बिन्दु
निरक्ष क्षितिज में आता है वही काल उस राशि का निरक्षोदयामु है अर्थात् राश्याद्युपरिगत
ध्रुव प्रोतवृत्त नाड़ीवृत्त के सम्पात बिन्दु से राश्यन्तोपरिगत ध्रुवप्रोतवृत्त नाड़ीवृत्त के सम्पात
पर्यन्त उस राशिका निरक्षोदयासु है । जैसे मेपादि (गोल सन्धि) के ऊपर ध्रुव प्रोतवृत्त नाड़ी-
वृत्त के सम्पात से मेपान्तोपरिगत ध्रुव प्रोतवृत्त नाड़ीवृत्त के सम्पात पर्यन्त मेपका निरक्षोद-

यमान है । एवं वृषाद्युपरिगत ध्रुवप्रोतवृत्त नाडीवृत्त के सम्पात से वृषान्तोपरिगत ध्रुवप्रोतवृत्त नाडीवृत्त के सम्पात पर्यन्त वृष का निरक्षोदयमान है । इसी तरह मिथुन का भी समझना चाहिये । अब राशियों के निरक्षोदयमान साधन करते हैं । मेष का भुजांश एक भुज मेषान्तक्रान्ति द्वितीय भुज । मेषादि से मेषान्तोपरिगत ध्रुव प्रोतवृत्त नाडीवृत्त के सम्पात बिन्दु पर्यन्त मेष का विषुवांश (मेष निरक्षोदयमान) तृतीय भुज । इन तीनों भुजाओं से उत्पन्न एक चापजात्य त्रिभुज है । तथा ध्रुव से मेषान्त बिन्दु पर्यन्त मेषान्तद्युज्या चाप एकभुज । परमाल्पद्युज्याचाप द्वितीय भुज । क्रान्तिवृत्त में मेषान्तभुज कोट्यंश तृतीय भुज । इन तीनों भुजाओं से उत्पन्न द्वितीय चापजात्य त्रिभुज है, दोनों त्रिभुजों के ज्याक्षेत्र सजातीय हैं इसलिए अनुपात करते हैं यदि मेषान्त द्युज्या में परमाल्प द्युज्या पाते हैं तो मेष भुजज्या में क्या इस अनुपात से मेष की निरक्षोदयमानज्या आती है उसका स्वरूप
$$\frac{\text{पद्यु. मेषभुजज्या}}{\text{मेद्यु}} = \text{मे}$$

निरक्षोदयज्या । इसका चाप करने से मेषका निरक्षोदयमान होता है । एवं वृषान्तद्युज्या चाप एक भुज । परमाल्प द्युज्या चाप द्वितीय भुज । वृषभुजांश कोटि तृतीय भुज, इन तीनों भुजाओं से उत्पन्न एक चाप जात्य है । तथा गोल सन्धि से वृषान्त तक वृषभुजांश एक भुज । वृषान्त क्रान्ति द्वितीय भुज । गोल सन्धि से वृषान्तोपरिगत ध्रुवप्रोतवृत्तनाडीवृत्त का सम्पात पर्यन्त तृतीय भुज, इन तीनों भुजाओं से उत्पन्न द्वितीय चापजात्य त्रिभुज है । दोनों चापीय जात्य त्रिभुजों के सजातीयत्व से अनुपात करते हैं यदि वृषान्त द्युज्या में परमाल्प द्युज्या पाते हैं तो वृष भुजज्या में इस अनुपात से मेषनिरक्षोदय और वृषनिरक्षोदयमान की योगज्या आती है
$$\frac{\text{पद्यु. वृभुज्या}}{\text{वृद्यु}} = \text{ज्या (मेनिरक्षोदय + वृनिरक्षोदय)}$$
 इस के चाप में मेषो-

दयमान को घटाने से शुद्ध वृषका निरक्षोदय मान होता है । इसीतरह मिथुन का भी साधन करना । तथा त्रिज्या में जिनज्या पाते हैं तो रवि भुजज्या में क्या इस अनुपात से क्रान्तिज्या आती है उसका स्वरूप
$$\frac{\text{जिज्या. रभुज्या}}{\text{त्रि}} = \text{क्रांज्या}$$
 । तब पलभा भुज, द्वादशाङ्गुल शङ्कु-कोटि, पलकर्ण कर्ण इन तीनों भुजाओं से एक अक्षक्षेत्र है । कुज्या भुज, क्रान्तिज्या कोटि, अग्रा कर्ण इन तीनों भुजाओं से उत्पन्न द्वितीय अक्षक्षेत्र है, दोनों त्रिभुज सजातीय हैं इस लिये अनुपात करते हैं
$$\frac{\text{पभा. क्रांज्या}}{१२} = \text{कुज्या}$$
, अब ध्रुव से क्षितिजाहोरात्रवृत्त सम्पातो-

परिगत ध्रुवप्रोतवृत्तनाडीवृत्त के सम्पात पर्यन्त ध्रुवप्रोतवृत्त मे नवत्यंश चाप एक भुज । ध्रुव से पूर्व स्वस्तिक पर्यन्त उन्मण्डल में द्वितीयभुज । पूर्व स्वस्तिक से ध्रुवप्रोतवृत्त नाडीवृत्त के सम्पात बिन्दु पर्यन्त नाडीवृत्त में चरासु तृतीयभुज । यह एक चापीय त्रिभुज है तथा ध्रुव से क्षितिजाहोरात्रवृत्त के सम्पात तक द्युज्या चाप एकभुज । ध्रुव से उन्मण्डलाहोरात्रवृत्त के सम्पात तक उन्मण्डल में द्वितीयभुज । क्षितिज और उन्मण्डल के अन्तर्गत अहोरात्र वृत्त में कुज्यांश तृतीय भुज । इन तीनों भुजाओं से द्वितीय त्रिभुज है । दोनों का ज्याक्षेत्र सजातीय है इसलिये अनुपात करते हैं यदि द्युज्या में कुज्या पाते हैं तो त्रिज्या में क्या इस

अनुपात से चरज्या आती है $\frac{\text{कुज्या. त्रि}}{\text{चु.}} = \text{चरज्या}$, इसमें पूर्वानीत कुज्या से उत्थापन देने

से $\frac{\text{पभा. क्रांज्या. त्रि}}{१२. \text{चु.}} = \text{चरज्या}$, इसका चाप चरासु प्रमाण है । सिद्धान्त शिरोमणि में

‘अक्षप्रभा सङ्गुणिता पमज्या तद् द्वादशांशो भवति क्षितिज्या’ इत्यादि से भास्कराचार्य ने भी चरासु के आनयन इसी तरह किये हैं । इस तरह रविभुजज्या और लग्न भुजज्या उपर्युक्त नियम से लङ्कोदय चर दलवत् पृथक् पृथक् लङ्कोदयामु और चरासु लाकर मकरादि में दोनों का अन्तर कर्चादि में दोनों के योग रविलग्न की कला स्वदेशीय राश्युदयामु मेपादि तीन राशि में (प्रथम पद) होती है । कर्चादि तीन राशि (द्वितीय पद) में उस अमु को छः राशियों में से घटाना चाहिए । तुलादि तीन राशि (तृतीय पद) में उस अमु में छः राशि जोड़ना चाहिये । मकरादि तीन राशि (चतुर्थ पद) में उस अमु को बाग्ह राशियों में से घटाना चाहिये तब स्वदेशीय राश्युदयामुमान होता है । उसके बाद यदि लग्नकला में रविकला नहीं घटे तब लग्न कला में चक्रकला जोड़ कर रविकला को घटाने से शेष रवि और लग्न का अन्तर सु प्रमाण स्फुट ही होता है । सिद्धान्तशेखर में ‘कृत्वा लङ्कोदयवदुदयासू-श्चरासूश्च भानोः’ इत्यादि श्लोकों से श्रीपति ने आचार्योक्त प्रकार के अनुरूप ही कहा है इति ॥ २६-३१ ॥

इदानीं स्वदेशोदयैर्विनेष्टघटिकाभिर्लग्नं यो जानातीत्यस्योत्तरमाह ।

अष्टयमाः शून्यगुणा दिगिषुकलोना रदाः सतिथिलिप्ताः ।

कर्णभुजकोटिभिर्द्वितीयं त्रिभुजम् । एतयोस्त्रिभुजयोः साजात्यादनुपातः क्रियते
यदि त्रिज्यया चरज्या लभ्यते तदा द्युज्यया किं समागच्छति कुज्या तत्स्वरूपम्
= $\frac{\text{च. ज्या. द्यु.}}{\text{त्रि}}$, ततः पलभा भुजः । द्वादश कोटिः । पलकर्णः कर्णः इति भुजत्र-
यैरुत्पन्नमेकमक्षक्षेत्रम् । कुज्या भुजः । क्रान्तिज्या कोटिः । अग्रा कर्ण इति भुज-
त्रयैरुत्पन्नं द्वितीयमक्षक्षेत्रम् । अनयोस्त्रिभुजयोः साजात्यादनुपातः $\frac{\text{कुज्या. १२}}{\text{क्रांज्या}}$
= पलभा, $\sqrt{\text{कुज्या}^2 + \text{क्रांज्या}^2}$ = अग्रा, ततः $\frac{\text{कुज्या. त्रि}}{\text{अग्रा}}$ = अक्षज्या $\frac{\text{क्रांज्या. त्रि}}{\text{अग्रा}}$
= लम्बज्या एतावताऽऽचार्योक्तमुपपन्नम् ॥ ३४-३५ $\frac{१}{२}$ ॥

अब रवि और चरार्ध से जो अक्षांश को जानते हैं इस प्रश्न के उत्तर को कहते हैं ।

हि. भा.—चरज्या को द्युज्या से गुणा कर त्रिज्या से भाग देने से कुज्या होती है ।
कुज्या को बारह से गुणा कर क्रान्तिज्या से भाग देने से पलभा होती है, कुज्या और
क्रान्तिज्या का वर्ग योग मूल अग्रा होती है । कुज्या और क्रान्तिज्या को त्रिज्या से गुणा कर
रवि की अग्रा से भाग देने से क्रमशः अक्षज्या और लम्बज्या होती है इति ॥ ३०-३५ $\frac{१}{२}$ ॥

उपपत्ति ।

त्रिज्या कर्ण, चरज्या भुज, चर कोटिज्या कोटि, इन कर्ण भुज और कोटि से उत्पन्न
एक त्रिभुज । तथा द्युज्या कर्ण, कुज्या भुज, दोनों का वर्गान्तर मूल कोटि, इन कर्ण भुज
कोटि से उत्पन्न द्वितीय त्रिभुज । इन दोनों त्रिभुजों के सजातीयत्व से अनुपात करते हैं । यदि
त्रिज्या में चरज्या पाते हैं तो द्युज्या में क्या इस अनुपात से कुज्या आती है, तब पलभा
भुज, द्वादशांगुल शंकु कोटि, पलकर्ण कर्ण इन तीनों भुजाओं से उत्पन्न एक त्रिभुज, कुज्या
भुज, क्रान्तिज्या कोटि, अग्रा कर्ण इन तीनों भुजाओं से उत्पन्न द्वितीय त्रिभुज, इन दोनों
त्रिभुजों के सजातीयत्व से अनुपातकरते हैं $\frac{\text{कुज्या. १२}}{\text{क्रांज्या}}$ = पलभा । $\sqrt{\text{कुज्या}^2 + \text{क्रांज्या}^2}$
= अग्रा, तब $\frac{\text{कुज्या. त्रि}}{\text{अग्रा}}$ = अक्षज्या, $\frac{\text{क्रांज्या. त्रि}}{\text{अग्रा}}$ = लम्बज्या, इस से आचार्योक्त
उपपन्न हुआ इति ॥ ३४-३५ $\frac{१}{२}$ ॥

इदानीं योऽक्षचरार्धज्ञोर्कं कथयतीत्यस्योत्तरमाह ।

अर्काज्ञाने ज्ञाने विषुवच्छाया चरासूनाम् ॥ ३६ ॥

इष्टचरार्धस्य ज्या क्षयवृद्धिज्या तदर्कवधकृत्या ।

त्रिज्या विषुवच्छाया वधवर्गो युतहृतश्छेदः ॥ ३७ ॥

व्यासार्धं कृतेर्मूलं क्रान्तिज्या व्यासदलगुणा भक्ता ।

जिनभागजीवया लब्धचापमर्कः पदैः प्राग्वत् ॥ ३८ ॥

सु. भा.—पलभाचरासूनां ज्ञानेऽर्काज्ञाने वक्ष्यमाणः प्रकारो ज्ञेयः इष्ट-
चरार्धस्य ज्या क्षयवृद्धिज्या भवतीति पूर्वमेव प्रतिपादितम् । तस्याश्चरज्याया
अर्कानां द्वादशानां च या वधकृतिस्तया त्रिज्यापलभयोर्वधवर्गो युतो हृतश्च
व्यासार्धकृतेस्त्रिज्यावर्गस्य छेदो हरो भवति । तेन त्रिज्याकृतिहृता या
लब्धिस्तस्या मूलं क्रान्तिज्या स्यात् । सा व्यासदलगुणा जिनभागजीवया भक्ता
फलचापं पदैः प्राग्वदर्को भवति ।

अत्रोपपत्तिः । क्षितिजेऽग्रा चापांशाः कर्णः । ग्रहध्रुवप्रोते क्रान्तिः कोटिः ।
नाडीवलये चरांशा भुजः । कोटिसम्मुखकोणो लम्बांशाः । ततस्त्रिसक्तावयव-
सिद्धान्तेन त्रि × ज्याच = $\frac{\text{त्रि} \times \text{ज्याक्रा}}{\text{द्यु}} \times \frac{\text{त्रि} \times \text{ज्याअ}}{\text{ज्याल}} = \text{स्पक्रा} \times \text{त्रि} \times \text{वि} \div १२$

अतः स्पक्रा = $\frac{१२ \times \text{ज्याच}}{\text{त्रि}}$ ।

त्रि^३ + स्प^३क्रा = छे^३क्रा = $\frac{\text{त्रि}^३ \times \text{वि}^३ + १२^३ \times \text{ज्या}^३ \text{च}}{\text{वि}^३}$, ततः

ज्या^३क्रा = $\frac{\text{त्रि}^२ \times \text{स्प}^३ \text{क्रा}}{\text{छे}^३ \text{क्रा}} = \frac{१२^२ \text{ ज्या}^२ \text{ च} \times \text{त्रि}^२}{\text{त्रि}^३ \times \text{वि}^३ + १२^३ \times \text{ज्या}^३ \text{च}} \dots\dots (१)$

= $\frac{\text{त्रि}^२}{\text{त्रि}^३ \times \text{वि}^३ + १२^२ \times \text{ज्या}^२ \text{च}} \cdot \text{अत उपपद्यते मूलोक्तम् ।}$
 $\frac{१२^२ \times \text{ज्या}^२ \text{च}}{\text{त्रि}^२ \times \text{वि}^३ + १२^२ \times \text{ज्या}^२ \text{च}}$

अथ (१) अस्मिन् भाज्यहारौ त्रिज्यावर्गेणापवत्यं

ज्या^२क्रा = $\frac{१२^२ \times \text{ज्या}^२ \text{च}}{\text{वि}^२ + \frac{१२^२ \times \text{ज्या}^२ \text{च}}{\text{त्रि}^२}}$ । ∴ ज्याक्रा = $\frac{१२ \times \text{ज्याच}}{\sqrt{\text{वि}^२ + \frac{१२^२ \times \text{ज्या}^२ \text{च}}{\text{त्रि}^२}}}$ ।

अनेन 'चरज्याकार्काभिहतिस्त्रिमोर्व्या भक्ता'—इत्यादि भास्करोक्तामा-
चार्योक्तानुरूपमुपपद्यते ॥ ३५½-३८ ॥

वि. भा.—इष्टचरार्धज्या क्षयवृद्धिज्या कथ्यते । तस्या द्वादशानां च यो घातवर्गस्तेन त्रिज्यापलभयोर्वधवर्गो युतो भक्तश्च स च त्रिज्यावर्गस्य छेदो (हरः) भवति, तेन हरेण त्रिज्यावर्गभक्ते या लब्धिस्तन्मूलं क्रान्तिज्या स्यात् । सा त्रिज्या गुणा जिनज्यया भक्ता फलस्य चापं पदैः पूर्ववद्रविर्भवेदिति ॥ ३५३-३८ ॥

अत्रोपपत्तिः ।

$$\begin{aligned} & \text{अत्र कल्प्यते क्रान्तिज्या प्रमाणम्} = y, \text{ तदाऽक्षेत्रानुपातेन } \frac{y \cdot pma^2}{12^2} \\ & = \text{कुज्या} । अस्या वर्गः = \frac{y^2 \cdot pma^2}{12^2}, \text{ तथा } त्रि^2 - y^2 = द्यु^2 \text{ ततः } \frac{\text{चरज्या} \cdot द्यु}{त्रि} \\ & = \text{कुज्या, वर्गेण } \frac{\text{चज्या}^2 (त्रि^2 - y^2)}{त्रि^2} = \text{कुज्या}^2, \text{ कुज्यावर्गयोः समीकरणम् ।} \\ & \frac{y^2 \cdot pma^2}{12^2} = \frac{\text{चज्या}^2 (त्रि^2 - y^2)}{त्रि^2} \text{ प्रथमपक्षे हरभाज्यौ त्रि^2 गुणितौ, द्वितीय-} \\ & \text{पक्षे हरभाज्यौ } 12^2 \text{ गुणितौ तदा } \frac{y^2 \cdot pma^2 \cdot त्रि^2}{12^2 \cdot त्रि^2} = \frac{12^2 \cdot \text{चज्या}^2 (त्रि^2 - y^2)}{त्रि^2 \cdot 12^2} \\ & \text{छेदगमेन } y^2 \cdot pma^2 \cdot त्रि^2 = 12^4 \cdot \text{चज्या}^2 (त्रि^2 - y^2) = 12^4 \cdot \text{चज्या}^2 \cdot त्रि^2 - \\ & 12^4 \cdot \text{चज्या}^2 \cdot y^2, \text{ समयोजनेन } y^2 \cdot pma^2 \cdot त्रि^2 + 12^4 \cdot \text{चज्या}^2 \cdot y^2 = y^2 \\ & (pma^2 \cdot त्रि^2 + 12^4 \cdot \text{चज्या}^2) = 12^4 \cdot \text{चज्या}^2 \cdot त्रि^2 \text{ पक्षौ पमा}^2 \cdot त्रि^2 + 12^4 \cdot \\ & \text{चज्या}^2 \text{ भक्तौ तदा } \frac{12^4 \cdot \text{चज्या}^2 \cdot त्रि^2}{pma^2 \cdot त्रि^2 + 12^4 \cdot \text{चज्या}^2} = y^2 \text{ हरभाज्यौ चज्या}^2 \cdot \\ & 12^2 \text{ भक्तौ तदा } \frac{12^2 \cdot \text{चज्या}^2 \cdot त्रि^2}{pma^2 \cdot त्रि^2 + 12^2 \cdot \text{चज्या}^2} = y^2, \text{ मूल ग्रहणेन} \\ & \frac{\text{चज्या}^2 \cdot 12^2}{pma^2 \cdot त्रि^2 + 12^2 \cdot \text{चज्या}^2} \end{aligned}$$

$$\sqrt{\frac{\text{त्रि}^2}{pma^2 \cdot त्रि^2 + 12^2 \cdot \text{चज्या}^2}} = y = \text{क्रांज्या} । \text{ ततः } \frac{\text{त्रि} \times \text{क्रांज्या}}{\text{जिज्या}} = \text{रवि-}$$

भुजज्या, अस्याश्चापं रविभुजांशाः स्युरिति । एतावताऽऽचार्योक्तमुपपन्नम् । सिद्धान्तशेखरे “सूर्यघ्नी चरशिञ्जिनी कृतकृतिस्तद्युक्तभक्ता सती त्रिज्याऽक्षप्र-भयोर्वधस्य करणी छेदस्त्रिभज्याकृतेः । लब्धैर्मूलमिनापमस्य हि गुणस्तस्मादपि प्रोक्तवत् तिग्मांशुविषुवत्प्रभाचरदलज्ञानादसौ जायते” श्रीपत्युक्तोऽयं प्रकार आचार्योक्तप्रकारस्य सर्वथा सहसः । सिद्धान्त शिरोमणौ ‘चरज्यकार्काभिहतिरित्यादि’ भास्कर प्रकारश्चाप्याचार्योक्त प्रकारानुरूप एवेति ॥ ३५३-३८ ॥

अब ‘योऽक्षचरार्धज्ञोऽर्क कथयति’ इस प्रश्न के उत्तर को कहते हैं ।

हि. भा.—इष्ट चरज्या और बारह के घात के वर्ग को त्रिज्या और पलभा के घात

वर्ग में जोड़ कर तथा भाग देकर जो हो उसमें त्रिज्यावर्ग में भाग देने में जो नब्बि हो उसका मूल क्रान्तिज्या होती है। उस क्रान्तिज्या को त्रिज्या में गुणा कर जिनज्या में भाग देने में जो लब्धि हो उसका चाप रवि होते हैं इति ॥ ३५३-३८ ॥

उपपत्ति ।

कल्पना करते हैं क्रान्तिज्या मान = y , तब अक्ष क्षेत्रानुपात में $\frac{y^2}{12^2}$ पभा = - कुज्या

$$\therefore \text{कुज्या}^2 = \frac{y^2 \cdot \text{पभा}^2}{12^2}, \text{ तथा त्रि}^2 - y^2 = \text{छु}^2 \therefore \frac{\text{चज्या}^2 \cdot \text{त्रि}^2}{\text{त्रि}^2} = \text{कुज्या}^2 =$$

$$\frac{\text{चज्या}^2 (\text{त्रि}^2 - y^2)}{\text{त्रि}^2} \text{ दोनों कुज्या वर्गों के समीकरण करने में } \frac{y^2 \cdot \text{पभा}^2}{12^2} =$$

$$\frac{\text{चज्या}^2 (\text{त्रि}^2 - y^2)}{\text{त्रि}^2} \text{ प्रथम पक्ष में हर और भाज्य को त्रि}^2 में तथा द्वितीय पक्ष में हर$$

$$\text{और भाज्य को } 12^2 \text{ से गुणा करने से } \frac{y^2 \cdot \text{पभा}^2 \cdot \text{त्रि}^2}{12^2 \cdot \text{त्रि}^2} = \frac{12^2 \cdot \text{चज्या}^2 (\text{त्रि}^2 - y^2)}{\text{त्रि}^2 \cdot 12^2}$$

$$\text{छेदगम से } y^2 \cdot \text{पभा}^2 \cdot \text{त्रि}^2 = 12^2 \cdot \text{चज्या}^2 (\text{त्रि}^2 - y^2) = 12^2 \cdot \text{चज्या}^2 \cdot \text{त्रि}^2 - 12^2 \cdot \text{चज्या}^2 \cdot y^2 \text{ दोनों पक्षों में } 12^2 \cdot \text{चज्या}^2 \cdot y^2 \text{ जोड़ने से } y^2 \cdot \text{पभा}^2 \cdot \text{त्रि}^2 + 12^2 \cdot \text{चज्या}^2 \cdot y^2 = y^2 (\text{पभा}^2 \cdot \text{त्रि}^2 + 12^2 \cdot \text{चज्या}^2) = 12^2 \cdot \text{चज्या}^2 \cdot \text{त्रि}^2 \text{ दोनों पक्षों को पभा}^2 \cdot \text{त्रि}^2 + 12^2 \cdot \text{चज्या}^2 \text{ इससे भाग देने से—}$$

$$\frac{12^2 \cdot \text{चज्या}^2 \cdot \text{त्रि}^2}{\text{पभा}^2 \cdot \text{त्रि}^2 + 12^2 \cdot \text{चज्या}^2} = y^2 \dots\dots\dots (१)$$

हर और भाज्य को चज्या^२ १२^२ से भाग देने से—

$$\frac{\text{त्रि}^2}{\text{पभा}^2 \cdot \text{त्रि}^2 + 12^2 \cdot \text{चज्या}^2} = y^2 \text{ मूल लेने से } \sqrt{\frac{\text{त्रि}^2}{\text{पभा}^2 \cdot \text{त्रि}^2 + 12^2 \cdot \text{चज्या}^2}}$$

$$= y = \text{क्रांज्या}, \therefore \frac{\text{त्रि} \cdot \text{क्रांज्या}}{\text{त्रिज्या}} = \text{रविभुज्या}, \text{ इसका चाप करने से रविभुजांश होता है,}$$

इससे आचार्योक्त उपपन्न हुआ । सिद्धान्त शेखर में 'सूर्यघ्नी चरणिज्जिनीकृतकृतिस्तद्युक्त-भक्तम सती' इत्यादि संस्कृतोपपत्ति में लिखित श्लोक से श्रीपति ने आचार्योक्त प्रकार के अनु-रूप ही कहा है (१) $\frac{12^2 \cdot \text{चज्या}^2 \cdot \text{त्रि}^2}{\text{पभा}^2 \cdot \text{त्रि}^2 + 12^2 \cdot \text{चज्या}^2}$ इसमें हर और भाज्य को त्रि^२ से अप-

$$\text{वर्तन देने से } \frac{12^2 \cdot \text{चज्या}^2}{\text{पभा}^2 + 12^2 \cdot \text{चज्या}^2} = y^2, \text{ मूललेने से } \sqrt{\frac{12^2 \cdot \text{चज्या}^2}{\text{पभा}^2 + 12^2 \cdot \text{चज्या}^2}}$$

= y = क्रांज्या, इससे सिद्धान्त शिरोमणि में 'चरज्यकाकाभिहितः' इत्यादि भास्करोक्त उपपन्न होता है इति ॥ ३५३-३८ ॥

इदानीं पलभाज्ञाने यश्चरार्धं कथयतीत्यस्योत्तरमाह ।

विषुवच्छाया भक्ता स्वचरार्धज्येष्ठयाऽन्यया गुणिता ।

लब्धस्य चापमिष्टच्छायायाश्चरदलप्राणाः ॥ ३६ ॥

सु. भा.—स्वदेशीयचरज्याऽन्ययेष्टदेशीयपलभया गुणिता विषुवच्छाया भक्ता स्वदेशीयपलभया भक्ता लब्धस्य चापमिष्टच्छाया इष्टपलभायाश्चरदलप्राणाश्चरासवो भवन्तीति ।

अत्रोपपत्तिः । यदि द्वयोर्देशयोः पलभे वि_१, वि_२ कल्प्येते तथैकक्रान्तौ द्वयोर्देशयोश्चरे च_१, च_२ । तदा गोलयुक्त्या—

$$\text{ज्याच}_1 = \frac{\text{वि}_1 \times \text{ज्याक्रा}}{१२} \times \frac{\text{त्रि}}{\text{द्यु}} \quad \text{ज्या च}_2 = \frac{\text{वि}_2 \times \text{ज्याक्रा}}{१२} \times \frac{\text{त्रि}}{\text{द्यु}}$$

$$\text{अतः } \frac{\text{ज्याच}_1}{\text{ज्याच}_2} = \frac{\text{वि}_1}{\text{वि}_2} \quad \text{ततः } \text{ज्याच}_2 = \frac{\text{वि}_2 \times \text{ज्याच}_1}{\text{वि}_1}$$

अत उपपद्यते यथोक्तम् ॥ ३९ ॥

वि. भा.—स्वदेशीयचरज्याऽन्ययेष्टविषुवच्छायाया (अन्यदेशसम्बन्धिन्या पलभया) गुणिता, विषुवच्छायाया (स्वदेशीयपलभया) भक्ता लब्धस्य चापमिष्ट-पलभायाश्चरासवो भवन्तीति ॥ ३९ ॥

अत्रोपपत्तिः ।

स्वदेशान्यदेशयोः पलभे कल्प्येते पभा, पभा तथैक क्रान्तौ तयोर्देशयोश्चरे च, च तदाऽक्षप्रभा संगुणितापमज्या तद् द्वादशांशो भवति क्षितिज्येत्यादि भास्करोक्त्या

$$\frac{\text{पभा. क्रंज्या. त्रि}}{१२. \text{द्यु}} = \text{चज्या}, \quad \text{तथा } \frac{\text{पभा. क्रंज्या. त्रि}}{१२. \text{द्यु}} = \text{चज्या},$$

$$\text{अनयोः सम्बन्धः} = \frac{\text{चज्या}}{\text{चज्या}} = \frac{\text{पभा}}{\text{पभा}} \quad \text{छेदगमेन चज्या . पभा} = \text{पभा . चज्या}$$

$$\therefore \frac{\text{चज्या. पभा}}{\text{पभा}} = \text{चज्या}, \quad \text{अतः स्वदेशपलभया स्वदेशचरार्धज्या लभ्यते तदा-}$$

ऽन्यदेशीयपलभया केति अन्यदेशीय चरार्धज्या समागच्छतीति सिद्धमेतावताऽऽचार्योक्तसूत्रमुपपन्नम् । सिद्धान्तशेखरे 'अन्यदेशपलभा समाहता स्वीयपत्तनचरार्धशिञ्जिनी । भाजिता पलभया स्वया ततश्चापमन्यविषये चरासवः' इति श्लोपतेः प्रकार आचार्योक्त प्रकारानुरूप एवेति ॥ ३९ ॥

अब 'पलभा ज्ञाने यश्चरार्धं कथयति' इस प्रश्न के उत्तर को कहने है ।

हि. भा.—स्वदेशीय चरज्या को अन्य देशीय पलभा में गुणा कर स्वदेशीय पलभा से भाग देने से जो लब्ध हो उसका चाप अन्य देशीय चरार्धामु प्रमाण होता है इति ॥ ३६ ॥

उपपत्ति ।

कल्पना करते हैं दोनों देशों की पलभा = पभा । पभा, पभा = स्वदेश पलभा, पभा = अन्य देशपभा, तथा एक कान्ति में स्वदेशीय चरज्या = चज्या । अन्य देशीय चज्या = चज्या तब 'अक्षप्रभा संगुणितापमज्या' इत्यादि ।

भास्करोक्त प्रकार से $\frac{\text{पभा. क्राज्या. त्रि}}{१२. घु. चज्या} = \text{चज्या, तथा } \frac{\text{पभा क्राज्या. त्रि}}{१२. घु. पभा}$
 $= \text{चज्या इन दोनों के सम्बन्ध} = \frac{\text{चज्या}}{\text{चज्या}} = \frac{\text{पभा}}{\text{पभा}}$ छेदगम में चज्या. पभा = पभा.

चज्या $\therefore \frac{\text{चज्या. पभा}}{\text{पभा}} = \text{चज्या}$ इस से 'स्वदेशीय पलभा में यदि स्वदेशीय चरार्धज्या पाते हैं तो अन्य देशीय पलभा में क्या अन्य देशीय चरार्धज्या आती है, निश्च ह्यभा, इस में आचार्योक्त उपपन्न हुआ । सिद्धान्त शेखर में 'अन्य देश पलभा गमाहता स्वीय पन्नन चरार्धं शिञ्जिनी' इत्यादि संस्कृतोपपत्ति में लिखित श्लोक से श्रीपति ने आचार्योक्त प्रकार के अनुरूप ही कहा है इति ॥ ३६ ॥

इदानीं य इष्टचरार्धात् छायां कथयतीत्यस्योत्तरमाह ।

स्व चरार्धज्या भक्ता विषुवच्छायेष्टचरदलासूनाम् ।

गुणिता ज्ययेष्टचरदलविषुवच्छाया फलं भवति ॥ ४० ॥

सु. भा.—विषुवच्छाया स्वचरार्धज्या भक्ता इष्टचर दलासूनां ज्यया गुणिता फलमिष्टचरदलसम्बन्धिनी विषुवच्छाया भवति ।

अत्रोपपत्तिः । पूर्वप्रकारवैपरीत्येन स्फुटा ॥ ४० ॥

वि. भा.—विषुवच्छाया (स्वदेशीय पलभा) इष्टचरदलासूनां ज्यया (इष्ट देश सम्बन्धिज्या चरज्यया) गुणिता, स्वचरार्धज्यया (स्वदेशीय चरज्यया) भक्ता फलमिष्टदेशीयचरार्धसम्बन्धिनी पलभा भवतीति ॥ ४० ॥

अत्रोपपत्तिः ।

पूर्वश्लोकोपपत्तौ $\frac{\text{चज्या. पभा}}{\text{पभा}} = \text{चज्या, सिद्धमस्ति, छेदगमेन चज्या. पभा}$

$= \text{पभा. चज्या पक्षौ चज्या भक्तौ तदा पभा} = \frac{\text{पभा. चज्या}}{\text{चज्या}},$ अत्र पभा, चज्या

स्वदेशीय पलभाचरज्ये स्तः । पभा, चज्या इष्टदेशीय (अन्यदेशीय) पलभा चरज्ये स्तः । एतेनाचार्योक्तमुपपन्नम् । सिद्धान्त शेखरे “स्वदेशजाऽक्षद्युतिरिष्ट देशचरार्ध-जीवा गुणिता विभक्ता । स्वपत्तनोद्भूतचरार्धमौर्व्या प्रजायतेऽसौ पलभाऽन्य-देशे ॥” श्रीपत्युक्तोऽयं प्रकार आचार्योक्तानुरूप एवेति ॥ ४० ॥

अब ‘य इष्ट चरार्धात् छायां कथयति’ इस प्रश्न के उत्तर को कहते हैं ।

हि. भा.—स्वदेशीय पलभा को इष्टदेशीय (अन्यदेशीय) चरज्या से गुणा कर स्वदेशीय चरज्या से भाग देने से फल इष्टदेशीय पलभा होती है ॥ ४० ॥

उपपत्ति ।

पूर्वश्लोक की उपपत्ति से $\frac{\text{चज्या. पभा}}{\text{पभा}} = \text{चज्या, सिद्ध है छेदगम से चज्या. पभा} =$

$\text{पभा. चज्या दोनों पक्षों को (चज्या) भाग देने से} \frac{\text{पभा. चज्या}}{\text{चज्या}} = \text{पभा, यहां पभा, चज्या}$

स्वदेशीय पलभा और चरज्या है पभा, चज्या इष्टदेशीय (अन्यदेशीय) पलभा और चरज्या है; इस से आचार्योक्त प्रकार उपपन्न हुआ । सिद्धान्त शेखर में ‘स्वदेशजाऽक्षद्युतिरिष्टदेश-चरार्धजीवा गुणिता’ इत्यादि श्रीपत्युक्तप्रकार आचार्योक्त प्रकार के अनुरूप ही है इति ॥ ४० ॥

इदानीं योऽक्षबिन्मध्यच्छायातो रविमानयति दिवाकरज्ञोऽक्षमानयतीति
प्रश्नद्वयोत्तरमाह ।

अब जो अक्षांश ज्ञाता मध्यच्छाया से रवि को जानते हैं, तथा सूर्य ने अक्षांश जानते हैं ।

इन दोनों प्रश्नों के उत्तर को कहते हैं ।

हि. भा.—यदि शङ्कु मूल से मध्यच्छायाग्र उत्तर दिशा में हो तो दिनार्ध नतांश

को दक्षिण समझना चाहिये । यदि छायाग्र दक्षिण दिशा में हो तो मध्यनतांश को उत्तर समझना चाहिये । अक्षांश को सर्वदा दक्षिण ही समझना चाहिये । मध्याह्न काल में नतांश और अक्षांश की एक दिशा रहने से दोनों के अन्तर करने से क्रान्त्यंश होता है, नतांश और अक्षांश के भिन्न दिशा रहने से दोनों का योग करने से क्रान्त्यंश होता है । इससे पूर्ववत् रवि का साधन करना चाहिये । एवं क्रान्त्यंश और मध्यनतांश के संस्कार से अक्षांश होता है ॥

उपपत्ति ।

$\sqrt{१२^१ + मछाया^१} = मछायाक$ । तब अनुपात करते हैं यदि मध्यच्छाया कर्ण में मध्यच्छाया भुज पाते हैं तो त्रिज्या कर्ण में क्या इस अनुपात से आती है दृज्या $= \frac{मछा. त्रि.}{मछाक}$ इसके चाप करने से मध्यनतांश होता है । यदि खस्वस्तिक और निरक्षखस्वस्तिक के मध्य में याम्योत्तर वृत्त में रवि है तो रवि से खस्वस्तिक पर्यन्त नतांश है । खस्वस्तिक निरक्ष खस्वस्तिक अन्तर अक्षांश है इसलिये यहां अक्षांश — नतांश $=$ — रवि से निरक्षखस्वस्तिक पर्यन्त क्रान्त्यंश । यदि खस्वस्तिक से रवि उत्तर है तदा अक्षांश + नतांश $=$ क्रान्त्यंश $=$ रवि से निरक्ष खस्वस्तिक पर्यन्त । क्रान्ति ज्ञान से $\frac{त्रि. क्रांज्या}{त्रिज्या} =$ रवि भुजज्या, इसका चाप $=$ रविभुजांश । एवं क्रान्त्यंश और मध्यनतांश के संस्कार से अक्षांश होता है इति ॥४१-४२॥

इदानीं योऽग्राकर्कजो लम्बाऽक्षांशान् कथयतीत्यस्योत्तरमाह ।

उदयज्येष्ठापक्रमजीवा कृत्यन्तरात्पदं क्षितिजा ।

व्यासार्धगुणा क्षितिजा भक्तोदयजीवयाऽक्षज्या ॥४३॥

उदयज्यया विभक्ता क्रान्तिज्या व्यासदलगुणा लम्बः ।

सु. भा.—उदयज्याया अग्राया इष्टक्रान्तिजीवायाश्च वर्गान्तरात् पदं मूलं क्षितिजा कुज्या भवति । सा क्षितिजा व्यासार्धगुणा ऽग्राया भक्ता ऽक्षज्या स्यात् । क्रान्तिज्या च व्यासदलगुणा अग्राया विभक्ता लम्बो लम्बज्या भवेत् । एवं कुज्या द्वादशगुणा विषुवच्छायाहता फलं क्रान्तिः क्रान्तिज्या भवतीति ।

अत्रोपपत्तिः । अक्षक्षेत्रानुपातेन स्फुटा ॥ ४३ । ४४ ॥

वि. भा.—उदयज्या शब्देनाग्रा बोध्या, तस्याः क्रान्तिज्यायाश्च वर्गान्तर-मूलं कुज्या स्यात् । सा कुज्या त्रिज्या गुणाऽग्राया भक्ता तदाऽक्षज्या भवति । क्रान्तिज्या त्रिज्या गुणाऽग्राया विभक्ता लम्बज्या स्यात् । क्षितिजा (कुज्या) द्वादश-गुणिता पलभया भक्ता तदा क्रान्तिज्या भवेदिति ॥४३-४४॥

अत्रोपपत्तिः ।

अग्रा क्रान्तिज्या कुज्येति कर्णकोटिभुजैरुत्पन्नाक्षेत्राः ॥ अग्रा^१ क्रान्तिज्या^२
 = कुज्या । ततः अक्षज्या भुजः लम्बज्या कोटिः । त्रिज्याकर्णः, एतैर्भुजत्रयैरुत्प-
 न्नमेकं त्रिभुजम् । कुज्या भुजः । क्रान्तिज्या कोटिः । अग्राकर्णः एतैर्भुजत्रयैरुत्पन्नं
 द्वितीयत्रिभुजम् । एतयोस्त्रिभुजयोः माजात्यादनुपातो यद्यग्राकर्णेन कुज्या भुजो
 लभ्यते तदा त्रिज्याकर्णेन किं समागच्छत्यक्षज्या तत्स्वरूपम् = कुज्या त्रि
 अग्रा
 = अक्षज्या । तथा अग्रा कर्णे यदि क्रान्तिज्या कोटिर्लभ्यते तदा त्रिज्याकर्णे किं
 समागच्छति लम्बज्या तत्स्वरूपम् = $\frac{\text{क्रान्तिज्या त्रि}}{\text{अग्रा}}$ = लज्या तथा पलभाभुजः द्वादशा-
 ङ्गुलशङ्कुः कोटिः । पलकर्णः कर्णः, एतैर्भुजत्रयैरुत्पन्नमक्षक्षेत्रं कुज्या क्रान्ति-
 ज्या अग्राभिर्भुजकोटिकर्णैरुत्पन्नाक्षक्षेत्रसजातीयमनोऽनुपातो यदि पलभाभुजे
 द्वादशकोटिर्लभ्यते तदा कुज्याभुजे किं समागच्छति क्रान्तिज्या = १२. कुज्या
 पभा.
 एतावताऽऽचार्योक्तमुपपन्नम् ॥४३-२४॥

अब 'योऽग्राकर्णो लम्बाक्षांशान् कथयति' इस प्रश्न के उत्तर को कहते हैं ।

हि. भा.—अग्रा और क्रान्तिज्या का वर्गान्तर मूल कुज्या होती है । कुज्या को त्रिज्या से गुणाकर अग्रा से भाग देने से अक्षज्या होती है । क्रान्तिज्या को त्रिज्या में गुणाकर अग्रा से भाग देने से लम्बज्या होती है । कुज्या को बारह में गुणाकर पलभा से भाग देने में क्रान्तिज्या होती है इति ॥४३-४४॥

उपपत्ति ।

अग्रा कर्ण, क्रान्तिज्या कोटि, कुज्या भुज इन तीनों भुजों में उत्पन्न त्रिभुज में
 $\sqrt{\text{अग्रा}^2 - \text{क्रान्तिज्या}^2} = \text{कुज्या}$ अक्षज्याभुज, लम्बज्या कोटि, त्रिज्या कर्ण इन तीनों भुजाओं
 से उत्पन्न त्रिभुज पूर्वोक्त त्रिभुज के सजातीय हैं इसलिए अनुपात करते हैं यदि अग्रा कर्ण में
 कुज्या भुज पाते हैं तो त्रिज्या कर्ण में क्या इस अनुपात में अक्षज्या आती है कुज्या त्रि
 अग्रा
 = अक्षज्या । तथा अग्रा कर्ण में यदि क्रान्तिज्या कोटि पाते हैं तो त्रिज्या कर्ण में क्या इस
 से लम्बज्या आती है $\frac{\text{क्रान्तिज्या त्रि}}{\text{अग्रा}}$ = लज्या । तथा पलभाभुज द्वादशाङ्गुलशङ्कुकोटि, पल
 कर्ण कर्ण इन तीनों भुजाओं से उत्पन्न त्रिभुज पूर्वोक्त त्रिभुज का सजातीय है इसलिए अनु-

पात करते हैं यदि पलभाभुज में द्वादश कोटि पाते हैं तो कुज्या भुज में क्या इससे क्रान्तिज्या
प्राप्ती है। $\frac{१२ \times \text{कुज्या}}{\text{पभा}} = \text{क्रांज्या}$, इससे आचार्योक्त उपपन्न हुआ इति ॥४३-४४॥

इदानीं य उदयेऽस्ते वाऽग्रां वेत्तीत्यस्योत्तरमाह ।

यष्टि व्यासार्धेऽग्रा प्राच्यपरा भास्करान्तरांशज्या ।

द्विगुणमुदयास्तसूत्रं तत्त्रिज्याकृतिविशेषपदम् ॥४५॥

अब "इदानीं यो दिशो न गेतास्ते तान् विगतान् तान् लम्ब्यान् विना"

इत प्रश्नों के उत्तर कहते हैं ।

हि. भा — मध्याह्न काल में वेध में उन्नतज्या और नतज्या मन्त्रों परना पड़ती। पूर्व-श्लोक की उपपत्ति में लिखित यष्टिव्यासार्धोत्पन्न वृत्तकेन्द्र में जैसे वृत्त के व्यासार्धोत्पन्न यष्टि की नष्टच्छाया हो वैसे तिर्यक् रवि बिम्बकेन्द्रगामी कर्गमृत्वाकार अयलम्ब पारगण करना चाहिए । उस वृत्त के केन्द्र से जितने अङ्गुलो में लम्ब पतन हो वही अङ्गुलमान यष्टि व्यासार्धोत्पन्न वृत्त में नतांशज्या होती है, और लम्ब उन्नतांशज्या होती है । उस वृत्त में वृत्त केन्द्र से उत्तर दिशा में वा दक्षिण दिशा में शङ्कुमूल निपात (गिरना) मध्याह्न काल में होता है इसलिये उत्तरगोल में मध्याह्नकाल में यदि वृत्त केन्द्र से उत्तर दिशा में शङ्कुमूल पतित है तो शङ्कुमूल से पूर्वापर रेखा पर्यन्त लम्बरूप भुज को अग्रा में से पटाने में शङ्कुमूल में स्वीदयास्त सूत्रपर्यन्त शङ्कुतल होता है । यदि वृत्तकेन्द्र से दक्षिण दिशा में शङ्कुमूल पतित हो तो अग्रा में भुज को जोड़ने से शङ्कुतल होता है । दक्षिण गोल में भुज में से अग्रा को पटाने में शङ्कुतल होता है । इस शङ्कुतल को बारह से गुणाकर दिनार्धशङ्कु से भाग देने में पलभा होती है । त्रिज्या को दो स्थानों में स्थापन करना एक स्थान में शङ्कुतल में गुणा करना, द्वितीय स्थान में शङ्कु से गुणा करना, दोनों स्थानों में हृति (शङ्कु और शङ्कुतल के वर्गयोग मूल) से भाग देने से क्रम से मध्याह्न काल में अक्षज्या लम्बज्या होनी है इति ॥ ४६-४८ ॥

उपपत्ति ।

शङ्कुमूल से स्वीदयास्त सूत्र के ऊपर लम्ब शङ्कुतल है । शङ्कुमूल में पूर्वापर सूत्र के ऊपर लम्ब भुज है । स्वीदयास्त सूत्र और पूर्वापर सूत्र का अन्तर अग्रा है । 'सौम्याग्रकाग्रान्तुलं हि याम्यं' इत्यादि संस्कृतोपपत्ति में लिखित भास्करोक्ति में यथार्थानयन भुज और अग्रा के योग और अन्तर से शङ्कुतल होता है । तब अनुपात करने हैं यदि मध्यशङ्कु में शङ्कुतल पाते हैं तो द्वादशाङ्गुल शङ्कु में क्या इस अनुपात में पलभा आती है । तब फिर अनुपात करते हैं यदि हृति (शङ्कु और शङ्कुतल के वर्गयोग मूल) में शङ्कुतल पाते हैं तब त्रिज्या में क्या इससे मध्याह्न काल में अक्षज्या होती है । तथा यदि हृति में शङ्कु पाते हैं तो त्रिज्या में क्या इससे मध्याह्न काल में लम्बज्या आती है । इसमें आचार्योंक्त उपपन्न हुआ ॥ सिद्धान्त शेखर में 'यष्टिर्नष्ट्युतिरिह यथा ज्ञायते वृत्तमध्ये' इत्यादि श्लोकों से श्रीपति ने आचार्योंक्त प्रकार के अनुरूप ही कहा है इति ॥ ४६-४८ ॥

इदानीं बृहदलादन्यदापलभासाधनार्थमाह ।

छाया वृत्तेऽर्काग्रा कर्गगुणा व्यासदलहृताऽर्काग्रा ।

साध्यास्तत्र सप्त अङ्गुलान्तरात् पलभां पलभां पलभां पलभां पलभां पलभां पलभां

उत्तरगोले याम्ये विषुवच्छायाऽग्रयाऽन्तरं हीनम् ।

एवं विषुवच्छाया युक्तविहीनाऽन्तरेणाग्रा ॥ ५० ॥

सु. भा.—प्रथमार्याया पूर्वार्धं त्रिप्रश्नाध्यायस्थचतुर्थार्यापूर्वार्धसमं व्याख्यातमेव । अन्यत् सर्वं च त्रिप्रश्ना ५८-६० आर्याभिः स्फुटम् ॥ ४९-५० ॥

वि. भा.—दिनार्धादन्यकाले अर्काग्रा छायाकर्णगुणा त्रिज्याभक्ता तदा छायाकर्णगोलीया रवेरग्रा भवेत् । शङ्कुमूलपूर्वापररेखयोरन्तरं भुजः । तेन भुजेनोनयुता कर्णवृत्ताग्राऽर्थादुत्तरेण भुजेनोनादक्षिणेन भुजेन युता तदोत्तरगोले विषुवच्छाया (पलभा) भवेत् । याम्ये (दक्षिण गोले) तथा कर्णवृत्तीयाग्राऽन्तरं (भुजमान) हीनं तदा पलभा भवेत् । एवमन्तरेण (भुजेन) युक्तविहीनाऽग्रयाऽर्थादुत्तरभुजेन युता दक्षिणभुजेन हीना तदा पलभा भवेदिति ॥ ४९-५० ॥

अत्रोपपत्तिः ।

छायाकर्ण गोले पलभा शङ्कुतलयोस्तुल्यत्वं भवति कथमिति प्रदर्श्यते यदि द्वादशाङ्गुलशङ्कौ पलभा भुजो लभ्यते तदेष्टशङ्कौ किमिति जातं शङ्कुतलम् = $\frac{\text{पभा. शंकु.}}{१२}$, परन्तु शंकु = $\frac{१२ \times \text{त्रि.}}{\text{छाक}}$ अत उत्थापनेन शङ्कुतलम् = $\frac{\text{पभा. १२. त्रि.}}{१२. \text{छाक}}$
ततश्छायाकर्णगोले शङ्कुतलम् = $\frac{\text{पभा. १२. त्रि. छाक}}{१२. \text{छाक. त्रि.}} = \text{पभा}$

∴ सिद्धं कर्णगोले शङ्कुतलम् = पलभा । कर्णवृत्ताग्रा व्यस्तगोला भवति । पलभा च सदोत्तरा । तथोः संस्कारतश्छायाग्रपूर्वापरसूत्रमध्यं भुजः कथ्यतेऽतस्तद्वैपरीत्येन कर्णवृत्ताग्रा भुजयोः संस्कारेण पलभा भवतीति । सिद्धान्तशेखरे “अन्यदा तु नरपूर्वपश्चिमाशान्तरेण रुचिवृत्तजाग्रका । दक्षिणोत्तरभुवा युतोनिता सौम्यवर्त्तिनि रवौ पलप्रभा ॥ दक्षिणेन पुनरिनाग्रया तथा हीनमेव हि तदन्तरं सदा । एवमन्तरयुतोनिता भवेदक्षभा नियतमंगुलाऽग्रका ॥” श्रीपत्युक्तमिदमाचार्योक्तानुरूपमेवेति ॥ ४९-५० ॥

अब छुदल (दिनार्ध) से भिन्न समय में पलभा साधन के लिये कहते हैं ।

हि. भा.—दिनार्ध से भिन्न समय में रवि की अग्रा को छायाकर्ण से गुणा कर त्रिज्या से भाग देने से छायाकर्ण गोलीय अग्रा होती है, शङ्कुमूल और पूर्वापर रेखा का अन्तर भुज है । उत्तर गोल में कर्णवृत्ताग्रा में उत्तर भुज को घटाने से और दक्षिण भुज को जोड़ने से पलभा होती है । दक्षिण गोल में भुज में कर्णवृत्तीया अग्रा को घटाने ही से पलभा होती है इति ॥ ४९-५० ॥

उपपत्ति ।

छाया कर्णगोल में शङ्कुतल और पलभा बराबर होती है जैसे यदि द्वादशाङ्गुल शङ्कु में पलभा पाते हैं तो इष्टशङ्कु में क्या इसमें शङ्कुतल आना है पभा श = शङ्कुतल ।

परन्तु $\frac{१२ \times \text{त्रि}}{\text{छाक}} = \text{शङ्कु}$, इससे शङ्कु को उत्थापन देने में शङ्कुतल = पभा. १२. त्रि
१२ छाक

अतः छाया कर्ण गोल में परिणामन करने से शङ्कुतल = पभा. १२. त्रि. छाक
१२. छाक त्रि = पभा,

अतः सिद्ध हुआ छाया कर्ण गोल में शङ्कुतल = पलभा । उत्तर गोल में कर्णवृत्ताग्रा—उत्तर भुज = पलभा । तथा कर्णवृत्ताग्रा + दक्षिणभुज = पलभा । दक्षिणगोल में मध्यदा भुज—कर्णवृत्ताग्रा = पलभा होती है । इससे आचार्योक्त उपपन्न हुआ । सिद्धान्त शेखर में 'अन्यदा तु नर पूर्वं पश्चिमाशान्तरेण रूविवृत्तजाग्रका' इत्यादि में श्रीपति ने आचार्योक्त के अनुरूप ही कहा है इति ॥ ४६-५० ॥

मणावित्यमेव कथ्यते । अत्राचार्येण कुज्या कोटिः । क्रान्तिज्याभुजः कथ्यते । अत्र न कश्चिद्दोषो भुजकोटयोर्नाम एव भेदो न हि स्वरूपभेदः । ग्रहात् क्षितिजधरातलोपरि यो लम्बः स शंकुः । शंकुमूलात् स्विदयास्तसूत्रपर्यन्तं शंकुतलम् । तच्च क्षितिजादुपरि दक्षिणतोऽहोरात्रवृत्तस्य गतत्वादधश्चोत्तरतो गतत्वात् दिने स्विदयास्त सूत्रादक्षिणतो रात्रावुत्तरतश्च भवतीति । सिद्धान्तशेखरे “याम्योत्तरं शङ्कुतलं भवेत्तद्विवारजन्योदयास्तसूत्रात्” श्री पत्युक्तमिदमाचार्योक्तानुरूपमेव तथा सिद्धान्तशिरोमणी “सूत्राद्विवा शङ्कुतलं यमाशं याम्यां गतं हि द्युनिशं कुजोर्ध्वं । अधश्च सौम्यां निशि सौम्यमस्मात् सद्युक्तियुक्तं नूतलं निरुक्तम् ॥” भास्करेणोक्तं कथ्यते इति ॥ ५१ ॥

अब क्रान्तिज्या आदि की स्थिति को कहते हैं ।

हि. भा. - क्रान्तिज्या भुज, कुज्या कोटि, और दोनों का वर्गयोगमूल अग्रा कर्ण, यह अक्षक्षेत्र है । दिवाशकुतल स्विदयास्त सूत्र से दक्षिण होता है इति ॥ ५१ ॥

उपपत्ति ।

पूर्व स्वस्तिक से क्षितिज और अहोरात्र वृत्त के सम्पात पर्यन्त क्षितिज में अग्राचापांश है, पूर्वस्वस्तिक ही से उन्मण्डल और अहोरात्रवृत्त के सम्पात पर्यन्त उन्मण्डल में क्रान्ति चाप है तथा क्षितिज और उन्मण्डल के अन्तर्गत अहोरात्रवृत्त में कुज्या चाप है । इन तीनों भुजों से उत्पन्न त्रिभुज का ज्याक्षेत्र करने से अग्रा कर्ण, क्रान्तिज्या कोटि, और कुज्याभुज होता है, सिद्धान्त शिरोमणि में भास्कराचार्य ने इसी तरह कहा है । यहाँ आचार्य कुज्या कोटि, क्रान्तिज्याभुज कहते हैं इससे कोई दोष नहीं है क्योंकि भुज और कोटि के नाम में भेद है स्वरूप में भेद नहीं है । ग्रह से क्षितिज धरातल के ऊपर जो लम्ब होता है वह शङ्कु है । शङ्कुमूल से स्विदयास्त सूत्र पर्यन्त शङ्कुतल है । वह क्षितिज से ऊपर अहोरात्रवृत्त के दक्षिण होने से तथा अधोभाग में उत्तर होने से दिन में स्विदयास्त सूत्र से दक्षिण और रात्रि में उत्तर होता है । सिद्धान्तशेखर में ‘याम्योत्तरं शंकुतलं भवेत्तद्विवारजन्योदयास्तसूत्रात्’ इससे श्री पति ने आचार्योक्त के अनुरूप ही कहा है सिद्धान्त शिरोमणि में ‘सूत्राद्विवाशङ्कुतलं यमाशं याम्यां गतं’ इत्यादि संस्कृतोपपत्ति में लिखित श्लोक के अनुसार भास्कराचार्य ने कहा है । इति ॥ ५१ ॥

यद्युत्क्रमज्यामानं त्रिज्याधिकं तदा त्रिज्यातो यन्मितमधिकं तस्य क्रमचापेन सहितं

त्रिज्याचापं ५४०० उत्क्रमचापमानं भवेत् । सिद्धान्तशिरोमणौ 'त्रिज्याधिकस्य क्रमचाप लिप्ता' खखाब्धिबाणा ५४०० धनुस्तक्रमात् स्यात् ।' इत्यनेन भास्करेणापि तदेव कथ्यते । सिद्धान्त शेखरे 'व्यासार्धं चरजीवया भवति सा चान्त्यार्कगोलक्रमात् ॥ मध्याह्नान्त्योत्क्रमविरचितं चापमाहुर्दिनार्धं तच्च त्रिशच्च्युतमिह दलं जायते याममत्याः, एतेन श्रीपतिनाऽप्याचार्योक्तानुरूपमेव कथ्यत इति ॥५२-५३॥

अब 'चरदलैर्विना दिनरात्र्यर्धे करोति' इस प्रश्न के उत्तर को कहते हैं ।

हि भा.—उत्तर गोल में त्रिज्या और चरज्या के योग करने से दिनार्ध में अन्त्या होती है । दक्षिण गोल में त्रिज्या में चरज्या को घटाने से दिनार्ध में अन्त्या होती है । तथा उत्तर गोल में तथा दक्षिण गोल में त्रिज्या और चरज्या के अन्तर और योग क्रम से रात्र्यर्ध में अन्त्या होती है । दोनों अन्त्याओं की उत्क्रमज्या विधि से पृथक् पृथक् जो चाप होता है वे चरार्धासु के बिना दिनार्ध और रात्र्यर्ध के मान होते हैं । यदि उत्क्रमज्या मान त्रिज्या से अधिक हो तो त्रिज्या से जितना अधिक है उस के क्रमचाप को त्रिज्याचाप (६० × ६० = ५४००) में जोड़ने से उत्क्रम चाप मान होता है इति ॥ ५२-५३ ॥

उपपत्ति ।

उत्तर गोल में क्षितिजाहोरात्र वृत्त सम्पातोपरिगत ध्रुवप्रोतवृत्त नाडीवृत्त में पूर्व स्वस्तिक से चरार्धासु तुल्य अन्तर पर नीचे लगता है और दक्षिण गोल में उतने ही अन्तर पर ऊपर लगता है । उन दोनों बिन्दुओं से पूर्वापर सूत्र की समानान्तर रेखा के ऊपर ग्रहोपरिगत ध्रुव प्रोतवृत्त नाडीवृत्त के सम्पात से जो लम्ब रेखाएँ होती हैं वे दोनों गोलों में इष्टकाल में इष्टान्त्या होती हैं । दिनार्ध काल में ग्रहोपरिगत ध्रुव प्रोतवृत्त (याम्योत्तर वृत्त) नाडीवृत्त के सम्पात बिन्दु (निरक्ष खस्वस्तिक) से समानान्तर रेखा के ऊपर लब रेखा निरक्षोर्ध्वाधर सूत्र है भूकेन्द्र से निरक्ष खस्वस्तिक पर्यन्त त्रिज्या है । तथा भूकेन्द्र से समानान्तर रेखा और निरक्षोर्ध्वाधर सूत्र के योग से बिन्दु पर्यन्त चरज्या है । अतः उत्तर गोल में त्रि+चरज्या=दिनार्धान्त्या, तथा दक्षिण गोल में त्रिज्या—चरज्या=दिनार्धान्त्या । एवं उत्तर गोल में त्रिज्या—चरज्या=रात्र्यर्ध में अन्त्या, दक्षिण गोल में त्रि+चरज्या=रात्र्यर्ध में अन्त्या । दिनार्धान्त्या के उत्क्रम चाप विधि से जो चाप होता है वह दिनार्ध का मान होता है । एवं रात्र्यर्धान्त्या के उत्क्रमज्या से चापानयन विधि से जो चाप होता है वह रात्र्यर्ध का मान होता है । यदि उत्क्रमज्या का मान त्रिज्या से अधिक हो तो त्रिज्या से जितना अधिक है उसके क्रमचाप को त्रिज्या चाप (५४००) में जोड़ देने से उत्क्रम चाप मान होता है सिद्धान्त शिरोमणि में 'त्रिज्याधिकस्य क्रमचापलिप्ताः खखाब्धिबाणा धनुस्तक्रमात् स्यात्' इससे भास्कराचार्य भी उसी बात को कहते हैं । सिद्धान्त शेखर में 'व्यासार्धं चरजीवया भवति सा चान्त्यार्कगोलक्रमात् । मध्याह्नान्त्योत्क्रमविरचितं' इत्यादि से श्रीपति ने आचार्योक्त के अनुसार ही कहा है । सूर्य सिद्धान्त में 'त्रिज्योदक् चरजा युक्ता-

याम्यायां तद्विवर्जिता । अन्त्या' इससे सूर्य सिद्धान्ताकर भी उगी बात हो जाती है
इति ॥५२-५३॥

इदानीं ताभ्यामक्षावलम्बकी य करोतीत्येनम्योत्तरमाह ।

अत्रोपपत्तिः

यत्र देशे षट्षष्टे ६६ रधिकाऽक्षांशास्तत्र रवेस्तत्रा क्रान्तिर्यावत्कालं लम्बांशाधिका भवति तावत्तत्र सर्वदा दिनमेव भवति । दक्षिणा क्रान्तिर्यावत् लम्बांशाधिका तावत् सर्वदा रात्रिरेव भवति । यतो लम्बांशैर्नाडी वृत्तं दक्षिणाक्षितिजदुपरि भवति । तैरेवांशैरुत्तरक्षितिजादधो भवति । अतो लम्बांशाधिका मुत्तरां क्रान्ति नाडीवृत्ताद्दत्त्वा तदग्रे यदहोरात्रवृत्तं तदुत्तरक्षितिजादुपर्येव भवति । तथा तामेव दक्षिणां क्रान्तिं दत्त्वा तदग्रे यदहोरात्रवृत्तं तद्दक्षिणाक्षितिजादध एव भवति । अतः क्षितिजादुपरि-अहोरात्रवृत्तेषु भ्रमन् रविः सर्वदा दृश्यो भवति । क्षितिजादधः-स्थेष्वहोरात्रवृत्तेषु भ्रमन् रविः सर्वदाऽदृश्य एव । सिद्धान्त शिरोमणौ ‘षट्षष्टि-भागाभ्यधिकाः पलांशा यत्राथ तत्रास्त्यपरो विशेषः । लम्बाधिका क्रान्तिरुदक् च यावत्तावद्दिनं सन्ततमेव तत्र । यावच्च याम्या सततं तमिस्रा ततश्च मेरौ सततं समार्धम् ॥’ अनेन भास्कराचार्येण स्पष्टीकरणपूर्वकमाचार्योक्तं कथ्यते । सिद्धान्त-

शेखरे “यत्राक्षज्यादिनगुणसमालम्बकः क्रान्तितुल्यस्तस्मिन् मेघप्रभृतिषु रविः कर्कटादौषु यावत् । नास्तं गच्छत्युदयति तुलानक्रपूर्वेषु नासौ तन्मध्याकर्न्तर- भवकला भुक्तिभक्ता दिनानि ॥” श्रीपतिनाप्याचार्योक्तानुरूपं कथितमिति ॥

अब ‘योऽस्तमयाकर्न्तु करोति’ इस प्रश्न के उत्तर को कहते हैं ।

हि. भा — जिस देश में मेषादि तीन राशियों में स्थित रवि की बुज्या अक्षज्या के बराबर होती है तथा लम्बज्या क्रान्तिज्या के बराबर होती है । फिर कर्क्यादि गत रवि की बुज्या अक्षज्या के बराबर और लम्बज्या क्रान्तिज्या के बराबर तब तक रहती है जब तक उस देश में रवि अस्तमय नहीं होते हैं । इस तरह तुलादि और मकरादि गत रवि की बुज्या अक्षज्या के बराबर और क्रान्तिज्या के बराबर लम्बज्या जब तक रहती है तब तक उस देश में रवि का उदय नहीं होता है । जब मेषादि गत रवि की क्रान्तिज्या लम्बज्या के बराबर हुई तब जो मध्यम रवि है तथा कर्क्यादि गत रवि की क्रान्तिज्या के बराबर होती है तब जो मध्यम रवि है उन दोनों मध्यम रवि के अन्तर में जो कला है उसको रवि मध्यम गति से भाग देने से दिन प्रमाण होते हैं, तावत्कालपर्यन्त लम्बांश से रवि की उत्तर क्रान्ति के अधिक होने के कारण वहाँ रवि अस्त नहीं होते हैं । दक्षिण क्रान्ति के लम्बांशाधिक होने से तब तक वहाँ रवि का उदय नहीं होता है इति ॥

उपपत्ति ।

जिस देश में ६६ से अधिक अक्षांश है वहाँ रवि की उत्तराक्रान्ति जब तक लम्बांशाधिक रहती है तब तक सर्वदा दिन ही रहता है । दक्षिण क्रान्ति जब तक लम्बांशाधिक रहती है तब तक सर्वदा रात्रि ही रहती है । क्योंकि दक्षिणक्षितिज से ऊपर नाडीवृत्त लम्बांशान्तरित पर रहता है । लम्बांशान्तरित ही पर उत्तर क्षितिज से नीचा रहता है । इसलिये नाडीवृत्त से लम्बांशाधिक उत्तराक्रान्ति को देकर उसके अग्र में जो अहोरात्र वृत्त होता है वह उत्तर क्षितिज से ऊपर ही रहता है । नाडी वृत्त से उसी दक्षिणा क्रान्ति को देकर उसके अग्र में जो अहोरात्र वृत्त होता है वह दक्षिण क्षितिज से नीचे ही रहता है अतः क्षितिज से उपरिस्थ अहोरात्र वृत्तों में भ्रमण करते हुए रवि सर्वदा दृश्य होते हैं । क्षितिज से अधः स्थित अहोरात्र वृत्तों में भ्रमण करते हुए रवि सतत अदृश्य होते हैं । सिद्धान्त शिरोमणि में ‘षट्षष्टि भागाम्यधिकाः पलांशाः’ इत्यादि संस्कृतोपपत्ति में लिखित पद्यों से भास्कराचार्य ने इन्हीं विषयों का स्पष्टीकरण किया है । सिद्धान्त शेखर में ‘यत्राक्षज्या दिनगुण समा लम्बकः क्रान्तितुल्यः’ इत्यादि संस्कृतोपपत्ति में लिखित श्लोक से श्रीपति ने आचार्योक्त के अनुरूप ही कहा है इति ॥५५-५६॥

अथवा

कोणवृत्तस्थरविगत ध्रुवप्रोतवृत्ते ध्रुवाद्विपर्यन्तं द्युज्यात्रायांशा एको भुजः । ध्रुवात्खस्तिकावधि लम्बांशा द्वितीयो भुजः । कोणवृत्ते खस्वम्निकाद्विपर्यन्तं नतांशास्तृतीयो भुजः । त्रिभुजेऽस्मिन् रविगतध्रुवप्रोतवृत्तयाम्योत्तरवृत्ताभ्यामुत्पन्नकोणो नतकालः । याम्योत्तरवृत्तकोणवृत्ताभ्यामुत्पन्नकोणः = ४५ नतोऽनुपातः क्रियते यदि नतकालज्यया दृज्या लभ्यते तदागरवेदांशज्यया (ज्या ४५) किमिति समागच्छति द्युज्या = $\frac{\text{दृज्या. ज्या } ४५}{\text{नकाज्या}} = \frac{\text{दृज्या. त्रि. ज्या } ४५}{\text{नतकाज्या. त्रि. }} = \frac{\text{दृज्या. त्रि. } २४१५}{३४१५ \text{ नकाज्या.}}$
 $\frac{\text{दृज्या. त्रि. } ४८३}{\text{नकाज्या } ६८३}$ अत्र $\frac{\text{दृज्या. } ४८३}{६८३} = \text{त्रिगुणजा कोटिः, अतो द्युज्या}$
 $= \frac{\text{त्रिगुणजाकोटि. त्रि. }}{\text{नकाज्या}}, \text{ ततः } \sqrt{\text{त्रि}^2 - \text{द्यु}^2} = \text{क्रांज्या} ।$

एतावता श्रीपत्युक्तसूत्रमुपपन्नं भवति ।

कोणद्युतिगुणगजश्रुतिभिर्निहत्य दृज्यां च पावकभुजङ्गरमैरवाप्तम् । कर्णत्रिराशिगुणवृत्तभवा क्रमेण कोटिर्भवेत् त्रिगुणजा त्रिगुणेन निधनी ॥ नतक्रमज्या विहृता द्युजीवा स्यात्तत्रिजीवाकृतिजान्तरस्य । पदं भवेत् क्रान्तिरनो विवस्वानक्षद्युतिश्चाभिमतता प्रकल्प्या । साध्या ततोऽप्राप्य भुजात्रयोस्तु योगान्तरं भिन्नसमाशयोर्धत् । तदर्कनिधनं निजशङ्कुभक्तमक्षद्युतिः स्यादमकृद्विधानात् इति ॥

सिद्धान्तशेखर में इसका उत्तर दूसरी ही तरह किया गया है ।

कोणवृत्तस्थ रविकेन्द्र से क्षितिज घरातल के ऊपर लम्ब कोणशङ्कु है । उसका मूल कोण सूत्र के ऊपर पतित होता है । शङ्कुमूल से पूर्वापर सूत्र के ऊपर लम्ब भुज संज्ञक है । भुजाग्र से भूकेन्द्र पर्यन्त कोटि संज्ञक है भूकेन्द्र से कोण शङ्कुमूल तक दृज्या है । दृज्या-भुज-कोटि इन तीनों भुजों से उत्पन्न त्रिभुज में भुज और कोटि से उत्पन्न कोण = ९० । दृज्या तथा कोटि से उत्पन्न कोण = ४५ इसलिये तीसरा कोण भी दृज्या और भुज से उत्पन्न कोण = ४५ इसलिये यहां भुज और कोटि बराबर हुई । उस त्रिभुज में कोणानुपात करते हैं यदि त्रिज्या में दृज्या पाते हैं तब भूकेन्द्रलग्न कोणज्या (ज्या ४५) में क्या इस अनुपात से भुज आता है $\frac{\text{दृज्या. ज्या } ४५}{\text{त्रि}}$ यही त्रिराशिगुणवृत्तभवकोटि कही जाती है । पुनः अनुपात करते हैं यदि त्रिज्या कर्ण में ज्या ४५ पाते हैं तो कोणच्छाया कर्ण में क्या इससे आती है छायाकर्णवृत्तसम्बन्धिनीकोटि = $\frac{\text{कोणच्छा. ज्या } ४५}{\text{त्रि}}$ यह कर्ण भवकोटि कही आती है ।

यहां त्रि = ३४१५, ज्या ४५ = २४१५ अतः त्रिराशिगुणवृत्तभवकोटि = $\frac{\text{दृज्या } २४१५}{३४१५}$

$$= \frac{\text{दृज्या. } ४८३}{६८३} \text{ कर्णवृत्तभवकोटि} = \frac{\text{कोणच्छा } २४१५}{३४१५} = \frac{\text{कोणच्छा. } ४८३}{६८३} \text{ यह त्रिराशि}$$

गुणवृत्तभवकोटि से दृज्यानयन के लिये कोणवृत्तस्थ रव्युपरिगत ध्रुवप्रोतवृत्त नाडीवृत्त के सम्पात से निरक्षोर्ध्वाधर सूत्र के ऊपर लम्ब ननकालज्या है त्रिज्यावृत्त में। दृज्यावृत्त में परिणत करने से कोणशङ्कु के अग्र से याम्योत्तर वृत्त धरातल के ऊपर लम्बरूप नन-कालज्या होती है। वह पूर्वानीत त्रिराशिगुणवृत्त भव कोटि के समान है। अतः $\frac{\text{दृज्या. ज्या } ४५}{\text{त्रि}}$

$$= \frac{\text{नकाज्या. दृज्या}}{\text{त्रि}} \text{ इसलिये दृज्या} = \frac{\text{दृज्या. ज्या } ४५. \text{ त्रि}}{३४१५. \text{ नकाज्या}} = \frac{\text{दृज्या } २४१५. \text{ त्रि}}{३४१५. \text{ नकाज्या}}$$

$$\frac{\text{दृज्या. त्रि. } ४८३}{६८३ \text{ नकाज्या}} = \frac{\text{त्रिगुणजाकोटि. त्रि}}{\text{नकाज्या}} \therefore \sqrt{\text{त्रि}^2 - \text{दृज्या}^2} = \text{क्रांज्या}।$$

अथवा

कोणवृत्तस्थरविगत ध्रुवप्रोतवृत्त में ध्रुव से रविपर्यन्त दृज्याचापांश एक भुज। ध्रुव से खस्वस्तिक पर्यन्त लम्बांश द्वितीय भुज। कोणवृत्त में खस्वस्तिक से रविपर्यन्त तृतीयांश तृतीय भुज। इस त्रिभुज में रविगत ध्रुव प्रोतवृत्तयाम्योत्तरवृत्त से उत्पन्न कोण ननकाल है। याम्योत्तरवृत्त कोणवृत्त से उत्पन्न कोण = ४५ तब अनुपात करते हैं यदि ननकालज्या में दृज्या पाते हैं तो ज्या ४५ में क्या इस अनुपात से दृज्या आती है दृज्या $= \frac{\text{दृज्या. ज्या } ४५}{\text{नकाज्या}} = \frac{\text{दृज्या. त्रि. ज्या } ४५}{\text{नकाज्या. त्रि}} = \frac{\text{दृज्या. त्रि. } २४१५}{\text{नकाज्या. } ३४१५} = \frac{\text{दृज्या. त्रि. } ४८३}{\text{नकाज्या. } ६८३}$ यहां

$$\frac{\text{दृज्या. } ४८३}{६८३} = \frac{\text{त्रिगुणजाकोटि}}{\text{नकाज्या}} \therefore \text{दृज्या} = \frac{\text{त्रिगुणजा कोटि. त्रि}}{\text{नकाज्या}} \text{ अतः } \sqrt{\text{त्रि}^2 - \text{दृज्या}^2}$$

= क्रांज्या, इससे संस्कृतोपपत्ति में लिखित श्रीपत्युक्त सूत्र उपपन्न हुआ ॥

अब कोणच्छाया से रवि का आनयन करते हैं।

हि. भा.—कोणवृत्त में रवि के रहने से द्वादशांगुल शंकु की जो छाया होती है वह कोणच्छाया कहलाती है। उस के वर्गाधं का जो मूल होता है वह शंकुमूल और पूर्वा पर रेखा के अन्तर में भुज होता है। यदि शंकुमूल पूर्वापर रेखा से उत्तर दिशा में पतित हो तब भुज और पलभा का योग कर्णवृत्ताग्रा होती है। यदि शङ्कुमूल पूर्वापर रेखा से दक्षिण दिशा में पतित हो तब भुज और पलभा का अन्तर कर्णवृत्ताग्रा होती है। उस योग और अन्तर (कर्णवृत्ताग्रा) को लम्बज्या से गुणाकर कोणच्छाया कर्ण से भाग देने से इष्ट क्रान्तिज्या होती है, उससे रविज्ञान करना चाहिए इति ॥ ५७-५८ ॥

उपपत्ति ।

कोणवृत्तस्थ रविकेन्द्र से क्षितिज धरानल के ऊपर जो लम्ब होता है वह कोणमक्ष है । उसका मूल दृक्कुज सूत्र के ऊपर पतित होता है । उसके मूल में भूकेन्द्र पर्यन्त दृग्ज्या वा कोणच्छाया है । कोण शंकुमूल से पूर्वापर रेखा के ऊपर जो लम्ब होता है वह भुजमक्षक है । भुजाग्र से भूकेन्द्र पर्यन्त कोटि संज्ञक है । इससे एक जान्य त्रिभुज बना जैसे कोणच्छाया कर्ण, भुज-भुज, और कोटि-कोटि, इस त्रिभुज में कोणच्छाया और पूर्वापर रेखा में उत्पन्न कोण = ४५° है । भुज और कोटि से उत्पन्न कोण = ९०° है । अतः तृतीय कोण = ४५° तब यहां भुज और कोटि बराबर हुई इसलिए $\text{भु}^2 + \text{को}^2 = \text{रभु}^2 = \text{कोणच्छाया}^2$

$$\therefore \text{भु}^2 = \frac{\text{कोणच्छाया}^2}{2} \text{ मूल लेने से } \sqrt{\frac{\text{कोणच्छाया}^2}{2}} = \text{भुज} । \text{अग्रा और शङ्कुतल}$$

के संस्कार से भुज होता है, इसके विपरीत शङ्कुतल और भुज के संस्कार में अग्रा होती है । परन्तु छाया कर्णगोल में शङ्कुतल = पलभा अतः यदि शङ्कुमूल पूर्वापर रेखा में उत्तर तरफ पतित है तब भुज और पलभा का योग अन्यथा दक्षिण तरफ (पतित) हो दोनों का अन्तर करने से कर्णवृत्ताग्रा होती है । तब अनुपात करने ह यदि छाया कर्ण में कर्णवृत्ताग्रा पाने ह तो त्रिज्या में क्या इससे अग्रा आती है । उसका स्वरूप = $\frac{\text{त्रि. कर्णवृत्ताग्रा}}{\text{छाक}}$ फिर अनुपात करने है

यदि त्रिज्या में लम्बज्या पाते है तो अग्रा में क्या इससे क्रान्तिज्या आती है $\frac{\text{लंज्या. अग्रा}}{\text{त्रि}}$

क्रांज्या, इसमें अग्रा को उत्थापन करने से $\frac{\text{लंज्या. त्रि. कर्णवृत्ताग्रा}}{\text{छाक. त्रि}} = \text{क्रांज्या} =$

$\frac{\text{लंज्या. कर्णवृत्ताग्रा}}{\text{छाक}}$, तब $\frac{\text{त्रि. क्रांज्या}}{\text{त्रिज्या}} = \text{रविभुजज्या}$, इस के चाप करने से रविभुजांश होता है, इससे आचार्योक्त उपपन्न हुआ इति ॥ ५७-५८ ॥

इदानीं स्वप्रशंसामाह ।

मध्यगतिस्पष्टगतित्रिप्रश्नान् सोत्तरान् विजानाति ।

स भवत्याचार्यो व ब्रह्मोक्तान् योऽन्यतन्त्रज्ञः ॥ ५९ ॥

सु. भा.—योऽन्यतन्त्रज्ञ आर्यभटादितन्त्रज्ञो गणको ब्रह्मोक्तान् सोत्तरान् मध्यगति-स्पष्टगति-त्रिप्रश्नान् विजानाति विशेषेण जानाति । स वै निश्चयेन गणितस्कन्धे आचार्यो भवतीति ॥ ५९ ॥

वि. भा.—योऽन्यतन्त्र ज्ञोऽर्थादार्यभटादितन्त्र पण्डितो ज्योतिर्विन् ब्रह्मगुप्त-

कथितान् उत्तरसहितान् मध्यगति-स्पष्टगति-त्रिप्रश्नान् विशेषरूपेण जानाति
सोऽत्रशास्त्रे (ज्यौतिषे) आचार्यो भवतीति ॥ ५९ ॥

अब अपनी प्रशंसा कहते हैं ।

हि. भा.— जो ज्योतिषी आर्य भटादितन्त्रो के पण्डित ब्रह्मगुप्त कथित उत्तर सहित
मध्यगति-स्पष्टगति और त्रिप्रश्न को विशेषरूप से जानते हैं वे उस ज्यौतिष शास्त्र में
आचार्य होते हैं इति ॥ ५९ ॥

इदानीमध्यायोपसंहारमाह ।

अध्यायः पञ्चदशस्त्रिप्रश्नस्योत्तरं यदिह नोक्तम् ।

तच्चार्याषष्ठ्याऽयं गोलादुत्प्रेक्ष्य बुद्धिमता ॥ ६० ॥

सु. भा.— त्रिप्रश्नस्योत्तरं नामायं पञ्चदशोऽध्याय आर्याषष्ठ्या मया कृत
इति । इहास्मिन्नध्याये यत् किञ्चिन्मया नोक्तं बुद्धिमता गोलात् तदुत्प्रेक्ष्य ज्ञेयम् ।
गोलयुक्तघोत्प्रेक्षां कल्पनां कृत्वा तत् सर्वं बोध्यं यतो गोलबोध इदमेव फलं यदनु-
क्तमपि बुद्धिमता ज्ञायत इति ।

मधुसूदनसूनूनोदितो यस्तिलकः श्रीपृथुनेह जिष्णुजोक्तः ।

हृदि तं विनिधाय नूतनोऽयं रचितः प्रश्नविधौ सुधाकरेण ॥

इति श्रीकृपालुदत्तसुतसुधाकरद्विवेदिविरचिते ब्राह्मस्फुटसिद्धान्त नूतनतिलके
त्रिप्रश्नोत्तराध्यायः पञ्चदशः ॥ १५ ॥

वि. भा.— आर्याषष्ठ्या त्रिप्रश्नोत्तरनामकोऽयं पञ्चदशोऽध्यायः कृतः ।
अत्राध्याये यन्मया न कथितं तद्बुद्धिमता गोलादुत्प्रेक्ष्य अर्थादर्थानुगौलिक युक्त्या
कल्पनां कृत्वा ज्ञेयमिति ॥ ६० ॥

इति ब्राह्मस्फुट सिद्धान्ते त्रिप्रश्नोत्तराध्यायः पञ्चदशः

अब अध्याय के उपसंहार को कहते हैं ।

हि. भा.— साठ आर्याओं से त्रिप्रश्नोत्तर नामक पन्द्रहवां अध्याय हमने किया है ।
इस अध्याय में जो बात हम ने नहीं कहा है वह बुद्धिमान् ज्योतिषी गोलयुक्ति से कल्पना
कर समझे इति ॥ ६० ॥

इति ब्राह्मस्फुट सिद्धान्त में पन्द्रहवां त्रिप्रश्नोत्तराध्याय समाप्त हुआ ॥ १५ ॥

ब्राह्मस्फुटसिद्धान्तः

ग्रहणोत्तराध्यायः

ब्राह्मस्फुटसिद्धान्तः

ग्रहणोत्तराध्यायः

तदारम्भ प्रयोजनार्थप्राह

ग्रहणाग्रहसंयोगग्रहर्क्षतन्त्रेषु सर्वविदाम् ।

आचार्यश्छेद्यकविद् यतस्तत्तच्छेद्यकं वक्ष्ये ॥ १ ॥

सु. भा.—यतो ग्रहणाग्रहसंयोगग्रहर्क्षतन्त्रेषु सर्वविदां मध्ये छेद्यकविदाचार्यो भवति ततस्तस्माच्छेद्यकं वक्ष्ये । संग्रहं छेदयतीति छेद्यकः । येन क्षेत्ररचनया ग्रहणादिकं प्रदर्श्यते स छेद्यक इति ॥ १ ॥

वि. भा.—यतश्छेद्यकवित् (छेद्यकज्ञाता) स्पर्शमोक्षादौ ग्रहसंयोगे (ग्रासादौ) ग्रहयुतौ वा ग्रहनक्षत्रतन्त्रेषु-एतेषां सर्वेषां विपद्याणां पण्डितानां मध्येऽऽचार्यो भवति । तस्मात्कारणात् छेद्यकं कथयामि । येन ग्रहणे स्पर्शमोक्षादिकं क्षेत्ररचनया स्फुटं ज्ञातं भवेत् स छेद्यक इति ॥ १ ॥

अब ग्रहणोत्तराध्याय आरम्भ किया जाता ।

उसके आरम्भ करने के प्रयोजन को कहने है ।

हि. भा.—क्यों कि छेद्यकज्ञाता स्पर्श-मोक्ष आदियों से ग्रासादियों में, वा ग्रहयुति में ग्रह नक्षत्रतन्त्रों में इन सब विषयों के ज्ञाताओं में आचार्य होते हैं । इस कारण से छेद्यक को कहता हूं । जिस से ग्रहण में स्पर्श मोक्ष आदि क्षेत्र रचना से स्फुट विदित हो वह छेद्यक है इति ॥ १ ॥

इदानीं छेद्यकं केभ्यो न देयमित्याह ।

बुर्जंनकृतधनशत्रुप्रतिकंचुककारिपतितमूर्खेभ्यः ।

छेद्यकमदेयमेभ्यो ददतः सुकृतायुषोर्नाशः ॥ २ ॥

सु. भा.—प्रतिकंचुककारी पिशुनः । शेषं स्पष्टम् ॥ २ ॥

वि. भा.—दुर्जनः प्रसिद्धः (दुष्टः) कृतघ्नः (कृतमुपकार यो न मन्यते) प्रति कञ्चुककारी (पिशुनः) पतितः (गोहत्यादिनिन्दितकार्यकर्त्ता) मूर्खं प्रसिद्धः, एभ्य एतत् छेद्यकं न दातव्यम् । ददतः पुरुषस्य सुकृतायुषोर्नाश इति ॥ सिद्धान्त शिरोमणौष्टिप्पण्याम् “दिव्यं ज्ञानमतीन्द्रियं यदृषिभिर्ब्रह्म वशिष्ठादिभिः पारं पर्यवशाद्रहस्यमवनी नीतं प्राकाश्यं ततः । नैतद् द्वेपिकृतघ्नदुर्जनदुर्गचाराचिरा-वासिनां स्यादायुः सुकृतक्षयो मुनिकृतां सीमामिमामुज्जतः ॥” कस्यचित् पद्यमिदं बहुधा आचार्योक्तानुरूपमेवेति ॥ २ ॥

अब छेद्यक किनको नहीं देना चाहिये सो कहते हैं ।

हि. भा.—दुर्जन (दुष्ट) कृतघ्न (किये हुए उपकार को जो नहीं मानता है), कुल-खोर, पतित (अति निन्दित कार्य कर्त्ता) मूर्ख प्रसिद्ध ही है इन सबों के लिये छेद्यक नहीं देना चाहिये । देने वाले पुरुष के सुकृत और आयु का नाश होता है ॥ सिद्धान्त शिरोमणि की टिप्पणी में ‘दिव्य ज्ञानमतीन्द्रियं यदृषिभिर्ब्रह्म वशिष्ठादिभिः’ इत्यादि विज्ञान भाष्य में लिखित किसी का पद्य बहुत अंगों में आचार्योक्त के अनुरूप ही है ॥ २ ॥

इदानीं छेद्यकं कस्मै देयमित्याह ।

उषिताय दीर्घकालं शिष्याय गुरुराधिकाय भक्ताय ।

पात्रे वा सुहृदे वा सुताय वा छेद्यकं देयम् ॥ ३ ॥

सु. भा.—स्पष्टार्थम् ॥ ३ ॥

वि. भा.—आत्मनिकटे बहुकालं वासिने बहुगुणयुताय भक्ताय शिष्याय (छात्राय) वा सुपात्रे मित्राय वा स्व बालकाय वा एतत् च्छेद्यकं दातव्यम् । सूर्य-सिद्धान्ते ‘रहस्यमेतद्देवानां न देयं यस्य कस्यचित् । सुपरीक्षितशिष्याय देयं वत्सर-वासिने’ तत्कर्त्रेवं कथ्यते ॥ ३ ॥

अब छेद्यक किसको देना चाहिये कहते हैं ।

हि. भा.—जो बहुत दिनों तक अपने सम्पर्क में रहा हो या अधिक गुणों से युक्त भक्त हो ऐसे विद्यार्थी को और सुपात्र को वा अपने सुत (बालक को) यह छेद्यक देना चाहिये ॥ सूर्य सिद्धान्त में ‘रहस्य मेतद्देवानां न देयं यस्य कस्यचित् । सुपरीक्षित शिष्याय देयं वत्सर वासिने’ इस तरह कहा गया है ॥ ३ ॥

इदानीं प्रश्नानाह ।

विषुवदपमण्डलदिशो बलनज्याभिस्त्रिगृहवृत्ते ।

सम्पर्कं ग्रासं वा यो वेत्ति छेद्यकज्ञः सः ॥ ४ ॥

सु. भा.—यो बलनज्याभिस्त्रिगृहवृत्ते ग्रहत्रिज्यावृत्ते विषुवदवृत्तस्य क्रान्ति-
वृत्तस्य च दिशो वेत्ति । वा सम्पर्कं छाद्यछादकयुतौ वेत्ति स एव छेद्यकज्ञ इति ।
एवमत्र प्रश्नद्वयम् ॥ ४ ॥

वि. भा.—यो ग्रहत्रिज्यावृत्ते बलनज्याभिर्नाडीक्रान्तिवृत्तयोर्दिशो जानाति
वा छाद्यच्छादकयुतौ ग्रासं जानाति स छेद्यकपण्डितोऽस्तीति ॥ ४ ॥ अत्र प्रश्न-
द्वयमस्ति ॥

अब प्रश्नों को कहते हैं ।

हि. भा.—जो ग्रहत्रिज्यावृत्त में बलनज्या से नाडीवृत्त और क्रान्तिवृत्त की दिशा
को जानते हैं । वा छाद्य और छादक के योग में ग्रास को जानते हैं वे छेद्यकज्ञ हैं इति ॥ ४ ॥
यहां दो प्रश्न हैं ।

इदानीमन्यान् प्रश्नानाह ।

सम्पर्कं मण्डले यः प्रग्रहमोक्षौ पृथक् स्वविक्षेपात् ।

मध्यान्मध्यग्रासं परिलिखति छेद्यकज्ञः सः ॥ ५ ॥

सु. भा.—यः सम्पर्कमण्डले मानैवद्यार्धमण्डले स्वस्वविक्षेपात् पृथक् पृथक्
प्रग्रहमोक्षौ स्पर्शमोक्षौ परिलिखति । मध्यात् मध्यकालिकाद्विक्षेपाच्च मध्यग्रासं
परिलिखति स एव छेद्यकज्ञः । एवमत्र प्रश्नत्रयम् ॥ ५ ॥

वि. भा.—सम्पर्कमण्डले (मानैक्यार्धवृत्ते) स्व स्व शरात् पृथक् पृथक् यः
स्पर्शमोक्षौ परिलिखति, मध्यात् (मध्यकालिकात्) शरान्मध्यग्रासं परिलिखति
स छेद्यकपण्डितोऽस्तीति ॥ अत्र प्रश्नत्रयमस्ति ॥ ५ ॥

अब अन्य प्रश्नों को कहते हैं ।

हि. भा.—जो व्यक्ति मानैक्यार्ध वृत्त में अपने अपने शर से पृथक् पृथक् स्पर्श और
मोक्ष को लिखते हैं एवं मध्यकालिक शर से मध्यग्रास को लिखते हैं वे छेद्यक के पण्डित हैं ।
यहां तीन प्रश्न हैं ॥ ५ ॥

इदानीमन्यान् प्रश्नानाह ।

परिलिखतीष्ट ग्रासं तात्कालिक बाहुकोटिकर्णैः ।

अथवा निमीलनोन्मीलनद्वयं छेद्यकज्ञः सः ॥ ६ ॥

सु. भा.—यस्तात्कालिकबाहुकोटिकर्णैर्ग्रहणकालोद्भवैरिष्टग्रासं परिलिखति । अथवा निमीलनमुन्मीलनं चेति द्वयं यः परिलिखति स एव छेद्यकज्ञः । एवमत्र प्रश्नत्रयम् ॥ ६ ॥

वि. भा.—ग्रहणकालिकभुजकोटिकर्णैर्ग्रहणग्रासं परिलिखति । अथवा निमीलनमुन्मीलनं चेति द्वयं लिखति सछेद्यकपण्डितोऽस्तीति । अत्र प्रश्नत्रयमस्ति ॥ ६ ॥

अब अन्य प्रश्नों को कहते हैं ।

हि. भा.—ग्रहण कालिक भुज कोटि कर्णों से जो इष्ट ग्रास को लिखते हैं । अथवा निमीलन और उन्मीलन को लिखते हैं वे छेद्यक के पण्डित हैं । यहां तीन प्रश्न हैं ॥

इदानीं मन्यान् प्रश्नानाह ।

ग्राह्यं परिलिख्यैक्यं परिलिखति ग्रहगृहादिकं तत्र ।

भूमौ यः फलके वा परिवर्त्यच्छेद्यकज्ञः सः ॥ ७ ॥

सु. भा.—यो ग्राह्यं छाद्यबिम्बमैक्यं मानैक्यार्धवृत्तं च परिलिख्य तत्र भूमौ वा परिवर्त्य विपरीतं कृत्वा फलके पीठे ग्रहगृहादिकं परिलिखति स एव छेद्यकज्ञः । एवमत्र प्रश्नद्वयम् ॥ ७ ॥

वि. भा.—ग्राह्यं (छाद्यबिम्बं) ऐक्यं (मानैक्यार्धवृत्तं) परिलिख्य तत्र पृथिव्यां वा परिवर्त्य (विपरीतं कृत्वा) फल के (पीठे) ग्रहगृहादिकं यः परिलिखति सछेद्यकपण्डितोऽस्ति । अत्र प्रश्नद्वयमस्ति ॥ ७ ॥

अब अन्य प्रश्नों को कहते हैं ।

हि. भा.—जोव्यक्ति छाद्य बिम्ब को और मानैक्यार्ध वृत्त को लिखकर पृथिवी ऊपर परिवर्तन (विपरीत) कर फलक (पीठ) पर ग्रह के गृहादिक को लिखते हैं वे छेद्यक के पण्डित हैं । यहां दो प्रश्न हैं ॥ ७ ॥

इदानीमन्यान् प्रश्नानाह ।

देशान्तरं यथा गतदृक्प्रग्रहणान्तराद्विजानाति ।

यो रेखातोऽध्वानं पर्वेष्टदिनात् स तन्त्रज्ञः ॥ ८ ॥

सु. भा.—यो यथागतदृक्प्रग्रहणान्तराद् गणितागतदृष्टिजन्यस्पर्शकालयोग-
न्तराद्देशान्तरं विजानाति । यो रेखानो रेखादेशादध्वानं देशान्तरयोजनानि
विजानाति । इष्टदिनात् पर्वं विजानाति । इष्टदिनादग्रे कतिभिर्दिनैः पर्वग्रहणं
भविष्यतीति वा इष्टदिनस्य पश्चात् कतिभिर्दिनैः पर्वगतमिति । एवमत्र प्रश्न-
त्रयम् ॥ ८ ॥

वि. भा.—यथागत दृक्प्रग्रहणान्तरात् (गणितागतवेधागतस्पर्शकालयोग-
न्तरात्) यो देशान्तरं विजानाति । रेखादेशाद्देशान्तरयोजनानि विजानाति, इष्ट
दिनात् पर्वं विजानात्यर्थादिष्टदिनादग्रे कतिभिर्दिनैः पर्वग्रहणं भविष्यति वेष्टदिना-
त्पूर्वं कतिभिर्दिनैः पर्वगतमिति जानाति स तन्त्रज्ञः । अत्र प्रश्नत्रयमस्ति ॥ ८ ॥

अब अन्य प्रश्नों को कहते हैं ।

हि. भा.—जो व्यक्ति गणितागत और वेधागत स्पर्श काल के अन्तर से देशान्तर
को जानते हैं । रेखा देश से देशान्तर योजन को जानते हैं । इष्ट दिन से पर्व को जानने हैं
अर्थात् इष्ट दिन से आगे कितने दिनों में ग्रहण होगा वा इष्टदिन से पहले कितने दिनों में
हुआ, वे तन्त्रज्ञ हैं । यहा तीन प्रश्न हैं ॥ ८ ॥

इदानीमन्यान् प्रश्नानाह ।

यो वेत्ति राहुमार्गं तेनेष्टग्रासमिष्टकालाद्वा ।

ग्रासं ग्रासात्कालं जानाति छेद्यकज्ञः सः ॥ ९ ॥

सु. भा.—यो ग्रहणे राहुमार्गं भूभामार्गं वेत्ति । तेन मार्गोऽष्टग्रासं वेत्ति
वेष्टकालाद् ग्रासं वेत्ति ग्रासाच्च कालमिष्टकालं जानाति स एव छेद्यकज्ञः । एवमत्र
प्रश्नचतुष्टयम् ॥ ९ ॥

वि. भा.—यो ग्रहणे भूभामार्गं जानाति । तेन (भूभामार्गेण) इष्टग्रासं
जानाति । इष्ट कालाद् ग्रासं जानाति ग्रासादिष्ट कालं जानाति स छेद्यक पण्डितो-
ऽस्तीति । अत्र प्रश्न चतुष्टयमस्ति ॥ ९ ॥

अब अन्य प्रश्नों को कहते हैं ।

हि. भा.—जो व्यक्ति ग्रहण में राहुमार्ग (भूभामार्ग) को जानते हैं, उस मार्ग

(भ्रूभामार्ग) से इष्टग्रास को जानते हैं । इष्टकाल से ग्रास को जानते हैं । ग्राम मे इष्टकाल को जानते हैं वे छेदक के पण्डित हैं । यहां चार प्रश्न हैं ॥ ९ ॥

इदानीं पूर्वोक्तानां प्रश्नानामुत्तरार्थं विशेषमाह ।

ग्रासप्रमाणयोगग्राह्यग्राहकदलानि वलनज्या ।

विक्षेपश्चापरतो भवति रवेः पूर्वतः शशिनः ॥ १० ॥

सु. भा.—ग्रासप्रमाणयोगो मानैक्यम् । ग्राह्यदलं छाद्यबिम्बार्धम् । ग्राहक-
दलं ग्राहकबिम्बार्धम् । इति वस्तुत्रयं ग्रहणपरिलेखे चावश्यकम् । अथ वलनज्या ।
विक्षेपः स्पर्शकालिकः शरश्च । खेग्रहणोऽपरतः पश्चिमतः शशिनश्चन्द्रस्य ग्रहणो
पूर्वतो भवति ॥ १० ॥

वि. भा.—ग्रास प्रमाणयोगो (ग्राह्यग्राहकयोर्मानैक्यम्) । ग्राह्यबिम्बार्धम् ।
ग्राहकबिम्बार्धम्, इति ग्रहणपरिलेखोपयोगीनि वस्तूनि सन्ति । वलनज्या-स्पर्श-
कालिकः शरश्च सूर्यग्रहणे पश्चिमतः, चन्द्रग्रहणे पूर्वतो भवति ॥ १० ॥

अब पूर्वोक्त प्रश्नों के उत्तर के लिये विशेष कहते हैं ।

हि. भा.—मानैक्यार्ध-ग्राह्य बिम्बार्ध, ग्राहक बिम्बार्ध ये ग्रहण परिलेखोपयोगि वस्तु
हैं । वलनज्या, स्पर्श कालिक शर सूर्य ग्रहण में पश्चिम से, चन्द्र ग्रहण में पूर्व से होता है
इति ॥ १० ॥

अब अङ्गुल लिप्ता के लिये कहते हैं ।

हि. भा.—दिनगत और दिन शेष में जो अल्प घटी है उसको चौबीस से गुणाकर दिनार्ध से भाग देने से जो लब्धि हो तत्तुल्य ज्या ग्रहण करनी चाहिये । उसको पांच से गुणित त्रिज्यार्ध में जोड़कर त्रिज्या से भाग देने से अङ्गुल लिप्ता होती है । अर्थात् उतनी कला का एक अङ्गुल होता है इति ॥

उपपत्ति ।

यदि दिनार्ध तुल्य उन्नत काल में नवत्यंशतुल्य उन्नतांश पाते हैं तो इष्ट उन्नत काल में क्या इस अनुपात से स्थूल उन्नतांश प्रमाण आता है उसका स्वरूप $\frac{९० \times \text{उका}}{\frac{\text{दि}}{२}}$ इसको साठ

से गुणा करने से उन्नतकला = $\frac{९० \times \text{उका} \times ६०}{\frac{\text{दि}}{२}}$ तब ‘तत्त्वाश्विभक्ता असवः कला वा’

इत्यादि भास्करोक्त प्रकार से उन्नत कलज्या = $\frac{६० \times \text{उका} \times ६०}{\frac{\text{दि}}{२} \times २२५} = \frac{२४ \times \text{उका}}{\frac{\text{दि}}{२}}$, यहां

$\frac{६० \times ६०}{२२५} = २४ = \text{स्वल्पान्तर से शङ्कु है। तब 'त्रिज्योद्धृतं स्तम्भमयोत्थशङ्कुः' इत्यादि}$

भास्करोक्त प्रकार से अङ्गुलकला = $\frac{५}{२} + \frac{\text{शं}}{\text{त्रि}} = \frac{५ \text{ त्रि} + \text{शं}}{२ \text{ त्रि}}$ इमने आचार्योक्त उगम

हुआ ॥ सिद्धान्त शेखर में 'स्वोन्नताग्निजगुणात् बृदलाप्तात्' इत्यादि संस्कृतोपपत्ति में लिखित श्लोक से श्रीपति ने आचार्योक्त के अनुरूप ही कहा है। सूर्यसिद्धान्त में 'मोघ्नं दिनमध्यर्धं दिनार्धाप्तं फलेन तु' इत्यादि से सूर्यसिद्धान्तकार ने अङ्गुलकलानयन किया है। उनके प्रकार की युक्ति यह है—दिनार्ध काल में ग्रहबिम्ब किञ्चित् सूक्ष्म देखने में आता है, तथा उदय काल में कुछ विशाल देखने में आता है। उसकी सूक्ष्मता और विशालता की उपलब्धि से आचार्य ने दिनार्ध काल में चार कला और उदय काल में त्रिकला अङ्गुल कल्पना की हैं। इन दोनों के मध्य में अनुपात से 'यदि दिनार्ध तुल्य उन्नत काल में अङ्गुल कलान्तर एक पाते है तो इष्ट उन्नत काल में क्या इससे जो फल हो उसमें तीन जोड़ने से अङ्गुल कला होती है। इस अनुपातागत अङ्गुल कला का स्वरूप = $३ + \frac{\text{उका}}{\frac{\text{दि}}{२}}$

= $\frac{३ \text{ दि} + \text{उका}}{\frac{\text{दि}}{२}}$ इससे सूर्य सिद्धान्तकारोक्त सूत्र उपपन्न होता है। इसमें क्या स्थूलता है

उपपत्ति देखने ही से स्पष्ट है। सिद्धान्त शिरोमणि में भास्कराचार्य ने दिनार्ध काल में साढ़े तीन अङ्गुल लिप्ता और उदय काल में अढ़ाई (२½) अङ्गुल लिप्ता कल्पनाकर दोनों के मध्य में शङ्कु से सूक्ष्म अनुपात किया है। अङ्गुल लिप्ता साधन के लिये भास्कराचार्य शङ्कु में और उन्नत काल से भी अनुपात किया है। उनमें कौन प्रकार सूक्ष्म है इसका ज्ञान वास्तव प्रकार के ज्ञान बिना नहीं हो सकता है। इसलिये 'शङ्कुवनुपात जनित फल सूक्ष्म है' यह भास्कराचार्य का कथन ठीक नहीं है। यह बात सूर्य सिद्धान्त की सुधा वर्षिणी टीका में म. म. सुधाकर द्विवेदी कहते हैं। वस्तुतः दृष्टि स्थान से ग्रह बिम्ब केन्द्रगत रेखा, दृष्टिस्थान से बिम्बस्पर्शरेखा, ग्रह बिम्ब केन्द्र से स्पर्श बिन्दुगत ग्रह बिम्बव्यासार्ध इन तीनों भुजों से जो जात्य त्रिभुज बनता है उसमें अनुपात करते हैं ददि ग्रहदृष्टि कर्ण में तत्संमुख कोणज्या त्रिज्या पाते हैं तो ग्रहबिम्बव्यासार्ध में क्या इस अनुपात से दृष्टिलग्न कोणाध्रज्या (बिम्ब-कलार्धज्या) आती है इसके चाप को दूना करने से दृष्टिलग्नकोण (बिम्बकला) प्रमाण होना है। जितना बिम्ब प्रदेश देखने में आता है उसके अङ्गुल प्रमाण से अनुपात करते हैं। यदि

इतने अङ्गुल में दृष्टिलग्न कोणमान (बिम्बकला) पाते हैं तो एक अङ्गुल में क्या इस अनुपात से वास्तव अङ्गुल लिप्ता प्रमाण आता है। परन्तु इसकी आसन्नता उन्नत काला-
नुपातजनित फल की अपेक्षा शङ्क्वनुपातजनित फल ही की होती है इसका ज्ञान अति-
शयेन दुर्घट है। इसलिये म. म. सुधाकर द्विवेदी का कथन युक्तियुक्त है यह मेरा मत है
इति ॥ ११ ॥

इदानीं प्रकारान्तरेणाङ्गुललिप्ता आह ।

ज्या ना चेज्ज्याद्वितयादङ्गुललिप्तास्त्रिसङ्गुणात् त्रियुतात् ।

खण्डोन्नतलवभवजीवा ताडिता त्रिज्ययाप्ता । फलमहितमिषुध्नं त्रिज्यकार्थं
विभक्तं त्रिभवनभवमौर्व्या मोर्विका द्व्यङ्गुलस्य ॥ श्रीपतेरस्मि अस्य व्याख्या-
स्वदिवसगतशेषाल्पज्यया (इष्टोन्नतकालज्यया) स्वदिनार्धकोन्नतांशज्या (दिनार्ध-
शङ्कुः) गुणिता त्रिज्यया भक्ता पञ्चगुणितं त्रिज्यकार्थं त्रिज्याभक्तलब्धफलं
सहितं त्रिज्यया भक्तं तदा ऽङ्गुलस्य ज्या भवति । अर्थानावतीभिर्ज्याकलाभिरेक-
मङ्गुलं भवतीति ॥

अस्योपपत्तिः ।

त्रिज्यातुल्ययोन्नतकालज्यया यदि दिनार्धकालिकोन्नतांशज्या लभ्यते
तदेष्टोन्नतकालज्यया किं समागच्छति शङ्कुः । उदयकाले सार्धद्वितयकलाभ्यामेक-
मङ्गुलं दिनार्धकाले सार्धत्रिकलाभिरेकमङ्गुलं भवति द्वयोरन्तरमेकमङ्गुल-
लिप्तान्तरम् । ततोऽनुपातो यदि त्रिज्यातुल्यशङ्कौ अङ्गुल लिप्तान्तरमेक लभ्यते
तदेष्टशङ्कौ किमिति फलं सार्धद्विकलासु योज्य तदा ऽङ्गुललिप्ता भवन्ति ।

यथा पूर्वानुपातेन = $\frac{\text{दिनार्धकालिकोन्नतांशज्या} \times \text{इष्टोन्नतकाज्या}}{\text{त्रि}} = \text{शङ्कु} ।$

ततः शङ्क्वनुपातेन यत्फलं तत्सार्धद्विकलासु युक्तं तदा $२\frac{१}{२} + \frac{\text{फल}}{\text{त्रि}} = \frac{५}{२} + \frac{\text{फल}}{\text{त्रि}}$

$\frac{५ \text{ त्रि}}{२} + \text{फल}$
= $\frac{\text{त्रि}}{\text{त्रि}} = \text{अङ्गुललिप्ता, एतावता श्रीपत्युक्तमूत्रमुपपद्यते ॥}$

अब प्रकारान्तर से अङ्गुललिप्ता को कहते हैं ।

हि. भा.—यदि शङ्कु ही ज्या है तब द्विगुणित शङ्कु में त्रिगुणित त्रिज्या जोड़कर
जो हो उसमें द्विगुणित त्रिज्या को जोड़कर द्विगुणित त्रिज्या से भाग देने से प्रकारान्तर से
अङ्गुललिप्ता होती है छः छिलकास सहित यव का मध्यभाग स्थित पदार्थ एक अङ्गुल होता
है । भास्कराचार्य ने लीलावती में 'यवोदरैरङ्गुलमष्ट संख्यैः' इससे आठ यवोदर का एक
अङ्गुल कहा है इति ॥

उपपत्ति ।

$\frac{५ \text{ त्रि}}{२} + \text{शं}$
पूर्वश्लोक से अङ्गुललिप्ता = $\frac{\text{त्रि}}{\text{त्रि}}$ हर और भाज्य को दो से गुणा करने से
 $\frac{५ \text{ त्रि} + २ \text{ शं}}{२ \text{ त्रि}} = \frac{२ \text{ त्रि} + (३ \text{ त्रि} + २ \text{ शं})}{२ \text{ त्रि}} = \text{अङ्गुललिप्ता} ।$ इससे आचार्योक्त उपपन्न

हुआ । सिद्धान्त शेखर में भी प्रकारान्तर से 'स्वदिवस गत शेषाल्पज्यया स्वद्युखण्डोन्नतलवभव-
जीवा' इत्यादि से श्रीपति ने कहा है । श्रीपत्युक्त सूत्र का तात्पर्य है—इष्टोन्नत कालज्या से
दिनार्धकालिक उन्नतांशज्या (शङ्कु) को गुणा कर त्रिज्या से भाग देना, पञ्च गुणिता
त्रिज्यार्ध में त्रिज्या भक्त फलको जोड़कर त्रिज्या से भाग देनेसे अङ्गुलज्या होती हैं । अर्थात्
उतनी ज्याकला का एक अङ्गुल होता है इति ॥

उत्पत्ति ।

यदि त्रिज्या तुल्य उन्नत कालज्या में दिनार्धकालिक उन्नतांशज्या पाते हैं तो इष्ट
उन्नत कालज्या में क्या इससे शङ्कु प्रमाण आता है । उदय काल में २।३० कला में एक
अङ्गुल होता है । दिनार्ध काल में ३।३० कला में एक अङ्गुल होता है दोनों का अन्तर एक
अङ्गुल लिप्तान्तर है । तब अनुपात करते हैं यदि त्रिज्या तुल्य शङ्कु में अङ्गुल लिप्तान्तर
एक पाते हैं तो इष्ट शङ्कु में क्या फल को २।३० इसमें जोड़ने से अङ्गुललिप्ता होती है ।
जैसे पूर्वानुपात से $\frac{\text{दिनार्धकालिकोन्नतांशज्या} \times \text{इष्टोन्नतकालज्या}}{\text{त्रि}} = \text{शङ्कु}$ । तब शङ्कुवनुपात

से जो फल है उसको २।३० में जोड़ने से $(२।३०) + \frac{\text{फल}}{\text{त्रि}} = \frac{५}{२} + \frac{\text{फल}}{\text{त्रि}} = \frac{५ \text{ त्रि} + \text{फल}}{\text{त्रि}}$
= अङ्गुललिप्ता, इससे श्रीपत्युक्त सूत्र उपपन्न होता है इति ॥१२॥

इदानीमङ्गुललिप्तायाः प्रयोजनमाह ।

व्यासवलनापवर्त्तनमेकेनेष्टेन कार्यमितरेषाम् ।

अङ्गुलकलाभिरेवं शशिसितपरिलेखसूत्राणाम् ॥१३॥

सु. भा.—एकेन केनचिदिष्टेन व्यासवलनापवर्त्तनं ग्राह्यग्राहकबिम्बमानानां
वलनादीनामपवर्त्तनं कार्यं लाघवेन स्वल्पस्थान एव परिलेखप्रदर्शनाय । इतरेषां
शशिसितपरिलेखसूत्राणां शशिनो बिम्बार्धस्य सितकलानां परिलेखसूत्रस्य स्व-
भासूत्रस्य चाङ्गुलकलाभिः प्रागानीताभिर्लघूकरणायापवर्त्तनं कार्यमिति ।

'विषुवदपमण्डलदिशो वलनज्याभिः'—इत्यादिप्रश्नद्वयस्योत्तरं ग्रहणाधि-
कारे प्रदर्शितमेव । अन्योत्तरार्थमग्रे वक्ष्यति ॥ १३ ॥

वि. भा.—ग्राह्यग्राहक बिम्बमानानां वलनादीनां केनचिदेकेनेष्टेनापवर्त्तनं
कार्यं लाघवार्थम् । इतरेषां चन्द्रबिम्बार्धस्य सितकलानां परिलेखसूत्राणां
पूर्वोक्ताङ्गुलकलाभिरपवर्त्तनं कार्यं लाघवार्थमिति ॥ वस्तुतस्तु अङ्गुललिप्ता
प्रयासेन किम् । केनापि समेनाङ्केन परिलेखे लाघवार्थं शरादयोऽपवर्त्याः । अत एव

गणेशदैवज्ञादिभिर्बहुभिराचार्यैस्त्रिभिरपवर्तिनाः शरादय एवाङ्गुलत्वेन कल्पिताः । सिद्धान्तशेखरे “ग्राह्यबिम्बशकलस्य शराणां मानसंयुतिदलस्य भुजानाम् । ग्राहकार्धवपुषः श्रवणानां भाजको नियममङ्गुललिप्ताः ॥” श्रीपनिनेत्यं कथितम् । सूर्यसिद्धान्ते “सोन्नतं दिनमध्यर्धं दिनार्धाप्तं फलेन तु । छिन्द्याद्विक्षेपमानानि तान्येषामङ्गुलानि तु ॥” सूर्यसिद्धान्तकारेणेत्यं कथ्यते । सिद्धान्तशिरोमणी “अभिर्विभक्ता बलनेषु बिम्बदोश्छन्नलिप्ताः स्युरथाङ्गुलानि” भास्कराचार्येणैव कथ्यते । आचार्येण विषयविभागं कृत्वा परिलेखे लाघवार्थं कथं भिन्नोभिन्नोऽपवर्त्तनाङ्कः कथितस्तत्कारणं मन्मनसि नागच्छति । अन्यैराचार्यैस्तथा न कथ्यत इति ॥१३॥

अब अङ्गुल लिप्ता के प्रयोजन को कहते हैं ।

हि. भा.—ग्राह्यग्राहक बिम्बमानों को तथा बलनादिभू को लाघव के लिये किसी एक इष्टाङ्क से अपवर्त्तन करना चाहिये । इनमें अन्य चन्द्र बिम्बार्ध-मितकला-परिलेख भूयो को पूर्वसाधित अङ्गुल कला से अपवर्त्तन करना चाहिये । वस्तुतः अङ्गुल लिप्तार्थ प्रयास की क्या जरूरत है परिलेख में लाघवार्थ किसी समान अङ्क से शरादियों को अपवर्त्तन देना चाहिये इसी से गणेश दैवज्ञादि बहुत आचार्यों ने शर आदि को तीन में अपवर्त्तन देकर जो फल होता है उसका अङ्गुलत्व स्वीकार किया है । सिद्धान्त शेखर में ‘ग्राह्यबिम्बशकलस्य शराणां मानसंयुतिदलस्य भुजानाम्’ इत्यादि विज्ञान भाष्य में लिखित श्लोक के अनुसार श्रीपति ने कहा है । सूर्य सिद्धान्त में ‘सोन्नत दिनमध्यर्धं दिनार्धाप्तं फलेन तु’ इत्यादि विज्ञान भाष्य में लिखित श्लोकानुसार कहा है । सिद्धान्त शिरोमणि में ‘अभिर्विभक्ताबलनेषु बिम्ब’ दोश्छन्नलिप्ताः स्युरथाङ्गुलानि’ इत्यादि भास्कराचार्य कहते हैं । आचार्य ने विषय विभाग कर परिलेख में लाघव के लिये क्यों भिन्न भिन्न अपवर्त्तनाङ्क कहा है इसका कारण हमारे मन में नहीं आता है । अन्य आचार्यों ने उनके (आचार्य ब्रह्मगुप्त) कथनानुसार नहीं कहा है इति ॥१३॥

विषुवदपमण्डलदिश इत्यादि प्रश्नद्वयस्योत्तरं ग्रहणाधिकारे

प्रतिपादितमेव, तदुत्तरार्धमग्रे कथयति ।

इदानीं सम्पर्कमण्डले य इत्यादि प्रश्नोत्तरमाह ।

‘अब ‘यः परिलिखितीष्टग्रास मित्यादि’ प्रश्न के उत्तर को कहते हैं ।

हि. भा.—इष्टकाल में ग्रहणाधिकारोक्त विधि से भुज कोटि और कर्ण लाना चाहिये, वलनज्या साधन कर उसकी सहायता से वलन सूत्र का ज्ञान करना चाहिये । स्पाशिक इष्टकाल में वलन सूत्र में रविकेन्द्र से पश्चिम दिशा में भुज देना चाहिये । मौक्षिक इष्टकाल में पूर्व दिशा में भुज देना चाहिये । चन्द्र ग्रहण में चन्द्र केन्द्र से विपरीत भुज देना चाहिये अर्थात् पूर्व दिशा में स्पाशिक भुज और पश्चिम दिशा में मौक्षिक भुज देना चाहिये । भुजाग्र से रवि की जिस दिशा की कोटि है उसी दिशा में कोटि देना चाहिये और चन्द्र के विपरीत दिशा की कोटि देनी चाहिये । तब रवि केन्द्र से वा चन्द्र केन्द्र से कोट्यग्र पर्यन्त तिर्यकरूप कर्ण देना चाहिये । कर्णाग्र और कोटि के योग बिन्दु से ग्राहक मानव्यास से वृत्त बनाकर पूर्ववत् परिलेख कर खण्डित द्वाद्य बिम्ब की तात्कालिक संस्थिति समझनी चाहिये । इसी तरह निमीलन और उन्मीलन कालिक भुज-कोटि कर्णों से निमीलन और उन्मीलन समझना चाहिये ।

उपपत्ति ।

ग्राहक मार्ग खण्ड भुज है, शर कोटि और दोनों का वर्ग योग मूल कर्ण है, कर्णाग्र से

ग्राहक बिम्ब लिखने से संमीलनादिक होता है । शङ्का यह होती है कि ग्राह्य बिम्ब केन्द्र में बलन सूत्र में भुज दिया गया है तब भुज ग्राहक मार्ग खण्ड क्यों है । उसका उत्तर यह है— जहाँ कहीं भुज कोटि करायो से जो जात्य त्रिभुज बनता है वह व्यायन चतुर्भुज का प्राधा होता है, यहाँ भुजाग्र से शर कोटि है, एव भुजमूल से भी, शरद्वय के मूलान्तर में जिनना भुज है उतना ही दोनों शराग्र के अन्तर में भी है, इसलिये ग्राहक मार्ग खण्ड भुज कहा जाता है । यह संमीलन और उन्मीलन की उपपत्ति है । इष्टग्रास परिलेखोपपत्ति भी इसी तरह की समझनी चाहिये । सिद्धान्त शेखर में “स्वबलन दिशि बाहुः प्राङ्मुखः शीतरश्मेर्भवति खलु निमीले प्रत्यगुन्मीलने तु” इत्यादि श्लोकों से श्रीपति ने संमीलन और उन्मीलन परिलेख प्रकार प्रदर्शित किया है । सिद्धान्त शिरोमणि में ‘केन्द्राद् भुजं स्वे बलनस्य सूत्रे शर भुजाग्राच्छ्रवणं च केन्द्रात्’ इत्यादि संस्कृतोपपत्ति में लिखित पद्यों से भास्कराचार्य ने कहा है । सिद्धान्त शेखर में ‘दिश्यभीष्ट बलनस्य कोटिदोः कर्णोदानविधिनैवमेव हि’ इत्यादि श्लोक से श्रीपति ने इष्टग्रास परिलेख के लिये यही विधि प्रदर्शित की । इष्टग्रास परिलेखोपपत्ति भी पूर्वोक्त परिलेख प्रकार युक्ति से तथा ‘केन्द्राद् भुजं स्वे बलनस्य सूत्रे शर भुजाग्रात्’ इत्यादि भास्कर प्रकारोपपत्ति से स्पष्ट है । सूर्य सिद्धान्त में “मानान्तरार्धेन मितां शलाका ग्राम दिङ्मुखीम्” इत्यादि श्लोकों से सूर्य सिद्धान्तकार ने संमीलन और उन्मीलन परिलेख प्रकार लिखा है और कहा है कि इष्टग्रास परिलेखवत् संमीलन और उन्मीलन परिलेख होना है । ठीक ही है संमीलन और उन्मीलन काल में केन्द्रान्तर मानान्तरार्ध के बराबर होता है इसलिये इष्टग्रास परिलेख ही की तरह संमीलन और उन्मीलन परिलेख होता है इति ॥१६—१७—१८॥

इदानीं प्रकारान्तरेण परिलेखमाह ।

 इचाचार्योक्तप्रकारानुरूप एवेति ॥१९-२०-२१-२२॥

अब प्रकारान्तर से परिलेख को कहते हैं ।

हि. भा.—त्रिज्या को स्पर्श कालिकशर से और मोक्षकालिक शर से पृथक् गुणाकर
 मानैक्यार्ध से भाग देने से जो लब्ध हो उसका चापांश स्पर्श और मोक्ष में सूर्य की शर दिशा
 में और चन्द्र की शर दिशा से विपरीत दिशा में समझना चाहिये । एक दिशा में लब्धचापांश
 और वलनांश के योग तथा दोनों की भिन्न दिशा रहने में अन्तर करना चाहिये । तब
 उसकी ज्या और ग्राह्यबिम्बार्ध के घात को त्रिज्या से भाग देने से जो लब्ध हो तत्तुल्यज्या
 पूर्वापर रेखा के ऊपर यथादिक् लम्बरूप करनी चाहिये जिससे ज्या ग्राह्यबिम्ब परिधि में
 हो । ज्याग्र बिन्दु में सूर्य और चन्द्र का स्पर्श वा मोक्ष होता है । मध्यग्रहणकालिक वलनज्या
 को सूर्य ग्रहण में रवि बिम्बार्ध से तथा चन्द्र ग्रहण में चन्द्र बिम्बार्ध से गुणाकर त्रिज्या से
 भाग देने से जो लब्ध हो उससे दक्षिणोत्तर रेखा से मध्य ग्रहण संस्था होती है । ग्राह्य
 बिम्बार्ध परिणत मध्यवलनज्या दक्षिणोत्तर रेखा से ज्यारूप यथादिक् देनी चाहिये जिससे
 ज्याग्र ग्राह्यबिम्ब परिधि में हो । ग्राह्य केन्द्र से मध्यज्याग्र पर्यन्त रेखा को पूर्ववत् फैलाकर
 ग्राह्य केन्द्र से शर कला को फैलाकर शराग्र से ग्राह्य प्रमाण व्यास से वृत्त लिखकर ग्राह्य
 बिम्बसम्बन्धिग्राससंस्था समझनी चाहिये इति ।

उपपत्ति ।

मानैक्यार्धवृत्त में पूर्वापर सूत्र और वलनसूत्र के मध्य में वलनांश है । वलनसूत्र मानै-
 क्यार्धवृत्त परिधि में जहां लगा है और जहां स्पाशिक वा मौक्षिक शर का अग्र है उनके अन्तरां-
 शानयनार्थ अनुपात करते हैं । यदि मानैक्यार्ध में शर पाते हैं तो त्रिज्या में क्या इससे जो लब्ध
 हो उसका चापांश अन्तरांश होता है । चन्द्र ग्रहण में विपरीत दिशा का होता है । इसलिये
 तब वह विपरीत होता है एवं उस चाप और वलनांश के संस्कार से केन्द्र से शराग्रगत रेखा

और पूर्वापर रेखा का अन्तरांश होता है उसकी ज्या को ग्राह्यबिम्बार्ध व्यासार्ध में परिगणन किया । इसलिये उस ज्याग्र में ग्राह्यबिम्ब परिधि में स्पर्श वा मोक्ष होता है । सिद्धान्तदेश्वर में 'बाणक्षुणा त्रिजीवा तनुयुतिशकलेनोद्धृता स्पर्शमुक्तयोस्नच्चापांशा' इत्यादि संस्कृतोपपत्ति में लिखित श्रीपत्युक्त प्रकार तथा 'क्षुण्णा मध्यग्रहणवलनज्या तुषारोष्णुरग्न्याः' इत्यादि संस्कृतोपपत्ति में लिखित श्रीपत्युक्त प्रकार भी आचार्योक्त प्रकार के अनुरूप ही है इति ॥१६—२२॥

र्धाप्ते भवति हि फलं तच्च मार्गं ग्रहीतुर्युक्त्या दत्वा भ्रमगविधिना ग्रास इष्टो
भवेद्वा ॥ श्रीपत्युक्तेष्ट ग्रासपरिलेखप्रकार ईदृशोस्तीति ॥

अब प्रकारान्तर से इष्ट ग्रास के लिये परिलेख को कहते हैं ।

हि. भा. — त्रिज्या को इष्ट कालिक शर से गुणा कर इष्टग्रास सम्बन्धिनी कर्णाकला
से भाग देने से जो लब्धि सो उसका चाप पूर्ववत् सूर्य ग्रहण में शरदिक् और चन्द्र ग्रहण में
व्यस्तशरदिक् समझना चाहिए । फलचाप के और तात्कालिक स्ववलनांश की एक दिशा में
योग और भिन्न दिशा में दोनों का अन्तर करना चाहिये । योग और अन्तर से जो होता है
उसकी ज्या को ग्राह्य बिम्बार्ध से गुणाकर त्रिज्या से भाग देने से जो लब्ध हो उसको पूर्व-
वत् पूर्वापर रेखा के ऊपर ज्या की तरह लम्बरूप फैलाना चाहिए, जिससे ज्याग्र ग्राह्य बिम्ब-
परिधि में हो । ग्राह्यबिम्ब केन्द्र से उस ज्याग्र को कर्ण सूत्र पर्यन्त फैलाकर ग्राह्य बिम्ब-
केन्द्र से उस कर्ण सूत्र में कर्णानुल्य रेखा देकर उसके अग्र से ग्राहक बिम्बमान से वृत्त निख
कर तात्कालिक संस्थान समझना चाहिये इसी तरह तात्कालिक शर से मानान्तरार्ध कर्ण से
निमीलन संस्थान और उन्मीलन संस्थान होता है इति ॥

उपपत्ति

पूर्वापर सूत्र और वलनसूत्र के अन्तर में इष्ट काल में ग्राह्य बिम्बकेन्द्र लग्न कोण चलनाशतुल्य है। वलनसूत्र में केन्द्र से भुज, भुजाग्र से शरकोटि, केन्द्र से कोटघ्न पर्यन्त कर्मा। कर्ण और कोटि के योग बिन्दु में ग्राहक केन्द्र है। तब कर्णाग्र में शर पाने हैं ना त्रिज्याग्र में क्या लब्ध का चाप वलन और कर्णसूत्र के अन्तर में केन्द्र लग्नकोण है। उसके और वलनाश के सस्कार से कर्णसूत्र और पूर्वापर सूत्र के अन्तर में कोण होता है उसकी ज्या ग्राह्य बिम्बार्ध में परिणत की गई। पूर्वापर रेखा के ऊपर लम्बरूप उसके निवेश में ज्याग्र ज्ञात ग्राह्य बिम्बपरिधि में लगे केन्द्र से तदुपरिगत कर्णरेखा ही का यहाँ आचार्य ने साधन किया है। कर्ण प्रमाण को केन्द्र से फैलाकर कर्णाग्ररूप ग्राहक केन्द्र से तात्कालिक ग्रास मन्थान लाया गया है इति ॥ २३-२५ ॥

इदानीं फलकोपरि कथं परिलेखो भवतीत्यस्योत्तरमाह ।

प्राच्यपरे विपरीते विपरीतं मध्यवलनमर्कन्दोः ।

पूर्ववदन्यत् सर्वं फलके स्वे ग्रहणपरिलेखाः ॥ २६ ॥

सु. भा.—फलके प्राच्यपरे विपरीते कार्ये । भूमौ यः प्राग्विन्दुः पश्चिमविन्दु-
श्च फलके स पश्चिमविन्दुः प्राग्विन्दुः कार्य इति । अर्कन्दोर्मध्यवलनं यथादिशमा-
गतं विपरीतं कार्यम् । अन्यत्सर्वं पूर्ववदेव कर्म कर्तव्यम् । एवं स्वेऽभीष्टे फलके ग्रह-
णपरिलेखाः प्रग्रहमोक्षग्रासा भवन्तीति ।

अत्रोपपत्तिः । फलके प्राच्यपरे विपरीते ये कृते मध्यवलनं च यद्विपरीतं
कृतं तत्सर्वं पूर्वापरमार्गेण परिवर्त्याकाशे फलकनिवेशने यथादिशं परिलेखाहंमुत्पद्य-
त इति स्फुटम् ॥ २६ ॥

वि. भा.—फलके पूर्वापरविन्दू विपरीते कार्येऽर्थात्पृथिव्यां यः पूर्वविन्दुः
स फलके पश्चिमविन्दुः । यश्च पश्चिमविन्दुः स फलके पूर्वविन्दुः कार्यः । रवि-
चन्द्रयोर्थथादिशमागतं मध्यवलनं विपरीतं कार्यं, अन्यत् सर्वं कर्म पूर्ववत्कार्यं तदा
स्वे फलके (इष्टफलके) स्पर्शमोक्षग्रासा भवन्तीति ॥

अत्रोपपत्तिः ।

फलके पूर्वापरे विपरीते ये कृते मध्यवलनमपि विपरीतं यत्कृतं तत्सर्वं पूर्वापर-
मार्गेण परिवर्त्य आकाशे फलकनिवेशने यथादिशं परिलेखाहंमुत्पद्यते इति ॥ २६ ॥

अब फलक के ऊपर कैसे परिलेख करना चाहिये इस प्रश्न के उत्तर को कहते हैं ।

हि. भा.—फलक में पूर्व बिन्दु और पश्चिम बिन्दु को विपरीत करना चाहिये अर्थात्

पृथिवी में जो पूर्व बिन्दु है वह फलक में पश्चिम बिन्दु, तथा पश्चिम बिन्दु को फलक में पूर्वं बिन्दु करना चाहिए । रवि और चन्द्र के यथादिक् समागत मध्यवलन को भी विपरीत करना चाहिए । अन्य सब कर्म पूर्ववत् ही करना चाहिये । तब अपने अभीष्ट फलक में स्पर्श मोक्ष ग्रास होते हैं इति ॥

उपपत्ति ।

फलक में पूर्व बिन्दु और पश्चिम बिन्दु को विपरीत किया गया है, तथा रवि चन्द्र के मध्यवलन को विपरीत किया गया है उन सबों के पूर्वापर मार्ग में परिवर्तन कर आकाश में फलक को निवेश करने से यथा दिक् परिलेख योग्य होता है इति ॥ २६ ॥

इदानीं देशान्तरं यथागतमित्यादि प्रश्नद्वयोत्तरमाह ।

दृग्गणितप्रग्रहयोरन्तरघटिका फलं ग्रहे मध्ये ।

देशान्तरं धनं तत् प्रग्रहणे क्षयं पश्चात् ॥ २७ ॥

प्रग्रहणान्तरघटिका भूपरिधिहता विभाजयेत् षष्ट्या ।

फलयोजनेष्ववन्त्याः प्राग्बत् प्रागपरयोर्देशः ॥ २८ ॥

सु. भा.—दृष्ट्या वेधेन यः प्रग्रहणः स्पर्शकालो यश्च गणितेन तयोरन्तरं घट्यात्मकं देशान्तरं तद्वशेन फलं चालनफलं देशान्तरं मध्ये ग्रहे प्राक् प्रग्रहणे दृश्ये धनं पश्चात् क्षयं कार्यम् । गणितोत्थकालादादौ प्रग्रहणे दृश्ये धनं पश्चात् क्षयमित्यर्थः । अथ देशान्तरयोजनान्याह । प्रग्रहणयोर्दृग्गणितस्पर्शकालयोरन्तरघटिका भूपरिधिहताः स्पष्टभूपरिधिहता घातं षष्ट्या विभाजयेत् फलयोजनेषु प्राग्बत् गणितोत्थकालादनन्तरमादौ च वेधोपलब्धस्पर्शं अवन्त्याः प्रागपरयोर्देशो भवतीति ।

अत्रोपपत्तिः । 'प्राग्भूविभागे गणितोत्थकालादनन्तरं प्रग्रहणं विधोः स्यात्' इत्यादि भास्करविधिना स्फुटा ॥ २७-२८ ॥

वि. भा.—वेधेन यः स्पर्शकालो यश्च गणितेन तयोरन्तरं घट्यात्मकं देशान्तरम् । तद्वशेन यच्चालनफलं स्पर्शकाले पूर्वदृश्ये तदा मध्ये ग्रहे धनं पश्चात् क्षयं कार्यम् । अथ देशान्तरयोजनं कथयति । वेधगणितस्पर्शकालयोरन्तरघटिकाः स्पष्टभूपरिधिगुणिताः षष्ट्या भक्ता फलयोजनेषु पूर्ववत् गणितोत्थकालानन्तरं पूर्वं च वेधोपलब्धस्पर्शं अवन्त्याः प्रागपरयोर्देशो भवतीति ॥

अत्रोपपत्तिः ।

अत्र देशान्तराज्ञानाद्देशान्तरसंस्काररहिताभ्यां स्फुटरविचन्द्राभ्यां चन्द्र-ग्रहणविधिना सर्वग्रहणे संमीलनकाल उन्मीलनकालश्च साध्यः । तत्र दिने

दृष्ट्या च संमीलनकालो ज्ञेयः स च गणितागतसंमीलनकालाधिकम्नदा द्रष्टा रेखातः प्राग्भागेऽन्यथा पश्चिमभागे स्थित इति ज्ञातव्यः । यतः प्राचि प्रथमं स्वदेशे ततो रेखादेशे मध्यान्हकालोऽतो रेखादेशेऽष्टसंमीलनकालान् स्वदेशीय-संमीलनकालोऽधिकः पश्चिमेऽतोऽन्यथा । एवं परीक्षोन्मीलनकालादिष्टग्रास-कालात् स्पर्शकालान्मोक्षकालाद्वा भवति । स्पर्शकालमोक्षकालपरीक्षा च दृष्ट्या दुर्घटास्तः “प्राग्भूविभागे गणितोत्थकालादनन्तरं प्रग्रहणम्” इत्यादि भास्करयु-क्तितः ‘अतीत्योन्मीलनादिन्दोर्दृक् सिद्धिर्गणितागतात्’ इत्यादि मूर्यमिद्वान्तोक्त-युक्तिरुक्तमाऽस्ति । आचार्योक्तादपि सौरी युक्तिविलक्षणास्ति । दृष्टग्रासकाले चेष्टग्रासपरीक्षातदिष्टकालपरीक्षाऽपेक्षितेति परीक्षाद्वये गौरवं विलोक्य संमी-लनोन्मीलनकालावेव दृष्टिमुलभौ गृहीतौ सूर्यसिद्धान्तकारेण । तयोर्गणितागत-वेधोपलब्धकालयोरन्तरनाड्यो देशान्तर नाड्यः । ततो यदि षष्टि घटीभिः स्फुट भूपरिधिर्लभ्यते तदा देशान्तरघटीभिः किं लब्धैः प्रागपरयोजनै रेखातः स्वस्फुट परिधौ स्वदेशो ज्ञेयः । आचार्येण तु वेधागत गणितागतस्पर्शकालयोरन्तरघटि-कातोऽनुपातेन ‘यदि षष्टिघटीभिः स्फुटभूपरिधियोजनानि लभ्यन्ते तदाऽग्नग्ध-टीभिः किं लब्धयोजनेषु पूर्ववत् गणितागतागलानन्तरं पूर्वं च वेधोपलब्धे स्पर्शे अवन्त्याः पूर्वापरयोर्देशो भवतीति कथ्यत इति ॥ २७-२८ ॥

अब ‘देशान्तरं यथागतमित्यादि’ दोनों प्रश्नों के उत्तर को कहते हैं ।

हि. भा.—वेध से जो स्पर्श काल है तथा गणित से जो स्पर्श काल है इन दोनों का अन्तर देशान्तर घटी है । उसके वश से जो चालन फल होता है उसको मध्य ग्रहण से स्पर्शकाल पूर्व दृश्य होने पर धन अन्यथा ऋण करना चाहिये । अब देशान्तर योजन कहते हैं । वेधागत और गणितागत स्पर्शकाल की अन्तर घटी को स्पष्ट भूपरिधि से गुणा कर साठ से भाग देने से जो लब्ध योजन हो उतने योजन पर गणितागत स्पर्श कालानन्तर वा पूर्व वेधोपलब्ध स्पर्शकाल में अवन्ती से पूर्व और पश्चिम देश होता है इति ॥

उपपत्ति ।

यहाँ देशान्तर विदित नहीं है इसलिये देशान्तर संस्कार से रहित स्फुट रवि और स्फुट चन्द्र से चन्द्र ग्रहण विधि से सर्वग्रहण में संमीलन काल और उन्मीलन काल साधन करना चाहिये । उस दिन में दृष्टि से भी संमीलन काल समझना चाहिये वह यदि गणितागत संमीलन काल से अधिक हो तो द्रष्टा रेखा से पूर्व भाग में अन्यथा पश्चिम भाग में स्थित है यह समझना चाहिये । क्योंकि रेखा से पूर्व स्वदेश में पहले स्वदेश में पश्चात् रेखा देश में मध्यान्ह काल होता है । अतः रेखा देशीय इष्ट संमीलन काल से स्वदेशीय संमीलन काल अधिक होता है पश्चिम में इसके विपरीत होता है । इस तरह उन्मीलन काल से इष्ट ग्रास काल से स्पर्श काल से या मोक्ष काल से परीक्षा होती है, स्पर्श काल परीक्षा और मोक्ष काल परीक्षा दृष्टि

से दुर्घट है अतः 'प्राग्भू विभागे गणितोत्थकालात्' इत्यादि भास्करोक्तगुणित मे 'अनीन्यो-
न्मीलनादिन्दो दृक् सिद्धिर्गणितागतात्' इत्यादि सूर्य सिद्धान्तोक्त गुणित अच्छी है ।
आचार्योक्त से भी अच्छी है । उस गणितागत काल और वेधोपलब्ध काल की अन्तर घटी
देशान्तर घटी है । तब अनुपात करते हैं । यदि साठ घटी में स्पष्ट भूपरिधि योजन पाते हैं तो
देशान्तर घटी में क्या इस से लब्ध प्रागपर योजन पर रेखा में अपनी स्फुट परिधि में स्वदेश
समझना चाहिये । आचार्य वेधागत स्पर्शकाल और गणितागत स्पर्श काल के अन्तर घटी
से 'यदि साठ घटी में स्फुट भूपरिधि योजन पाते हैं तो अन्तर घटी में क्या उसमें लब्ध योजन
में पूर्ववत् गणितागत स्पर्श कालानन्तर तथा पूर्व वेधोपलब्ध स्पर्श काल होने में अवन्ती से
पूर्वदेश होता है और पश्चिम देश होता है ॥२७-२८॥

इदानीमिष्टदिनाद्यः पर्व विजानातीत्यस्योत्तरमाह ।

पातार्क युतिर्भावात् चक्राद्विनाधिका कला भक्ता ।

एष्यपूर्वणि मध्ये निर्णीतमध्यग्रहणकालिकरव्यादौ क्षेप्याः । व्यतीते ग्रहणे च
शोध्यास्तदा तत्पूर्वणि मध्यमौ रविचन्द्रौ पातश्च भवति । ततो रविचन्द्रयोः
स्पष्टीकरणादिकं यथोक्तमस्ति तथोक्तवत्सर्वं ज्ञात्वा तिथ्यन्तमानादिकं साध्यम् ।
तदा गणितात् ग्रहणज्ञानं स्फुटं भवतीति ॥

अत्रोपपत्तिः ।

यदि स पातरविः षड्राशिसमो द्वादशराशिसमो वा स च यद्यमान्ते पूर्णान्ते वा
भवेत्तदाऽवश्यमेव ग्रहणं शराभावात् । यदि ग्रहण सम्भवो न तदा षण्मासिक-
चालनेन पुनः पुनरग्रे पृष्ठे वा दर्शान्तपूर्णांतिकालयोः सपातरविः षड्राशिसमो
द्वादशराशिसमो वाऽन्वेषणीयः । यदि ग्रहणसम्भवस्तदा स्फुटार्थं स्पष्टीकरणादिकं
कर्म कार्यम् ॥ २९-३३ ॥

अब 'इष्टदिनाद्यः पर्व विजानाति' इस प्रश्न के उत्तर को कहते हैं ।

हि. भा.—पात और रवि का योग छः राशि से वा बारह राशि से जब तक ऊन वा
अधिक रहता है उस ऊनाधिक कला को पात और रवि के गतियोग से भाग देने से जो
लब्ध दिन हो उतने दिनों में अमान्तासन्न में रवि का पर्व और पूर्णांतासन्न में चन्द्र का पर्व
इष्ट दिन से पहले होता है यदि अधिक कला रहती है तब । ऊन कला रहने से लब्ध दिनों
में पश्चान् पूर्व होता है । यदि उसके मध्य में अमान्त वा पूर्णान्त आसन्न में ग्रहण न हो
तब उसके आगे वा पीछे छः महीने में ग्रहण सम्भव होता है अतः रव्यादिग्रहों में षण्मासिक

चालन को कहते हैं। 'पञ्च जिन भरसा' इत्यादि श्लोकों से पण्मासोत्तर वृद्धि से पर्व सम्भव होता है इसलिये ग्रहादिको इष्ट पर्व सख्या से गुणा करना गुण्य पर्व में, मध्य में निर्णीत मध्यग्रहण कालिक रव्यादि ग्रहों में जोड़ना चाहिये। व्यतीत (गन) ग्रहण में घटाना चाहिये तब उस पर्व में मध्यम रवि-चन्द्र और पात होते हैं। तब रवि और चन्द्र का स्पष्टी करणादिक जैसा कथित है वैसा उक्तवत् सब जानकर तिथ्यन्त मानादिक माधन करना चाहिये। तब गणित से स्फुट ग्रहण ज्ञान होना है इति ॥

उपपत्ति

यदि सपात रवि छः राशि के बराबर वा बारह राशि के बराबर हो और वह यदि अमान्त वा पूर्णान्त में हो तो अवश्य ही ग्रहण होता है क्योंकि शराभाव है। यदि ग्रहण सम्भव न हो तो षण्मासिक चालन से पुनः पुनः आगे वा पीछे दर्शान्त काल में पूर्णान्त काल में छः राशि के बराबर वा बारह राशि के बराबर सपात रवि का खोज करना चाहिये। यदि ग्रहण सम्भव हो तो स्फुटार्थ स्पष्टीकरणादिक कर्म करना चाहिये इति ॥२६-३३॥

इदानीं विशेषमाह ।

चत्वार्यत्रापवर्त्तग्रहणान्यर्कस्य शीतरश्मेश्च ।

दृष्ट्वोदयास्तसमये द्युरात्रिदलयोश्च केन्द्रस्य ॥३४॥

सु. भा.—(चत्वार्यत्रापवर्त्तग्रहणान्यर्कस्य शीतरश्मेश्च ।

दृष्ट्वोदयास्तसमये द्युरात्रि दलयोश्च केन्द्रस्य ॥)

अयं साधुपाठो विभाति ।

उदयसमये ऽस्तसमये दिनार्धे रात्रिदले च अर्कस्य रवेः शीतरश्मेश्चन्द्रस्य चात्र चत्वारि अपवर्त्तग्रहणानि लघुग्रहणानि दृष्ट्वा रवेश्चन्द्रस्य च केन्द्रस्य गणकैः परीक्षा कार्येत्यध्याहार्यमिति ॥ ३४ ॥

वि. भा.—उदयसमये ऽस्तसमये च दिनार्धे रात्र्यर्धे च रवेश्चन्द्रस्य चात्र चत्वारि लघुग्रहणानि दृष्ट्वा रविचन्द्रयोः केन्द्रस्य परीक्षा कार्येति ॥३४॥

अथ विशेष कहते हैं ।

हि. भा.—उदय समय में और अस्त समय में दिनार्ध में रात्र्यर्ध में रवि और चन्द्र के चार अपवर्त्त ग्रहण (लघुग्रहण) को देखकर रवि और चन्द्र के केन्द्र की परीक्षा करनी चाहिये इति ॥३४॥

इदानीं स्वप्रशंसामाह ।

सर्वपदानामन्ते तिथ्यन्ते ज्ञानमिन्दुभास्करयोः ।

ग्रहणे च कृते स्पष्टे जिष्णुसुतब्रह्मगुप्तेन ॥३५॥

सु. भा.—सर्वपदानां सर्वपादकरणानामन्ते विनाशे जिष्णुसुतब्रह्मगुप्तेन तिथ्यन्ते इन्दुभास्करयोः स्पष्टं ज्ञानं कृतं तद्वशतो रवीन्द्रोर्ग्रहणे च स्पष्टे कृते । ग्रहणस्पष्टार्थं सर्वपादकरणानां दृग्गणितैक्याभावादन्तो विनाशो जातस्तस्माद्ब्रह्मगुप्तेन सर्वं स्फुटं कृतमित्यर्थः ॥ ३५ ॥

वि. भा.—सर्वपादकरणानां विनाशे तिथ्यन्ते चन्द्रख्योः स्फुटं ज्ञानं जिष्णुसुतब्रह्मगुप्तेन कृतं तद्वशतो रविचन्द्रयोर्ग्रहणे स्पष्टे कृते । ग्रहणस्फुटार्थं दृग्गणितैक्याभावात्सर्वपादकरणानां विनाशो जातस्तस्मात्कारणात् ब्रह्मगुप्तेन सर्वं स्फुटं कृतमिति ॥३५॥

अब अपनी प्रशंसा को कहते हैं ।

हि. भा.—सर्वपादकरणों के विनाश होने से जिष्णुसुत ब्रह्मगुप्त ने तिथ्यन्त में चन्द्र और रवि का स्फुट ज्ञान किया । उसके वल से रवि ग्रहण और चन्द्र ग्रहण स्फुट किया, ग्रहण स्फुटार्थं दृग्गणितैक्य के अभाव के कारण सर्वपाद करणों का विनाश हुआ इस कारण से ब्रह्मगुप्त ने उपर्युक्त सब विषयों का स्फुटीकरण किया इति ॥३५॥

इदानीं श्रीषेणादितन्त्राणां निन्दां करोति ।

दूरभ्रष्टे ग्रहणे श्रीषेणार्यभटविष्णुचन्द्रेषु ।

ग्रहणगतविसंवादात् संवादः काकतालीयः ॥३६॥

सु. भा.—श्रीषेणार्यभटविष्णुचन्द्रेषु तदुक्ततन्त्रेषु ग्रहणगतविसंवादाद् ग्रहणगतस्याशुद्धत्वाद्रविचन्द्रयोर्ग्रहणे दूरभ्रष्टे स्तः । यदि कदाचित् संवादोऽर्थाद् ग्रहणद्वयं घटते तर्हि स संवादः काकतालीयो ज्ञेय इति । यथा काकागमनसमये यदि तालपतनं भवेत् तर्हि दैवात् तत्पतनं ज्ञेयं न काकागमनकारणेनेति ॥ ३६ ॥

वि. भा.—श्रीषेणार्यभटविष्णुचन्द्रेष्वर्थात्तदुक्ततन्त्रेषु ग्रहणगतस्याशुद्धत्वाद्रविचन्द्रयोर्ग्रहणे दूरभ्रष्टे जाते । यदि संवादो ग्रहणद्वयं घटते कदाचित् स काकतालीयो ज्ञेयोऽर्थात्काकागमनसमये यदि तालवृक्षस्य पतनं भवेत्तदा दैवात्तत्पतनं ज्ञेयं नहि काकागमनकारणेनेति ॥ ३६ ॥

अब श्रीषेण आदि आचार्यकृत तन्त्रों की निन्दा करने हैं ।

हि. भा.—श्रीषेण-आर्यभट-विष्णु-चन्द्रोक्त तन्त्रों में ग्रहगणित की यगुन्ता के कारण रविग्रहण और चन्द्रग्रहण बहुत भ्रष्ट हो गया । यदि कदाचित् दोनों ग्रहण घटते हैं तो उसको काकतालीय समझना चाहिये अर्थात् काक (कौआ) के आने के समय यदि ताल वृक्ष का पतन (गिरना) हो जाय तो दैवात् उस पतन को समझना चाहिये । काक के आगमन के कारण से नहीं इति ॥ ३६ ॥

इदानीं पुनः स्वप्रशंसां करोति ।

स्फुटतिथ्यन्तज्ञानं यन्नार्यभटादिभिः कृतमतीतैः ।

ब्राह्मे स्फुटं कृतं तज्जिष्णुसुतब्रह्मगुप्तेन ॥३७॥

सु. भा.—अतीतैः प्राचीनैरार्यभटादिभिर्यत् स्फुटतिथ्यन्तज्ञानं पर्वसाधनार्थं न कृतं तद्ब्राह्मे सिद्धान्ते जिष्णुसुतब्रह्मगुप्तेन स्फुटं कृतमिति ॥ ३७ ॥

वि. भा.—अतीतैः (प्राचीनैः) आर्यभटादिभिराचार्यैः पर्वसाधनार्थं यत्स्फुट-तिथ्यन्तज्ञानं न कृतं तत् ब्राह्मसिद्धान्ते (ब्राह्मस्फुट सिद्धान्ते) जिष्णुसुतब्रह्म-गुप्तेन स्फुटं कृतमिति ॥३७॥

अब पुनः अपनी प्रशंसा करते हैं ।

हि. भा.—प्राचीन आर्यभट आदि आचार्यों ने पर्व साधन के लिये जो स्फुट तिथ्यन्त ज्ञान नहीं किया उसको ब्राह्म सिद्धान्त (ब्राह्मस्फुट सिद्धान्त) में जिष्णुसुत ब्रह्मगुप्त ने स्फुट किया है इति ॥३७॥

इदानीं स्वसिद्धान्तप्रशंसां करोति ।

ब्राह्मोक्ताकौन्दुतदुच्चपातदेशान्तरस्फुटीकरणाः ।

स्फुटमिन्द्रकग्रहणद्वितयं न स्फुटमतीतोक्तम् ॥३८॥

सु. भा.—अतीतोक्तं प्राचीनोक्तमार्यभटादिभिस्तमिन्द्रकग्रहणद्वितयं न स्फुटम् । शेषं स्पष्टार्थम् ॥ ३८ ॥

वि. भा.—ब्राह्मसिद्धान्तोक्तविचन्द्रतदुच्चपातदेशान्तरस्फुटीकरणाश्चन्द्र-व्योग्रहणद्वयस्फुटमस्ति । अतीतोक्तं (प्राचीनार्यभटादिकथितं) ग्रहणद्वयं स्फुटं नास्तीति ॥३८॥

अब अपने सिद्धान्त की प्रशंसा करते हैं ।

हि. भा.—ब्राह्मसिद्धान्त कथित रवि चन्द्र और उनके उच्च पात-देशान्तर के स्फुटीकरण से रवि और चन्द्र के ग्रहण स्फुट हैं । प्राचीन आर्य भटादि कथित दोनों ग्रहण (सूर्य ग्रहण और चन्द्र ग्रहण) स्फुट नहीं हैं इति ॥३८॥

इदानीं यो वेत्ति राहुमार्गमित्यस्योत्तरमाह ।

गतं वृत्तचापं भवति । तत्र स्पर्शमध्यमोक्षबिन्दुषु ग्राहको गमित्यपि परन्तु तच्चाप एव ग्राहको गच्छेदित्यत्र न काचिद्युक्तिः । चन्द्रग्रहणाधिकारे यथा कल्पित विमण्डलं स्थिरभूमात् सरलरेखाकारं सिध्यति तथाऽत्रापि यदि पूर्णान्तकालिकं चन्द्रबिम्बं स्थिरीकृत्य कल्पितभूमामार्गः साध्यते तदा सोऽपि सरलाकार एव भविष्यति । अतोऽत्र शरादिकानां सरलत्वे नैव वृत्तचापाकारो नापि भास्करोक्तो 'ये स्पर्श-मुक्त्योर्विशिखाग्रचिह्ने' इत्यादिना वक्राकारो ग्राहकमार्गः । प्राचीनग्रहणे यथा शरादिकानां सरलत्वं रविचन्द्रयोगोन्ती चैक रूपे कल्पिते तत्कल्पनानो ग्राहकमार्गः कल्पितविमण्डलवत् सरलाकार एवेति । सूर्यसिद्धान्ते "स्वसेजिताश्चयः कार्यो विक्षेपाग्रेषु बिन्दवः । तत्र प्राङ्मध्ययोर्मध्ये तथा मौक्षिकमध्ययोः ॥ त्रिवेन्मन्स्यौ तयोर्मध्यान्मुखपुच्छविनिःसृतम् । प्रसार्य सूत्रद्विनय तयोर्वेव युतिर्भवेत् ॥ तत्र सूत्रेण विलिखेच्चापं बिन्दुत्रयस्पृशा । स पन्था ग्राहकभ्योक्तो येनाग्नी सम्प्रया-स्यति ॥" सूर्यसिद्धान्तोक्तानुरूप एवा" चार्योक्तः ॥ सिद्धान्तशेखरे 'विक्षेपाग्रत्रयकृत-मितिद्वन्द्वमध्यस्थरज्ज्वोर्योगाद्वृत्तं कृतशरशिरो वर्त्म तद् ग्राहकस्य । तन्ममत्ता श्रुतिमपि नयेद्युक्तितो मध्यकेन्द्रादिष्टासाद्यवगमविधिज्ञप्तये चन्द्रभान्वोः ॥" श्रीपत्युक्तमिदमाचार्योक्तानुरूपमेवेति ॥ ३९-४० ॥

अब 'यो वेत्तिराहुमार्ग' इस प्रश्न के उत्तर को कहते हैं ।

हि. भा.—स्पर्श मध्य और मोक्ष शराग्रों में तीन बिन्दु (चिह्न) कर स्पर्श बिन्दु और मध्य बिन्दु के मध्य में तथा मौक्षिक बिन्दु और मध्य बिन्दु के मध्य में मत्स्योत्पादन करना चाहिये । इन दोनों मत्स्यो के मुख और पुच्छगत सूत्र द्वय के योग बिन्दु केन्द्र में तीनों बिन्दुगत जो वृत्त होता है वह बिन्दुपरिलेख रेखा भूमामार्ग होता है । या स्पर्श मोक्ष चिह्नों से मध्यशराग्रगत दो सूत्रों को फैला कर स्थूल ग्राहक मार्ग समझना चाहिये इति ॥

उपपत्ति ।

स्पर्श मध्य मोक्ष शराग्रों में तत्काल में ग्राहककेन्द्र होता है । जैसे त्रिप्रश्नाधिकार में छायात्रयाग्रगत मत्स्यद्वय से वृत्ताखण्ड किया गया वैसे ही यहां भी मत्स्यद्वय से बिन्दु-त्रयोपरिगत वृत्तचाप होता है । वहां स्पर्श-मध्य-मोक्ष बिन्दुओं में ग्राहक जायगा परन्तु उस चाप ही में ग्राहक जायगा इस में कुछ युक्ति नहीं है । चन्द्रग्रहणाधिकार में स्थिरभूमा से जैसे कल्पित विमण्डल सरल रेखाकार सिद्ध होता है वैसे यहां भी यदि पूर्णान्तकालिक चन्द्रबिम्ब को स्थिर मानकर कल्पित भूमामार्ग साधन किया जाता है तो वह भी सरला-कार ही होगा । इसलिये यहां शरादियों के सरलत्व में वृत्त चापाकार ग्राहक मार्ग नहीं होता है । 'ये स्पर्शमुक्त्योर्विशिखाग्रचिह्ने' इत्यादि भास्करोक्त से भी वक्राकार ग्राहकमार्ग नहीं होता है । प्राचीनाचार्यों ने ग्रहण में जैसे शरादियों का सरलत्व और रवि-चन्द्र की गति एक रूप कल्पना की है उनकी कल्पना से कल्पित विमण्डल की तरह ग्राहकमार्ग सरलाकार

ही होता है। सूर्य सिद्धान्त में 'स्वसञ्ज्ञितास्त्रयः कार्या विक्षेपाग्रेषु बिन्दवः' इत्यादि सूर्य सिद्धान्तोक्त के अनुरूप ही आचार्योक्त है। सिद्धान्त शेखर में 'विक्षेपाग्रत्रयकृत मिति द्वन्द्वमध्यस्थ-रज्ज्वोः' इत्यादि श्रीपत्युक्त आचार्योक्तानुरूप ही है इति ॥ ३६-४० ॥

इदानीमिष्टकालादिष्टग्रासं यो जानातीत्यस्योत्तरमाह ।

बिन्दुद्वयान्तरं स्थितिदलेन हृतमिष्टनाडिकागुणितम् ।

अत्रोपपत्तिः ।

यदि स्थित्यर्धघटीभिः स्पर्शमध्यसम्बन्धिनोः शरयोर्मध्यमोक्षसम्बन्धिनोर्वा शरयोरन्तरं लभ्यते तदेष्टघटीभिः किमन्तरमिति तस्य यथारीतिदानेन ग्राहककेन्द्रं ततस्तन्मानार्धेन लिखिते वृत्ते इष्टग्रासस्वरूपमिति परिलेख संस्थानानुसारेण स्फुटमिति ॥ ४१-४४ ॥

अब 'इष्टकालादिष्टग्रामं यो जानाति' इस प्रश्न के उत्तर को कहने हैं ।

हि. भा.—स्पर्शिक इष्टकाल में स्पर्श और मध्य बिन्दु के अन्तर मौक्षिक इष्ट में मध्य बिन्दु और मोक्ष बिन्दु के अन्तर को ग्राहक मार्ग में ग्रहण करना चाहिए । उन अन्तरों को इष्ट घटी से गुणा कर अपने अपने स्थित्यर्ध से भाग देने से जो अङ्गुलादि फल होता है । उसको स्पर्शिक इष्ट में स्पर्शचिह्न से आगे मध्य चिह्नोन्मुख ग्राहक मार्ग में देना चाहिए । मौक्षिक इष्ट में मौक्षिक चिह्न से मध्योन्मुख देना चाहिए वहाँ ग्राहक केन्द्र होता है । उस केन्द्रबिन्दु से ग्राहकमान से वृत्त लिखकर रवि और चन्द्र का इष्ट ग्रास तथा संमीलन और उन्मीलन समझना चाहिये । प्रकारान्तर से इष्टकाल से इष्टग्रासानयन करते हैं । स्पर्शिक इष्ट में पूर्वानीत अङ्गुलादि फलदान से मध्य से पूर्व मार्ग उर्वरित (फाजिल) । वह वीष्टस्थिति खण्ड सम्बन्धी भुज है । मौक्षिक इष्ट में मध्य के पश्चान् जो मार्ग उर्वरित है वह वीष्टस्थितिरुण्डसम्बन्धी भुज है । दोनों इष्ट के क्रम से स्पर्शिक शर का मध्यम शर के साथ जो अन्तर है तथा मध्यम शर का मौक्षिक शर के साथ जो अन्तर है उसको इष्ट घटी से

गुणाकर अपनी स्थित्यर्थ घटी से भाग देने से जो फल हो उसको मध्यशर से ऊन या अधिक रहने पर स्पर्शिकशर में और मौक्षिक शर में ऋण और धन करना तब तात्कालिक शर कोटि होती है । तब पूर्वोक्त ग्रहणाधिकार विधि से भुज और कोटि से कर्ण लाकर मानै-क्यार्थ में कर्ण से इष्टग्रास होता है इति ।

उपपत्ति ।

यदि स्थित्यर्थ घटी में स्पर्शिक शर और मध्यशर का अन्तर पाते हैं तो इष्ट घटी में क्या इससे जो फल होता है उसको यथारीति दान देने से ग्राहक केन्द्रज्ञान होता है । एवं स्थित्यर्थ घटी में मौक्षिक शर मध्यशर का अन्तर पाते हैं तो इष्ट घटी में क्या इससे जो फल होता है उसे रीति के अनुसार दान देने से ग्राहक केन्द्र होता है तब उस केन्द्र से ग्राहक मानार्थ से जो वृत्त होगा उसमें इष्ट ग्रास स्वरूप परिलेख संस्थानुसार स्फुट है इति ॥४१-४४॥

इदानीं ग्रासात्कालानयनमाह ।

मध्यग्रासकलाहृतमृणं धनं चोक्तवत् स्वविक्षेपः ।

तेन ग्रासात्कालः कालादसकृच्च विक्षेपः ॥ ४५ ॥

सु. भा.—एवं स्पर्शिकेष्टे स्पर्शमध्यशरान्तरं मौक्षिकेष्टे मध्यमोक्षशरान्तर-मिष्टग्रासलिप्ताभिर्गुणं मध्यग्रासकलाहृतं फलं चोक्तवत् 'ऋणधनमूनाधिके मध्ये आद्यन्ते च पृषत्के' इत्यादिविधिना ऋणं धनं कृत्वा तात्कालिकः स्वविक्षेपः साध्यः । तेन विक्षेपेण स्वेष्टग्रासाच्च ग्रहणाधिकारविधिना कालः साध्यः । ग्रासोनमासैक्य दलं कर्णः । विक्षेपः कोटिः । तद्वर्गान्तरपदं ग्राहकमार्गखण्डं भुजो वीष्टस्थितिखण्ड-भुक्तयन्तरांशघातसमस्ततो विलोमेन कालानयनं कार्यमित्यर्थः । कालादसकृच्च विक्षेपः । लब्धकालाद्ग्रहणाधिकारविधिना तात्कालिकौ चन्द्रपातौ कृत्वा पुनः शरः साध्यस्तस्मात् पुनः काल एवमसकृत् कालः स्फुटो भवति ।

अत्रोपपत्तिः । मध्यग्रासेन विक्षेपान्तरं तदेष्टग्रासेन किमित्यनुपातेन समान-वेगेन विक्षेपान्तरं प्रसाध्य तत्संस्कारतस्तत्तात्कालिकविक्षेपः स्थूलः साधितस्तद्वशात् कालश्च प्रथमं स्थूल आगतस्ततोऽसकृद्विधिना सूक्ष्मः कालो भवतीति ॥ ४५ ॥

वि. भा.—स्पर्शिकेष्टे स्पर्शमध्यशरान्तरं मौक्षिकेष्टे मध्यमोक्षशरान्तर-मिष्टग्रासकलाभिर्गुणितं मध्यग्रासकलाभक्तं फलमुक्तवत् 'ऋणधनमूनाधिके मध्ये । आद्यन्ते च पृषत्के' इत्यादि विधिना ऋणं धनं कृत्वा तात्कालिकः स्वशरः साध्यः । तस्माच्छरात् स्वेष्टग्रासाच्च ग्रहणाधिकारविधिना कालः साध्यः । ग्रासोनमानैक्यार्थं कर्णः । शरः कोटिः तद्वर्गान्तरमूलं ग्राहकमार्गखण्डं भुजो वीष्टस्थितिखण्डगत्यन्तरांशघातसमः । ततो विलोमेन कालानयनं कार्यं कालाद-

सकृच्छरः । लब्धकालात् ग्रहणाधिकारविधिना तात्कालिको चन्द्रपानी पमान् पुनः शरः साध्यस्तस्मात् पुनः काल एवमगच्छन् कालं स्फुटो भवेदिति ॥

अत्रोपपत्तिः ।

यदि मध्यग्रासेन शरान्तरं लभ्यते तदेष्टग्रासेन निमित्त्यनुपातेन गमान्पेग शरान्तरं प्रसाध्य तत्संस्कारतस्तात्कालिकः शरः स्युतः साधितमन्त्रानां तात्काल प्रथमं स्थूलः समागतस्ततोऽसकृद्विधिना सूक्ष्मः कालो भवतीति । निदान्न शेषरे “वीष्ट ग्रासात् तनुयुतिदलाद्विगितात् क्षेपकृत्या हीनान्मन्त्र परमगुणित भुक्ति-विश्लेषभक्तम् । स्वात् स्थित्यर्थात् फलमपनयेद्विष्टकालोऽमकृत्य स्पर्शादुत्थं भवति हि गतो मुच्यमाने तु शेषः ॥” अर्थात् ब्राह्मग्राहकयोर्विषययोगार्थात् एष्टग्रासेन रहितात् वर्गितात् शरवर्गेण हीनात् मूलं यत् तत् पश्चात् गुणितं रविचन्द्रयोगान्यन्तरेण भक्तं फलं स्वात् स्थित्यर्थात् (स्पर्शिकस्थित्यर्थात् मौक्षिकस्थित्यर्थाद्वा शोधयेत् तदेष्टग्राससम्बन्धी कालः स्यात् । एवमगच्छन् शरवर्गेण हीनान्मूलं पश्चात् गुणितं रविचन्द्रगत्यन्तरभक्तं फलकालेन रविचन्द्रपातान् प्रचात्य तात्कालिकशर संसाध्य पुनः ‘वीष्टग्रासात् तनुयुतिदला’ दित्यादिना वारं वारं कृते यः कालः शिखरी भवति तं स्पर्शिकस्थित्यर्थात् शोधयेत् स्पर्शान्तरं गतः कालः एतौ तावतीष्टकाले तावानिष्टग्रासो भवति । तमेव कालं मौक्षिकस्थित्यर्थाद्विशोधयेत् शेष मोक्षान् प्राक् तावतीष्टकाले तावानिष्टग्रासो भवतीति । सिद्धान्तशिरोमणी ‘ग्रासेनमानैक्यदलस्य वर्गाद्विक्षेपकृत्या रहितात्पदं यत्’ इत्यादिना भास्कराचार्येण श्रीपत्युक्तानुसारमेव कथितम् । सूर्य सिद्धान्ते ‘मध्यग्रहगतश्चोर्वमिष्टनाडी विमोध्ये’ दित्यादिना सूर्यसिद्धान्तकारेणापि तदेव कथ्यत इति ॥ ४५ ॥

अब ग्रास से कालानयन को कहते हैं ।

हि. भा.—स्पर्शिक इष्ट में स्पर्श शर और मध्यशर के अन्तर को मौक्षिक इष्ट में मध्यशर और मौक्षिक शर के अन्तर को इष्ट ग्रास कला से गुणाकर मध्यग्रास कला से भाग देने से जो फल हो उसको पूर्ववत् ऋणधन मूनाधिके मध्ये’ इत्यादि विधि से ऋण-धन कर तात्कालिक शर साधन करना चाहिये । उस शर से और वीष्ट ग्रास में ग्रहणाधिकारोक्त विधि से काल साधन करना चाहिये । ग्रासेनमानैक्यार्थं कर्णं शरः कौटि, एतौ दोनों के वर्गान्तरमूल ग्राहक मार्गखण्डं वीष्टस्थितिखण्ड और गत्यन्तरांश के धान के बराबर भुज होता है । तब विलोम से कालानयन करना चाहिये । काल से अमकृत शर साधन करना, लब्ध काल से ग्रहणाधिकारोक्त विधि से तात्कालिक चन्द्र और पात साधन कर पुनः शर-साधन करना, उस से काल साधन करना इसतरह असकृत कर्म करने से स्फुटकाल होता है इति ॥

उपपत्तिः ।

यदि मध्य ग्रास मे शरान्तर पाते हैं तो इष्ट ग्रास मे क्या इस अनुपात से समान वेग से शरान्तर साधन कर उस के संस्कार से तात्कालिक शर स्थूल होता है उस के वश से काल भी पहले स्थूल होता है तब असकृत् विवि से सूक्ष्म काल होता है । सिद्धान्त शेखर में 'वीण्ट-ग्रासात् तनु युति दलाद्वर्गितात् क्षेपकृत्या' इत्यादि संस्कृतोपपत्ति में लिखित श्लोक से श्रीपति ने कालानयन किया है । श्रीपत्युक्त श्लोक का अभिप्राय यह है कि ग्राह्य और ग्राहक बिम्ब योगार्ध में इष्टग्रास को घटा कर जो हो उस के वर्ग में शर वर्ग को घटा कर शेष का मूल जो हो उस को साठ से गुणा कर रवि और चन्द्र के गत्यन्तर से भाग देने से जो फल हो उस को स्पाशिक स्थित्यर्ध में वा मौक्षिक स्थित्यर्ध में घटाने से इष्टग्रास सम्बन्धी काल होता है । इस तरह असकृत् ग्रासोन मानैक्यार्ध वर्ग में शरवर्ग को घटाकर जो शेष रहे उस के मूल को साठ से गुणा कर रवि और चन्द्र के गत्यन्तर से भाग देने से जो फल हो उस फल काल में रवि चन्द्र और पात को चलाकर तात्कालिक शर साधन कर पुनः 'वीण्ट-ग्रासात् तनु युति दलात्' इत्यादि से बार बार करने पर जो काल स्थिर होता है उसको स्पाशिक स्थित्यर्ध में से घटा देना, तब स्पर्श के अनन्तर गतकाल होता है अर्थात् उतने इष्ट काल मे उतना इष्टग्रास होता है । उसी काल को मौक्षिक स्थित्यर्ध मे से घटा कर शेष मोक्ष से पहले उतने काल में उतने इष्ट ग्रास होता है सिद्धान्त शिरोमणि में 'ग्रासोन मानैक्य दलस्य वर्गात् विक्षेप कृत्या रहितात्पदं यत्' इत्यादि से भास्कराचार्य ने श्रीपत्युक्त के अनुसार ही कहा है । सूर्य सिद्धान्त में 'मध्यग्रहणतश्चोर्ध्वमिष्ट नाडी विशोधयेत्' इत्यादि से सूर्य सिद्धान्त कार भी उसी बात को कहते हैं इति ॥ ४५ ॥

इदानीमध्यायोऽयं यत्नेन गोपनीय इत्याह ।

ग्रहणोत्तरं न देयं शपथैरपि दत्तमुकृतनाशाय ।

गृहणं स्फुटमार्यभटश्रीषेणाद्यैर्यतस्तन्न ॥ ४६ ॥

सु. भा.—शपथैरपि गृहणोत्तरमिदं न देयं यतो दत्तमुकृतनाशाय भवति । दत्तस्य मुकृतनाशाय भवतीत्यर्थः । किमर्थमिदं गोपनीयमित्याह । यत आर्यभट-श्रीषेणाद्यैस्तत् स्फुटं गृहणं न भवतीति ॥ ४६ ॥

वि. भा.—इदं गृहणोत्तरं शपथै रपि न देयं यतो दत्तस्य मुकृतनाशाय भवति । यत आर्यभटश्रीषेणाद्यैस्तत् स्फुटं गृहणं न कृतमत इदं गोपनीय-मिति ॥ ४६ ॥

अब यह अध्याय गोपनीय है इस बात को कहते हैं ।

हि. भा.—शपथ से भी इस ग्रहणोत्तर अध्याय को नहीं देना चाहिये । क्योंकि देने

वाले के वह सुकृत नाश के लिये होता है । आर्यभट श्रीपेरण आदि आचार्यों ने स्फुट ग्रहण नहीं किया है इसलिये यह ग्रहणोत्तर गोपनीय है इति ॥ ४६ ॥

इदानीमध्यायोपसंहारमाह ।

परिलेख वलनजीवा विक्षेपाद्येषु षोडशोऽध्यायः ।

गृहणोत्तरमर्कन्दोः षट्चत्वारिंशदार्याणाम् ॥ ४७ ॥

सु. भा.—स्पष्टार्थम् ॥ ४७ ॥

मधुसूदनसूनुनोदितो यस्तिलकः श्रीपृथुनेह जिष्णुजोक्ते ।

हृदि तं विनिधाय नूतनोऽयं रचितः पर्वविधौ सुधाकरेण ॥

इति श्रीकृपालुदत्तसूनुसुधाकरद्विवेदिविरचिते ब्राह्मस्फुटसिद्धान्त नूतननिर्णके गृहणोत्तराधिकारः षोडशः ।

वि भा.—परिलेखवलनज्या शराद्येषु-आर्याणां षट्चत्वारिंशद्विचन्द्रयो गृहणोत्तरं नाम षोडशोऽध्यायः समाप्त इति

इति श्री ब्राह्मस्फुटसिद्धान्ते गृहणोत्तराध्यायः षोडशः ।

अब अध्याय के उपसंहार को कहते हैं ।

हि. भा.—परिलेख-वलनज्या शर आदियों में छयालीस आर्याओं में युक्त, रवि और चन्द्र का गृहणोत्तर नाम का सोलहवां अध्याय समाप्त हुआ ॥ ४७ ॥

इति श्री ब्राह्मस्फुटसिद्धान्त में गृहणोत्तर नामक सोलहवां अध्याय समाप्त हुआ ।

ब्राह्मः स्फुटसिद्धान्तः सज्जनगणितज्ञगोलबित्रीत्यै ।
त्रिशद्वर्षेण कृते जिष्णुसुतब्रह्मगुप्तेन ॥

ब्राह्मस्फुट सिद्धान्त के संज्ञाव्याय में आचार्य की इस उक्ति के अनुसार ५२० शाकवर्ष में आचार्य ब्रह्मगुप्त का जन्म हुआ । तीस वर्ष की आयु में ही उन्होंने ब्राह्मस्फुट सिद्धान्त नामक ज्योतिष के इस महान् सिद्धान्त ग्रन्थ का प्रणयन किया । इनके जन्म काल नाम के अन्त में लगा 'गुप्त' शब्द प्रकट करता है कि इनका जन्म वैश्य कुल के एक संपन्न परिवार में हुआ था । ज्योतिषशास्त्र के यह प्रकाण्ड पण्डित थे—इसी से रीवां नरेश व्याघ्रभट्टेश्वर ने इन्हें अपना प्रधान ज्योतिषी बनाकर सम्मानित किया ।

इनके जन्म स्थान के सम्बन्ध में कोई मत विभिन्नता नहीं । पाश्चात्य विद्वानों की इस दिशा में खोज की जो उपलब्धि हुई है, उसके अनुसार इनका जन्म गुर्जर देशान्तर्गत भिनमाल नामक गाँव में हुआ । गुर्जर प्रदेश के ज्योतिषियों की जन्म स्थान मुखकथा से भी इस बात का समर्थन होता है । गुर्जर प्रदेश की उत्तर सीमा में मालव (मारवाड़) देश से दक्षिण दिशा की ओर आबू पर्वत और सूरणी नदी के मध्यवर्ती पर्वत से वायुकोण में भिनमाल नामका गाँव अब भी स्थित है ।

ब्रह्मोक्तं ग्रहगणितं महता कालेन यत् खिलीभूतम् ।
अभिधीयते स्फुटं तज्जिष्णुसुतब्रह्मगुप्तेन ॥

रचना—

आचार्य की इस उक्ति से स्पष्ट ज्ञात होता है कि नलिकादि से वेषद्वारा दृग्गणितैक्य (विभागतः और गणितगत ग्रहादिकीं की तुल्यता) कारक ग्रहादि साधन के कारण विष्णुधर्मोत्तर पुराण के अन्तर्गत अति प्राचीन सिद्धान्त को ही आगम मानकर उसका संशोधन करके आचार्य ब्रह्मगुप्त ने नवीन ब्राह्मस्फुट सिद्धान्त की रचना की ।

इस (ब्राह्मस्फुट सिद्धान्त) की चतुर्वेदाचार्य कृत 'तिलक' नाम की टीका प्रसिद्ध थी—वह इस समय संपूर्ण उपलब्ध नहीं है । 'कोलभूक' नामक पाश्चात्य विद्वान् की वह

सम्पूर्ण टीका उपलब्ध थी। इसी कारण उसके आधार पर इस ग्रन्थ के बारहवें (व्यक्त) अध्याय और अठारहवें (अव्यक्तगणित) अध्याय का कोलब्रूक महाशय कृत, आङ्ग्ल भाषा में अनुवाद सन् १८१७ (१७३६ शाकवर्ष) ई० में ही उपलब्ध हो गया था।

इस ग्रन्थ (ब्राह्मस्फुट सिद्धान्त) में १००८ श्लोक (आर्यावृत्त) हैं। पूर्वार्ध और उत्तरार्ध नामक दो भागों में बंटा हुआ है। पूर्वार्ध में (१) मध्यगति (२) स्फुटगति (३) त्रिप्रश्नाध्याय (४) चन्द्रग्रहणाध्याय ग्रन्थ का विषय (५) सूर्यग्रहणाध्याय, (६) उदयास्तमयाध्याय, (७) चन्द्रशृंगो- विभाजन न्त्यध्याय, (८) चन्द्राच्छायाध्याय, (९) ग्रहयुत्यध्याय और (११) भग्रहयुत्यध्याय, ये दस अध्याय हैं। उत्तरार्ध में (१) तन्त्र परीक्षाध्याय, (२) गणिताध्याय, (३) मध्यमत्युत्तराध्याय, (४) स्फुटगत्युत्तराध्याय, (५) त्रिप्रश्नोत्तराध्याय, (६) ग्रहणोत्तराध्याय, (७) छेदकाध्याय, (८) शृंगोन्त्युत्तराध्याय, (९) कुट्टाकाराध्याय, (१०) छन्दविषत्युत्तराध्याय, (११) गोलाध्याय, (१२) यन्त्राध्याय, (१३) मानाध्याय और (१४) संज्ञाध्याय। ये चौदह अध्याय हैं। दोनों पूर्वार्ध और उत्तरार्ध को मिला कर १०+१४ इस ग्रन्थ में कुल चौबीस अध्याय हैं।

इन अध्यायों में तन्त्रपरीक्षाध्याय बहुत विचारणीय है क्योंकि इस अध्याय में आचार्य ने और अनेक आचार्यों के नामों और उनके मतों का उल्लेख किया है।

लाटात् सूर्यशशाङ्कौ मध्याविन्दू च चन्द्रपातौ च ।

कुजबुध शीघ्रबृहस्पतिसितशीघ्र शनैश्चरान् मध्यान् ॥

युगपातवर्षभगरान् वासिष्ठाद्विजयनन्दिकृतपादात् ।

मन्दोच्चपरिधिपातस्पष्टीकरणाद्यमार्यभटात् ॥

श्रीषेणेन गृहीत्वा रक्षोच्चयरोमकः कृतः कन्था ।

एतानेव गृहीत्वा वासिष्ठो विष्णुचन्द्रेण ॥

अनयोर्न कदाचिदपि ग्रहणादिषु भवति दृष्टिगणितैक्यम् ।

यद्भवति तद्बुधणाक्षरमतोऽस्फुटाभ्यां किमेताभ्याम् ॥

इन श्लोकों के द्वारा श्रीषेणाचार्यकृत 'रोमकसिद्धान्त' है और विष्णुचन्द्रकृत 'वासिष्ठसिद्धान्त।' दोनों के दोष कहते हैं, यह टीकाकार चतुर्वेदाचार्य का कथन है। 'पञ्चसिद्धान्तिका' में श्रीषेण और विष्णुचन्द्र के नामों का उल्लेख नहीं है। इससे मालूम होता है कि वराहमिहिराचार्य के बाद और ब्रह्मगुप्त से पूर्व ४२६ और ५५० शाकवर्ष के मध्य इन दोनों आचार्यों (श्रीषेण और विष्णुचन्द्र) ने ज्योतिषसिद्धान्त के विशाल ग्रन्थों की रचना की। इस बात को स्वयं वेध द्वारा स्थिर करके आचार्य ने 'यद् भवति तद्बुधणाक्षरम्' इत्यादि प्रौढोक्ति से पुष्ट किया है।

आर्यभट के सिद्धान्त सर्वथा दोषपूर्ण हैं, यह कहते हुए आचार्य ने उनकी उक्तियों आर्यभट के मत का नाना प्रकार से खण्डन करने के लिए इस ग्रन्थ की रचना का खण्डन की। आचार्य भूभ्रमणखण्डन में कहते हैं—

यः प्राणेनैति कलां भूर्यदि तर्हि कुतो ब्रजेत् कमध्वानम् ।
आवर्त्तनमुर्व्याश्चेन्न पतन्ति समुच्छ्रयाः कस्मात् ॥

आर्यभट तो पृथिवी के चलत्व और भगणों के स्थिरत्व को स्वीकार कर अहोरात्रासु में पृथिवी के भ्रमण को अपने अक्ष के ऊपर मानते हैं, परन्तु ब्रह्मगुप्त ने आवर्त्तन-मुर्व्याश्चेदित्यादि उक्ति के द्वारा, तथा अन्यत्र अनेक-अत्युक्तियों द्वारा भूभ्रमण का जो खंडन किया है वहदुराग्रहपूर्ण और केवल वाग्बल है।

स्वयमेव नाम यत्कृतमार्यभटेन स्फुटं स्वगणितस्य ।
सिद्धं तदस्फुटत्वं ग्रहणादीनां विसंवादात् ॥
जानात्येकमपि यतो नार्यभटो गणितकाल गोलानाम् ।
न मया प्रोक्तानि ततः पृथक् पृथक् दूषणान्येषाम् ॥
आर्यभटदूषणानां संख्या वक्तुं न शक्यते यस्मात् ।
तस्मादयमुद्देशो बुद्धिमताऽन्यानि योज्यानि ॥

जिस रीति से, जिन शब्दों द्वारा ब्रह्मगुप्त ने आर्यभट के मत का खण्डन किया है उसी रीति से उन्हीं शब्दों में वटेश्वराचार्य ने वटेश्वर सिद्धान्त में ब्रह्मगुप्त के मत का खण्डन किया है। इसके विस्तृत विवरण के लिए वटेश्वर सिद्धान्त का अवलोकन अपेक्षित है।

ग्रहग्रहणादि के बंधकर्ता ब्रह्मगुप्त स्वयं तो प्राचीनाचार्यों की अपेक्षा अनेक विशिष्ट ब्राह्मस्फुट-ग्रहाविषाघन विधियों का, तथा गणित के सत्य और असत्य की सिद्धान्त परीक्षा के लिए बंध विधियों का अपने ग्रन्थ में प्रौढोक्ति के साथ प्रतिपादन करते हैं।

ज्ञातं कृत्वा मध्यं भूयोऽन्यदिने तदन्तरं भुक्तिः ।
त्रैराशिकेन भुक्त्या कल्पग्रहमण्डलानयनम् ॥
यदि भिन्नाः सिद्धान्ता भास्करसंक्रान्तयोऽपि भेदसमाः ।
स स्पष्टः पूर्वस्यां विषुवत्सर्कोदयो यस्य ॥

इत्यादि वास्तव विचारों में प्रवृत्त विशिष्ट विवेचनायुक्त सिद्धान्त ग्रन्थ की रचना सबसे पहले ब्रह्मगुप्त ही ने की। यह बात इस समय उपलब्ध ज्योतिष सिद्धान्तों के ग्रन्थों से विदित होती है।

‘कृती जयति जिष्णुजो गणकचक्रचूडामणिः ।’ इस उक्ति द्वारा भास्कराचार्य ने अपने सिद्धान्त शिरोमणि के गणिताध्याय के आरम्भ में आचार्य ब्रह्मगुप्त को अभिवादन किया । उसके पश्चात् अनेक स्थानों पर ब्रह्मगुप्त के मत का उल्लेख करते हुए भास्कराचार्य ने लिखा—

यथाऽत्र ग्रन्थे ब्रह्मगुप्त स्वीकृतागमोऽङ्गीकृतः ।

इससे यह बात स्पष्ट हो जाती है कि भास्कराचार्य ने अपने ग्रन्थ में ब्रह्मगुप्त का ही अनुकरण किया । ब्रह्मगुप्त को अयन चलन की उपलब्धि नहीं हुई, यह बात ‘ब्राह्मस्फुट सिद्धान्त’ से समझी जाती है । अत एव ब्रह्मगुप्तकृत अयन चलोपलब्धि का खण्डन देखा जाता है । तन्त्रपरीक्षाध्याय में ब्रह्मगुप्त ने कहा है—

परमाल्पा मिथुनान्ते द्युरात्रिनाड्योऽर्क गतिवशादृतवः ।

नायनयुगमयनवशात् स्थिरमयनद्वितयमपि तस्मात् ॥

बराह मिहिराचार्य अयनचलन के विषय में सन्दिहान थे । इसीलिए उन्होंने ‘नूनं कदाचिदासीद्येनोक्तं पूर्वशास्त्रेषु’ कहा है । उस समय अश्विन्यादि में क्रान्तिपात था, इसलिए अश्विन्यादि से नक्षत्रों की गणना प्रवृत्त हुई । ब्रह्मगुप्त के पश्चात् आज तक गणना की यही प्रक्रिया प्रचलित है । क्रान्तिपात पश्चिम दिशा में प्रायः ६५ वर्ष में एक अंश चलता है । अतः उसका ज्ञान अल्पसमय में असम्भव प्राय है । इसीलिए तो ब्रह्मगुप्त भी अयनचलन की उपलब्धि नहीं कर सके । आर्यभट्ट का विरोधी होकर भी ब्रह्मगुप्त ने ब्राह्मस्फुट सिद्धान्त की रचना की ।

३७ वर्ष की अवस्था में ब्रह्मगुप्त ने ‘खण्डखाद्यक’ नाम के करण ग्रन्थ का खण्डखाद्यक की रचना प्रणयन किया । उसके प्रारंभ में ही ब्रह्मगुप्त ने लिखा—

प्रणिपत्य महादेवं जगदुत्पत्ति स्थितिप्रलयहेतुम् ।

वक्ष्यामि खण्डखाद्यकमाचार्यार्यभटतुल्यफलम् ॥

प्रायेणार्यभटेन व्यवहारः प्रतिदिनं यतोऽशक्यः ।

उद्वाहजातकादिषु तत्समफल लघुतरोक्तिरतः ॥

यह उनके ग्रन्थ की पर्यालोचन से समझा जाता है कि सर्वत्र मनुष्यों के व्यवहारों में प्रचलित आर्यभट्ट मत का निराकरण करना अत्यन्त कठिन था । इसलिए आर्यभट्ट मतानुसार व्यवहार करते हुए मनुष्यों के उपकारार्थ व्यावहारिक ‘खण्डखाद्यक’ नामक करण-ग्रन्थ की रचना ब्रह्मगुप्त ने की । जिस प्रकार उपलब्ध प्राचीन ज्योतिषसिद्धान्त ग्रन्थों में ब्राह्मस्फुटसिद्धान्त एक आदर्श ग्रन्थ माना जाता है उसी प्रकार सब करणग्रन्थों में सर्व प्रथम आदर्श आज से तेरह सौ वर्ष पूर्व लिखित यही ‘खण्डखाद्यक’ है ।

भारतीय ज्योतिषियों में आर्यभट्ट ही सब से पहले दिन और रात्रि के कारण-स्वरूप पृथिवी के आवर्तन को कहते हैं जैसे गीतिकापाद के प्रथम श्लोक में एक महायुग (४३२०००००) में भूमि के १५८२२३७५०० भरण होते हैं। पहले इसको कह कर दृष्टान्त द्वारा भ्रमण को—

अनुलोमगतिर्नीस्थः पश्यत्यचलं विलोमगं यद्वत् ।
अचलानि भानि तद्वत् समपश्चिमगानि लङ्कायाम् ॥

उक्ति से दृढ़ करते हैं। परन्तु यहाँ विचित्रता देखने में आती है कि आर्यभटीय टीकाकार परमेश्वर ने इस श्लोक की व्याख्या के समय—भूमेः प्राग्गमनं नक्षत्राणां गत्य-भावश्चेच्छन्ति केचित्त्तन्मिथ्याज्ञानवशादुत्पन्नां प्रत्यग्गमनप्रतीतिमङ्गीकृत्य भूमेः प्राग्गतिर-भिधीयते। परमार्थतस्तु स्थिरैव भूमिः—कहा है। अर्थात् कोई-कोई पृथिवी के पूर्वाभि-मुख चलन और नक्षत्रों के गत्यभाव (अर्थात् नक्षत्रों की गति नहीं है) कहते हैं वह मिथ्या अज्ञानवश पश्चिमाभिमुख चलन की प्रतीति स्वीकार कर पृथिवी की पूर्वाभिमुख गति को कहते हैं। वस्तुतः पृथिवी स्थिर ही है।

उदयास्तमयनिमित्तं नित्यं प्रवहेण वायुना क्षिप्तः ।
लङ्कासमपश्चिमगो भपञ्जरः स ग्रहो भ्रमति ॥

इससे स्वयं आर्यभटाचार्य भी भ्रमण को अस्वीकार करते हैं। आर्यभटाचार्य के मन में यह निश्चय नहीं था कि पृथिवी चलती है या नहीं! ऐसा उनके लेख से प्रतीत होता है। अस्तु ॥

‘ब्रह्माह्वय श्रीधरपद्मनाभबीजानि यस्मादति विस्तृतानि’ अपने बीजगणित में भास्कराचार्य की इस उक्ति से मालूम होता है, कि ब्रह्मगुप्त का बहुत बड़ा बीजगणित का ग्रन्थ था, परन्तु यह ग्रन्थ आज प्राप्य नहीं है।

ब्रह्मगुप्त ही श्रीधरों की अपेक्षा श्रीपति का श्रेष्ठतर आदर्श है। ब्राह्मस्फुट सिद्धान्त और सिद्धान्तशेखर की पर्यालोचना से ज्ञात होता है। कि ब्रह्मगुप्त श्रीपति द्वारा रचित सार्थक आर्याभट्टों (इस नाम का श्लोक) का ही ब्रह्मगुप्त का श्रीपति ने बड़े-बड़े छन्दों में अनुवाद किया है। वस्तुतः ब्रह्म-अनुकरण गुप्तोक्त ग्रहगणित को ही सत्य परन्तु दुरुह समझ कर श्रीपति ने उसे अपनी सुन्दर रचना द्वारा सुगमतर ग्रन्थान्तर (सिद्धान्त-शेखर) के रूप में हमारे सम्मुख रखा। इसमें किसी को कोई आपत्ति नहीं है। ग्रन्थ रचना के विषय में सल्लाचार्य ही श्रीपति के विशेष रूप से श्रेष्ठ आदर्श है। जो विषय ब्रह्मगुप्त ने नहीं कहा है वह सल्लाचार्य ने कह दिया है। उन सभी विषयों को उसी प्रकार श्लोका-

न्तरों से श्रीपति ने कह दिया है । सारांश यह है कि श्रीपति ने दोनों (ब्राह्मस्फुट सिद्धान्त और शिष्यवीवृद्धि) ग्रन्थों का परिशीलन करने के पश्चात् ही सिद्धान्तशेखर की रचना की ।

ब्रह्मगुप्त ने एक बहुत विलक्षण विषय को अपनी रचना में स्थान दिया है । यह है 'नतकर्म' । मन्दफल शीघ्रफल भुजान्तरादि संस्कार करने से जो स्पष्टग्रह आते हैं वे स्वगोलीय (ग्रहगोलीय) स्पष्ट ग्रह होते हैं । उन स्वगोलीय स्पष्ट ग्रहों को हम लोग जहाँ देखते हैं वे हम लोगों के लिए स्पष्ट ग्रह होते हैं । स्वगोलीय स्पष्टग्रह में जितना संस्कार करने से हम लोगों के स्पष्टग्रह होते हैं उसी संस्कार का नाम 'नतकर्म' है ।

ब्रह्मगुप्त का
'नतकर्म'

ब्रह्मगुप्त से पूर्व किसी भी अन्य प्राचीनचार्य ने कुछ भी नहीं लिखा । नतकर्म साधन की बात तो दूर रही, उसके नाम तक का भी किसी ने उल्लेख नहीं किया । भास्कराचार्य ने सिद्धान्तशिरोमणि (गणिताध्याय) के स्पष्टाधिकार में इस नतकर्म के साधन का प्रकार लिखा है । 'मुहुः स्फुटाऽतो ग्रहो रवीन्द्रोस्तिथिस्त्विदं जिष्णुसुतो जगाद' भास्कर की इस उक्ति से स्पष्ट ज्ञात होता है—कि इस 'नतकर्म' के आविष्कर्ता ब्रह्मगुप्त ही हैं । सिद्धान्त-शिरोमणि (गणिताध्याय) के स्पष्टाधिकार में भास्कराचार्य ने 'भोग्यखण्डस्पष्टीकरण' में जो लिखा है उसका मूल भी ब्रह्मगुप्तकृत ब्राह्मस्फुट सिद्धान्त के ध्यान ग्रहोपदेशाध्याय में ही है । और आचार्यों ने इस विषय में कुछ नहीं लिखा है । सिद्धान्त तत्त्व विवेक में कमलाकर ने भास्करोक्त भोग्यखण्ड स्पष्टीकरण प्रकार का खण्डन किया है । वस्तुतः यह खण्डन कमलाकर का दुराग्रह ही है । अतः यह खण्डन ठीक नहीं है ।

ब्राह्मस्फुट सिद्धान्त के त्रिप्रश्नाधिकार में दिक्साधन में—

पूर्वापरयोर्विन्दू तुल्यच्छायाग्रयोर्दिगपराद्यः ।

पूर्वान्यः क्रान्तिवशात् तन्मध्याच्छङ्कुतलमितरे ॥

यहाँ क्रान्तिवश से दिक्साधन में कैसे भेद उत्पन्न होता है इसके लिए चतुर्वेदाचार्य ने कर्णवृत्ताग्रान्तर का जो साधन किया है उसी को 'छाया निर्गमन प्रवेश समयाकक्रान्ति-जीवान्तर' आदि द्वारा श्रीपति ने कहा है । उसके पश्चात् 'तत्कालापमजीवयोस्तु विवरात्' इत्यादि से सिद्धान्तशिरोमणि में भास्कराचार्य ने कहा है । सूर्यसिद्धान्त आदि प्राचीन ग्रन्थों में इस विषय का उल्लेख नहीं है ।

'मन्दफलानयन' के लिए मन्दकर्णानुपात ही आवश्यक साधन है । यद्यपि इस विषय में भास्कराचार्य ने अपना कुछ भी मत व्यक्त नहीं किया है, तथापि चन्द्रग्रहणाधिकार में स्फुट रवि चन्द्रकर्णसाधन में 'मन्दश्रुतिर्द्राक् श्रुतिवत्प्रसाध्या' इत्यादि से ब्रह्मगुप्त ही के मत को स्वीकार किया है । यह भी ब्रह्मगुप्त की उक्ति की ही विलक्षणता है ।

लल्लाचार्य ने बलन और दृक्कर्म के आनयन को उत्क्रमज्या द्वारा किया है। ब्रह्मगुप्त की उक्ति में चतुर्वेदाचार्य की 'अत्रज्याशब्देनोत्क्रमज्या ग्राह्या' व्याख्या को लक्ष्य कर भास्कराचार्य ने 'ब्रह्मगुप्तकृतिरत्र सुन्दरी साऽन्यथा तदनुगैर्विचार्यते' कहा है। ब्राह्मस्फुट सिद्धान्त के बहुत से स्थलों में वर्णन की स्थूलता अवश्य है, तथापि इसमें नाना प्रकार के विषयों का अपूर्व समावेश है। अतएव 'ब्राह्मस्फुटसिद्धान्त' सर्वश्रेष्ठ सिद्धान्त ग्रन्थ है, इस कथन में किसी प्रकार की विप्रतिपत्ति (विरोध) प्रतीत नहीं होती है। इस ग्रन्थ में 'छन्दश्चित्युत्तराध्याय' नाम का एक अध्याय है। इसके अन्तर्गत श्लोकों की उपपत्ति तो दूर की बात है, आज तक किसी विद्वान् ने इनकी व्याख्या तक नहीं की।

प्रश्नाध्याय का जैसा क्रम इस ग्रन्थ में है वैसा अन्य ग्रन्थों में नहीं है। इसमें मध्य-गति आदि (मध्यगत्युत्तराध्याय-स्पष्टगत्युत्तराध्याय-त्रिप्रश्नाध्याय-ग्रहणाध्याय तथा शृङ्गो-न्त्युत्तराध्याय) पाँच अध्यायों में पृथक्-पृथक् उत्तर सहित प्रश्नों प्रश्नाध्याय का विवेचन किया गया है। इसके अभ्यास से छान्नवृन्द सिद्धान्त विषय में निपुणता प्राप्त कर सकते हैं। सिद्धान्त शिरोमणि की भूमिका में 'जीवा साधनं विनैव यद् भुजज्यानयनं कृतवान् श्रीपतिस्तत्त्वपूर्वमेव स्यात् यथा सत्प्रकारो विदां विनोदाय प्रदर्श्यते—

दोः कोटि भागरहिताभिहृताः खनागचन्द्रास्तदीयचरणेन शराकंदिग्भिः ।

ते व्यासखण्डगुणिता विहृताः फलं तु ज्याभिर्विनापि भवतो भुजकोटिजीवे ॥

इति केनापि लिखितमस्ति तन्नैव युक्तियुक्तम् ॥

कहने का भाव यह है कि सिद्धान्त शिरोमणि की भूमिका में जीवासाधन विना ही श्रीपति ने जो भुजज्यानयन किया है वह अपूर्व ही है, उनके प्रकार को पंडितों के विनोद के लिए दर्शते हैं 'दोः कोटि भागरहिताः' इत्यादि ही उनका सिद्धान्त शिरोमणि प्रकार है। भूसिका लेखक का यह उक्त लेख ठीक नहीं है, तथा सिद्धान्तशेखर क्योंकि ज्याविना भुजज्या और भुजकोटिज्या का आनयन और में सादृश्य ज्या द्वारा चापानयन सर्वप्रथम ब्रह्मगुप्त ही ने किया है। ब्राह्मस्फुट सिद्धान्त में कथित प्रकार अवोलिखित है—

भुजकोट्यंशोनगुणा भार्वाशास्तच्चतुर्थभागोनैः ।

पञ्चद्वीन्दुखचन्द्रैर्विभाजिता व्यासदलगुणिता ॥

तज्ज्ये परमफलज्या सङ्गुणिता तत्फले विना ज्याभिः ।

इष्टोच्चनीचवृत्तव्यासार्धं परमफलजीवा ॥

इष्टज्या से चापानयन प्रकार—

इष्टज्या संगुणिताः पञ्चकयमलैकशून्यचन्द्रमसः ।

इष्टज्या पादयुतव्यासार्धविभाजिता लब्धम् ॥

नवतिकृतेः प्रोह्य पदं नवतेः संशोध्य शेषं भागकलाः ।
एवं धनुरिष्टाया भवति ज्याया विना ज्याभिः ॥

बहुत पहले से ज्याविना भुजज्या और भुजकोटिज्या का आनयन 'दोः कोटिभाग-रहिताभिहताः' इत्यादि प्रकार से श्रीपति द्वारा कथित है, यह बात ज्योतिषियों में प्रसिद्ध है। इसी का अवलम्बन करके 'ग्रहलाघव' नामक अपने करणग्रन्थ में विस्तार से लिखा है। परन्तु वस्तुतः यह प्रकार ब्रह्मगुप्त ही का है। उनके उपर्युक्त श्लोकों से यह बात सर्वथा स्पष्ट हो गई है। अब यह सन्देह का निषय नहीं रहा। वटेश्वर सिद्धान्त में वटेश्वराचार्य ने भी ब्रह्मगुप्तोक्त इसी प्रकार को श्लोकान्तरों में लिख दिया है। सिद्धान्तशेखर में सर्वत्र श्रीपति का अपना निजी प्रकार थोड़ा ही है, उन्होंने भी ब्रह्मगुप्तोक्त प्रकार को ही श्लोकान्तरों में वर्णित किया है। उदाहरण के लिए देखिये सिद्धान्तशेखर के सूर्यग्रहणाधिकार में—

तिथ्यन्तात् स्थितिखण्डहीनसहितात् प्राग्वत्ततो लम्बनं ।
कुर्यात् प्रग्रहमोक्षयोः स्थितिदलं युक्तं विधायासकृत् ॥
तन्मध्यग्रहणोत्थलम्बनभुवा विश्लेषणानेहसा ।
मर्दाधोनयुतात्तिथेरपि तथा संमीलनोन्मीलने ॥
अधिकमृणयोराद्यं मध्यात्तथाऽन्त्यमिहाल्पकं ।
भवति धनयोश्चाद्यं हीनं यदाऽधिकमन्तिमम् ॥
नमनविवरेणैवं कुर्याद्विहीनमतोऽन्यथा ।
स्थितिदलमृणस्वस्थे भेदे तदैक्ययुतं पुनः ॥

यह श्रीपत्युक्त प्रकार ब्रह्मगुप्त के अधोलिखित प्रकार के सर्वथा अनुरूप ही है—

प्राग्वल्लम्बनमसकृत् तिथ्यन्तात् स्थितिदलेन हीनयुतात् ।
अधिकोनं तन्मध्यादृणयोरूनाधिकं धनयोः ॥
यद्यधिकं स्थित्यधं तदाऽन्तरेणान्यथोनमृणमेकम् ।
अन्यद्धनं तदैक्येनाधिकमेवं विमर्दाधे ।

इसी प्रकार प्रकारान्तर से कहा गया श्रीपत्युक्त स्फुटस्थिति दल साधन प्रकार—

स्थित्यधोनयुतात् परिस्फुटतिथेः स्याल्लम्बनं पूर्ववत् ।
तन्मध्यग्रहवे च मध्यमतिथो ततस्तु तिथौ ॥
स्थित्यधेन परिस्फुटेषु जन्मितेनोनाधिकाद्वाऽसकृत् ।
तत्तिथ्यन्तरनाडिकाः स्थितिदलेस्तः स्पर्शमुक्तयोः स्फुटे ।

इस श्लोक का द्वितीयचरण शुद्ध नहीं है। यह प्रकार ब्रह्मगुप्त के अधोलिखित प्रकार के अनुरूप ही है।

स्फुटतिथ्यन्ताल्लम्बनमसकृत् स्थित्यर्धहीनयुक्ताद्वा ।
तत्स्फुटविक्षेपकृतस्थित्यर्धोनयुततिथ्यन्तात् ॥
तत्स्पष्टतिथिच्छेदान्तरे स्फुटे दिनदले विहीनयुतात् ।
स्वविमर्दार्धेनासकृदेवं स्पष्टे विमर्दार्धे ॥

सिद्धान्तशिरोमणि में भी भास्कराचार्य ने अधोलिखित शब्दों में—

तिथ्यन्ताद् गणितागतात् स्थितिदलेनोनाधिकाल्लम्बनं
तत्कालोत्थनतीषु संस्कृतिभवास्थित्यर्धहीनाधिके ।
दर्शान्ते गणितागते धनमृणं वा तद्विधायीसकृज्ज्ञेयी
प्रग्रहमोक्षसंज्ञसमयावेवं क्रमात् प्रस्फुटौ ॥

ब्रह्मगुप्तोक्त प्रकार का ही वर्णन किया है। इसी प्रकार सिद्धान्तशेखरे के सूर्यग्रहणाध्याय के उपसंहार में—

स्फुटं भवति पञ्चजीवया लम्बनं न हि यतस्ततः कृतम् ।
युक्तियुक्तमिति जिष्णुसूनुना तन्मयाऽपि कथितं परिस्फुटम् ॥

कथित आशय ब्रह्मगुप्त की अधोलिखित उक्ति के सदृश ही है—

दृग्गणितैक्यं न भवति यस्मात् पञ्चज्यया रविग्रहणे ।
तस्माद्यथा तदैक्यं तथा प्रवक्ष्यामि तिथ्यन्ते ॥

मध्यगत्यध्याय से ग्रन्थसमाप्ति पर्यन्त सादृश्य की यही स्थिति है। यह बात दोनों ग्रन्थों (ब्रह्मस्फुट सिद्धान्त और सिद्धान्तशेखर) के अवलोकन से स्पष्ट हो जाती है।

केवल श्रीपति ने ही अपने पूर्ववर्ती आचार्यों के ग्रन्थों से उनके कथित विषयों को श्लोकान्तरों द्वारा अपने ग्रन्थ में अपनी उक्ति के रूप में लिखा है, सो नहीं है अपितु उनके पूर्ववर्ती आचार्यों की भी यही रीति रही है। श्रीपति के परवर्ती भास्कराचार्य आदि विद्वानों ने भी उसी रीति को अपनाया है। उदाहरणार्थ भास्कराचार्य द्वारा-गणिताध्याय के मध्यमाधिकार में सिद्धान्त लक्षण—वेद के अंग ज्योतिःशास्त्र का निरूपण—वेदांगों में ज्योतिःशास्त्र की प्रधानता—वेद वेदांग पढ़ने का द्विजों (ब्राह्मण-क्षत्रिय-वैश्य) का ही अधिकार—शूद्रादिकों का नहीं—भचक्रचलन—कालप्रवृत्ति—कालमातों की परिभाषा—ग्रहों का भगणपाठ—युगों तथा मन्वादि के नाम—तथा ब्रह्मा के गत वर्षादि के प्रयोजनाभाव इत्यादि मध्यमाधिकारोक्त सब विषयों का निरूपण श्रीपति कृत साधनाध्यायोक्त श्लोकों का श्लोकान्तर मात्र है। ज्योतिष शास्त्र के पाठकों को दोनों ग्रन्थों का अवलोकन करना

चाहिए जिससे उनके सादृश्य की जानकारी हो सके । प्राचीनोक्त विषयों का आश्रय लेकर अनेक विशिष्ट विषयों को कहने के लिए श्रीपति ने प्रथम साधनाध्याय, तथा ग्रहभगणाध्याय की रचना की । उसके पश्चात् मध्यमाध्याय में सात प्रकार से अहर्गणानयन-वार प्रवृत्ति के विषय में विभिन्न आचार्यों के मत का प्रतिपादन-तद्गत दोष निरूपण करके अपने मतानुसार वार प्रवृत्ति का प्रतिपादन-मध्यम ग्रह साधन के लिए नाना प्रकार का नूतन प्रकारान्तर वर्णन-तथा रवि आदि सब ग्रहों के राश्यादिमन्दोच्च का प्रतिपादन-आदि नाना प्रकार के विषयों का दिग्दर्शन श्रीपति के सिद्धान्तशेखर में मिलता है । ब्राह्मस्फुट सिद्धान्त में अहर्गणानयन बहुत प्रकार से किया गया है, उन प्रकारों का अनुकरण श्रीपति ने किया है । आचार्य ने लघ्वहर्गणानयन भी किया है परन्तु श्रीपति ने उसकी चर्चा नहीं की । अहर्गण से अभीष्ट वार ज्ञान के लिए अहर्गण में एक जोड़ना चाहिए— यह बात ब्रह्मगुप्त ने लिखी है । उसके पश्चात् सिद्धान्तशेखर में भी श्रीपति ने उनका अनुकरण किया है ।

सिद्धान्तशिरोमणि में भास्कराचार्य ने अहर्गण से अभीष्टवार ज्ञानार्थ अहर्गण में सैक निरेक करना लिखा है यथा —

अभीष्टवारार्थमहर्गणश्चेत्सैको निरेकस्थितयोऽपि तद्वत् ।

ब्रह्मगुप्त ने अहर्गण में निरेक करण की चर्चा क्यों नहीं की, नहीं कहा जा सकता । वटेस्वर सिद्धान्त में भी नाना प्रकार से अहर्गणानयन और लघ्वहर्गणानयन किया गया है । ब्रह्मगुप्त द्वारा अनेक प्रकार से किये गये अहर्गणानयन को देख कर वटेस्वराचार्य ने भी उन्हीं के मार्ग का अवलम्बन किया है । अर्वाचीन आचार्यों (भास्कराचार्य-कमलाकर आदि) के ग्रन्थों में अनेक प्रकार से साधित अहर्गणानयन देखने में नहीं आता है । यद्यपि लघ्वहर्गणानयन में स्थूलता है, तथापि एक अपूर्व वस्तु का प्रतिपादन किया गया है । वटेस्वराचार्यकृत लघ्वहर्गणानयन भी स्थूलरूप में कहा गया है । इन आचार्यों के अतिरिक्त और किसी आचार्य के ग्रन्थ में लघ्वहर्गणानयन के सम्बन्ध में कुछ भी नहीं लिखा गया है । सिद्धान्त तत्त्व विवेक में कमलाकर ने भास्करोक्त लघ्वहर्गणानयन में वार गणना का खण्डन किया है ।

स्फुटगत्यध्याय में आर्यभट-ब्रह्मगुप्त-सल्ल आदि आचार्यों ने वृत्त परिधि के चतुर्थांश (नवत्यंश) में दो सौ पच्चीस कलावृद्धि से चौबीस क्रमज्या और उत्क्रमज्या का साधन किया है । आर्यभट और सल्ल की त्रिज्या = ३४३८, ब्रह्मगुप्त मत स्फुटगत्यध्याय में त्रिज्या ३२७०, इन सबों से भिन्न श्रीपति की त्रिज्या = ३४१५, ब्रह्मगुप्तोक्त भूपरिधि = ५००० । 'पादोन गोऽक्षधृतिभूमितयोजनानि' इन भास्करोक्ति से ग्रहों की योजनात्मक गति = ११८५८।४५, 'गतियोजनतिथ्यंशः कुदलस्य

यतो मितिः' से भूव्यास=१५८१, भू परिधि=४६६७ । यही बात 'प्रोक्तो योजनसंख्यया कुपरिधिः सप्ताङ्गनन्दाव्यस्तद्व्यासः कुभुजङ्गसायकभुवः' से भास्कराचार्य ने कही है । भास्कराचार्य ने बहुत से स्थलों में ब्रह्मगुप्त के मत का ही अनुसरण किया है । परन्तु ब्रह्मगुप्तोक्त त्रिज्या से भिन्न त्रिज्या स्वीकार करने में उनका क्या अभिप्राय है सो नहीं कह सकते हैं । ब्रह्मगुप्तोक्त भुजान्तर कर्म के अनुसार ही सिद्धान्तशेखर और सिद्धान्त शिरोमणि में भी कहा गया है । इसके अतिरिक्त ब्राह्मस्फुट सिद्धान्त के स्फुटगत्यध्याय में और भी अनेक विषय वर्णित हैं जो दर्शनीय और पढ़ने के योग्य हैं ।

त्रिप्रश्नाधिकार में रवि के मध्याह्न कालिक नतांश जान कर, उसके आधार पर रवि के आनयन के लिए पहले क्रान्तिज्या का ज्ञान होता है । तब त्रिप्रश्नाधिकार अनुपात से रवि के भुजांश का ज्ञान होता है । भुजांश से राश्यादि रवि का ज्ञान पदाधीन है । किसी भी प्राचीन आचार्य ने पदज्ञान के लिए विधि नहीं लिखी है । यहाँ आचार्य ने—

क्रान्तिव्यासार्धगुणा जिनभागज्याहृता घनुरजादौ,
कर्क्यादौ चक्रार्धात्प्रोह्य तुलादौ स चक्रार्धम् ॥
चक्रार्धात् प्रोह्य मृगादौ स्फुटो सकृत् व्यस्तमृणं धनं मध्यम् ।

अर्कोऽस्मात्' इत्यादि से रवि का आनयन किया है । लेकिन यह साधित रवि किस पद का है इसके ज्ञान के लिए कोई युक्ति नहीं लिखी है । सिद्धान्तशेखर में श्रीपति ने—
'अत्रतुलादिगतस्य विचस्वतो दिनदल प्रभयोर्युतिरर्धिता । भवति वैधुती निजदेशजेति से पलभा के मान का पता लगाकर—

आद्ये पदेऽपचयिनी पलभाऽल्पिका स्यात्,
छायाल्पिका भवति वृद्धिमती द्वितीये ।
छायादिका भवति वृद्धिमती तृतीये,
तुर्ये पुनः क्षयवती तदनल्पिका च ।
वृद्धिं प्रयान्ती यदि दक्षिणाग्रच्छाया तथापि प्रथमं पदं स्यात् ।
ह्रासं व्रजन्तीमथ तां विलोक्य रवेर्विजानीहि पदं द्वितीयम् ॥

सें गोल युक्ति सिद्ध पद का ज्ञान किया है यहाँ भास्कराचार्य ने—

क्रान्तिज्या त्रिज्याधनी जिनभागज्योद्धृता दोज्या ।
तदनुराद्ये चरणे वर्षस्यार्कः प्रजायतेऽन्येषु ॥

भार्धाच्च्युतः सभार्धो भगणात्पतितोऽब्द चरणानाम् ।
ऋतुचिह्नं ज्ञानं स्यादतु चिह्नान्यग्रतो बक्ष्ये ॥

से आचार्योक्तवत् ही कहा है। केवल 'ऋतुवर्णनम्' नामक एक अधिकार सिद्धान्त शिरोमणि के गोलाध्याय में लिखा है। भास्कराचार्य के पञ्चवर्ती और कमलाकर के पूर्व-वर्ती सब आचार्यों ने ऋतुवर्णन को ज्योतिष सिद्धान्त का एक अङ्ग समझकर अपने अपने सिद्धान्तग्रन्थ में निश्चित रूप से 'ऋतुवर्णनाध्याय' नाम देकर लिखा है। सिद्धान्त तत्त्व विवेक में—'आद्ये पदेऽपचयिनी पलभालिका स्यात्' इत्यादि श्रीपत्युक्त पदज्ञानबोधक श्लोक द्वय को लिख कर कमलाकर ने—

ऋतुचिह्नैरिदं पूर्वेरुक्तं सर्वत्र तन्नहि ।

केवलं कुकविप्रीत्यै पदज्ञप्त्यै न तद्रवेः ॥

से भास्करोक्त ऋतुवर्णन की निन्दा की है। वस्तुतः कमलाकर का कथन ठीक है। भिन्न भिन्न देशों में ऋतु भिन्न भिन्न होती है; इसलिए ऋतुचिह्न से पदज्ञान ठीक नहीं हो सकता है। परन्तु—आद्ये पदेऽपचयिनी पलभालिका स्यात्' इत्यादि पदज्ञानबोधक पद्य ठीक सिद्धान्तशेखर में हैं। इसको कमलाकर ने अपने नाम से लिखा है। जब तक सिद्धान्त-शेखर उपलब्ध नहीं था, तब तक लोग यही समझते थे कि यह पदज्ञान प्रकार कमलाकरोक्त ही है। परन्तु अब वह बात नहीं रही। वस्तुतः यह प्रकार श्रीपत्युक्त ही है। कमलाकर को अपनी रचना में यह मानना चाहिए था कि यह प्रकार श्रीपति कथित है। वास्तविक बात यह है कि प्राचीन आचार्यों ने पदज्ञान के लिए कोई प्रकार नहीं लिखा है। इस स्थिति में श्रीपति ही इस प्रकार को लिखने के कारण ज्योतिषियों के प्रशंसापात्र हैं, यह बात अवश्य ही निःसन्दिग्ध है। आश्चर्य की बात तो यह है कि श्रीपतिकृत गोलयुक्ति-युक्त पद ज्ञान को छोड़कर भास्कराचार्य ने जो काव्यमय ऋतुवर्णन किया है वह बिल्कुल असंगत है।

आचार्य ब्रह्मगुप्त ने चन्द्र ग्रहणाध्याय में रवि, चन्द्र और पृथिवी का योजनविम्ब, रवि और चन्द्र के योजनात्मक कर्ण का स्पष्टीकरण, भूभा बिम्बानयन, आसमानाद्यानयन तथा परिलेख प्रकार लिखा है। श्रीपति और भास्कराचार्य चन्द्रग्रहणाध्याय ने भी कथनक्रम को लेकर विशेष रूप से वैसा ही अनुवाद किया है। ब्रह्मगुप्तकृत सम्पूर्ण सूर्यग्रहणाध्याय को श्रीपति ने प्रायः अपने श्लोकान्तरों द्वारा किया है, उदयास्तमयाध्याय में आचार्य ने आयन द्वकर्मनियन किया है, परन्तु वह ठीक नहीं है। श्रीपति ने आयन द्वकर्मनियन करके—

खनभोधृतिभिः समाहतं प्रथमं द्वक्फलमायनाह्वयम् ।

द्युचराश्रितभोदयासुभिर्विहृतं स्पष्टमिह प्रजायते ॥

से उनका स्पष्टीकरण किया है। इसको देख कर भास्कराचार्य ने "आयनं चलनमस्फुटेषुणा संगुणम्" इत्यादि से उसके अनुसार ही कहा है। चन्द्राध्याय में आचार्य ने अनेक विषयों का प्रतिपादन किया है। परन्तु श्रीपति ने केवल वराह ब्रह्मगुप्त तथा लल्लाचार्य के बहुत से श्लोकों का अनुवादमात्र ही किया है। अपनी ओर से कोई विशेष बात नहीं लिखी। केवल चन्द्र के स्पष्ट चरानयन में तथा परिलेख सूत्र प्रमाणानयन में बहुत ही प्रकारान्तर से प्रतिपादन किया है।

आचार्य वराह ब्रह्मगुप्त और लल्लाचार्य ने ग्रहयुत्यध्याय (ग्रहयुद्धाध्याय ग्रहयुत्यध्याय या ग्रहयोगाध्याय) में उदयान्तर कार्य के विषय में कुछ भी नहीं कहा है । परन्तु—

अन्त्यभ्रमेण गुणिता रविबाहुजीवाऽभीष्टभ्रमेण विहृता फलकार्मुकेण ।
बाहोः कलासु रहिता रहितास्ववशेषकं ते यातासवो युगयुजोः पदयोर्धनर्णम् ॥

के द्वारा श्रीपत्युक्त दृग्गणितैक्यकारक कर्म ही को भास्कराचार्य ने 'उदयान्तर कर्म' नाम से कहा है । जब तक सिद्धान्तशेखर उपलब्ध नहीं था तब तक आधुनिक गणकों को यही विश्वास था कि यह उदयान्तरकर्म सर्वप्रथम भास्कराचार्य ने ही लिखा है । परन्तु इस उदयान्तर को दृष्टि में रख कर सर्व प्रथम श्रीपति ने ही अपने विचार व्यक्त किये थे । तथा—

त्रिभविरहितचन्द्रोच्चेन भास्वद् भुजज्या
गगननृपविनिघ्नी भत्रयज्याविभक्ता ।
भवति चर फलाख्यं तत् पृथक्स्थं शरघ्नं
हृतमुडुपतिकर्णत्रिज्ययोरन्तरेण ॥१॥
परमफलमवाप्तं तद्धनरां पृथक्स्थे
तुहिनकिरणकर्णं त्रिज्यकोनाधिकेऽथ ।
स्फुटदिनकर हीनादिन्दुतो या भुजज्या
स्फुट परमफलघ्नी भाजिता त्रिज्ययाऽऽप्तम् ॥२॥
शशिनि चरफलाख्यं सूर्यहीनेन्दुगोलात्
तदृणमुत धनं चेन्दूच्चहीनार्कं गोलम् ।
यदि भवति हि साम्यं व्यस्तमेतद्विधेयं
स्फुटगणितद्वगैक्यं कर्तुमिच्छद्भिरत्र ॥३॥

इन तीनों श्लोकों के द्वारा श्रीपति ने दृग्गणितैक्य के लिए चन्द्र में संस्कार विशेष को कहा है । किसी भी प्राचीन ग्रन्थ में यह संस्कार नहीं लिखा है । यद्यपि—

इन्दूच्चोनार्ककोटिघ्ना गत्यंशा विभवा विधोः ।
गुणो व्यर्केन्दुदोः कोट्योरूप पञ्चाप्तयोः क्रमात् ॥
फले शशाङ्कतदगत्योर्लिप्ताद्ये स्वर्णयोर्वधे ।
ऋणं चन्द्रे धनं भुक्तौ स्वर्णसाम्यवधेऽन्यथा ॥

के द्वारा इसी प्रकार (श्रीपत्युक्त चन्द्रसंस्कार की भांति) के चन्द्रसंस्कार का उल्लेख 'लघुमानस' नामक करण ग्रन्थ में मुञ्जालाचार्य ने किया है । परन्तु इन दोनों में सादृश्याभाव के कारण, श्रीपति ने वेधद्वारा वेध कर उस (लघुमानसोक्त) से भिन्न कहा है,

ऐसा ज्ञात होता है । भास्कराचार्य ने इस श्रीपत्युक्त संस्कार को बार-बार देख कर विचार करने से उपलब्ध ज्ञान के विस्तार पूर्वक प्रतिपादन के लिए सिद्धान्त शिरोमणि ग्रन्थ की रचना की । इस रचना के एक वर्ष पश्चात् ५६ श्लोकों का 'बीजोपनय' नामक ग्रन्थ सिद्धान्त शिरोमणि की भांति 'वासना भाष्य' सहित बनाया । जैसा कि निम्नोक्ति में सिद्ध है—

मयाथ बीजोपनये यदन्ते सूर्योक्तमाद्यं परमं रहस्वम् ।
 प्रकाशये गोप्यमपीह देवं प्रणम्य बीजं जगतां हितायम् ॥१॥
 यद्यपि पूर्वमपीदं संक्षेपादुक्तमागमोक्तदिशा ।
 नैतावतैव कश्चित् दृक्करणैक्याय कल्पते गणकः ॥२॥
 दृक्करणैक्यविहीनाः खेटाः स्थूला न कर्मणामर्हाः ।
 अत इह तदर्हतायै तात्कालिकबीजविस्तरं वक्ष्ये ॥३॥
 पाता रवेस्तामसकीलकाख्यास्तेषां समाकर्षणतः शशाङ्कः ।
 तत्तुङ्गशक्तिश्च निजस्वभावं विहाय नित्यं विषमत्वमेति ॥४॥
 चद्राच्च तद्योगवियोगतश्च साध्यं हि भाद्यं विषमं यतः स्यात् ।
 तस्माद्विधोरत्र विशुद्धिशुद्धयै विस्तार्यते बीजफलक्रियेयम् ॥५॥
 एकेन पुंसा निखिलग्रहाणामन्तं प्रबोधो न हि शक्यतेऽतः ।
 व्यासात्समासाच्च यथोपलब्धं प्रोक्तं मयेत्यादरणीय मेतत् ॥६॥

भग्रहयोगाध्याय] भग्रहयोगाध्याय में—

कृत्वापि दृष्टिकर्म श्रीषेणार्यभटविष्णुचन्द्रोक्तम् ।
 प्रतिदिनमुदयेऽस्ते वा न भवति दृग्गणितयोरैक्यम् ॥१॥
 भमुनिमृगव्याधानां यतस्ततो दृष्टिकर्म वक्ष्यामि ।
 दृग्गणितसमं देयं शिष्याय चिरोषितायेदम् ॥२॥

ब्राह्मस्फुट सिद्धान्त के उत्तरार्ध में—परिकर्म विंशति (सङ्कलित, व्यवकालित, गुगुन, भागहार, वर्ग, वर्गमूल, पञ्चजाति, त्रैराशिक, व्यस्तत्रैराशिक, सप्तराशिक, नवराशिक, एकादशराशिक, भाण्डप्रतिभाण्ड (अदला बदली)—आदि विषयों का उल्लेख है । प्रत्येक स्थान में चतुर्वेदचार्योक्त उदाहरण हैं । सिद्धान्त शेखर में भी परिकर्म विंशति (अभिन्नाङ्कों के छः गुणन, भजन, वर्ग, वर्गमूल, घन, तथा घनमूल; भिन्नाङ्कों के योग, अन्तर, गुणन, भजन, वर्ग, वर्गमूल छः; भाग, प्रभाग, भागानुबंध, भागापवाह जातिचतुष्टय; विलोमकर्म, त्रैराशिक, व्यस्तत्रैराशिक और

पञ्चराशिक) । ब्रह्मगुप्त और श्रीपति के बीस कर्मों के विषय वर्णन में बहुत भेद है । उन बीस परिकर्मों के नामों में भी बहुधा भिन्नता है । भास्कर द्वारा प्रकीर्ण विषय (योगान्तर से लेकर भाण्ड प्रतिभाण्ड पर्यन्त) जिस स्पष्टता के साथ प्रतिपादित हैं । वैसी स्पष्टता ब्रह्मगुप्त और श्रीपति द्वारा प्रतिपादित परिकर्म विंशति में नहीं पाई जाती । जहां तक विषयों का सम्बन्ध है वहां तक तीनों आचार्य — ब्रह्मगुप्त, श्रीपति तथा भास्कर समान हैं । केवल विषयों के प्रतिपादन की रीति में भिन्नता है ।

इसके अतिरिक्त मिश्रक व्यवहार, श्रेढी व्यवहार, क्षेत्र व्यवहार, खात व्यवहार, चितिव्यवहार, क्राकचिक व्यवहार राशिव्यवहार, और छाया व्यवहार ये आठ व्यवहार ब्राह्मस्फुट सिद्धान्त, सिद्धान्त शेखर तथा भास्करीय लीलावती में वर्णित हैं । इन आठों व्यवहारों के प्रतिपादन में असादृश्य पाया जाता है । इन व्यवहारों में से ब्रह्मगुप्त और श्रीपति की अपेक्षा भास्कर ने अधिक विषयों का प्रतिपादन किया है, और अपेक्षा कृत अधिक स्पष्टता के साथ । यह बात उक्त तीनों को देखने से स्फुट हो जाती है ।

इसके पश्चात् प्रश्नाध्याय में मध्यमगत्युत्तराध्याय, स्पष्टगत्युत्तराध्याय, त्रिप्रश्नोत्तराध्याय, ग्रहणोत्तराध्याय, शृंगोन्नत्युत्तराध्याय—इन पांचों उत्तराध्यायों में सोत्तर प्रश्न समूह का समावेश है । प्रश्न सभी विलक्षण हैं । इनके अभ्यास से पाठक लोग ज्योतिष के सिद्धान्त ग्रन्थों में अतिशय निपुण हो सकते हैं । ब्राह्मस्फुट सिद्धान्त के प्रत्येक अध्याय में प्रदर्शित इस प्रकार के सोत्तर प्रश्नक्रम का लेखी कुछ-कुछ सिद्धान्त शेखर और बटेश्वर सिद्धान्त में भी दृष्टिगोचर होता है । सिद्धान्त शिरोमणि आदि ग्रन्थों में यह क्रम नहीं है । ब्रह्मगुप्तोक्त कुट्टाकाराध्याय में बहुत से ऐसे प्रश्न हैं जिनके उत्तरों से चित्त प्रसन्न हो जाता है । श्रीपति और भास्कर की अपेक्षा ब्रह्मगुप्त ने कुट्टाध्याय में अधिक विषयों का समावेश किया है । किन्तु विषय के प्रतिपादन की स्पष्टता भास्करोक्ति में ही है । घन ऋण आदि के सङ्कलित व्यवकलितादि विषय भास्करोक्ति के सदृश ही ब्राह्मस्फुट सिद्धान्त और सिद्धान्त शेखर में भी विद्यमान हैं । उसके पश्चात् एक समीकरण बीज है । यह भास्करोक्त एक वर्ण समीकरण बीज की अपेक्षा छोटा है । तत्पश्चात् ब्रह्मगुप्तोक्त अनेक वर्ण समीकरण बीज है । यह बहुत ही विलक्षण है । इसमें विषय भी बहुत अधिक है । भास्करोक्त अनेकवर्ण समीकरण बीज में भी बहुत विषय हैं । परन्तु सिद्धान्तशेखर में बहुत कम विषयों का उल्लेख है । ब्रह्मगुप्त की अपेक्षा भास्कर ने भावितबीज का अपने ग्रन्थ में अधिक समावेश किया है परन्तु श्रीपति ने कुछ कम । तो भी इन सबके विषयों में कोई विशेष अन्तर नहीं है, केवल भास्करोक्ति में अधिक वैशेष है ।

इसके पश्चात् वर्ग प्रकृति का वर्णन है, यहाँ ब्रह्मगुप्त ने कनिष्ठ, ज्येष्ठ और क्षेप की योग भावना और अन्तरभावनता का प्रतिपादन किया है । सिद्धान्तशेखर में श्रीपति ने तथा भास्कराचार्य ने अपने बीजगणित में यहीं से लेकर केवल श्लोकान्तरों में रख दिया

है। गणित क्रिया एक ही हैं। श्रीपति ने भावना का स्वरूप नहीं कहा है। वर्गात्मक प्रकृति में कनिष्ठ और ज्येष्ठ के आनयन को ब्रह्मगुप्त ही से लेकर भास्कराचार्य ने अपने बीज-गणित में 'इष्टभक्तो द्विधाक्षेप इष्टोनाढ्यो दलीकृतः' आदि श्लोकों द्वारा कहा है। परन्तु श्रीपति ने इसके विषय में कुछ भी नहीं लिखा है। ब्रह्मगुप्तोक्त 'शङ्कुच्छायादि ज्ञानाध्याय' अपूर्व है। इस अध्याय में जो विषय प्रतिपादित है वह सिद्धान्त शेखर और भास्करीय सिद्धान्तशिरोमणि में नहीं है। वस्तुतः यह अध्याय दर्शनीय और पठनीय है। छन्दविचिन्त्युत्तराध्याय ऐसा विचित्र है; कि इसमें लिखित श्लोकों की उपपत्ति की बात तो अलग रही उनकी तो साधारण व्याख्या भी अभी तक किसी ने नहीं की। गोलाध्याय में भूगोल संस्थान, देवासुरसंस्थान, चक्रभ्रमणव्यवस्था, देवादिकों की रविभ्रमण स्थिति, देवों और दैत्यों का राशि संस्थान, देवादिकों का रवि दर्शन काल, भूगोल में लङ्का और अवन्ती का स्थान, आदि आदि विषय वर्णित हैं।

भूपरिधि तुर्यभागे लङ्का भूमस्तकात् क्षितितलाच्च ।
लङ्कोत्तरतोऽवन्ती भूपरिधेः पञ्चदश भागे ॥

के द्वारा लङ्का से भूपरिधि के पञ्चदशांश पर अवन्ती की स्थिति को आचार्य ने बतलाया है। परन्तु आचार्य के अनुयायी भास्कराचार्य ने सिद्धान्त शिरोमणि के गोलाध्याय में 'निरक्षदेशात् क्षितिषोडशांशे भवेदवन्ती गणितेन यस्मात्' कहा है। चतुर्वेदाचार्य सम्मन पाठ 'पञ्चदशभागे' ही है। सिद्धान्त शेखर में 'सत्र्यंशरामाग्निगुरौरवन्त्याः स्याद्योजनैर्दक्षिणतो हि लङ्का' कहा गया है। श्रीपति के मत से उज्जयिनी (अवन्ती) का अक्षांश = 24° तथा भूपरिधिमान = 5000 है, अतः $\frac{\text{भूपरिधि}}{15} = 333\frac{1}{3}$ एतत्तुल्य लङ्का और अवन्ती के मध्य में योजनात्मक दूरी हुई। यहाँ 'भूपरिधेरष्टशेऽवन्ती स्यात् सौम्यदिग्भागे' लल्ल की इस उक्ति से तथा भास्कर की पूर्वोक्ति से उज्जयिनी का अक्षांश = $22^\circ 13' 0''$ है, बराहमिहिराचार्य के मत से अक्षांश परमक्रान्त्यंश के बराबर = 24° है। पञ्च-सिद्धान्तिका में—

प्रोद्यद्भविरमराणां भ्रमत्यजादौ कुवृत्तगः सव्यम् ।
उपरिष्टाल्लङ्कायां प्रतिलोमश्चामरारीणाम् ॥
मिथुनान्ते च कुवृत्तादंशं चतुर्विंशतिं विहायोच्चैः ।
अमति हि रविरमराणां समोपरिष्टात्तदाऽवन्त्याम् ॥

श्रीपति के मत से अवन्ती का अक्षांश = 24° , इसके आधार पर योजमान = $333\frac{1}{3}$ योजना होता है। आचार्योक्त के अनुसार ही श्रीपति के मत से भी लङ्का, उज्जयिनी के दक्षिण में परिधि के पञ्चदशांश पर स्थित है। लल्लाचार्य और भास्कराचार्य के मत से लङ्का, अवन्ती के दक्षिण में भूपरिधि के षोडशांश पर स्थित सिद्ध होती है। इस

अध्याय के बहुत से विषय सूर्यासिद्धान्त के गोलाध्याय में वर्णित विषयों के सदृश ही हैं । बीच बीच में दोनों ब्राह्मस्फुटीय गोल अध्याय तथा सूर्य सिद्धान्तीय भूगोलाध्याय में कुछ विषयान्तर भी है । सिद्धान्त शेखर के गोलाध्याय में श्रीपति ने भी कितने ही विषय आचार्योंक्त विषयों के सदृश ही कहे हैं । 'यन्मूलं तद्व्यासो मण्डललिप्ताकृतेर्दशहृतायाः, द्वारा श्रीपति ने भी 'व्यासः स्यात् परिधेर्वर्गाद् दिग्भक्ताच्च पदं त्विह' प्रकार के अनुकूल ३४१५ त्रिज्या स्वीकार की है । भास्कराचार्य ने 'व्यासे भनन्दाग्निहते विभक्ते खवागु-सूर्यः' के द्वारा परिध्यानयन का विस्तार से प्रतिपादन किया है । इसके विलोम द्वारा परिधि से व्यासानयन होता है । परन्तु व्यास से परिध्यानयन या परिधि से व्यासानयन किसी का भी ठीक नहीं है । क्योंकि व्यास और परिधि का सम्बन्ध स्थिर नहीं है । ज्या प्रकरण में जैसे चापार्धांशज्या आदि का आनयन आचार्य ने किया है वैसे ही सिद्धान्त शेखर में और सिद्धान्त शिरोमणि के गोलाध्याय में किया गया है । ब्राह्मस्फुट सिद्धान्त में चापार्धांशज्यानयनप्रकार—

तुल्यक्रमोत्क्रमज्यासमखण्डक वर्ग युति चतुर्भागम् ।

प्रोह्यानष्टं व्यासार्धवर्गतस्तत्पदे प्रथमम् ॥

तद्दलखण्डानि तदूनजिनसमानि द्वितीयमुत्पत्तौ ।

कृतयमलैक दिगीशेषु सप्तरसगुणनवादीनाम् ॥

सिद्धान्तशेखर में—

उत्क्रमक्रमसमानसमज्या खण्डवर्गयुतिवेदविभागम् ।

व्यासखण्डकृतितस्तमनष्टं शोधयेदथ पदे भवतो ये ॥

आद्यमूलमिह तद्दलसंख्यं तद्विहीन जिनसम्मितमन्यत् ।

ज्यार्धमेवमपराणि समेभ्यो ज्यादलानि न भवन्त्यसमेभ्यः ॥

सिद्धान्तशिरोमणि में—

क्रमोत्क्रमज्या कृतियोगमूलादलं तदर्धांशकशिञ्जिनी स्यात् ।

इस प्रकार प्रकारान्तर से भी चापार्धांशज्यानयन प्रकार तीनों ग्रन्थों (ब्राह्मस्फुट-सिद्धान्त-सिद्धान्तशेखर-सिद्धान्तशिरोमणि) में समान ही है । भास्करीय ग्रन्थज्योत्पत्ति में अनेक विषयों का विशिष्ट प्रतिपादन देखने में आता है ।

स्फुटगतिवासना समीचीन होता है, तब कर्णानुपात न करने का कारण क्या है ? यह बात अधोलिखित उक्ति से प्रकट होती है—

त्रिज्याभक्तः परिधिः कर्णगुणो बाहुकोटिगुणकारः ।
असकृन्मान्दे तत्फलमाद्यसमं नात्र कर्णाऽस्मात् ॥

सिद्धान्त शेषर में—

त्रिज्याहृतः श्रुतिगुणः परिधिर्यतो दोः
कोट्योगुणोमृदुफलानयनेऽसकृत्स्यात् ।
स्यान्मन्दमाद्यसममेव फलं ततश्च
कर्णाः कृतो न मृदुकर्मणि तन्त्रकारैः ॥

यह श्रीपत्युक्त श्लोक आचार्योक्त श्लोक का ही अनुवाद है । भास्कराचार्य ने भी—

स्वल्पान्तरत्वान्मृदुकर्मणीह कर्णाः कृतो नेति वदन्ति केचित् ।
त्रिज्योद्धृतः कर्णगुणः कृतेऽपि कर्णो स्फुटः स्यात्परिधिर्यतोऽत्र ॥
तेनाद्यतुल्यं फलमेति तस्मात् कर्णः कृतो नेति च केचिदूचुः ।
नाशङ्कनीयं न चले किमित्थं यतो विचित्रा फल बासनाऽत्र ॥

यहाँ कर्ण से जो फल आता है वही समीचीन है । मन्द कर्म में स्वल्पान्तर से कर्णानुपात नहीं किया गया है, यह कहते हैं मन्दकर्म में मन्दकर्ण तुल्य व्यासार्ध से जो वृत्त होता वह कक्षावृत्त है । जो पाठ पठित मन्द परिधि है वह त्रिज्या परिणत है । अतः उसको कर्ण व्यासार्ध में परिणामन करते हैं, यदि त्रिज्यावृत्त में यह पाठ पठित परिधि पाते हैं, तो कर्णवृत्त में क्या इससे स्फुट परिधि होती है । 'तत्र स्वेनाहते परिधिना भुजकोटिजीवे' इत्यादि से जो फल होता है उसको त्रिज्या से गुणा कर कर्ण से भाग देने जो उपलब्ध होता है तो वह पूर्व फल के तुल्य ही होता है । यह आचार्य ब्रह्मगुप्त का मत है । यदि इस कर्णानुपात से परिधि की स्फुटता होती है तो शीघ्रकर्म में क्यों नहीं किया जाता है ? यहाँ चतुर्वेदाचार्य कहते हैं कि ब्रह्मगुप्त ने औरों को ठगने के लिए ऐसा कहा है, परन्तु यह ठीक नहीं है । शीघ्रकर्म में क्यों नहीं किया जाता, यह आशंका नहीं करनी चाहिए, क्योंकि फल की उपपत्ति विचित्र है ।

छादक का निर्णय करके राहुकृत ग्रहण नहीं होता है । यह आचार्य ने प्रथम वराह-मिहिरादिकों के मत का प्रतिपादन किया फिर संहितामत ग्रहणवासना का अवलम्बन कर, उस (वराह मिहिरादिक) मत का निराकरण किया है ।

राहुकृतं ग्रहणद्वयमागोपालाङ्गनादिसिद्धमिदम् ।

बाहुफलमिदमपि सिद्धं जपहोमस्नानफलमत्र ॥

इसे लोक प्रथा बताकर राहुकृत ग्रहण के समर्थन में आचार्य ने वेद और स्मृति के बाक्यों का उल्लेख किया है । युक्ति से राहुकृत ग्रहण सिद्ध नहीं होता है, परन्तु वेदों में,

स्मृतियों में और गुराणों में राहुकृत ग्रहण का प्रतिपादन विद्यमान है। अतः दोनों मतों का समन्वय करते हुए आचार्य ने कहा है—

राहुस्तच्छादयति प्रविशति यच्छुक्लपञ्चदश्यन्ते ।
भूछाया तमसीन्दोर्बप्रदानात् कमलयोनेः ॥
चन्द्रोऽम्बुमयोऽधःस्थो यदग्निमयभास्करस्य मासान्ते ।
छादयति शमिततापो राहुश्छादयति तत् सवितुः ॥

सिद्धान्तशिरोमणि के गोलाध्याय में भी अशोलिखित भास्करोक्ति—

दिग्देशकालावरणादि भेदान्न छादको राहुरिति ब्रुवन्ति ।
यन्मानिनः केवलगोलविद्यास्तत्संहिता वेदपुराणबाह्यम् ॥
राहुः कुभामण्डलगः शशाङ्कं शशाङ्कगश्छादयतीव बिम्बम् ।
तमोमयः शम्भुवरप्रदानात् सर्वागमानामविरुद्धमेतत् ॥

से समन्वय किया गया है। सिद्धान्तशेखर में राहुकृत ग्रहण के खण्डनार्थ 'राहुनिराकरणाध्याय' नाम का एक अध्याय रक्खा गया है। इसमें श्रीपति ने भी निम्नलिखित श्लोकों ने समन्वय किया है—

विष्णुलूनशिरसः किल पङ्कोर्दत्तवान् वरमिमं परमेष्ठी ।
होमदानविधिना तवतृप्तिस्तिग्मशीतमहसोरुपरारे ॥
भूमेश्छायां प्रविष्टः स्थगयति शशिनं शुक्लपक्षावसाने ।
राहुर्ब्रह्मप्रसादात् समधिगतवरस्तत्तमो व्यासतुल्यः ॥
ऊर्ध्वस्थं भानुबिम्बं सलिलमयतनोरप्यधोवर्त्ति बिम्बम् ।
संसृत्यैवं च मासव्युपरतिसमये स्वस्य साहित्यहेतोः ॥

गोलबन्धाधिकार में मह द्रवृत्तों (पूर्वापरवृत्त, याम्योत्तरवृत्त, क्षितिजवृत्त आदि) की रचना तथा लघुवृत्तों (मेषादिक द्वादश राशियों के ग्रहोरात्रवृत्त) की रचना करके परमलम्बन-नति का स्वरूप प्रतिपादन कर आचार्य ने दृक्कर्म का आनयन किया है। गोलाध्याय में आचार्य ने जैसे गोलबन्ध कहा है वैसे ही सिद्धान्त शेखर में श्रीपति और सिद्धान्त शिरोमणि के गोलाध्याय में भास्कराचार्य ने कहा है। ग्रहगोल और नक्षत्रगोल में पांच स्थिरवृत्त (पूर्वापरवृत्त, क्षितिजवृत्त, याम्योत्तरवृत्त, उन्मण्डल, विषुवद्वृत्त) कहे हैं। ये सब कक्षा-मण्डल के बराबर हैं। तथा ग्रहों के चलवृत्त मन्दनीर्चावृत्त = ७, भीमादि ग्रहों के शीघ्र-नीचोच्चवृत्त = ५। मन्दप्रतिवृत्त = ७, शीघ्रप्रतिवृत्त = ५। सात ग्रहों के दृग्मण्डल दृक्क्षेप

मण्डल, कक्षामण्डल = २१ चन्द्रादि ग्रहों के विमण्डल = ६, सबों का योग ५१ एकाग्र चलवृत्तों की संख्या है। सिद्धान्तशेखर में भी ऐसा ही है—

मन्दोच्चनीचवलयाणि भवन्ति सप्तशैघ्रचारिण, पञ्च च तथा प्रतिमण्डलानि ।
दृक्षेप दृष्ट्यपमजानि च खेचराणामर्कं विनैव खलु षट् च विमण्डलानि ॥
पञ्चाशदेकसहितानि च मण्डलानि पूर्वापरं वलयमुत्तरदक्षिणं च ।
क्षमाजं तथा विषुवदुद्वलयाभिधाने पञ्चस्थिराणि कथितान्युदुखेचराणाम् ॥

यन्त्राध्याय—

सप्तदश कालयन्त्राण्यतो धनुस्तुर्यंगोलकं चक्रम् ।
यष्टिः शङ्कुर्घटिका कपालकं कर्त्तरी पीठम् ॥
सलिलं भ्रमोऽवलम्बः कर्णश्छायादिनार्धमर्कोऽक्षः ।
नतकालज्ञानार्थं तेषां संसाधनान्यष्टौ ॥

इससे धनुर्यन्त्र, तुरीययन्त्र, चक्रयन्त्र, यष्टियन्त्र, शङ्कुयन्त्र, घटी यन्त्र, कपालयन्त्र, कर्त्तरीयन्त्र, पीठसंज्ञक (फलक) यन्त्र, सलिल (जल), भ्रम (शाण), अवलम्बसूत्र, छाया-कर्ण, शङ्कुछाया, दिनार्धमान, सूर्य, दक्षर (अक्षांश), ये नतकाल के लिए सत्रह काल यन्त्र हैं। इन यन्त्रों में सलिल आदि आठ यन्त्र रचना के उपकरण हैं। सिद्धान्त-शेखर में—

गोलश्चक्रं कामुर्कं कर्त्तरी च कालज्ञाने यन्त्रमन्यत्कपालम् ।
पीठं शङ्कुः स्याद्घटी यष्टिसंज्ञं गन्त्री यन्त्राण्यत्र दिक्संमितानि ॥

इससे गोलयन्त्र, चक्रयन्त्र, धनुर्यन्त्र, कर्त्तरी नामक यन्त्र, कपालयन्त्र, पीठ (फलक) यन्त्र, शङ्कुनामक यन्त्र, घटी नामक-यन्त्र, यष्टियन्त्र, गन्त्री (शकट) ये श्रीपति द्वारा वर्णित दस यन्त्र हैं। शिष्यघोषवृद्धिदत्तयन्त्र में अष्टौ लिखित बारह यन्त्रों का उल्लेख है—

गोलो भगणश्चक्रं धनुर्घटी शङ्कुशकटकर्त्तर्यः ।
पीठकपालशलाका द्वादशयन्त्राणि सह्यष्टं च ॥
कर्णश्छाया द्युदलं रविरक्षो लम्बको भ्रमः सलिलम् ।
स्युर्यन्त्रसाधनानि प्रज्ञा च समुद्यमाश्चैवम् ॥

भास्कराचार्य ने गोलाध्याय में केवल दस यन्त्र कहे हैं—

गोलो नाडीवलयं यष्टिः शङ्कुर्घटीचक्रम् ।
चापं तुर्यं फलकं धीरेकं पारमार्थिकं यन्त्रम् ॥

सूर्य सिद्धान्त में ग्रहो लिखित यन्त्र विवरण है—

तुङ्गबीजसमायुक्तं गोलयन्त्रं प्रसाधयेत् ।
 गोप्यमेतत्प्रकाशोक्तं सर्वगम्यं भवेदिह ॥
 कालसंसाधनार्थाय तथा यन्त्राणि साधयेत् ।
 एकाकी योजयेद्बीजं यन्त्रे विस्मय कारिणि ॥
 शङ्कुयष्टि धनुश्चक्रैश्छायायन्त्रैरनेकधा ।
 गुरुपदेशाद्विज्ञेयं कालज्ञानमतन्द्रितैः ॥
 तोययन्त्रकपालाद्यैर्मयूरनरवानरैः ।
 ससूत्ररेणुगमैश्च सम्यक्कालं प्रसाधयेत् ॥
 परदाराम्बुसूत्राणि शुल्वतैलजलानि च ।
 बीजानि पांसवस्तेषु प्रयोगास्तेऽपि दुर्लभाः ॥
 ताम्रपात्रमधश्छिद्रं न्यस्तं कुण्डेऽमलाम्भसि ।
 षष्टिर्मज्जत्यहोरात्रे स्फुटं यन्त्रं कपालकम् ॥
 नरयन्त्रं तथा साधु दिवा च विमले रवी ।
 छाया संसाधनैः प्रोक्तं कालसाधनमुत्तमम् ॥

मानाध्याय

मानानि सौरचान्द्रार्क्षसावनानि ग्रहानयनमेभिः ।

मानैः पृथक् चतुर्भिः संव्यवहारोऽत्र लोकस्य ॥

इससे सौरमान, चान्द्रमान, नाक्षत्रमान और सावनमान, ये चार प्रकार के मान कहे गये हैं । इन्हीं चारों मानों से लोगों के सब व्यवहार होते हैं । किस किस मान से कौन कौन पदार्थ ग्रहण किये जाते हैं यह सब प्रति पादित है । ब्राह्म, दिव्य, पित्र्य, प्राजापत्य, बार्हस्पत्य, सौर, सावन, चान्द्र, नाक्षत्र ये नौ मान हैं । इन मानों में से मनुष्यलोक में केवल सौर, चान्द्र, सावन और नाक्षत्र इन चार मानों की ही प्रधानता है । क्योंकि इन्हीं मानों से मनुष्यों के सब व्यवहार सम्पन्न होते हैं । सूर्यसिद्धान्त, सिद्धान्तशेखर, सिद्धान्त-शिरोमणि आदि सब ग्रन्थों में मानों के विषय में समान रूप से कहा गया है । ब्राह्मस्फुट सिद्धान्त के इस अध्याय में भूमादैर्ध्य के भी साधन है ।

संज्ञाध्याय में संज्ञा कहने के कारण दर्शाये हैं । सिद्धान्त इसका एक ही है । किस अंश में सूर्यसिद्धान्तादि भिन्न हैं । इसका प्रतिपादन कर आचार्य ने अपने सिद्धान्त के उत्तरार्ध में अनुक्रमणिका कही है । सूर्यसिद्धान्त, सिद्धान्तशेखर आदि संज्ञाध्याय अन्य सिद्धान्तग्रन्थों में संज्ञाध्याय नहीं है वस्तुतः इसकी आवश्यकता भी नहीं है । अध्याय के उपसंहार से पूर्व एक विशेष प्रश्न—

आग्नेये नैऋत्ये वेष्टदिने संस्थितस्य योऽर्कस्य ।
शङ्कुच्छाये कथयति वर्षादपि वेत्ति सूर्य सः ॥

रक्खा हुआ है । इसका उत्तर कोणशङ्कु के आनयन से स्फुट है ।

ध्यान ग्रहोपदेशाध्याय-मूल ब्राह्मस्फुट सिद्धान्त का अंग नहीं है । ब्राह्मस्फुट सिद्धान्त तो चौबीसवें (संज्ञाध्याय) अध्याय पर समाप्त हो जाता है । ध्यान ग्रहोपदेशाध्याय भी ब्रह्मगुप्त की ही एक कृति हैं । अतः परिशिष्ट के रूप इसे यहाँ संलग्न कर दिया गया है ।

इसके चैत्रादि में मासगणानयन, चैत्रादि में दिनादिक, तिथिध्रुवसाधन, इद्रमासादि में रवि के आनयन प्रकार, प्रतिमास में चन्द्रकेन्द्र, तिथि ध्रुवक्षेप के आनयन का प्रतिपादन है । प्रतिदिन चालन, चन्द्रसाधन, औदयिक रविसाधन, ज्याखण्ड तथा केन्द्रज्या साधन का वर्णन है—

त्रिंशत्सनवरसेन्दुर्जिनतिधिविषयागृहार्धचापानाम् ।
अर्धज्याखण्डानि ज्याभुक्तैक्यं स भोग्यफलम् ॥
गतभोग्यखण्डकान्तर दलविकलवधाच्छतैर्नवभिराप्तैः ।
तद्युतिदलं युतोर्न भोग्याद्गुनाधिकं भोग्यम् ॥

यह आचार्योक्त भोग्यखण्ड स्पष्टीकरण है । भास्कराचार्य ने इसी को सिद्धान्तशिरोमणि के स्पष्टाधिकार में “यातैग्ययोः खण्डकयोर्विशेषः शेषांशनिघ्नः” इत्यादि द्वारा लिखा है । भास्कराचार्य ने १२० त्रिज्या ग्रहण की हैं । यहाँ आचार्य ब्रह्मगुप्त ने १५० त्रिज्या ग्रहण को हैं । यहाँ यह बात बड़ी निश्चित लगती है कि आचार्योक्त विषयों को ही सिद्धान्त शेखर में श्रीपति ने सर्वत्र श्लोकान्तरों में लिखा है, परन्तु पता नहीं क्यों उन्होंने आचार्योक्त इस अपूर्व भोग्य खण्ड स्पष्टीकरण की चर्चा तक नहीं की । चन्द्र में भुजफल संस्कार, तिथि फलसंस्कार आदि सभी विषय विलक्षण है । आचार्य ने इस अध्याय में जो विषय लिख दिये हैं, सूर्यसिद्धान्त-सिद्धान्तशेखर- तथा सिद्धान्त शिरोमणि में वे नहीं हैं ।

ब्राह्मस्फुट सिद्धान्त में जिन आचार्यों के नाम आये हैं । उनके सम्बन्ध में कुछ विचार करते हैं । सब सिद्धान्तों में आदिम या सबसे प्राचीन सिद्धान्त ब्रह्मसिद्धान्त ही है । इसी को लोग पितामह सिद्धान्त के नाम से भी कहते हैं । पञ्चसिद्धान्त का मैं बराहमिहिर ने बारहवें अध्याय को जिसमें केवल पांच आर्याएँ हैं, पितामह सिद्धान्त के नाम से पुकारते हैं, उदाहरणतः—

रविशशिनोः पञ्चयुगं वर्षाणि पितामहोपदिष्टानि ।
अधिमासस्त्रिंशद्भिर्मासैरवमस्त्रिषष्ट्याऽह्नुम् ॥१॥

द्वयचून् शकेन्द्रकालं पञ्चभिरुद्धृत्य शेषवर्षाणाम् ।
 द्विगुणमाद्यसिताद्यं कुर्याद् द्युगणं तदह्णचुदयात् ॥२॥
 सैकषष्ट्यं शे गणे तिथिर्भमार्कं नवाहतेऽक्षयर्कः ।
 दिग्रसभागैः सप्तभिरूनं शशिभं धनिष्ठाद्यम् ॥३॥
 *.....

द्वयग्निनगेषूत्तरतः स्वमितमेष्ट्यदिनमपि याम्यायनस्य ।
 द्विघ्नं शशिरसभक्तं द्वादशहीनं दिनसमानम् ॥५॥

इसके अनुसार एक युग में सौर वर्ष = ५, सौरमाह $५ \times १२ = ६०$, अविमास = २, चान्द्रमास = ६२, इसे तीस से गुणा करते से तिथि = १८६०, अवम = ३०, तिथियों में से इसे घटाने पर अहर्गण = १८३० ॥

आचार्य बराहमिहिर विक्रमादित्य के प्रसिद्ध नव रत्नों में से एक थे । इनके द्वारा बने ग्रन्थ 'लघुजातक', बृहज्जातक, विवाहपटल, बृहद्योगयात्रा, बृहत्संहिता, समास संहिता और पञ्चसिद्धान्तिका है ।

'पौलिश सिद्धान्त', रोमक सिद्धान्त, वासिष्ठ सिद्धान्त, सौर (सूर्य) सिद्धान्त, और पैतामह सिद्धान्त, इन पाञ्च सिद्धान्तों के सार का संकलन रूप 'पञ्चसिद्धान्तिका' है । इस ग्रन्थ को को बराह मिहिराचार्य 'ताराग्रह कारिका तन्त्र' के नाम से पुकारते हैं । इस ग्रन्थ (पञ्चसिद्धान्तिका) में 'पौलिश सिद्धान्त' नाम का एक अध्याय है । पौलिश सिद्धान्त के रचयिता के सम्बन्ध में बहुत मतमतान्तर हैं । बराहोक्त पौलिशसिद्धान्त में यवनपुर से उज्जयिनी का और बाराणसी का देशान्तर उल्लिखित है, जैसे—

यवनाच्चरजा नाड्यः सप्तावन्त्यां त्रिभागसंमिश्राः ।
 बाराणस्यां त्रिकृतिः साधनमन्यत्र वक्ष्यामि ॥

शाक्य संहितोक्त ब्रह्मसिद्धान्त में पौलिश सिद्धान्त का उल्लेख तथा पुलिशाचार्य के—

उज्जयिनी रोहीतक कुर्यमुना हिमनिवासमेरुणाम् ।
 देशान्तरं न कार्यं तल्लेखामध्यसंस्थदेशेषु ॥

आदि विचार से 'पौलिश सिद्धान्त' सर्वमान्य था । परन्तु यह सिद्धान्त अभी उपलब्ध नहीं है ।

सूर्य सिद्धान्त ही प्राचीनतम सिद्धान्त ग्रन्थ है, यह बहुत विद्वानों का मत है ।

*प्रागर्ध्वे पर्व यदा तदोत्तराऽतोऽग्न्यस्य तिथिः पूर्वा ।

अर्कं च्चे व्यतिपाताद्युगणे पञ्चाम्बरहुताशीः ॥४॥

केचित् प्रत्यक्षसूर्याच्च भिन्नोऽयमिति यद्वलात् ।

वदन्ति भूदवादस्याप्रामाण्यात्तदसद्ध्रुवम् ॥

कमलाकर की इस उक्ति से स्वयं भगवान् सूर्य ही इस के रचयिता सिद्ध होते हैं ।
आश्चर्य तो इस बात का है कि 'सूर्यसिद्धान्त' में—

त्रिंशत्कृत्यो युगे भानां चक्रं प्राक् परिलम्बते ।

तद्गुणाद्भूदिर्नैर्भक्ताद् द्युगणाद्यदवाप्यते ॥

तद्गोस्त्रिघ्ना दशाष्टांशा विज्ञेया अयनाभिधाः ।

तत्संस्कृताद् ग्रहात् क्रान्तिच्छायाचरदलादिकम् ॥

आदि से अयांशानयन किया गया है, परन्तु सूर्य सिद्धान्त के पश्चात् ब्रह्मस्फुट सिद्धान्त के रचयिता आचार्य ब्रह्मगुप्त ने उसकी कोई चर्चा ही नहीं की । इस चर्चा न करने का कोई कारण भी समझ में नहीं आता है । सूर्यसिद्धान्त के उदयास्ताधिकार में "अभिजिद् ब्रह्म हृदयं स्वाती वैष्णव वासवाः" इत्यादि से भगवान् सूर्य को सदोदित नक्षत्र बतलाया गया है । इस श्लोक की सुधावर्षिणी टीका में जो—

देशज्ञानं बिना सदोदितनक्षत्राणां ज्ञानं न भवति, निरक्षे च सौम्य द्रुवोऽप्य-
दृश्योऽतः केनचिद् गोलानभिज्ञेनायं श्लोक प्रक्षिप्त इति लिखा गया है, सो ठीक नहीं है ।
पाताधिकार में—

आद्यन्तकालयोर्मध्यः कालोऽज्ञे योऽतिदारुणः ।

प्रज्वलज्ज्वलनाकारः सर्वकर्मसु गर्हितः ॥

एकायनगतं यावदकेन्द्रोर्मण्डलान्तरम् ।

सम्भवस्तावदेवास्य सर्वकर्म विनाशकृत् ॥

स्नानदानजपश्राद्धव्रतहोमादिकर्मभिः ।

प्राप्यते सुमहच्छ्रेयस्तत्कालज्ञानतस्तथा ॥

इत्यादि से पातस्थितिकाल सब कर्मों का विनाशकारक कहा गया है । प्रातःकाल में स्नान, दान, जप, श्राद्ध, व्रत, होम आदि कार्यों से लोग कल्याण लाभ करते हैं । तथा—

रवीन्द्रोस्तुल्यता क्रान्त्योर्विषुवत्सन्निधौ यदा ।

द्विर्भवेद्धि तदा पातः स्यादभावो विपर्ययात् ॥

से अपूर्व विषयों का प्रति पादन हुआ है । अर्थात् रविगोल-संधि समीप में जब रवि और चन्द्र का क्रान्तिसाम्य हो तब अल्प समय में ही दो बार पात होता है । जब रवि की अयनसन्धि समीप में क्रान्ति साम्याभाव होता तब बहुत कालपर्यन्त क्रान्ति साम्याभाव होता है, ब्रह्मस्फुट सिद्धान्त में भी पातस्थिति काल फल सूर्य सिद्धान्त में कथित के अनु-

ही कहा गया है। श्रीवेणु, आर्यभट तथा विष्णुचन्द्र के विषय में संक्षेप से पहले लिख चुके हैं !

इलाहाबाद विश्वविद्यालय के रसायन विभाग के अध्यक्ष डाक्टर सत्य प्रकाश जी डी. एस. सी महोदय का मैं अत्यन्त अनुगृहीत हूँ, जिन्होंने आंगल भाषा में इस ग्रन्थ की प्रस्तावना लिख कर कृतार्थ किया।

सम्पादक मण्डल के अन्य सहयोगी ज्योतिषाचार्य श्री मुकुन्दमिश्र, श्री विईवनाथ झा, श्री दयाशंकर दीक्षित एवं श्री ओदत्तशर्मा शास्त्री एम. ए. एम. ओल. भी धन्यवाद के पात्र हैं जिनके सहयोग के बिना इस महान् ग्रन्थ का सम्पादन अति कठिन था।

नव प्रिंटर्स पक्ष श्री प्रकाशन के स्वामी श्री रमेशचन्द्र जी का परिश्रम भी सराहनीय है। इसके अतिरिक्त उन सभी लोगों के प्रति मैं अपना हार्दिक आभार प्रदर्शन करता हूँ जिन्होंने अल्पमात्र भी सहयोग देकर मुझे कृतार्थ किया।

ब्राह्मस्फुटसिद्धान्तः

ऋंगोन्नत्युत्तराध्यायः

ब्राह्मस्फुटसिद्धान्तः

शृङ्गोन्नत्युत्तराध्यायः

अथ शृङ्गोन्नत्युत्तराध्यायः प्रारम्भ्यते ।
अथ प्रश्नमाह ।

भुजकोटिकर्णशशिमानशुक्लसितसूत्रपरिलेखात् ।
प्रतिदिवसं प्रतिघटिकं यो वेत्ति स तन्त्रहृदयज्ञः ॥१॥

सु. भा.—शृङ्गोन्नतौ प्रतिदिवसं वा प्रतिघटिकं यो भुजं कोटिं कर्णं शशि-
माने चन्द्रबिम्बे शुक्लं सितसूत्रं स्वभासूत्रं परिलेखं च वेत्ति स एव तन्त्रहृदयज्ञः
सिद्धान्तग्रन्थमर्मज्ञ इति ॥ १ ॥

वि. भा.—प्रतिदिनं प्रतिघटिकं भुजं कोटिं कर्णं चन्द्रबिम्बे शुक्लं सितसूत्रं
(स्वभासूत्रं) परिलेखं च शृङ्गोन्नतौ यो जानाति स सिद्धान्तग्रन्थमर्मज्ञ इति ।
शृङ्गोन्नत्यधिकारे पूर्वं भुजादयः साधिता एवातः परिलेखमत्र कथयति ॥१॥
अब शृङ्गोन्नत्युत्तराध्याय प्रारम्भ किया जाता है ।

अब प्रश्न को कहते हैं ।

हि. भा.—प्रत्येक दिन में प्रत्येक घटी में भुज—कोटि—कर्णों को चन्द्रबिम्ब में शुक्ल
को, स्वभा सूत्र को, परिलेख को, शृङ्गोन्नति में जो जानते हैं वे सिद्धान्तग्रन्थ के मर्मज्ञ हैं
इति । शृङ्गोन्नत्यधिकार में पहले भुजादि साधित ही हैं । इसलिये यहां परिलेख ही को कहते
हैं ॥१॥

इदानीं परिलेखमाह ।

प्राच्यपरा दिगभिमुखं शुक्लेतरपक्षयोर्लिखेद् भूमौ ।
अपवर्त्येकेनेष्टेन राशिना कोटिभुजकर्णान् ॥२॥

परिकल्प्याकं बिन्दुं तस्माद्बाहुं यथादिशं दत्त्वा ।
 बाह्यागत् प्राच्यपरां कोटिं तिर्यक् स्थितं कर्णम् ॥३॥

तत्र परिलेखे लाघवार्थं शङ्कुद्वादशांशेन शङ्कुभुजस्तद्वर्गयोगमूलसमः कर्णश्चा-
पवर्त्तितः । अतो रविबिन्दुतो भुजं दत्त्वा तदग्रादूर्ध्वाधररूपां कोटिं दत्त्वा कोट्यग्र-
रविबिन्दुगतं कर्णसूत्रं दत्तम् । कोट्यग्रे कल्पितचन्द्रबिम्बं तत्र कल्पितरविः
कर्णमार्गेण शुक्लं ददाति । अतस्तत्सूत्रे शुक्लं दत्तम् । कर्णरेखोपरि या याम्योत्तरा
तिर्यग्रेखा तया छिन्नमर्धं बिम्बं रविणा शुक्लं भवति । अतो दृश्यवृत्ते तत्प्रान्तयोश्च
शुक्लम् । अतस्तद्विन्दुत्रयोपरिगतेन वृत्तखण्डेन चन्द्रखण्डाकृतिरुत्पद्यते । अत्र
कोट्यूर्ध्वाधररेखोपरि या तिर्यग्रेखा तद्वशतो भुजान्यदिशि शृङ्गमुन्नतं भवति ।
एवमेव परिलेखो भास्कराचार्यस्याप्यस्ति । परन्तु केषामपि प्राचीनाचार्याणां
शृङ्गोन्नतिपरिलेखः समीचीनो नास्तीति ॥२-६॥

अब परिलेख को कहते हैं ।

हि. भा.—एक किसी इष्ट राशि से भुज कोटि और कर्ण को अपवर्त्तन देकर भूमि
में शुक्ल पक्ष और कृष्णपक्ष में पूर्व पश्चिम दिशा की तरफ लिखना चाहिये । कैसे लिखना
चाहिये सो कहते हैं । इष्ट बिन्दु को रवि कल्पना कर उससे भुज देकर भुजाग्र से यथादिक्
पूर्वापर कोटि देकर उन दोनों के मध्य में तिर्यक् कर्ण को देकर कर्ण में चन्द्र को लिखकर
वहाँ कर्णमार्ग से चन्द्रबिम्ब में शुक्ल देकर शुक्लाग्र से परिलेख तुल्य सूत्र (स्वभातुल्यसूत्र) से
कर्ण में अङ्कित कर उस बिन्दु को केन्द्रमान कर स्वभाव्यासार्ध से वृत्त लिखकर कर्णगतिस्थ
रात्रि सम्बन्धी शुक्ल में शुक्ल संस्थान होता है । कर्ण सूत्र में शुक्लाग्र को किस दिशा में
देकर परिलेख करना चाहिये सो कहते हैं । चन्द्र में सूर्य को घटा कर जो शेष रहे उसको
ग्रहण करना चाहिये । भेषादि तीन राशियों में और तुलादि तीन राशियों में शेष में
पश्चिमाम्निमुख शुक्ल देना चाहिये । तथा कर्कटादि तीन राशियों में और मकरादि तीन
राशियों में शेष में पूर्वाम्निमुख शुक्ल देना चाहिये ॥ इति ।

उपपत्ति ।

जब रवि और चन्द्र का अन्तर तीन राशि से अल्प होता है तब शुक्लमान भी चन्द्र बिम्बार्ध से अल्प होता है अतः कर्ण सूत्र में शुक्लाङ्गुल को पश्चिमाभिमुख देकर वहां से स्वभासूत्र व्यासार्ध से परिलेख वृत्त करने से शुक्ल चन्द्रखण्डाकृति बनती है । जब वह अन्तर तुलादि तीन राशि में हो तब कृष्ण बिम्बधाल्प होता है उसके वश से पश्चिमाभिमुख युक्त है । एवं कर्क्यादि तीन राशियों में भी कृष्णचन्द्र खण्डाकृति होती है । मकरादि तीन राशियों में मास के चतुर्थचरण में शुक्ल शृङ्गोन्नति बनती है । वहां पूर्वाभिमुख शुक्ल संस्थान होता है । सिद्धान्त शेखर में 'आदर्शोदर सोदरेऽवनितले बिन्दुं प्रकल्प्योष्णगुं स्वाशायां' इत्यादि संस्कृतोपपत्ति में लिखित श्लोक से श्रीपति ने परिलेख प्रकार लिखा है । शिष्यधीवृद्धिद तन्त्र में 'यच्चिह्नं समभुवि भानुमाद् स तस्मात् दातव्यः स्वदिशि भुजः' इत्यादि संस्कृतोपपत्ति में लिखित श्लोकों से ललाचार्योक्त प्रकार भी आचार्यों (ब्रह्मगुप्त) क्त प्रकार और श्रीपत्युक्त प्रकार तथा भास्करोक्त शृङ्गोन्नति प्रकार के समान ही है । सूर्य सिद्धान्त में 'दत्वाऽर्कं संज्ञितं बिन्दुं ततो बाहुं स्वदिङ्मुखम्' इत्यादि संस्कृतोपपत्ति में लिखित श्लोकों से सूर्य सिद्धान्तकार ने परिलेख प्रकार लिखा है इसी तरह के परिलेख भास्करोक्त भी हैं लेकिन कोई भी प्राचीनाचार्योक्त प्रकार समीचीन नहीं है इति ॥२-६॥

इदानीं प्रकारान्तरेण परिलेखमाह ।

बाहुज्येन्दुदलगुणा कर्णबिभक्ता भुजान्यदिक् चन्द्रे ।

कर्णोभुजाग्रतश्चन्द्रमध्यतः पूर्ववच्छेषम् ॥७॥

सु. भा.—वा एवं वक्ष्यमार्गं संस्थानं शुक्लसंस्थानं ज्ञेयं । अभीष्टस्थाने केन्द्रं प्रकल्प्य चन्द्रबिम्बं परिलिख्य दिशश्च प्रसाध्य ततः पूर्वशृङ्गोन्नत्यध्यायविधिना बाहुज्या भुजा साध्या सा चन्द्रदलेन चन्द्रबिम्बार्धेन गुणा कर्णेन विभक्ता सा चन्द्रे चन्द्रबिम्बेऽन्यदिक् भुजा भवति । ततश्चन्द्रमध्यतश्चन्द्र केन्द्राद्भुजाग्रतश्च कर्णसंस्थानं ज्ञेयम् । ज्ञाते कर्णसंस्थाने शेषं पूर्ववत् ज्ञेयम् ।

अत्रोपपत्तिः । अत्र रवेर्यदिक् चन्द्रः स प्रथमं भुजः साधितो भुजाग्राच्चन्द्र-केन्द्रगता रेखा कोटिः । कोटिसूत्रमेव चन्द्रबिम्बे पूर्वापररेखा । कर्णसूत्रं च चन्द्र-बिम्बपरिधौ कोटिसूत्राद् भुजविपरीतदिशि लग्नं तत्स्थानज्ञानार्थं चन्द्रबिम्बार्धे भुजः परिणीतस्ततः कर्णसंस्थानज्ञानं सुगमम् ॥ ७ ॥

वि. भा.—पूर्वोक्तपरिलेखश्लोकानामन्ते 'एवं वा संस्थानम्' इत्यस्ति एतस्यार्थः वा एवमग्रे कथितं शुक्लसंस्थानं बोध्यम् । इष्टस्थाने कमपि बिन्दुं केन्द्रं मत्वा चन्द्रबिम्बं विलिख्य दिक्साधनं कृत्वा शृङ्गोन्नत्यध्यायोक्तविधिना भुजज्या (भुजा) साध्या सा चन्द्रबिम्बार्धेन गुणा कर्णेन भक्ता तदा चन्द्र बिम्बेऽन्यदिक्

भुजा भवति । ततश्चन्द्रकेन्द्राद् भुजाग्रतश्च कर्णसंस्थानं ज्ञेयम् । अवशिष्टं पूर्ववदेव बोद्धव्यम् ॥

अत्रोपपत्तिः ।

रवेर्यस्यां दिशि चन्द्रस्तत्र प्रथमं भुजः साधितः । भुजाग्राच्चन्द्रबिम्बकेन्द्रग्रता रेखाकोटिः । इयमेव कोटिरेखा चन्द्रबिम्बे पूर्वापररेखा । कर्णसूत्रं च चन्द्रबिम्ब-परिधौ कोटिसूत्राद् भुजविपरीतदिशि लग्नं तत्स्थानज्ञानार्थं चन्द्रबिम्बार्धे भुजः परिणतः कृतस्ततः कर्णसंस्थानज्ञानं सुलभम् ॥७॥

अब प्रकारान्तर से परिलेख को कहते हैं ।

हि. भा.—अभीष्ट स्थान में केन्द्र मान कर चन्द्र बिम्ब को लिखकर दिशाओं का ज्ञान करना चाहिये तब पूर्वशृङ्गोन्नत्यध्यायोक्त विधि से भुजज्या साधन करना उसको चन्द्र बिम्बार्ध से गुणाकर कर्ण से भाग देने से फल चन्द्र बिम्ब में अन्य दिशा की भुजज्या होती है । तब चन्द्र केन्द्र से और भुजाग्र से कर्ण संस्थान समझना चाहिये । अवशिष्ट विषय पूर्ववत् समझना चाहिये इति ॥

उपपत्ति ।

रवि से जिस दिशा में चन्द्र है वहाँ पहले भुज साधित है । भुजाग्र से चन्द्रकेन्द्र गत रेखा कोटि है । कोटि रेखा ही चन्द्रबिम्ब में पूर्वापर रेखा है । कर्णसूत्र चन्द्रबिम्ब परिधि में कोटिसूत्र से भुज विपरीत दिशा में लगता है उस स्थान के ज्ञान के लिये चन्द्र बिम्बार्ध में भुज को परिणत किया गया, तब कर्ण संस्थानज्ञान सुलभ ही है इति ॥७॥

इदानीं फलके परिलेखमाह ।

प्राच्यपरे विपरीते फलकेऽन्यत् सर्वमुक्तवच्छेषम् ।

शृङ्गोन्नतिपरिलेखाश्चत्वारः शीतकिरणस्य ॥८॥

सु. भा.—फलके गृहणपरिलेखवत् प्राच्यपरे दिशौ विपरीते कार्ये । अन्य-त्सर्वं शेषमवशिष्टं कर्माक्तवत् कार्यम् । एवं शीतकिरणस्य चन्द्रस्य शृङ्गोन्नति-परिलेखाश्चत्वारो भवन्ति । भूमौ प्रकारद्वयं तद्वशातः फलके प्रकारद्वयमिति चत्वारः परिलेखप्रकारा भवन्तीति ।

अत्रोपपत्तिः । ग्रहण परिलेखवत् फलकं परिवर्त्याकिशे संस्थाप्य सर्वा दिशो वास्तवा बोध्या इति ॥ ८ ॥

वि. भा.—फलके पूर्वापर दिशौ विपरीते कार्ये । अन्यत् सर्वं शेषं कर्माक्तवत्

कर्त्तव्यम् । एवं चन्द्रस्य शृङ्गोन्नति परिलेखाश्चत्वारो भवन्ति । प्रकारद्वयं भूमौ तद्वशतः प्रकारद्वयं फलके इति परिलेखस्य चत्वारः प्रकारा भवन्तीति ॥

अत्रोपपत्तिः ।

पूर्व २-६ श्लोकोक्तपरिलेखोपपत्तौ सूर्यसिद्धान्तोक्तप्रकारो योऽस्ति स फलके परिलेखप्रकारोऽस्ति तेनैव फलके परिलेखचमत्कृतिर्ज्ञातव्येति ॥८॥

अब फलक में परिलेख को कहते हैं ।

हि. भा.—फलक में पूर्वदिशा और पश्चिम दिशा को विपरीत करना चाहिये । अन्य सब अवशिष्ट कर्म पूर्ववत् करना चाहिये । इस तरह चन्द्र का शृङ्गोन्नतिपरिलेख चार प्रकार का होता है । दो प्रकार भूमि पर और उसके वश से दो प्रकार फलक पर ये चार प्रकार परिलेख के होते हैं इति ।

इदानीं विशेषमाह ।

ग्रहयोगेन्दुच्छायाग्रहोदयामयभग्रहमुनीनाम् ।

तत्क्रान्तिज्याप्रश्नोत्तराणि भग्रहयुतौ न पृथक् ॥९॥

 दनमिति ॥३-५॥

अब कुट्टक को कहते हैं ।

हि. भा.—किसी राशि को एक हर से भाग देने से जो शेष रहता है वही उसी राशि को दूसरे हर से भाग देने से रहता है । तब यह राशि क्या है । अधिक शेष सम्बन्धी हर में अल्पशेष सम्बन्धी हर से भाग देने से जो शेष रहता है उसको परस्पर भाग देने से लब्ध को पृथक् अघोऽवः स्थापन करना । अधिकशेष सम्बन्धी हर में अल्पशेष सम्बन्धी हर से भाग देने से जो शेष रहता है उससे अल्पशेष सम्बन्धी हर को भाग देने से जो शेष रहता है उससे प्रथम शेष को भाग देना । फिर यहां जो शेष रहे उससे द्वितीय शेष को भाग देना । इस तरह बराबर कर्म करना चाहिये । फलों को अघोऽवः स्थापन करना । इस तरह अभीष्ट शेष को किसी इष्ट से गुणा कर दोनों शेषों को जोड़ना जिससे वह भाजक (हर) उपान्तिम शेष से शुद्ध हो । इस तरह वह गुणक पूर्वस्थापित फलों के अघः स्थापन करना । तब अन्त से कर्म करना चाहिये । कैसे सो कहते हैं । ऊर्ध्वाङ्क को उपान्त्य से गुणाकर अन्त्य को जोड़ देना चाहिये, उस अन्त्य को त्याग देना चाहिये । इस तरह अन्त्य में जो ऊर्ध्व राशि होता है उसको अल्प शेष सम्बन्धी हर से भाग देने से जो शेष रहे उसको अधिक शेष सम्बन्धी हर से गुणाकर अधिक शेष को जोड़ने से राशि होता है ॥

यहां म. म. सुधाकर द्विवेदी का उदाहरण है ।

हि. भा.— किसी राशि को चौतीस से भाग देने से दो शेष रहता है और तेरह से भाग देने से दस शेष रहता है उस राशि को कहो ॥

यहां ३४ हर का शेष = २ है । १३ हर का शेष = १० है । इसलिये अधिक शेष सम्बन्धी हर = १३ अल्प शेष सम्बन्धी हर = ३४ है । इससे अधिक शेष सम्बन्धी हर को भाग भाग देने से शेष = १३ तब परस्पर भाग देने से वल्ली

२	३६	'उपान्तिमेन स्वोर्ध्वं हतेऽन्त्येन युतं तदन्त्यं त्यजेत्' इत्यादि से अग्रान्त = ३६ इसको १ १४ अल्प शेष सम्बन्धी ३४ इस हर से भाग देने से शेष = २, इसको अधिक शेष १ ८ सम्बन्धी हर से गुणाकर अधिक शेष को जोड़ने से राशि = ३६, इसको २ ६
---	----	--

यदि दोनों हरों के घात के बराबर हर $३४ \times १३ = ४४२$ से भाग देने से शेष राशि के बराबर होता है । यदि वल्ली सम रहे तब ही इस तरह कर्म करना । यदि वल्ली विषम रहे तब गुणक के नीचे जो लब्ध स्थापित है उसको श्रृण कल्पना कर बीज क्रिया से योग अन्तर आदि कर्म करना चाहिये । इष्ट शेष को किस से गुणाकर दोनों शेषों के अन्तर को जोड़कर हर से भाग देने से शुद्ध होता है यहां यदि शेष रूप १ के बराबर हो तब शेष को शेष द्वय के अन्तर तुल्य गुणक से गुणा करने से शेषद्वय का अन्तर ही रहता है इसलिये उसमें शेषान्तर को घटाकर हर से भाग देने से लब्ध निःशेष शून्य होता है अतः सीलावती में 'मिथो भजेत्तौ दृढभाज्य हारौ' इत्यादि भास्कराचार्य ने कहा है ।

उपपत्ति ।

कल्पना करते हैं अधिक शेष = शे । उसका हर = ह । अल्प शेष = शे, इसका हर = ह जिस तरह अधिक शेष और उसके हर से आलाप घटे वैसे कल्पित राशिमान = ह. क + शे इसको अल्प शेष सम्बन्धी हर से भाग देनेसे लब्ध न तद्गुणित हर में शेष जोड़ने से पूर्व राशि के समान हुआ ह. क + शे = ह. न + शे समशोधन आदि करने से न मान अभिन्नात्मक = $\frac{ह. क + (शे - शे)}{ह}$ यहां ह, ह इन भाज्य और हर से यदि कुट्टक क्रिया की

जाती है तो जो राशिद्वय होता है उनमें नीचे की राशि ही आचार्य का अग्रान्त है उसको ह इस अल्प शेष हार से भाग देने से शेष क मान होता है 'ते भाज्य तद् भाजक वर्णमाने' इस भास्करोक्ति से क मान अल्प शेष सम्बन्धी हर से अल्प हुआ । उसको अधिक शेष सम्बन्धी हर से गुणाकर शेष जोड़ने से राशिमान होता है । परम क मान = ह—१ इसको—ह से गुणाकर शे जोड़ने से ह. ह—ह + शे = ह—(ह—शे) । यहां प्रश्न के अनुसार ह > शे इसलिये ह—शे यह घनात्मक है । अतः पूर्वागत राशिमान सदा—ह, ह इससे अल्प होगा इसलिये शेष घात तुल्य हर से राशि मान को भाग देने से शेष राशिमान के बराबर ही होता है इति ॥३—५॥

तदा कल्पात् कियन्ति दिनानि व्यतीतानीति प्रश्ने को राशिश्चतुस्त्रिंशद् भक्तो
दशशेषस्त्रयोदशभक्तश्च दशशेष इति प्रश्नोत्तरेणैव तदुत्तरसिद्धिः । अत्र शेषयोः
समत्वादधिकशेषसम्बन्धिहरश्चतुस्त्रिंशदेव कल्पितः । ततः पूर्वप्रकारेण शेष-
योरन्तरं शून्यं गृहीत्वा गुणकारं शून्यं प्रकल्प्याग्रान्तः शून्यसमो वा द्वितीयहार-
समस्तदा राशिः=ह. ह+शे अयं शेषो हरघातश्च हर इत्येकस्य प्रकल्प्यान्यस्यैक-
भगणकालस्तद्धरस्तच्छेषश्च पूर्वशेषसमः=शे इति प्रकल्प्य पुनः कुट्टाकारेणैव
ग्रहान्तिमयुतेर्दशदिनानि व्यतीतानि तदा कल्पगतं किमिति प्रश्नोत्तरमानेयम् ।
एवं त्र्यादिग्रह युगगतानयनं कर्तव्यमिति ॥ ६ ॥

अब विशेष कहते हैं ।

हि. भा.—दो ग्रहों का योग छेदवध (हर घात) होता है अन्तिम योग से जो गत है
वह दोनों हर का शेष होता है । एवं कुट्टाकार से त्र्यादि ग्रहयुगगतानयन करना चाहिये ।
जैसे एक ग्रह चौतीस दिन में अन्य ग्रह तेरह दिन में एक भगण को भोग करता है । दोनों
का अन्तिम योग से दश दिन का समय व्यतीत हुआ तब कल्प से कितने दिन व्यतीत हुए इस
प्रश्नमें कौन राशि है—जिस को चौतीस से भाग देने से दस शेष रहता है । तेरह से भाग देने
से दस शेष रहता है इस प्रश्न के उत्तर ही से उसकी उत्तर सिद्ध होती है । यहां शेषद्वय के
समत्व से अधिक शेष सम्बन्धी हर चौतीस ही कल्पना किया गया । तब पूर्व प्रकार से दोनों
शेषों के अन्तर को शून्य मानकर गुणकार को शून्य कल्पना कर एक भगण काल—उसका
हर और शेष पूर्वशेष शे के बराबर कल्पनाकर पुनः कुट्टक से ग्रह के अन्तिम योग से दश दिन
व्यतीत हुए तब कल्पगत क्या है इस प्रश्न का उत्तर लाना चाहिये । इस तरह तीन त्र्यादि
ग्रहों का युग गतानयन करना चाहिये ॥ ६ ॥

अत्र ककु, कल्पभ भाज्यहाराभ्यां यौ राशी तत्राधरः कल्पभभक्तः शेषं गतभगण-मानम् । परन्तु यद्यधिकशे = भशे, तद्वरः = ककु, अल्पशेषं = ०, तद्वरः = कभगण तदा कुट्टकविधिना छेदवध (हरघात) समे हरे शेष मानम् = गतभगण. ककु + भशे अत इदं शेषमानं कल्पभगणभक्तं लब्धं य मानं भवेद्राश्यादिशेषेऽपि तत्तच्छेदाभ्यां छेदघातसमे छेदेऽग्र (शेष) मानीय तत्कल्पभगणभक्तमहर्गणो भवतीति ॥ सिद्धान्त शेषरे “चक्रर्क्षभागकलिका विकलादिशेषमग्रं स्वहारविहृतं भगणादि-भक्तम् । न्यूनाग्रमत्र हि फलं भगणादिनाप्तं लब्धं भवेद्दिनगणस्त्वपर्वन्ति ते स्यात् ॥” श्रीपत्युक्तोऽयं प्रकार आचार्योक्तिप्रकार सम एवेति ॥७॥ अत्र कोलब्रू-कानुवादानुसारेण प्रश्नरूपार्यायास्त्रुटिर्वर्तते सा च ‘इष्ट भगणशेषाद्वा राश्यंश-कलाविलिप्तिकाशेषात् । आनयति द्युगणं यः कुट्टाकारं स जानाति एवं भवि-तुमर्हतीति ॥९॥

अब भगणादि शेष से अहर्गणानयन कहते हैं ।

हि. भा.—भगणादि शेष (भगण शेष, राशिशेष, कलाशेष, विकलाशेष, उसके षष्ठ्यं (६०) शादि शेष) को छेद (दृक्कुदिन) से भाग देने से अग्र (शेष) होता है । एक दिन सम्बन्धी भगणादिशेष (दिनज शेष) से शून्य को भाग देने से द्वितीयशेष होता है । अर्थात् भगणादि शेष एक अग्र (शेष) उसका छेद (हर) दृक् कुदिन । और शून्य द्वितीय अग्र उसका छेद दिनज शेष कल्पना कर दोनों छेदों के घात तुल्य छेद में कुट्टक रीति से अग्र(शेष)साधन करना उसको भगणशेष से भाग देने से लब्ध अहर्गण होता है । यहां कोलब्रूक साहब के अनुवादानुसार प्रश्नरूप आर्या की त्रुटि है वह संस्कृतोपपत्ति में लिखित श्लोक के सदृश होना चाहिये ॥६॥

उपपत्ति ।

कल्पना करते हैं अहर्गण प्रमाण = य तब अनुपात करते हैं यदि कल्प कुदिन में कल्प भगण पाते हैं तो अहर्गण में क्या इस अनुपात से आते हैं गतभगण और भगणशेष । तब अनुपात स्वरूप = $\frac{\text{कल्पभ. य}}{\text{ककु}} = \text{गतभ} + \frac{\text{भशे}}{\text{ककु}}$, छेदगम से कल्पभ. य = ककु. गतभ + भशे, दोनों पक्षों को कल्पभ भाग देने से य = $\frac{\text{ककु. गतभ} + \text{भशे}}{\text{कभ}}$ यहां ककु, कल्पभ भाज्य

और हार से जो दो राशिप्रमाण होता है उसमें अधर (नीचे की) राशि को ‘कल्पभ’ से भाग देने से शेष गतभगण का मान होता है । परन्तु यदि अधिक्राग्र = भशे, उसका हर = ककु, अल्पाग्र = ०, उसका हर = कभगण । तब कुट्टक विधि से छेदवध तुल्य छेद में शेषमान = गत-

भगण. ककु + भशे इसलिये इस शेषमान को कल्पभगण से भाग देने से लब्ध य मान होता है । राश्यादिशेष में भी तत् तत् शेष के छेदद्वय से छेदद्वय घात तुल्य छेद में अग्र (शेष) को लाना चाहिये, उसको कल्पभगण से भाग देने से अहर्गण होता है ॥ सिद्धान्तशेखर में “चक्रार्क्षभाग कलिका विकलादिशेष” इत्यादि संस्कृतोपपत्ति में लिखित श्लोक से, श्रीपति ने आचार्योंक्त प्रकार के सदृश ही कहा है इति ॥ ६ ॥

इदानीं विशेषमाह ।

दिनजभगणादि शेषं येन गुणं मण्डलादिशेषकयोः ।

सदृशच्छेदोद्धृतयोस्तद्घातमहर्गणाद्यमतः ॥८॥

सु. भा.—उद्दिष्टं मण्डलादिभगणादिशेषं यदि येन केनापीष्टेन गुणं भवेत् तदा द्वे शेषे सदृशच्छेदे च कृत्वा ततस्तयोः शेषकयोः सदृशच्छेदोद्धृतयोश्च कृत्वा ‘भगणादिशेषमग्नं छेदहृत’ मित्यादिविधिना तद्घातसम्बन्ध्यग्नं साध्यं तदा तदग्नं तज्जातीयं कल्पगतं भवेदतोऽहर्गणाद्यं भवति । यथा कस्मिन् घटिकात्मके कल्पगते चन्द्रस्य भगणशेषं ४१०५ भवेत् । यदि १३७ दिनैश्चन्द्रभगणाः पञ्च ५ भवन्ति । अत्र यदि दिनानि १३७ षष्टिगुणानि कृत्वा १३७—६०=८२२० अयं हरः कल्प्यते तदा सच्छेदमुद्दिष्टभगणशेषम् = $\frac{४१०५}{८२२०}$ । दिनजभगणशेषं पूर्ववत् ५ । ततः ‘खं

एवं भवितुमर्हति ।

वि. भा.—यो राशिः केनचिदुद्दिष्टेन गुणकेन गुणितः, एकहीनः, उद्दिष्ट-

हरेण भक्तः शुध्यति स राशिः कः । प्रथमं गुणहरयोर्महत्तमापवर्त्तनमानीयते । परस्परं भक्तयोर्गुणहरयोरन्ते यच्छेषं तेन भक्तौ तौ (गुणहरौ भवतः) दृढौ गुण-हरौ भवतः । ततो दृढयोर्गुणहरयोः परस्परं भक्तयोर्लब्धान्यधोऽधः स्थाप्यानि, पूर्वप्रदर्शितकुट्टकनियमेन । इदं कर्म तावत्पर्यन्तं कर्त्तव्यं यावदन्ते रूपं शेषं तिष्ठेत् । तच्छेषं तथा केनापि गुणकेन गुणितं रूपेण हीनं तच्छेषसम्बन्धिहरेण भक्तं शुध्यति । सत्येवं गुणकः पूर्वाधोऽधः स्थापितकलानामधः स्थाप्यः, तदन्तात्फलं स्थाप्यम् । एवं जातायां वल्यां उपान्तिमेन स्वाध्वो गुणितोऽन्त्येन युत इति कुट्टक-विधिना शेषान्तं यावत्कर्म कर्त्तव्यम् । तत् दृढभागहारेण (दृढहरेण) भक्तं शेषमेव स्थिरकुट्टको भवतीति ॥

अत्रोपपत्तिः ।

अथ महत्तमापवर्त्तनार्थं कल्प्यते । भाज्यः=य । भाजकः=क, भाजकेन भक्ते भाज्ये लब्धं=न शेषम्=प । पुनः प अनेन स्वहारे क भक्ते लब्धं=ल, शेषम्=ह, पुनरनेन शेषेण स्वहारे प भक्ते लब्धं=र, शेषम्=० तदाऽवश्यमेव य, क माने ह अनेन निः शेषौ भवेताम् । हरलब्ध्योर्धातः शेषयुतो भाज्यसमो भवतीति तेन. य=क. न+प । क=प. ल+ह । प=ह. र एतत् समीकरणत्रयाव लोकनेन स्फुटमवसीयते यत् प अयं ह अनेन निः शेषः स्यात् । ततः क अयमपि तेनैव निः शेषो भवेत् । एवं क, प अनयोर्निःशेषत्वात् य अयमपि ह अनेन निः-शेषो भवेदेवेति । एतावता 'हृतयोः परस्परं यच्छेषं गुणकार भागहारकयो' रित्याचार्योक्तमुपपन्नम् । सिद्धान्तशेखरे "परस्परं भाजितयोस्तु शेषकं तयोर्द्वयोरप्यप-वर्त्तनं भवेत् । तदुद्धृतच्छेदविभाजकौ क्रमादभीष्टनिघ्नौ तु गुणाप्तयोः क्षिपेत्" श्रीपत्युक्तमिदमाचार्याक्तानुरूपमेवास्ति, तथा लीलावत्यां "परस्परं भाजितयोर्य-योर्यः शेषस्तयोः स्यादपवर्त्तनं सः तेनापवर्त्तनं विभाजितौ यौ तौ भाज्यहारौ दृढसंज्ञकौ स्तः ॥" इति भास्करोक्तमपि-आचार्योक्तानुरूपमेवास्ति । आचार्येणान्न रूपशुद्धौ गुणक एव साधितोऽतोऽन्नाधरराशिरेवाग्रान्तो दृढभागहारेण भक्त इति ॥९-११॥

कोलब्रूकानुवादानुसारेण प्रश्नरूपार्यायास्त्रुटिरस्ति सा च 'भगणादिशेष-तोऽर्कस्यान्येषां वा दिवा गणार्थं त्वम् । स्थिरकुट्टकं प्रचक्ष्व कुट्टार्णवपारगोऽसि यदि' ॥१४॥ एवं भवितुमर्हति ।

अथ स्थिर कुट्टक को कहते हैं ।

हि. मा.—जिस राशि को किसी उद्दिष्ट गुणक से गुणाकर एक घटा कर उद्दिष्ट हर से भाग देने से शुद्ध होता है वृह राशि क्या है । पहले गुणक और हर का महत्तमाप-वर्त्तन लाते हैं । परस्पर गुणक और हर को भाग देने से अन्त में जो शेष रहता है उससे

गुणक और हर को भाग देने से दृढ़ संज्ञक गुणक और हर होता है तब दृढ़ गुणक और हर को परस्पर भाग देने से जो लब्धियाँ हो उन्हें अधोऽधः स्थापन करना चाहिये । पूर्व प्रदर्शित कुट्टक नियम से इस कर्म को तब तक करना चाहिये जब तक अन्त में रूप शेष रह जाय । उस को किसी गुणक से गुणाकर रूप को घटा कर उस शेष सम्बन्धी हर से भाग देने से शुद्ध हो जाय । इस तरह पूर्वाधोऽधः स्थापित फलों के नीचे गुणक को स्थापन करना चाहिये । अन्त में फल स्थापन करना चाहिये । इस तरह वल्ली सम्पन्न होने पर उपान्त्य से ऊर्वाङ्क को गुणाकर अन्त्य को जोड़ना । इस कुट्टक विधि से अग्रान्तपर्यन्त कर्म करना चाहिये । उसको दृढ़ भाग हार से भाग देने से शेष ही स्थिर कुट्टक होता है ॥

उपपत्ति ।

महत्तमापवर्तन के लिये कल्पना करते हैं भाज्य=य । भाजक=क, भाज्य में भाजक से भाग देने से लब्ध=न, शेष=प । पुनः प इससे अपने हर क को भाग देने से लब्ध=ल, शेष=ह । पुनः इस शेष से अपने हर प में भाग देने से लब्ध=र, शेष=० तब अवश्य ही य, क, का मान ह इससे निः शेष होगा, हर और लब्ध के बात में शेष को जोड़ देने से भाज्य के के बराबर होता है इसलिये य=क. न + प । क=प. ल + ह । प=ह. र इन तीनों समीकरणों को देखने से स्फुट समझ में आता है कि प यह ह इससे निः शेष होगा, तब क यह भी उसी से निः शेष होगा इस तरह क, और प के निःशेषत्व से य यह भी ह इससे निः शेष होगा ही । इससे 'द्वतयोः परस्परं यच्छेषं भाग-भागहारकयोः' इत्यादि आचार्योक्त उपपन्न हुआ । आचार्य ने रूप शुद्धि में गुणक ही साधन किया है इसलिये यहां अवर राशि ही को दृढ़ भाग हार से भाग दिया गया है । सिद्धान्तशेखर में 'परस्परं भाजितयोस्तु शेषकं तयोर्द्वयोरप्यपवर्तनं भवेत्' इत्यादि संस्कृतोपपत्ति में लिखित श्लोक से श्रीपति ने आचार्योक्त के अनुरूप ही कहा है । तथा लीलावती में 'परस्परं भाजितयोर्योयः शेषः' इत्यादि संस्कृतोपपत्ति में लिखित पद्य से भास्कराचार्य ने भी आचार्योक्त के अनुरूप ही कहा है ॥१६-११॥ कोलब्रूक साहिब के अनुवाद के अनुसार प्रश्नरूप आर्या की त्रुटि है वह संस्कृतोपपत्ति में लिखित पद्य के अनुसार होना चाहिये ॥१४॥

इदानीं स्थिरकुट्टकादहर्गणमाह ।

स्थिर कुहक से ग्रहानयन और विकलादिशेष से अहर्गणानयन ब्रह्मगुप्त और भास्कराचार्यने किया है । विकलादिशेष से अहर्गणानयन को ही प्राचीनाचार्य प्रधानरूप से कुहक विधि कहते हैं । भास्कराचार्य ने लीलावती में ‘अस्य गणितस्य ग्रहगणिते महानुपयोग-स्तदर्थं किञ्चिदुच्यते’ यह कहकर उसकी विधि “कल्पयाथ शुद्धिविकलावशेषं षष्टिञ्च भाज्यः कुदिनानि हारः” तज्जं फलं स्युर्विकला गुणारतु लिप्ताग्रमस्माच्च कलालवाग्रम् । एवं तदूर्ध्वं च तथा इत्यादि से भास्कराचार्य ने विधि कही है । ग्रह के विकलाशेष से ग्रहानयन अहर्गणानयन करते हैं । जैसे—साठ भाज्य । कुदिन हर, विकलावशेष शुद्धि ये कल्पना कर गुणक और लब्धि साधन करना चाहिये, यहाँ लब्धि विकला होती है । और गुणक कलाशेष । एवं कलाशेष शुद्धि । साठ भाज्य । कुदिन हर इससे लब्धि कला होती है और गुणक भाग (अंश) शेष होता है । भागशेष शुद्धि, तीस भाज्य, कुदिनहर इससे लब्धि गतराशि प्रमाण होता है । गुणक भगणशेष होता है । कल्पभगण भाज्य । कुदिन हर, भगणशेष शुद्धि इससे लब्धि गतभगण होता है । गुणक अहर्गण होता है । अहर्गण ज्ञान से ग्रहानयन सुगम ही है । यद्यपि श्रीपति ने कुहकाध्याय में इस विषय को (विकलादिशेष से ग्रहानयन और अहर्गणानयन) नहीं कहा है । तथापि प्रश्नाध्याय में एतद्विषयक प्रश्न लिखे हैं जैसे—

‘यो राशिशेषादथ भागशेषा’दित्यादि संस्कृतोपपत्ति में लिखित श्लोक से स्पष्ट किया है । अर्थात् भगणादि ग्रहानयन में जो राशि शेष है उससे, भगणादिग्रहानयन में ही जो अंश शेष है उससे भगणादि ग्रहानयन में कलाशेष से या विकलाशेष से ग्रह को और अहर्गण को जो गुणक जानते हैं वे कुहकज्ञ हैं ।

(१) यंखा = १२ । गना = ३० । तना = ६० । तेना = ६० द्वितीयार्यभट्टकृते महा-सिद्धान्ते एवमेव केरलमतानुसारी सप्तत्रय संख्यापाठोऽस्तीति ।

इसकी उपपत्ति ।

यदि कल्प कुदिन में कल्पभगण पाते हैं तो अहर्गण में क्या इस त्रैराशिक से अभीष्ट दिन में भगणादि ग्रहानयन करते हैं । उपर्युक्तानुपात से लब्ध भगण होता है और शेष भगण शेष है । इस भगण शेष को बारह से गुणा कर कल्प कुदिन से भाग देने से लब्ध राशिप्रमाण होता है । शेष राशि शेष है । राशि शेष को तीस से गुणाकर कल्प कुदिन से भाग देने से लब्ध अंश होता है । शेष अंश शेष होता है । इस अंश शेष को साठ से गुणा कर कल्पकुदिन से भाग देने से लब्ध कला होती है । और शेष कला शेष होता है । कला-शेष को साठ से गुणाकर कल्पकुदिन से भाग देने से लब्ध विकला होती है । शेष विकला शेष होता है । यही भगणादिशेषों की परिभाषा है । अतः यहां राश्यादि शेष से ग्रहानयन में कुट्टक गणितानुसार सम्भव रहने पर किसी अङ्क से भाज्य हार-क्षेपों को अपवर्तन देना चाहिये । तब पूर्वकथित रीति से कलाशेष के गुणक साठ, हार दृक्कुदिन, जिस गुणक से गुणित छेद में विकलाशेष जोड़कर अपने गुणक साठ से भाग देने से निःशेष हो वह गुणक ग्रहविकला होती है । लब्धिकला शेष होता है । कलाशेष से कला अंश शेष होता है । इस तरह अन्त में भगणशेष ज्ञान होता है । उससे अहर्गणानयन भी होता है । जैसे कलाशेष को साठ से गुणाकर दृक् कुदिन से भाग देने से लब्ध ग्रहविकला होती है और शेष विकला शेष होता है । हर और लब्ध के घात में क्षेप को जोड़ने से भाज्य के बराबर होता है

$$\therefore ६० \times \text{कशे} = \text{ग्रवि. दृक्} + \text{विशे} \therefore \frac{\text{ग्रवि. दृक्} + \text{विशे}}{६०} = \text{कशे अतः दृक्कुदिन मानं}$$

जिस गुणक से गुणाकर विकला शेष को जोड़कर साठ से भाग देने से निरग्र (निःशेष) हो वह गुणक ग्रहविकला होती है । और लब्धिकलाशेष होता है । भगणादि शेष से अहर्गणा-नयन की विधि आर्यभटीय महासिद्धान्त में है जैसे—

‘भगणाद्यग्राणि स्युः क्षेपा ऋण संज्ञकाः कुट्टाश्छेदः ।

भगणादीनां भाज्या भगणा यंखा' गना तना तेना ॥’

इत्यादि संस्कृतोपपत्ति में लिखित श्लोकों से स्पष्ट है इति ॥

भास्कराचार्येण ‘कल्याथ शुद्धिविकलावशेषमित्यादौ’ कथ्यते यदस्य ग-
 णितस्य ग्रहगणिते महानुपयोगस्तदुपयोगित्वसम्बन्धे विचार्यते । यथा भगणा-
 दिशेषतो ऽहर्गणानयनार्थं दृक्भगणशेषं चक्रविकलाभिर्गुणितं दृक्कुदिनैर्भक्तं
 लब्धं विकलात्मकग्रहः शेषं विकलाशेषं तत्स्वरूपम् = $\frac{\text{दृक्भशे} \times \text{चवि}}{\text{दृक्कुदि}} = \text{विग्र} +$
 $\frac{\text{विशे}}{\text{दृक्कुदि}}$ छेदगमेन दृक्भशे \times चवि = दृक्कुदि. विग्र + विशे अतः दृक्भशे

१. यंखा = १२ । गना = ३० । तना = ६० । तेना = ६० द्वितीयार्यभट्टकृत महा-
 सिद्धान्त में इसी तरह केरलमतानुसारी सब जगह संख्याओं के पाठ हैं ।

= $\frac{\text{हकुदि. विग्र} + \text{विशे}}{\text{चवि}}$, विग्र = विकलात्मकगृह । विशे = विकलाशेष । चवि

= चक्रविकला । अत्र यदि चक्रविकलातो विकलाशेषमल्पं तदा अस्मिन् $\frac{\text{हकुदि. विग्र}}{\text{चवि}}$

स्वरूपेऽपि शेषेणावश्यं भवितव्यम् यतो दृढभगणस्वरूपे दृढकुट्टकावसरः । कुट्टकस्य सार्वदिक दृढत्वमस्त्येवातो विकलाशेषस्य शेषस्य च योगश्चक्रविकलासमः । अन्यथा दृढत्वाभावापत्तिः । अथ यदि लब्धः = ल तदा भशे = $\frac{\text{ल. चवि} + \text{शे} + \text{विशे}}{\text{चवि}}$

अर्थात् ल + $\frac{\text{विशे} + \text{शे}}{\text{चवि}}$ परन्त्वत्र शे < चवि, विशे < चवि परञ्च दृढभगणशेषं

निरवयवमतः शे + विशे = चवि अतः $\frac{\text{शे} + \text{विशे}}{\text{चवि}} = १$ । तेन ल + १ = दृभशे

अन्यथा दृढत्वाभावात्कुट्टकस्याव्याप्तिः । अतः चवि—शे = विशे, यदि शे = ० तदा विशे = चवि । यदि चवि-शे > हकु स्यात्तदा 'येनच्छिन्नौ भाज्यहारावित्यादि' युक्त्या खिलोद्दिष्टत्वात् दृढभगणशेषमपि खिलम् । अखिलोदाहरणसत्त्वे 'कल्प्याथ शुद्धिविकलावशेष' मित्यादिना ऽहर्गणः साध्यः । अथ पूर्वानीतभगणशेषस्वरूपे छेदगमादिना $\frac{\text{दृभशे. चवि-विशे}}{\text{हकु}} = \text{विग्र}$ अत्र कुट्टकयुक्त्या ऽहर्गणज्ञानं सुलभम् ।

परञ्चोक्तस्वरूप एव भशे. चवि-विग्र. हकु = विशे., अस्मिन् इ. चवि योजनेन तुल्य-गुणक पृथक् करणेन च (दृभशे. इ) चवि-विग्र = विशे + इ. चवि अत्र यदि विशे + इ. चवि-हकु तदा दृभगशे. + इ. = भगशे-विशे + इ. चवि = विशे अस्मादपि कल्प्याथ शुद्धिविकलावशेषमित्यादिना ऽहर्गणः साध्य इति ॥

भास्कराचार्य लीलावती में 'कल्प्याथ शुद्धि विकलावशेष' इत्यादि कहते हैं कि 'अस्य गणितस्य ग्रहगणिते महानुपयोगः' अर्थात् इस गणित के ग्रहगणित में बहुत उपयोगिता है । उसकी उपयोगिता के सम्बन्ध में विचार करते हैं । यथा भगणादिशेष से अहर्गणानयन के लिये दृढभगणशेष को चक्र विकला से गुणाकर दृढकुदिन से भाग देने से लब्ध विकलात्मक ग्रह होता है शेषविकला शेष रहता है उसका स्वरूप = $\frac{\text{दृभशे. चवि}}{\text{हकुदि}} = \text{विग्र} + \frac{\text{विशे}}{\text{हकुदि}}$

छेदगम से दृभशे. चवि = हकुदि. विग्र + विशे । अतः $\frac{\text{हकुदि. विग्र} + \text{विशे}}{\text{चवि}} = \text{दृभशे.}$ विग्र

= विकलात्मकग्र, विशे = विकलाशेष, चवि = चक्रविकला, यहाँ यदि चक्रविकला से विकला-शेष अल्प है तब $\frac{\text{हकुदि. विग्र}}{\text{चवि}}$ इस स्वरूप में भी शेष अवश्य होना चाहिये, क्योंकि दृढभग-

णस्वरूप में दृढ कुट्टक का अवसर है, कुट्टक का सार्वदिक दृढत्व है ही इसलिये विकलाशेष

और शेष का योग चक्र विकला के समान है। अन्यथा दृढ़त्वाभाव रूप आपत्ति होगी। यदि लब्धि = ल तब भशे = $\frac{\text{ल. चवि} + \text{शे} + \text{विशे}}{\text{चवि}}$ अर्थात् ल + $\frac{\text{शे} + \text{विशे}}{\text{चवि}}$ परन्तु यहां शे

< चवि, विशे < चवि लेकिन दृढ़ भगण शेष निरवयव है इसलिये शे + विशे = चवि
 $\therefore \frac{\text{शे} + \text{विशे}}{\text{चवि}} = १$, इसलिये ल + १ = दृभशे अन्यथा दृढ़त्व के अभाव से कुट्टक

की अव्याप्ति होगी, अतः चवि-शे = विशे, यदि शे = ० तब विशे = चवि, यदि चवि-शे > दृकुदि तब 'येनच्छिन्नौ भाज्यहारौ' इत्यादि युक्ति से उदाहरण के खिलत्व से दृढ़भग-
 णशेष भी खिल होगा। अखिल उदाहरण के रहने से 'कल्प्याथशुद्धिविकलावशेष' इत्यादि
 भास्करोक्त से अहर्गण साधन करना, पूर्वानीत भगणशेषस्वरूप में छेदगमादि से
 दृभशे. चवि-विशे = विप्र। यहां कुट्टक की युक्ति से अहर्गणज्ञान सुलभ है। परञ्च उक्त
 दृकु

स्वरूप ही में भशे. चवि-विप्र. दृकु = विशे इसमें इ. चवि जोड़ने से और तुल्य गुणक पृथक्
 करने से (दृभशे.इ) चवि-विप्र = विशे + इ. चवि। यहां यदि विशे + इ. चवि-दृकुदि
 तब दृभशे + इ = भगशे × विशे + इ. चवि = विशे, इससे भी 'कल्प्याथ शुद्धि
 विकलावशेष' इत्यादि से अहर्गण साधन करना चाहिए इति ॥ १२ ॥

इदानीं स्थिरकुट्टके विशेषमाह।

अब प्रश्न को कहते हैं ।

हि. भा—दो तीन आदि ग्रहों के अलग-अलग कथित ग्रह गतयुग से जो युगादि को
जानते हैं वे कुट्टक को जानते हैं ॥ इसके उत्तर के लिये—

उपपत्ति ।

पूर्वोक्त 'अधिकाग्रभागहारादूनाग्रच्छेद भाजिताच्छेषम्' इत्यादि श्लोकों में म. म.
श्रीमान् सुधाकर द्विवेदी जी के उदाहरण हैं, जैसे किसी राशि को चौतीस से भाग देने से दो
शेष रहता है, तथा तेरह से भाग देने से दस शेष रहता है उस राशि को कहो । इसके
अनुसार यदि एक ग्रह चौतीस दिनों में और अन्य ग्रह तेरह दिनों में एक भगण को भोग

करते हैं दोनों की अन्तिम युति (योग) से दश दिन व्यतीत हुए तब कल्प से कितने दिन व्यतीत हुए ? इस प्रश्न में 'कौन राशि है जिसको चौतीस से भाग देने से दस शेष रहता है, तथा उसी राशि को तेरह से भाग देने से भी दस शेष रहता है इस प्रश्न के उत्तर ही से उत्तर सिद्ध होती है। इस तरह तीन आदि ग्रहों का भी युगगतानयन होता है। यहां उदाहरण के लिये चतुर्वेदाचार्य ने, कल्प में रवि भगण = ३०, चन्द्रभगण = ४००, कुजभगण = १६, बुधभगण = १३०, गुरुभगण = ३, शुक्रभगण = ५०, शनिभगण = १, चन्द्रोच्चभगण = ४, चन्द्रपातभगण = २, भदिन = १०६६०, सौरमास = ३६०, चान्द्रमास = ३७०, अधिमास = १०, सौरदिन = १०८००, चान्द्रदिन = १११००, क्षयाह = १४०, सावनदिन = १०६६०, तथा एक दिन में भगणात्मक गति की संस्कृतोपपत्ति में लिखित (क) के अनुसार कल्पना की। यह सब कोलब्रूक साहेब के अनुवाद से विदित होता है इति ॥१५॥

इदानीमन्यं प्रश्नमाह ।

भगणाद्यमिष्टशेषं कदेन्दुदिवसे रवेर्गुरुदिने वा ।

ज्ञदिने राशीन् कथयति कुट्टाकारं स जानाति ॥१६॥

सु. भा.—रवेर्भगणाद्यमिष्टशेषं भगणादिशेषमिष्टं कदा चन्द्रदिने वा गुरुदिने ज्ञदिने भवतीति विज्ञाय यश्च रवे राशीन् राश्यादिरविं कथयति स कुट्टाकारं जानातीत्यहं मन्ये । अर्थाद्भगणशेषादहर्गणमानयेति प्रश्नः ।

अस्योत्तरं १२ सूत्रेण स्फुटम् । अत्रकुट्टके तावद्धरणैकादिगुणः क्षेप्यो यावद-भीष्टो वारो भवेदिति ॥ १६ ॥

वि. भा.—रवेरिष्टं भगणादिशेषं कदा चन्द्रदिने वा गुरुदिने वा बुधदिने भवतीति ज्ञात्वा राश्यादिरविं यः कथयति स कुट्टाकारं जानातीति, अर्थाद् भगण शेषादहर्गणमानयेति प्रश्नः ।

अत्रोपपत्तिः ।

उपपत्तिः पूर्वं प्रदर्शिताऽपि सौकर्यार्थं विलिख्यते । कल्प्यतेऽहर्गणमानम् = य, तदा कल्पकुदिनैः कल्पभगणा लभ्यन्ते तदा ऽहर्गणेन किं लब्धं गतभगणाः शेषं कल्प्यते भगणशेषम् तदा तत्स्वरूपम् = $\frac{\text{कल्पभ. य}}{\text{ककु}} = \text{गभ} + \frac{\text{भशे}}{\text{ककु}}$ छेदगमेन कल्पभ. य =

ककु. गभ + भशे । ततः $\frac{\text{ककु. गभ} + \text{भशे}}{\text{कल्पभ}} = \text{य}$ । अत्र ककु, कल्पभ भाज्यहाराभ्यां यौ राशी तत्राधरः कभ भक्तः शेषं गभमानम् । परन्तु यद्यधिकाग्रम् = भशे । तच्छेदः ककु । अनाग्रम् = ०, तच्छेदः = कभ तदाऽऽचार्योक्तकुट्टकप्रकारेण छेदवधच्छेदेऽ-

(१) अधिकाग्रभागहाराद्वानाग्रच्छेदभाजिताच्छेषमित्यादिना.

ग्रमानम् = गभ. ककु + भशे, अत इदमग्रं कल्पभगणभक्तं लब्धं य मानं स्यादथादि-
हर्गणो भवेत् । ततो रविज्ञानं सुगममेव ॥ १६ ॥

अब अन्य प्रश्न को कहते हैं ।

हि. भा.—रवि के इष्ट भगणादिशेष कब चन्द्रदिन में वा गुरुदिन में वा बुधदिन में होता है इसको जानकर जो राश्यादिरवि को कहते हैं वे कुट्टक को जानते हैं । अर्थात् भगणशेष से अहर्गणानयन के लिये प्रश्न है ।

उपपत्ति ।

कल्पना करते हैं अहर्गणमान = य । तब अनुपात करते हैं कल्पकुदिन में कल्पभगण पाते हैं तो अहर्गण में क्या इससे लब्ध गतभगण, शेष भगणशेष होता है इसका स्वरूप = $\frac{\text{कभ.य}}{\text{ककु}}$
= गभ + $\frac{\text{भशे}}{\text{ककु}}$ छेदगम से कभ . य = ककु . गभ + भशे $\therefore \frac{\text{ककु. गभ + भशे}}{\text{कभ}}$
= य । यहां ककु, कभ भाज्य, हारों से जो राशिद्वय होता है उसमें अधरराशि को कल्प-
भगण से भाग देने से शेष गत भगणमान होता है । लेकिन यदि अधिकाग्र = भशे उसका
छेद = ककु । ऊनाग्र = ० । उसका छेद = कभ तब आचार्योक्त कुट्टक प्रकार से छेद-
घात तुल्य छेद में अग्र (शेष) मान = ककु . गभ + भशे । इस अग्र को कल्पभगण
से भाग देने से लब्ध य मान होता है वही अहर्गण है । अहर्गण ज्ञान से रवि का ज्ञान सुलभ
ही है इति ॥ १६ ॥

इदानीमन्यं प्रश्नमाह ।

जदिने यदंशशेषं विकलाशेषं कदा तदिन्दुदिने ।

भानोरथवा शशिनो यः कथयति कुट्टकज्ञः सः ॥ १७ ॥

सु. भा.—भानोरथवा शशिनश्चन्द्रस्य यदंशशेषं वा विकलाशेषं बुधदिने
दृष्टं तदेव कदा चन्द्रदिने भवतीत्यस्योत्तरं यः कथयति स एव कुट्टकज्ञ इत्यहं
मन्ये ।

अस्योत्तरं १२ सूत्रेण स्फुटम् ॥ १७ ॥

वि. भा.—भानोः (सूर्यस्य) शशिनः (चन्द्रस्य) यदंशशेषं विकलाशेषं वा
बुधदिने दृष्टं तच्चन्द्र दिने कदा भवतीत्यस्योत्तरं यः कथयति सः कुट्टक पण्डित
इति ॥

अत्रोपपत्तिः ।

इष्टभगणादिशेषात् स्वकुट्टकगुणात् स्वभागहारहृतादित्यादिना स्फुटै-
वास्तीति ॥ १७ ॥

अब अन्य प्रश्न को कहते हैं ।

हि. भा.—सूर्य और चन्द्र का जो अंशशेष वा विकलाशेष बुधदिन में देखा गया वही चन्द्रदिन में कब होता है इसका उत्तर जो जानते हैं वे कुट्टक के पण्डित हैं । इति ॥

उपपत्ति ।

‘इष्ट भगणादिशेषात् स्वकुट्टकगुणात्’ इत्यादि १२ सूत्र से स्फुट है इति ॥१७॥

इदानीमन्यं प्रश्नमाह ।

तिथिमान दिनेष्विष्टा ये ऽर्काद्यास्ते पुनः कदा तेषु ।

इष्टग्रहवारेषु यः कथयति कुट्टकज्ञः सः ॥ १८ ॥

सु. भा.—तिथिमानदिनेषु चान्द्रसौरसावनदिनेष्वर्थाद्विष्टाहर्गणो येऽभीष्टा अर्काद्यास्त एव पुनः कदेष्टग्रहवारेषु तेषु चान्द्रसौरसावनदिनेषु भवन्ति । इति यः कथयति स एव कुट्टकज्ञ इत्यहं मन्ये । यस्मिन्नहर्गणो येऽभीष्टा गृहा आगतास्तत्समा एव कदेष्टवारेऽन्यस्मिन्नहर्गणो ते भवन्तीति प्रश्नः ।

अस्योत्तरं च १२ सूत्रेण स्फुटम् ॥ १८ ॥

वि. भा.—तिथिमानदिनेषु (चान्द्रसौरसावनदिनेष्वर्थाद्विष्टाहर्गणो) ये इष्टा रव्यादयस्त एव पुनः कदेष्टग्रहवारेषु चान्द्रसौरसावनदिनेषु भवन्तीत्यर्थाद्यस्मिन्नहर्गणो ये ऽभीष्टा गृहा समागतास्तत्तुल्या एव कदेष्टवारेऽन्यस्मिन्नहर्गणो ते भवन्तीति यः कथयति सः कुट्टकपण्डितोऽस्तीति । ‘इष्टभगणादिशेषादि’-इत्यादि १२ सूत्रेणाऽस्योपपत्तिः स्फुटैवास्तीति ॥ १८ ॥

अब अन्य प्रश्नों को कहते हैं ।

हि. भा.—चान्द्र सौर सावन दिनों में अर्थात् उद्दिष्टाहर्गण में जो इष्ट रवि आदि ग्रह हैं वही पुनः कब इष्टग्रह वारों में उन चान्द्र सौर सावन दिनों में होते हैं अर्थात् जिस अहर्गण में जो अभीष्टग्रह आये हैं उनके बराबर ही कब इष्टवार में अन्य अहर्गण में वे होते हैं यह प्रश्न है इसको जो कहते हैं वे कुट्टक के पण्डित हैं ॥ इसकी उपपत्ति ‘इष्ट भगणादिशेषात्’ इत्यादि १२ सूत्र से स्पष्ट ही है इति ॥ १८ ॥

इदानीं बालावबोधार्थं पूर्वप्रश्नोत्तरं कथयति ।

इष्टभगणादिशेषाद् द्युगणस्तत् कुट्टकेन संयुक्तः ।

तच्छेददिनस्तावद्दिनवारो यावद्विष्टः स्यात् ॥ १९ ॥

सु. भा.—इष्टभगणादिशेषात् तत्कुट्टकेन १२ सूत्रविधिना प्रथमं द्युगणोऽहर्गणः साध्यः स तावत् तच्छेददिनैः संयुक्तो यावदिष्टो वारः स्यादिति स्पष्टम् ॥ १९ ॥

वि. भा.—इष्टभगणादिशेषात् पूर्ववत् (इष्टभगणादिशेषादित्यादि १२ सूत्रानुसारेण) अहर्गणः साध्यः स तावत्तच्छेददिनैः संयुक्तः कार्यो यावदिष्टो दिनवारः स्यादिति ॥ १९ ॥

अब बालकों के बोध के लिये पूर्व प्रश्न के उत्तर को कहते हैं ।

हि. भा.—इष्टभगणादिशेष से पूर्ववत् ('इष्टभगणादि शेषात्' इत्यादि १२ सूत्र के अनुसार) अहर्गण साधन करना चाहिये उसमें तब तक उन छेददिनों को जोड़ना चाहिये जब तक इष्ट दिनवार हो इति ॥ १९ ॥

इदानीमन्यान् प्रश्नानाह ।

यो राश्यादीन् दृष्ट्वा मध्यस्येष्टस्य कथयति द्युगणम् ।

द्व्यादिग्रहसंयोगात् ग्रहान्तराद्वा स कुट्टनः ॥ २० ॥

सु. भा.—य इष्टग्रहस्य मध्यस्य राश्यादीन् दृष्ट्वा द्युगणं कथयति । वा द्व्यादिग्रहसंयोगाद् द्युगणं कथयति वा द्वयोर्ग्रहयोरन्तराद्द्युगणं कथयति स कुट्टनः कुट्टकज्ञ इत्यहं मन्ये ॥ २० ॥

वि. भा.—इष्टग्रहस्य मध्यस्य राश्यादीन् दृष्ट्वा योऽहर्गणं कथयति । वा द्व्यादिग्रहसंयोगादहर्गणं कथयति । वा ग्रहान्तरात् (द्वयोर्ग्रहयोरन्तरात्) अहर्गणं कथयति स कुट्टकपण्डितो ऽस्तीति ॥ २० ॥

अब अन्य प्रश्नों को कहते हैं ।

हि. भा.—मध्यम इष्ट ग्रह के राश्यादि को देखकर जो अहर्गण को कहते हैं । वा दो आदि ग्रहों के संयोग से अहर्गण को कहते हैं । वा दो ग्रहों के अन्तर से अहर्गण को कहते हैं वे कुट्टक के पण्डित हैं इति ॥ २० ॥

इदानीं पूर्वप्रश्नस्योत्तरमाह ।

निश्छेदभागहाराद्वाश्यादिकलादिना हताद् भक्तात् ।

भमणकलाभिर्लब्धं मण्डलशेषं दिनगणोऽस्मात् ॥ २१ ॥

सु. भा.—निश्छेदभागहाराद् दृढकुदिनमानात् किं विशिष्टाद् राश्यादिकलादिना ग्रहकलात्मकप्रमाणेन हताङ्गकलाभिर्भक्ताद्यल्लब्धं तद्भगणशेषं स्यादस्मात् पूर्वोक्तविधिना दिनगणो भवतीति ।

अत्रोपपत्तिः । दृढभगणशेषं चक्रकलागुणं दृढकुदिनभक्तं कलात्मकगृहो भवत्यतस्तद्विपरीतेन कलात्मकग्रहो दृढकुदिनगुणश्चक्रकलाभक्तो दृढभगणशेषं स्यात् । ततो दृढभगणा भाज्यं दृढभगणशेषं ऋणक्षेपं दृढकुदिनमानं हारं च प्रकल्प्य कुट्टाकारेण गुणमानमहर्गणः स्यात् । गृहयोगकलातो वाऽन्तरकलातो यद्दृढभगणशेषं स्यात् तत्र दृढभगणयोगं वा दृढभगणान्तरं भाज्यं प्रकल्प्य पूर्ववत् कुट्टकेनाहर्गणः साध्यः ॥

वि. भा.—निश्छेदभागहारात् (दृढकुदिनात्) राश्यादिकलादिना (गृहकलात्मकमानेन) गुणितात्, भगणकला (चक्रकला) भिर्भक्तात् लब्धं मण्डलशेषं (भगणशेषं) भवति, अस्मात्पूर्ववदहर्गणो भवतीति ॥

अत्रोपपत्तिः :

$$\frac{\text{दृढभगणशेष} \times \text{चक्रकला}}{\text{दृढकुदिन}} = \text{कलात्मकगृह छेदगमेन दृढभगणशेष} \times \text{चक्रकला}$$

$$= \text{दृढकुदिन} \times \text{कलात्मकग्रह, अतः } \frac{\text{दृढकुदिन} \times \text{कलात्मकगृह}}{\text{चक्रकला}} = \text{दृढभगणशेष}$$

 ततः भाज्यं
$$= \frac{\text{दृढभगण} - \text{दृढभगणशेष}}{\text{दृढकुदिन}} = \text{क्षेप}$$
 अत्र कुट्टकेन यो गुणः स एवाहर्गणो भवति । गृहयोगकलातोऽन्तरकलातो वा यद् दृढभगणशेषं भवेत्तत्र दृढभगणयोगं दृढभगणान्तरं वा भाज्यं प्रकल्प्य पूर्ववत् कुट्टकेनाहर्गणः साध्य इति ॥२१॥

अब पूर्वप्रश्न के उत्तर को कहते हैं ।

हि. भा.—निश्छेदभागहार (दृढकुदिन) को ग्रहकलात्मक मान से गुणाकर भगणकला (चक्रकला) से भाग देने से लब्ध मण्डल (भगण) शेष होता है इससे पूर्ववत् अहर्गण होता है इति ।

उपपत्ति ।

$$\frac{\text{दृढभगणशेष} \times \text{चक्रकला}}{\text{दृढकुदिन}} = \text{कलात्मकग्रह} \times \text{छेदगम से दृढभगणशेष} \times \text{चक्रकला} =$$

$$\text{कलात्मकग्रह} \times \text{दृढकुदिन, अतः } \frac{\text{कलात्मकग्रह} \times \text{दृढकुदिन}}{\text{चक्रकला}} = \text{दृढभगणशेष} \text{ । ततः}$$

 भाज्यं
$$= \frac{\text{दृढभगण} - \text{दृढभगणशेष}}{\text{दृढकुदिन}} = \text{क्षेप}$$
 यहाँ कुट्टक से जो गुणक होता है वही अहर्गण होता है । ग्रह योगकला से वा अन्तर कला से जो दृढभगण शेष होता है वहाँ दृढ-

भगणा योग को वा दृढभगणान्तर को भाज्य कल्पनाकर पूर्ववत् कुट्टक से अहर्गण साधन करना चाहिये इति ॥ २१ ॥

इदानीं विशेषमाह ।

एवं राश्यंकला विकला शेषादहर्गणः प्राग्वत् ।

नष्टस्थेष्विष्टान् तान् कृत्वा भक्तवोक्तवच्छेषम् ॥ २२ ॥

सु. भा.—एवं राशिशेषात् अंशशेषात् कलाशेषात् विकलाशेषाच्च प्राग्वदहर्गणः स्यात् । किं कृत्वा नष्टस्थेषु विकलाकलादिमानेषु भक्त्या विभज्येष्टान् तान् विकलादीन् कृत्वा शेषं भगणशेषमहर्गणं चोक्तवत्कार्यम् । अत्रैतदुक्तं भवति । षष्टिर्भाज्यो विकलाशेषमृणक्षेपो दृढकुदिनानि हार इति प्रकल्प्य यः कुट्टकः सकलाशेषस्तेन षष्टिर्हृता विकलाशेषोना दृढकुदिनहृता फलं विकला अभीष्टा स्युस्ततः कलाशेषमृणक्षेपं षष्टि भाज्यं दृढकुदिनानि हारं प्रकल्प्य यः कुट्टकः स चांशशेषस्तेन षष्टिर्गुणा कलाशेषोना दृढकुदिनभक्ता फलं कला अभीष्टाः स्युः । एवं राशि शेषानयने त्रिंशद्भाज्यो भगणशेषानयने च द्वादशभाज्यकल्प्यः । भगणशेषतः पूर्वविधानेनाहर्गणो गतभगणाश्च साध्याः । ‘कल्प्याथ शुद्धिर्विकलावशेषम्’—इत्यादि भास्करोक्तमेतदनुरूपमेव ॥ २२ ॥

वि. भा.—एवं राशिशेषात् अंशशेषात् कलाशेषात् विकलाशेषात् पूर्ववदहर्गणः स्यात् कथं तदुच्यते । नष्टस्थेषु विकला कलादिमानेषु भक्त्या (विभज्य) इष्टान् तान् विकलादीन् कृत्वा शेषं (भगणशेषं) अहर्गणं च पूर्ववत्कार्यम् । यथा षष्टिभाज्यः । दृढ कुदिनानि हारः । विकलाशेषं शुद्धिरिति प्रकल्प्य कुट्टकविधिना गुणाप्ती साध्ये तत्र लब्धिर्विकलाः स्युः । गुणस्तु कलावशेषम् । ततः कलावशेषं शुद्धिः । षष्टिर्भाज्यः । दृढकुदिनानि हार इति प्रकल्प्य कुट्टकेन गुणाप्ती साध्ये तत्र लब्धिः कलाः । गुणोऽंशशेषम् । अंशशेषं शुद्धिः । त्रिंशद् भाज्यः । दृढकुदिनानि हारः । अत्र कुट्टकेन लब्धिरंशः । गुणो राशिशेषम् । एवं राशिशेषं शुद्धिः । द्वादश भाज्यः । कुदिनानि हारः । अत्र कुट्टकेन लब्धिर्गतराशयः । गुणोभगणशेषम् । कल्पभगणा भाज्यः । कुदिनानि हारः । भगणशेषं शुद्धिः । अत्र लब्धिर्गतभगणाः । गुणोऽहर्गणः स्यादिति । लीलावत्यां ‘कल्प्याथ शुद्धिर्विकलावशेषं षष्टिर्भाज्यः कुदिनानि हार’ इत्यादि भास्करोक्तमेतदनुरूपमेवेति ॥ २२ ॥

अब विशेष कहते हैं ।

हि. भा.—एवं राशिशेष से, अंश शेष से, कलाशेष से, विकलाशेष से अहर्गण होता है । कैसे होता है सो कहते हैं । विकला-कलादि मानों में भाग देकर इष्टविकलादि करके भगणशेष और अहर्गण पूर्ववत् करना चाहिये । जैसे-साठ को भाज्य, दृढकुदिन को-

हार, विकलाशेष को ऋणक्षेप कल्पना कर कुट्टक विधि से गुणक और लब्धि साधन करना, उनमें लब्धि विकला होती है, और गुणक कलाशेष होता है। इसके बाद साठ को भाज्य, दृढकुदिन को हार, कलावशेष को ऋणक्षेप कल्पना कर कुट्टक से गुणक और लब्धि साधन करना चाहिए, उनमें लब्धिकला होती है। गुणक अंश शेष होता है। एवं तीस को भाज्य, दृढकुदिन को हार, अंशशेष को ऋणक्षेप कल्पना कर कुट्टक से जो गुणक और लब्धि होती है उनमें लब्धि अंश होता है। गुणक राशिशेष होता है। एवं द्वादश को भाज्य, दृढकुदिन को हार, राशिशेष को ऋण क्षेप मान कर कुट्टक से लब्धिगत राशिमान होता है, गुणक भगणशेष होता है। एवं कल्प भगण को भाज्य, कुदिन को हार, भगणशेष को ऋणात्मक क्षेप क्षेपकल्पना कर कुट्टक से लब्धि गतभगण होता है, गुणक अहंगण होता है, लीलावती में 'कल्प्याय शुद्धिविकलावशेष' इत्यादि भास्करोक्त इसके अनुरूप ही है इति ॥ २२

इदानीमन्यं प्रश्नमाह ।

राश्यंशकला विकलाशेषात् कथितादभीष्टतो नष्टान् ।

यः साधयत्युपरितनान् समध्यमान् कुट्टकज्ञः सः ॥ २३ ॥

मु. भा.—अभीष्टतः कथितान्निर्दिष्टात् राशिशेषत् वांशशेषात् वा कलाशेषादथवा विकलाशेषाच्च यो नष्टान् विकलादीन् तथोपरितनानुपरिशेषान् विकलाशेषतः कलाशेषं कलाशेषादंशशेषमित्यादीन् समध्यमान् मध्यमग्रहसहितान् साधयति स एव कुट्टकज्ञः। निर्दिष्टादेकशेषात् मध्यमग्रहं य आनयति स एव कुट्टकज्ञ इत्यर्थः। अस्योत्तरं पूर्वसूत्रेण स्फुटमपि बालावबोधार्थमग्रे वक्ष्यति ॥ २३ ॥

वि. भा.—अभीष्टतः कथितान्निर्दिष्टात् राशिशेषादंश शेषाद्वा कलाशेषाद्विकलाशेषाद्वा नष्टान् (विकलादीन्) उपरितनान् (उपर्युक्तशेषान्) मध्यमग्रहसहितान् यः साधयति सः कुट्टकज्ञः । निर्दिष्टादेकशेषान्मध्यग्रहानयनं यः करोति सः कुट्टकज्ञ इति । अस्योत्तरं यद्यपि पूर्वसूत्रेण स्पष्टमप्यस्ति तथाप्याचार्येणाग्रे कथ्यते ॥ २३ ॥

अब अन्य प्रश्न को कहते हैं ।

हि. भा.—अभीष्ट से कथित राशिशेष से अथवा अंशशेष से, कलाशेष से अथवा विकलाशेष से विकलादि को तथा उपर्युक्त शेष मध्य ग्रह सहित को जो व्यक्ति साधन करता है अर्थात् निर्दिष्ट एकशेष से मध्यम ग्रहानयन करता है वह कुट्टकज्ञ है, यद्यपि इसका उत्तर २२ सूत्र से स्पष्ट है तथापि आचार्य आगे कहते हैं इति ॥ २३ ॥

इदानीमुत्तरमाह ।

येन गुणः शेषयुतश्छेदः शुध्यति हृतः स्वगुणकेन ।

तद्भुक्तं शेषं फलमेवं शेषात् ग्रहङ्गुणौ ॥ २४ ॥

सु. भा.—छेदो दृढकुदिनमानं येन गुणः शेषयुतः स्वगुणकेन हृतः शुध्यति स गुणश्च तद्भुक्तं तस्य ग्रहस्य भुक्तं भवति स्वगुणकेन हृतं यत् फलं प्राप्तं तच्छेषमुपरिशेषं भवति । एवं शेषात् ग्रहाहर्गणौ द्वावेव भवतः । अत्रैतदुक्तं भवति । यथा कलाशेषस्य गुणकः षष्टिश्छेदो दृढकुदिनानि । तत्र येन गुणेन गुणितश्छेदो विकलाशेषयुतः स्वगुणकेन षष्टिमितेन हृतः शुध्यति स गुणो ग्रहविकला भवन्ति फलं च कलाशेषं ज्ञेयमेवं कलाशेषात् कला अंशशेषं च सिध्यति । एवमन्ते भगण-शेषज्ञानं तस्मादहर्गणज्ञानं च भवति ।

अत्रोपपत्तिः । यथा कलाशेषं षष्टिगुणं दृढकुदिनहृतं लब्धं ग्रहविकलाः शेषं च विकलाशेषम् । अतो हरो लब्धिगुणः शेषयुतो भाज्यराशिसमः ।

$$६० \times \text{कशे} = \text{ग्रवि} \times \text{दृकु} + \text{विशे}$$

$$\therefore \text{कशे} = \frac{\text{ग्रवि} \times \text{दृकु} + \text{विशे}}{६०}$$

अतो दृढकुदिनमानं येन गुणं विकलाशेषयुतं षष्टिभक्तं शुध्यति स गुणो ग्रहविकलाः फलं च कलाशेषम् । एवं स्व स्वशेषगुणकच्छेदाभ्यां तत्तच्छेषमाने भवत इत्युपपद्यते ॥ २४ ॥

वि. भा.—छेदो (दृढकुदिनमानं) येन गुणः शेषयुतः स्वगुणकेन भक्तः शुध्यति स गुणस्तस्य गृहस्य भुक्तं भवति स्वगुणकेन भक्तं सद्यत्फलं लब्धं तदुपरि शेषं भवति । एवं शेषात् ग्रहाहर्गणौ भविष्यतः । यथा कलाशेषस्य गुणकः षष्टिर्दृढकुदिनानि हरः । तत्र येन गुणकेन गुणितो हरो विकलाशेषयुतः स्वगुणकेन षष्टि-तुल्येन भक्तः शुध्यति स गुणो गृहविकलाः स्युः फलं कलाशेषमेवं कलाशेषात् कला अंशशेषं सिध्यति । एवमन्ते भगण-शेषज्ञानं भवेत्तस्मादहर्गणो भवेदिति ॥

अत्रोपपत्तिः ।

कलाशेषं षष्टिगुणं दृढकुदिनभक्तं लब्धं गृहविकलाः शेषं विकलाशेषम् तत्स्वरूपम् = $\frac{६० \times \text{कलाशे}}{\text{दृढकु}} = \text{गृहविकला} + \frac{\text{विकलाशे}}{\text{दृढकु}}$ छेदगमेन $६० \times \text{कलाशे} = \text{दृढकु} \times \text{गृहविकला} + \text{विकलाशे}$, पक्षौ षष्टिभक्तौ तदा $\frac{\text{दृढकु} \times \text{गृहविकला} + \text{विकलाशे}}{६०}$

—कलाशे, अतो दृढ़कुदिनं येन गुणं विकलाशेषयुतं षष्टिभक्तं शुध्यति स गुणो गृहविकलाः । फलं कलाशेषम् एवं स्वस्वशेषगुणकहराभ्यां तत्तच्छेषमाने भवत इत्युपपन्नं भवतीति ॥२४॥

अब उत्तर कहते हैं ।

हि. भा.—दृढ़कुदिन (हर) को जिस से गुणा कर शेष जोड़कर अपने गुणक से भाग देने से शुद्ध हो तब वह गुणक उस ग्रहका भुक्त होता है । अपने गुणक से भाग देने से जो फल होता है वह उपरिशेष होता है इस तरह शेष से ग्रह और अहर्गण होता है, जैसे कलाशेष का गुणक साठ है, दृढ़कुदिन हर है वहां जिस गुणक से गुणित हर में विकला शेष को जोड़ कर साठतुल्य अपने गुणक से भाग देने से शुद्ध होता है तब वह गुणकग्रह विकला होती है और फल कलाशेष होता है, एवं कलाशेष से कला और अंशशेष सिद्ध होता है । इस तरह अन्त में भगण शेष ज्ञान होता है उससे अहर्गणज्ञान होता है इति ॥

उपपत्ति ।

कला शेष को साठ से गुणा कर दृढ़कुदिन से भाग देने से लब्ध ग्रह विकला और शेष विकला शेष । उसका स्वरूप = $\frac{६० \times \text{कलाशे}}{\text{दृढ़कु}} = \text{ग्रह विकला} + \frac{\text{विकलाशे}}{\text{दृढ़कु}}$ छेदगम से $६० \times \text{कलाशे} = \text{दृढ़कु} \times \text{ग्रह विकला} + \text{विकलाशे}$ । दोनों पक्षों को साठ से भाग देने से, कलाशे = $\frac{\text{दृढ़कु} \times \text{ग्रह विकला} + \text{विकलाशे}}{६०}$ अतः दृढ़कुदिन को जिससे गुणाकर विकला शेष को जोड़कर साठ से भाग देने से शुद्ध होता है वह गुणक ग्रह विकला है और फल कला शेष है एवं अपने अपने शेष गुणक हरों से अपने अपने शेष मान होते हैं, इससे उपपन्न हुआ ॥२४॥

इदानीमन्यान् प्रश्नानाह ।

जानाति यो युगगतं कथितादधिमासशेषकादिष्टात् ।

अवमावशेषतो वा तद्योगाद्वा स कुट्टकः ॥२५॥

अथ धनर्णादीनां सङ्कलितव्यवकलितादि

इदानीं धनर्णशून्यानां सङ्कलनमाह ।

धनयोर्धनमृणमृणयोर्धनर्णयोरन्तरं समैक्यं खम् ।

ऋणमैक्यं च धनमृणधनशून्ययोः शून्ययोः शून्यम् ॥ ३० ॥

सु. भा.—धनयोरेक्यं धनमृणयोरेक्यमृणं भवति । धनर्णयोरन्तरमेवैक्यं भवति । समयोर्धनर्णयोरेक्यं खं शून्यं भवति । ऋणशून्ययोरेक्यमृणं धनशून्ययोरेक्यं च शून्यं भवति ।

अत्रोपपत्त्यर्थं मन्मुद्रिता भास्करबीजटिप्पणी द्रष्टव्या ॥ ३० ॥

वि. भा.—धनात्मकयोरङ्कयोर्योगो धनं भवति । ऋणात्मकयोर्योगश्च ऋणं भवति । धनर्णयोरन्तरमेव योगो भवति । तुल्ययोर्धनर्णयोर्योगः शून्यं भवति । ऋणशून्ययोर्योगो ऋणं धनशून्ययोर्योगश्च धनं भवति, शून्ययोर्योगः शून्यं भवतीति ।

अत्रोपपत्तिः ।

यद्येकस्य पुरुषस्य प्रथमं रूप्यकपञ्चकं धनमासीत्, कालान्तरेण तेन रूप्यकचतुष्टयमर्जितं तयोर्योगे तस्य नवरूप्यकाणि धनानि भविष्यन्ति । एवं तस्यैव यदि रूप्यकपञ्चकमृणं पुनरूप्यकचतुष्टयमृणं कृतं तदा तयोर्योगे तस्य नवरूप्यकाणि ऋणं भविष्यति । यदि च रूप्यकचतुष्टयं धनमस्ति तेन रूप्यकपञ्चकमृणं कृतं तदा रूप्यकचतुष्टयदानेन तस्य निकटे रूप्यकमेकमृणमेव स्थास्यति । यदि रूप्यकपञ्चकं धनमस्ति, तेन पुनरूप्यकपञ्चकमृणं कृतं तदा रूप्यकपञ्चकदानेन तन्निकटे शून्यमेव स्थास्यति । सिद्धान्तशेखरे । ऐक्यां युतौ स्यात् क्षययोः स्वयोश्च धनर्णयोरन्तरमेव योगः, श्रीपत्युक्तमिदं, बीजगणिते 'योगे युतिः स्यात् क्षययोः स्वयोर्वा धनर्णयोरन्तरमेव योगः' भास्करोक्तमिदं चाऽऽचार्योक्तानुरूपमेवेति ॥ ३० ॥

अब धनाङ्क ऋणाङ्क और शून्य के सङ्कलन को कहते हैं ।

हि. भा.—धनात्मक अङ्कों का योग धन होता है । ऋणात्मक अङ्कों का योग ऋण होता है । धनाङ्क और ऋणाङ्क का अन्तर ही योग होता है । तुल्य धन और ऋण अङ्कों का योग शून्य होता है । ऋणात्मक दो शून्यों का योग ऋण होता है । धनात्मक दो शून्यों का योग धन होता है । दो शून्यों का योग शून्य होता है इति ।

उपपत्ति ।

यदि किसी एक पुरुष के पास पहले पांच रुपये धन था, कालान्तर में उसने चार रुपये उपार्जन किया । तब दोनों का योग नौ रुपये उसके निकट धन होगा । यदि उसी को पहले पांच रुपये ऋण था फिर उसने चार रुपये ऋण लिया तब दोनों मिलकर उसके पास नौ रुपये ऋण होंगे । यदि उसके निकट चार रुपये धन है और पांच रुपया लिया तब चार रुपये सघाने से उसके निकट एक रुपया ऋण रहा । यदि उसके पास पांच रुपये धन है और पांच रुपये ऋण लिया तो पांच रुपये सघाने से उसके पास शून्य (कुछ नहीं) रहा । इससे आचार्योक्त उपपन्न हुआ ॥ सिद्धान्तशेखर में 'ऐक्यं युतौ स्यात् क्षययोः' इत्यादि संस्कृतोपपत्ति में लिखित श्लोक से श्रीपति तथा बीजगणित में 'योगे युतिः स्यात् क्षययोः स्वयोर्वा' इत्यादि से भास्कराचार्य ने आचार्योक्त के अनुरूप ही कहा है इति ॥ ३० ॥

अथ व्यवकलनमाह ।

ऊनमधिकाद्विशोध्यं धनं घनादृणमृणादधिकमूनम्

व्यस्तं तदन्तरं स्यादृणं धनं घनमृणं भवति ॥ ३१ ॥

शून्यविहीनमृणमृणं धनं धनं भवति शून्यमाकाशम् ।

शोध्यं यदा घनमृणादृणं घनाद्वा तदा क्षेप्यम् ॥ ३२ ॥

सु. भा.—अधिकाद्वनादूनं धनं विशोध्यं शेषं धनं भवति । अधिकादृणादूनमृणं विशोध्यं शेषमृणं भवति । ऊनाद्वनादधिकं धनं घनादृणादधिकमृणं विशोध्यं तदा तदन्तरं व्यस्तं विपरीतं स्यात् । अर्थादधिकं धनं विशोध्यं तदा शेषमृणं भवति । अधिकमृणं विशोध्यं तदा शेषं धनं भवति । कथं विपरीतं भवतीत्याह । ऋणं धनं भवति धनं चणं भवतीति । चेदृणं शून्यविहीनं शून्येन विहीनं तदा ऋणं धनं च शून्यविहीनं धनं शून्यं च शून्यविहीनमाकाशं शून्यं भवति । यदि ऋणाद्धनं शोध्यं वा घनादृणं शोध्यं तदा क्षेप्यमर्थात् तदा तयोर्योग एवान्तरं भवतीति ।

अत्रोपपत्त्यर्थं मन्मुद्रिता भास्करबीज टिप्पणी विलोक्या ॥ ३१-३२ ॥

वि. भा.—अधिकाद्वनादूनं (अल्पं) धनं विशोध्यं तदा शेषं धनं भवति । अधिकादृणादूनमृणं विशोध्यं तदा शेषमृणं भवति । ऊना (अल्पात्) द्वनादधिकं धनं वा ऊनादृणादधिकमृणं विशोध्यं तदा तदन्तरं विपरीतं स्यादर्थादधिकधनस्य शोधनेन शेषमृणं भवति । तथाधिक-ऋणशोधनेन शेषं धनं भवतीति । कथं व्यस्तं (विपरीतं) भवतीति कथ्यते । ऋण धनं भवति, धनं चणं भवति, चेदृणं शून्येन विहीनं तदा ऋणम् । धनं च शून्यविहीनं तदा धनं, शून्यं च शून्यविहीनं तदा शेषं शून्यं भवति । यदि ऋणात् धनं शोध्यं वा घनादृणं शोध्यं तदा तयोर्योग एवान्तरं भवतीति ॥

अत्रोपपत्तिः ।

यदि घनरूप्यकपञ्चकाद्रूपकत्रयं घनं विशोध्यते अर्थादल्पं क्रियते तदा रूप्यक द्वयं घनमवशिष्यते । यदि ऋणरूप्यकपञ्चकादृणरूप्यकत्रयमल्पं क्रियते तदा रूप्यकद्वयमृणं स्थास्यति । अथ यस्य रूप्यकपञ्चकं घनमस्ति रूप्यकत्रय-मृणमस्ति तदा तदृणस्याधुना विशोघनं जातमर्थाच्चेन तदृणं दत्तं तेन न गृह्यते कथ्यते च यदहं तद्रूप्यकत्रयं भवते दत्तवान् तदा तस्य अष्टौ रूप्यकारिण घनं भविष्यति । यदि च रूप्यकपञ्चकमृणं रूप्यकत्रयं च घनं स्यात्तदा तद्रूप्यकत्रयस्य विशोघनेऽर्थादल्पीकरणे तद्रूप्यकत्रयं ऋणात्मकं भविष्यति । तदानीं तस्याष्टौ रूप्य-कारिण ऋणात्मकानि भविष्यंतीति । शेषं स्पष्टं मेवास्ति । सिद्धान्तशेखरे 'संशोध्य-मानं स्वमृणं घनरूपं घनं भवेदुक्तवदत्र योगः' श्रीपत्युक्तमिदं, बीजगणिते 'संशोध्य-मानं स्वमृणत्वमेति स्वत्वं क्षयस्तद्धुतिरुक्तवच्च' भास्करोक्तमिदंचाऽऽचार्योक्ता-नुरूपमेवास्तीति ॥ ३१-३२ ॥

अब व्यवकलन को कहते हैं ।

हि. भा.—अधिक घन में से अल्प घन को घटाने से शेष घन होता है अधिक ऋण में से अल्प ऋण को घटाने से शेष ऋण होता है । अल्प घन में अधिक घन को वा अल्प ऋण-में से अधिक ऋण को घटाने से वह अन्तर विपरीत होता है अर्थात् अधिक घन के घटाने से शेष ऋण होता है । तथा अधिक ऋण के घटाने से शेष घन होता है । क्यों विपरीत होता है सो कहते हैं । ऋण घन होता है, घन ऋण होता है यदि ऋण में से शून्य को घटाते हैं तो ऋण ही रहता है अर्थात् उस ऋणाङ्क में किसी तरह का विकार नहीं होता है । घन में से शून्यको घटाने से शेष घन होता है । शून्य में से शून्य को घटाने से शेष शून्य होता है । यदि ऋणाङ्क में से घनाङ्क को घटाया जाय वा घनाङ्क में से ऋणाङ्क को घटाया जाय तब उन दोनों का योग ही अन्तर होता है इति ॥

उपपत्ति ।

यदि घनात्मक पांच रुपये में से घनात्मक तीन रुपयों को घटाते हैं अर्थात् अल्प करते हैं तो दो रुपये घन शेष रहता है यदि ऋणात्मक पांच रुपयों में से ऋणात्मक तीन रुपयों को अल्प करते हैं तो दो रुपये ऋण रहता है । जिसके पास पांच रुपये घन हैं और तीन रुपये ऋण हैं उसके उन तीन रुपयों को घटवाना है लेकिन जिसने तीन रुपये दिये थे वह नहीं लिये कहा कि वह तीनों रुपये आप ही को दे दिये तब उस व्यक्ति के पास आठ रुपये घन हो गया । यदि पांच रुपये ऋण हैं और तीन रुपये घन हैं तब उन तीनों रुपयों को विशोघन करने से वे तीनों रुपये ऋण होंगे तब उसको कुल आठ रुपये ऋण होंगे । शेष विषय स्पष्ट ही है । सिद्धान्त शेखर में 'संशोध्यमानं स्वमृणं घनरूपमित्यादि' श्रीपत्युक्त तथा बीजगणित में 'संशोध्यमानं स्वमृणत्वमेति' इत्यादि भास्करोक्त आचार्योक्त के अनुरूप ही है ॥ ३१-३२ ॥

अत्रोपपत्तिः

गुणनोपपत्तिवैपरीत्येन भागहारोपपत्तिरपि सुगमैव । शून्यं शून्येन भक्तं

फलं शून्यं न भवतीति प्रदर्शयते । यथा $\frac{३-३}{६-६} = \frac{०}{०} = \frac{३(१-१)}{६(१-१)} = \frac{३}{६}$ एतावता शून्ये न्यूनाधिकत्वं स्पष्टमेव दृग्गोचरीभूतं भवत्यर्थात्सर्वाणि शून्यानि न समानानि भवन्ति तस्मात् शून्येन शून्यं भक्तं फलं शून्यं न भवितुमर्हति, आचार्येण यदस्य $\frac{०}{०}$ मानं शून्यं कथ्यते तत्समीचीनं नास्ति । समयोद्वयोर्धातस्य वर्ग इत्यभिधानात् धनयोर्धातस्य ऋणयोर्धातस्य च धनत्वात् वर्गस्य सर्वथैव धनत्वमेव । ऋणां धनं वा शून्येन विभक्तं तच्छेदं भवतीत्याचार्योक्तौ विचार्यते । यथा $\frac{य}{र}$ अत्र र मानं यथा यथाऽल्पं भवेत्तथा तथा लब्धिरधिका स्यात्, र मानस्य परमाल्पत्वेऽर्थाच्छून्यसमत्वे लब्धिः परमाधिकाऽनन्तसमा भवेदत एव बीजगणिते $\frac{य}{०}$ खहरराशिसम्बन्धे 'अस्मिन् विकारः खहरे न राशावपि प्रविष्टेष्वपि निः सृतेषु । बहुष्वपि स्याल्लय-सृष्टिकालेऽनन्तेऽच्युते भूतगणेषु यद्वत्, भास्करेण कथितम् । अनेन खहरराशे-रविकारिता दृष्टान्तप्रसङ्गेन भगवतोऽनन्तस्याच्युतस्य साम्यं प्रतिपादयति ।

अथ ऋणात्मक राशिसम्बन्धे किञ्चिद्विचार्यते । $० > -य, \frac{य^१}{०} = अनन्त,$ तथा $\frac{य^१}{-य} = -य$ परन्तु $-य < ० \therefore \frac{य^१}{-य} = -य > अनन्ताधिक$ । इति ऋणा-ऽत्मकराशेर्वैचित्र्यमाश्चर्यकारकमस्ति, यतः शून्यादल्पो भूत्वाऽनन्ततोऽपि महान् भवतीति ॥३४-३५॥

अब भाग हार के लिये कहते हैं ।

हि. मा.—धन को धन से वा ऋण को ऋण से भाग देने से फल धन होता है । शून्य को शून्य से भाग देने से फल शून्य होता है । धन को ऋण से भाग देने से फल ऋण होता है । धन से ऋण को भाग देने से फल ऋण होता है । ऋण वा धन को शून्य से भाग देने से उस ऋण वा धन में शून्य छेद (हर) होता है । शून्य को ऋण वा धन से भाग देने से फल शून्य होता है । ऋण और धन का वर्ग धन होता है । शून्य का वर्ग शून्य होता है । शून्य का पद (मूल) भी शून्य होता है इति ॥

उपपत्ति ।

शून्यानोपपत्ति वैधरीत्य से भागहारोपपत्ति भी सुगम ही है । शून्य को शून्य से भाग देने से फल शून्य नहीं होता है । जैसे $\frac{३-३}{६-६} = \frac{०}{०} = \frac{३(१-१)}{६(१-१)} = \frac{३}{६}$ इससे शून्यों में न्यूनाधिक्य स्पष्ट ही देखने में आता है । अर्थात् सब शून्य बराबर नहीं होते हैं अतः शून्य से

शून्य को भाग देने से फल शून्य नहीं हो सकता है। आचार्य ० इसका मान शून्य कहते हैं सो ठीक नहीं है। $\frac{य}{र}$ यहाँ र का मान ज्यों ज्यों अल्प होगा त्यों त्यों लब्धि अधिक होगी। र मान के परमाल्प में अर्थात् शून्य समत्व में लब्धि परमाधिक अर्थात् अनन्त के बराबर होती है। भास्कराचार्य ने बीजगणित में खहर $\frac{य}{०}$ राशि के सम्बन्ध में 'अस्मिन् विकारः खहरे न राशावपि प्रविष्टेष्वपि निःसृतेषु। बहुष्वपि स्याल्लयसृष्टिकालेऽनन्तेऽच्युते भूतगणेषु यद्वत्' कहा है।

अब ऋणात्मक राशि के वैचित्र्य को दिखलाते हैं। $० > -य$, $\frac{य^१}{०} = अनन्त$ तथा $\frac{य^१}{-य} = -य$ परन्तु $० > -य$ ∴ $\frac{य^१}{-य} = -य > अनन्त$ यह ऋणात्मक राशि की विचित्रता आश्चर्य कारक है। क्योंकि शून्य से भी अल्प होकर अनन्त से भी अधिक होता है इति ॥३४-३५॥

इदानीं संक्रमणविषमकर्मह।

योगोऽन्तर युतहीनो द्विहृतः संक्रमणमन्तरविभक्तं वा।

वर्गान्तरमन्तरयुतहीनं द्विहृतं विषमकर्म ॥३६॥

सु. भा.—योगो राश्योर्योगोऽन्तरेण राश्यन्तरेण युतो हीनश्च द्विहृतो दलितो राशी स्तः। इदं सङ्क्रमणं नाम गणितम्। वा राश्योर्वर्गान्तरं राश्यन्तरेण विभक्तं फलमन्तरेण युतं हीनं द्विहृतं च राशी स्तः। इदं विषमकर्म नाम गणितम्। 'योगोऽन्तरेणोनयुतः'—इत्यादि तथा 'वर्गान्तरं राशिवियोगभक्तं'—इत्यादि च भास्करोक्तं चैतदनुरूपमेव ॥ ३६ ॥

वि. भा.—द्वयो राश्योर्योगस्तयोरन्तरेण युतो हीनश्च कार्यः। अर्धितस्तदा राशी भवेताम्, इदं सङ्क्रमणं नाम गणितम्। वा राश्योर्वर्गान्तरं राश्यन्तरेण विभक्तं लब्धमन्तरेण युतं हीनं द्वाभ्यां भक्तं तदा राशी भवेताम्। इदं विषमकर्म नाम गणितम् ॥

अत्रोपपत्तिः।

कल्प्येते राशी य, र अनयोर्योगः = य + र, अन्तरम् = य - र, योगोऽन्तरेण युतः य + र + य - र = २ य अर्धितः = $\frac{योग + अन्तरम्}{२} = य$ । योगोऽन्तरेण हीनः

य + र - (य - र) = य + र - य + र = २ र अधितः = $\frac{\text{योग} - \text{अन्तर}}{२} = २$ इदं संक्रमणसंज्ञकं गणितम् । तथा राश्योर्वर्गान्तरम् = $य^२ - र^२$ राश्यन्तरेण य - र भक्त $\frac{य^२ - र^२}{य - र} = य + र$ ततः पूर्ववत् । $\frac{\text{योग} + \text{अन्तर}}{२} = य$ । $\frac{\text{योग} + \text{अन्तर}}{२} = २$ । इदं विषमकर्म नाम गणितम् । एतावताऽऽचार्योक्तमुपपन्नम् । लीलावत्यां 'योगोऽन्तरेणोनयुतोऽधितस्तौ राशी स्मृतं संक्रमणाख्य' मिति तथा वर्गान्तरं राशिवियोगभक्तं योगस्ततः प्रोक्तवदेव राशी' इति च भास्करोक्तमाचार्योक्तानुरूपमेवास्ति ॥३६॥

अब संक्रमण और विषम कर्म को कहते हैं ।

हि. भा.— दो राशियों के योग में दोनों राशियों के अन्तर को युत और हीन कर दो से भाग देने से दोनों राशियों का प्रमाण होता है इसका नाम संक्रमण है । वा दोनों राशियों के वर्गान्तर को राश्यन्तर से भाग देकर जो लब्धि हो उसमें राश्यन्तर को युत और हीनकर दो से भाग देने से राशिद्वय का मान होता है इसका नाम विषम कर्म है ॥

उपपत्ति ।

प्रथम राशि = य । द्वितीय राशि = र, प्ररा + द्विरा = य + र = योग । प्ररा - द्विरा = य - र = अन्तर, योग + अन्तर = य + र + य - र = २य . . . $\frac{\text{योग} + \text{अन्तर}}{२} = य$ । योग - अन्तर = य + र - (य - र) = य + र - य + र = २ र । अतः $\frac{\text{योग} - \text{अन्तर}}{२} = २$ । यह संक्रमण गणित है । वा राशिद्वय का वर्गान्तर = $य^२ - र^२$, राश्यन्तर (य - र) से भाग देने से $\frac{य^२ - र^२}{य - र} = य + र = \text{योग}$ तब पूर्ववत् $\frac{\text{योग} + \text{अन्तर}}{२} = य$ । $\frac{\text{योग} - \text{अन्तर}}{२} = २$, इसका नाम विषमकर्म गणित है । इससे आचार्योक्त उपपन्न हुआ । लीलावती में 'योगोऽन्तरेणोनयुत' इत्यादि से तथा 'वर्गान्तरं राशिवियोगभक्त' इत्यादि से भास्कराचार्य ने आचार्योक्त के अनुरूप ही कहा है इति ॥३६॥

इदानीं समद्विबाहुत्रिभुजे लम्बज्ञानादकरणीगतौ भुजावाह ।

करणी लम्बस्तत्कृतिरिष्टहृतेष्टोनसंयुताऽल्पा भूः ।

अधिको द्विहतो बाहुः संक्षेप्यो यद्वधो वर्गः ॥३७॥

सु. भा.—यो लम्बस्तस्य करणी संज्ञा ज्ञेया । तस्याः करण्याः कृतिरिष्टेन होता । इष्टोनसंयुता कार्या अनयोर्याऽल्पा सा समद्विबाहोर्भूः कल्प्या । यश्चाधिकः स द्विहतः समद्विबाहोर्बाहुर्ज्ञेयः । 'संक्षेप्यो यद्वधो वर्गः' इत्यस्याग्रे सम्बन्धः ।

अत्रोपपत्तिः । समद्विबाहौ यः शिरः कोणादाधारोपरि लम्बस्तद्वशाज्जात्य-
द्वयं समानमुत्पद्यते । तत्र लम्बः कोटिः । आधारार्धं भुजः । समद्विबाहोर्बाहुः कर्णः ।
भुजकर्णान्तरमिष्टं प्रकल्प्य तद्वर्गान्तरात् कोटिवर्गाद्विषमकर्मणाऽन्तरप्रतिपादि-
तेन द्विगुणभुजो भूः । कर्णो बाहुश्चाकरणीगत आनीत इति ॥ ३७ ॥

वि. भा.—समद्विबाहौ शिरः कोणादाधारोपरि यो लम्बः सा करणी संज्ञका
ज्ञेया, तस्या वर्ग इष्टेन भक्तः, इष्टोनयुक्तौ कार्यौ अनयोर्याऽल्पा सा समद्विबाहु-
त्रिभुजस्य भूः कल्पनीया । योऽधिकः स द्वाभ्यां भक्तः समद्विबाहुत्रिभुजस्य भुजो
ज्ञेयः । 'संक्षेप्यो यद्वधोवर्ग' इत्यस्याग्रे सम्बन्धः ॥

अत्रोपपत्तिः ।

अ क ग समद्विबाहु त्रिभुजम् । अ शिरः कोण बिन्दुतः क ग आधारोपरि
लम्बः=अ र एतल्लम्बवशेन अकर, अग र जात्य-
त्रिभुजद्वयं तुल्यं समुत्पद्यते, अर लम्बः कोटिः, क र
आधारार्धं भुजः । अक=कर्णः । अत्र भुजकर्णयोर्वर्गान्तरं
कोटिवर्गमिष्टं प्रकल्प्य वर्गान्तरं राशिवियोगभक्त-
मित्यादिना $\frac{\text{कर्ण}^2 - \text{भुज}^2}{\text{कर्ण} - \text{भुज}} = \frac{\text{कोटि}^2}{\text{कर्ण} - \text{भुज}} = \frac{\text{इ}^2}{\text{कर्ण} - \text{भु}}$
= कर्ण + भुज ततः कर्णभुजयोर्योगान्तराभ्यां संक्रमणगणितेन भुजकर्णौ भवेत् ।
भुजो द्विगुणितस्तदा भू भवेत् । कर्णो भुजश्चाकरणीगतः समागत इति ॥३७॥

अब समद्विबाहु त्रिभुज में लम्बज्ञान से अकरणीगत भुजद्वय को कहते हैं ।

हि. भा.—सम द्विबाहु में शिरःकोण से आधार के ऊपर जो लम्ब होता है वह
करणी संज्ञक है । उस के वर्ग को इष्ट से भाग देकर जो लब्धि हो उस में इष्ट को हीन
और युत करना चाहिये । इन दोनों में जो अल्प है उसको समद्विबाहु त्रिभुज की भू कल्पना
करना । अधिक जो है उस को दो से भाग देने से जो हो वह समद्विबाहु का भुज होता है
इति ॥

उपपत्ति ।

यहां संस्कृतोपपत्ति में लिखित (१) क्षेत्र को देखिये । अक ग समद्विबाहुक त्रिभुज है ।
अ शिरः कोणबिन्दु से क ग आधार के ऊपर लम्ब=अर इस लम्ब के वश से अकर, अग र
दो तुल्य जात्य त्रिभुज उत्पन्न होता है । अर लम्ब=कोटि, क र आधारार्ध=भुज, अक=कर्ण
यहां भुज और कर्ण के वर्गान्तर कोटि (लम्ब) वर्ग को इष्ट कल्पना कर 'वर्गान्तरं राशि
वियोग भक्त' इत्यादि से $\frac{\text{कर्ण}^2 - \text{भुज}^2}{\text{कर्ण} - \text{भु}} = \frac{\text{कोटि}^2}{\text{कर्ण} - \text{भु}} = \frac{\text{इ}^2}{\text{कर्ण} - \text{भु}} = \text{क} + \text{भु}$ तब कर्ण

और भुज के योगान्तर से संक्रमण गणित से भुज और कर्ण का प्रमाण आज्ञायगा, द्विगुणित भुज समद्विबाहुक की भू है। इस तरह अकरणीगत भुज और कर्ण लाया गया है इति ॥३७॥

इदानीं करणीयोगान्तरे गुणनं चाह।

इष्टोद्धतकरणी पद्युतिकृतिरिष्टगुणिताऽन्तरकृतिर्वा।

हि. मा.—जिन दो करणियों का वध वर्ग होता है, उन दोनों का ही योगान्तर होता है। इष्टाङ्क से भाग देकर दोनों करणियों का मूल लेना चाहिए।

दोनों का योग या वर्ग तथा अन्तर वर्ग इष्टगुणित हो तब दोनों करणियों का योगान्तर होता है। गुणक के तुल्य गुण्यखंड को अधोऽधः पक्ति में तिर्यक् स्थापना करें, उसके बाद उन खण्डों से गुणक को गुणाकर सबों का योग गुणानफल होता है।

उपपत्ति।

इस समय मूलचिह्न से जो प्रकट होता है उसी को पुरातन समय में करणी नाम से प्रकट किया जाता था। 'विभाजको वा गुणकोऽथवाऽस्याः कृतिभिर्नियुक्ता कृतिभिः करण्याः' इस पद से करणी की परिभाषा एवं गुणन, भजन के लिए विशेष बात कही गई है।

करणयोगान्तर के सम्बन्ध में 'योगे वियोगे करणीं स्वबुद्ध्या सन्ताडयेत्तेन यथा कृतिः स्यात् तन्मूलम्' इत्यादि संस्कृतोपपत्ति में कहा गया है। उदाहरण के लिए 'द्विका-ष्टमित्योस्त्रिभसंख्ययोः' इत्यादि भास्करोक्त है। श्रीपति की उक्ति में 'सन्ताडयेत्तेन यथाकृतिः स्यात्' इत्यादि और 'विभाजयेदिष्टगुणेन तेन' इत्यादि दोनों पदों के परिवर्तन से उसी प्रकार योगान्तर होता है। तब यह सूत्र इस प्रकार होना चाहिए "योगे वियोगे करणीं स्व बुद्ध्या विभाजयेत्तेन यथाकृतिः स्यात्" इत्यादि संस्कृतोपपत्ति में लिखित परम्परा ज्योतिषियों में प्रचलित है।

इसी प्रकार जीवमाथ दैवज्ञ ने भी अपनी भास्करबीजगणित की टीका में लिखा है 'आदौ करण्यापवर्त्तनीये तन्मूलयोरन्तरयोगवर्गौ' इत्यादि भास्कराचार्य ने लघुकरण की बराबर अपवर्त्तनाङ्क मानकर 'लघ्व्या हृतायास्तु पद्म' इत्यादि सूत्र लिखा है। उदाहरण के लिए यदि $इ\sqrt{य}$, $इ\sqrt{य}$ यह दोनों करणी हैं। गणित की भांति

$$\text{योग} = (इ + इ) \sqrt{य} = \sqrt{(इ + इ)^2 \cdot य},$$

$$\begin{aligned} \text{अन्तर} &= (इ - इ) \sqrt{य} = \sqrt{(इ - इ)^2 \cdot य}, \text{ तब दोनों का घात} \\ &= इ \sqrt{य} \times इ \sqrt{य} = \sqrt{इ^2 \cdot य} \times \sqrt{इ^2 \cdot य} = \sqrt{इ^2 \cdot इ^2 \cdot य} \end{aligned}$$

इस स्वरूप में मूलचिह्नान्तर्गत का मूल निरग्र = इ. इ. य है। इसलिए जिन दो का वध वर्ग होता है वहीं पर उन दोनों का योग तथा अन्तर होता है ॥ ३८ ॥

इदानीं करणीभागहारे वर्गे च करणसूत्रमाह ।

स्वेष्टर्णच्छेदगुणौ भाज्यच्छेदौ पृथक् युजावसकृत् ।

छेदैकगतहतो वा भाज्यो वर्गः समद्विवधः ॥ ३६ ॥

वि. भा. — भाज्यहरो हरे या काचिदिष्टा करणी तां ऋणं मत्वा तादृशेन हरेण गुणनीयौ, सम्भवे सति गुणितभाज्ये गुणितहरे च द्वयोर्द्वयोः करण्योर्योगौ साध्यौ । पुनः स्वेष्टर्णभाज्यहरो कार्यविवमसकृद्घावद्धरगतैकैव करणी स्यात् । ततो भाज्यो हरैकगतकरण्या भक्तो वा फलं स्यात् । यो गुणो हरो भाज्याच्छुध्यति स गुण एव लब्धिरिति साधारणभागहाररीतिरपि वा पदेनाचार्येण सूचितः, समद्विघातो वर्गो भवतीति ॥

अत्रोपपत्तिः ।

भाज्यभाजकयोः समेनाङ्केन संगुण्य यदि भजेत्तदा लब्धिरविकृतैवातो भाजकगतकरणीनामेकां व्यस्तधनर्णरूपां प्रकल्प्य तादृशा भाजकेन भाज्यभाजकावुभौ यदि गुण्येते तदा नूतनभाजके योगान्तरघातस्य वर्गान्तरसमत्वे नैका करणी न्यूना भविष्यति पुनस्तथैव कृते प्रायो नूतनभाजकेऽप्येका करणी न्यूना भविष्यति, एवमसकृत्कृतेऽन्त्ये सम्भवे भाजके भविष्यति ह्येकैव करणीत्युपपन्नमाचार्योक्तम् । सिद्धान्तशेखरे "छेदे करण्याः सममीप्सितायाः कृत्वा विपर्ययसमृणास्वयोश्च । गुण्यौ पृथक् भाज्यहरो युतौ तौ छेदेऽसकृत् स्यात् करणीयथैका ॥ तथा भजेदूर्ध्वग-भाज्यराशिवेवं करण्याः खलु भागहारः । समानराशोरुभयोश्च घाते कृते करण्याः कृतिमप्युशन्ति" श्रीपत्युक्तमिदं, बीजगणिते 'धनर्णता व्यत्ययमीप्सितायाश्छेदे करण्या असकृद्विधाय । तादृक् छिदा भाज्यहरो निहन्यादेकैव यावत्करणी हरे-स्यात् ॥ भाज्यास्तया भाज्यगता करण्यः' भास्करोक्तमिदं चाऽऽचार्योक्तानुरूपमे-

वास्ति । परन्तु यदि हरे धनकरणी भवेत्तदाऽऽचार्योक्तश्रीप्रत्युक्तभास्करोक्ता
'हरे यावदेकैव करणी स्यात्' नां व्यभिचारो भवेदिति ॥ ३९ ॥

अब करणी भागहार और वर्ग को कहते हैं ।

हि. भा.—हर में जो कोई इष्ट करणी हो उसको ऋण मानकर भाज्य और हर को गुण देना चाहिये । सम्भव रहने से गुणित भाज्य में और गुणित हर में, दो दो करणी के योग साधन करना पुनः उपर्युक्त क्रिया के अनुसार क्रिया करनी चाहिये । इस तरह बार बार तब तक क्रिया करनी चाहिए जब तक हर में एक ही करणी हो । तब भाज्य को भाजकगत एक करणी से भाग देने से फल होता है । वर्ग की परिभाषा कहते हैं समान दो अङ्कों का घात उसका वर्ग कहलाता है ॥

उपपत्ति ।

भाज्य और भाजक को समान अङ्क से गुणा कर यदि भाग दिया जाय तो लब्धि ज्यों की त्यों रहती है । अर्थात् लब्धि में किसी तरह का विकार नहीं होता है । इसलिये भाजक गत करणियों में एक को व्यस्त (उल्टा) धन, ऋण कल्पना कर उस भाजक से यदि भाज्य और भाजक को गुणा करते हैं तब नवीन भाजक में योगान्तर घात के वर्गान्तर के समान होने के कारण एक करणी न्यून होगी । पुनः उसी तरह क्रिया करने से फिर भी नवीन भाजक में एक करणी न्यून होगी । एवं असङ्कृत् (बार-बार) करने से हर में एक ही करणी होगी, इस से आचार्योक्त उपपन्न हुआ । सिद्धान्तशेखर में 'छेदे करण्यः सममीप्सिताया' इत्यादि संस्कृतोपपत्ति में लिखित श्लोकों से श्रीपति ने तथा बीजगणित में 'धनरांता व्यत्ययमीप्सिताया' इत्यादि संस्कृतोपपत्ति में लिखित श्लोक से भास्कराचार्य ने भी आचार्योक्त के अनुरूप ही कहा है । परन्तु भाजक धनकरणी रहेगी तब 'यावद्धरे एकैव करणी भवेद्' इसका व्यभिचार होगा इति ॥ ३९ ॥

इदानीं करणीमूलानयनार्थमाह ।

इष्टकरण्यूनाया रूपकृतेः पदयुतोनरूपार्थे ।

प्रथमं रूपाण्यन्यत्ततो ततो द्वितीयं करण्यसङ्कृत् ॥ ४० ॥

सु. भा.—रूपकृतेः किं विशिष्टाया इष्टकरण्यूनायाः । इष्टा यैका तथा वेष्टयो-
र्द्वयोर्यो रूपबद्धोगस्तेन वेष्टानामनेकासां यो रूपबद्धोगस्तेनोनाया । यत्पदं तेन रूपाणि
पृथक् युतोनितानि तदर्थं च कार्ये । तत्र प्रथममर्धाद्धोगार्धं रूपाणि कल्प्यानि । ततो
अन्यदन्तरार्धं द्वितीयं मूलस्यैका करणी भवति । एवमसङ्कृन्मूलानयनं कार्यम् ।

अत्रोपपत्तिः । 'वर्गे करण्य यदि वा करण्योः' इत्यादि भास्करसूत्रस्य या
मट्टिप्पण्यामुपपत्तिस्तया स्फुटा । तत्रान्ये बहवो विशेषाश्च निरीक्षणीयाः ॥४०॥

अत्रोपपत्तिः ।

अब करणी मूलानयन को कहते हैं ।

हि. भां.—इष्ट एक करणी, वा इष्ट दो. करणियों का रूपवत् जो योग हो उससे वा अनेक करणियों के रूपवत् योग से रहित रूपवर्ग का जो मूल हो उससे रूप को पृथक् युत और हीन करना, दोनों का आधा करना, उसमें प्रथम योगार्ध की रूप कल्पना करना, और अन्य अन्तरार्ध के द्वितीय मूल्य की एक करणी होती है। एवं असकृत् मूलानयन करना चाहिये ॥

उपपत्ति ।

अ $\pm \sqrt{n} = व \pm \sqrt{म}$ यह एक समीकरण है जिस में अ, व ये दोनों संख्याएँ संभव हैं, न, म, ये दोनों संख्याएँ अवर्गाङ्क रूप हैं तब अ=व, न=म होगा । यदि ऐसा नहीं होगा तो कल्पना करते हैं अ=व+इ अतः व+इ $\pm \sqrt{n} = व \pm \sqrt{म}$ समशोधन से इ $\pm \sqrt{n} = \pm \sqrt{म}$ वर्ग करने से इ^२ ± २ इ $\sqrt{n} + न = म$ समशोधनादि से $\frac{इ^२ - (म-न)}{२ इ} = \sqrt{n}$ इससे सिद्ध होता है कि न का मूल भिन्न हो कर अभिन्न संभव संख्या के बराबर हुआ, लेकिन क का मान पहले अवर्गाङ्क रूप प्रकल्पित है, अवर्गाङ्क का मूल भिन्न वर्ग में भिन्नत्व के कारण और निरवयवाङ्क के वर्ग में वर्गाङ्कत्व के कारण, नसावयव होता है, न निरवयव, इसलिये पूर्व कल्पना समीचीन नहीं हैं । अतः अ=व, न=म सिद्ध होता है । कल्पना करते हैं अ+ \sqrt{n} इसका मूल = $\sqrt{य} + \sqrt{र}$ वर्ग करने से य+र+ $\sqrt{४}$ य. र=अ+ \sqrt{n} पूर्व समीकरणयुक्ति से य+ र=अ । ४ य. र=न वर्ग करने से य^२+२ य. र+र^२=अ^२ । ४ य. र=न समशोधन से य^२-२ य. र+र^२=अ^२-न मूल लेने से य-र= $\sqrt{अ^२-न}$, अन्तर ज्ञान से संक्रमण गणित से य, र इन दोनों का मान विदित हो जायगा । इस से आचार्योक्त उपपन्न हुआ । सिद्धान्त शेखर में 'रूपकृतेः करणी रहिता वा' इत्यादि संस्कृतोपपत्ति में लिखित श्लोक से श्रीपति ने आचार्योक्त के अनुरूप ही कहा है, भास्कराचार्य ने बीज गणित में 'वर्गं करण्य यदि वा करण्योः' इत्यादि संस्कृतोपपत्ति में लिखित पद्यों से श्रीपत्युक्त करणीमूलानयन को स्पष्टी करण पूर्वक कहा है ॥ ४० ॥

इदानीमव्यक्तसङ्कलितव्यवकलितयोः करणसूत्रमाह ।

अव्यक्त वर्ग घनवर्ग वर्ग पञ्चगत षड्गतादीनाम् ।

तुल्यानां संकलितव्यवकलिते पृथगतुल्यानाम् ॥ ४१ ॥

सु. भा.—अव्यक्तानां तद्वर्गाणां घनानां वर्गवर्गाणां पञ्चघातानां पञ्चघातानां षड्गतादीनां षड्घातादीनां तुल्यानां समानजातीनां सङ्कलितव्यवकलिते भवतोऽतुल्यानां भिन्नजातीनां च पृथक् स्थापनमेव तेषां सङ्कलितव्यवकलिते भवत इति । 'योगोऽन्तरं तेषु समानजात्योर्विभिन्नजात्योश्च पृथक् स्थितिश्च'—इति भास्करोक्तमेतदनुरूपमेवातोऽस्योपपत्तिश्च तद्वत् ॥ ४१ ॥

वि. भा.—अव्यक्तानां वर्गाणां घनानां वर्गवर्गाणां पञ्चघातानां षड्घातादीनां तुल्यानां (समानजातीनां) योगोऽन्तरं भवति, अतुल्यानां (भिन्नजातीनां) पृथक् स्थितिरेव "तद्योगोऽन्तरं भवतीति ॥ नारायणीये बीजगणितावतसे 'वर्णेषु च समजात्योर्योगः कार्यस्तथा वियोगश्च । असदृशजात्योर्योगे पृथक् स्थितिः

स्याद्वियोगे च' इति 'योगोऽन्तरं तेषु समानजात्योर्विभिन्नजात्योश्च पृथक् स्थितिश्च' भास्करोक्तमिदं चाऽऽचार्योक्तानुरूपमेव । समद्विघातो वर्गः । त्रिघातो घनः । चतुर्घातो वर्गवर्ग इत्यादियथेष्टघाता भवितुमर्हति । पाश्चात्यगणिते यस्य घातोऽपेक्ष्यते तन्मस्तकोपरि तद्घातज्ञापनाय तदङ्का रक्ष्यन्ते यथा य अस्य द्विघातः $= y^2 = y^1 \times y^1 = y^{1+1}$ । त्रिघातो घनः $= y^3 = y^1 \times y^1 \times y^1 = y^{1+1+1}$ ऊर्ध्वरूपदर्शनादवगम्यते यद्वारज्ञापका द्वित्र्यादयः । यदि द्विघाते विचारः क्रियते तदा $y^1 \times y^1$ अत्रैकघात एकघातेन गुण्यतेऽत्रैकैकयोर्योगो द्वयम् $y^1 \times y^1 = y^{1+1} = y^2$, एवं यथेष्टघातेषु $y^3 \times y^1 = y^{3+1} = y^4 =$ वर्गवर्गः । $y \times y \times y \times y = y^{1+1+1+1} = y^4 =$ पञ्चघातः इति ॥ ४१ ॥

अब अव्यक्तों के सङ्कलित और व्यवकलित को कहते हैं ।

हि. भा.—अव्यक्तों के वर्ग, घन, वर्गवर्ग, पञ्चघात, षष्ठघात आदि समान जातियों का योग और अन्तर होता है । भिन्न जातियों की पृथक् स्थिति ही योग और अन्तर होता है ॥ नारायणीय बीजगणितावतंस में 'वर्णेषुच समजात्योर्योगः कार्यं' इत्यादि विज्ञान भाष्य में लिखित श्लोक तथा बीजगणित में 'योगोऽन्तरं तेषु समान जात्योः' इत्यादि विज्ञान भाष्य में लिखित भास्करीय श्लोक विषय आचार्योक्त के अनुरूप ही है । समान दो अङ्कों का घात वर्ग है, त्रिघात घन है चतुर्घात वर्गवर्ग इत्यादि यथेष्टघात होते हैं । पाश्चात्य गणित में जिसका घात अपेक्षित है उसके मस्तक के ऊपर उस घात के ज्ञानार्थ उस अङ्क को रक्खा जाता है । जैसे य इसका द्विघात $= y^2 = y^1 \times y^1 = y^{1+1} =$ य का वर्ग त्रिघात घन है । $y^3 =$ य का घन $+ y^1 \times y^1 = y^1 \times y^1 \times y^1 = y^{1+1+1}$ एवं यथेष्टघात होते हैं । समान जातिक अङ्कों का योग और अन्तर होता है जैसे $३ y^1 + २ y^1 + ५ y^1 = y^1 (३ + २ + ५) = १० y^1$ एवं $१० y^1 - २ y^1 - ५ y^1 = y^1 (१० - २ - ५) = y^1 (१० - ७) = ३ y^1$ ।

यदि $१२ y^1$, इसमें $५ y^1$ इसको जोड़ते हैं वा घटाते हैं तो पृथक् स्थापन ही होता है यथा $१२ y^1 \pm ५ y^1$ एवं सर्वत्र समझना चाहिये इति ॥ ४१ ॥

इदानीमव्यक्तगुणने सूत्रमाह ।

सदृशद्विघधो वर्गस्थ्यादिवधस्तद् गतोऽन्यजातिवधः ।

अन्योऽन्यवर्णघातो भावितकः पूर्ववच्छेषम् ॥ ४२ ॥

वर्गगुणकेन भक्तं) तदा मध्योऽव्यक्तोऽर्थादव्यक्तमानं भवेदिति ॥

अत्रोपपत्तिः ।

कल्प्यते य^१ . गु + य . गु^१ = व्य पक्षौ गु भक्तौ तदा य^१ + य . $\frac{गु}{गु}$
= $\frac{व्य}{गु}$ पुनः पक्षयोः $\frac{गु}{२ गु}$ अस्य वर्गयोगेनावश्यमेवाव्यक्तपक्षो मूलदो भवति
“द्वयोर्द्वयोश्चाभिर्हतिं द्विनिष्ठीम्” —इत्यादिना तेन य^१ + य . $\frac{गु}{गु}$
+ $\frac{गु^१}{४ गु^१}$ = $\frac{गु^१ + ४ गु . व्य}{४ गु^१}$ एतौ वर्गेण गुणितौ वर्गत्वं न त्यजतोऽतो गुण-
वर्गेणचतुर्गुणेन गुणितौ जातौ ४ गु^१ . य^१ + ४ गु . गु . य + गु^१ = गु^२ + ४ गु . व्य

$= ४ गु (गु य^१ + गु^१ य) + गु^१ = गु^१ + ४ गु व्य$ एतेनाचार्योक्तं
तथा चतुराहतवर्गं समै रूपैः पक्षद्वयं गुणयेत् । अव्यक्तवर्गरूपैर्युक्तौ पक्षौ ततो
मूलमिति श्रीधराचार्योक्तसूत्रं चोपपद्यत इति ॥ ४४ ॥

अब वर्गसमीकरण को कहते हैं ।

हि. भा.—जिस पक्ष में अव्यक्त और अव्यक्त वर्ग घटाते हैं उससे इतर पक्ष में रूप
को घटाना चाहिये । इस तरह एक पक्ष में अव्यक्तवर्ग और अव्यक्त होता है, इतर पक्ष में
रूप होते हैं, वहाँ अव्यक्त मान ज्ञान कैसे होता है उसके लिए कहते हैं । चतुर्गुणित अव्यक्त
वर्ग के रूप से दोनों पक्ष को गुणा दें । दोनों पक्षों में अव्यक्त वर्ग रूप को जोड़कर दोनों
पक्ष का मूल लें । तब अन्योन्य पक्षानयन भागादि क्रिया करने पर अव्यक्त राशि मान
आ जाता है ।

उपपत्ति ।

कल्पना करते हैं $य^१. गु + य. गु^१ = व्य$ दोनों पक्षों को गु भाग देने से $य^१ + य. गु^१$
 $= व्य$ पुनः दोनों पक्षों में $गु$ इसका वर्ग जोड़ने से अवश्य ही अव्यक्त पक्ष मूलद होता है
'द्वयोर्द्वयोश्चाभिर्हतिं द्विगुणी' इत्यादि से, अतः $य^१ + य. गु^१ + गु^१ = गु^१ + ४ गु. व्य$ इन
दोनों को वर्गाङ्क से गुणा करने से वर्गत्व नहीं हटता है इसलिए चतुर्गुणित गुणवर्ग से गुणा
करने से $४ गु^१. य^१ + ४ गु. गु. य + गु^१ = गु^१ + ४ गु. व्य = ४ गु (गु. य^१ गु. य) + गु^१ = गु^१$
 $+ ४ गु. व्य$, इससे आचार्योक्त तथा 'चतुराहतवर्गसमै रूपैः पक्षद्वयं गुणयेत्' इत्यादि श्रीधरा-
चार्य सूत्र भी उपपन्न हुआ इति ॥ ४४ ॥

इदानीं प्रकारान्तरेण वर्गसमीकरणोऽव्यक्तमानमानयति ।

 & = \frac{\text{गु}}{४} + \text{गु. व्य पक्षयोर्मूल ग्रहणेन गु. य} + \frac{\text{गु}}{२} = \sqrt{\frac{\text{गु}}{२} + \text{गु. व्य पक्षयोः}} \\
 & \frac{\text{गु}}{२} \text{ हीनौ तदा गु. य} = \sqrt{\frac{\text{गु}}{२} + \text{गु. व्य} - \frac{\text{गु}}{२}} \text{ पक्षौ गु भक्तौ तदा} \\
 & \text{य} = \frac{\sqrt{\frac{\text{गु}}{२} + \text{गु. व्य} - \frac{\text{गु}}{२}}}{\text{गु}} \text{ एतेनाचार्योक्तमुपपन्नम् ॥४५॥}
 \end{aligned}$$

अब प्रकारान्तर से वर्ग समीकरण में अव्यक्त मान लाते हैं ।

हि. भा.—अव्यक्त वर्ग गुणक से गुणित रूपमें अव्यक्त गुणकार्ध वर्ग जोड़कर जो मूल हो उसमें से अव्यक्त गुणकार्ध को घटाकर अव्यक्त वर्ग गुणक से भाग देने से राशि मान होता है इति ।

उपपत्ति ।

$$\begin{aligned}
 & \text{पूर्व सूत्रोपपत्ति में } ४ \text{ गु (गु. य}^२ + \text{गु. य) + गु}^३ = \text{गु}^३ + ४ \text{ गु. व्य दोनों पक्षों को} \\
 & \text{चार से अपवर्त्तन देने से गु (गु. य}^२ + \text{गु. य) + } \frac{\text{गु}}{४} = \frac{\text{गु}}{४} + \text{गु. व्य} = \text{गु}^३. \text{ य}^२ \\
 & + \text{गु. गु. य} + \frac{\text{गु}}{४} = \frac{\text{गु}}{४} + \text{गु. व्य दोनों पक्षों के मूल ग्रहण करनेसे गु. य} + \frac{\text{गु}}{२} \\
 & = \sqrt{\frac{\text{गु}}{२} + \text{गु. व्य दोनों पक्षों में } \frac{\text{गु}}{२} \text{ घटाने से गु. य} = \sqrt{\frac{\text{गु}}{२} + \text{गु. व्य} - \frac{\text{गु}}{२}} \text{ दोनों पक्षों}
 \end{aligned}$$

को गु से भाग देने से $y = \frac{\sqrt{\frac{1}{2} \text{गु} + \text{गु. व्य} - \frac{1}{2} \text{गु}}}{\text{गु}}$ इससे आचार्योक्त उपपन्न हुआ ॥४५॥

इदानीं प्रश्नमाह ।

सैकादंशकशेषाद् द्वादशभागश्चतुर्गुणोऽष्टयुतः ।

सैकांशशेषतुल्यो यदा तदाऽहर्गणं कथय ॥४६॥

सु. भा.—अंशकशेषात् सैकाद्यो द्वादशभागः स चतुर्गुणोऽष्टयुतस्तदा सैकेनांशशेषेण यदा तुल्यो भवति तदाहर्गणं कथयेति । अत्रांशशेषप्रमाणं या १ । तदा प्रश्नालापेन

$$\frac{४(या+१)}{१२} + ८ = \frac{या+१}{३} + ८ = \frac{या+२५}{३} = या+१, \text{ अतश्छेदगमिना}$$

$$या+२५ = ३ या+३ \therefore या = ११$$

अस्मादंशशेषात् रव्यादीनामुद्दिष्टात् पूर्ववदहर्गणः स्यादिति ॥ ४६ ॥

वि. भा.—एकेन सहितादंशकशेषाद्यो द्वादशांशः स चतुर्गुणोऽष्टयुतस्तदा सैकेनांशशेषेण यदा तुल्यो भवति तदाहर्गणं कथयेति ॥

अत्रोपपत्तिः ।

$$\begin{aligned} \text{अत्रांशशेषप्रमाणं कल्प्यते} &= य \text{ तदा सूत्रोक्तालापेन } \frac{४(य+१)}{१२} + ८ \\ &= \frac{य+१}{३} + ८ = \frac{य+२५}{३} = य+१ \text{ छेदगमेन } य+२५ = ३ य+३ \text{ समशोधनेन } २ य \\ &= २२ \text{ अतः } य = \frac{२२}{२} = ११ \text{ अस्मादंशशेषाद्रव्यादीनामुद्दिष्टात् पूर्ववदहर्गणो } \\ &\text{भवेदिति ॥४६॥} \end{aligned}$$

अब अन्य प्रश्न को कहते हैं ।

हि. भा.—एक सहित अंश शेष के द्वादशांश को चार से गुणा कर आठ जोड़ने से यदि एक सहित अंश शेष के बराबर होता है तब अहर्गण प्रमाण को कहो इति ॥

उपपत्ति ।

$$\text{यहाँ कल्पना करते हैं अंश शेष प्रमाण} = य, \text{ तब सूत्रोक्त आलाप से } \frac{४(य+१)}{१२}$$

$$+ ८ = \frac{य + १}{३} + ८ = \frac{य + २५}{३} = य + १ \text{ छेदगम से } य + २५ = ३ य + ३ \text{ समशोधन से } \\ २ य = २२ \therefore य = \frac{२२}{२} = ११ \text{ इस अंश शेष से पूर्ववत् ग्रहर्गण होता है इति ॥४६॥}$$

इदानीमन्यं प्रश्नमाह ।

द्व्यूनमधिमासशेषं त्रिहृतं सप्ताधिकं द्विसङ्गुणितम् ।

अधिमासशेषतुल्यं यदा तदा युगगतं कथय ॥४७॥

सु. भा.—स्पष्टार्थम् । अत्र प्रश्नालापेन यदि अधिशेषमानं या १ ।

$$२ \left\{ \frac{या - २}{३} + ७ \right\} = \frac{२ या - ४}{३} + १४ = \frac{२ या + ३८}{३} = या$$

∴ या = ३८ । अस्मादधिमासशेषात् कुट्टकेन युगगतानयनं सुगमम् ॥ ४७ ॥

वि. भा.—अधिमासशेषं द्वाभ्यां रहितं त्रिभक्तं सप्तयुतं द्विगुणितं तदाऽ-
धिमासशेषतुल्यं भवति तदा युगगतं कथयेति ॥

अत्रोपपत्तिः ।

$$\begin{aligned} &\text{अत्र कल्प्यते अधिशेषमानम्} = य, \text{ तदा प्रश्नोक्त्या } २ \left\{ \frac{(य - २)}{३} + ७ \right\} \\ &= \frac{२ य - ४}{३} + १४ = \frac{२ य - ४ + ४२}{३} = \frac{२ य + ३८}{३} = \text{अधिशेष} = य \text{ छेदगमेन } २ य \\ &+ ३८ = ३ य \text{ अतः } य = ३८ \text{ अस्मादधिमासशेषात् कुट्टकयुक्त्या युगगतानयनं } \\ &\text{स्फुटमिति ॥४७॥} \end{aligned}$$

अब अन्य प्रश्न को कहते हैं ।

हि. भा.—अधिमास शेष में से दो घटाकर तीन से भाग देने से जो लब्ध हो उसमें सात जोड़कर द्विगुणित करने से यदि अधिमास शेष के बराबर होता है तब युगगत को कहो इति ॥

उपपत्ति

$$\begin{aligned} &\text{यहां कल्पना करते हैं अधिशेषमान} = य, \text{ तब प्रश्नानुसार } २ \left\{ \frac{(य - २)}{३} \right. \\ &\left. + ७ \right\} = \frac{२ य - ४}{३} + १४ = \frac{२ य - ४ + ४२}{३} = \frac{२ य + ३८}{३} \end{aligned}$$

= अवशेष = य छेदगम से २ य + ३८ = ३ य अतः य = ३८ इस अवशिष्ट शेष से कुट्टक युक्ति से युगगतानयन स्फुट है इति ॥ ४७ ॥

इदानीमन्यप्रश्नमाह ।

व्येकमवभावशेषं षड् द्रुतं त्रियुतमवमशेषस्य ।

पञ्चविभक्तस्य समं यदा तदा युगगतं कथय ॥ ४८ ॥

सु. भा.—स्पष्टार्थम् । अत्र प्रश्नालापेन यद्यवभावशेषं या १ ।

$$\frac{या-१}{६} + ३ = \frac{या+१७}{६} = \frac{या}{५} । छेदगमादिना या = ८५ ।$$

अस्मात् क्षयशेषात् पूर्वप्रकारेण युगगतानयनं सुगममिति ॥ ४८ ॥

वि. भा.—अवमशेषमेकेन हीनं षड्भक्तं त्रियुतं यदा पञ्चभक्तस्यावमशेषस्य तुल्यं भवति तदा युगगतं कथयेति ।

अत्रोपपत्तिः

$$\begin{aligned} \text{अत्र कल्प्यते अवमशेषमानम्} &= \text{य, तदा प्रश्नोक्त्या } \frac{य-१}{६} + ३ \\ &= \frac{य-१+१८}{६} = \frac{य+१७}{६} = \frac{\text{अवमशे}}{५} = \frac{य}{५} \text{ छेदग-} \\ \text{मेन } ५ य + ८५ &= ६ य अतः य = ८५ \text{ अस्मादवमशेषात् पूर्ववद्युगगतानयनं} \\ &\text{स्फुटमिति ॥ ४८ ॥} \end{aligned}$$

अब अन्य प्रश्न को कहते हैं ।

हि. भा.—अवशेष में से एक घटाकर छः से भाग देने से जो लब्ध हो उसमें तीन जोड़ने से यदि पाँच से विभक्त अवशेष के बराबर हो तब युगगत प्रमाण को कहते इति ।

उपपत्ति ।

$$\begin{aligned} \text{यहाँ कल्पना करते हैं अवमशेषमान} &= \text{य, तब प्रश्नानुसार } \frac{य-१}{६} \\ + ३ &= \frac{य-१+१८}{६} = \frac{य+१७}{६} = \frac{\text{अवमशे}}{५} = \frac{य}{५} \\ \text{छेदगम से } ५ य + ८५ &= ६ य अतः य = ८५ \text{ इस अवमशे से पूर्ववत् युगगतानयन} \\ &\text{स्फुट है इति ॥ ४८ ॥} \end{aligned}$$

इदानीमन्यप्रश्नमाह ।

मण्डलशेषाद् दृष्टान्मूलं व्येकं दशाहतं द्वियुतम् ।

मण्डलशेषं व्येकं भानोज्ज्वलिने कदा भवति ॥ ४६ ॥

सु. भा.—भानोर्मण्डलशेषाद् भगणशेषात् । शेषं स्पष्टार्थम् । अत्र प्रश्नालापेन यदि भगणशेषप्रमाणं $य^३ + २$ । $१० (य - १) + २ = १०$ या $- ८ = य^३ + २ - १ = य^३ + १$ पक्षान्तरानयनेन $य^३ - १०$ या $= - ९$

वर्गसमीकरणविधिना $य^३ - १०$ या $+ २५ = २५ - ९ = १६$

अतः या $- ५ = \pm ४$ \therefore या $= ९$ वा १ ,

एवमत्र बीजयुक्तितो द्विविधं मानमुत्पद्यते यावत्तावत्स्तद्वशेनोत्थापनेन भगणशेषमानम् $= ८३$ वा, ३ । अत्र चतुर्वेदाचार्येण प्रथममानमेव गृहीतम् । कस्माद्भगणशेषात् पूर्वकुट्टकविधिना ज्ञेकधा ऽहर्गणो भवति स चाभीष्टवारे ग्राह्यः ॥ ४९ ॥

वि. भा.—भानोः (सूर्यस्य) मण्डल शेषात् (भगणशेषात्) द्वाभ्यां हीनान्मूलं यत्तद् व्येकं दशगुणितं द्वियुतं व्येकं मण्डलशेषतुल्यं बुधदिने कदा भवतीति ॥

अत्रोपपत्तिः ।

अत्र कल्प्यते भगणशेषप्रमाणम् $= य^३ + २$ तदा प्रश्नोक्त्या $(\sqrt{य^३ + २} - २ - १) १० + २ = (य - १) १० + २ = १०$ य $- १० + २ = १०$ य $- ८ =$ भगणशेष $- १ = य^३ + २ - १ = य^३ + १$ समशोधनादिना $य^३ - १०$ य $= - ९$ पमयोः २५ योजनेन $य^३ - १०$ य $+ २५ = २५ - ९ = १६$ मूल ग्रहणेन य $- ५ = \pm ४$ अतः य $= ५ \pm ४$ अर्थात् य $= ९$, य $= १$ आभ्यां भगणशेषस्योत्थापनेन ८३ , ३ अस्माद् भगणशेषात् कुट्टकयुक्त्या ज्ञेकधा ऽहर्गणो भवति सोऽभीष्टदिने ग्रहीतव्य इति ॥ ४९ ॥

अब अन्य प्रश्न को कहते हैं ।

हि. भा.—सूर्य के भगण शेष में से दो घटा कर जो मूल होता है उसमें से एक घटा कर दस से गुणाकर दो जोड़ कर यदि एक हीन भगणशेष तुल्य होता है तो बुध दिन में कब होगा इति ।

उपपत्ति ।

यहां कल्पना करते हैं भगण शेष प्रमाण $= य^३ + २$ तब प्रश्नानुसार

$(\sqrt{y^2 + 2} - 2 - 1) 10 + 2 = (y - 1) 10 + 2 = 10y - 10 + 2 = 10y - 8 = \text{भगणशे} - 1 = y^2 + 2 - 1 = y^2 + 1$
 सम शोधनादि से $y^2 - 10y = -8$ दोनों पक्षों में २५ जोड़ने से $y^2 - 10y + 25 = 25 - 8 = 17$ मूलग्रहण से $y - 5 = \pm 4$ अतः $y = 5 \pm 4$ अर्थात् $y = 9, y = 1$ इन दोनों से भगण शेष को उत्थापन देने से ८३, ३ इस भगणशेष से कुछक युक्ति से अनेकधा ग्रहण होता है वह अभीष्ट दिन में ग्रहण करना चाहिये इति ॥ ४६ ॥

इदानीमन्यप्रश्नमाह ।

अधिमासशेषपादात् श्युनाद्वर्गो ऽधिमासशेषसमः ।

अवमावशेषतो वाऽवमशेषसमः कदा भवति ॥ ५० ॥

सु. भा.—स्पष्टार्थम् । यद्यधिमासशेषस्य क्षयशेषस्य च प्रमाणां या १ तदा प्रश्नालापेन ।

$$\left(\frac{y}{4} - 3\right)^2 = \left(\frac{y^2 - 12}{4}\right)^2 = \frac{y^4 - 24y^2 + 144}{16} = y^2 \text{ तत उक्तवत्}$$

$$y^4 - 40y^2 = -144,$$

$$y^4 - 40y^2 + 400 = 400 - 144 = 256$$

$$\therefore y - 20 = \pm 16 \text{ ततः } y = 36 \text{ वा } 4$$

अत्र यदि रूपत्रयतोऽधिशेषस्य क्षयशेषस्य वा पादः शोध्यते शेषश्च धनात्मकोऽपेक्षितस्तदा द्वितीयं मानमेव ग्राह्यम् । ततोऽधिशेषादवमावशेषाच्च कुछकविधिना कल्पगतानयनं सुगममिति ॥ ५० ॥

वि. भा.—अधिमासशेषचतुर्थांशात् त्रिहीनात् वर्गोऽधिशेष समः । वा अवमावशेषतोऽवमशेषतुल्यः कदा भवतीति ॥

अत्रोपपत्तिः ।

$$\text{कल्प्यते अधिमासशेषस्य मानम्} = y, \text{ तदा प्रश्नोक्त्या } \left(\frac{y}{4} - 3\right)^2$$

$$= \text{अधिशेष} = y = \left(\frac{y - 12}{4}\right)^2 = \frac{y^2 - 24y + 144}{16}$$

$$= y \text{ छेदगमेन } y^2 - 24y + 144 = 16y \text{ समशोधनेन } y^2 - 40y = -144$$

$$\text{पक्षयोः } 400 \text{ योजनेन } y^2 - 40y + 400 = 400 - 144 = 256 \text{ मूलग्रहणेन } y - 20 = \pm 16 \therefore y = 36, y = 4$$

एवमेवावभावशेषतः क्रिया कार्या तदा अवमशेषज्ञानं भवेत् । अत्र यदि रूपत्रयतोऽधिशेषस्यावमशेषस्य वा चतुर्थांशः शोध्यते शेषश्च घनात्मकोऽपेक्षितस्तदा द्वितीयमानमेव ग्राह्यम् । ततोऽधिशेषादवमशेषाच्च कुट्टकेन कल्पगतानयनं स्फुटमेवेति ॥ ५० ॥

इत्येकवर्णसमीकरणम्

अब अन्य प्रश्न को कहते हैं ।

हि. भा.—अधिमास शेष चतुर्थांश में से तीन घटाकर वर्ग करते हैं वह अधिशेष के बराबर होता है वा अवमशेष चतुर्थांश में से तीन घटाकर वर्ग करते हैं वह अवमशेष के बराबर कब होता है इति ।

उपपत्ति ।

कल्पना करते हैं अधिमास शेष प्रमाण = य, तब प्रश्नानुसार $\left(\frac{य}{४} - ३\right)^२$
 $= \text{अधिसे} = य = \left(\frac{य - १२}{४}\right)^२ = \frac{य^२ - २४ य + १४४}{१६} = य$ छेदगम से $य^२ - २४ य + १४४ = १६ य$ समशोधन से $य^२ - ४० य = -१४४$ दोनों पक्षों में ४०० जोड़ने से $य^२ - ४० य + ४०० = ४०० - १४४$ मूलग्रहण से $य - २० = \pm १६$ अतः $य = २० \pm १६$ अर्थात् $य = ३६, य = ४$, इसी तरह अवभावशेष ज्ञान होता है । यहां यदि तीन में से अधिशेष के चतुर्थांश वा अवमशेष के चतुर्थांश को घटाते हैं तथा शेष घनात्मक अपेक्षित हो तब द्वितीय मान ही ग्रहण करना चाहिये । तब अधिशेष अवमशेष से कुट्टक युक्ति से कल्पगतानयन स्फुट ही है इति ॥ ५० ॥

इति एक-वर्ण-समीकरण समाप्त हुआ ।

अनेकवर्णसमीकरणबीजम्

इदानीमनेकवर्णसमीकरणमाह ।

आद्याद्वर्णादन्यान् वर्णान् प्रोह्याद्यमानमाद्यहतम् ।

सदृशच्छेदावसकृद् द्वौ व्यस्तौ कुट्टको बहुषु ॥ ५१ ॥

सु. भा. — आद्याद्वर्णाद्येऽन्ये वर्णास्तानितरस्मात् पक्षात् प्रोह्य शेषमाद्येनाऽऽद्यवर्णगुणकेन हृतमाद्यमानमाद्योन्मितिः स्यात् । एकस्य वर्णस्योन्मितीनां बहुत्वे द्वौ द्वौ पक्षौ व्यस्तावन्योन्यहरगुणनोद्भूतौ सदृशच्छेदौ कृत्वाऽसकृत् तदन्यवर्णोन्मितिः साध्या । एकपक्षस्य हरेणापरपक्षीयौ लवहरौ सङ्गुण्य छेदगमं च विधाय 'आद्याद्वर्णादन्यान्' इत्यादिना तदन्यवर्णमानेयम् । एवमसकृत् कर्म कार्यम् । अन्ते बहुषु वर्णेष्वज्ञातेषु कुट्टको भवति । तत्र कुट्टकोन्मितिः साध्येत्यर्थः । भास्करानेकवर्णसमीकरणमेतदनुरूपमेव ॥ ५१ ॥

वि. भा. — आद्याद्वर्णादन्ये ये वर्णास्तानितरस्मात् पक्षात् प्रोह्य शेषमाद्यवर्णगुणकेन भक्तमाद्यमानं भवति एकस्य वर्णस्योन्मितीनां बहुत्वे द्वौ द्वौ पक्षौ व्यस्तौ (परस्परहरगुणनोद्भूतौ) सदृशहरौ कृत्वाऽसकृत् तदन्यवर्णोन्मितिः साध्या । एकपक्षस्य हरेणापरपक्षीयावशहरौ संगुण्य छेदगमं च कृत्वा 'आद्याद्वर्णादन्यान्' इत्यादिना तदन्यवर्णमानेतव्यम् । एवमसकृत्कर्मकार्यम् । अन्ते बहुषु वर्णेष्वज्ञातेषु कुट्टको भवति । तत्र कुट्टकेन मानं साध्यमिति ॥ सिद्धान्तशेखरे "आद्यं वर्णं प्रोह्य पक्षात्कुतोऽपि त्यक्त्वा शेषानन्यतश्चाद्यभक्ते । प्राहुस्तज्ज्ञास्तामितीरादुरेवं कार्यातुल्यच्छेदनाभिश्च भूयः ॥ एकोन्माने कुट्टकः स्यात् प्रमाणं तान्यन्यानि स्युः प्रतीपात्ततश्च । कुट्टाकारे भाज्यवर्णस्य मानं तस्मिन् लब्धं हारवर्णस्य चाहुः" । श्रीपत्युक्तमिदमनेकवर्णसमीकरणमाचार्यैर्नूत्कारूपमेवास्ति, बीजगणिते "आद्यं वर्णं शोधयेदन्यपक्षादन्यान् रूपाप्यन्यतश्चाद्यभक्ते । पक्षेऽन्यस्मिन्नाद्यवर्णोन्मितिः स्याद्वर्णस्यैकस्योन्मितीनां बहुत्वे ॥ समीकृतच्छेदगमे तु ताभ्यस्तदन्यवर्णोन्मितयः प्रसाध्याः । अन्त्योन्मितौ कुट्टविधेर्गुणाप्तौ ते भाज्य तद्भाजक वर्णमाने ॥ अन्येऽपि भाज्ये यदि सन्ति वर्णास्तन्मानमिष्टं परिकल्प्य साध्ये । विलोमकोत्थापनतोऽन्यवर्णमानानि भिन्नं यदि मानमेवम् "भूयः कार्यः कुट्टकोऽत्रान्त्यवर्णं तेनोत्थाप्योत्थापयेद् व्यस्तमाद्यान् ॥" अनेन भास्कराचार्येणाचार्यैर्नूत्कार्यं वा स्पष्टीकृत्योक्तं व्याख्यातं चेति ॥ ५१ ॥

अब अनेक वर्ण समीकरण को कहते हैं ।

हि. भा.—प्रथम वर्ण से अन्य जो वर्ण हैं उनको इतर (दूसरे) पक्ष में से घटा कर शेष को प्रथम वर्ण गुणक से भाग देने से प्रथम वर्ण का मान होता है । एक वर्ण के अनेक मान रहने से दो दो पक्षों के समान हर कर के असकृत् (बार बार) अन्व वर्ण का मान साधन करना चाहिए । एक पक्ष के हर से दूसरे पक्ष के अंश और हर को गुणा कर और छेदगम कर के 'आद्याद्वर्णादन्यान्' इत्यादि आचार्योक्ति से अन्य वर्ण का मान लाना चाहिये । एवं असकृत् कर्म करना चाहिये । अन्त में बहुत वर्णों के अज्ञात रहने से कुछ होता है अर्थात् वहां कुछ से मान साधन किया जाता है ॥ सिद्धान्त शेखर में "आद्यं वर्णं प्रोह्य पक्षात्कु-तोऽपि" इत्यादि विज्ञान भाष्य में लिखित श्रीपतिप्रकार आचार्योक्त प्रकार के अनुरूप ही है । तथा बीजगणित में "आद्यं वर्णं शोधयेदन्यपक्षादन्यान् रूपाप्यन्यतश्चाद्यभक्तं" इत्यादि विज्ञान भाष्य में लिखित पद्यों से भास्कराचार्य ने आचार्योक्त प्रकार को वा श्रीपत्युक्त प्रकार को स्पष्टीकरणपूर्वक कहा है और व्याख्या की है इति ॥ ५१ ॥

इदानीं प्रश्नानाह ।

गतभगणयुताद् द्युगणात् तच्छेषयुतात् तदैक्यसंयुक्तात् ।

तद्योगाद् द्युगणं वा यः कथयति कुट्टकज्ञः सः ॥ ५२ ॥

सु. भा.—अहर्गणादिष्टग्रहस्य गतभगणयुताद्योऽहर्गणं कथयति । वाऽहर्गणात् तस्य गतभगणस्य शेषयुताद्योऽहर्गणं कथयति । वाऽहर्गणात् तयोर्गतभगणभगण-शेषयोर्यदैक्यं तेन संयुक्ताद्योऽहर्गणं कथयति । वा तयोर्गतभगणभगणशेषयोर्यो-गाद्योऽहर्गणं कथयति स एव कुट्टकज्ञः ।

प्रथमप्रश्नेऽहर्गणमानं या १ । भगणशेषमानं का १

ततोऽनुपातेन गतभगणाः = $\frac{\text{ग्रभ. या} - \text{का}}{\text{ककु}}$

∴ ग्रभ + या = $\frac{\text{या (ग्रभ + ककु)} - \text{का}}{\text{ककु}}$ = यो ।

ततः का = $\frac{\text{या (ग्रभ + ककु)} - \text{ककु. यो}}{१}$

कुट्टकेन यावत्तावन्मानं सुगमम् ।

द्वितीय प्रश्नेऽहर्गणः = या १ । गतभगणाः = का ।

भगणशेषम् = ग्रभ + या - ककु. का

∴ भशे + या = या (ग्रभ + १) - ककु. का = यो

∴ का = $\frac{\text{या (ग्रभ + १)} - \text{यो}}{\text{ककु}}$ । अतः कुट्टकेन यावत्तावन्मानं सुगमम् ।

तृतीय प्रश्ने ऽहर्गणः=या १ । गतभगणाः=का । ततो गतभगणशेषम्=
ग्रभ. या—ककु. का

अतः भशे + या + ग्रभ = या (ग्रभ + १) — का (ककु — १) = यो

∴ का = $\frac{\text{या (ग्रभ + १) — यो}}{\text{ककु — १}}$ । कुट्टकेन याक्तावन्मानं सुगमम् ।

चतुर्थ प्रश्ने ऽहर्गणः=या । गतभगणाः=का ।

भगणशेषम्=ग्रभ. या—ककु. का

∴ ग्रभ + भशे = ग्रभ. या—ककु. का + का = ग्रभ. या—का (ककु—१)
= यो । अतः का = $\frac{\text{ग्रभ. या — यो}}{\text{ककु — १}}$ । कुट्टकेन याक्तावन्मानं सुगमम् ॥ ५२ ॥

अब अन्य दो प्रश्नों को कहते हैं ।

वि. भा.— किसी इष्ट दिन में रवि का अंशमान अंशशेष के बराबर होता है वा कलातुल्य कलाशेष होता है इसका उत्तर वर्ष पर्यन्त करते हुए व्यक्ति गणक कहलाते हैं इति ॥ ५७ ॥

उपपत्ति ।

कल्पना करते हैं अहर्गण प्रमाण = य, गत भगण = क, तब पूर्ववद् भगणशेष =

ग्रभ. य—ककु. क इसको बारह से गुणा कर कल्पकुदिन से भाग देने से लब्धि = न तद्गुणित हर को भाज्य में से घटाने से रागिशेष = १२ ग्रभ. य—१२ ककु. क—ककु. न इसको तीस से गुणाकर कल्पकुदिन से भाग देने से लब्धि = प, तद्गुणित हर को भाज्य में से घटाने से अंशशेष = ३६० ग्रभ. य—३६० ककु. क—३० ककु. न—ककु. प = प समयोजन से ३६० ककु. क + ३० ककु. न + प (ककु + १) = ३६० ग्रभ. य, अतः

३६० ककु. क + ३० ककु. न + प (ककु + १) = य। यहां भाज्य में तीन वर्ण हैं, दो वर्णों ३६० ग्रभ

का मान इष्ट कल्पना कर कुट्टक से य मान सुगमता ही से होता है। एवं अंश शेष को साठ से गुणाकर कल्पकुदिन से भाग देने से लब्धि कलामान ल कल्पना कर तद्गुणित हर को भाज्य में से घटाकर कला शेष से समीकरण कर वहां भाज्य में तीनों वर्णों के मान को इष्ट कल्पना कर य मान जानना चाहिये इति ॥५७॥

इदानीमन्यान् प्रश्नानाह ।

अवभावशेषमवमैरधिमासकशेषमधिमासैः ।

इष्टयुतोत्तं तुल्यं कुर्वन्नावत्सराद् गणकः ॥५८॥

सु. भा.—इष्टाङ्केन युतमूनं वाऽवभावशेषमवमैस्तुल्यं तथेष्टाङ्केन युतमूनं वाऽधिमासशेषमधिमासैस्तुल्यमस्तीत्यस्योत्तरमावत्सरात् कुर्वन्नपि गणकः ।

अत्राहर्गणमानम् = या १ । गतावमानि = का १ । तदाऽवभावशेषम् = क्षदि. या—ककु. का । ततः प्रश्नालापेन क्षदि. या—ककु. का ± इ = का

∴ या = $\frac{(ककु + १) का \mp इ}{क्षदि}$ । अतः कुट्टकेन यावत्तावन्मानं सुगमम् ।

द्वितीयप्रश्ने गतसौरमानम् = या १ । गताधिमासाः = का । तदाऽधिमास-शेषम् = अधिमा. या—कसौदि. का । ततः प्रश्नालापेन—

अधिमा. या—कसौदि. का ± इ = का

∴ या = $\frac{(कसौदि + १) का \mp इ}{अधिमा}$ । अतो यावत्तावन्मानं सुगमम् ।

अस्योत्तरं गतेन्दुदिनमानं यावत्तावत्कल्प्यते तदाऽपि भवतीति ॥ ५८॥

वि. भा.—इष्टाङ्केन युतं हीनमवभावशेषमवमैस्तुल्यं तथेष्टाङ्केन युतं हीनमधिमासशेषमधिमासैस्तुल्यमस्तीत्येतदुत्तरमावत्सरात् (वर्ष पर्यन्तं) कुर्वन्नपि गणकोऽस्तीति ॥

अत्रोपपत्तिः ।

कल्प्यते अहर्गणप्रमाणम् = य । गतावमानि = र तदाऽनुपातेन $\frac{अवम . य}{ककु}$

$= \text{गतावम} + \frac{\text{अवमशे}}{\text{ककु}} = \text{र} + \frac{\text{अवमशे}}{\text{ककु}}$ छेदगमेन अवम . य = ककु . र + अवमशे
 समशोधनेन अवम . य — र . ककु = अवमशे, ततः प्रश्नोक्त्या अवम . य — र . ककु
 $\pm \text{इ} = \text{र पक्षयोः र . ककु योजनेन अवम . य} \pm \text{इ} = \text{र} + \text{र . ककु} = \text{र} (1 + \text{ककु})$
 समशोधनेन अवम . य = र $(1 + \text{ककु}) \mp \text{इ}$ अतः $\frac{\text{र} (1 + \text{ककु}) \pm \text{इ}}{\text{अवम}} = \text{य}$, अत्र
 कुट्टकेन य मानं सुखेन विदितं भवेत् ॥

द्वितीय प्रश्ने कल्प्यते गतसौरप्रमाणम् = य । गताधिमासः = र, तदाऽनु-
 पातेन $\frac{\text{अधिमास . य}}{\text{कसौ}} = \text{गताधिमास} + \frac{\text{अधिशे}}{\text{कसौ}} = \text{र} + \text{अधिशे}$, छेदगमेन अधिमा.
 य = कसौ . र + अधिशे, समशोधनेन अधिमा . य — कसौ . र = अधिशे प्रश्नोक्त्या
 अधिमा . य — कसौ . र $\pm \text{इ} = \text{र पक्षयोः कसौ . र योजनेन अधिमा . य} \pm \text{इ} = \text{र}$
 $+ \text{कसौ . र} = \text{र} (1 + \text{कसौ})$ समशोधनेन अधिमा . य = र $(1 + \text{कसौ}) \mp \text{इ}$ अतः
 $\frac{\text{र} (1 + \text{कसौ}) \mp \text{इ}}{\text{अधिमा}} = \text{य}$ अत्र कुट्टकेन य मानं सुखेन विदितं भवेदिति ॥५८॥

अब अन्य प्रश्नों को कहते हैं ।

हि. भा.—इष्टाङ्क से युत वा हीन अवम शेष अवम के बराबर है तथा इष्टाङ्क से
 युत वा हीन अधिमास शेष अधिमास के बराबर है इसका उत्तर वर्ष पर्यन्त करते हुए व्यक्ति
 गणक है इति ॥

उपपत्ति ।

कल्पना करते हैं अहर्गण प्रमाण = य । गतावम = र, तब अनुपात से $\frac{\text{अवम . य}}{\text{ककु}}$
 $= \text{गतावम} + \frac{\text{अवमशे}}{\text{ककु}} = \text{र} + \frac{\text{अवमशे}}{\text{ककु}}$ छेदगम से अवम . य = ककु . र + अवमशे समशोधन से
 अवम . य — र . ककु = अवमशे, तब प्रश्नालाप से अवम . य — र . ककु $\pm \text{इ} = \text{र}$ दोनों पक्षों
 में र . ककु जोड़ने से अवम . य $\pm \text{इ} = \text{र} + \text{र . ककु} = \text{र} (1 + \text{ककु})$ समशोधन से अवम . य
 $= \text{र} (1 + \text{ककु}) \mp \text{इ}$ अतः $\frac{\text{र} (1 + \text{ककु}) \mp \text{इ}}{\text{अवम}} = \text{य}$, यहां कुट्टक से सुगमता से य मान
 विदित हो जायगा ।

द्वितीय प्रश्न में कल्पना करने हैं गत और प्रमाण = य । गताधिमास = र तब
 अनुपात से $\frac{\text{अधिमा . य}}{\text{कसौ}} = \text{गताधिमास} + \frac{\text{अधिशे}}{\text{कसौ}} = \text{र} + \frac{\text{अधिशे}}{\text{कसौ}}$ छेदगम से अधिमा . य
 $= \text{कसौ . र} + \text{अधिशे}$, समशोधन से अधिशे = अधिमा . य — कसौ . र अब प्रश्नालाप से

अधिमा . य—कसौ . $r \pm d = r$ दोनों पक्षों में ककु—र जोड़ने से अधिमा . $y \pm d = r + कसौ . r = r (1 + कसौ)$ समशोधन से अधिमा . $y = r (1 + कसौ) \pm d$ अतः $\frac{r (1 + कसौ)}{अधिमा} \pm d = y$ यहां कुट्टक से सुगमता पूर्वक य मान विदित होगा इति ॥५८॥

इदानीमन्यं प्रश्नमाह ।

निश्छेदभागहारो भानोः सप्ततिगुणोऽशशेषोः ।

शुध्यत्ययुतविभक्तः कुर्वन्नावत्सराद् गणकः ॥५९॥

सु. भा.—निश्छेदभागहारो दृढकुदिनानि । शेषं स्पष्टार्थम् । ५५ आर्या-प्रश्नोत्तरे यदि अ=चक्रभा. इग्रभ, तदा तेनैव विधिनांशशेषम्=अ . या—दृककु. का=नी । ततः प्रश्नालापेन $\frac{७० \text{ दृककु. अ. या } + \text{दृककु. का}}{१००००}$ अयं निरग्रः ।

$$= \frac{७० \text{ दृककु.—नी}}{१००००} ।$$

ततः कुट्टकेन ऋणभाज्यविधिना नीलकमानं सुगमम् ॥ ५९ ॥

इत्यनेकवर्णसमीकरणबीजम् ।

वि. भा.—भानोः (सूर्यस्य) निश्छेदभागहारः (दृढकुदिनानि) सप्तत्यागुणः, अंशशेषेण हीनः, अयुतविभक्तः शुध्यति, एतदुत्तरं वर्षपर्यन्तं कुर्वन् गणकोऽस्तीति ॥

अत्रोपपत्तिः ।

५५ सूत्रोपपत्तौ रविभगणांशाः = चक्रभा . रविभ = र तेनैव विधिनांशशेषम् = र . य — दृककु . क = न ततः प्रश्नोक्त्या $\frac{७० \times \text{दृककु.—अंशशेष}}{१००००}$

$$= \frac{७० \times \text{दृककु.—र. य} + \text{दृककु. क}}{१००००} = \frac{७० \times \text{दृककु.—न}}{१००००} \text{ अयं निःशेषः । ततः}$$

कुट्टकेन ऋणभाज्यरीत्या न मानज्ञानं सुलभम् ॥५९॥

इत्यनेकवर्णसमीकरणबीजम्

अब अन्य प्रश्न को कहते हैं ।

हि. भा.—सूर्य के दृढकुदिन को सत्तर से गुणाकर अंश शेष बढ़ाकर एक अयुत से भाग देने से निःशेष होता है इसका उत्तर वर्ष पर्यन्त करते हुए व्यक्त गणक है इति ॥

उपपत्ति ।

५५ सूत्र की उपपत्ति में रवि भगणांश = चभा. रविभ = र, उसी विधि से
 अंशशेष = र . य — हककु . क = न, तब प्रश्नोक्ति से $\frac{७० \text{ हककु} - \text{अंशशे}}{१००००}$
 $\frac{७० \text{ हककु} - \text{र. य} + \text{हककु. क}}{१००००} = \frac{७० \text{ हककु} - \text{न}}{१००००}$ यह निःशेष है तब कुट्टक से ऋण भाज्य
 विधि से न मान ज्ञान सुगम ही है इति ॥५६॥

अनेकवर्गसमीकरणबीज समाप्त हुआ ।

भावितबीजम्

अथ भावितमुच्यते तत्र सूत्रम् ।

अत्रोपपत्तिः । पक्षान्तरादिना कल्प्यते समौ पक्षौ

अ. या. का = क. या + ख . का + ग

$$\therefore \text{याका} = \frac{\text{क}}{\text{अ}} \text{या} + \frac{\text{ख}}{\text{अ}} \text{का} + \frac{\text{ग}}{\text{अ}}$$

ततो 'भावितं पक्षतोऽभीष्टात् त्यक्त्वा वर्णौ सरूपकौ' इत्यादि भास्कर-विधिना $\frac{\text{इ}}{\text{अ}}$ इतीष्टं प्रकल्प्य फलं = $\frac{\text{क. ख} + \text{अ. ग}}{\text{अ. इ}}$ । यतः केवलं संयोजनेन

$$\text{या} = \frac{\text{ख}}{\text{अ}} + \frac{\text{क. ख} + \text{अ. ग}}{\text{इ}} = \frac{१}{\text{अ}} \left(\text{ख} + \frac{\text{क. ख} + \text{अ. ग}}{\text{इ}} \right) = \frac{\text{ख} + \text{आप्ति}}{\text{अ}}$$

$$\text{का} = \frac{\text{क}}{\text{अ}} + \frac{\text{इ}}{\text{अ}} = \frac{\text{क} + \text{इ}}{\text{अ}} \text{ । अत उपपन्नम् ।}$$

विशेषाश्च भास्करबीजतोऽवगम्याः । तत्र मत्कृतोपपत्तिश्च तद्विपर्यायां विलोक्या ॥ ६० ॥

वि. भा.—भावितकस्य (भावित गुणकस्य) रूपाणां च गुणना (वधः) व्यक्तगुणकयोर्वधेन सहिता, इष्टेन भक्ता लब्धिग्राह्या, इष्टलब्ध्योर्मध्ये योऽधिकः सोऽल्पेऽव्यक्तगुणकेऽल्पश्चाधिकेऽव्यक्तगुणके क्षेप्यः, एवं द्वौ राशी भवतः, तौ भावितकभक्तौ (भावितगुणकेन भक्तौ) तदा विपरीतमव्यक्तमानं स्यात् ॥

अत्रोपपत्तिः ।

यदि इ य + इ. क + रु = य. क, यत्र य, क माने अभिन्नो स्तः । अत्र यदि य = न + इ, क = प + इ तदा य . क = (न + इ) (प + इ) = इ (न + इ) + इ (प + इ) + रु वा न. प + इ. न + इ. प + इ. इ = इ. न + इ. इ + इ. प + इ. इ + रु समशोधनेन न . प = इ. इ + रु अतः $\frac{\text{इ. इ + रु}}{\text{न}} = \text{प}$, अत्रा (न) स्य तथाऽभिन्नं मानं कल्प्यं यथा प मानमभिन्नं स्यात् । ततो न, प मानाभ्यामुत्थापनेन य, क माने भवेताम् । यदि इ. इ + रु इदं घनात्मकं भवेत्तदा (न) ऽस्य ऋणमानकल्पने (प) ऽस्यापि ऋणमानमागमिष्यति तदा य = इ — न क = इ — प, एतेनोपपन्नमाचार्योक्तम् । सिद्धान्तशेखरे 'जह्यात् पक्षादेकतो भावितानि वर्णां रूपाण्यन्यतो वर्णांघातः । क्षिप्तोरूपैस्ताडिते भाविते च भक्त्येष्टेन प्राप्तिहारो नियोज्यौ ॥ ज्येष्ठा-ल्पाभ्यां वर्णांकाभ्यां यथेच्छं व्यत्यासाद्वा भाविताप्तौ च वर्णौ । स्यातामेवं स्वस्व-वर्णौ त्वभीष्टमर्नैः कर्मतत्प्रमाणस्य कुर्यात्' श्री पत्युक्तं च समुपपद्यते । श्रीपत्यु-क्तमेव भास्करेण बीजगणिते "भावितं पक्षतोऽभीष्टात्यक्त्वा वर्णौ सरूपकौ । अन्यतोभाविताङ्केन ततः पक्षौ विभज्य च ॥ वर्णाङ्काहतिरूपैक्यं भक्त्येष्टेनेष्ट-तत्फले । एताभ्यां संयुतादूनौ कर्त्तव्यौ स्वेच्छया च तौ ॥ वर्णाङ्कौ वर्णयोर्मनि ज्ञातव्ये ते विपर्ययात्" इत्यनेन स्फुटमुक्तमिति ॥ ६० ॥

अब भावित बीज को कहते हैं ।

हि. भा.—भावित के गुणक और रूपों के घात में अव्यक्त गुणकद्वयवच को जोड़ कर इष्ट से भाग देकर लब्धिग्रहण करना चाहिए । इष्ट और लब्धि में जो अधिक हो उसको अल्प अव्यक्त गुणक में जोड़ना और अल्प को अधिक अव्यक्तगुणक में जोड़ना और, इस तरह दो राशिमान होता है उन दोनों राशियों को भावित गुणक से भाग देने से विपरीत अव्यक्तमान होता है अर्थात् प्रथम अव्यक्त गुणक में जोड़ने से जो होता है वह द्वितीय अव्यक्त का मान होता है, तथा द्वितीय अव्यक्त गुणक में जोड़ने से जो होता है वह प्रथम अव्यक्त का मान होता है इति ॥

उपपत्ति ।

यदि इ. य + इ. क + रु = य . क जिसमें य, और क का मान अभिन्न है, यदि य = न + इ, क = प + इ तब य . क = (न + इ) (प + इ) = इ (न + इ) + इ (प + इ) + रु वा न . प + इ . न + इ . प + इ. इ = इ . न + इ. इ + इ. प + इ. इ रु समशोधन से

न.प=इ.इ+रू अतः $\frac{इ. इ+रू}{न} = प$, यहाँ 'न' का ऐसा अभिन्न मान कल्पना करना चाहिए जिससे 'प' मान अभिन्न हो; तब न, प मानों से उत्पादन करने से य, क, के मान होंगे। यदि इ. इ+रू यह घनात्मक है तब 'न' की ऋणात्मक मानकल्पना करने से 'प' का भी ऋणात्मक मान आयेगा। तब य=इ-न, क=इ-प इससे आचार्योक्त उपपन्न हुआ ॥ सिद्धान्तशेखर में 'जह्यात् पक्षादेकतो भावितानि' इत्यादि संस्कृतोपपत्ति में लिखित श्रीपत्युक्त भी उपपन्न होता है। बीज गणित में 'भावितं पक्षतोऽभीष्टात्' इत्यादि संस्कृतोपपत्ति में लिखित पद्यों से भास्कराचार्य ने श्रीपत्युक्त ही को स्फुट कहा है इति ॥ ६० ॥

इदानीं प्रश्नमाह ।

भानोराश्यंशवधात् त्रिचतुर्गुणितान् विशोध्य राश्यंशान् ।

नर्वति दृष्ट्वा सूर्यं कुर्वन्नावत्सराद् गणकः ॥ ६१ ॥

सु० भा०—भानोः सूर्यस्य यद्वाशिमानं यच्चांशमानं तयोर्वधात् त्रिगुणान् राशीन् चतुर्गुणानंशांश्च विशोध्य शेषं नर्वति दृष्ट्वाऽऽवत्सरात् सूर्यं कुर्वन्नपि स गणक इति ।

अत्र राशिमानम् = या १। अंशमानम् = का १। ततः प्रक्षालापानुसारेण—

या. का—३ या—४ का=९०

∴ मा. का=३ या+४ का+९०

∴ वर्गाङ्काहतिरूपैक्यम् = $३ \times ४ + ९० = १०२$ । इष्टम् = ६।

फलम् = $\frac{१०२}{६} = १७$ । ततो या=१०। का=२० ॥ ६१ ॥

वि. भा.—भानोः (सूर्यस्य) राश्यंशयोर्वधात् त्रिगुणितान् राशीन् चतुर्गुणानंशांश्च विशोध्य शेषं नर्वति दृष्ट्वा सूर्यमावत्सरात् (वर्षपर्यन्तं) कुर्वन्नपि स गणक इति ।

अत्र कल्प्यते राशिप्रमाणम् = य, अंश प्रमाणम् = र तदा प्रश्नोक्त्या य. र—३ य—४ र=९० समयोजनेन य. र=९०+३ य+४ र, ततो वर्गाङ्काहतिरूपैक्यम् = $३ \times ४ + ९० = १०२$ इष्टम् = ६

$\frac{१०२}{६} = १७ = \text{फलम्}। अतो य= १०, र=२० ॥ ६१ ॥$

अब प्रश्न की कहते हैं ।

हि. भा.—सूर्य की राशि और अंश के घात में से त्रिगुणित राशि चतुर्गुणित अंश

को घटाने से नब्बे होता है तब एक वर्ष पर्यन्त सूर्य का साधन करते हुए भी वह गणक है इति ॥ ६१

यहां कल्पना करते हैं राशि प्रमाण = य । अंश प्रमाण = र, तब प्रश्नानुसार य . र
— ३ य — ४ र = ६० दोनों पक्षों में ३ य + ४ र जोड़ने से य.र = ६० + ३ य + ४ र तब
'वर्णाङ्काहतिरूपैक्य' मित्यादि भास्करोक्त सूत्र से वर्णाङ्काहतिरूपैक्य = ३ × ४ + ६० = १०२,
इष्ट = ६ ∴ $\frac{१०२}{६} = १७ = \text{फल}$ । अतः य = १०, र = २० इति ॥ ६१ ॥

इदानीं भाविते प्रकारान्तरमाह ।

भावितके यद्घातो विनष्टवर्णेन तत्प्रमाणानि ।

अब वर्गप्रकृति आरम्भ किया जाता है ।

हि. भा.—इष्ट वर्ग को गुणक से गुणा कर किसी अन्य इष्ट को युत वा हीन करने से जो होता है वह अन्त्य संज्ञक (ज्येष्ठ) है । उसको अधोऽधः दो स्थानों में रखना । जिस इष्ट (कनिष्ठ) का वर्ग किया गया है आद्य संज्ञक (कनिष्ठ) है उस को भी अधोऽधः दो स्थानों में स्थापन करना । जिसको जोड़ने वा घटाने से मूल लाभ हुआ है वह क्षेपसंज्ञक

वा शोधक संज्ञक है। उसको भी अधोऽधः दो स्थानों में स्थापन करना। इस तरह दो पंक्तियों में कनिष्ठ ज्येष्ठ और क्षेप का स्थापन हुआ। इष्टवर्ग को जिस गुणाक से गुणा किया गया है उसका नाम प्रकृति है। कनिष्ठ द्वय के घात को प्रकृति से गुणा कर ज्येष्ठ-द्वय घात को जोड़ने से अन्य ज्येष्ठ होता है कनिष्ठ और ज्येष्ठ के वज्राभ्यास का योग अन्य कनिष्ठ होता है वहां क्षेपद्वय का घात क्षेप होता है। एवं प्रक्षेप (शोधक) के ऋणा क्षेप में तुल्य भावना से जो कनिष्ठ और ज्येष्ठ होते हैं उन्हें प्रक्षेप से भाग देने से रूप क्षेप में कनिष्ठ और ज्येष्ठ होते हैं ॥

उपपत्ति ।

प्र = प्रकृति, क = कनिष्ठ, ज्ये = ज्येष्ठ, क्षे = क्षेप तब सूत्रानुसार प्र. क^१ + क्षे = ज्ये^२
 अतः ज्ये^२ — प्र. क^२ = क्षे, एवं ज्ये^१ — प्र. क^२ = क्षे, इन दोनों के घात करने से क्षे. क्षे =
 ज्ये^२. ज्ये^२ — ज्ये^१. प्र. क^२ — ज्ये^२. प्र. क^१ + प्र. क^१ क^२ इसमें २ प्र. क. क. ज्ये — ज्ये इसको
 घन ऋण और ऋण घन करने से ज्ये^२. ज्ये^२ ± २ प्र. क. क. ज्ये. ज्ये. + प्र^२. क^२. क^२
 ± २ प्र. क. क. ज्ये. ज्ये — ज्ये^२. प्र. क^२ — ज्ये^२. प्र. क^२ = (ज्ये. ज्ये ± प्र. क. क.)^२
 — प्र { (ज्ये. क ± ज्ये. क)^२ } पक्षान्तर से प्र { (ज्ये. क ± ज्ये. क)^२ } + क्षे. क्षे = (ज्ये.
 ज्ये ± प्र. क. क.)^२ अतः क्षेपघात तुल्य क्षेप में ज्ये. क ± ज्ये. क यह कनिष्ठ होता है और
 ज्ये. ज्ये ± प्र. क. क यह ज्येष्ठ होता है। इससे आचार्योक्त भावना उपपन्न होती है ॥
 सिद्धान्त शेखर में 'कृतेगु'णो यः प्रकृतिर्हि प्रोक्ता क्षिप्तिस्तथैवर्गभनात्मिका स्यात्' इत्यादि
 संस्कृतोपपत्ति में लिखित, श्रीपत्युक्त आचार्योक्त अनुरूप ही है; भावना विधि 'वज्राभ्यासौ
 ह्रस्वज्येष्ठकयोस्तद्युतिर्भवेद्ध्रस्वम्' इत्यादि संस्कृतोपपत्ति में लिखित, भावना आचार्योक्त
 भावना के अनुरूप ही है। बीजगणित में 'इष्टं ह्रस्वं तस्य वर्गः प्रकृत्या क्षुण्णो युक्तो वर्गितो
 वा स येन' इत्यादि संस्कृतोपपत्ति में लिखित पद्यों से भास्कराचार्य ने भी आचार्योक्त के अनु-
 रूप ही कहा है ॥ ६४-६५ ॥

इदानीं विशेषमाह ।

रूपप्रक्षेपपदे पृथगिष्टक्षेप्यशोध्यमूलाभ्याम् ।

कृत्वाऽऽन्त्याद्यपदे ये प्रक्षेपे शोधनेवेष्टे ॥ ६६ ॥

सु. भा.—रूपप्रक्षेपे ये पदे आद्यान्त्यपदे ते पृथक् स्थाप्ये । तत इष्टक्षेपे वेष्ट-
 शोधके ये मूले ताभ्यां भावनयाऽन्ये अन्त्याद्यपदे ज्येष्ठकनिष्ठे कृत्वा ते इष्टे प्रक्षेपे
 वेष्टे शोधनेऽन्ये अन्त्याद्यपदे ज्ञेये इति ॥ ६६ ॥

वि. भा.—रूपक्षेपे ये अन्त्याद्यपदे (ज्येष्ठ कनिष्ठे) ते पृथक् स्थाप्ये, इष्ट-क्षेपे (इष्टशेषके वा) ये मूले (कनिष्ठ ज्येष्ठे) ताभ्यां भावनया ज्येष्ठकनिष्ठे कृत्वा ते इष्टक्षेपेऽन्ये ज्येष्ठ कनिष्ठे ज्ञातव्ये इति ।

अत्रोपपत्तिः स्पष्टं वास्तीति ॥ ६६ ॥

अब विशेष कहते हैं ।

हि. भा.—रूपक्षेप में जो ज्येष्ठ, कनिष्ठ है उन्हें पृथक् स्थापन करना, इष्टक्षेप में जो कनिष्ठ, ज्येष्ठ है उसके साथ भावना से इष्टक्षेप में अन्य ज्येष्ठ, कनिष्ठ होते हैं इति ।

उपपत्ति स्पष्ट ही है ॥ ६६ ॥

इदानीं चतुःक्षेपकनिष्ठज्येष्ठाभ्यां रूपक्षेपे कनिष्ठज्येष्ठानयनमाह ।

चतुरधिकेऽन्त्यपदकृतिस्त्र्य्यूना दलिताऽन्त्यपदगुणाऽन्यपदम् ।

अन्त्यपदकृतिर्व्यंका द्विहृताऽऽद्यपदाहृताऽऽद्य पदम् ॥ ६७ ॥

सु. भा.—चतुरधिके चतुःक्षेपेऽन्त्यपदकृतिस्त्रिभिरूनाऽर्धिताऽन्त्यपदगुणा फलं रूपक्षेपीयमन्त्यपदं ज्येष्ठं भवेत् । अन्त्यपदकृतिरेकेन हीना द्विहृताऽऽद्यपदेन हृता फलं रूपक्षेपीयमाद्यपदं कनिष्ठं भवेत् ।

अत्रोपपत्तिः । यदि चतुःक्षेपे कनिष्ठम् = क, ज्येष्ठम् = ज्ये । तदा इष्टवर्ग-हृतः क्षेपः क्षेपः स्यात्—इत्यादिभास्करविधिना रूपक्षेपे कनिष्ठम् = $\frac{क}{२}$ । ज्येष्ठम् = $\frac{ज्ये}{२}$ । तथा विलोमेन प्रकृतिः = $\frac{ज्ये^१ - ४}{क^१}$ समासभाषनया $\frac{क}{२}$, $\frac{ज्ये}{२}$, आभ्यामन्ये कनिष्ठज्येष्ठे रूपक्षेपे साध्येते तदा कनिष्ठम् = $\frac{क \times ज्ये}{२}$, ज्येष्ठम् = $\frac{ज्ये^१ - २}{२}$ आभ्यां $\frac{क}{२}$, $\frac{ज्ये}{२}$ एताभ्यां च पुना रूपक्षेपे यदि कनिष्ठज्येष्ठे साध्येते तदा कनिष्ठम् = $\frac{क (ज्ये^१ - १)}{२}$ । ज्येष्ठम् = ज्ये (ज्ये^१ - ३) अत उपपद्यते ॥ ६७ ॥

वि. भा.—चतुरधिके (चतुः क्षेपे) अन्त्यपद (ज्येष्ठ) वर्गस्त्रिभिर्हीनोऽर्धितो ज्येष्ठगुणितस्तदा रूपक्षेपे ज्येष्ठं भवेत्, ज्येष्ठवर्ग एकेन हीनो द्वाभ्यां भक्तः कनिष्ठ-गुणितस्तदा रूपक्षेपीयं कनिष्ठं भवेदिति ॥

अत्रोपपत्तिः ।

कल्प्यते चतुः क्षेत्रे कनिष्ठम् = क । ज्येष्ठम् = ज्ये, तदा 'इष्टवर्गहृतः क्षेत्र'
 इत्यादिना इष्टं द्वयं प्रकल्प्य रूपक्षेपे कनिष्ठम् = $\frac{क}{२}$, ज्येष्ठम् = $\frac{ज्ये}{२}$ तथा
 प्र. $क^२ + ४ = ज्ये^२$ समशोधनेन प्र. $क^२ = ज्ये^२ - ४$ अतः प्र = $\frac{ज्ये^२ - ४}{क^२}$, $\frac{क}{२}$,
 $\frac{ज्ये}{२}$ आभ्यां तुल्यभावनया रूपक्षेपे कनिष्ठम् = $\frac{क \cdot ज्ये}{२}$, ज्येष्ठम् = $\frac{ज्ये^२ - २}{२}$
 आभ्यां $\frac{क}{२}$, $\frac{ज्ये}{२}$ एताभ्यां भावनया रूपक्षेपे कनिष्ठम् = $\frac{क (ज्ये^२ - १)}{२}$
 ज्येष्ठम् = $\frac{क (ज्ये^२ - १)}{२}$, ज्येष्ठम् = $\frac{ज्ये (ज्ये^२ - ३)}{२}$ एतेनाचार्योक्तमुपपन्नम्
 ॥ ६७ ॥

अब चार क्षेत्र के कनिष्ठ और ज्येष्ठ से रूप क्षेत्र में कनिष्ठ और ज्येष्ठ
 के आनयन को कहते हैं ।

हि.भा.—चार क्षेत्र में से जो ज्येष्ठ है उसके वर्ग में से तीन घटाकर दो से भाग देने
 से जो फल हो उसको ज्येष्ठ से गुणा करने से रूपक्षेप में ज्येष्ठ होता है । ज्येष्ठ वर्ग में एक
 घटाकर दो से भाग देने से जो फल होता है उसको कनिष्ठ से गुणा करने से रूपक्षेप में
 कनिष्ठ होता है इति ॥

उपपत्ति ।

कल्पना करते हैं चार क्षेत्र में कनिष्ठ = क । ज्येष्ठ = ज्ये, तब 'इष्टवर्गहृतः
 क्षेत्र' इत्यादि भास्करोक्त प्रकार से दो इष्ट कल्पना करने से रूपक्षेप में कनिष्ठ = $\frac{क}{२}$, ज्येष्ठ
 = $\frac{ज्ये}{२}$, वर्ग प्रकृति लक्षण से प्र. $क^२ + ४ = ज्ये^२$ समशोधन से प्र. $क^२ = ज्ये^२ - ४$ अतः
 प्र = $\frac{ज्ये^२ - ४}{क^२}$, $\frac{क}{२}$, $\frac{ज्ये}{२}$ इसकी तुल्य भावना से रूपक्षेप में कनिष्ठ = $\frac{क \cdot ज्ये}{२}$, ज्येष्ठ
 = $\frac{ज्ये^२ - २}{२}$, इसको $\frac{क}{२}$, $\frac{ज्ये}{२}$ इसके साथ भावना से रूपक्षेप में कनिष्ठ = $\frac{क (ज्ये^२ - १)}{२}$
 ज्येष्ठ = $\frac{ज्ये (ज्ये^२ - ३)}{२}$ इससे आचार्योक्त उपपन्न हुआ इति ॥ ६७ ॥

इदानीमृणात्मकचतुःक्षेपकनिष्ठज्येष्ठाभ्यां रूपक्षेपे कनिष्ठज्येष्ठयोरानयनमाह ।

चतुरूपेऽन्त्यपदकृती श्रेकयुते वधदलं पृथग्व्येकम् ।

व्येकाद्याहतमन्त्यपदवधगुणमाद्यमन्त्यपदम् ॥६८॥

$\left(\frac{\text{ज्ये}^३+४ \text{ ज्ये}^३+३}}{२} - १ \right) = \left\{ \text{ज्ये}^३+२ \right\} \left\{ \frac{(\text{ज्ये}^३+३) (\text{ज्ये}^३+१)}{२} - १ \right\}$ अत

उपपद्यते ॥

वि. भा.—चतुरूपे (ऋणात्मकचतुःक्षेपे) अन्त्यपद (ज्येष्ठ) कृतिद्विधा स्थाप्या, एकत्र त्रियुताऽन्यत्रैकयुता, तयोर्घातार्धं पृथक् स्थाप्यम् । एकत्रैकहीनं कार्यं तदेकहीन-कनिष्ठगुणम् । अन्त्यपद (ज्येष्ठ) कृतिस्त्रियुता प्रथमं या साधिता तद्व्येकेना ज्ये^३+२ नेन गुणितमित्यर्थः । तदा रूपक्षेपे ज्येष्ठं भवेत् । पृथक् स्थापितं कनिष्ठ-ज्येष्ठयोर्घातिन गुणं फलं पूर्वागतज्येष्ठसम्बन्धिकनिष्ठं भवेदिति ॥

अत्रोपपत्तिः ।

कल्प्यते ऋणात्मकचतुःक्षेपे कनिष्ठम् = क, ज्येष्ठम् = ज्ये, वर्गप्रकृतिलक्षणेन

प्र. क^३—४=ज्ये^२ समयोजनेन प्र. क^३=ज्ये^२+४ अतः $\frac{\text{ज्ये}^2+४}{\text{क}^2}=\text{प्र}$ । 'इष्टवर्ग
 हृतक्षेप' इत्यादिनेष्टम्=२ प्रकल्प्य ऋणात्मकरूपक्षेपे कनिष्ठम्= $\frac{\text{क}}{२}$, ज्येष्ठम्
 = $\frac{\text{ज्ये}}{२}$ आभ्यां तुल्यभावनया रूपक्षेपे कनिष्ठम्= $\frac{\text{क. ज्ये}}{२}$, ज्येष्ठम्= $\frac{\text{ज्ये}^2+२}{२}$
 आभ्यां पुनः समासभावनया रूपक्षेपे कनिष्ठम्= $\frac{\text{क. ज्ये} (\text{ज्ये}^2+२)}{२}$, ज्येष्ठम्
 = $\frac{\text{ज्ये}^4+४ \text{ज्ये}^2+२}{२}$ आभ्यां पूर्वसाधिताभ्यां $\frac{\text{क. ज्ये}}{२}$, $\frac{\text{ज्ये}^2+२}{२}$ समास भावनया
 रूपक्षेपे कनिष्ठम्= $\frac{\text{क. ज्ये} (\text{ज्ये}^4+४ \text{ज्ये}^2+३)}{२}=\text{क. ज्ये.} \frac{(\text{ज्ये}^4+१)(\text{ज्ये}^2+३)}{२}$
 ज्येष्ठम्=(ज्ये^२+२) $\frac{(\text{ज्ये}^4+४ \text{ज्ये}^2+१)}{२}=(\text{ज्ये}^2+२) \frac{(\text{ज्ये}^4+४ \text{ज्ये}^2+३)}{२}-१$
 = $\left\{ (\text{ज्ये}^2+२) \right\} \left\{ \frac{(\text{ज्ये}^2+३) (\text{ज्ये}^2+१)}{२}-१ \right\}$ अत उपपन्नमचार्योक्त-
 मिति ॥६८॥

अब ऋणात्मक चार क्षेप के कनिष्ठ और ज्येष्ठ से रूपक्षेप में कनिष्ठ और
 ज्येष्ठ के आनयन को कहते हैं ।

हि. भा.—ऋणात्मक चार क्षेप में ज्येष्ठ वर्ग को दो स्थानों में स्थापन करना, एक
 स्थान में तीन जोड़ना दूसरे स्थान में एक जोड़ना, इन दोनों के घातार्ध को पृथक् स्थापन
 करना, एक स्थान में एक हीनकर जो हो उसको एक हीन कनिष्ठ से गुणा करना चाहिये तब
 रूप क्षेप में ज्येष्ठ होता है । पूर्व स्थापित को कनिष्ठ और ज्येष्ठ के घात से गुणा करने से
 पूर्वागत ज्येष्ठ सम्बन्धी कनिष्ठ होता है इति ॥

उपपत्ति ।

कल्पना करते हैं ऋणात्मक चारक्षेप में कनिष्ठ=क । ज्येष्ठ=ज्ये । वर्ग प्रकृति
 लक्षण से प्र. क^३—४=ज्ये^२ दोनों पक्षों में चार जोड़ने से प्र. क^३=ज्ये^२+४ अतः प्र
 = $\frac{\text{ज्ये}^2+४}{\text{क}^2}$ 'इष्ट वर्ग हृतः क्षेप' इत्यादि से इष्ट=२ कल्पना करने से ऋणात्मक रूपक्षेप में
 कनिष्ठ= $\frac{\text{क}}{२}$, ज्येष्ठ= $\frac{\text{ज्ये}}{२}$ तुल्य भावना से रूपक्षेप में कनिष्ठ= $\frac{\text{क. ज्ये}}{२}$, ज्येष्ठ
 = $\frac{\text{ज्ये}^2+२}{२}$ इनसे समास भावना से रूपक्षेप में कनिष्ठ= $\frac{\text{क. ज्ये} (\text{ज्ये}^2+२)}{२}$, ज्येष्ठ

$$\begin{aligned}
 &= \frac{\text{ज्येष्ठ}^2 + ४ \text{ ज्ये}^2 + २}{२} \text{ इनके साथ पूर्वसाधित } \frac{\text{क. ज्ये}}{२}, \frac{\text{ज्ये}^2 + २}{२} \text{ इनकी समास भावना} \\
 &\text{से रूपक्षेप में कनिष्ठ} = \frac{\text{क. ज्ये} (\text{ज्ये}^2 + ४ \text{ ज्ये}^2 + २)}{२} = \text{क. ज्ये} \frac{(\text{ज्ये}^2 + १) (\text{ज्ये}^2 + ३)}{२}, \\
 &\text{ज्येष्ठ} = (\text{ज्ये}^2 + २) \cdot \frac{(\text{ज्ये}^2 + ४ \text{ ज्ये}^2 + १)}{२} = (\text{ज्ये}^2 + २) \cdot \frac{(\text{ज्ये}^2 + ४ \text{ ज्ये}^2 + ३) - १}{२} \\
 &= \left\{ (\text{ज्ये}^2 + २) \right\} \cdot \left\{ \frac{(\text{ज्ये}^2 + ३) (\text{ज्ये}^2 + १) - १}{२} \right\} \text{ इससे आचार्योक्त उपपन्न} \\
 &\text{हुआ ॥ ६८ ॥}
 \end{aligned}$$

इदानीं वर्गात्मकप्रकृतौ कनिष्ठज्येष्ठयोरानयनमाह ।

वर्गे गुणके क्षेपः केनचिदुद्धृतयुतो नितो दलितः ।

प्रथमोऽन्त्यमूलमन्यो गुणकारपदोद्धृतः प्रथमः ॥ ६९ ॥

सु. भा.—गुणके प्रकृतौ वर्गे वर्गात्मके सति क्षेपः केनचिदिष्टेनोद्धृतः फलं तेनैवेष्टेन युतमूनितं दलितं च कार्यम् । एवं राशिद्वयं भवेत् तत्र प्रथमो राशिरन्त्यमूलं ज्येष्ठं भवेत् । अन्यो गुणकारपदोद्धृतो गुणकारः प्रकृतिस्तत्पदेनोद्धृतः फलं प्रथम आद्योऽर्थात् कनिष्ठं पदं भवेदिति । ‘इष्टभक्तो द्विधाक्षेप’ इत्यादि भास्करोक्तमेतदनु रूपमेव ।

अत्रोपपत्त्यर्थं मत्कृतभास्करबीज टिप्पण्याम्-इष्टभक्तो द्विधाक्षेपः इत्यस्योपपत्तिर्दृष्टव्या ॥ ६९ ॥

वि. भा.—गुणके (प्रकृतौ) वर्गे (वर्गात्मके) सति क्षेपः केनचिदिष्टेन भक्तो लब्धं तेनैवेष्टेन युतं हीनं दलितं च कार्यम् एवं राशिद्वयं भवति । तत्र प्रथमो राशिरन्त्यमूलं (ज्येष्ठं) भवति, गुणकारः (प्रकृतिः) तन्मूलेन भक्तो द्वितीयराशि स्तदा लब्धं कनिष्ठं भवेदिति ॥

अत्रोपपत्तिः ।

वर्गप्रकृत्या प्र^२ . क^२ + क्षे = ज्ये^२ समशोधनेन क्षे = ज्ये^२ - प्र^२ . क^२ वर्गान्तरस्य योगान्तरघातसमत्वात् (ज्ये + प्र. क) (ज्ये - प्र. क) = क्षे, अत्र यदि ज्ये - प्र. क इष्टं कल्प्यते तदा क्षे = (ज्ये + प्र. क) . इ पक्षौ इ भक्तौ तदा $\frac{\text{क्षे}}{\text{इ}} = \text{ज्ये} + \text{प्र. क पक्षौ इ हीनौ तदा } \frac{\text{क्षे}}{\text{इ}} - \text{इ} = \text{ज्ये} + \text{प्र. क} - (\text{ज्ये} - \text{प्र. क}) = \text{ज्ये} + \text{प्र. क}$

—ज्ये + प्र.क = २ प्र.क पक्षौ २ प्र भक्तौ तदा $\frac{\text{क्षे} - \text{इ}}{२ \text{प्र}} = \text{क} । \frac{\text{क्षे}}{\text{इ}}$ अत्रैवेष्टयोजनेन

$\frac{\text{क्षे}}{\text{इ}} + \text{इ} = \text{ज्ये} + \text{प्र. क} + \text{ज्ये} - \text{प्र. क} = २ \text{ ज्ये}$ अतः $\frac{\text{क्षे}}{\text{इ}} + \text{इ} = \text{ज्ये}$, एतावताऽऽ-
चार्योक्तमुपपन्नम् ॥ बीजगणिते 'इष्टभक्तो द्विधाक्षेप' इत्यादि भास्करोक्तमेतदनु-
रूपमेवेति ॥६९॥

अब वर्गात्मक प्रकृति में कनिष्ठ और ज्येष्ठ का आनयन करते हैं ।

हि. भा.—वर्गात्मक प्रकृति में क्षेप को किसी इष्ट से भाग देकर जो फल हो उसमें उसी इष्ट को युत और हीन कर आधा करना चाहिये इस तरह दो राशियों का मान होता है, उनमें प्रथम राशि ज्येष्ठ होता है, द्वितीय राशि को प्रकृति के मूल से भाग देने से कनिष्ठ होता है इति ।

उपपत्ति ।

वर्ग प्रकृति से प्र^२. क^२ + क्षे = ज्ये^२ समशोधन से क्षे = ज्ये^२ — प्र^२. क^२ वर्गान्तर
योगान्तर घात के बराबर होता है इसलिये क्षे = (ज्ये + प्र. क) (ज्ये — प्र. क) यहाँ यदि
ज्ये — प्र. क = इष्ट माना जाय तब क्षे = (ज्ये + प्र. क) इ ∴ $\frac{\text{क्षे}}{\text{इ}} = \text{ज्ये} + \text{प्र. क}$, अब

संक्रमण गणित से $\frac{\text{क्षे}}{\text{इ}} + \text{इ} = \text{प्रथमराशि} = \text{ज्ये} । \frac{\text{क्षे}}{\text{इ}} - \text{इ} = \text{द्वितीयराशि} = \text{प्र. क}$

∴ $\frac{\text{क्षे}}{\text{इ}} - \text{इ} = \text{क}$ इससे आचार्योक्त उपपन्न हुआ ।

बीज गणित में 'इष्ट भक्तो द्विधाक्षेपः' इत्यादि भास्करोक्त इसके अनुरूप ही
है इति ॥६९॥

अतोऽग्रं चैकाऽर्या नष्टा सा कोलब्रूकानुवादानुसारेण ।

सु. भा.—यदि गुणकः प्रकृतिः केनचिद्वर्गेण निःशेषो भवति तदा तं तद्वर्गेण संहृत्य लब्धसमे गुणके मूले साध्ये तत्र प्रथममाद्यमर्थात् कनिष्ठं तस्य वर्गस्य मूलेन भाजितं फलमभीष्टे गुणके कनिष्ठं भवेत् । ज्येष्ठं त्वत्रापि तदेव । क्षेपे वर्गच्छिन्ने सति वर्गेण क्षेपं विभज्य लब्धसमे क्षेपे ये मूले ते तद्वर्गपदेन गुणिते अभीष्टगुणके मूले भवत इति । 'वर्गच्छिन्ने गुणे ह्रस्वं तत्पदेन विभाजयेदिति भास्करप्रकारः प्रथमप्रकारानुरूपः । 'क्षुण्णः क्षुण्णे तदा पदे' इति भास्करप्रकारश्च द्वितीयप्रकारानुरूपः ।

अत्रोपपत्त्यर्थं मत्कृतभास्करबीजटिप्पणी विलोक्या ॥ ७० ॥

वि. भा.—यदि गुणकः (प्रकृतिः) केनापि वर्गाङ्केन भक्तः सन् निःशेषो भवेत्तदा तदगुणकं तद्वर्गाङ्केन भक्त्वा लब्धतुल्ये गुणके (प्रकृतौ) कनिष्ठज्येष्ठे साध्ये तत्र प्रथमं (कनिष्ठं) तस्य वर्गाङ्कस्य मूलेन भाजितं तदा तदगुणके (नवीन-प्रकृतौ) कनिष्ठं भवेत् । ज्येष्ठं तदेव, क्षेपे वर्गाङ्केन छिन्ने सति वर्गाङ्केन क्षेपं भक्त्वा लब्धतुल्ये क्षेपे ये कनिष्ठज्येष्ठे ते तद्वर्गाङ्कमूलेन गुणिते तदेष्टगुणके कनिष्ठज्येष्ठे भवेतामिति ॥

अत्रोपपत्तिः ।

वर्गं प्रकृति लक्षणोन प्र.क^२ + क्षे = ज्ये^२, वा गु^२. प्र. $\frac{क^२}{गु^२} + क्षे = ज्ये^२$
 $= गु^२. प्र. \left(\frac{क}{गु} \right)^२$ अत्र यदि गु^२. प्र इयमन्या प्रकृति = प्र तदा तत्सम्बन्धि कनिष्ठं $\frac{क}{गु}$ स्यादेतेन पूर्वार्धं मुपपन्नम् । अथ प्र. क^२ + क्षे = ज्ये^२ पक्षौ इ^२ गुणितौ तदा प्र. क^२. गु^२ + क्षे. गु^२ = ज्ये^२. गु^२ = प्र. (क. गु)^२ + क्षे. गु^२ = (ज्ये. गु)^२ यदि क्षे. गु^२ = क्षे तदा तत्सम्बन्धि कनिष्ठम् = क. गु = क, ज्येष्ठम् = ज्ये. गु = ज्ये तदा प्र. क^२ + क्षे = ज्ये^२ एतेनोत्तरार्धं मुपपन्नम् इति ॥ ७० ॥

६९ सूत्र से आगे की एक आर्या नष्ट है वह कोलब्रूक साहेब के अनुवादानुसार निम्नलिखित आशय की है ।

हि. भा.—यदि प्रकृति किसी वर्गाङ्क से भाग देने से निः शेष हो तब प्रकृति को

(१) वर्गच्छिन्ने गुणे ह्रस्वं तत्पदेन विभाजयेदिति भास्करोक्तमेतत्सदृशमेव ।

(२) क्षेपः क्षुण्णः क्षुण्णे तदा पदे भास्करोक्तमिदमेतत्सदृशमेवेति ।

वर्गाङ्क से भाग देने से जो लब्धि हो तत्तुल्य नवीन प्रकृति में कनिष्ठ और ज्येष्ठ साधन करना, उस कनिष्ठ को वर्गाङ्क के मूल से भाग देने से नवीन प्रकृति में कनिष्ठ होता है, ज्येष्ठ यहां भी वही रहता है। यदि क्षेप किसी वर्गाङ्क से भाग देने से निःशेष हो तब वर्गाङ्क से क्षेप को भाग देने से जो लब्धि हो तत्तुल्य नवीन क्षेप में जो कनिष्ठ और ज्येष्ठ हो उनको उस वर्गाङ्क के मूल से गुणा करने से नवीन क्षेप में कनिष्ठ और ज्येष्ठ होते हैं इति ॥

उपपत्ति ।

वर्गप्रकृति लक्षण से प्र. $क^२ + क्षे = ज्ये^२ = गु^२$. प्र. $\frac{क^२}{गु^२} = गु^२.प्र. \left(\frac{क}{गु} \right)^२$

यहां यदि $गु^२$. प्र यह अन्य प्रकृति $= प्र$, है तब तत्सम्बन्धी कनिष्ठ $\frac{क}{गु}$ होगा, ज्येष्ठ वही रहेगा, इससे पूर्वार्ध उपपन्न हुआ। बीज गणित में 'वर्गविल्लने गुणे ह्रस्वं तत्पदेन विभाजयेत्' यह भास्करोक्त कोलब्रूक के अनुवाद के पूर्वार्ध के अनुरूप ही है। प्र. $क^२ + क्षे = ज्ये^२$ दोनों पक्षों को $इ^२$ से गुणा करने से प्र. $क^२.इ^२ + क्षे.इ^२ = ज्ये^२.इ^२ = प्र.(क.गु)^२ + क्षे.गु^२ = (ज्ये.इ)^२$ यदि $क्षे.गु^२ = क्षे$ तब तत्सम्बन्धी कनिष्ठ $= क$. $गु = क$, तथा ज्येष्ठ $= ज्ये$. गु. इससे कोलब्रूक साहेब के अनुवाद का उत्तरार्ध उपपन्न हुआ। 'क्षेपः क्षुण्णः क्षुण्णे तदा पदे' यह भास्करोक्त उसी के स्रष्टव्य है ॥७०॥

इदानीं प्रश्नविशेषस्योत्तरमाह ।

गुणकयुतिरष्टगुणिता गुणकान्तरभाजिता राशिः ।

गुणकौ त्रिगुणौ व्यस्ताधिकौ हृतावन्तरेण पदे ॥७१॥

$$\text{प्रथमपदम्} = \sqrt{\frac{८ \text{गु}_1^२ + ८ \text{गु}_1 \text{गु}_1}{\text{गु}_1^२ - २ \text{गु}_1 \text{गु}_1 + \text{गु}_1^२} + १} = \frac{३ \text{गु}_1 + \text{गु}_1}{\text{गु}_1^१ ८ \text{गु}_1}$$

$$\text{एवं द्वितीयपदम्} = \frac{३ \text{गु}_1 - \text{गु}_1}{\text{गु}_1^१ ८ \text{गु}_1} \quad । \quad \text{अत उपपन्नं सर्वम् ॥ ७१ ॥}$$

वि. भा.—गुणकयोर्योगं अष्टगुणितो गुणकयोरन्तरेण भक्तस्तदा राशि-
भवेत् । द्वौ गुणकौ त्रिगुणितौ तौ व्यस्तगुणकाधिकौ गुणकान्तरेण भक्तौ तदा
ते एव निरग्रे पदे भवेतामिति ॥

अत्रोपपत्तिः ।

कल्प्यते गुणकद्वयं क्रमेण गु, गु, तथा राशिप्रमाणम् = $\frac{य^२-१}{गु}$ एतत्

गु अनेन सङ्गुण्यैकं क्षिप्त्वा र वर्गेण समं $\frac{य^२ \cdot गु - गु}{गु} + १ = \frac{य^२ \cdot गु - गु + गु}{गु}$
 $= र^२$ छेदगमेन $य^२ \cdot गु - गु + गु = गु \cdot र^२$ पक्षौ 'गु' गुणितौ तदा $गु^२ \cdot र^२ = य^२$.
 $गु \cdot गु - गु \cdot गु + गु^२$ प्रथम पक्षस्य मूलम् = गु. र द्वितीय पक्षस्यास्य $य^२ \cdot गु \cdot गु - गु \cdot गु$
 $+ गु^२$ वर्गप्रकृत्या प्रकृतिः = गु. गु, क्षेपः = $गु^२ - गु \cdot गु$ । अत्र कल्प्यते कनिष्ठम्
 $= क = १$ तदा ज्येष्ठम् = ज्ये = गु । क्षेपः = $गु^२ - गु \cdot गु$ इष्टवर्गप्रकृत्योर्यद्विवरं
 तेन वा भजेदित्यादिना रूपक्षेपे कनिष्ठम् = $\frac{२ इ}{गु \cdot गु \sim इ^२}$, ज्येष्ठम् = $\frac{गु \cdot गु + इ^२}{गु \cdot गु \sim इ^२}$,

क्षेपः = १ समासभावनया $\frac{२ गु \cdot इ + गु \cdot गु + इ^२}{गु \cdot गु \sim इ^२} = क$ ।

$\frac{२ गु \cdot गु \cdot इ + गु^२ \cdot गु + गु \cdot इ^२}{गु \cdot गु \sim इ^२} = ज्ये$ । अत्र कनिष्ठं य मानं, ज्येष्ठं प्रथम-
 पक्षस्या (गु. र) स्य समम् । यदि इ = गु तदोत्थापनेन राशिः = $\frac{य^२-१}{गु}$

= $\left[\left\{ \frac{३ गु^२ + गु \cdot गु}{गु (गु \sim गु)} \right\} - १ \right] \div गु = \left\{ \left(\frac{३ गु + गु}{गु \sim गु} \right)^२ - १ \right\} \div गु =$
 $= \left(\frac{९ गु^२ + ६ गु \cdot गु + गु^२}{गु^२ - २ गु \cdot गु + गु^२} - १ \right) \div गु = \frac{८ गु^२ + ८ गु \cdot गु}{(गु - गु)^२} \div गु = \frac{८ (गु + गु)}{(गु \sim गु)^२}$

अत आलापेन प्रथम पदम् = $\sqrt{\frac{८ गु^२ + ८ गु \cdot गु}{गु^२ - २ गु \cdot गु + गु^२}} + १ = \frac{३ गु + गु}{गु \sim गु}$,

द्वितीय पदम् = $\frac{३ गु - गु}{गु \sim गु}$ इति ॥७१॥

अब प्रश्न विशेष का उत्तर कहते हैं ।

हि. भा.—राशि को पृथक् पृथक् गुणकद्वय से गुणाकर एक जोड़ने से यदि उनके

मूल को एक वर्ष पर्यन्त निः शेष करते हुए व्यक्ति गणक है यह प्रश्न है । तो—

इसका उत्तर

गुणकद्वय योग को घाट से गुणाकर गुणकद्वय के अन्तर वर्ग से भाग देने से राशिमान होता है । दोनों गुणकों को तीन से गुणा कर दोनों में विपरीत गुणक जोड़ कर गुणकान्तर से भाग देने से वे दोनों निःशेष पद द्वय होते हैं इति ।

उपपत्ति ।

कल्पना करते हैं दोनों गुणक क्रम से गु, गु तथा राशिमान = $\frac{य^2-१}{गु}$ इसको गु

से गुणाकर एक जोड़कर र वर्ग के बराबर करने से $\frac{गु-य^2-गु+गु}{गु} = र^2$ छेदगम से

गु. $र^2 = गु. य^2 - गु + गु$ दोनों पक्षों को (गु) गुणा करने से गु^२. $र^2 = गु. गु. य^2 - गु. गु$

$+ गु^२$ प्रथम पक्ष का मूल = गु. र, द्वितीय पक्ष गु. गु. य^२ - गु. गु + य^२ इसकी वर्गप्रकृति से

प्रकृति = गु. गु, क्षेप = गु^२ - गु. गु, यहाँ कनिष्ठ = १, ज्येष्ठ = गु, क्षेप = गु^२ - गु. गु

‘हृष्टवर्गप्रकृत्योर्यद्विवरं’ इत्यादि भास्करोक्त सूत्र से क = $\frac{२ इ}{गु. गु-इ^२}$, ज्ये =

$\frac{गु. गु + इ^२}{गु. गु-इ^२}$, क्षेप = १ समाप्त भावना से क = $\frac{२ गु. इ + गु. गु + इ^२}{गु. गु-इ^२}$, ज्ये =

$\frac{२ गु. गु. इ + गु^२. गु + गु. इ^२}{गु. गु-इ^२}$ यहाँ कनिष्ठ (य) का मान होता है, तथा ज्येष्ठ प्रथम पक्ष

(गु. र) के बराबर होता है यदि इ = गु तब उत्थापन से राशि = $\frac{य^2-१}{गु}$

$= \left[\left\{ \frac{३ गु^२ + गु. गु}{गु. (गु-गु)} \right\}^२ - १ \right] \div गु = \left\{ \left(\frac{३ गु + गु}{गु \wedge गु} \right)^२ - १ \right\} \div गु =$

$= \left(\frac{९ गु^२ + ६ गु. गु + गु^२}{गु^२ - २ गु. गु + गु^२} - १ \right) \div गु = \frac{८ गु^२ + ८ गु. गु}{(गु \wedge गु^२)} \div गु = \frac{८ (गु + गु)}{गु \wedge गु}$

अब आलाप से प्रथम पद = $\sqrt{\frac{८ गु^२ + ८ गु. गु}{गु^२ - २ गु. गु + गु^२} + १} = \frac{३ गु + गु}{गु \wedge गु}$

द्वितीय पद = $\frac{२ गु - गु}{गु ५ गु}$ इससे आचार्योक्त उपपन्न हुआ इति ॥७१॥

इदानीं प्रश्नान्तरविशेषस्योत्तरमाह ।

वर्गोऽन्यकृतियुतो नस्तत्संयोगान्तरार्धकृतिभक्तः ।

तद्गुणितौ युतिवियुतौ वर्गौ घाते च रूपयुते ॥ ७२ ॥

सु० भा०—ययो राश्योर्युतिवियुतौ वर्गौ भवतस्तथा घाते रूपयुते च वर्गः स्यात् तत्र राश्योरानयनाय कश्चिदिष्टो वर्गः कल्प्यः । स चान्येष्टवर्गेण युत ऊनश्च कार्यः । एवं राशिद्वयं यद्भवेत् तत्संयोगस्तदन्तरार्धवर्गेण भक्तो यत् फलमागच्छेत् तेन पूर्वसाधितौ द्वौ राशी गुणितावभीप्सितौ राशी भवतः ।

अत्रोपपत्तिः । कल्प्येते राशी—

२ इ^२ (या^२ + का^२) । २ इ^२ (या^२ — का^२)

अत्र राश्योर्योगवियोगौ भवतोऽत आलापद्वयं घटते । अथानयोर्घातः संकः = ४ इ^२ या^२ — ४ इ^२ का^२ + १ अयं वर्गः । अत आद्यन्तयोः पदयोः — २ इ^२ या^२, — १ अनयोर्द्विघ्नहति — ४ इ^२ या^२ मध्यपदसमां कृत्वा पक्षौ— ४ इ^२ या^२ = — ४ इ^२ का^२ ।

$$\therefore २ इ^२ = \frac{२ या^२}{का^२} = \frac{(या^२ + का^२) + (या^२ - का^२)}{\left\{ \frac{(या^२ + का^२) + (या^२ - का^२)}{२} \right\}^२}$$

अत उपपद्यते यथोक्तम् ॥ ७२ ॥

वि. भा.—ययो राश्योर्युतिवियुतौ वर्गौ भवेतां, घाते रूपयुते च वर्गः स्यात् तत्र तयो राश्योर्ज्ञानार्थं कोपीष्टो वर्गः कल्पनीयः । सोऽन्येष्टवर्गेण युतो हीनश्च कार्यः, तदा यद्वाशिद्वयं भवेत् तयोर्योगस्तदन्तरार्धवर्गेण भक्तो यल्लब्धं भवेत्तेन पूर्वानीतौ राशी गुणितौ तदाऽभीप्सितौ राशी भवेतामिति ॥

अत्रोपपत्तिः ।

कल्प्येते राशी २ इ^२ (य^२ + र^२), २ इ^२ (य^२ — र^२) अत्र राश्योर्योगान्तरे वर्गौ भवतस्तेनाऽऽलापद्वयं घटते । अनयोर्घातः ४ इ^२ (य^२ — र^२) = ४ इ^२. य^२ — ४ इ^२. र^२ रूपयुतः ४ इ^२. य^२ — ४ इ^२. र^२ + १ तदा वर्गः स्यात् । तेनाऽऽद्यन्तयोर्मूलयोः — २ इ^२. य^२ — १ द्विघ्नघातं — ४ इ^२. य^२ मध्यपदसमं कृत्वा जातौ पक्षौ— ४ इ^२. र^२ = — ४ इ^२. र^२ पक्षौ र^२ भक्तौ तदा — $\frac{४ इ^२. य^२}{र^२} = - ४ इ^२ =$

$$- \frac{२ इ^२. २ य^२}{२^४} \text{ पक्षौ } - २ इ^२ \text{ भक्तौ तदा } २ इ^२ = \frac{२ य^२}{२^४} =$$

$$\left\{ \frac{(य^२+२^२)+(य^२-२^२)}{(य^२+२^२)-(य^२-२^२)} \right\}^२ \text{ एतावता सर्वमुपपन्नमाचार्योक्तमिति ॥ ७२ ॥}$$

अब प्रश्नान्तर विशेष का उत्तर कहते हैं ।

हि. भा.—जिन दो राशियों का योग और अन्तर करने से वर्ग होता है, तथा घात में एक जोड़ने से वर्ग होता है वहाँ दोनों राशियों के आनयन के लिए कोई इष्टवर्ग कल्पना करनी चाहिए । उसमें अन्य इष्टवर्ग को युत और हीन करना चाहिए । इस तरह जो राशिद्वय होता है उनके योग में उन्हीं के अन्तरार्ध वर्ग से भाग देने से जो फल हो उससे पूर्व साधित राशिद्वय को गुणा करने से अभीप्सित राशिद्वय होता है इति ॥

उपपत्ति ।

कल्पना करते हैं राशिद्वय $२ इ^२ (य^२+२^२)$, $२ इ^२ (य^२-२^२)$ यहां इन दोनों राशियों का योग और अन्तर वर्ग होता है इसलिए दो आलाप घटित होते हैं । दोनों के घात में रूप जोड़ने से $४ इ^४ (य^४-२^४) + १ = ४ इ^४. य^४ - ४ इ^४. २^४ + १$ वर्ग होता है इसलिए प्रथम खण्ड और अन्तिम खण्ड के मूल $(-२ इ^२. य^२-१)$ के द्विगुणित घात $(-४ इ^२. य^२)$ को मध्य पद के समान करने से $-४ इ^२. य^२ = -४ इ^४. २^४$ दोनों पक्षों को $२^४$ से भाग देने से $-\frac{४ इ^२. य^२}{२^४} = -४ इ^४ = -\frac{२ इ^२. २ य^२}{२^४}$ पुनः दोनों पक्षों को $-२ इ^२$ इससे भाग देने से $२ इ^२ = \frac{२ य^२}{२^४} = \left\{ \frac{(य^२+२^२)+(य^२-२^२)}{(य^२+२^२)-(य^२-२^२)} \right\}^२$ इससे आचार्योक्त उपपन्न हुआ इति ॥ ७२ ॥

इदानीं पुनः प्रश्नान्तरविशेषस्योत्तरमाह ।

यैरूनो यंश्च युतो रूपैर्वर्गस्तदैक्यमिष्टहृतम् ।

इष्टोनं तद्लङ्कृतिरूनोऽभ्यधिका भवति राशिः ॥ ७३ ॥

सु. भा.—को राशिरेतावद्भूरी रूपैर्युतस्तथैतावद्भूरी रूपैरूनश्च वर्गो भवतीति प्रश्नोत्तरार्थं यै रूपैरूनो यैर्युतश्च वर्गो भवति तेषामैक्यं केनचिदिष्टेन हृतं

वि. भा.—स को राशिर्य उद्दिष्टराशिभ्यां युक्तो हीनो वा कृति (वर्गः) भवति, अत्र याभ्यामुद्दिष्टराशिभ्यां युक्तो हीनो वा वर्गो भवति तदन्तरमिष्टेन भक्तं योग-प्रश्ने इष्टेनयुतं, हीनप्रश्ने इष्टेन हीनं विधेयम् तदा यद् भवति तदर्धस्य वर्गोऽधिको-द्दिष्टराशिना हीनः कार्यः,—अधिकयोः उद्दिष्टराशयोः । उद्दिष्टराशोरल्पयोरधिकः (युक्तः) कार्यः, तदा राशिर्भवति ॥

अत्रोपपत्तिः ।

कल्प्यते राशिः=य, यो हि न, म उद्दिष्टराशिभ्यां युतो वर्गः स्यात् । अत्र न > म तदा प्रश्नानुसारेण य+न=क^२, य+म=व^२ ततः क^२—व^२=न—म अत्र यदि क—व=इ तदा वर्गान्तरं राशिवियोगभक्तमित्यादिना $\frac{\text{न—म}}{\text{इ}} = \frac{\text{क}^2 - \text{व}^2}{\text{इ}} = \text{क} + \text{व} = \text{र}$ तदा संक्रमणेन $\frac{\text{र} + \text{इ}}{२} = \text{क}$, अतः य=क^२—न तथा राशिर्उद्दिष्टाभ्यां हीनो वर्गो भवतीति प्रश्ने क^२=य—न । य—म=व^२ ततः व^२—क^२=न—म अत्र यदि व—क=इ तदा $\frac{\text{व}^2 - \text{क}^2}{\text{व—क}} = \text{व} + \text{क} = \frac{\text{न—म}}{\text{इ}} = \text{र}$ ततः संक्रमणेन $\frac{\text{र—इ}}{२} = \text{क}$ \therefore य=क^२+न अत आचार्योक्तमुपपन्नम् ॥ ७४ ॥

अब पुनः प्रश्नान्तर का उत्तर कहते हैं ।

हि. भा.—कौन राशि है जिसमें उद्दिष्ट राशिद्वय को जोड़ने से वा घटाने से वर्ग होता है, यहां जिन उद्दिष्टराशिद्वय को जोड़ने वा घटाने से वर्ग होता है उन दोनों उद्दिष्ट राशियों के अन्तर को इष्ट से भाग देने से जो लब्धि हो उसमें इष्ट को जोड़ना योग प्रश्न में । हीन प्रश्न में इष्ट को हीन करना तब जो हो उसके आधे के वर्ग में अधिक उद्दिष्टराशि को घटाना चाहिए, अल्प उद्दिष्टराशि को जोड़ना चाहिए तब राशि प्रमाण होता है इति ।

उपपत्ति ।

कल्पना करते हैं राशि = य, इसमें उद्दिष्टराशिद्वय को जोड़ने से वर्ग होता है, न, म उद्दिष्टराशिद्वय है, तथा न > म तब प्रश्न के अनुसार य + न = क^२

$$य + म = व^२$$

अतः क^२ - व^२ = न - म, यदि क - व = इ तब $\frac{क^२ - व^२}{इ} = \frac{न - म}{इ} = क + व = र,$

तब संक्रमण से $\frac{र + इ}{२} = क$ ∴ य = क^२ - न, हीन प्रश्न में य - न = क^२, य - म = व^२

∴ व^२ - क^२ = न - म । यदि व - क = इ तब $\frac{व^२ - क^२}{इ} = \frac{न - म}{इ} = व + क = र,$

∴ संक्रमण से $\frac{र - इ}{२} = क$ ∴ य = क^२ + न इससे आचार्योक्त उपपन्न हुआ इति ॥ ७४ ॥

इति वर्गप्रकृतिः ।

उदाहरणानि

तत्र प्रथमं वर्गप्रकृत्युदाहरणम् ।

अब उदाहरणों को कहते हैं ।

पहले वर्ग प्रकृति के उदाहरण कहते हैं ।

हि. भा.—राशिशेषवर्ग को ६२ से गुणा कर एक जोड़ने से जो होता है उसको वा कला शेष वर्ग को तिरासी ८३ से गुणाकर एक जोड़ने से जो होता है उसके वर्ग को बुधदिन में वर्ष पर्यन्त करते हुए व्यक्ति गणक हैं इति ॥७५॥

प्रथमप्रश्न में प्रकृति=६२, क्षेप=१, तब 'इष्टं' ह्रस्वं तस्य वर्गः प्रकृत्या क्षुण्णः' इत्यादि भास्करोक्त सूत्र से कनिष्ठ क=१, ज्येष्ठ=ज्ये=१०, क्षेप=क्षे=८ अब भावना के लिये न्यास करते हैं क=१, ज्ये=१०, क्षे=८

क=१, ज्ये=१०, क्षे=८

'वज्राभ्यासौ ज्येष्ठलघ्वोस्तदैक्य' इत्यादि भास्करोक्त सूत्र से क=२०, ज्ये=१६२, क्षे=६४, अब इष्ट=८ कल्पना कर 'इष्टवर्ग हृतः क्षेपः' इत्यादि भास्करोक्त सूत्र से क=६, ज्ये=२४, क्षे=१, पुनः भावना के लिये न्यास क=६, ज्ये=२४, क्षे=१

क=६, ज्ये=२४, क्षे=१

समास भावना से क=१२०, ज्ये=११५१, क्षे=१, अतः राशि शेष मान=१२०, भावना से राशि शेष अनेकधा होता है । तब कुट्टक विधि से अग्निष्ट दिन में अहर्गण सुगमता ही से होता है । द्वितीय प्रश्न में प्रकृति=८३, क्षेप=१, तब 'इष्टं' ह्रस्वं तस्य वर्गः' इत्यादि

से क=१, ज्ये=६, क्षे=—२। भावना के लिये न्यास क=१, ज्ये=६, क्षे=—२

क=१, ज्ये=६, क्षे=—२ समाप्त

भावना से क=१८, ज्ये=१६४, क्षे=४, अब इष्ट=२ कल्पना कर 'इष्टवर्गहृतः क्षेपः' इत्यादि से क=६, ज्ये=८२, क्षे=१ एवं भावना से कनिष्ठ और ज्येष्ठ का आनन्त्य होता है। अतः कलाशेष=६ तब कुट्टक विधि से अभीष्ट दिन में सुगमता ही से अहर्गण होगा इति ॥७५॥

इदानीमन्यप्रश्नद्वयमाह ।

सूर्यविलिप्ताशेषं पञ्चभिरूनाहतं तथा दशभिः ।

वर्गं बृहस्पतिदिने कुर्वन्ता वत्सराद् गणकः ॥७६॥

सु. भा.—सूर्यविलिप्ताशेषं पञ्चभिरूनाहतं च बृहस्पतिदिने वर्गो भवति । वा विलिप्ताशेषं तथैव दशभिरूनाहतं च वर्गो भवतीति प्रश्न-मावत्सरात् कुर्वन्नपि स गणकोऽस्तीति ।

प्रथमप्रश्ने विलिप्ताशेषम्=या ।

ततः प्रश्नानुसारेण ५ या—२५ अयं वर्ग इष्टवर्गेण समः कृतः ।

ततः ५ या—२५=इ^२ ∴ या = $\frac{इ^२ + २५}{५}$ ।

यदि इ=५ तदा या=१० ।

एवं द्वितीयप्रश्ने १० या — १००=इ^२ ∴ या = $\frac{इ^२ + १००}{१०}$ ।

यदि इ=१० तदा या=२० । विलिप्ताशेषात् कुट्टकेनाहर्गणानयनं सुग-मम् ॥ ७६ ॥

वि. भा.—सूर्यविलिप्ताशेषं पञ्चभिर्हीनं पञ्चभिर्गुणितं च बृहस्पतिदिने वर्गो भवति, वा विलिप्ताशेषं दशभिर्हीनं दशभिर्गुणितं च वर्गो भवतीति प्रश्नोत्तर-मावत्सरात् कुर्वन् स गणकोऽस्तीति ॥

प्रथमप्रश्ने कल्प्यते विलिप्ताशेषम्=य, तदाऽऽलापानुसारेण ५ (य—५) इष्टवर्गेण समोऽयं वर्गः कृतः ५ (य—५)=इ^२=५ य—२५ समयोजनैर् ५ य=इ^२ + २५ पक्षौ पञ्चभिर्भक्तौ तदा य = $\frac{इ^२ + २५}{५}$, अत्र यदि इ=५ तदा $\frac{२५ + २५}{५}$

=य = $\frac{५०}{५}$ = १० । अस्मादहर्गणज्ञानं सुगमम् । द्वितीयप्रश्ने आलापानुसारेण

१० (य—१०) अयं वर्ग इष्टवर्गेण समः कृतः १० (य—१०)=इ^२=१० य — १००

$= ३२$ समयोजनेन १० य $= ३२ + १००$ अतः य $= \frac{३२ + १००}{१०}$ अत्र यदि $३ = १०$

तदा य $= \frac{१०० + १००}{१०} = \frac{२००}{१०} = २०$, विलिप्ताशेषाऽऽकुट्टकविधिनाऽग्रहर्गणज्ञानं सुखेन भवेदिति ॥७६॥

अब अन्य दो प्रश्नों को कहते हैं ।

हि. भा.—सूर्य के विलिप्ता शेष में से पांच घटा कर पांच से गुणा करने से बृहस्पति दिन में वर्ग होता है । वा उसी तरह विलिप्ता शेष में से दस घटा कर दस से गुणा करने से बृहस्पति दिन में वर्ग होता है इन प्रश्नों के उत्तर एक वर्ष तक करते हुए व्यक्ति गणक हैं इति ।

प्रथम प्रश्न में कल्पना करते हैं विलिप्ता शेष मान $= ५$ । तब प्रश्न के आलापानुसार ५ (य— ५) यह वर्ग है, इसको इष्ट वर्ग के बराबर करने से ५ (य— ५) $= ५$ य— $२५ = ३२$, दोनों पक्षों में २५ जोड़ने से ५ य $= ३२ + २५$ अतः य $= \frac{३२ + २५}{५}$, यहाँ यदि $३ = ५$ तब य $= \frac{२५ + २५}{५} = \frac{५०}{५} = १०$ इससे कुट्टक विधि से अग्रहर्गणयन सुगम है । इसी तरह द्वितीय प्रश्न में विलिप्ता शेष मान $= ५$, तब प्रश्न के आलापानुसार १० (य— १०) $= ३२ = १०$ य— १०० , दोनों पक्षों में १०० जोड़ने से १० य $= ३२ + १००$ \therefore य $= \frac{३२ + १००}{१०}$ यदि $३ = १०$ तब य $= \frac{१०० + १००}{१०} = \frac{२००}{१०} = २०$ इससे कुट्टक विधि से अग्रहर्गण ज्ञान सुगम है इति ॥७६॥

इदानीमन्यान् प्रश्नानाह ।

मगणादिशेषवर्गं त्रिभिर्गुणं संयुतं शतैर्नवभिः ।

कृतिमष्टशतोनं वा कुर्वन्नावत्सराद् गणकः ॥७७॥

सु. भा.—भगणादीनां भगण-राशि-कला-विकलानां शेषवर्गं त्रिभिर्गुणं नवभिः शतैः संयुतं वाऽष्टशतोनं वर्गमावत्सरात् कुर्वन्पि स गणकोऽस्तीति ।

अत्र भगणादिशेषमानम् $=$ या ।

ततः प्रश्नालापेन प्रथमप्रश्ने ३ या^३ + ६०० अयं वर्गः । अतः ७० सूत्रेण—

क १ ज्ये २ क्षे १

क ३० ज्ये ६० क्षे ९००

भावनया कनिष्ठज्येष्ठयोरानन्त्यम् ।

अतो भगणादिशेषमानम् = ३० । द्वितीयप्रश्नेऽप्येवम् ।

३ या^१—८०० अयं वर्गः ।

अतः क १ ज्ये १ क्षे २

क २० ज्ये २० क्षे ८००

रूपक्षेपपदाभ्यां भावनयाऽत्रापि पदयोरानन्त्यम् ।

अतो भगणादिशेषम् = २० ॥ ७७ ॥

वि. भा.—भगणादि (भगण-राशि-अंश-कला-विकला) शेषवर्गं त्रिभिर्गुणं नवभिः शतैः संयुतं वाऽष्टशतोनं वर्गः स्यादित्यावत्सरात् कुर्वन् स गणकोऽस्तीति ॥

प्रथमप्रश्ने कल्प्यते भगणादिशेषप्रमाणम् = य, तदाऽऽलापेन ३ य^२ + ९०० अयं वर्गः । अत्र प्रकृतिः = ३ कल्प्यते कनिष्ठम् = १, तदा ज्येष्ठम् = २, क्षे = १, तदा क्षुण्णः क्षुण्णे तदा पदे इत्यादिनेष्टम् = ३० प्रकल्प्य जाताः कनिष्ठज्येष्ठक्षेपाः क = ३०, ज्ये = ६०, क्षे = ९०० अत्र भावनया कनिष्ठज्येष्ठयोरानन्त्यम् । ततो भगणादिशेषमानम् = ३० ।

द्वितीयप्रश्ने आलापानुसारेण ३ य^२—८०० अयं वर्गः । अत्र प्रकृति = ३, क्षेपः = —८०० कल्प्यते कनिष्ठम् = १, तदा ज्येष्ठम् = १, क्षेपः = —२ अत्रापि 'क्षेपः क्षुण्णः क्षुण्णे तदा पदे, इत्यादिना इष्टम् = २० प्रकल्प्य जाताः कनिष्ठज्येष्ठक्षेपाः क = २०, ज्ये = २०, क्षे = —८०० रूपक्षेपीयकनिष्ठज्येष्ठाभ्यां तयो (कनिष्ठ-ज्येष्ठयोः) रानन्त्यम् । ततो भगणादिशेषमानम् = २० ॥ ७७ ॥

अब अन्य प्रश्नों को कहते हैं ।

हि. भा.—भगणादि (भगण-राशि-अंश-कला-विकला) शेष वर्ग को तीन से गुणा कर नौ सौ जोड़ने से वर्ग होता है वा आठ सौ को घटाने से वर्ग होता है इसको एक वर्ष पर्यन्त करते हुए व्यक्ति गणक है । यहां भगणादिशेष प्रमाण = य, है । तब प्रथम प्रश्न के आलापानुसार ३ य^२ + ९०० यह वर्ग है । यहां प्रकृति = ३, है तब 'इष्ट' ह्रस्वं तस्य वर्गः प्रकृत्या क्षुण्णः' इत्यादि से क = १, ज्ये = २, क्षे = १ 'क्षुण्णः क्षुण्णे तदा पदे' इस भास्करोक्ति से इष्ट = ३० कल्पना करने से क = ३०, ज्ये = ६०, क्षे = ९०० यहां भावना से कनिष्ठ और ज्येष्ठ अनन्त होता है । अतः भगणादि शेष = ३० ।

द्वितीय प्रश्न में प्रश्न के आलापानुसार ३ य^२—८०० यह वर्ग है, अतः क=१, ज्ये=१, क्षे=—२ । यहां भी 'क्षुण्णः क्षुण्णे तदा पदे' इस भास्करोक्ति से इष्ट=२० कल्पना करने से क=२०, ज्ये=२०, क्षे=—८००, यहां भी रूप क्षेपीय पदों से भावना द्वारा कनिष्ठ और ज्येष्ठ अनन्त होगा, इसलिये भगणादि शेष=२० इति ॥७७॥

इदानीमन्यं प्रश्नद्वयमाह ।

भगणादिशेषवर्गं चतुर्गुणं पञ्चषष्टिसंयुक्तम् ।
षष्ट्यूनं वा वर्गं कुर्वन्नावत्सराद् गणकः ॥७८॥

सु. भा.—स्पष्टार्थम् । प्रथमप्रश्ने भगणादिशेषमानम् = या । ततः प्रश्नानु-
सारेण ४ या^२+६५ अयं वर्गः ।

अत्र ६९ सूत्रतः । इष्टम्=५ । $\frac{५}{४}=१\frac{१}{४}$ ।

१३—५, ८ । $\frac{५}{४}=४$ । $\sqrt{\frac{४}{४}}=२$ । अतो भगणादिशेषम्=२ रूपक्षेप-

पदाभ्यां भावनयाऽऽनन्त्यम् ।

द्वितीयप्रश्नेऽप्येवं ४ या^२—६० अयं वर्गः ।

अत्रेष्टम्=२ । $\frac{५}{४}=३०$ । $३०+२=३२$ । $\frac{३२}{४}=८$ ।

$\sqrt{\frac{१६}{४}}=८$ । अतोऽत्र भगणादिशेषम्=८ । एवं बुद्धिमता ऋणक्षेपे

गुणके वर्गे चाधिकसंख्यातः कनिष्ठानयनं कार्यमिति ॥ ७८ ॥

वि. भा.—भगणादीनां (भगण—राशि-भाग-कला-विकलानां) शेषवर्गं चतुर्गुणं पञ्चषष्ट्या युतं वर्गो भवति वा षष्ट्या हीनं वर्गो भवतीति—आवत्सरात् कुर्वन् स गणकोऽस्तीति ।

प्रथमप्रश्ने कल्प्यते भगणादिशेषप्रमाणम्=य, तदा प्रश्नालापानुसारेण ४य^२+६५ अयं वर्गः स्यात् । अत्र प्रकृतिः=४, क्षेपः=६५, वर्गात्मकप्रकृतौ कनिष्ठज्येष्ठयोरानयनार्थं 'इष्टभक्तो द्विधाक्षेप' इत्यादि भास्करोक्तिसूत्रेणोष्टं=५ कल्पनेन जातं कनिष्ठम्=२, रूपक्षेपीयकनिष्ठज्येष्ठाभ्यां भावनयाऽऽनन्त्यम्, ततो भगणादिशेषमानम्=२ । द्वितीयप्रश्ने प्रश्नालापानुसारेण ४य^२—६० अयं वर्गः स्यात् । अत्रापि 'इष्टभक्तो द्विधाक्षेप' इत्यादि भास्करोक्त्या कनिष्ठम्=८, अतो भगणादिशेष मानम्=८ एवं वर्गात्मकप्रकृतौ ऋणक्षेपेऽधिकसंख्यातः कनिष्ठज्ञानं कार्यमिति ॥७८॥

अब अन्य दो प्रश्नों को कहते हैं ।

हि. भा.—भगणादि शेष वर्ग को चार से गुणा कर पैंसठ जोड़ने से वर्ग होता है,

वा साठ घटाने से वर्ग होता है इसको करते हुए व्यक्ति गणक हैं । प्रथम प्रश्न में कल्पना करते हैं भगणादि शेषमान = य, तब प्रश्न के आलापानुसार $४य^२ + ६५$ यह वर्ग है, यहां वर्गात्मक प्रकृति = ४ है, क्षेप = ६५ तब 'इष्टभक्तो द्विधाक्षेपः' इस भास्करोक्त सूत्र से इष्ट = ५ कल्पना करने से कनिष्ठ = २, रूपक्षेपीय कनिष्ठ और ज्येष्ठ से भावना द्वारा कनिष्ठ और ज्येष्ठ अनन्त होता है, इसनिये भगणादिशेषमान = २ हुआ । द्वितीय प्रश्न में प्रश्न के आलापानुसार $४ य^२ - ६०$ यह वर्ग है यहां भी 'इष्टभक्तो द्विधाक्षेपः' इत्यादि भास्करोक्त सूत्र से कनिष्ठ = ८, अतः भगणादिशेषमान = ८ हुआ । एवं वर्गात्मक प्रकृति में और ऋण-क्षेप में अधिक संख्या से कनिष्ठानयन करना चाहिये इति ॥७८॥

इदानीमन्यं प्रश्नमाह ।

इष्टभगणादिशेषं द्विनवत्पूतं त्र्यशीतिसङ्गुणितम् ।

रूपेण युतं वर्गं कुर्वन्नावत्सराद् गणकः ॥७९॥

सु. भा.—इष्टभगणादिशेषं द्विनवतिभि ९२ रूनं कार्यं शेषं त्र्यशीति ८३ संगुणितं रूपेण युतं च वर्गमावत्सरात् कुर्वन्नपि स गणकोऽस्तीति । इष्टभगणादिशेषमानम् = या । ततः प्रश्नालापेन —

$$८३ (या - ९२) + १ = ८३ या - ८३ \times ९२ + १$$

$$= ८३ या - ७६३६ + १ = ८३ या - ७६३५ = इ^२ \therefore या = \frac{इ^२ + ७६३५}{८३}$$

अत्र यदि इ = १ तदा या = ९२ इदमेव भगणादिशेषमानम् ॥ ७९ ॥

वि. भा.—इष्ट भगणादिशेषं द्विनवत्या ९२ हीनं शेषं त्र्यशीति ८३ गुणित-मेकेन युतं वर्गः स्यादित्यावत्सरात् कुर्वन् स गणकोऽस्तीति । कल्प्यते इष्टभगणादिशेषप्रमाणम् = य, तदाऽऽलापानुसारेण $८३ (य - ९२) + १ = ८३ य - ८३ \times ९२ + १ = ८३ य - ७६३६ + १ = ८३ य - ७६३५$ अयं वर्गः स्यात् कल्प्यते $८३ य - ७६३५ = इ^२$ पक्षौ ७६३५ युतौ तदा $८३ य = इ^२ + ७६३५$ पक्षौ ८३ भक्तौ तदा $\frac{इ^२ + ७६३५}{८३} = य$, अत्र यदि इष्टम् = १ तदा $य = \frac{७६३६}{८३} = ९२$ इत्येव भगणादिशेषप्रमाणम् ॥७९॥

अब अन्य प्रश्न को कहते हैं ।

हि. भा.—इष्ट भगणादिशेष में ९२ घटाने से जो शेष रहता है उसको ८३ से गुणाकर एक जोड़ने से वर्ग होता है इसको करते हुए व्यक्ति गणक है । यहां कल्पना करते हैं भगणादिशेषमान = य, तब प्रश्न के आलापानुसार $८३ (य - ९२) + १ = ८३ य - ७६३६$

+१=८३य-७६३५ यह वर्ग है, कल्पना करते हैं ८३य-७६३५=इ^२, दोनों पक्षों में ७६३५ जोड़ने से ८३य=इ^२+७६३५, दोनों पक्षों को ८३ से भाग देने से $\frac{इ^२+७६३५}{८३}$

=य, यहाँ यदि इ=१ तब $\frac{१+७६३५}{८३} = \frac{७६३६}{८३} = ९२ = य$ यही भगणादिशेष-मान हुआ इति ॥७९॥

इदानीं प्रश्नद्वयमाह ।

अधिमासशेषवर्गं त्रयोदशगुणं त्रिभिः शतैर्युक्तम् ।

त्रिघनोनं वा वर्गं कुर्वन्नावत्सराद् गणकः ॥८०॥

अयं वर्गः स्यात् । अत्र प्रकृतिः=१३, क्षेपः=-२७ इष्टं ह्रस्वमित्यादिना क=१,
ज्ये=४, क्षेपः=३, तथा कनिष्ठम्=१, ज्येष्ठम्=२, क्षेपः=-९ अनयोर्भावनया
क=६, ज्ये=२१, क्षेपः=-२७ रूपक्षेपकनिष्ठज्येष्ठाभ्यां भावनयाऽऽनन्त्यं
कार्यम् अत्र कनिष्ठमधिशेषमानम्=६=य ॥८०॥

अब अन्य दो प्रश्नों को कहते हैं ।

हि. भा. - अधिमास शेष वर्ग को तेरह से गुणा कर तीन सौ जोड़ने से वर्ग होता है, वा अधिमास शेष वर्ग को तेरह से गुणा कर सताइस घटाने से वर्ग होता है इसको करते हुए व्यक्ति गणक है इति ॥८०॥

यहां कल्पना करते हैं अधिमास शेषमान=य, तब प्रथम प्रश्न में प्रश्नालाप से १३य^२+३०० यह वर्ग है यहां प्रकृति=१३, क्षेप=३००, 'इष्टं ह्रस्वं तस्य वर्गः' इत्यादि से क=१, ज्ये=४, क्षे=३, तब 'क्षुराणः क्षुराणो तदा पदे' इस भास्करोक्ति से इष्ट=१० कल्पना करने से क=१०, ज्ये=४०, क्षे=३०० रूपक्षेपीय कनिष्ठ और ज्येष्ठ से भावना द्वारा कनिष्ठ और ज्येष्ठ की अनन्तता करनी चाहिये । यहां कनिष्ठ=१०=अधिमास शेष प्रमाण=य, हुआ, यहां यदि क=१, ज्ये=३, क्षे=-४ तब 'चतुरूनेऽन्त्य पदकृती त्र्येक-युते' इत्यादि आचार्योक्त ६८ सूत्र से रूपक्षेप में कनिष्ठ= $\frac{\text{क.ज्ये} (\text{ज्ये}^२+१) (\text{ज्ये}^२+३)}{२}$

$$= \frac{१ \times ३ (३^२ + १) (३^२ + ३)}{२} = \frac{३ \times १० \times १२}{२} = १८०, ज्ये = \{ ज्ये^२ + २ \}$$

$$\{ \frac{(ज्ये^२ + १) (ज्ये^२ + ३)}{२} - १ \} = \{ ३^२ + २ \}$$

$$\{ \frac{(३^२ + १) (३^२ + ३)}{२} - १ \} = ११ \times ५६ = ६४६, एवं रूपक्षेप में कनिष्ठ और$$

ज्येष्ठ साधन कर भावना से कनिष्ठ और ज्येष्ठ की अनन्तता करनी चाहिये । एतं द्वितीय प्रश्न में १३ य^२ - २७ यह वर्ग है, 'इष्टं ह्रस्वं तस्य वर्गः' इत्यादि से क=१, ज्ये=४, क्षे=३ तथा क=१, ज्ये=२, क्षे=-६ इन दोनों की समास भावना से क=६, ज्ये=२१, क्षे=-२७ यहां भी रूपक्षेपीय कनिष्ठ और ज्येष्ठ से भावना द्वारा कनिष्ठ और ज्येष्ठ की अनन्तता करनी चाहिये यहां अधिमास शेष प्रमाण=६=य, हुआ ॥८०॥

इदानीमन्यप्रश्नद्वयमाह ।

इन्दुविलिप्ता शेषं सप्तदश गुणं त्रयोदश गुणं चापि ।

पृथगेकयुतं वर्गं कुर्वन्नावत्सराद् गणकः ॥८१॥

सु. भा.—स्पष्टार्थम् ।

अत्र ७१ सूत्रतः । गु_१=१७ । गु_२=१३,

$$\begin{aligned} \text{ततो विलिप्ताशेषम्} &= \frac{८ (गु_१ + गु_२)}{(गु_१ - गु_२)^२} = \frac{८ (१७ + १३)}{(१७ - १३)^२} = \frac{८ \times ३०}{४^२} \\ &= \frac{८ \times ३०}{४ \times ४} = १५ । \end{aligned}$$

वि. भा.—चन्द्रस्य विलिप्ताशेषं पृथक् सप्तदशगुणितं, त्रयोदशगुणितां च एकयुतं वर्गं आवत्सरात् कुर्वन् स गणको ऽस्तीति । अत्र गुणक=गु=१७ । गुणकः=गु=१३ तदा 'गुणकयुतिरिष्टगुणिता गुणकान्तरवर्गभाजिते'

$$\text{त्याद्याचार्योक्तसूत्रेण विलिप्ताशेषम्} = \frac{८ (गु + गु)}{(गु - गु)^२} = \frac{८ (१७ + १३)}{(१७ - १३)^२} =$$

$$\frac{८ \times ३०}{४^२} = \frac{८ \times ३०}{१६} = \frac{३०}{२} = १५ ॥८१॥$$

अथ अन्य प्रश्नद्वय को कहते हैं ।

हि. भा.—चन्द्र के विलिप्ताशेष को पृथक् सतरह से और तेरह से गुणा कर एक जोड़ने से वर्ग होता है, इसको करते हुए व्यक्ति गणक है ॥ ८१ ॥ यहाँ गुणक=गु=१७,

गुणक = $\frac{1}{1} = 1$, तब 'गुणकयुतिरिष्टगुणिता गुणकान्तरभाजिता' इत्यादि आचार्योक्त

$$\text{सूत्र से विलिप्ताशेष} = \frac{5(\frac{1}{1} + \frac{1}{1})}{(\frac{1}{1} - \frac{1}{1})} = \frac{5(1 + 1)}{(1 - 1)} = \frac{5 \times 2}{0} = \frac{5 \times 2}{16} =$$

$$\frac{10}{2} = 5, \text{ इति ॥ ८१ ॥}$$

इदानीमन्यं प्रश्नद्वयमाह ।

अवभावशेषवर्गं द्वादशगुणितं शतेन संयुक्तम् ।

त्रिभिरूनं वा वर्गं कुर्वन्नावत्सराद् गणकः ॥ ८२ ॥

सु. भा.—स्पष्टार्थम् ।

प्रथमप्रश्ने क्षयशेषमानम् = या । ततः प्रश्नानुसारेण

$$१२ या^२ + १०० अयं वर्गः ।$$

वर्गप्रकृत्या, क १ ज्ये ४ क्षे ४

$$क ५ ज्ये २० क्षे १००$$

अथ चतुः क्षेप पदाभ्यां ६७ सूत्रेण ।

$$\text{रूपक्षेपे क} = \frac{क (ज्ये^२ - १)}{२} = \frac{१ (४^२ - १)}{२} = \frac{१५}{२}$$

$$ज्ये = \frac{ज्ये (ज्ये^२ - ३)}{२} = \frac{४ (४^२ - ३)}{२} = २६ ।$$

आभ्यां भावनयाऽऽनन्त्यं कार्यम् । अत्र क्षयशेषम् = ५ ।

द्वितीय प्रश्नेऽप्येवम् । १२ या^२ - ३ वर्गः ।

अतः क १ ज्ये ३ क्षे ३

रूपक्षेप पदाभ्यामत्राप्यानन्त्यं कार्यम् । अत्र क्षयशेषम् = १ ॥ ८२ ॥

वि. भा.—स्पष्टार्थम् । कल्प्यते अवमशेषप्रमाणम् = य, तदा प्रथम प्रश्नाला-
 पेन $१२ या^२ + १०० अयं वर्गः$ स्यात् । अत्र प्रकृतिः = १२, क्षेपः = १०० तदा कनिष्ठं १
 प्रकल्प्य 'इष्टं ह्रस्वं तस्य वर्गं' इत्यादि भास्करोक्त्या ज्येष्ठम् = ज्ये = ४, क्षेपः = ४
 ततः क्रमेण न्यासः क = १, ज्ये = ४, क्षेपः = ४ अत्रेष्टं = ५ प्रकल्प्य 'क्षुण्णः क्षुण्णौ तदा
 पदे' इति भास्करोक्त्या जाताः कनिष्ठज्येष्ठक्षेपाः क = ५, ज्ये = २०, क्षे = १००,
 चतुःक्षेपीय कनिष्ठ ज्येष्ठाभ्यां 'चतुरधिकेऽन्त्यपदकृतिरिति'त्यादि आचार्योक्तसूत्रेण
 रूपक्षेपे कनिष्ठम् = $\frac{क (ज्ये^२ - १)}{२} = \frac{१ \times (४^२ - १)}{२} = \frac{१५ - १}{२} = \frac{१५}{२}$

$$\text{ज्ये} = \frac{\text{ज्ये} (\text{ज्ये}^2 - ३)}{२} = \frac{४ (४^2 - ३)}{२} = २ (१६ - ३) = २ \times १३ = २६ । आभ्यां$$

भावनया कनिष्ठ ज्येष्ठयोरनन्तत्वं विधेयम् । अतोऽवमशेषप्रमाणम् = ५ = य ।

द्वितीय प्रश्ने १२ य^३—३ अयं वर्गः स्यात् । अत्र प्रकृतिः=१२, क्षेपः=—३ तदेष्टं ह्रस्वमित्यादिना क=१, ज्ये=३, क्षे=—३, रूपक्षेपीय कनिष्ठज्येष्ठाभ्यां कनिष्ठज्येष्ठयोरत्राप्यनन्तत्वं विधेयम् । अतोऽवमशेषमानम्=१ ॥ ८२ ॥

अब अन्य दो प्रश्नों को कहते हैं ।

हि. भा.—अवमशेष वर्ग को बारह से गुणा कर एक सौ जोड़ने से वर्ग होता है, वा अवम शेषवर्ग को बारह से गुणा कर तीन घटाने से वर्ग होता है इनका उत्तर करते हुए व्यक्ति गणक है इति ॥ ८२ ॥ कल्पना करते हैं अबमशेष प्रमाण=य, तब प्रथम प्रश्न के आलापानुसार १२ य^३+१०० यह वर्ग है । यहाँ प्रकृति=१२, क्षेप=१०० तब 'इष्टं ह्रस्वं तस्य वर्गः' इत्यादि भास्करोक्त सूत्र से चारक्षेप में क=१, ज्ये=४, क्षे=४, यहाँ इष्ट=५ कल्पना कर 'क्षुण्णः क्षुण्णे तदा पदे' इस भास्करोक्ति से क=५, ज्ये=२०, क्षे=१००, चारक्षेप सम्बन्धी कनिष्ठ और ज्येष्ठ से 'चतुरधिकेऽन्त्यपदकृतिः' इत्यादि आचार्योक्त ६७ सूत्र से रूपक्षेप में कनिष्ठ = $\frac{\text{क} (\text{ज्ये}^2 - १)}{२} = \frac{१ \times (४^2 - १)}{२} = \frac{१६ - १}{२} = \frac{१५}{२}$ ज्येष्ठ = $\frac{\text{ज्ये} (\text{ज्ये}^2 - ३)}{२} = \frac{४ (४^2 - ३)}{२} = २ (१६ - ३) = २ \times १३ = २६$ । इन कनिष्ठ और ज्येष्ठ से भावना के द्वारा कनिष्ठ और ज्येष्ठ अनन्त होता है, अतः अवमशेषमान= ५ = य, हुआ ।

द्वितीय प्रश्न में १२ य^३—३ यह वर्ग है । यहाँ प्रकृति=१२, क्षेप=—३, 'इष्टं ह्रस्वं तस्य वर्गः' इत्यादि से क=१, ज्ये=३, क्षे=—३, रूपक्षेपीय कनिष्ठ और ज्येष्ठ से भावना से यहाँ भी कनिष्ठ और ज्येष्ठ की अनन्तता होती है । अतः अवमशेष=१, हुआ इति ॥ ८२ ॥

इदानीमन्यं प्रश्नमाह ।

ज्ञदिनेऽर्ककलाशेषं गुरुदिनविकलावशेषयुक्तोत्तनम् ।

वर्गं वधं च सैकं कुर्वन्नावत्सराद् गणकः ॥ ८३ ॥

सु. भा.—बुधदिनेऽर्कस्य यत् कलाशेषं तद्गुरुदिनजेनार्कस्य विकलावशेषेण युक्तमूनं च वर्गं तथा तयोः कलाविकलाशेषयोर्वधं सैकं च वर्गमावत्सरात् कुर्वन्नपि स गणकोऽस्तीति ।

अत्र ७२ सूत्रेण कल्पित एको वर्गः १६ । अन्यश्च ४ ।

ततः १६+४=२० । १६-४=१२ ।

$$\frac{२०+१२}{(२०-१२)^{\frac{१}{२}}} = \frac{३२}{१६} = २ । अनेन गुणितौ २० । १२ जातौ राशी ४०।२४ ।$$

अत्र प्रथमं ४० कलाशेषं द्वितीयं लघुं २४ विकलाशेषम् । कलाशेषात् कुट्ट-
केन बुधदिनेऽहर्गणः साध्यः । विकलाशेषाच्च कुट्टकेन गुरुदिनेऽहर्गणः साध्य
इति ॥ ८३ ॥

वि. भा.—बुधदिने रवेः कलाशेषं यत्तद्बृहस्पतिदिनजेन रवेर्विकलाशेषेण
युतं हीनं च वर्गं तथा कलाविकलाशेषयोर्वधं सैकं च वर्गमावत्सरात् कुर्वन् स
गणकोऽस्तीति ।

‘वर्गोऽन्यकृतियुतो नस्तत्संयोगान्तरार्धकृतिभक्त’ इत्यादि सूत्रेणैको वर्गः
= १६ कल्पितः । द्वितीयश्च=४, तदा १६+४=२० । १६-४=१२
∴ $\frac{२०+१२}{(२०-१२)^{\frac{१}{२}}} = \frac{३२}{४^{\frac{१}{२}}} = \frac{३२}{१६} = २ । अनेन २०, १२ गुणितौ तदा राशी$

अवेताम् ४० । २४ अत्र प्रथमं=४०=कलाशेषम् । द्वितीयं=२४=विकलाशेषम् ।
कलाशेषात् बुधदिने कुट्टकेनाहर्गणः साध्यः, विकलाशेषात् कुट्टकविधिना
बृहस्पतिदिनेऽहर्गणः साध्य इति ॥ ८३ ॥

अब अन्य प्रश्न को कहते हैं ।

हि. भा.—बुध दिन में रवि के कलाशेष में बृहस्पतिदिनोत्पन्न रवि के विकलाशेष
को जोड़ने से और हीन करने से जो वर्ग होता है उस वर्ग को तथा कलाशेष और विकलाशेष
के घात में एक जोड़ने से जो वर्ग होता है उस वर्ग को करते हुए व्यक्ति गणक हैं । यहाँ
‘वर्गोऽन्यकृतियुतो नः’ इत्यादि आचार्योक्त ७२ सूत्र से एक वर्ग=१६ कल्पना किया, और
द्वितीय वर्ग=४ तब आचार्योक्त ७२ सूत्र के अनुसार १६+४=२० । १६-४=१२
∴ $\frac{२०+१२}{(२०-१२)^{\frac{१}{२}}} = \frac{३२}{४^{\frac{१}{२}}} = \frac{३२}{१६} = २$ इससे २० । १२ गुणा करने से दोनों

राशिमान होते हैं ४० । २४ इनमें प्रथम राशि=४०=कलाशेष, द्वितीय राशि=२४=
विकलाशेष, कलाशेष से बुध दिन में कुट्टक विधि से अहर्गणानयन करना चाहिये, विकला
शेष से कुट्टक विधि द्वारा बृहस्पति दिन में अहर्गणानयन करना चाहिये ।

इदानीमन्यप्रश्नमाह ।

विकलाशेषं सहितं त्रिनवत्या सप्तषष्टिहीनं च ।

भानोर्ब्धदिने वर्गं कुर्वन्नावत्सराद् गणकः ॥८४॥

सु. भा.—भानोर्ब्धदिने यद्विकलाशेषं तत् त्रिनवत्या सहितं वर्गं तथा सप्त-
षष्टिहीनं च वर्गमावत्सरात् कुर्वन्नपि स गणकोऽस्तीति ।

अत्र ७३ सूत्रेण इष्टम् = ४ ।

$$\frac{९३+६७}{४} = \frac{१६०}{४} = ४० । ४०-४ = ३६ । \frac{३६}{२} = १८ । १८^२ = ३२४ ।$$

३२४ + ६७ = ३९१ इदं विकलाशेषमतः कुट्टकेन बुधदिनेऽहर्गणानयनं सुगमम् ॥८४॥

वि. भा.—रवेर्ब्धदिने विकलाशेषं यत्तत् त्रिनवत्या ९३ युतं वर्गो भवति,
तथा सप्तषष्टि हीनं च वर्गो भवतीत्येतत् आवत्सरात् कुर्वन् गणकोऽस्तीति ।

यैरूनो यैश्च युतो रूपवर्गं इत्याद्याचार्योक्त ७३ सूत्रेण, कल्पितमिष्टम्
= ४ तदा $\frac{९३+६७}{४} = \frac{१६०}{४} = ४० । ४०-४ = ३६ । \frac{३६}{२} = १८, १८^२ = ३२४$

ततः ३२४ + ६७ = ३९१ = विकलाशेषमतः कुट्टकविधिना बुधदिनेऽहर्गणः साध्व
इति ॥८४॥

अब अन्य प्रश्न को कहते हैं ।

हि. भा.—बुधदिन में रवि का जो विकलाशेष है उसमें तिरानवे जोड़ने से वर्ग होता
है । तथा ६७ घटाने से वर्ग होता है इसको करते हुए व्यक्ति गणक हैं इति । 'यैरूनो यैश्च
युतो रूपवर्गः' इत्यादि आचार्योक्त ७३ सूत्र से $४ =$ इष्ट कल्पना कर $\frac{९३+६७}{४} = \frac{१६०}{४}$

$= ४०, ४०-४ = ३६, \frac{३६}{२} = १८, १८^२ = ३२४$ अतः $३२४ + ६७ = ३९१ =$ विकला
शेष, इससे कुट्टक विधि से अहर्गणानयन करना चाहिये इति ॥८४॥

इदानीमन्यप्रश्नद्वयमाह ।

शदिनेऽर्ककलाशेषं द्वादशभिः संयुतं त्रिषष्ट्या च ।

षष्ट्याऽष्टाभिश्चोनं कुर्वन्नावत्सराद् गणकः ॥८५॥

सु. भा.—बुधदिनेऽर्कस्य कलाशेषं यत् तद् द्वादशभिः संयुतं वर्गं तथा
त्रिषष्ट्या संयुतं च वर्गमावत्सरात् कुर्वन्नपि स गणकोऽस्तीत्येकः प्रश्नः । वा तत्
कलाशेषं षष्ट्यो ६० नं वर्गं तथाऽष्टाभिश्चोनं वर्गमावत्सरात् कुर्वन्नपि स गणको-

स्तीति द्वितीयः प्रश्नः । अत्र ७४ सूत्रेण । प्रथमप्रश्ने इष्टं ३ प्रकल्प्य
 $\frac{६३-१२}{२} = \frac{५१}{३} = १७$ । $\frac{१७+३}{२} = \frac{२०}{२} = १०$ । $१०^२ = १००$ । $१००-६३$
 $= ३७$ इदमेव कलाशेषम् । द्वितीय प्रश्ने इष्टं २ प्रकल्प्य $\frac{६०-८}{२} = \frac{५२}{२} =$
 $= २६$ । $\frac{२६-२}{२} = \frac{२४}{२} = १२$ । $१२^२ = १४४$ । $१४४+६०=२०४$ इदमेव
 कलाशेषम् ॥८५॥

वि. भा.—बुधदिने रवेः कलाशेषं द्वादशभिः संयुतं वर्गं कुर्वन् तथा
 त्रिषष्ट्या संयुतं च वर्गमावत्सरात्कुर्वन् स गणकोऽस्तीति प्रथमः प्रश्नः । वा
 तदेव कलाशेषं षष्ट्या हीनं वर्गं कुर्वन् तथाऽष्टाभिश्च हीनं वर्गमावत्सरात् कुर्वन्
 स गणकोऽस्तीति द्वितीयः प्रश्नः ।

याभ्यां कृतिरधिकोनं तदन्तरं हृतयुतो नमिष्टेनेत्याचार्योक्तसूत्रेण प्रथम-
 प्रश्ने इष्टं ३ प्रकल्प्य $\frac{६३-१२}{३} = \frac{५१}{३} = १७$, $\frac{१७+३}{२} = \frac{२०}{२} = १०$,
 $(१०)^२ = १००$, $१००-६३=३७=$ कलाशेषम् । द्वितीयप्रश्ने इष्टम्=२ कल्प-
 यित्वा $\frac{६०-८}{२} = \frac{५२}{२} = २६$, $\frac{२६-२}{२} = \frac{२४}{२} = १२$ । $(१२)^२ = १४४$,
 $१४४+६०=२०४=$ कलाशेषम् ॥८५॥

अब अन्य दो प्रश्नों को कहते हैं ।

हि. भा.—बुध दिन में कलाशेष में बारह जोड़ने से तथा तिरसठ जोड़ने से वर्ग को
 करते हुए व्यक्ति गणक हैं यह प्रथम प्रश्न है । वा कलाशेष में साठ घटाने से तथा आठ
 घटाने से वर्ग को करते हुए व्यक्ति गणक हैं यह द्वितीय प्रश्न है ।

‘याभ्यां कृतिरधिकोनं तदन्तरं’ इत्यादि आचार्योक्त ७४ सूत्र से प्रथम प्रश्न में इष्ट
 $= ३$ कल्पना कर $\frac{६३-१२}{३} = \frac{५१}{३} = १७$, $\frac{१७+३}{२} = \frac{२०}{२} = १०$, $(१०)^२$
 $= १००$, $१००-६३=३७=$ कलाशेष, कलाशेष से बुध दिन में कुछक विधि से अहर्गणान-
 नयन सुगमता ही से हो जायगा । द्वितीय प्रश्न में इष्ट=२ कल्पना कर $\frac{६०-८}{२} = \frac{५२}{२}$
 $= २६$ । $\frac{२६-२}{२} = \frac{२४}{२} = १२$, $(१२)^२ = १४४$, $१४४+६०=२०४=$ कलाशेष
 इससे बुध दिन में कुछक विधि से अहर्गणानयन करना चाहिये इति ॥८५॥

इदानीमन्यान् प्रश्नानाह ।

इन्दुविलिप्ताशेषाद्रविलिप्ताशेषमंशशेषं वा ।

अथवा मध्यमभिष्टं कुर्वन्नावत्सराद् गणकः ॥८६॥

सु० भा०—इन्दुविलिप्ताशेषात् रविलिप्ताशेषं वांशशेषमथवाऽभीष्टं मध्यमं ग्रहमावत्सरात् कुर्वन्नपि स गणकोऽस्तीति प्रश्नत्रयम् । अत्र चन्द्रकलाविकलाशेषात् कुट्टकविधिनाऽहर्गणज्ञानं तस्मादिष्टमध्यानयनं रवेः कलांशशेषानयनं च सुगमम् ॥८६॥

वि. भा.—चन्द्रस्य विकलाशेषात् रवेः कलाशेषमंश शेषं वा, अथवेष्टं मध्यमं ग्रहं, आवत्सरात् कुर्वन् स गणकोऽस्तीति । अत्र प्रश्नत्रयमस्ति । चन्द्रस्य विकलाशेषात् कुट्टकेनाहर्गणानयनं कार्यं तस्मादभीष्टमध्यमग्रहानयनं रवेः कलाशेषानयनमंश शेषानयनं च विधेयमिति ॥८६॥

अब अन्य प्रश्नों को कहते हैं ।

हि. भा.—चन्द्र के विकलाशेष से रवि के कला शेष को वा अंशशेष को अथवा इष्ट मध्यम ग्रह को करते हुए व्यक्ति गणक हैं, यहां तीन प्रश्न हैं । चन्द्र के विकलाशेष से कुट्टक विधि से अहर्गणानयन करना चाहिये । उस से अभीष्ट मध्यमग्रहानयन, तथा रवि का कलाशेषानयन, अंशशेषानयन सुगमता ही से हो जायगा इति ॥८६॥

इदानीमन्यान् प्रश्नानाह ।

जीवविलिप्ताशेषात् कुजमिन्दुं भौमलिप्तिकाशेषात् ।

रविमिन्दुभागशेषात् कुर्वन्नावत्सराद् गणकः ॥८७॥

सु० भा०—गुरुविलिप्ताशेषात् कुजं भौमकलाशेषाच्चन्द्रं चन्द्रभागशेषाच्च रविमावत्सरात् कुर्वन्नपि स गणकोऽस्तीति ।

गुरोर्विकलाशेषाद्वा भौमकलाशेषादथवा चन्द्रभागशेषात् कुट्टकेनाहर्गणज्ञानं ततोऽहर्गणादभीष्टग्रहज्ञानं स्फुटमेवेति ॥८७॥

त्र द्वयोर्द्वयोर्निश्छेदभागहारयोर्महत्तमापवर्त्तनविभक्तयोः सतोर्ये लब्धे ताभ्यामन्यो-
न्यहारौ सङ्गुण्य लघुतमापवर्त्त्य एवोत्पादित इति गणितविदां प्रसिद्धमे-
वेति ॥८९-९०॥

वि. भा.— यस्मात् द्युगणात् (अहर्गणात्) ग्रहयोर्ये भगणादिशेषे स्तस्तयो-
र्निश्छेदभागहारौ (स्वस्वदृढकुदिनसंज्ञकौ) यौ तयोर्निश्छेदेन (महत्तमापवर्त्तनेन)
भक्तयोर्ये लब्धे ताभ्यां निश्छेदभागहारौ गुणितावर्थात् महत्तमापवर्त्तनभक्ताद्
प्रथमदृढकुदिनसंज्ञकाच्चल्लब्धं तेन द्वितीयदृढकुदिनप्रमाणं गुणीयं, द्वितीयलब्धेन
प्रथमदृढकुदिमानं गुणीयमेवं समच्छेदौ भवतः । तद्युतात् (पूर्वसाधितादहर्गणात्)
पुनस्ते एव ग्रहयोर्भगणादिशेषे भवतः । पूर्वसाधितसमच्छेदेनोद्दिष्टाहर्गणो
युतस्तदा योगसमेऽहर्गणे पुनस्ते एव भगणादिशेषे भवतः । एवमिष्टदिने श्र्यादीनां
ग्रहाणां यानि भगणादिशेषाणि तानि पुनः कदेतिप्रश्नोत्तरं पूर्ववत्कार्यम् ।
द्वयोर्निश्छेदांशहाराभ्यां पूर्ववत् समच्छेदं विधाय नवीनो निश्छेदभागहारः कल्पनीयः ।

पुनरस्य तृतीयदृक्कुदिनस्य च लघुतमापवर्त्यो गवेषणीयः । अग्रेऽप्येवमेव कर्म कार्यम् ।
अन्ते सर्वेषां दृक्कुदिनानां यो लघुतमापवर्त्यस्तेनाहर्गणो युतस्तदा योगतुल्येऽहर्गणो
पुनस्तान्येव शेषाणि स्युरिति ॥८९-९०॥

अत्रोपपत्तिः ।

यदि ग्रहाणां दृक्कुदिनानि क, ख, ग, दृक्भगणाः य, र, ल, कल्प्यन्ते, तथा
दृक्कुदिनानां लघुतमापवर्त्यश्च = प, तदा 'प + अहर्गण' अहर्गणो दृक्भगणगुणो
दृक्कुदिनभक्तः प्रथमखण्डे निःशेषभगणाः समागच्छन्ति, प्रयोजनाभावात्ते यदि न
गृह्यन्ते तदोद्दिष्टादहर्गणाद्यद् भगणशेषं तदेवा 'प + अहर्गण' स्मादपि, द्वयोर्द्वयोर्दृक्
कुदिनसंज्ञकयोर्महत्तमापवर्त्तनेन विभक्तयोर्मे लब्धी ताभ्यां परस्परं हारौ सङ्गुण्य
लघुतमापवर्त्य एव सम्पादित आचार्येणेति ॥८९-९०॥

अब उद्दिष्ट अहर्गण में दो ग्रहों के भगणादि शेष जो है वे ही पुनः किस
अहर्गण में होंगे इस प्रश्न के उत्तर को कहते हैं ।

हि. भा.-जिस अहर्गण से दो ग्रहों के जो भगणादि शेष हैं उन दोनों के अपने अपने दृक्
कुदिन को महत्तमापवर्त्तन से भाग देने से जो लब्धिद्वय होता है उन दोनों से विपरीत दोनों
दृक् कुदिन को गुणा करना चाहिए अर्थात् प्रथम दृक्कुदिन संज्ञक को महत्तमापवर्त्तन से भाग
देने से जो लब्धि हो उससे द्वितीय दृक्कुदिन को गुणा चाहिए और द्वितीय लब्धि से प्रथम
दृक्कुदिन को गुणा करना चाहिए, इस तरह करने से समच्छेद होता है । उस से युत
पूर्व साधित अहर्गण से फिर दोनों ग्रहों के वे ही भगणादि शेष होते हैं अर्थात् उद्दिष्टा-
हर्गण में पूर्व साधित समच्छेद को जोड़ने से योग तुल्य अहर्गण में पुनः वे ही दोनों ग्रहों के
भगणादि शेष होते हैं । इसी तरह तीन आदि ग्रहों के इष्टदिन में जो भगणादि शेष हों
वे पुनः कब होंगे इसका उत्तर पूर्ववत् करना चाहिए । दो ग्रहों के दृक्कुदिन संज्ञकों से
पूर्ववत् समच्छेद करके नये दृक्कुदिन कल्पना करना फिर इसके और तृतीय दृक्कुदिन के
लघुतमापवर्त्य अन्वेषण (खोजना) करना चाहिए, एवं आगे भी क्रिया करनी चाहिए ।
अन्त में सब दृक्कुदिनों के जो लघुतमापवर्त्य हो उसको अहर्गण में जोड़ देना चाहिए तब योग-
तुल्य अहर्गण में पुनः वे ही शेष होंगे इति ॥

उपपत्ति ।

यदि ग्रहों के दृक्कुदिन क, ख, ग, और दृक्भगण य, र, ल कल्पना करते हैं तथा
दृक्कुदिन संज्ञकों के लघुतमापवर्त्य = प, तब प + अहर्गण को दृक्भगण से गुणाकर दृक्-
कुदिन से भाग देने से प्रथम खण्ड में निःशेष भगण लब्ध होता है, प्रयोजना भाव से यदि
उसको छोड़ देंगे तब उद्दिष्ट अहर्गण से जो भगणादि शेष होता है वही प + अहर्गण,
इससे भी, आचार्य ने यहां दो ग्रहों के दृक्कुदिन को महत्तमापवर्त्तन से भाग देने से जो लब्धिद्वय

होते हैं उन दोनों से परस्पर हारों को गुणाकर लघुतमापत्यं ही उत्पादित किया इति ॥८६-९०॥

इदानीमन्यान् प्रश्नानाह ।

 \end{aligned}$$

वि. मा.—अवमशेषात् १०८४५५ एभिर्गुणितात् ३५०६४८१ एभिर्भक्तात्, यच्छेषं सोऽहर्गणः स्यादिति ॥

अत्रोपपत्तिः ।

यदि कल्पहृदकुदिनैर्हृदकल्पावमानि लभ्यन्ते तदाऽहर्गणेन किमित्यनुपातेन समागच्छन्ति स शेष गतावमानि तत्स्वरूपम् = $\frac{\text{हृदकल्पावम} \times \text{अहर्गण}}{\text{हृदककुदिन}}$ = गतावम

+ $\frac{\text{हृदावमशेष}}{\text{हृदककुदिन}}$ पक्षौ $\frac{\text{हृदावमशेष}}{\text{हृदकल्पकुदिन}}$ एभिर्हीनौ तदा $\frac{\text{हृदकल्पावम} \times \text{अहर्गण}}{\text{हृदककुदिन}}$

— $\frac{\text{हृदावमशेष}}{\text{हृदककुदिन}}$ = $\frac{\text{हृदकल्पावम} \times \text{अहर्गण} - \text{हृदावमशेष}}{\text{हृदककुदिन}}$ = गतावमानि । अत्र यदि

हृदकल्पावमं भाज्यं हृदावमशेषमृणक्षेपं हृदकल्पकुदिनं हारं कल्प्यते तदा कुट्टकेन योगुणः समाग मिष्यति स एवाहर्गणो भवेत् । अत्राचार्येण लाघवार्थं रूपशुद्धौ (ऋणात्मकरूपक्षेपे) १०८४५५ गुणाकं प्रकल्प्य स्थिरकुट्टकः कृतः । ३५०६४८१ इति हृदकुदिनानि सन्ति तदानयनं क्रियते ।

$$\begin{aligned} \frac{\text{कल्पावम}}{\text{ककुदि}} &= \frac{२५०८२५५००००}{१५७७९१६४५००००} = \frac{५०००० \times ५०१६५१}{५०००० \times ३१५५८३२९} \\ &= \frac{५०००० \times ६ \times ५५७३३९}{५०००० \times ९ \times ३५०६४८१} = \frac{५५७३९}{३५०६४८१} = \frac{\text{हृदावम}}{\text{हृदकुदिन}} \parallel \end{aligned}$$

अथ हृदरविभगणहृदकुदिनयोरानयनं प्रदर्श्यते ।

$$\begin{aligned} \frac{\text{करभगणा}}{\text{ककुदिन}} &= \frac{४३२००००००००}{१५७७९१६४५००००} = \frac{५०००० \times ८६४००}{५०००० \times ३१५५८३२९} \\ \frac{५०००० \times ६ \times ६६००}{५०००० \times ६ \times ३५०६४८१} &= \frac{५०००० \times ९ \times ३ \times ३२००}{५०००० \times ६ \times ३ \times ११६८८२७} = \frac{३२००}{११६८८२७} \\ &= \frac{\text{हृदरविभगणा}}{\text{हृदकुदिन}} \text{ । एवमेव } \frac{\text{चं कल्पभगणा}}{\text{ककुदिन}} = \frac{५७७५३३०००००}{१५७७९१६४५००००} \\ &= \frac{५०००० \times ११५५०६६}{५०००० \times ३१५५८३२९} = \frac{५०००० \times ३ \times ३८५०२२}{५०००० \times ३ \times १०५१९४४३} = \frac{३८५०२२}{१०५१९४४३} \\ &= \frac{\text{हृद चं भगणा}}{\text{हृदकुदिन}} \parallel \end{aligned}$$

अब प्रथम प्रश्न के उत्तर को कहते हैं ।

हि. भा.—अवमशेष को १०८४५५ इससे गुणा कर ३५०६४८१ इससे भाग देने से शेष अहर्गण होता है ॥६३॥

उपपत्ति ।

यदि कल्प हृदकुदिन में हृद कल्पावम पाते हैं तो अहर्गण में क्या इस अनुपात से

शेष (शेषसहित) गतावम प्रमाण आता है उसका स्वरूप = $\frac{\text{दृढ़कल्पावम} \times \text{अहर्गण}}{\text{दृढ़कल्पकुदिन}} =$

गतावम + $\frac{\text{दृढ़ावमशेष}}{\text{दृढ़ककुदिन}}$ दोनों पक्षों में $\frac{\text{दृढ़ावमशेष}}{\text{दृढ़ककुदिन}}$ घटाने से $\frac{\text{दृढ़कल्पावम} \times \text{अहर्गण}}{\text{दृढ़ककुदिन}}$

— $\frac{\text{दृढ़ावमशेष}}{\text{दृढ़ककुदिन}} = \frac{\text{दृढ़कल्पावम} \times \text{अहर्गण}}{\text{दृढ़कल्पकुदिन}} - \frac{\text{दृढ़ावमशेष}}{\text{दृढ़ककुदिन}} = \text{गतावम}$, यहां यदि दृढ़कल्पावम

को भाज्य, दृढ़ावमशेष को ऋणाक्षेप और दृढ़कल्पकुदिन को हार माना जाय तब कुट्टक विधि से जो गुणक आयगा वही अहर्गण होगा, यहां आचार्य ने लाघवायं ऋणात्मक रूपक्षेप में १०८४५५ कल्पना कर स्थिर कुट्टक किया है, ३५०६४८१ यह दृढ़कुदिन है, इसका आनयन करते हैं। $\frac{\text{कल्पावम}}{\text{कल्पकुदिन}} = \frac{२५०८२५५००००}{१५७७९१६४५००००} = \frac{५०००० \times ५०१६५१}{५०००० \times ३१५५८३२९}$

= $\frac{५०००० \times ९ \times ५५७३९}{५०००० \times ९ \times ३५०६४८१} = \frac{५५७३९}{३५०६४८१} = \frac{\text{दृढ़ावम}}{\text{दृढ़ककुदिन}}$ इससे अभीष्ट सिद्धि हो गई इति ॥

अब दृढ़रविभगण और दृढ़कुदिन का आनयन करते हैं।

$$\begin{aligned} \frac{\text{कल्परविभगण}}{\text{कल्पकुदिन}} &= \frac{४३२०००००००}{१५७७९१६४५००००} = \frac{५०००० \times ८६४००}{५०००० \times ३१५५८३२९} \\ &= \frac{५०००० \times ९ \times ९६००}{५०००० \times ९ \times ३५०६४८१} = \frac{५०००० \times ९ \times ३ \times ३२००}{५०००० \times ९ \times ३ \times ११६८८२७} = \frac{३२००}{११६८८२७} \\ &= \frac{\text{दृढ़रवि भगण}}{\text{दृढ़ककुदिन}} \text{ इसी तरह } \frac{\text{चं कल्पभगण}}{\text{कल्प कुदिन}} = \frac{५७७५३३०००००}{१५७७९१६४५००००} \\ &= \frac{५०००० \times ११५५०६६}{५०००० \times ३१५५८३२९} = \frac{५०००० \times ३ \times ३८५० \times २२}{५०००० \times ३ \times १०५१९४४३} = \frac{३८५०२२}{१०५१९४४३} \\ &= \frac{\text{दृढ़ चं भगण}}{\text{दृढ़ कुदिन}} \quad \parallel \end{aligned}$$

इदानीमवमशेषाद्रव्यानयनमाह ।

जिनरसगोऽग्निरव ३२४९६२४ गुणात् शशिवसुकृतरसखभूतराम ३५०६४८१ हृतात् ।
दृष्टावमशेषाद्यत् शेषं रविभगणशेषं तत् ॥९४॥

सु. भा.—स्पष्टार्थम् ।

अत्रोपपत्तिः ।

अत्र पूर्वप्रकारेणाहर्गणः = १०८४५५ क्षशे—३५०६४८१ इ । अयं रविदृढ-
भगणगुणास्तद् दृढवु दिनगुणो जातो रविभगणात्मकः ।

$$= \frac{३२०० \times १०८४५५ \text{ क्षणे} - ३२०० \times ३५०६२८१ \text{ इ}}{११६८८२७} = \frac{३४७०५६००० \text{ क्षणे}}{११६८८२७}$$

$$- ३२०० \times ३ \text{ इ} = \frac{१०८३२०८}{११६८८२७} + ९६ \text{ क्षणे} - ९६०० \text{ इ अतो दृढभगणशेषम्}$$

$$= १०८३२०८ \text{ क्षणे} - ११६८८२७ \text{ इ, । आचार्येण गुणहरी त्रिभिः सङ्गुण्य}$$

वि. भा.—अवमशेषात् ११०१७९ एतैर्गुणितात् ३५६२२२० एतैर्भक्ताच्छेषं तिथयो भवन्ति, अवमशेषकाद्वर्त्तमानतिथेर्भुक्तं मानं साध्यमिति ॥

अत्रोपपत्तिः ।

‘सावनान्यवमानि स्युश्चान्द्रेभ्यः साधितानि चेत् । सावनेभ्यस्तु चान्द्राणि तच्छेषं तद्वशात्तथेति’ सिद्धान्त शिरोमणौ प्रतिपादितम् । तेन चान्द्रेभ्यो यान्यवमानि तच्छेषं च यत्तदेव शेषमवमानि च सावनेभ्यो भवन्ति, ततः कल्पचान्द्रदिनैर्यदि कल्पावमानि लभ्यन्ते तदा गत चान्द्रदिनैः किमित्यनुपातेन लब्धं गतावमानि शेषमवमशेषं तत्स्वरूपम् = $\frac{\text{कल्पावम} \times \text{गत चान्द्रदि}}{\text{कल्पचांदि}} = \text{गतावम} + \frac{\text{अवमशे}}{\text{कल्पचांदि}}$

पक्षौ अवमशे कल्पचांदि अभिर्हीनौ तदा $\frac{\text{कल्पावम} \times \text{गतचान्द्रदि} - \text{अवमशे}}{\text{कल्पचांदि}} = \text{गतावम},$

अत्र कल्पावमानि भाज्यं, अवमशेषमृणक्षेपं कल्पचान्द्रदिनानि हारं प्रकल्प्य कुट्टकेन यो गुणस्तान्येव गतचान्द्रदिनानि गततिथयो भवन्ति । तत्राचार्येण ऋणात्मकरूप क्षेपे स्थिर कुट्टकः साधितः स एवावमशेष गुणकः पठितः । अथ दृढावम

दृढचान्द्रदिनयोरानयनं क्रियते $\frac{\text{कल्पावमदि}}{\text{कल्पचांदि}} = \frac{२५०८२५५००००}{१६०२९९००००००}$

= $\frac{५०००० \times ५०१६५१}{५०००० \times ३२०५९९८०} = \frac{५०००० \times ९ \times ५५७३९}{५०००० \times ९ \times ३५६२२०} = \frac{५५७३९}{३५६२२०}$

= $\frac{\text{दृढावमदि}}{\text{दृढचांदि}}$ अतो दृढचान्द्रदिनान्येव हरः सिद्धः । गणितागतमवमशेष-

५०००० × ९ मनेन विभक्तं लब्धमत्र दृढावमशेषं बोध्यमिति । ९१ श्लोके-अवशिष्टा अन्ये ये प्रश्नास्तेषामुत्तराण्यवमशेषादहर्गणं संसाध्य तस्मादहर्गणात्कार्याणि । ९२ श्लोके च ये प्रश्नास्तेषामुत्तराणि कुट्टकयुत्तया कार्याणीति ॥९५॥

अब अवमशेष से तिथि के आनयन को कहते हैं ।

हि. भा.—अवमशेष को ११०१७९ इससे गुणाकर ३५६२२२० इन से भाग देने से जो शेष रहता है वह तिथि होती है । अवमशेष से वर्त्तमान तिथि का भुक्तमान साधन करना चाहिये इति ॥६५॥

उपपत्ति ।

चान्द्रदिन से साधित अवम और जो अवमशेष होता है वही अवम और अवमशेष

सावन से भी होता है 'गोलाध्याय में सावनान्यवमानि स्युश्चान्द्रेभ्यः साधितानि चेत्' इत्यादि श्लोक की मिताक्षरा में भास्कराचार्योंक्त से स्पष्ट है, अतः कल्प चान्द्र दिन में यदि कल्पावम पाते हैं तो गतचान्द्र दिन में क्या इस अनुपात से सशेष (शेष सहित) गतावम आता है उसका स्वरूप = $\frac{\text{कल्पावम} \times \text{गतचांदि}}{\text{कल्पचांदि}} = \text{गतावम} + \frac{\text{अवमशे}}{\text{कल्पचांदि}}$ दोनों पक्षों में $\frac{\text{अवमशे}}{\text{कल्पचांदि}}$

इसको घटाने से $\frac{\text{कल्पावम} \times \text{गतचांदि} - \text{अवमशे}}{\text{कल्पचांदि}} = \text{गतावम}$, यहां यदि कल्पावम को भाज्य,

अवमशेष को ऋणाक्षेप, कल्पचान्द्र दिन को हार कल्पना की जाय तब कुट्टक विधि से जो गणक होता है वही गतचान्द्रदिन गततिथि होती है। वहां आचार्य ने ऋणात्मक रूप क्षेप में स्थिर कुट्टक साधन किया है वही अवमशेषका गुणक पठित हैं। दृढावम और दृढचान्द्र दिन का

आनयन करते हैं $\frac{\text{कल्पावमदि}}{\text{कल्पचांदि}} = \frac{२५०८२५५००००}{१६०२९९००००००} = \frac{५०००० \times ५०१६५१}{५०००० \times ३२०५९९८०}$
 $= \frac{५०००० \times ९ \times ५५७३९}{५०००० \times ९ \times ३५६२२०} = \frac{५५७३९}{३५६२२०} = \frac{\text{दृढावमदि}}{\text{दृढचांदि}}$ अतः चान्द्रदिन ही हर

सिद्ध हुआ। गणितागत अवमशेष को ५००००×९ इससे भाग देने से जो लब्ध होता है वह यहां अवमशेष समझना चाहिये।

९१ श्लोक में अवशिष्ट जो अन्य प्रश्न हैं उन सबों के उत्तर अवमशेष से अहर्गण साधन कर उस अहर्गण से करना चाहिये। तथा ९२ श्लोक में जो प्रश्न हैं उन सबों के उत्तर कुट्टक विधि से स्पष्ट हैं; आचार्य ने भी इसी कारण से उनके उत्तर नहीं कहे हैं इति ॥९५॥

इदानीं पुनः प्रश्नान्तरं तदुत्तरं चाह।

भागकलाविकलैक्यं दृष्ट्वा विकलान्तरं च के शेषे।

ऐक्यं द्विधाऽन्तराधिकहीनं च द्विभाजितं शेषे ॥९६॥

सु. भा.—भागविकलं भागशेषं। कलाविकलं कलाशेषम्। अनयोरैक्यं तथाऽनयोर्विकलयोः शेषयोरन्तरं न दृष्ट्वा शेषे ते द्वे के स्त इति प्रश्नः। अथ तदुत्तरमाहैक्यमिति।

ऐक्यं द्विधा स्थाप्यमन्तरेणैकत्राधिकमन्यत्र हीनं कार्यं ततो द्विभाजितं दलितं शेषे भवतः।

अत्रोपपत्तिः। सङ्क्रमणगणितेन स्फुटा ॥९६॥

वि. भा.—भागविकलं (अंशशेषं) कलाविकलं (कलाशेषं) एतयोरैक्यं (योगं) तथा विकलान्तरं (शेषयोरन्तरं) दृष्ट्वा ते शेषे के स्त इति प्रश्नः। ऐक्यं

(शेषयोर्योगं) स्थानद्वये स्थाप्यमेकत्रान्तरेण युतमन्यत्र हीनं कार्यं द्वाभ्यां भक्तं तदा शेषे भवेतामित्युत्तरम् ।

अत्रोपपत्तिः ।

कल्प्यते अंशशेषमानम् = य, कलाशेषमानम् = र, अनयोर्योगः = य + र = यो, तयोरेवान्तरम् = य - र = अं तदा यो + अं = (य + र) + (यो - अं) = य + र + य - र = २ य ∴ $\frac{\text{यो}-\text{अं}}{२} = \text{य}$ तथा यो - अं = (य + र) - (य - र) = य + र - य + र = २ र ∴ $\frac{\text{यो}-\text{अं}}{२} = \text{र}$, अत आचार्योक्तमुपपन्नम् ॥९६॥

अब पुनः प्रश्नान्तर और उसके उत्तर को कहते हैं ।

हि. भा.—अंशशेष और कलाशेष का योग तथा उन्हीं दोनों शेषों का अन्तर जान कर वे दोनों शेष क्या हैं यह प्रश्न है । दोनों शेषों के योग को दो स्थानों में रख कर एक स्थान में अन्तर को जोड़ कर दूसरे स्थान में अन्तर को घटाकर आधा करने से दोनों शेषों के मान होते हैं, यह उत्तर है ।

बृहद्वाशिः = य, लघुवाशिः = र । य + र = योगः = यो । य - र = अन्तरम् = अं, तब यो + अं = य + र + य - र = २ य अतः $\frac{\text{यो}+\text{अं}}{२} = \text{य}$, तथा यो - अं = य + र - (य - र) = य + र - य + र = २ र अतः $\frac{\text{यो}-\text{अं}}{२} = \text{र}$, यहां यदि अंशशेष = य, कला-

शेष = र तब $\frac{\text{यो}+\text{अं}}{२} = \text{आचार्योक्तसूत्र उपपन्न होता है । आचार्य संक्रमण गणित}$

“योगोऽन्तरयुतहीनो द्विहृत” इत्यादि से पहले कह चुके हैं, यहां भी ‘ऐक्य’ द्विधाऽन्तराधिक-हीन’ इत्यादि से उसी संक्रमण की प्रक्रिया का पिष्टपेषण करते हैं, सिद्धान्तशेखर में ‘योगो-ऽन्तरेणोनयुतो द्विभक्तः कर्मोदितं संक्रमणाख्यमेतत्’ इससे श्रीपति तथा लीलावती में ‘योगो-ऽन्तरेणोनयुतोऽर्धतस्तौ राशी स्मृतं संक्रमणाख्यमेतत्’ इससे भास्कराचार्य ने भी आचार्योक्त संक्रमण कर्म के सदृश ही संक्रमण कर्म कहा है इति ॥९६॥

इदानीं पुनः प्रश्नान्तरं तदुत्तरं चाह ।

तद्वर्गान्तरमाद्ये तदन्तरं चान्तरोद्धृतयुतो नम् ।

वर्गान्तरं विभक्तं द्वाभ्यां शेषे ततो द्युगणः ॥९७॥

पु. भाः—आद्येऽनन्तरोक्ते प्रश्ने यदि तयोः शेषयोर्वर्गान्तरं तथा तयोरन्तरं

चोद्दिष्टं भवेत् तदा वर्गान्तरमन्तरेणोद्धृतं लब्धं चान्तरेण युतमूनं च कार्यम् । ततो द्वाभ्यां विभक्तं शेषे भवतः । ततो भागकलाशेषाभ्यां प्राग्बत् कुट्टकविधिनाऽहर्गणः साध्यः ।

अत्रोपपत्तिः । विषमकर्मणा स्फुटा ॥६७॥

वि. भा.—आद्ये (अनन्तरोक्ते) प्रश्ने यदि तयोः शेषयोर्वर्गान्तरं तथा तयोरन्तरं चोद्दिष्टं भवेत् तदा वर्गान्तरमन्तरेण भक्तं लब्धं तयोर्योगो भवेत्, लब्धमन्तरेण युतं हीनं च विधेयं द्वाभ्यां भक्तं तदा शेषे भवतः । ततोऽशकला शेषाभ्यां पूर्ववत् कुट्टकेनाऽहर्गणज्ञानं भवेदिति ।

अत्रोपपत्तिः ।

$$\begin{aligned} \text{कल्प्यते अंशशेषमानम्} &= \text{य}, \text{ कलाशेषमानम्} = \text{र}, \text{ तदा } \frac{\text{य}^2 - \text{र}^2}{\text{य} - \text{र}} = \text{य} + \text{र} \\ &= \frac{\text{वर्गान्तर}}{\text{अन्तर}} = \text{यो} । \text{य} - \text{र} = \text{अन्तर}, \text{ ततः संक्रमणेन } \frac{\text{यो} + \text{अं}}{2} = \text{य} । \\ \frac{\text{यो} - \text{अं}}{2} &= \text{र एतावताऽऽचार्योक्तमुपपन्नम्} । \text{अत्रापि 'वर्गान्तरमन्तरयुतहीनमित्यादि'}$$

विषमकर्म संज्ञकस्य गणितस्य पिष्टपेषणमेव कृतमाचार्येण 'वर्गान्तरं स्वान्तर-हृद्युतोर्न योगो द्विभक्तं विषमाख्यकर्म' अनेन श्रीपतिनाऽऽचार्योक्तविषमकर्म-सदृशमेव विषमकर्मोक्तम्' भास्कराचार्येणैतस्य नाम विषमकर्म न कथ्यते; अंशकलाशेषाभ्यां पूर्ववत् कुट्टकेनाहर्गणज्ञानं भवेदेवेति ॥९७॥

अब पुनः प्रश्नान्तर और उसके उत्तर को भी कहते हैं ।

हि. भा.—यदि अंशशेष और कलाशेष का वर्गान्तर तथा उन्हीं दोनों का अन्तर उद्दिष्ट है तब वर्गान्तर को अन्तर से भाग देने से जो लब्ध हो उस में अन्तर को युत और हीन कर, दो से भाग देने से अंशशेष और कलाशेष होते हैं, इन दोनों शेषों से पूर्ववत् कुट्टक विधि से अहर्गणानयन सुगमता ही से होता है ॥६६॥

उपपत्ति ।

कल्पना करते हैं अंशशेषमान = य, कलाशेषमान = र, तब $\text{य}^2 - \text{र}^2 = \text{वर्गान्तर}$, $\text{य} - \text{र} = \text{अन्तर}$ $\frac{\text{य}^2 - \text{र}^2}{\text{य} - \text{र}} = \frac{\text{वर्गान्तर}}{\text{अन्तर}} = \text{य} + \text{र} = \text{योग}$, अब योग और अन्तर ज्ञान से संक्रमण गणित से य, और र विदित हो जायेंगे, तब अंशशेष और कलाशेष ज्ञान से पूर्ववत् कुट्टक विधि से अहर्गण ज्ञान सुगमता से हो जायगा । यहां आचार्य ने पूर्वोक्त विषम-कर्मोक्त प्रक्रिया लिख कर विषम कर्म का पिष्ट पेषण किया है ॥६७॥

इदानीं शेषयोर्वर्गयोग-योगाभ्यां तयोरानयनमाह ।

कृतिसंयोगाद् द्विगुणाद्युतिवर्गं प्रोह्यमूलं यत् ।

तेन युतो नो योगो दलितः शेषे पृथगभीष्टे ॥६८॥

सु. भा.—एवं भवितुमर्हति ।

यदाऽनन्तरोक्ते प्रश्ने शेषयोर्वर्गयोगः शेषयोगश्चोद्दिष्टो भवेत् तदा द्विगुणात् कृतिसंयोगाच्छेषयोर्युतिवर्गं प्रोह्य शेषस्य यन्मूलं भवेत् तद्भागकलाशेष-योरन्तरं भवेत् तेन योगो युतो नो दलितः पृथगभीष्टे भागकलयोः शेषे भवतः ।

अत्रोपपत्तिः । अत्रप्रश्नानुसारेण ।

भाशे^१ + कशे^१ = वयु

भाशे + कशे = यु

∴ २ भाशे^१ + २ कशे^१ = २ वयु

भाशे^१ + २ भाशे × कशे + कशे^१ = यु^२, द्वयोरन्तरेण

भाशे^१ — २ भाशे × कशे + कशे^१

= (भाशे + कशे)^१ = वयु — यु^२

∴ भाशे — कशे = $\sqrt{२ वयु — यु^२}$

अवशिष्टोपपत्तिः सङ्क्रमणेन स्फुटा ॥६८॥

वि. भा.—यदि पूर्वोक्तशेषयोर्वर्गयोगः शेषयोगश्चोद्दिष्टो भवेत्तदा शेषयोर्द्वि-गुणाद्वर्गयोगाच्छेषयोर्युतिवर्गं विशोध्य शेषस्य मूलं यत्तदंशकलाशेषयोरन्तरं भवेत् तेन योगो युतो नोऽर्धितस्तदा पृथगभीष्टेऽंशकलयोः शेषे भवेतामिति ॥

अत्रोपपत्तिः :

कल्प्यते अंशशेषप्रमाणम् = य, कलाशेषमानम् = र, य^१ + र^१ = वर्गयोगः ।

य + र = युतिः = यु, तदा २ वर्गयोः = २ य^१ + २ र^१, (य + र)^२ = यु^२ = य^१ + २ य.र + र^१ अतः २ वर्गयोः — यु^२ = २ य^१ + २ र^१ — (य^१ + २ य.र + र^१) = २ य^१ + २ र^१ — य^१ — २ य.र — र^१ = य^१ + र^१ — २ य.र = (य — र)^२ मूलग्रहणेन $\sqrt{२ वयु — यु^२} = य — र = अंशशे — कलाशे$, ततो विदिताभ्यामंशशेषकलाशेषयो-र्योगान्तराभ्यां संक्रमणेन ते शेषे (अंशकलयोः शेषे) विदिते भवतः एतेन

(१) एतस्योत्तरमन्यरीताऽपि भवति, यथा 'वर्गयोगस्य यद्वाशयोर्युतिवर्गस्य चान्तरमि' त्यादि भास्करोक्त सूत्रेण योग^१ — वर्गयो = (य + र)^१ — (य^१ + र^१) = य^१ + २ य.र + र^१ — य^१ — र^१ = २ य.र द्वाभ्यां गुणनेन २ (योग^१ — वर्गयो) = ४ य.र ततश्चतुर्गुणस्य घातस्य युतिवर्गस्य चान्तरमि' त्यादि भास्करोक्त सूत्रेण योग^१ — ४घात = य^१ + २ य.र + र^१ — ४ य.र = य^१ — २ य.र + र^१ = (य — र)^२ मूल ग्रहणेन य — र = अन्तरम् ततः संक्रमणेन य, र अनयोर्ज्ञानं भवेदिति ॥

सूत्रमुपपन्नम् ॥९८॥

अब शेषद्वय के वर्गयोग और शेषद्वय के आनयन को कहते हैं ।

हि. भा. — यदि पूर्वोक्त शेषद्वय का वर्गयोग और शेषयोग उद्दिष्ट हो तब द्विगुणित वर्गयोग में से शेष योग वर्ग को घटा कर जो शेष हो उसका मूल दोनों शेषों का अन्तर होता है योग में इस अन्तर को युत और हीन कर आधा करने से दोनों शेषों के प्रमाण होते हैं ॥९८॥

उपपत्ति ।

कल्पना करते हैं अंश शेषमान = य, कलाशेषमान = र, $य^१ + र^१ =$ वर्गयो । $य + र =$ योग = यो, तब २ वर्गयो — यो^१ = २ य^१ + २ र^१ — (य + र)^१ = २ य^१ + २ र^१ — (य^१ + २ य.र + र^१) = २ य^१ + २ र^१ — य^१ — २ य.र — र^१ = य^१ + र^१ — २ य.र = (य — र)^१ मूल लेने से $\sqrt{२}$ वयो — या^१ = य — र = अंश शेष — कलाशेष, तब अंशद्वय के योग और अन्तर ज्ञान से संक्रमण से दोनों शेषों का मान विदित हो जायगा । इस प्रश्न का उत्तर दूसरी रीति से भी हो सकता है । जैसे 'वर्ग' योगस्य यद्वाश्योरित्यादि भास्करोक्त सूत्र से योग^१ — वर्गयो = (य + र)^१ — (य^१ + र^१) = य^१ + २ य.र + र^१ — य^१ — र^१ = २ य.र द्विगुणित करने से; २ {(य + र)^१ — (य^१ + र^१)} = ४ य.र, अब 'चतुर्गुणस्य घातस्य युति वर्गस्य चान्तर' इत्यादि भास्करोक्त सूत्र से योग^१ — ४ घात = (य + र)^१ — ४ य.र = य^१ + २ य.र + र^१ — ४ य.र = य^१ — २ य.र + र^१ = (य — र)^१ मूल लेने से अन्तर ज्ञान होगा तब संक्रमण से य, र का ज्ञान हो जायगा इति ॥९८॥

इदानीं पुनः प्रश्नान्तरस्योत्तरमाह ।

शेषवधाद् द्विकृतिगुणात् शेषान्तरवर्गसंयुतान्मूलम् ।

शेषान्तरोनयुक्तं दलितं शेषे पृथगभीष्टे ॥९९॥

सु. भा. — यदाऽनन्तरोक्ते प्रश्ने भागकलाशेषयोरन्तरं वधश्चेति द्वयमुद्दिष्टं भवेत् तदा द्विकृतिगुणात् । द्वयोर्वा कृतिवर्गस्तेनार्थाद्वेदै ४ गुणाच्छेषवधाच्छेषान्तरवर्गसंयुतान्मूलं ग्राह्यम् । तच्छेषान्तरेणोनयुक्तं दलितं च पृथगभीष्टे भागकलाशेषे भवतः ।

अत्रोपपत्तिः । अत्र प्रश्नानुसारेण

भाशे — कशे = अं

भाशे × कशे = व

∴ (भाशे — कशे)^१ = भाशे^१ — २ भाशे × कशे + कशे^१ = अं^१

४ भाशे × कशे = ४ व

द्वयोयोगेन

भाशे^३+२ भाशे × कशे + कशे^३ = (भाशे + कशे)^३ = अं^३ + ४ व

मूलग्रहणेन, भाशे + कशे = $\sqrt{\text{अं}^३ + ४ व}$

शेषवासना सङ्क्रमणेन स्फुटा ॥६६॥

वि. भा.—यदि अंशकलाशेषयोरन्तरं घातश्चेति द्वयमुद्दिष्टं भवेत्तदा द्विकृतिगुणात् (चतुर्गुणात्) शेषयोर्घाताच्छेषान्तरवर्गयुतान्मूलं यत्तच्छेषान्तरेण हीनं युक्तं तदर्थं पृथगभीष्टंऽशकला शेषे भवेता मिति ।

अत्रोपपत्तिः ।

कल्प्यते अंशशेषमानम् = य, कलाशेषमानम् = र शेषयोरन्तरं = य-र, चतुर्गुण-घातः = ४ य.र = घा अन्तर^३ + ४ घात = (य-र)^३ + ४ य.र = य^३ - २ य.र + र^३ + ४ य.र = य^३ + २ य.र + र = (य+र)^३ मूलग्रहणेन य+र = योग । ततः $\frac{\text{योग} + \text{अन्तर}}{२}$

= य, $\frac{\text{योग} - \text{अन्तर}}{२} = र$, बीजगणिते 'चतुर्गुणस्य घातस्य युतिवर्गस्य चान्तरम्' त्यादिना भास्कराचार्येण राश्योर्योगवधयोर्ज्ञानाद्राश्यन्तरज्ञानार्थं विधिः प्रदर्शितः, अत्राऽऽचार्येण राश्योरन्तरवधयोर्ज्ञानाद्राशियोगज्ञानं कृतं वस्तुतोऽनयोर्न कश्चिद् भेद इति ॥९९॥

अब पुनः प्रश्नान्तर के उत्तर को कहते हैं ।

हि. भा.—यदि पूर्वोक्त प्रश्न में अंश शेष और कलाशेष का अन्तर तथा उन्ही दोनों का चतुर्गुणित घात उद्दिष्ट हो तब शेषान्तर वर्ग में चतुर्गुणित घात को जोड़ कर जो मूल हो उस में से शेषान्तर को हीन और जोड़ कर आधा करने से अभीष्ट शेषद्वय का मान होता है इति ॥६०॥

उपपत्ति ।

कल्पना करते हैं । अंशशेष = य, कलाशेष = र, दोनों शेषों का अन्तर = अं = य - र, चतुर्गुणघात = ४ य.र = ४ घा, अं^३ + ४ घा = (य-र)^३ + ४ य.र = य^३ - २ य.र + र^३ + ४ य.र = य^३ + २ य.र + र = (य+र)^३ मूल लेने से य+र = यो, तब $\frac{\text{यो} + \text{अं}}{२} = य$, $\frac{\text{योग} - \text{अं}}{२} = र$, बीजगणित में 'चतुर्गुणस्य घातस्य युतिवर्गस्य चान्तरम्'

इत्यादि से भास्कराचार्य ने योग और घात के ज्ञान से राश्यन्तर ज्ञानार्थं विधि दिखलाई है । यहां आचार्य ने अन्तर और वध के ज्ञान से राशियोग ज्ञात किया है वस्तुतः इन दोनों में कुछ भेद नहीं है इति ॥६६॥

इदानीं छात्रान् स्ववक्तव्यं कथयति ।

हृन्मात्रमसी प्रश्नाः प्रश्नानन्यान् सहस्रशः कुर्यात् ।

अन्यैर्दत्तान् प्रश्नानुत्तथैवं साधयेत् करणैः ॥१००॥

सु. भा.—असी पूर्वोक्ताः प्रश्नाश्छात्राणां हृन्मात्रं हृदये बोधार्थमात्रमेव मया लिखिताः । एतान् बुद्ध्वा बुद्धिमान् सहस्रशोऽन्यान् प्रश्नान् कुर्यात् । एवमुत्तथा पूर्वोक्तथा करणैः साधनप्रकारैश्चान्यैर्दत्तान् प्रश्नानपि बुद्धिमान् साधयेत् प्रश्नोत्तराणीति शेषः ॥१००॥

वि. भा.—असी पूर्वकथिताः प्रश्नाः, छात्राणां हृन्मात्रं (हृदये ज्ञानार्थमात्रमेव) मया कथिताः । एतान् ज्ञात्वा प्रतिभावान् सहस्रशोऽन्यान् प्रश्नान् कुर्यात् एवं पूर्वोक्तथा करणैः (साधन प्रकारैः) अन्यैर्दत्तान् प्रश्नान् प्रतिभावान् साधयेत् (तदुत्तराणि) इति ॥१००॥

अब छात्रों को अपना वक्तव्य कहते हैं ।

हि. भा.—ये पूर्व कथित प्रश्न समूह छात्रों के हृदय में केवल बोध के लिये कहे हैं । इन प्रश्नों को मिधावी व्यक्ति समझ कर अन्य हजारों प्रश्नों को करे, पूर्वोक्त साधन प्रकारों से अन्य व्यक्ति से दिये हुए प्रश्नों को भी बुद्धिमान् साधन करे अर्थात् उत्तर करे इति ॥१००॥

इदानीं प्रश्नप्रशंसामाह ।

जन संसदि दैवविदां तेजो नाशयति भानुरिव भानाम् ।

कुहाकारप्रश्नैः पठितैरपि किं पुनः शतशः ॥१०१॥

सु. भा.—गणकः कुहाकारप्रश्नैः पठितैरपि जनसंसदि गणकजनसभायां दैवविदां ज्योतिर्विदां तेजो नाशयति भानां भानुरिव । पुनः सूत्रैः किं वक्तव्यमस्ति । प्रश्नपाठैरेव गणको ज्योतिर्विदां मध्ये भानुरिव भवति तत्सूत्रज्ञानेन पुनः किं भवतीति वर्णनातीतमित्यर्थः ॥१०१॥

वि. भा.—कुहाकारप्रश्नैः पठितैरपि गणको जनसंसदि (ज्योतिर्वित्स-भायां) ज्योतिर्विदां तेजो नाशयति यथा सूर्यस्याग्रे नक्षत्राणां तेजो नष्टं भवति, अर्थात्प्रश्नपठनमात्रेणैव गणको ज्योतिर्विदां संमुखे सूर्य इव भवति तदा पुनः शतशः सूत्रादिपाठेव किं भवतीति ॥१०१॥

अब प्रश्न प्रशंसा करते हैं ।

हि. भा.—कुटाकार प्रश्नों के पठनमात्र से ही गणक ज्योतिषिकीसभा में ज्योतिषिकों के तेज को नाशकरते हैं जैसे सूर्य भगवान् नक्षत्रों के तेज (प्रकाश) को नाश करते हैं । अर्थात् प्रश्नों के पठन मात्र ही से गणक ज्योतिषिकों के मध्य में नक्षत्रों के मध्य में सूर्य की तरह होते हैं तब फिर उन सूत्रों के ज्ञान से क्या होगा अर्थात् उसका वर्णन नहीं हो सकता है इति ॥ १०१ ॥

इदानीं मध्यायोपसंहारमाह ।

प्रतिसूत्रममी प्रश्नाः पठिताः सोद्देशकेषु सूत्रेषु ।

आर्यात्र्यधिकशतेन च कुट्टकाष्टादशोऽध्यायः ॥१०२॥

सु. भा.—प्रतिसूत्रं मयाऽमी प्रश्नाः पठिताः । एवं सोदाहरणेषु सूत्रेषु आर्यात्र्यधिकशतेनायं कुट्टक नामाऽध्यायोऽष्टादशः ।

मधुसूदनसूनुनोदितो यस्तिलकः श्रीपृथुनेह जिष्णुजोक्ते ।

हृदितं विनिधाय नूतनोऽयं रचितः कुट्टविधौ सुधाकरेण ॥

इति श्री कृपालुदत्तसूनुसुधाकरद्विवेदि विरचिते ब्राह्मस्फुटसिद्धान्त नूतन तिल के कुट्टकाध्यायोऽष्टादशः ॥१०३॥

वि. भा.—मया प्रतिसूत्रममी पूर्वोक्ताः प्रश्नाः पठिताः । एवमुदाहरण-सहितसूत्रेषु आर्यात्र्यधिकशतेना (त्र्यधिकशतप्रमिताऽऽर्यया) अयं कुट्टकनामाऽध्या-योऽष्टादशोऽस्तीति ।

इति श्री ब्राह्मस्फुटसिद्धान्ते कुट्टकाध्यायोऽष्टादशः समाप्तः ॥१०४॥

अब अध्याय के उपसंहार को कहते हैं ।

हि. भा.—हम ने पूर्वोक्त इन प्रश्नों को प्रति सूत्र में पठित किया है । एक सौ तीन आर्यात्रियों से कुट्टक नाम का यह अठारहवां अध्याय है इति ॥१०२॥

इति ब्राह्म स्फुट सिद्धान्त में अठारहवां (कुट्टक) अध्याय समाप्त हुआ ॥१०३॥

ब्राह्मस्फुटसिद्धान्तः

शंकुच्छायादिज्ञानाध्यायः

ब्राह्मस्फुटसिद्धान्तः

हस्योदयाद्यावतीभिर्घटिकाभिरन्यो ग्रह उदेति ता उदयान्तरघटिकास्ताभिर्द्वयोर्ग्रह-
योर्मध्ये यो ज्ञातो ग्रहोस्ति तस्माज्ज्ञातादपरं ज्ञेयं ग्रहं वा यो विजानाति स एव
तन्त्रज्ञः सिद्धान्तविद्याविदित्यहं मन्ये इति शेषः ॥१॥

वि. भा.—योऽर्कज्ञो दिनार्धघटिका दृष्ट्वाऽक्षांशकान् विजानाति, उदया-
न्तरघटिकाभिः (एकग्रहस्योदयादन्यो ग्रहो यावतीभिर्घटिकाभिरुदेति ता उदयान्तर
घटिकास्ताभिः) ग्रहयोर्मध्ये यो ज्ञातग्रहो (विदितग्रहः) ऽस्ति तस्मादपरं ज्ञेयं ग्रहं
वा यो विजानाति स तन्त्रज्ञो (सिद्धान्त शास्त्रवेत्ता) ऽस्तीति ॥१॥

अथ शङ्कुच्छायादि ज्ञानाध्याय प्रारम्भ किया जाता है ।

उसमें पहले प्रश्नों को कहते हैं ।

हि. भा.—जो रवि के ज्ञाता दिनार्ध घटी को देख कर अक्षांश को जानते हैं अर्थात्
जो व्यक्ति रवि और दिनार्ध घटी से अक्षांश को जानते हैं । वा उदयान्तर घटी (एक ग्रह के
उदय से दूसरे ग्रह जितनी घटी में उदित होते हैं वे उदयान्तर घटी हैं) से दोनों ग्रहों में
जो विदित ग्रह है उससे ज्ञेय (ज्ञातव्य) ग्रह को जानते हैं वे सिद्धान्त विद्या के पण्डित
हैं इति ॥१॥

इदानीमन्यान् प्रश्नानाह ।

अस्तान्तरघटिकाभिर्यो ज्ञाताज्ज्ञेयमानयति तस्मात् ।

मध्यर्गाति युगभगणानानयति ततः स तन्त्रज्ञः ॥२॥

सु. भा.—एकग्रहस्यास्तान्तरमन्यो ग्रहो यावतीभिर्घटिकाभिरस्तं याति ता अस्तान्तरघटिकास्ताभिर्ज्ञाताच्चैकस्माद्ग्रहादन्यं ज्ञेयं ग्रहं य आनयति । तस्मात् स्पष्टज्ञेयग्रहात् मध्यमगतिं मध्यमज्ञेयं ग्रहं य आनयति । ततस्तस्मान्मध्यमज्ञेयाद्युगभरणान् तस्य य आनयति स एव तन्त्रज्ञ इति ॥२॥

वि. भा.—एकग्रहस्यास्तान्तरं यावतीभिर्घटिकाभिर्द्वितीयग्रहोऽस्तं याति ता अस्तान्तरघटिकास्ताभिर्ज्ञातादेकस्माद् ग्रहाज्ज्ञेयं (ज्ञातव्यं) द्वितीयग्रहं य आनयति । वा तस्मात् स्पष्टज्ञेयग्रहात् ज्ञेयं मध्यमग्रहं य आनयति, तस्मान्मध्यमज्ञेयग्रहात्तस्य युगभरणान् य आनयति स तन्त्रज्ञोऽस्तीति ॥२॥

अब अन्य प्रश्नों को कहते हैं ।

हि. भा.—जो व्यक्ति अस्तान्तर घटी (एक ग्रह के अस्त के बाद द्वितीय ग्रह जितनी घटी में अस्त होता है वह अस्तान्तर घटी है) से विदित एक ग्रह से ज्ञेय (ज्ञातव्य) द्वितीय ग्रह को लाते हैं अर्थात् जानते हैं । वा उस स्पष्टज्ञेय ग्रह से मध्यम ग्रह को जानते हैं वा उस मध्यम ग्रह से उसके युग भरण को जानते हैं वे सिद्धान्त विद्या के पण्डित हैं इति ॥२॥

इदानीमन्यान् प्रश्नानाह ।

आनयति यस्तमोरविशशाङ्कुमानानि दीपकशिखौच्छ्यात् ।

शङ्कुतलान्तरभूमिज्ञाने छायां स तन्त्रज्ञः ॥३॥

सु. भा.—यो राहुरविचन्द्रबिम्बमानान्यानयति । दीपकशिखौच्छ्यात् प्रदीपोच्छ्रितेः शङ्कुतलान्तरभूमिज्ञाने प्रदीपतलाच्छङ्कुमूलान्तरं शङ्कुतलान्तरम् । तदेव भूमिरिति शङ्कुतलान्तरभूमिस्तस्या ज्ञाने यश्छायामानयति स एव तन्त्रज्ञः ॥३॥

वि. भा.—यस्तमोरविशशाङ्कुमानानि (राहुरविचन्द्रबिम्बमानानि) आनयति, प्रदीपोच्छ्रितेः शङ्कुतलान्तरभूमिज्ञाने (प्रदीपतलाच्छङ्कु मूलं यावच्छङ्कुतलान्तरं तदेव भूमिस्तस्याज्ञाने) छायामानयति स तन्त्रज्ञोऽस्तीति ॥३॥

अब अन्य प्रश्नों को कहते हैं ।

हि. भा.—जो व्यक्ति राहु-रवि और चन्द्र के बिम्बमान को जानते हैं । दीपशिखौच्छ्य (दीप की ऊँचाई) से दीपतल और शङ्कुमूल के अन्तर को जानते हैं । शङ्कुतलान्तर (दीपतल और शङ्कुमूल के अन्तर) से छाया को जानते हैं वे सिद्धान्त विद्या के पण्डित हैं इति ॥३॥

इदानीमन्यं प्रश्नमाह ।

इष्टगृहौच्यज्ञो यस्तदन्तरज्ञो निरीक्षते तु जले ।

गृहभित्त्यग्रं दर्शयति दर्पणे वा स तन्त्रज्ञः ॥४॥

सु. भा.—य इष्टगृहौच्यज्ञ आत्मस्थानात् तस्य गृहस्यान्तरज्ञश्च जले गृहभित्त्यग्रं निरीक्षते वा दर्पणे तदग्रं दर्शयति स एव तन्त्रज्ञः ॥४॥

हि. भा.—य इष्टगृहौच्यज्ञाता स्वस्थानात्तस्य गृहस्यान्तरज्ञाता च जले गृहभित्त्यग्रं निरीक्षते वा दर्पणे तदग्रं दर्शयति स तन्त्रज्ञोऽस्तीति ॥४॥

अब अन्य प्रश्न को कहते हैं ।

हि. भा.—जो इष्टगृह की ऊँचाई तथा अपने स्थान से उस गृह के अन्तर का भी ज्ञाता जल में उस गृह की भीति के अग्र को देखता है वा दर्पण में उसके अग्र को दिखलाता है वह तन्त्रज्ञ है ॥४॥

इदानीमन्यं प्रश्नमाह ।

छायाद्वितीयभागान्तर विज्ञानेन वेत्ति दीपौच्यम् ।

शङ्कुच्छायाज्ञो वा भूमेच्छायां स तन्त्रज्ञः ॥५॥

सु. भा.—यः शङ्कुछायाज्ञः (शङ्कुर्यो द्वे छाये ते जानातीति शङ्कुछायाज्ञः) छायाद्वितीयभागान्तरविज्ञानेन छायायाः प्रथमच्छायाया द्वितीय भागस्य द्वितीय-च्छायाया यदन्तरं तस्य विज्ञानेन दीपौच्यं वेत्ति वा भूमेभूमिमिमानाच्छायां वेत्ति स एव तन्त्रज्ञः ॥५॥

वि. भा.—यः शङ्कुछायाज्ञः (शङ्कुर्यो द्वे छाये ते जानातीति शङ्कुछायाज्ञः) प्रथम छायाया द्वितीयच्छायायाश्च यदन्तरं तद्विज्ञानेन दीपौच्यं जानाति वा भूमिमिमानाच्छायां जानाति स तन्त्रज्ञोऽस्तीति ॥५॥

अब अन्य प्रश्न को कहते हैं ।

हि. भा.—जो शङ्कु के दो छायाओं के ज्ञाता है । तथा जो प्रथम छाया और द्वितीय छाया के अन्तर को जानकर दीपौच्य को जानते हैं वा भूमिमान से छाया को जानते हैं वे सिद्धान्त विद्या के पण्डित हैं ॥५॥

इदानीमन्यं प्रश्नमाह ।

गृहपुरुषान्तरसलिले यो दृष्ट्वाग्रं गृहस्य भूमिज्ञः ।

वेत्ति गृहौच्यं दृष्ट्वा तैलस्थं वा स तन्त्रज्ञः ॥६॥

सु. भा.—(गृहपुरुषान्तरसलिले यो दृष्ट्वाग्रं गृहस्य भूमिज्ञः ।
वेत्ति गृहौर्च्च्यं दृष्ट्वा तैलस्थं वा स तन्त्रज्ञः ॥६॥

पुरुषो द्रष्टा ग्रहपुरुषयोरन्तरे मध्ये स्थापितं यत् सलिलं जलं तस्मिन् गृहस्याग्रं दृष्ट्वा यो भूमिज्ञो जले यत्र गृहाग्रस्य प्रतिबिम्ब तस्माद्गृहान्तरं नरान्तरं च यत् तद्भूमिपदेनोच्यन्ते तज्ज्ञो गृहौर्च्च्यं वेत्ति वा तैलस्थं गृहाग्रं दृष्ट्वा यो भूमिज्ञो गृहौर्च्च्यं वेत्ति स एव तन्त्रज्ञ इत्यहं मन्ये इति ॥६॥

वि. भा.—गृहपुरुषयोरन्तरे स्थापितं यज्जलं तस्मिन् गृहस्याग्रं दृष्ट्वा यो भूमिज्ञो (जले प्रतिबिम्बितस्य गृहाग्रस्य गृहस्य च यदन्तरं नरान्तरं च यत्तद्भूमि-
शब्देन कथ्यते तज्ज्ञाता) गृहौर्च्च्यं जानाति, वा तैलस्थं गृहाग्रं दृष्ट्वा यो भूमिज्ञो गृहौर्च्च्यं जानाति स तन्त्रज्ञोऽस्तीति अत्र पुरुषशब्देन द्रष्टा ज्ञेयः) ॥६॥

अब अन्य प्रश्नों को कहते हैं ।

हि. भा.—गृह और पुरुष (द्रष्टा) के अन्तर में रखे हुए जल में गृह के अग्र को देखकर जो जल में प्रतिबिम्बित गृहाग्र और गृह के अन्तर और नरान्तर को जानने वाले गृहौर्च्च्य को जानते हैं, वा जो जल में प्रतिबिम्बित गृहाग्र और गृह के अन्तर और नरान्तर को जानने वाले तैलस्थित गृहाग्र को देखकर गृहौर्च्च्य (गृह की ऊँचाई) को जानते हैं वे सिद्धान्त विद्या के ज्ञाता हैं इति ॥६॥

इदानीमन्यं प्रदनमाह ।

वीक्ष्य गृहाग्रं सलिले प्रसार्य सलिलं पुनः स्वभूज्ञाने ।

आनयति जलाद्भूमिं गृहस्य और्च्च्यं स तन्त्रज्ञः ॥७॥

सु. भा.—सलिले गृहाग्रं वीक्ष्य सलिलं च तस्मिन्नेव मार्गे स्थानान्तरे प्रसार्य पुनस्तस्मिन् सलिले गृहाग्रं वीक्ष्यात्मसलिलान्तरे ये वेधद्वये ते स्वभूसंज्ञे तयोर्ज्ञाने जलाद्गृहस्यान्तरं भूमिं य आनयति वा गृहस्यौर्च्च्यं य आनयति स एव तन्त्रज्ञ इत्यहं मन्ये ॥७॥

वि. भा.—जले गृहस्याग्रं दृष्ट्वा जलं च तस्मिन्नेव मार्गे स्थानान्तरे प्रसार्य पुनस्तस्मिन् जले गृहस्याग्रं दृष्ट्वा स्वस्य जलस्य चान्तरे ये वेधस्थानद्वये ते स्वभू-
संज्ञके तयोर्ज्ञाने गृहजलयोरन्तरभूमिं य आनयति वा गृहस्यौर्च्च्यं य आनयति स तन्त्रज्ञोऽस्तीति ॥७॥

अब अन्य प्रश्न को कहते हैं ।

हि. भा.—जल में गृह के अग्र को देखकर जलको उसी मार्ग में स्थानान्तर (दूसरे

स्थान) में फैलाकर फिर उसी जल में गृह के अग्र को देखकर अपने और जल के अन्तर में जो वेधद्वय है उसके ज्ञान से गृह और जल की अन्तरभूमि को जानते हैं वा गृहीच्छ्य (गृह की ऊंचाई) को जानते हैं वे सिद्धान्त विद्या के पण्डित हैं इति ॥७॥

इदानीं प्रश्नान्तरमाह ।

ज्ञातेऽच्छायापुरुषोर्विज्ञाते तोयकुड्ययोर्विवरे ।

कुड्येऽर्कतेजसो यो वेत्यारूढि स तन्त्रज्ञः ॥८॥

सु. भा.—तोयकुड्ययोरजलभित्तयोर्विवरेऽन्तरे विज्ञाते छायापुरुषोर्ज्ञातैः पुरुषस्योच्छ्रित्या जले तच्छायाप्रमाणेन च य आरूढि भित्त्युच्छ्रितिं वेत्ति वाऽर्कतेजसोऽर्कप्रकाशतश्छायादिज्ञानं विज्ञायारूढिं वेत्ति स एव तन्त्रज्ञ इत्यहं मन्ये ॥८॥

वि. भा.—तोयकुड्ययोः (जलभित्तयोः) विवरे (अन्तरे) विज्ञाते छायापुरुषोर्ज्ञातैः (पुरुषस्योच्छ्रित्या जले तच्छायाप्रमाणेन च य आरूढि (भित्त्युच्छ्रितिं) जानाति, वा कुड्ये (भित्तौ) रवेः प्रकाशतश्छायादिज्ञानं विज्ञाय भित्त्युच्छ्रितिं जानाति स तन्त्रज्ञोऽस्तीति ॥८॥

अथ प्रश्नान्तर को कहते हैं ।

हि. भा.—जल और भित्ति (दिवाल) के अन्तर को जानकर पुरुषी ऊंचाई और जल में उसके छायाप्रमाण से जो व्यक्ति भित्ति की ऊंचाई को जानते हैं वा भित्ति में रवि के प्रकाश से छायादिज्ञान जानकर भित्ति की ऊंचाई को जानते हैं वे सिद्धान्त विद्या के ज्ञाता हैं इति ॥८॥

अथ प्रश्नानामुत्तराणि ।

प्रथमं प्रथमप्रश्नस्योत्तरमाह ।

इष्टदिवसार्धघटिका पञ्चदशान्तरप्राणाः ।

तद्विवसचरप्राणास्तैरर्क्षं साधयेत् प्राग्वत् ॥९॥

सु. भा.—(इष्टदिवसार्धघटिकापञ्चदशान्तरघटीभवाः प्राणाः ।

तद्विवसचरप्राणास्तैरर्क्षं साधयेत् प्राग्वत् ॥९॥

पञ्चदशेष्टदिनार्धान्तरघटीनां ये प्राणास्ते गोलयुक्त्या चरप्राणा भवन्ति । तैश्चरासुभिरर्कात् क्रान्तिज्ञानेन च प्राग्वत् त्रिप्रश्नेतराध्यायविधिना गणकोऽक्ष-भक्षरैशान् साधयेत् ॥९॥

वि. भा.—इष्टदिनार्धघटी पञ्चदशघटयोरन्तरोत्पन्ना ये प्राणाः (असवः) ते चरासवो भवन्ति, तैः (चरासुभिः) पूर्ववत् (त्रिप्रश्नोत्तराध्याय विधिना) अक्षं (अक्षांशान्) साधयेद् गणक इति ॥६॥

अत्रोपपत्तिः ।

क्षितिजाहोरात्रवृत्तयोः सम्पाताद्याम्योत्तराहोरात्रवृत्तयोः सम्पातं यावद्दिनार्धम् । उन्मण्डलाहोरात्रवृत्तयोः सम्पाताद्याम्योत्तरवृत्ताहोरात्रवृत्तयोः सम्पातं यावत्पञ्चदश घटिकाः । अनयोरन्तरं क्षितिजाहोरात्रवृत्तयोः सम्पातादुन्मण्डलाहोरात्रवृत्तयोः सम्पातं यावच्चरार्धासवः = दिनार्धघटी ५ पञ्चदशघटी, अत्र चरार्धासुरव्योजनिनाक्षांशज्ञानं क्रियते । रविज्ञानेन $\frac{\text{जिज्या. रविभुजज्या}}{\text{त्रि}} = \text{क्रांज्या}$, अस्याश्चापम् = क्रान्तिः, क्रान्तिज्ञानं जातम्, ततः $\sqrt{\text{त्रि}^2 - \text{क्रांज्या}^2} = \text{द्यु. चरज्या} \times \text{द्यु. त्रि}$ = कुज्या, ततः $\frac{\text{कुज्या} \times १२}{\text{क्रांज्या}} = \text{पलभा}$, तथा $\sqrt{\text{कुज्या}^2 + \text{क्रांज्या}^2} = \text{अग्रा}$ । तदा $\frac{\text{कुज्या. त्रि}}{\text{अग्रा}} = \text{अक्षज्या}$, अस्याश्चापम् = अक्षांशः, एतेनोत्तरं जातमिति ।

अब प्रश्नों के उत्तरों को कहते हैं ।

पहले प्रथम प्रश्न के उत्तर को कहते हैं ।

हि. भा.—इष्ट दिनार्ध घटी और पञ्चदश (१५) घटी का अन्तर जनित जो असु है वह चरार्धासु है उससे पूर्ववत् (त्रिप्रश्नोत्तराध्यायोक्त विधि से) अक्षांश साधन करना चाहिए इति ॥६॥

उपपत्ति ।

यहां किसी इष्ट दिन में रवि और चरासु विदित है, इनसे अक्षांश ज्ञान करते हैं । क्षितिजाहोरात्रवृत्त के सम्पात से याम्योत्तरवृत्ताहोरात्रवृत्त के सम्पात पर्यन्त दिनार्ध घटी है, तथा उन्मण्डलाहोरात्रवृत्त के सम्पात से याम्योत्तरवृत्ताहोरात्रवृत्त की सम्पात पर्यन्त पञ्चदश (पन्द्रह) घटी है, इन दोनों का अन्तर करने से क्षितिजवृत्त और उन्मण्डल के अन्तर में अहोरात्र वृत्तीय चाप चरघटी है, यह विदित है, रवि के ज्ञान से $\frac{\text{जिज्या. रविभुजज्या}}{\text{त्रि}} = \text{क्रांज्या}$, इसका

चाप = क्रान्ति, क्रान्ति ज्ञान से $\sqrt{\text{त्रि}^2 - \text{क्रांज्या}^2} = \text{द्युज्या} = \text{द्यु. त्रि}$ तब $\frac{\text{चरज्या. द्यु. त्रि}}{\text{त्रि}} = \text{कुज्या}$, $\frac{\text{कुज्या. १२}}{\text{क्रांज्या}} = \text{पलभा}$, तथा $\sqrt{\text{कुज्या}^2 + \text{क्रांज्या}^2} = \text{अग्रा}$, अतः $\frac{\text{कुज्या. त्रि}}{\text{अग्रा}}$

=अक्षज्या, इसका चाप=अक्षांश, इससे अभीष्ट सिद्धि हो गई इति ॥१॥

इदानीमुदयान्तरघटिकाभिस्तथास्तान्तरघटिकाभिरित्यादि-

प्रश्नद्वयस्योत्तरमाह ।

ज्ञातज्ञेयग्रहयोरुदयान्तरनाडिकाभिरधिकोनः ।

उदयैर्ज्ञातो ज्ञाताज्ज्ञेयः प्रागपरयोर्ज्ञेयः ॥१०॥

ज्ञातः सभार्धं उदयैरस्तान्तरनाडिकाभिरधिकोनः ।

ज्ञातात्पूर्वापरयोर्ज्ञेयो भार्धोनके ज्ञेयः ॥११॥

सु. भा.—ज्ञातज्ञेयग्रहयोर्या उदयान्तर घटिकास्ताभिरुदयैः स्वदेशोदयैर्ज्ञातात् प्रागपरयोः पूर्वपश्चिमयोर्ज्ञातोऽधिकोनः कार्यः । यदि ज्ञेयो ज्ञातात् पूर्वदिश्यथादिग्रे तदा ज्ञातमर्कं प्रकल्प्य स्वदेशोदयैरुदयान्तरघटीमितेष्ट्रे क्रमलग्नं ज्ञातात् पश्चिमस्थे च ज्ञेये विपरीतलग्नं यत् स एव स्फुटो ज्ञेयो ग्रहो ज्ञेयः । अस्तान्तरघटीज्ञाने च ज्ञातः सभार्धोऽर्कः कल्प्यः अस्तान्तरघटिका इष्टघटिकाः । अत्रापि ज्ञातात् पूर्वोऽग्रे ज्ञेये क्रमलग्नं पश्चिमस्थे च विपरीतलग्नं यत् तस्मिन् भार्धोनके सति ज्ञेयो ग्रहो भवतीति ।

अत्र वासना लग्नानयनवत् सुगमा ॥१०-११॥

वि. भा.—ज्ञातज्ञेयग्रहयोरुदयान्तरघटिकाभिः स्वदेशीयोदयैर्ज्ञातात् पूर्व-दिशि स्थिते ज्ञेये तदा ज्ञातं रविं प्रकल्प्य स्वदेशीयोदयैः, उदयान्तरघटीतुल्ये इष्टकाले क्रमलग्नं यद् भवेत् तथा ज्ञातात् पश्चिमदिशि स्थिते ज्ञेये विपरीतलग्नं यद् भवेत् स एव स्फुटो ज्ञेयग्रहो बाध्यः । अस्तान्तरघटिकाज्ञाने ज्ञातः षड्राशियुतः कार्यस्तं रविं प्रकल्प्य, अस्तान्तरघटिकामिष्टकालं प्रकल्प्य ज्ञातात् पूर्वं (अग्रे) ज्ञेये क्रमलग्नं साध्यं ज्ञातात् पश्चिमस्थे ज्ञेये विपरीतलग्नं साध्यं तत्र षड्राशिहीने सति स्फुटो ज्ञेयग्रहो भवतीति ॥

अत्रोपपत्तिर्लग्नानयनवद् बाध्येति ॥१०॥

अब 'उदयान्तर घटिकाभिः' तथा 'अस्तान्तर घटिकाभिः' इत्यादि प्रश्नद्वय के उत्तर को कहते हैं ।

हि. भा.—ज्ञात ग्रह से ज्ञेय ग्रह पूर्व (आगे) में हो तब ज्ञात ग्रह को रवि कल्पना कर तथा ज्ञात ग्रह और ज्ञेय ग्रह का उदयान्तर घटी को इष्ट काल मानकर स्वदेशीय उदय से क्रमलग्न जो हो वही स्फुट ज्ञेय ग्रह होता है, तथा ज्ञात ग्रह से पश्चिम में हो तब विपरीत लग्न जो होता है वही स्फुट ज्ञेय ग्रह होते हैं । अस्तान्तर घटी के विदित रहने से ज्ञात ग्रह में छः राशि जोड़कर जो हो उसको रवि कल्पना कर अस्तान्तर घटी को इष्टकाल मानकर ज्ञात ग्रह से पूर्व (आगे) में ज्ञेय ग्रह के रहने से क्रम लग्न जो हो उसमें छः राशि घटाने से

स्फुट ज्ञेय ग्रह होते हैं । तथा ज्ञात ग्रह से पश्चिम में ज्ञेय ग्रह के रहने से विपरीत लग्न जो हो उसमें छः राशि घटाने से स्फुट ज्ञेय ग्रह होते हैं इति ॥

उपपत्ति लग्नानयनवत् समझनी चाहिये ॥१०-११॥

इदानीं तस्मान्मध्यगतिं ततो युगभरणान् साधयति य इत्यस्योत्तरमाह ।

ज्ञातं कृत्वा मध्यं भूयोऽन्यदिने तदन्तरं भुक्तिः ।

त्रैराशिकेन भुक्त्या कल्पग्रहमण्डलानयनम् ॥ १२ ॥

सु. भा.— एवं स्फुटज्ञेयग्रहात् स्पष्टीकरणविलोमविधिना मध्यं ग्रहं ज्ञातं कृत्वा भूयः पुनरन्यदिने च मध्यं ग्रहं ज्ञातं कृत्वा तदन्तरं तयोरन्तरं कार्यमेवं ग्रहस्य मध्यमा भुक्तिर्भवेत् । ततो भुक्त्या त्रैराशिकेनैकस्मिन् दिने मध्यमा गतिस्तदा कल्पकुदिनैः किमिति त्रैराशिकेन कल्पग्रहभरणानयनं सुगममिति ॥१२॥

वि. भा.— स्पष्टज्ञेयग्रहात् 'स्फुटं ग्रहं मध्यखगं प्रकल्प्ये' त्यादि भास्करोक्त-सूत्रेण स्पष्टीकरणविलोमक्रियया मध्यमं ग्रहं संसाध्य पुनरन्यस्मिन् दिने तेनैव विधिना मध्यमग्रहसाधनं कार्यं तयोरन्तरमेकदिनजा ग्रहस्य मध्यमा गतिर्भवेत् । ततोऽनुपातेना 'यद्येकस्मिन् दिने इयं मध्यमा गतिस्तदा कल्पकुदिनैः किम्' न कल्प-ग्रहभरणमानानयनं स्फुटमेवेति ॥१२॥

अत्रोपपत्तिविज्ञानभाष्यलिखितस दृश्येवेति ॥१२॥

अब 'तस्मान्मध्यगतिं ततोयुत भरणमानयति यः' इसके उत्तर को कहते हैं ।

हि. भा.— स्पष्ट ज्ञेयग्रह से 'स्फुटं ग्रहं मध्यखगं प्रकल्प्ये' इत्यादि भास्करोक्त सूत्र से स्पष्टीकरण की विलोम विधि से मध्यम ग्रह ज्ञान करके पुनः अन्य दिन में उसी विधि से मध्यम ग्रह ज्ञान करना चाहिये, दोनों मध्यम ग्रहों के अन्तर एक दिन सम्बन्धी ग्रह की मध्यम गति हुई, तब इस मध्यम गति से अनुपात 'यदि एक दिन में यह मध्यम गति पाते हैं तो कल्प कुदिन में क्या' से कल्प ग्रह भरणानयन स्फुट ही है इति ॥१२॥

इदानीमानयति यस्तमोरविशशाङ्कमानानीत्यस्योत्तरमाह ।

स्थित्यर्धाद्विपरीतं तमः प्रमाणं स्फुटं ग्रहणो ।

मानोदयात्रवीन्द्रोर्ध्वटिकावयवेन भोदयतः ॥१३॥

सु. भा.— स्थित्यर्धाद्विपरीतं विपरीतविधिना ग्रहणो स्फुटं तमः प्रमाणं भूभाबिम्बप्रमाणं भवति । अत्रैतदुक्तं भवति । स्थित्यर्धं रविचन्द्रगत्यन्तरकला-गुणं षष्टिहृतं स्थित्यर्धकला भवन्ति । तद्वर्गच्छ्रवर्गयुतान्मूलं मानैक्यार्धकला-

स्ताभ्यश्चन्द्रबिम्बार्धं प्रोह्य भूभाबिम्बार्धम् । एवं विपरीतक्रमेण ज्ञेयमिति । मानोदयाद् घटिकावयवेन भोदयतः स्वदेशराश्युदयतो रवीन्द्रोर्बिम्बमाने ज्ञेये । यदा प्राक्क्षितिजे बिम्बोर्ध्वपालिदर्शनं जातं ततोऽनन्तरं यावता घटिकावयवेनाधः पालिदर्शनं जातं स घटिकावयवो वेधेन ज्ञेयः । ततः स्वदेशराश्युदयघटीभिरष्टादशशतकलास्तदा वेधोपलब्धघटिकावयवेन किमेवं बिम्बकला रवेश्चन्द्रस्य च भवन्तीति । रविबिम्बस्योर्ध्वाधरप्रदेशौ यत्र क्रान्तिवृत्ते लग्नौ तयोरुदयदर्शनेनैवं बिम्बकला भवन्ति । चन्द्रश्च विमण्डले भ्रमति तेनैवं चन्द्रबिम्बकलाः स्वल्पान्तराद्भवन्ति ॥१२॥

वि. भा.—स्थित्यर्धाद्विपरीतविधिना ग्रहणो स्फुटं तमः प्रमाणं (भूभाबिम्बमानं) भवत्यर्थात् 'षष्ट्या विभाजिता स्थितिविमर्ददलनाङ्गिके' त्याद्याचार्योक्तसूत्रेण 'स्थित्यर्धनाडी गुणिता स्वभुक्तिरि' त्यादि भास्करोक्तसूत्रेण वा स्थित्यर्धकलाप्रमाणं विदितं भवेत्तद्वर्गयुताच्छरवर्गान्मूलं मानैक्यार्धकला भवन्ति, तत्र चन्द्रबिम्बार्धस्य विशेषनेन भूभाबिम्बार्धं भवेदिति, भोदयतः (स्वदेशीयराश्युदयात्) मानोदयाद् घटिकावयवेन रविचन्द्रयोर्बिम्बमाने ज्ञेये, अर्थात् पूर्वक्षितिजे यदा बिम्बस्योर्ध्वपालिदर्शनं भवेत्तस्माद्यावता घटिकावयवेन बिम्बस्याधः पालिदर्शनं भवेत्सघटिकावयवो वेधेन ज्ञातव्यः । ततो

१८०० × वेधोपलब्ध घटिकावयव

स्वदेशीयराश्युदयघ

नुपातेनानेन रविचन्द्रयोर्बिम्बकला भवन्तीति,

रविबिम्बस्योर्ध्वाधरप्रदेशौ यत्र क्रान्तिवृत्ते संलग्नौ तयोरुदयदर्शने नैवं बिम्बकला भवन्ति । परन्तु चन्द्रस्तु विमण्डले भ्रमणं करोति तस्मादेवं स्वल्पान्तराच्चन्द्रबिम्बकला भवन्ति ॥१३॥

अब 'आनयति यस्तमो रविशशाङ्कमानानि' इस प्रश्न के उत्तर को कहते हैं ।

हि. भा.—स्थित्यर्ध से विपरीत विधि से अर्थात् जिस विधि से स्थित्यर्ध सोधन होता है उससे विपरीत विधि से ग्रहण में स्फुट भूभाबिम्ब ज्ञान होता है, अर्थात् 'षष्ट्या विभाजिता स्थितिविमर्ददलनाङ्गिका' इत्यादि आचादि आचार्योक्त सूत्र से मानैक्यार्ध कला आती है उसमें से चन्द्र बिम्बार्ध को घटाने से भूभा बिम्बार्ध होता है । रवि और चन्द्र के बिम्बोदय घटिकावयव से रवि और चन्द्र का बिम्बमान जानना चाहिए अर्थात् पूर्वक्षितिज में जब बिम्बकी ऊर्ध्वपाली देखने में आवे उसके बाद जितने घटिकावयव में बिम्ब के अधः पाली का दर्शन हो उस घटिकावयव को वेध से जानकर अनुपात

१८०० × वेधोपलब्ध घटिका वयव

स्वदेशीय राश्युदयघ

, से रवि और चन्द्र की बिम्ब कला होती है । रवि

बिम्ब का ऊर्ध्व प्रदेश और अधः प्रदेश और क्रान्तिवृत्त में जहाँ लगे हुए हैं उनके देखने ही

से इस तरह बिम्बकला होती है । परन्तु चन्द्र बिम्बण्डल में रहते हैं इसलिये चन्द्र बिम्बकला इस तरह स्वल्पान्तर से होती है इति ॥१३॥

शङ्कुवन्तरमाननिघ्ने प्रभाप्रमाणं प्रवदन्ति सन्तः”

श्रीपत्युक्तमिदं लीलावत्यां ‘शङ्कुः प्रदीपतलशङ्कुतलान्तरघ्नश्छाया भवेद्विनरदीप
शिखौर्च्याभक्तः’ भास्करोक्तमिदं च आचार्योक्तानुरूपमेवास्तीति ॥१४॥

अब ‘दीपशिखौर्च्याच्छङ्कुतलान्तरभूमिज्ञाने छायां य आनयति’
इस प्रश्न के उत्तर को कहते हैं ।

हि. भा.—दीपतल और शङ्कुतल के अन्तर को इष्टशङ्कु से गुणा कर शङ्कुहीन
दीपशिखौर्च्या से भाग देने से छाया होती है ।

उपपत्ति ।

यहाँ संस्कृतोपपत्ति में लिखित (१) चित्र को देखिये । अक=दीपशिखौर्च्या । क
=दीपतल, मन=शङ्कु, न=शङ्कुतल, नप=छाया, नक=दीपतल और शङ्कुतल का

अन्तर—मश, म बिन्दु से कप रेखा की समानान्तर रेखा मश है । अक—कश—अक—मन
 =दीपशिखौच्च्य—शङ्कु=अश, तब अशम, मनप दोनों त्रिभुजों के सजातीयत्व से
 अनुपात करते हैं $\frac{\text{मश} \times \text{मन}}{\text{अश}} = \frac{\text{दीप शङ्कुतलान्तर} \times \text{शङ्कु}}{\text{दीपशिखौच्च्य} - \text{शङ्कु}} = \text{नप} = \text{छाया}$, इसमें
 आचार्योक्त उपपन्न हुआ । सिद्धान्तशेखर में 'विशङ्कुना दीपशिखौच्च्येण' इत्यादि संस्कृतो-
 पपत्ति में लिखित श्लोक से श्रीपति ने आचार्योक्त के अनुरूप ही कहा है लीलावती में 'शंकुः
 प्रदीपतलशङ्कुतलान्तरघ्नः' इत्यादि संस्कृतोपपत्ति में लिखित पद्य से भास्कराचार्य ने
 आचार्योक्त के अनुरूप ही कहा है इति ॥१४॥

इदानीं छाया द्वितीयभागान्तरविज्ञानेनेत्यादि प्रश्नोत्तरमाह ।

शङ्क्वन्तरेण गुणिता छाया छायान्तरेण भक्ता भूः ।

स छायां शङ्कुगुणा दीपौच्च्यं छायाया भक्ता ॥१५॥

सु. भा.—छायेष्टस्य कस्यापि शङ्कोश्छाया शङ्कोरन्तरेण शङ्कुमूला-
 न्तरेण गुणिता छायायोरन्तरेण भक्ता भूर्भवति । सा सच्छाया छायाया सहिता
 शङ्कुगुणा छायाया भक्ता च दीपौच्च्यं भवति ।

अत्रोपपत्तिः ।

तशि=दीपौच्च्यम् ।

अ, श,=अ, श, शङ्कुप्रमाणम् ।

श, मा,=प्रथमशङ्कुच्छाया

श, मा,=द्वितीयशङ्कुच्छाया

श, मा,=छाया

श, मा,=शङ्क्वन्तरम्=शअं, मा,मा,=छायाग्रान्तरम्=भाग्रअं ।

=श, मा, -(श, मा, -श, श,)

=श, मा, -श, मा, +श, श, =छायां + शअं ।

ततो गणिताध्यायस्य ५४ सूत्रेण ।

$$\frac{(\text{छात्र} + \text{शश्र}')}{\text{छात्र}} = \text{तभा}।$$

$$\begin{aligned} \text{श, त} &= \text{तभा} - \text{श, भा} = \frac{(\text{छात्र} + \text{शश्र}') \text{ श, भा} - \text{छात्र} \cdot \text{श, भा}}{\text{छात्र}} \\ &= \frac{\text{शश्र}' \cdot \text{श, भा}}{\text{छात्र}}। \end{aligned}$$

अत्राचार्येण तश, मानमेव भूसंज्ञं कल्पितमित्युपपन्नम् । द्वितीवच्छाया ग्रहणेन द्वितीया भूर्भवति । इयं भूः सच्छाया तदा छायाव्यवहारस्य ५४ सूत्रीया भूर्भवति ततो दीपौच्छयं प्राग्वदिति । अत उपपन्नम् ॥१५॥

वि. भा.—कस्यापीष्टशङ्कोश्छाया शङ्कुवन्तरेण (शङ्कुद्वयमूलान्तरेण) गुणिता छायायोरन्तरेण भक्ता तदा भूर्भवति । सा छायाया सहिता—शङ्कुगुणिता, छायाया भक्ता तदा दीपौच्छयं भवतीति ॥१५॥

अत्रोपपत्तिः ।

पश = नख = शङ्कुद्वयम् ।
 शख = शङ्कु मूलान्तरम् =
 शङ्कुवन्तरम् । अक = दीपौ-
 च्छयम् । पश = प्रथमशङ्कुः ।
 नख = द्वितीयशङ्कुः । शज =
 प्रथमच्छाया । खल = द्वितीय-
 छाया । जल = छायाग्रान्तरम् ।
 खल—शज = छायान्तरम् ।

खल—(शज—शख) = खल—शज + शख = छायान्तर + शङ्कुवन्तर ततो गुणिताध्यायस्य ५४ सूत्रेण ।

$$\frac{\text{प्रथमच्छाया (छायान्तर + शङ्कुवन्तर)}}{\text{छायान्तर}} = \text{कज, अतः कज—शज = कश ।}$$

$$= \frac{\text{प्रथमच्छाया (छायान्तर + शङ्कुवन्तर)}}{\text{छायान्तर}} - \text{प्रथमच्छाया ।}$$

$$= \frac{\text{प्रथमच्छाया} \times \text{छायान्तर} + \text{प्रथमच्छाया} \times \text{शङ्कुवन्तर} - \text{छायान्तर} \times \text{प्रथमच्छाया}}{\text{छायान्तर}}$$

$$= \frac{\text{प्रथमच्छाया} \times \text{शङ्कुवन्तर}}{\text{छायान्तर}} = \text{कश} = \text{भूः । एवमेव } \frac{\text{द्वितीयच्छाया. शङ्कुवन्तर}}{\text{छायान्तर}}$$

$$= \text{कख} = \text{भूः । कश + शज = भू + प्रथमच्छाया = कज = (छायाव्यवहारस्य ५४}$$

सूत्रोक्त भू) । कख + खल = भू + द्वितीयच्छाया = कल = छायाव्यवहारस्य ५४
 सूत्रोक्त भू, लीलावत्यां 'छायाप्रयोरन्तर सङ्गुणा भा छाया प्रमाणान्तरहृद्-
 वेद्भूरित्यत्र' भास्कराचार्येण कज, कल इत्येव भू द्वयं गृहीतम् । ततः अकज,
 पशज त्रिभुजयोः साजात्यादनुपातः । $\frac{\text{पश} \times \text{कज}}{\text{शज}} = \frac{(५४ \text{ सूत्रोक्त भू}) \times \text{प्रथमशं}}{\text{प्रथमच्छाया}}$
 $= \text{अक} = \text{दीपीच्यम्} । \text{एवमेव अकल, नखल त्रिभुजयोः साजात्यात्} \frac{\text{नख} \times \text{कल}}{\text{खल}}$
 $= \frac{\text{द्वितीयशं} (५४ \text{ सूत्रोक्त भू})}{\text{द्वितीयच्छाया}} = \text{दीपीच्यम् एतेनाऽऽचार्योक्त सूत्रमुपपन्नम्} ॥१५॥$

अब 'छाया द्वितीय भागान्तर विज्ञानेन इत्यादि' प्रश्न के उत्तर को कहते हैं ।

हि. भा.—किसी इष्ट शङ्कु की छाया को शङ्कुद्वय के अन्तर (शङ्कुद्वय मूलान्तर)
 से गुणा कर छायान्तर से भाग देने से भू होती है, भू में छाया को जोड़ने से जो हो उसको
 शङ्कु से गुणा कर छाया से भाग देने से दीपीच्य होता है इति ॥१५॥

उपपत्तिः ।

यहां संस्कृतोपपत्ति में लिखित (१) चित्र को देखिये । पश = नख = दोनों शङ्कु ।
 शख = शङ्कुमूलान्तर = शङ्कुवन्तर । अक = दीपीच्य । पश = प्रथमशङ्कु । नख
 = द्वितीयशङ्कु । शज = प्रथमच्छाया = प्रछा, खल = द्वितीयच्छाया = द्विछा जल = छाया-
 ग्रान्तर, खल—शज = छायान्तर, खल—(शज—शख) = खल—शज + शख = छायान्तर
 + शङ्कुवन्तर, तब गणिताध्याय के ५४ सूत्र से $\frac{\text{प्रछा} (\text{छायान्तर} + \text{शङ्कुवन्तर})}{\text{छायान्तर}} = \text{कज}$

अतः कज—शज = कश = $\frac{\text{प्रछा} (\text{छायान्तर} + \text{शङ्कुवन्तर})}{\text{छायान्तर}} - \text{प्रछा} =$

$= \frac{\text{प्रछा. छायान्तर} + \text{प्रछा शङ्कुवन्तर} - \text{प्रछा छायान्तर}}{\text{छायान्तर}} = \frac{\text{प्रछा. शङ्कुवन्तर}}{\text{छायान्तर}}$

$= \text{कश} = \text{भू} । \text{इसीतरह} \frac{\text{द्विछा. शङ्कुवन्तर}}{\text{छायान्तर}} = \text{कख} = \text{भू} । \text{कश} + \text{शज} = \text{भू} + \text{प्रछा}$

$= \text{छायाव्यवहार की } ५४ \text{ सूत्रोक्त भू} । \text{कख} + \text{खल} = \text{भू} + \text{द्विछा} = \text{कख} = \text{छायाव्यवहार की}$

$५४ \text{ सूत्रोक्त भू, लीलावती में 'छायाप्रयोरन्तर सङ्गुणाभा 'इत्यादि श्लोक में भास्कराचार्य}$
 कज, कल इन्हीं दोनों को प्रथम भू, और द्वितीय भू कहते हैं । अब अकज, पशज दोनों त्रिभुजों
 के सजातीयत्व से अनुपात करते हैं । $\frac{\text{पश.कज}}{\text{शज}} = \text{अक} = \frac{(५४ \text{ सूत्रोक्तभू}) \times \text{प्रथमशं}}{\text{प्रछा}}$

= दीपौच्च्य । इसी तरह अकल, नखल दोनों त्रिभुजों के सजातीयत्व से $\frac{\text{नख} \times \text{कल}}{\text{खल}}$

= $\frac{\text{द्वितीयशं (५४ सूत्रोक्त, भू)}}{\text{द्विच्छा}}$ = दीपौच्च्य । इससे आचार्योक्त उपपन्न हुआ इति ॥१५॥

इदानीं छायातो गृहादीनामौच्च्यानयनमाह ।

ज्ञात्वाशङ्कुच्छायामनुपातात् साधयेत् समुच्छायान् ।

गृहचैत्यतरुनगानामौच्च्यं विज्ञाय वा छायाम् ॥१६॥

सु. भा.—शङ्कुच्छायां ज्ञात्वाऽनुपाताद्गृहचैत्यतरुपर्वतानां समुच्छायान् गणकैः साधयेत् । वा तेषामौच्च्यं विज्ञाय तेषामिष्टकाले छायां साधयेत् । इष्टकाले गृहादीनां छायाप्रमाणं ज्ञात्वा तदैवेष्टशङ्कोरच छायाप्रमाणं विज्ञाय शङ्कुच्छायया शङ्कुप्रमाणं तदा गृहादिच्छायया किम् । एवं गृहादीनामौच्च्यं भवति । औच्च्याच्चैवेमनुपातेन गृहादीनां छायां साधयेत् ॥१६॥

वि. भा.—शङ्कुच्छायां ज्ञात्वा, अनुपातात् गृहचैत्यवृक्षपर्वतानां समुच्छायान् साधयेज्ज्यौतिषिकः । वा तेषामौच्च्यं विज्ञायेष्टकाले तेषां छायां साधयेदि ॥१६॥

अत्रोपपत्तिः ।

यदि शङ्कुच्छायया शङ्कुप्रमाणं लभ्यते तदा गृहचैत्यवृक्षपर्वतानां छायाया किमित्यनुपातेन तेषामुच्छ्रिति प्रमाणमागमिष्यति । एवं तेषामौच्च्यज्ञानेन तेषां छायायनयनमनुपातेनैव भवति यथा यदि शङ्कुना छाया लभ्यते तदा गृहादीनामौच्च्येन किं समागच्छन्ति तेषां छाया प्रमाणानीति ॥१६॥

अब छाया से गृहादियों का औच्च्या (ऊँचाई) नयन कहते हैं ।

हि. भा.—शङ्कु की छाया जान कर अनुपात से गृह-चैत (भाटा) वृक्ष, पर्वत इन सबों की उच्छ्रिति (ऊँचाई) को गणक साधन करे, वा उन सबों की उच्छ्रिति जानकर उन सबों की छाया साधन करे इति ॥१६॥

उपपत्ति ।

यदि शङ्कुच्छाया में शङ्कु प्रमाण पाते हैं तो गृह-चैत्य-वृक्ष-पर्वतों की छाया में क्या इस अनुपात से उन सबों की ऊँचाई के मान आजायगा । यदि उन गृहादियों की ऊँचाई

से उन सबों का छायायनन करना हो तो 'यदि शङ्कु में दृष्टछाया पाते हैं तो गृहादियों के औच्च्य में क्या' इस अनुपात से गृहादियों के छायाप्रमाण आते हैं इति ॥१६॥

इदानीमिष्टगृहौच्च्यज्ञो य इत्यादि प्रश्नोत्तरमाह ।

युतदृष्टिगृहौच्च्यहृता ह्यन्तरभूमिर्हृगौच्च्यसङ्गुणिता ।

फलभूर्न्यस्ते तोये प्रतिरूपाग्रं गृहस्य नरात् ॥१७॥

सु. भा.—गृहस्य नरस्य च मध्ये याऽन्तरभूमिः सा हृगौच्च्येन दृष्ट्युच्छ्रित्या सङ्गुणिता युतदृष्टिगृहौच्च्यहृता दृष्ट्युच्छ्रितिसंयुतगृहौच्छ्रित्या हृता । यत् फलं प्राप्तं तन्मिता भूर्नरादगृहाभिमुखी या तत्र तोये जले न्यस्ते तस्मिन् गृहस्य प्रतिरूपाग्रमग्रस्य प्रतिबिम्बं दृश्यं भवेदिति ।

अत्रोपपत्तिः

गृन = गृहनरान्तरभूमिः = अक ।
गृउ = गृहौच्च्यम् । प्र = जलम् । न द =
हृगौच्च्यम् । तदा ज्योतिर्विद्यया गृहाग्रप्रति-
बिम्बं चेद् द — दृष्ट्या दृश्यं तदा < गृ
प्र उ = < न प्र द । अतः गृ उ = गृ अ =
न क । द क = न द + गृ उ । द अ क, द प्र
न त्रिभुजे च सजातीये । ततः प्र न

$$= \frac{\text{अक} \times \text{दन}}{\text{हन}} \text{ । अत उपपन्नम् ॥१७॥}$$

वि. भा.—नरात् (द्रष्टुः) गृहस्यान्तरभूमिरर्थाद् गृहनरयोर्मध्ये या भूमिः सा दृष्ट्युच्छ्रित्या गुणिता दृष्ट्युच्छ्रितियुतगृहौच्च्यभक्ता यत्फलं लब्धं भवेत् नराद् गृहाभिमुखं तन्मितभूमौ स्थापिते जले गृहाग्रस्य प्रतिबिम्बं दृश्यं भवेदिति ।

लस = गृहौच्च्यम् । वश = हृगौच्च्यम् ।
म = जलम् । लव = गृहनरान्तरभूमिः = रय,
गृहाग्रप्रतिबिम्बं यदि श दृष्ट्या दृश्यं
भवेत्तदा ज्योतिर्विद्यायाः पतितपरावर्तित-
कोणसाम्यं भवतीति सिद्धान्तात् < लमस
= < वमश तथा < रमल = < वमश,

<मलर=<मलस=६० अतः रमल, लमस त्रिभुजद्वये तुल्ये (रे.प्र.अ.२६ क्षे) तेन लस=लर=वय । अतः यश=वश+लस शरय, शमव त्रिभुजयोः साजात्यादनुपातः $\frac{\text{रय.वश}}{\text{यश}} = \text{वम}$ अत उपपन्नमाचार्योक्तमिति ॥१७॥

अब 'दृष्टगृहीच्यज्ञो यः' इत्यादि प्रश्न को उत्तर कहते हैं ।

हि. भा.—गृह और नर (द्रष्टा) के मध्य में जो अन्तर भूमि है उसको दृष्टि की उच्छ्रिति (ऊँचाई) से गुणा कर गृह की उच्छ्रितियुत दृष्ट्युच्छ्रिति से भाग देने से जो लब्ध हो तत्तुल्य भूमि नर से गृह की तरफ (गृहाभिमुख) जो हो वहाँ जल को स्थापन करने से उस जल में गृह के अग्र के प्रति बिम्ब दृश्य होता है इति ॥१७॥

उपपत्ति ।

यहाँ संस्कृतोपपत्ति में लिखित (१) चित्र को देखिये । लस=गृहीच्य, वश=दृगौच्य, दृष्टि की ऊँचाई, म=जल, लब=गृह और नर की अन्तर भूमि=रय, गृह के अग्र का प्रति बिम्ब यदि श दृष्टि से दृश्य होता है तब ज्योतिर्विद्या के पतित कोण और परावर्तित कोण की तुल्यता सिद्धान्त से \angle लमस = \angle वमश तथा <रमल = <वमश, <मलर = <मलस = ६० । इसलिये रमल, लमस दोनों त्रिभुज सर्वथा तुल्य हुए (रे.प्र.अ. २६ क्षे) अतः लस=लर=वय, तथा यश=वश+लस, शरय, शमव दोनों त्रिभुजों के सजातीयत्व से अनुपात करते हैं $\frac{\text{रय.वश}}{\text{यश}} = \text{वम}$, अतः आचार्योक्त उपपन्न हुआ इति ॥१७॥

इदानीं गृहपुरुषान्तरसलिले यो दृष्ट्वेत्यादि प्रश्नोत्तरमाह ।

गृहपुरुषान्तरसलिले वीक्ष्य गृहाग्रं दृगौच्य सङ्गुणितम् ।

गृहतोयान्तरमौच्यं गृहस्य नृजलान्तरेण हृतम् ॥१८॥

सु. भा.—गृहपुरुषयोर्मध्येयत् सलिलं स्थापितं तस्मिन् गृहाग्रं वीक्ष्य यदि गृहौच्यमपेक्षितं तदा गृहतोयान्तरं दृगौच्यसङ्गुणितं नृजलान्तरेण हृतं फलं गृहस्यौच्यं भवेत् । अत्रोपपत्तिः । पूर्वश्लोक क्षेत्रे गृहतोयान्तरम्=गृप्र । नृजलान्तरम्=प्र न । प्र अ उ, ह न प्र त्रिभुजे च सजातीये ततः=गृ उ $= \frac{\text{गृ प्र} \times \text{न ह}}{\text{प्र न}}$ अत उपपद्यते ॥१८॥

वि. भा.—गृहपुरुषान्तरे स्थापिते जले गृहाग्रं दृष्ट्वा यदि गृहौच्यज्ञानमभीष्टं तदा गृहजलान्तरं दृगौच्य (दृष्टयुच्छ्राय) गुणितं पुरुषजलान्तरेण भक्तं तदा लब्धं गृहस्यौच्यं भवेदिति ।

अत्रोपपत्तिः ।

अत्र पूर्वश्लोको (१७) पपत्तौ लिखितं क्षेत्रं द्रष्टव्यम् । लस = गृहौच्यम् । वश = दृगौच्यम् । लव = गृहपुरुषान्तर भूमिः, म = जलम् । तदा सलम, शमव त्रिभुजयोः साजात्यादनुपातः $\frac{\text{वश} \times \text{लम}}{\text{वम}} = \text{लस} = \frac{\text{दृगौच्य} \times \text{गृहजलान्तर}}{\text{पुरुषजलान्तर}}$ = गृहौच्यम् । एतेनोपपन्नमाचार्योक्तम् ॥१८॥

अब 'गृहपुरुषान्तर सलिले यो दृष्ट्वाग्रं' इत्यादि प्रश्न के उत्तर को कहते हैं ।

हि. भा.—गृह और पुरुष के मध्य भूमि में स्थापित जल में गृह के अग्र को देख कर यदि गृहौच्यज्ञान अपेक्षित हो तब गृह और जल के अन्तर को दृगौच्य (दृष्टि की उच्छ्रिति) से गुणा कर पुरुष और जल के अन्तर से भाग देने से लब्ध गृहौच्य होता है इति ।

उपपत्ति ।

यहां पूर्व श्लोक (१७) की संस्कृतोपपत्ति में लिखित (१) क्षेत्र को देखिये । लस = गृहौच्य, वश = दृगौच्य । लव = गृह और पुरुष का अन्तर, म = जल, तब सलम और शमव दोनों त्रिभुजों में सजातीयत्व से अनुपात करते हैं $\frac{\text{वश.लम}}{\text{वम}} = \text{सल} = \frac{\text{दृगौच्य.गृहजलान्तर}}{\text{पुरुषजलान्तर}} = \text{गृहौच्य}$, इससे आचार्योक्त सूत्र उपपन्न हुआ ॥१८॥

इदानीं वीक्ष्य गृहाग्रं सलिले प्रसार्येत्यादि प्रश्नोत्तरमाह ।

प्रथमद्वितीय नृजलान्तरान्तरेणोद्धृता जलापसृतिः ।

दृगौच्य गुणोच्छ्रायस्तोयान्नृजलान्तरगुणा भूः ॥१९॥

सु. भा.—यत्र प्रथमं जले गृहाग्रप्रतिबिम्ब नरेण दृष्टं तत्र यन्नृजलान्तरं तत् प्रथमं ज्ञेयम् । एवं द्वितीयं नृजलान्तरं जानीयात् । ततो जलापसृतिर्जलयोरन्तरे भूमिः सा प्रथमद्वितीयनृजलान्तरयोरन्तरेणोद्धृता लब्धिद्विधा स्थाप्या । एकत्र दृगौच्यगुणा तदा गृहोच्छ्रायः स्यादन्यत्र नृजलान्तरेण गुणा तदा तोयाद्गृहत-लपर्यन्तं भूभूमिः स्यात् ।

अत्रोपपत्तिः ।

$$\frac{\text{द्वितीय नरजलान्तर} \times \text{जलान्तर}}{\text{नर जलान्तरयोरन्तरं}} = \text{द्वितीय जलस्थानाद् गृह्यत पर्यन्तं एतावता-}$$

ऽऽचार्योक्तमुपपन्नम् ॥१९॥

अब 'बीक्ष्य गृहाग्र' सलिले प्रसार्य 'इत्यादि प्रश्न के उत्तर को कहते हैं ।

हि. भा—एह के अग्र का प्रतिबिम्ब जल में पहले जहां देखा गया वहां जो नर और जल का जो अन्तर है उसको प्रथम नर जलान्तर समझना चाहिये। एवं द्वितीय गृहाग्र प्रतिबिम्ब में जहां देखा गया वहां नर और जल का जो अन्तर है उस को द्वितीय नर जलान्तर समझना चाहिये। दोनों जलस्थानों के अन्तर (जलापसृति) में जो भूमि है उसको प्रथम द्वितीय नर जलान्तर के अन्तर से भाग देने से जो लब्धि हो उसको दो स्थानों में स्थापित करना एक

स्थान में दृष्टि की ऊँचाई (दृगौच्छ्य) से गुणा करने से गृहोच्छ्राय होता है । द्वितीय स्थान में नरजलान्तर से गुणा करने से जल से गृहतलपर्यन्त भूमि होती है इति ।

उपपत्ति ।

यहां संस्कृतोपपत्ति में लिखित (१) क्षेत्र को देखिये । प=प्रथम जलस्थान । प = द्वितीय जलस्थान । य=प्रथमनर (द्रष्टा) स्थान, य = द्वितीय नरस्थान, गम=गम=गृहोच्छ्रिति, पप=जलान्तर=जलापसृति यय=रर=नरान्तर, इन दोनों का अन्तर=यय—पप । मपप, मरर सजातीय त्रिभुजद्वय के क्रम से मग, मख बहिलम्ब है । तब $\frac{\text{मख}}{\text{मग}}$

$$= \frac{\text{रर}}{\text{पप}} \text{—दोनों पक्षों में रूप घटाने से } \frac{\text{मख}}{\text{मग}} - १ = \frac{\text{रर}}{\text{पप}} - १ = \frac{\text{मख—मग}}{\text{मग}} = \frac{\text{खग}}{\text{मग}}$$

$$= \frac{\text{रर—पप}}{\text{पप}} = \frac{\text{यय—पप}}{\text{पप}} \text{ अतः मग=मग } = \frac{\text{दृष्ट्युच्छ्रिति} \times \text{जलान्तर}}{\text{नरजलान्तर का अन्तर}} = \text{गृहो}$$

च्छ्रिति । अथ गमप, परय, जात्य त्रिभुजद्वय के सजातीयत्व से $\frac{\text{पय. पप}}{\text{पय—पप}} = \text{गप} = \text{प्रथमजल}$

स्थान से गृहतलपर्यन्त = $\frac{\text{प्रथम नर जलान्तर} \times \text{जलान्तर}}{\text{नरजलान्तर द्वयान्तर}}$, इसी तरह

$\frac{\text{द्वितीयनरजलान्तर} \times \text{जलान्तर}}{\text{नरजलान्तर द्वयान्तर}} = \text{द्वितीय जल स्थान से गृहतल पर्यन्त; इससे आचार्योक्त सूत्र उपपन्न हुआ इति ॥१६॥}$

इदानीमुच्छ्रितिमाह ।

छायापुरुषच्छिन्नं जलकुड्यान्तरमवाप्तमारुढिः ।

अध्यायो विशत्यार्याणामेकोन विशोऽयम् ॥२०॥

सु. भा.—छायाया यः पुरुषः शङ्कुभागस्तेन जलभित्तोरन्तरं भक्तमत्र यदवाप्तं सा भित्तेरारुढिरुच्छ्रितिर्भवति । जलाद्यावताऽन्तरेण नरो भित्त्यग्रप्रति-बिम्बं जले पश्यति तदन्तरमेवात्र नरस्य छाया कल्प्या । अर्कतेजसो या भित्तेश्छाया ज्ञातव्या । (छायाव्यवहारस्य प्रथमश्लोकश्च छायापुरुषार्थं द्रष्टव्यः) शेषं स्पष्टार्थम् ।

अत्रोपपत्तिः । नरस्य छायाया नरप्रमाणसमोच्छ्रितस्तदा भित्तेश्छायाया किमित्यनुपातेन भित्तेरुच्छ्रितः स्फुटा ।

मधुसूदनसूनुनोदितो यस्तिलकः श्रोपृथुनेह जिष्णुजोक्ते ।

हृदि तं विनिधाय नूतनोऽयं रचितो भादिविधौ सुधाकरेण ॥

इति श्रीकृपालुदत्तसूनुसुधाकरद्विवेदिविरचिते ब्राह्मस्फुटसिद्धान्तनूतन-
तिलके शङ्कुछायादिज्ञानं नामैकोनविंशोऽध्यायः ॥१६॥

वि. भा.—जलकुडधान्तरं (जलभित्तोरन्तरं) छायापुरुषच्छिन्नं (छायायाः पुरुषः शङ्कुभागस्तेन भक्तं) तदा लब्धं भित्तेरुच्छ्रितिर्भवेत्, आरूढिशब्देनो-
च्छ्रितिर्बोध्या । जले भित्त्यग्रप्रतिबिम्बं नरो यावतान्तरेण पश्यति तदेवान्तरमत्र
नरस्य छाया, रविकिरणसम्बन्धेन भित्तेरुच्छ्रायाऽन्यत्र जलकुडधान्तरं तदा
नरस्य रविकिरणसम्बन्धेन या छाया सैव छाया बोध्येति । आर्याणां विशत्याऽयमे-
कोनविंशोऽध्यायोऽस्तीति ।

अत्रोपपत्तिः ।

नरस्य छायाया नरतुल्योच्छ्रितस्तदा भित्तेश्छायाया किमिति समागच्छति
भित्तेरुच्छ्रितिरिति ॥२०॥

इति ब्राह्मस्फुट सिद्धान्ते शङ्कुछायादिज्ञानं नामक एकोनविंशो-
ऽध्यायः ॥१९॥

अब भित्ति की उच्छ्रिति को कहते हैं ।

हि. भा.—जल और भित्ति के अन्तर को छाया के शङ्कुभाग से भाग देने से जो
लब्धि हो वह भित्ति की उच्छ्रिति (ऊँचाई) होती है । जल में नर (द्रष्टा) भित्ति के अग्र
के प्रतिबिम्ब जल से जितने अन्तर पर देखता है उसी (अन्तर) को यहाँ नर की छाया
कल्पना करनी चाहिये । रवि के तेज से भित्ति की जो छाया होती है अन्य प्रश्न में जल और
भित्ति का अन्तर होता है तब रवि के तेज से नर की जो छाया होती है वही छाया समझनी
चाहिये । यह बीस आर्यायों के उन्नीसवां अध्याय है इति ।

उपपत्ति ।

नर की छाया में नर प्रमाण तुल्य उच्छ्रिति पाते हैं तो भित्ति की छाया में क्या इस
अनुपात से भित्ति की उच्छ्रिति आती है ॥२०॥

इति ब्राह्मस्फुट सिद्धान्त में शङ्कुछायादिज्ञान नामक उन्नीसवां अध्याय समाप्त हुआ ।

ब्राह्मस्फुटसिद्धान्तः

गोलाध्यायः

ब्राह्मस्फुटसिद्धान्तः

अथ गोलाध्यायः

व्याख्यायते । तत्र प्रथमं तदारम्भप्रयोजनमाह ।

ग्रहनक्षत्रभ्रमणं न समं सर्वत्र भवति भूस्थानात् ।

तद्विज्ञानं गोलाद्यतस्ततो गोलमभिधास्ये ॥१॥

सु. भा.—भूस्थानां जनानां सर्वत्र ग्रहनक्षत्रभ्रमणं समं न भवति । तद्भ्रमणसंस्थानविज्ञानं च यतो गोलादेव भवति ततोऽहं गोलमभिधास्ये कथयामीति ॥१॥

वि. भा.—भूगोलनिवासिनां जनानां मध्ये ग्रहाणां नक्षत्राणां च भ्रमणं सर्वत्र समं (एकरूपं) न भवति, तेषां ग्रहनक्षत्राणां भ्रमणवैषम्यस्य विज्ञानं यतो गोलात् (गोलाध्यायात्) भवति, ततोऽहं (ब्रह्मगुप्तः) गोलं (गोलाध्यायं) अभिधास्ये (कथयामि) । प्रायः सर्वेऽपि ज्योतिषसिद्धान्तग्रन्था ग्रहगणितगोलाध्यायाभ्यां विभक्ता भवन्ति, तत्र ग्रहगणिते ग्रहसाधनादयो विधयो गोलाध्याये ग्रहसाधनादिविधीनामुपपत्तयश्च वर्णिता भवन्ति, पूर्वं ग्रहसाधनादिविधीनुक्तवा-
ऽधुना तदुपपत्तिं कथयतीति । सिद्धान्तशेखरे “उडुग्रहाणां भ्रमणं न तुल्यं सर्वत्र भूगोलनिवासिनां हि । तत्तत्त्वबोधावगतिस्तु गोलादतः स्फुटं गोलमिहाभिधास्ये” श्रीपतिनाप्याचार्योक्तानुरूपमेव कथ्यत इति ॥१॥

अब गोलाध्याय प्रारम्भ किया जाता है, उसमें पहले आरम्भ करने का प्रयोजन कहते हैं ।

हि. भा.—भूगोल निवासी लोगों के मध्य में ग्रहों का भ्रमण और नक्षत्रों का भ्रमण सब जगह समान (एकरूप) नहीं होता है उनके भ्रमणवैषम्य का ज्ञान गोलाध्याय से होता है इसलिये मैं (ब्रह्मगुप्त) गोलाध्याय को कहता हूं । प्रायः ज्योतिष के सब सिद्धान्त ग्रन्थ ग्रहगणित और गोलाध्याय से विभक्त होते हैं । ग्रहगणित में ग्रहसाधनादि विधियों का वर्णन रहता है और गोलाध्याय में उनकी उपपत्तियों का वर्णन रहता है । पूर्व में ग्रहसाधनादि विधियों को कह कर अब उनकी उपपत्ति कहते हैं इति ॥१॥

इदानीं भूगोलसंस्थानमाह ।

शशिबुधसितार्कं कुजगुरुशनि कक्षावेष्टितो भ कक्षान्तः ।

भूगोलः सत्त्वानां शुभाशुभैः कर्मभिरुपातः ॥२॥

सु. भा.—अयं भूगोलः सत्त्वानां प्राणिनां शुभाशुभैः कर्मभिरुपातः प्राप्तो भवति । 'भूमेः पिण्डः शशाङ्कज्ञकविरवि—इत्यादि भास्करोक्तमेतदनुरूपमेव । शेषं स्पष्टम् ॥२॥

वि. भा.—चन्द्रबुधशुक्ररविकुजगुरुशनीनां कक्षावृत्तैर्वेष्टितः (आवृतः) नक्षत्रकक्षाया मध्येऽयं भूगोलोऽस्ति यश्च प्राणिनां 'शुभाशुभैः कर्मभिः प्राप्तो भवति । चन्द्रबुधशुक्रादिग्रहकक्षावृत्तानां कथमीदृशी उपर्युपरि स्थितिरस्ति तद्युक्तिज्ञानार्थं मध्यमाध्यायो द्रष्टव्यो वा महीकाविभूषितो वटेश्वरसिद्धान्तस्य मध्यमाधिकारो द्रष्टव्यः भूमेः स्वरूपे मतान्तराणि सन्ति यथा “आदर्शोदरसन्निभा भगवती विश्वम्भरा कीर्तिता, कैश्चित् कैश्चन कूर्मपृष्ठसदृशी कैश्चित् सरोजा-कृतिः । अस्माकं तु कदम्बपुष्पनिचयग्रन्थेः समा सम्मता सर्वत्रासुमतां चयेन निचिता तोयस्थलस्थायिनाम्” कैश्चित् पौराणिकैः देवतास्वरूपा भगवती पृथ्वी मुकुरतलतुल्या कथिता, कैश्चन कूर्मपृष्ठसदृशी उन्नतमध्या, कैश्चित् कमलोकारा कथिता, अस्माकं ज्योतिषिकाणां तु कदम्बपुष्पनिचयग्रन्थेः समा, सर्वत्र जीवानां चयेन निचिताऽनुमतेति सिद्धान्तशेखरे श्रीपत्युक्तिरस्ति, सिद्धान्त-शिरोमणौ 'सर्वतः पर्वतारामग्रामचैत्यचयैश्चितः । कदम्बकुसुमग्रन्थिः केसर प्रसरैरिव' भास्करोक्तिरियं श्रीपत्युक्तिसदृश्येवास्ति, परन्तु नवीनाः पृथिव्या आकृतिं दीर्घं पिण्डाकृतिसदृशीं स्वीकुर्वन्ति । ग्रहनक्षत्रकक्षावृत्तसंस्थानसम्बन्धे सिद्धान्तशेखरे 'विबुधसित सूर्योरेज्यपातङ्गिकक्षावलयपरिवृत्तोऽसावृक्षकक्षोदर-स्थ' इत्यादि श्रीपत्युक्तिरियं सिद्धान्तशिरोमणौ 'भूमेः पिण्डः शशाङ्कज्ञ-कविरविकुजेज्यार्किनक्षत्रकक्षावृत्तैर्वृत्तो वृत्तः सन् मृदनिलसलिलव्योमतेजोमयो-ज्यम्' भास्करोक्तिरियं चाऽऽचार्योक्तिसदृश्येवास्तीति सम्प्रति वेधेन चन्द्रो भुवः समन्ताद् भ्रमणं करोति तथा सूर्यात् परितः क्रमेण बुधशुक्रभूमिभौमगुरुशनि नक्षत्राणि भ्रमन्तीति सिध्यति । अत एव प्राचीनानां भूस्थिरवादिनां भूपरितो ग्रहा भ्रमन्तीति वदतां मते बुधशुक्रकर्णयोर्महदन्तरमिति प्रसिद्धम् । पूर्वपश्चिम-योस्तयोर्दृश्यादृश्यत्वं च तन्मते न घटते । ग्रहाणामूर्ध्वाधरत्वं च तेषां कर्णानां ज्ञानेन स्फुटं विज्ञायते । बिम्बीयकर्णानामानयनं पूर्वमेव मध्यमाध्याये मया लिखितं तत्तत् एव ज्ञातव्यम् । एवं रविग्रहबिम्बान्तरवेधेन सर्वे ग्रहा रविपरितो भ्रमन्तीति स्फुटं सम्प्रति नव्यमतेन विज्ञायत इति ॥२॥

अब भूगोल संस्थान को कहते हैं ।

हि. भा.—चन्द्र-बुध-शुक्र-रवि-मङ्गल-गुरु (बृहस्पति) शनि इन सबों के कक्षावृत्तों

से वेष्टित (धिराहुष्मा) नक्षत्र कक्षा के मध्य में यह भूगोल है, जो प्राणियों के शुभ-अशुभ कर्मों से प्राप्त होता है। चन्द्र बुध शुक्रादिग्रह कक्षावृत्तों की क्यों इस तरह उपर्युपरिस्थिति है इस की युक्ति के लिये मध्यगति अध्याय में लिखित उपपत्ति अथवा बटेश्वर सिद्धान्त के मध्यमाधिकार में हमारी लिखी हुई टीका देखनी चाहिये। भूगोल के स्वरूप में बहुत मतान्तर है जैसे पौराणिक लोग देवता स्वरूप भगवती पृथ्वी को अयनक के तल सदृश कहते हैं, कोई कोई कछुए की पृष्ठ के सदृश पृथ्वी के स्वरूप कहते हैं, कोई कोई कमल के आकार के सदृश कहते हैं, हमारे ज्योतिषिकों के मत से कदम्ब फल के सदृश है और जिस तरह कदम्ब फल में सर्वत्र केसर रहता है उसी तरह इस गोलाकार पृथ्वी के ऊपर सर्वत्र प्राणियों की स्थिति है यह विषय सिद्धान्तशेखर में 'आदर्शोदरसन्निभा भगवती विश्वम्भरा' इत्यादि विज्ञान भाष्य में लिखित श्लोक से श्रीपति ने कहा है, सिद्धान्तशिरोमणि में 'सर्वतः पर्वतारामग्रामचैत्य चर्यश्चितः' इत्यादि श्लोक से भास्कराचार्य ने भी श्रीपति के कथनानुसार ही कहा है लेकिन नवीन लोग पृथ्वी का आकार दीर्घपिण्डाकार मानते हैं, इसके सम्बन्ध में बटेश्वर सिद्धान्त के मध्यमाधिकार में हमारी लिखी हुई टीका देखनी चाहिये। ग्रह-नक्षत्र कक्षावृत्तों की स्थिति के सम्बन्ध में सिद्धान्तशेखर में, 'विधुबुधसितसूर्यरिज्यपातङ्गिकक्षा' इत्यादि से श्रीपति तथा सिद्धान्त शिरोमणि में 'भूमेः पिण्डः शशाङ्कज्ञ कविरविकुजेज्याकिं नक्षत्रकक्षावृत्तैः' इत्यादि से भास्कराचार्य ने भी अचार्योक्त के अनुरूप ही कहा है। सम्प्रति वेध से चन्द्र पृथ्वी के चारों तरफ भ्रमण करती है तथा सूर्य के चारों तरफ क्रम से बुध-शुक्र पृथ्वी-मङ्गल-गुरु-शनि और नक्षत्र परिभ्रमण करते हैं यह सिद्ध होता है, इसलिये प्राचीनों के 'पृथ्वी स्थिर है उसके चारों तरफ ग्रह भ्रमण करते हैं' मत में बुध और शुक्र के कर्णों में बहुत अन्तर होता जो नहीं होना चाहिये। तथा उन (प्राचीनों) के मत में बुध और शुक्र का दृग्वाद्दृश्यत्व नहीं घटता है। ग्रहों का ऊर्ध्वारत्व उन (ग्रहों) के बिम्बीय कर्णज्ञान से समझा जाता है। बिम्बीय कर्णों का आनयन प्रकार मैं पहले ही मध्यमाध्याय में लिख चुका हूँ। वह वहीं से समझना चाहिये; एवं रवि और ग्रह के बिम्बान्तर वेध से रवि के चारों तरफ सब ग्रह भ्रमण करते हैं यह इस समय नवीनों के मत से समझा जाता है इति ॥२॥

इदानीं देवासुरसंस्थानमाह ।

खे भूगोलस्तदुपरि मेरौ देवाः स्थितास्तले दैत्याः ।

खे भगणाक्षाग्रस्थावुपर्यधश्च ध्रुवौ तेषाम् ॥३॥

सु. भा.—आकाशे भूगोलस्तदुपरि मेरुस्तत्र मेरावुपरि देवाः स्थिताः । तले मेरुतले कुमेरौ दैत्याः स्थिताः । तेषां देवदैत्यानां ख आकाशे भगणाक्षाग्रस्थौ भगणाक्षौ ध्रुवयष्टिस्तदग्रस्थौ ध्रुवावुपर्यधश्च । देवानामुत्तरो ध्रुव उपरि दक्षिणोऽधो दैत्यानां दक्षिण उपरि उत्तरो ध्रुवश्चाध इति । 'सौम्यं ध्रुवं मेरुगताः खमध्ये' इत्यादि भास्करोक्तमेतद्वनुरूपमेव ॥३॥

वि. भा.—खे (आकाशे) भूगोलोऽस्ति, भूगोलोपरि मेरुरस्ति, मेरावुपरि भागे देवाः) स्थिताः सन्ति, मेरुतले (मेरोरधोभागे) कुमेरौ दैत्याः स्थिताः सन्ति, तेषां (देवानां दैत्यानां च) खे (आकाशे) भगणाक्षाग्रस्थौ (भगणाक्षशब्देन ध्रुवयष्टि-स्तदग्रस्थितौ) ध्रुवौ उपर्यधश्चार्थात् देवानामुत्तरो ध्रुव उपरि, दक्षिण ध्रुवश्चाधः, दैत्यानां दक्षिण ध्रुव उपरि, उत्तर ध्रुवश्चाध इति ॥ सिद्धान्तशेखरे 'स्वमूर्धगं मेरु-गतास्तमुत्तरं तथेतरं वाङ्मवा सिनो जनाः, वङ्मवानलवासिनः —दैत्याः । श्रीपत्यु-क्तमिदं सिद्धान्तशिरोमणौ 'सौम्यं ध्रुवं मेरुगताः खमध्ये याम्यं च दैत्या निजमस्तकोर्ध्वं, भास्करोक्तमिदं चाऽऽचार्योक्तानुरूपमेवास्तीति ॥३॥

अब देव और दैत्य के संस्थान (स्थिति) को कहते हैं ।

हि. भा.—आकाश में भूगोल है, भूगोल के ऊपर मेरु है, मेरु के ऊपरी भाग में देवता लोग स्थित हैं और मेरु के अधो भाग (कुमेरु) में दैत्य लोग स्थित हैं । उन देवताओं और दैत्यों के आकाश में ध्रुवयष्टी के अग्रद्वय में स्थित दोनों ध्रुव ऊपर और नीचे है अर्थात् उत्तर ध्रुव देवों के ऊपर है दक्षिण ध्रुव नीचे में है और दैत्यों का दक्षिण ध्रुव ऊपर में है उत्तर ध्रुव नीचे में है ॥ सिद्धान्तशेखर में 'स्वमूर्धगं मेरुगतास्तमुत्तरं' इत्यादि विज्ञान भाष्य में लिखित पद्य से श्रीपति तथा सिद्धान्त शिरोमणि में 'सौम्यं ध्रुवं मेरुगताः खमध्ये' इत्यादि वि. भा. लिखित पद्य से भास्कराचार्य ने भी आचार्योक्त के अनुरूप ही कहा है इति ॥३॥

इदानीं देवानां दैत्यानां च भचक्रभ्रमणव्यवस्थामाह ।

ध्रुवयोर्बद्धं सव्यगममराणां क्षितिजसंस्थमुद्धुचक्रम् ।

अपसव्यगमसुराणां भ्रमति प्रवहानिलाक्षितम् ॥४॥

सु. भा.—स्पष्टम् । 'सव्यापसव्यं भ्रमदक्षचक्रम्' इत्यादि भास्करोक्तमेत-
दनुरूपमेव ॥४॥

वि. भा.—प्रवहवायुना प्रेरितं ध्रुवयष्ट्यधीनं देवानां क्षितिज संसक्तं भचक्रं सव्यगं भ्रमति, दैत्यानामपसव्यगं भ्रमत्यर्थादुत्तरं क्रान्तिमण्डलार्धं देवाः सव्यगं पश्यन्ति, दक्षिणं तदधः—अपसव्यगं दैत्याः पश्यन्ति, सव्यगमिति पश्चिमाभिमुखं भ्रमत् अपसव्यगं च पूर्वाभिमुखं भ्रमदित्यर्थः । चलद् भ्रमण्डलं स्वक्षितिजगतं देवा दैत्याश्च पश्यन्ति, तत्क्षितिजमण्डलेन सह क्रान्तिवृत्तस्य स्थानद्वये योग इति नक्षत्रचक्रं क्षितिजवृत्तस्थितमुपचर्यते । दक्षिणं क्रान्तिवृत्तार्धं कदाचिदपि देवैर्न विक्ष्यते उत्तरं क्रान्तिवृत्तार्धं दैत्यैर्न विक्ष्यते इति ॥ सिद्धान्तशेखरे 'सौम्यं हि मेषाद्यप-मण्डलार्धं पश्यन्त्यमी सव्यगमेव देवाः । तुलादिकं दक्षिणमन्यदधं सदैव दैत्यास्त्व-

पसव्यवर्त्ति, श्रीपत्युक्तमिदं सिद्धान्तशिरोमणौ 'सव्यापसव्यं अमदृक्षचक्रं विलोकयन्ति क्षितिजप्रसक्तम्' भास्करोक्तमिदं चाऽऽचार्योक्तानुरूपमेवेति ॥४॥

अब देवों और दैत्यों की भचक्र-भ्रमण-व्यवस्था को कहते हैं ।

हि. भा.—प्रवह वायु द्वारा प्रेरित ध्रुव यष्टी के अवीन (अर्थात् ध्रुव यष्टी के घूमने से घूमने वाला) देवों का क्षितिज वृत्त संसक्त भचक्र सव्य घूमता है, और दैत्यों का अपसव्य घूमता है, अर्थात् क्रान्तिमण्डल के उत्तरार्ध को देव सव्यग देखते हैं, क्रान्ति मण्डल के दक्षिणार्ध को दैत्य अपसव्यग देखते हैं, सव्यग से पश्चिमाभिमुख भ्रमण करते हुए और अपसव्यग से पूर्वाभिमुख भ्रमण करते हुए समझना चाहिए । सिद्धान्तशेखर में 'सौम्यं हि मेषाद्यपमण्डलार्ध' इत्यादि विज्ञान भाष्य में लिखित श्लोक से श्रीपति तथा सिद्धान्त शिरोमणि में 'सव्यापसव्यं अमदृक्षचक्र' इत्यादि से भास्कराचार्य ने भी आचार्योक्त के अनुरूप ही कहा है इति ॥४॥

इदानीं चक्रभ्रमणव्यवस्थामाह ।

अन्यत्र सर्वतो दिशमुन्नमति भपञ्जरो ध्रुवो नमति ।

लङ्कायामुडुचक्रं पूर्वापरं ध्रुवौ क्षितिजे ॥५॥

सु. भा.—अन्यत्र मेरुतोऽन्यत्र सर्वतो दिशं भूगोले भपञ्जरो भचक्रमुन्नमति ध्रुवश्च नमति । लङ्कायामुडुचक्रं भचक्रं पूर्वापरं सममण्डलाकारं ध्रुवौ च क्षितिजे स्त इति । आचार्येण यथा यथा मेरुतो द्रष्टा सर्वतो दिशं याति तथा तथा ध्रुवो नमतीत्युक्तम् । भास्करेण लङ्कामेव मूलस्थानं प्रकल्प्य स्थितिः प्रतिपादिता 'अतो निरक्षदेशे क्षितिमण्डलोपगौ ध्रुवौ नरः पश्यति दक्षिणोत्तरौ' इत्यादि भास्करोक्तमेतदनु रूपमेव ॥५॥

वि. भा.—मेरुतोऽन्यत्र सर्वतो दिशं पृथिव्यां भपञ्जरः (भचक्रं) उन्नमति, ध्रुवश्च नमति, लङ्कायां भचक्रं पूर्वापरं सममण्डलाकारं ध्रुवौ च तत्क्षितिजे स्तः । द्रष्टा मेरुतो यथा यथा सर्वतो दिशं याति तथा तथा ध्रुवौ नमतीत्याचार्येणोक्तम् । लङ्कामेव मूलस्थानं मत्वा भास्कराचार्येण स्थितिः प्रतिपादिता तेन 'निरक्षदेशे क्षितिमण्डलोपगौ ध्रुवौ नरः पश्यति दक्षिणोत्तरावि'त्यादि भास्करोक्ताऽऽचार्योक्तयोर्न कोऽपि भेदः, अर्थात् मेर्वभिमुखं गच्छतो नरस्योत्तरध्रुवोन्नतिस्तथा भचक्रस्य नतिर्भवति, एवमुत्तरभागतो निरक्षदेशाभिमुखं गच्छतो नरस्य विपरीते नतोन्नते भवतोऽर्धादुत्तरध्रुवस्य नतिर्भचक्रस्योन्नतिर्भवति, 'उदग्दिशं याति यथा यथा नरः' इत्यादि भास्करोक्तेरिदं स्फुटमस्ति, निरक्षाद्बहुत्रोत्तरदेशेऽपि उत्तरध्रुवदर्शनं न भवत्यतोऽत्र सिद्धान्तप्रतिपादने भूषृष्ठावरोधनमनङ्गीकृत्य भूगर्भतः सर्वं विचार्यम् ध्रुवयोर्बद्धं भचक्रं प्रवहवायुनाऽऽक्षिप्तं सततं पश्चिमाभिमुखं

भ्रमति । चन्द्रादीनां ग्रहाणां कक्षाश्च तस्मिन् भचक्रे बद्धा भ्रमन्तीति ॥
सूर्यसिद्धान्ते “ध्रुवोन्नतिर्भचक्रस्य नतिर्मेरुं प्रयास्यतः । निरक्षाभिमुखं यातुर्विपरीते
नतोन्नते ॥ भचक्रं ध्रुवयोर्बद्धमाक्षिप्तं प्रवहानिलैः । पर्येत्यजसू तन्नद्धा ग्रहकक्षा
यथाक्रमम्” इति सूर्याशपुरुषोक्तसदृशमथवाऽऽचार्योक्तं चेति ॥५॥

अब चक्रभ्रमण व्यवस्था को कहते हैं ।

हि. भा.—मेरु से अन्यत्र सब दिशाओं में भचक्र की उन्नति होती है और उत्तर
ध्रुव की नति होती है । लङ्का में भचक्र सममण्डलाकार है और दोनों ध्रुव लङ्का क्षितिज
में हैं । द्रष्टा मेरु से ज्यों ज्यों सब दिशाओं में जाते हैं त्यों त्यों ध्रुव की नति होती है यह
आचार्य का कथन है, परन्तु लङ्का ही को मूल स्थान मानकर भास्कराचार्य ने स्थिति का
प्रतिपादन किया है इसलिये ‘निरक्षदेशे क्षितिमण्डलोपगौ’ इत्यादि भास्कराचार्योक्ति और
आचार्योक्ति में कुछ भी भेद नहीं है । अर्थात् मेरु की ओर जाते हुए मनुष्य को उत्तर ध्रुव
की उन्नति और भचक्र की नति देखने में आती है । एवं उत्तर भाग से निरक्ष देशाभिमुख
जाते हुए मनुष्य को नति और उन्नति विपरीत देखने में आती हैं अर्थात् उत्तर ध्रुव की
नति और भचक्र की उन्नति देखने में आती है । ‘उदग्दिशं याति यथा यथा नरः’ इत्यादि
भास्करोक्ति से यह स्पष्ट है । निरक्षदेश से उत्तर भी बहुत देशों में उत्तर ध्रुव का दर्शन
नहीं होता है, इसलिए यहां सिद्धान्त कहने में भूपृष्ठजनित अवरोध को स्वीकार न कर
भूगर्भ ही से सब कुछ विचार करना चाहिए ॥ सूर्य सिद्धान्त में भी ‘ध्रुवोन्नतिर्भचक्रस्य’
इत्यादि विज्ञान भाष्य में लिखित श्लोकों से इन्हीं बातों को कहा गया है इति ॥५॥

इदानीं देवादीनां रविभ्रमणस्थितिं कथयति ।

देवाः सव्यगमसुराः पश्यन्त्यपसव्यगं रविं क्षितिजे ।

विषुवति समपश्चिमगं निरक्षदेशस्थिताः पुरुषाः ॥६॥

सु० भा०—विषुवति मेषतुलादौ देवाः क्षितिजे रविं सव्यगमसुरा अपसव्यगं
निरक्षदेशस्थाः पुरुषाश्च समपश्चिमगं पश्यन्तीति प्रसिद्धम् ॥६॥

वि. भा.—देवा दैत्याश्च नाडीमण्डलरूपक्षितिजे विषुवति (सायनमेषतुलादौ)
क्रमशः सव्यगमपसव्यगं रविं पश्यन्ति । निरक्ष देशवासिनस्तं रविं (सायनमेषादौ
सायनतुलादौ च स्थितं सूर्यं) पूर्वापरवृत्तानुकारे नाडीवृत्ते पश्यन्तीति ॥६॥

अब देवादियों की रवि भ्रमण स्थिति को कहते हैं ।

हि. भा.—नाडी मण्डल रूपक्षितिज में सायन मेषादि में और सायनतुलादि में

(१) ‘देवासुरा विषुवति क्षितिजस्थं दिवाकरम् । पश्यन्ति’ इति सूर्य सिद्धान्तेऽप्येव-
मेवास्ति ।

सव्यगत रवि को देवता लोग देखते हैं और दैत्य लोग अपसव्यगत देखते हैं । निरक्ष देश वासियों के नाडीवृत्त पूर्वापर वृत्त हैं इसलिए वे लोग तब (सायन मेषादिस्थित सूर्य को और सायन तुलादि स्थित सूर्य को) पूर्वापर वृत्तगत देखते हैं इति ॥६॥

इदानीं देवदैत्ययोराशिसंस्थानमाह ।

सौम्यमपमण्डलार्धं मेषाद्यं सव्यगं सदा देवाः ।

पश्यन्ति तुलाद्यर्धं दक्षिणमपसव्यगं दैत्याः ॥७॥

सु. भा.—देवाः सदा मेषाद्यं सौम्यमुत्तरं क्रान्तिमण्डलार्धं सव्यगं दैत्याश्च तुलादिक्रान्तिमण्डलार्धं दक्षिणमपसव्यगं पश्यन्ति ।

अत्रोपपत्तिः ।

गोलसंस्थानेन 'लम्बाधिका क्रान्तिरुदक् च यावत्'—इत्यादि भास्करविधिना स्फुटा ॥७॥

वि. भा.—देवाः सर्वदा मेषाद्यमुत्तरं क्रान्तिवृत्तार्धसव्यगं पश्यन्ति । दैत्याः तुलादिक्रान्तिवृत्तार्धं दक्षिणं (अपसव्यगं) पश्यन्तीति ।

अत्रोपपत्तिः ।

मेरी कुमेरी चाक्षांशा नवतिः=९०, अतो लम्बांशाः=०, तेन मेषादिषण्णां राशीनां क्रान्तेर्लम्बांशाधिकत्वात्तदहोरात्रवृत्तानां तत्क्षितिजोर्ध्वगतत्वाच्च तत्र स्थितं रवि देवाः सर्वदा पश्यन्ति । एवमेव तुलादिषण्णां राशीनां क्रान्तेरपि लम्बांशाधिकत्वात्तदहोरात्रवृत्तानां तत्क्षितिजोर्ध्वगतत्वात्तेषु राशिषु स्थितं सूर्य सर्वदा दैत्याः पश्यन्त्येव । दिनरात्रिसम्बन्धे सिद्धान्तशिरोमणौ 'लम्बाधिका क्रान्तिरुदक् च यावत्तावद्दिनं संततमेव तत्र । यावच्च याम्या सततं तमिस्रा' इत्येवं भास्करेण यत् कथितं तेनैव स्फुटमस्तीति ॥७॥

अब देवों के और दैत्यों के राशि संस्थान को कहते हैं ।

हि. भा.—देवता लोग मेषादि उत्तर क्रान्तिवृत्तार्ध को सर्वदा सव्यगत देखते हैं । तथा दैत्य लोग तुलादि क्रान्तिवृत्तार्ध को अपसव्यगत देखते हैं इति ॥७॥

उपपत्ति ।

मेरु में और कुमेरु में अक्षांश=९०, अतः लम्बांश शून्य=०, है इसलिये मेषादि (उत्तर गोलीय) छः राशियों की क्रान्तियों के लम्बांशाधिक होने के कारण उन राशियों के अहोरात्रवृत्तों के क्षितिजवृत्त से ऊपर होने से उन राशियों में स्थित सूर्य को सर्वदा देखते हैं ।

एवं तुलादि (दक्षिणगोलीय) छः राशियों की क्रान्तियों के लम्बांशाधिक होने के कारण उन राशियों में स्थित सूर्य को दैत्य लोग सर्वदा देखते हैं, सिद्धान्त शिरोमणि में 'लम्बाधिका क्रान्तिरुदक्' इत्यादि संस्कृतोपपत्ति में लिखित भास्करोक्त श्लोक से यह स्पष्ट है। सूर्य सिद्धान्त में 'देवासुरा विषुवति क्षितिजस्थं दिवाकरम् । पश्यन्ति' इससे सूर्यांश पुरुष आचार्योंक्त के सदृश ही कहा है इति ॥ ७ ॥

इदानीं देवदैत्ययोः पितृमानवयोश्च दिनप्रमाणमाह ।

पश्यन्ति देवदैत्या रविवर्षार्धमुदितं सकृत् सूर्यम् ।

शशिगाः शशिमासार्धं पितरो भूस्था नराः स्वदिनम् ॥८॥

सु. भा.—देवदैत्याः सकृदुदितं सूर्यं रविवर्षार्धं सौरवर्षदलपर्यन्तं शशिगाः शशिवृष्टस्थाः पितरश्च शशिमासार्धं पर्यन्तं भूस्था नराश्च स्वदिनं स्वदिनमानपर्यन्तं पश्यन्ति ।

अत्रोपपत्तिः । भास्करगोलाध्यायतः स्फुटा ॥८॥

वि. भा.—देवा दैत्याश्च सकृदुदितं सूर्यं सौरवर्षार्धं पश्यन्ति । शशिगाः (चन्द्रपृष्ठस्थाः) पितरश्चान्द्रमासार्धं रविं पश्यन्ति । पृथिव्यां स्थिता मनुष्याः स्वदिनमानपर्यन्तं रविं पश्यन्तीति ।

अत्रोपपत्तिः ।

उत्तरध्रुवो देवानां खस्वस्तिकम् । दक्षिणध्रुवश्च दैत्यानां खस्वस्तिकम् । ध्रुवाभ्यां नवत्यंशेन यद्वृत्तं तन्नाडीवृत्तं देवदानवयोः क्षितिजवृत्तम् । नाडीवृत्तक्रान्तिवृत्तयोः सम्पाते सायनमेषादौ सायनतुलादौ च रविदर्शनानन्तरं पुनस्तत्सायनमेषादौ सायनतुलादौ च रविदर्शनं यावता कालेन भवेत् स रवेरेकभगणः (सायन-रविभगणः) देवदैत्ययोरहोरात्रप्रमाणं भवति, परन्तुवेकसायनभगणभोगः सौरवर्ष-मतो देवदैत्ययोः सायनसौरवर्षार्धं (षण्मासप्रमाणं) दिनं सिद्धम् । परन्तु देवदैत्ययो-दिनरात्री विलोमेन भवतोऽर्थाद्धा मेषादावुदितं रविं प्रतिदिनं क्षितिजोपरिगतं देवाः पश्यन्ति तदा देवानामधःस्थितत्वादैत्यास्तं रविं न पश्यन्ति, अतो यदा देवानां दिनं तदा दैत्यानां रात्रिः, यदा देवानां रात्रिस्तदा दैत्यानां दिनमिति । सिद्धान्त-शेखरे "सकृदुदगतो दिनकरः सुरासुरैरपि वत्सरार्धमवलोक्यते स्फुटम् । पितृभिश्च मासदलमिन्दुगोलगैर्धुदलं महीतलगतैश्च मानवैः" श्रीपतिनाज्जेनाक्षरश आचार्योंक्ता नुरूपमेव कथितम् । अत्रोपपत्तिर्दिनरात्रिस्वरूपे च सिद्धान्तशिरोमणी ।

कृष्णोरविः पक्षदलेऽभ्युदेति शुक्लेऽस्त मेत्यर्थत एव सिद्धम् ।”

यस्मिन् वृत्ते ग्रहबिम्बं भ्रमति तदन्तर्गतो द्रष्टा यदि सर्वदा ग्रहबिम्बस्यैकं भागमेव पश्यति तदा ग्रहबिम्बं स्वाक्षोपरिस्वाङ्गभ्रमं करोति । यथा यदा वयं देवमन्दिरस्य प्रदक्षिणां कुर्मस्तदा भ्रमणवृत्तान्तर्गतो द्रष्टा सर्वदाऽस्मद्दक्षिणभागमेवास्मदङ्गभ्रमणेन पश्यति, भ्रमणवृत्तबहिर्गतो द्रष्टा च स्वाभिमुखमस्मच्छरीरावयवं भिन्नं भिन्नं पश्यतीति प्रत्यक्षप्रतीतिः । यथा बालावात्यावद् भूमौ लघुप्रदेशे भ्रमन्तः स्वाङ्गभ्रममुत्पादयन्ति तथा वयं महति प्रदेशे प्रदक्षिणा परिधौ भ्रमन्तः स्वाङ्गभ्रममुत्पादयामः भ्रमणवृत्तस्यात्यल्पत्वात्तद्वह्निः स्था द्रष्टारो बालानां स्वाङ्गभ्रमेण भिन्नान् भिन्नानवयवान् पश्यन्तीति । अथ यस्मिन् वृत्ते चन्द्रो भ्रमति तदन्तर्गता वयं सदा चन्द्रस्य कलङ्कसहितं तमेव भागं पश्यामोऽस्तः पूर्वकथितसिद्धान्तेन चन्द्रो भ्रमन् स्वाङ्गभ्रममुत्पादयतीति सिध्यति । अथ यच्च चन्द्रे कलङ्कनाम्ना प्रसिद्धं तत् सूक्ष्मदर्शकयन्त्रबलेन चन्द्रोपरि वनं पर्वतादिकं चास्तीति स्फुटं दृश्यते नव्यैस्तत्पर्वतादीनामुच्छ्रितिज्ञानं च कृतमस्तीति । पितृदिनसम्बन्धे बटेश्वरसिद्धान्ते मटीकाऽवलोकनीयेति ॥८॥

अब देव-दैत्यों को और पितर-मनुष्यों के दिनमान कहते हैं ।

हि. भा.—देव और दैत्य एक बार उदित सूर्य को छः महीने तक देखते हैं । चन्द्र पृष्ठ निवासी पितर एकबार उदित सूर्य को चान्द्रमासार्ध (एकपक्ष) देखते हैं । पृथ्वी पर स्थित मनुष्य अहोरात्रार्ध तक रवि को देखते हैं ॥८॥

उपपत्ति ।

उत्तरध्रुव देवों का खस्वस्तिक है । दक्षिण ध्रुव दैत्यों का ख स्वस्तिक है । दोनों ध्रुवों को केन्द्र मान कर नवत्यंश से जो वृत्त (नाड़ीवृत्त) होता है वह देव और दैत्यों का क्षितिज वृत्त है । नाड़ीवृत्त और क्रान्तिवृत्त के सम्पातद्वय सायन मेषादि में और सायन तुलादि में रवि दर्शन के बाद पुनः जितने काल में सायन मेषादि और सायन तुलादि में रवि-दर्शन होता है वह एक सायनरविभ्रमण (एक सायन सौरवर्ष) देव और दैत्य का अहोरात्र मान होता है । अतः देवों और दैत्यों का सायन सौरवर्षाब्धि (छः महीने) दिन सिद्ध हुआ । परन्तु देवों और दैत्यों का दिन और रात्रि बिलोम से होती है अर्थात् जब मेषादि में उदित रवि को प्रति दिन क्षितिज से ऊपर देव लोग देखते हैं तब देवों से अथः स्थित होने के कारण दैत्य लोग उस रवि को नहीं देखते हैं इसलिये जब देवों का दिन होता है तब दैत्यों की रात्रि होती है । जब देवों की रात्रि होती है तब दैत्यों का दिन होता है । सिद्धान्तशेखर में 'सकृदुदगतो दिनकरः सुरासुरैरपि वत्सरार्धमवलोक्यते स्फुटम्' यह श्रीपत्युक्त आचार्योंक्त के अनुरूप ही है । सूर्य सिद्धान्त में 'सकृदुदगतमब्दार्थं पश्यन्त्यर्कं सुरासुराः' इस सूर्यांश पुरुषोक्ति के अनुरूप ही श्रीपत्युक्त और आचार्योंक्त है । सिद्धान्तशिरोमणि में 'रवेश्चक्रभोगोऽर्कवर्षं प्रदिष्टं द्युरात्रं च देवासुराणां तदेव' इस से भास्कराचार्य ने भी आचार्योंक्त के अनुरूप ही कहा है । इसकी उपपत्ति और दिन रात्रि का स्वरूप सिद्धान्तशिरोमणि में "विषुवद्वृत्तं द्युसदां क्षितिजत्वमितं तथा च दैत्यानाम् । उत्तरयाम्यौ क्रमशो भूध्रुवोर्ध्वगतौ" इत्यादि संस्कृतोपपत्ति में लिखित श्लोक से इस तरह भास्कराचार्य ने कहा है । सांहितिक लोग 'उत्तरायण देवों का दिन और दक्षिणायन उनकी रात्रि होती है' कहते हैं, इसका खण्डन सिद्धान्तशेखर में 'दिनप्रवृत्तिर्मरुतामजादौ तुलाघरादौ च निशा प्रवृत्तिः' इत्यादि से श्रीपति ने किया है । मेषादि में सूर्य के रहने से दिनारम्भ होता है, तुलादि में सूर्य के रहने से रात्र्यारम्भ होता है, जो सांस्कृतिक लोग मकरादि में और कर्कादि में दिन और रात्रि कहते हैं वे लोग इसमें युक्ति कुछ भी नहीं कहते हैं अर्थात् उत्तरायण देवों का दिन होता है और दक्षिणायन रात्रि होती है इसमें कुछ भी युक्ति नहीं कहते हैं । देवता लोग यदि मिथुनान्त स्थित सूर्य को देखते हैं तो कर्कराशि में क्रान्ति के समत्व के कारण क्यों नहीं देखते हैं । इस प्रश्न का उत्तर कुछ नहीं है । इसलिये 'अत्रोपपत्तिं न च ते ब्रूवन्ति' यह श्रीपति का कहना ठीक है । श्रीपति रत्नमाला में 'शिशिरपूर्वमृतुत्रयमुत्तरं' इत्यादि संस्कृतोपपत्ति में लिखित श्लोकों से श्रीपति भी संहितोक्त फलादेश के लिये 'उत्तरायण और दक्षिणायन ही को दिन और रात्रि कह कर इस ज्योतिष सिद्धान्त में 'अत्रोपपत्तिं न च ते ब्रूवन्ति' से उनका उपहास करते हैं ।

पितृ दिनोपपत्ति ।

चन्द्र के ऊर्ध्व भाग में पितर बसते हैं । भूकेन्द्र से चन्द्रकेन्द्र गत रेखा पितरों के ऊर्ध्व याम्योत्तरवृत्त में जहाँ लगती है वह बिन्दु उनका ऊर्ध्व खस्वस्तिक है । वही बिन्दु परिणत चन्द्र भी पितृ त्रिज्या गोल में है । ऊर्ध्वखस्वस्तिक गत रेखा अधोयाम्योत्तर वृत्त में जहाँ

लगती है वह पितरों का अधः खस्वस्तिक है । पितरों के ऊर्ध्व खस्वस्तिक (परिणतचन्द्र) में रवि के आने से पितरों का दिनार्ध काल होगा लेकिन वहीं पर चन्द्र भी है इसलिये यदि चन्द्र का शराभाव हो तो रवि और चन्द्र के एक स्थान में रहने से दशान्ति (अमावास्या) होने के कारण सिद्ध होता है कि दशान्ति में पितरों का दिनार्ध होता है । एवं द्वितीय दशान्ति में द्वितीय दशान्ति होता है, दोनों दशान्ति का अन्तर एक चान्द्रमास है वही पितरों का दिनार्धान्तर काल भी है परन्तु दिनार्धान्तर काल (एक दिनार्ध से दूसरे दिनार्ध तक) उदयान्तर काल (एक सूर्योदय से दूसरे सूर्योदय तक) के बराबर होता है, सूर्योदयद्वयान्तर काल एक दिन है अतः दिनार्धान्तर काल भी एक दिन के बराबर हुआ । इसलिये सिद्ध हुआ कि पितरों का दिन (अहोरात्र) एकचान्द्रमास के बराबर होता है अर्थात् पितर लोग चान्द्र मास के आधे (एक पक्ष) तक उदित सूर्य को देखते रहते हैं । सूर्य सिद्धान्त में 'सकृदुदयतमब्दाधं पश्यन्त्यर्कं सुरासुराः । पितरः शशिगाः पक्षं' इस सूर्यांश पुरुषोक्त के अनुरूप ही आचार्योक्त है । सिद्धान्त शिरोमणि में 'रवीन्द्रोद्युतेः संयुतिर्यावदन्त्या विषोर्मास एतच्च पैत्रं द्युरात्रम्' यह भास्करोक्त आचार्योक्त के अनुरूप ही है । तथा 'विष्वर्ध्वभागे पितरो वसन्तः स्वाधः सुधादीधितिमामनन्ति पश्यन्ति तेजः' इत्यादि संस्कृतोपपत्ति में लिखित श्लोक से गोलाध्याय में भास्कराचार्य ने उसी बात को कहा है इति ॥८॥

इदानीं भूगोले लङ्कावन्त्योः संस्थानमाह ।

भूपरिधि चतुर्भागे लङ्काभूमस्तकात् क्षितितलाच्च ।

लङ्कोत्तरतोऽवन्ती भूपरिधेः पञ्चदशभागे ॥९॥

सु. भा.—भूमस्तको मेरुः क्षितितलश्च कुमेरुस्तस्माद्भूपरिधिचतुर्थभागेऽन्तरे दक्षिणदिशि लङ्कानाम नगरी । लङ्कोत्तरतश्च भूपरिधिपञ्चदशभागेऽवन्ती वर्तते । भास्करश्चाचार्यन्यायी 'निरक्षदेशात् क्षितिषोडशांशे भवेदवन्ती' इति कथितवान् । तेनान्येषां मते 'षोडशे भागे' इत्यत्र पाठान्तरम् । चतुर्वेदाचार्यसम्मतः पाठश्च 'पञ्चदशभागे' अयमेव ॥९॥

वि. भा.—भूमस्तकात् (मेरोः) क्षितितलाच्च (कुमेरोश्च) भूपरिधिचतुर्थांश (नवत्यंश) न्तरे-दक्षिणस्यां दिशि लङ्का नाम नगरी वर्तते । लङ्कात उत्तरदिशि भूपरिधिपञ्चदशांशान्तरेऽवन्ती (उज्जयिनी) वर्तते । भास्कराचार्येण गोलाध्याये 'निरक्षदेशात् क्षितिषोडशांशे भवेदवन्ती गणितेन यस्मात्' एवं कथ्यते । भूपरिधियोजनषोडशांशान्तरे निरक्षदेशादवन्ती वर्तते तदर्थं गणितम् । यदि षष्ठ्यधिकशतत्रयै ३६० रंशैः भूपरिधियोजनानि लभ्यन्ते तदा ऽवन्त्यक्षांशेन किमित्यनुपातेन निरक्षदेशावन्त्योरन्तरयोजनान्यागच्छन्ति तत्स्वरूपम् ।

भूपरिधियोजन × अवन्त्यक्षांश
३६० = निरक्ष देशावन्त्योरन्तरयोजनानि । अवन्तीदेशे-

$$\begin{aligned}
 \text{ऽक्षांशः} &= २२ \text{। } ३० = २२ \frac{१}{२} = \frac{४५}{२}, \text{ अतः } \frac{\text{भूपरिधियोजन} \times ४५}{३६० \times २} \\
 &= \frac{\text{भूपरिधियोजन} \times ४५}{७२०} \text{ हरभाज्या (४५) वनेन भक्तौ तदा } \frac{\text{भूपरिधियोजन}}{\frac{७२०}{४५}} \\
 &= \frac{\text{भूपरिधियोजन}}{१६} = \text{निरक्षदेशावन्त्योरन्तरं योजनानि। चतुर्वेदाचार्येण 'पञ्चदशे भागे' इत्येव कथ्यते यथा ऽऽचार्येण कथ्यते, कथं 'पञ्चदशे भागे' कथ्यते तत्र न कारणं किमपि प्रतिभाति। लङ्कातः सुमेरुः कुमेरुश्च नवत्यंशान्तरेऽस्ति' यतस्तत्राक्षांशः = ९० सन्तीति ॥६॥
 \end{aligned}$$

अब भूगोल में लङ्का और अवन्ती की संस्थिति कहते हैं।

हि. भा.—मेरु से और कुमेरु से भूपरिधि के चतुर्थांश (६० अंश) न्तर पर दक्षिण दिशा में लङ्का नामक नगरी है लङ्का से उत्तर दिशा में भूपरिधि के पञ्चदशांश १५ शान्तर पर अवन्ती उज्जयिनी है। भास्कराचार्य अपने गोलाध्याय में 'निरक्ष देशात् क्षितिषोऽक्षांशे' इत्यादि से भूपरिधि के षोडशांशान्तर पर गणित करके अवन्ती को कहते हैं। इसके लिये गणित इस तरह है। यदि भांश (३६०) में भूपरिधि योजन पाते हैं तो अवन्ती के अक्षांश में क्या इस अनुपात से निरक्ष देश और अवन्ती के अन्तर योजन आते हैं उसका स्वरूप

$$\begin{aligned}
 &= \frac{\text{भूपरिधियो} \times \text{अवन्ती के अक्षांश}}{३६०} \text{ परन्तु अवन्ती के अक्षांश} = २२ \frac{१}{२} = \frac{४५}{२} \text{ अतः} \\
 &\frac{\text{भूपरिधियो} \times ४५}{३६० \times २} = \frac{\text{भूपरिधियो} \times ४५}{७२०} = \text{निरक्षदेश और अवन्ती के अन्तर योजन, यहाँ} \\
 &\text{हर भाज्य को (४५) से भाग देने से } \frac{\text{भूपरिधियो}}{\frac{७२०}{४५}} = \frac{\text{भूपरिधियो}}{१६} = \text{निरक्षदेश और}
 \end{aligned}$$

अवन्ती के अन्तर योजन। इसको सोलह से गुणा करने से भूपरिधि योजन होता है। भूपरिधियोजन मान के लिये आचार्यों में मतभेद है। अपनी कथित भूपरिधि की समीचीनता की दृढ़ता के लिये बहुत जोर देकर गोलाध्याय में कहते हैं "शृङ्गोन्नतिग्रहयुतिग्रहणोदयास्तच्छायादिकं परिधिना घटतेऽमुना हि। नान्येन तेन जगुस्तमहीप्रमाणं प्रामाण्यमन्वययुजाव्यतिरेकेण" अर्थात् चन्द्र की शृङ्गोन्नति, ग्रहयुति, ग्रहण (चन्द्रग्रहण और सूर्यग्रहण) ग्रहों का उदय समय और अस्त समय आदि हमारे ही भूपरिधि मान से ठीक समय पर होता है अन्यो के भूपरिधिमान से ठीक समय पर नहीं होता है इसलिये हमारा ही कथित भूपरिधिमान ठीक है अन्याचार्यों का नहीं। आचार्य (ब्रह्मगुप्त) ने 'लङ्कोत्तरतोऽवन्ती भूपरिधेः परिधेः पञ्चदश भागे' से 'लङ्का से अवन्ती भूपरिधियोजन के पञ्चदशांश १५ श पर है' जो कहा है इसमें कुछ युक्ति नहीं मिलती है। चतुर्वेदाचार्य ने आचार्योक्त पाठ ही का अनुमोदन किया है इति ॥ ६

इदानीं निरक्षस्वदेशान्तर योजनान्याह ।

अक्षांशकुपरिधिवधान्मण्डलभागाप्त योजनैर्विषुवत् ।

इत्यन्यच्च मेरुस्वदेशान्तरयोजनादिज्ञानं तत्तदन्तरभागतोऽनुपातात् कार्यमिति
स्फुटम् । अत्र टीकायां चतुर्वेदाचार्यः 'कान्यकुब्जेऽक्षभागाः' २६ । ३५ ॥१०॥

वि. भा.—अक्षांशभूपरिध्योर्धाताद् भांशैर्भक्ताल्लब्धैर्नतभागयोजनैः स्वदे-
शाग्निरक्षदेशो भवति । विषुवच्छब्देनात्र निरक्षदेशो ज्ञेयः । जिनाल्पाक्षांशे देशे
यदा सूर्यः खस्वस्तिकोपरि भवति तदा कैर्नतभागयोजनैर्निरक्षदेशो भवति । अन्यच्च
मेरुस्वदेशान्तरयोजनादिज्ञानं तत्तदन्तरांशतोऽनुपातात्कार्यमिति ॥

अत्रोपपत्तिः ।

यदि भांशैर्भूपरिधियोजनानि लभ्यन्ते तदा स्वदेशीयाक्षांशैः किमित्यनुपातेन
लब्धयोजनानि स्वदेशनिरक्षदेशयोरन्तरयोजनानि भवन्ति । कस्मात् कस्माद्देशा-
ग्निरक्षदेशः कियदन्तरेऽस्तीति ज्ञानार्थं तत्तद्देशीयाक्षांशवशेन पूर्वोक्तानुपातः
कार्य इति ॥१०॥

अब स्वदेश और निरक्षदेश के अन्तर योजन को कहते हैं ।

हि. भा.—अक्षांश और भूपरिधियोजन के घात में भांश ३६० से भाग देने से जो
लब्धि हो उतने योजन पर स्वदेश से निरक्षदेश होता है । जिनाल्पा (चौबीस से कम) क्षांश
देश में जब सूर्य खस्वस्तिक के ऊपर होता है तब कितने नतभाग योजन पर निरक्ष देश होता
है । मेरु और स्वदेश का अन्तर योजनादि ज्ञान तत्तद्देश के अन्तरांश (अक्षांश) से करना
चाहिये, यदि निरक्ष देश से किसी देश का अन्तर योजन ज्ञान करना हो तो पूर्वोक्त अनुपात
से करना चाहिये । यदि साक्ष देश में दो देशों का अन्तर योजन करना हो तो दोनों देशों के
अक्षांशान्तर से अनुपात (भांश में भूपरिधि योजन पाते हैं तो अक्षांशान्तर में क्या) द्वारा
करना चाहिये ।

उपपत्ति ।

यदि भांश ३६० में भूपरिधि योजन पाते हैं तो स्वदेशीयाक्षांश में क्या इस अनुपात
से लब्ध योजन निरक्षदेश और स्वदेश का अन्तरयोजन होता है अर्थात् लब्ध योजनान्तर पर

अपने देश से निरक्ष देश है । जिस किसी देश से निरक्ष देश की दूरी ज्ञात करनी हो तो उस देश के अक्षांश से पूर्वोक्तानुपात से करना चाहिये इति ॥१०॥

इदानीं खकक्षां ग्रहकक्षां चाह ।

अम्बरयोजनपरिधिः शशिभगणाः शून्यखखजिनाग्निगुणाः ३२४००० ।

अत्रोपपत्तिः ।

$$\begin{array}{r} \text{कल्पे चन्द्रभगणाः} = ५७७५३३'०००००) १८७१२०६'९२०००'००००० = \text{खक}(३२४००० \\ १७३२५९९ \\ \hline १३८६०७९ \\ ११५५०६६ \\ \hline २३१०१३२ \\ २३१०१३२ \\ \hline \times \end{array}$$

अतो भास्करेणाचार्योक्तैव खकक्षा पठिता । शेषोपपत्तिर्भास्करोक्त-विधिना स्फुटा ॥११॥

वि. भा.—कल्पे ये चन्द्रभगणास्ते ३२४००० एभिर्गुणास्तदाऽम्बरयोजन-परिधिः (खकक्षा) भवति । सा (खकक्षा) यस्य ग्रहस्य कल्पभगणैर्विभक्ता तस्य ग्रहस्य कक्षा भवति । भकक्षायाः षष्ट्यं (६०) शो रविकक्षा भवतीति ॥११॥

अत्रोपपत्तिः ।

आकाशे चतुर्दिक्षु यावत् रवेः किरणानां व्याप्तिः (प्रसारः) तत्परिधेः प्रमाणमेव खकक्षाप्रमाणमित्यागमप्रामाण्येन मान्यम् । वस्तुतो रवेश्चलत्वादाकाशे किरणानां सञ्चारेण यावत्तमोहानिस्तदाकारो वृत्तवन्न भवति । अत एव कल्पकु-दिनग्रहणतियोजनघातसमा पठितखकक्षा कल्पे ग्रहभ्रमणयोजनैः समेति वक्तुं

शक्यते । वेधेन गतियोजनज्ञानं भवितुमर्हति, तत्कल्पकुदिनघातसमेयं पठित-
खकक्षा संख्या भवति न वेति परीक्षा न भवितुमर्हति । अत एव भास्कराचार्यः ।
“ब्रह्माण्डमेतन्मितमस्तु नो वा कल्पे ग्रहः क्रामति योजनानि । यावन्ति पूर्वैरिह
तत्प्रमाणं प्रोक्तं खकक्षाख्यमिदं मतं नः ।” कल्पे चन्द्र भगणाः = ५७७५३३०००००
अतः कल्प चन्द्रम् $\times ३२४००० = १८७१२०६६२०००००००० =$ खकक्षा भास्कराचा-
र्येणाऽपि ‘कोटिघ्नैर्नखनन्दषट्कनखभूभृद्भुजङ्गेन्दुभिर्ज्योतिःशास्त्रविदो वदन्ति
नभसः कक्षामिमां योजनै’ रित्यनेनाऽऽचार्योक्त खकक्षा समैव खक' क्षामितिः
पठिता । खकक्षा तुल्यानि योजनानि कल्पे ग्रहः क्रामति, भगणाश्च पाठपठित-
समाः । एकभगणभोगेन ग्रहः स्वकक्षावृत्तयोजनानि भ्रमति ततोऽनुपातो यदि
कल्प ग्रहभगणैः खकक्षामितयोजनानि लभ्यन्ते तदैकेन भगणेन किमिति जाता ग्रह
कक्षा = $\frac{\text{खकक्षा}}{\text{कग्रभ}}$, अर्कोभषष्ट्यंश इत्यागमप्रामाण्येन $\frac{\text{भकक्षा}}{६०} =$ रविकक्षा

∴ भकक्षा = ६० रविकक्षा, एतैर्योजनैः सर्वेषां ग्रहाणामुपरि दूरे कतिपय
नक्षत्राणां वृत्तं भ्रमति, एतेनाऽऽचार्योक्तमुपपन्नम् ॥११॥

अब खकक्षा और ग्रह कक्षा को कहते हैं ।

हि. भा.—कल्प में पठित चन्द्रभगण को ३२४००० से गुणा करने से खकक्षा
योजन परिधि प्रमाण होता है । खकक्षा को जिस ग्रह के कल्प भगण से भाग देते हैं फल
उस ग्रह की कक्षा होती है । नक्षत्र कक्षा का साठवां अंश रवि कक्षा होती है इति ।

उपपत्ति ।

आकाश में चारों तरफ रवि किरणों का प्रसार जहाँ तक होता है, उस परिधि का
प्रमाण ही खकक्षा प्रमाण है यह आगम प्रमाण से माना जाता है । वस्तुतः रवि के चलत्व

१ खकक्षा सम्बन्धे आचार्याणां भिन्नानि भिन्नानि मतानि सन्ति, सिद्धान्तशेखरे
‘हिरण्यगर्भाण्डकटाहसंपुटप्रवेष्टकं तच्च बभाषिरे बुधाः । अदृश्यदृश्यं च गिरि पुरातना
जगुः खकक्षामिति गोलवेदिनः’ हिरण्यगर्भो ब्रह्मा तस्याण्डकटाहस्य यत् संपुटं (परस्परभिमुखं
खण्डद्वयं) तदेव प्रवेष्टकं (करण्डकं यस्य तत्तथोक्तम्) बुधा गीतवन्तः । अर्थात् ब्रह्माण्ड-
करण्डकान्तः स्थितमाकाशवृत्तमिति यावत् । गोलवेदिनो दृश्यादृश्यं गिरि (लोकालोकारव्यं
गिरि) खकक्षा मिति गीतवन्तः’ इति मतान्तरं श्रीपतिना कथितम् । स्वमतसम्बन्धे तेनैवं
‘श्रीमदार्यभट्टजिष्णुनन्दन श्री त्रिविक्रमसुतादिसूरिभिः । सिद्धिरम्बरचरस्य कक्षया या
कृताऽथ मयकाऽपि सोच्यते’ कथ्यते । जिष्णुनन्दनो ब्रह्मगुप्तः । श्रीत्रिविक्रमसुतो लल्लः,
आदिशब्देन सूर्यसिद्धान्तादिकारः कश्चिदिति बोध्यम् ॥

से आकाश में किरणों के संचार से जितनी दूर तक अन्धकार नष्ट होता है उसकी आकृति वृत्ताकार नहीं होती है। इसलिये कल्प कुदिन और ग्रहगति योजन के घाततुल्य यह खकक्षा कल्प में ग्रहों के भ्रमण योजन 'अर्थात् कल्प में जितने योजन ग्रह भ्रमण करते हैं' के बराबर होती है यह कह सकते हैं। खकक्षा के सम्बन्ध में आचार्यों का मत भिन्न भिन्न है इसलिये सिद्धान्तशिरोमणि में 'ब्रह्माण्डमेतन्मितमस्तु नो वा कल्पे ग्रहः क्रामति योजनानि' से भास्कराचार्य कहते हैं कि कल्प में जितने योजन ग्रह भ्रमण करते हैं तत्तुल्य ही खकक्षा योजन है यह मेरा मत है।

कल्प में चन्द्रभगण = ५७७५३३००००० अतः कल्प चंभगण $\times ३२४०००$
 = १८७१२०६६२००००००००० = खकक्षा। भास्कराचार्य ने भी 'कोटिधनैर्नखनन्द-
 षट्कनख भू' इत्यादि से आचार्योंक्त खकक्षा के बराबर ही खकक्षा मान पठित किया है।
 ग्रहकल्प में खकक्षा तुल्य योजन भ्रमण करते हैं, एक भगण भोग से ग्रह स्वकक्षावृत्त योजन
 भ्रमण करते हैं। तब अनुपात करते हैं यदि कल्प ग्रहभगण में खकक्षायोजन पाते हैं तो
 एक भगण में क्या इस अनुपात से ग्रह कक्षा आती है $\frac{\text{खकक्षा}}{\text{कग्रभ}} = \text{ग्रहकक्षा}$, 'अर्को भपष्ट्य'-
 शः' अर्थात् नक्षत्र कक्षा का साठवां भाग रवि कक्षा है' इस आगमप्रमाण से $\frac{\text{भकक्षा}}{६०} = \text{रवि-}$
 कक्षा $\therefore \text{भकक्षा} = ६० \times \text{रविकक्षा}$ । इतने योजन पर सब ग्रहों से ऊपर दूर में कितने नक्षत्र
 का वृत्त है, सूर्य सिद्धान्त में 'भवेद्भकक्षा तीक्ष्णांशोभ्रमणं षष्टिताडितम्'। सर्वोपरिष्ठात्
 भ्रमति योजनैस्तैर्भमण्डलम्' सूर्याश पुरुष की इस उक्ति के सदृश ही आचार्य ने कहा है 'यस्य
 भगणैर्विभक्तास्तत्कक्षा' यह आचार्योंक्त भी 'सैव यत्कल्प भगणैर्भक्ता तद्भ्रमणं भवेत्' इस
 सूर्याश पुरुषोक्त के अनुरूप ही है ॥११॥

ग्रहाः कियन्ति योजनानि भ्रमन्तीत्याह ।

भपरिधिसमानि षष्ट्या खपरिधितुल्यानि कल्परविवर्षैः ।

गच्छन्ति योजनानि ग्रहाः स्वकक्षासु तुल्यानि ॥१२॥

सु० भा०—षष्ट्या रविवर्षषष्ट्या ग्रहाः स्वकक्षासु भूपरिधिसमानि
 नक्षत्रकक्षासमानि योजनानि कल्परविवर्षैश्च खपरिधितुल्यानि खकक्षासमानि
 योजनानि गच्छन्ति । तथा सर्वे ग्रहाः कल्पे तुल्यान्येव योजनानि खकक्षामितानि
 गच्छन्ति ।

अत्रोपपत्तिः ।

भास्कोक्तो न विधिना स्फुटा । नकक्षा = ६० रकक्षा = $\frac{\text{खक}}{\text{क सीव}} \times ६०$

खक = $\frac{\text{नक} \times \text{कसीव}}{६०}$ ।

कल्पसौरवर्षः खकक्षामितयोजनानि तदा सौरवर्षषष्ट्या किम् । लब्धानि ग्रहभ्रमणयोजनानि = नक्षत्रकला । अत उपपन्नं भपरिधिसमानि षष्ट्येति । संप्रति वेधेन नवीनानां मते ग्रहाणां योजनात्मिका गतिर्न समानेति सुधीभिश्चि-
चन्त्यम् ॥१२॥

वि. भा.—षष्ट्या (सौरवर्षषष्ट्या) कल्परविवर्षेष्व खकक्षातुल्यानि नक्षत्रकक्षासमानि योजनानि ग्रहाः स्वकक्षासु गच्छन्ति । तथा सर्वे ग्रहाः कल्पे तुल्यान्येव योजनानि खकक्षातुल्यानि परिभ्रमन्तीति ।

अत्रोपपत्तिः ।

$$\begin{aligned} \text{अर्को षष्ट्यंश इत्यागमप्रामाण्यात्} \frac{\text{नक्षत्रकक्षा}}{६०} &= \text{रविकक्षा, अतः नक्ष-} \\ \text{त्रकक्षा} &= ६० \times \text{रविकक्षा} = \frac{\text{खकक्षा}}{\text{कल्परविभरण}} \times ६० = \frac{\text{खकक्षा}}{\text{कल्पसौरवर्ष}} \times ६०, \text{ अतः} \\ \frac{\text{नक्षत्रक} \times \text{कल्पसौरवर्ष}}{६०} &= \text{खकक्षा} । \end{aligned}$$

यदि कल्पसौरवर्षः खकक्षा तुल्यानि योजनानि तदा सौरवर्षषष्ट्या किं समागच्छन्ति ग्रहभ्रमणयोजनानि नक्षत्रकक्षासमानानि अत उपपन्नमाचार्योक्त मिति ॥१२॥

अथ ग्रह कितने योजन भ्रमण करते हैं सो कहते हैं ।

हि. भा.—ग्रह अपनी कक्षा में साठ सौरवर्ष से नक्षत्र कक्षातुल्य योजन कल्प रवि वर्ष से खकक्षा तुल्य योजन परिभ्रमण करते हैं। और सब ग्रह कल्प में खकक्षा तुल्य ही योजन परिभ्रमण करते हैं ।

उपपत्ति ।

$$\begin{aligned} \text{नक्षत्र कक्षा का षष्ट्यंश रविकक्षा है इस आगम प्रमाण से} \frac{\text{नक्षत्रकक्षा}}{६०} &= \text{रविकक्षा,} \\ \text{अतः नक्षत्रक} &= ६० \times \text{रविक} = \frac{\text{खकक्षा}}{\text{कल्परविभरण}} \times ६० = \frac{\text{खकक्षा}}{\text{कल्पसौरवर्ष}} \times ६० \\ \therefore \frac{\text{नक्षत्रकक्षा} \times \text{कल्पसौरवर्ष}}{६०} &= \text{खकक्षा} । \end{aligned}$$

यदि कल्प सौरवर्ष में खकक्षा योजन पाते हैं तो साठ सौरवर्ष में क्या इससे लब्ध ग्रहभ्रमणयोजन नक्षत्रकक्षा के समान आता है इति ॥१२॥

इदानीं ग्रहकक्षाक्रममाह ।

भगणस्याधः शनिगुरुभूमिजरविशुक्रसौम्यचन्द्राणाम् ।

कक्षा क्रमेण शीघ्राः शनैश्चराद्याः कलाभुत्तया ॥१३॥

सु. भा.—भगणस्याधो भकक्षाया अघः क्रमेण शनि-गुरु-कुज-रवि-शुक्र-बुध-चन्द्राणां कक्षाः सन्ति । कलाभुतया शनैश्चराद्याः शीघ्राः शीघ्रगतयः सन्ति शनेर्गुरुः शीघ्रगामी । गुरोर्भौमः । भौमाद्रविरित्यादि । एवं शीघ्रतमः शशी भवतीति । यदि शशिन ऊर्ध्वक्रमेण कक्षापाठः क्रियते तदा 'भूमेः पिण्डः शशाङ्कज्ञ-कविरविकुजे' इत्यादि भास्करोक्तमेतदनुरूपमेव ।

 भ्रमन्तीति नव्यानां मतेन सिध्यति ॥१३॥

अब ग्रहकक्षाक्रम को कहते हैं ।

हि. भा.—नक्षत्र कक्षा के नीचे क्रम से शनि-गुरु-मङ्गल-रवि-शुक्र-बुध-चन्द्र

ग्रहों की कक्षाएं हैं। कलात्मक गति से शनैश्चरादिग्रह शीघ्रगतिक हैं अर्थात् शनि से गुरु शीघ्रगतिक हैं, गुरु से मङ्गल, मङ्गल से रवि, रवि से शुक्र, शुक्र से बुध, बुध से चन्द्र शीघ्र-गामी हैं। इससे चन्द्र सब ग्रहों से अधिक शीघ्रगतिक सिद्ध होता है। यदि चन्द्र से उर्ध्व क्रम से ग्रह कक्षा स्थिति को देखा जाय तो सिद्धान्तशिरोमणि में 'भूमेः पिण्डः शशाङ्कज्ञ कवि-रविकुजेज्याकिं नक्षत्रकक्षा' इत्यादि भास्कराचार्योक्त ग्रह कक्षा स्थिति ही देखने में आती है।

उपपत्ति ।

यहां संस्कृतोपपत्ति में लिखित (क) क्षेत्र को देखिये। ग्रह कक्षाओं का निवेशक्रम ऐसा (भाष्य में लिखित के अनुसार) क्यों हैं इसका ज्ञान ग्रहों के बिम्बीय कर्णों के ज्ञान से होता है। जिस ग्रह के बिम्बीय कर्ण से जिस ग्रह का बिम्बीय कर्ण अधिक होता है उसकी कक्षा बड़ी होती है अर्थात् जिसका बिम्बीय कर्ण अल्प है उसकी कक्षा से वह कक्षा (जिसका बिम्बीय कर्ण अधिक है) ऊपर होती है। अतः वेध से बिम्बीय कर्णानियन करते हैं।

भू = भूकेन्द्र, पृ = भूपृष्ठस्थान, वि = ग्रह बिम्बकेन्द्र, दृ = दृष्टिस्थान, पृदृ = नरोच्छ्रि-ति, भूवि = बिम्बीयकर्ण, भूपृ = भूव्यासार्ध, भूव्यासार्ध और नरोच्छ्रिति विदित है, विपृदृ, विदृपृ दोनों कोण तुरीय यन्त्र से मापन करके जान लिये तब $१८० - (< विपृदृ + < विदृपृ) = < पृविदृ$ यह कोण भी विदित हो गया, अब विपृदृ त्रिभुज में अनुपात करते हैं।

$\frac{पृदृ \times ज्या < पृदृवि}{ज्या < पृविदृ} = पृवि$, कोणज्या और कोणोन भाषांशज्या बराबर होती है अतः

ज्या $< विपृदृ = ज्या (१८० - < विपृदृ)$ से $< विपृभू$ कोण का भी ज्ञान हो गया तब विपृभू त्रिभुज में विपृ, भूपृ इन दोनों भुजों के तथा उसके अन्तर्गत कोण के ज्ञान से 'भूसंमुखासोद्भव कोटिशिञ्जिनी' इत्यादि प्रकार से भूवि भुज (आधार) का ज्ञान हो जायगा यही बिम्बीय कर्ण है इति।

प्रकारान्तर से बिम्बीय कर्णानियन करते हैं।

यहां संस्कृतोपपत्ति में लिखित (ख) क्षेत्र को देखिये। भू = भूकेन्द्र, वि = ग्रहबिम्ब-केन्द्र, वे = प्रथम वेध स्थान, वे = द्वितीय वेधस्थान। भूवि = बिम्बीयकर्ण, विवेन, विवेम दोनों कोणों को तुरीय यन्त्र से मापन कर जान लिया, वेवे = वेधस्थानान्तर विदित है, तब वेवे चाप की पूर्णज्या भी विदित हो जायगी, भूवे = भूवे = व्यासार्ध तब भूवेवे त्रिभुज में तीनों भुजों के ज्ञान से तीनों कोणों का भी ज्ञान हो जायगा, $१८० - (< विवेन + < भूवेवे) = < विवेवे$, एवं $१८० - (< विवेम + < भूवेवे) = < विवेवे$ इन दोनों कोणों के ज्ञान से $१८० - (< विवेवे + < विवेवे) = < वेवेवे$ इस कोण का भी ज्ञान होगया तब वेवेवे त्रि-

भुज में अनुपात करने हैं $\frac{\text{वेवे} \times \text{ज्या} < \text{विवेवे}}{\text{ज्या} < + \text{विवेवे}} = \text{वेवि}$, तब भूवेवि त्रिभुज में भूवे, वेवि

दोनों भुजों के तथा तदन्तर्गत कोण के ज्ञान से 'भूसंमुखास्रोद्भव कोटिशिञ्जिनी' इत्यादि से भूवि आधार ज्ञान हो गया यही बिम्बीय कर्ण है ।

इस वेध द्वारा कर्णानयन से सब ग्रहों के बिम्बीय कर्णों की अपेक्षा चन्द्र का बिम्बीय कर्ण अल्प उपलब्ध होता है अतः सब ग्रहों की कक्षा की अपेक्षा चन्द्र कक्षा छोटी है, चन्द्र कर्ण से बुध का कर्ण अधिक होता है, अतः चन्द्र कक्षा से बुध कक्षा बड़ी होती है, बुध कर्ण से शुक्र का कर्ण अधिक होता है अतः बुध कक्षा से शुक्र कक्षा बड़ी होती है, एवं शुक्र कक्षा से रवि कक्षा, रवि कक्षा से कुज कक्षा, कुज कक्षा से गुरु कक्षा इत्यादि कक्षाओं की छोटी बड़ी होने का कारण बिम्बीय कर्ण की न्यूनाधिकता है तथा कक्षाएं एक केन्द्रिक है इसलिये उपर्युक्त आचार्योंक्त कक्षाक्रम पाठ के सदृश है, सूर्य सिद्धान्त में 'मन्दागरेज्यभूपुत्रसूर्य-शुक्रेन्दुजेन्दवः परिभ्रमन्त्यधोऽधः स्थाः' इस सूर्याश पुरुषोक्त कक्षाक्रम पाठ के अनुरूप ही आचार्योंक्त पाठ है इति ॥१३॥

इदानीं शनैश्चराद्याः कथं शीघ्रा इत्यस्य कारणमाह ।

लघवोऽल्पे राश्यंशा महति महान्तोऽल्पवृत्तमल्पेन ।

पूरयतीन्वुर्महता कालेन महच्छनैश्चारी ॥१४॥

अत्रोपपत्तिः ।

सर्वेषां ग्रहाणां योजनात्मकगतयस्तुल्या एव भवन्ति, 'कल्पोद्भवैः क्षिति-दिनैर्गगनस्य कक्षा भक्ता भवेद्दिनगतिर्गगनेचरस्य । पादोनगोऽक्षधृतिभूमित योजनानी' त्यादि भास्करोक्तेः । सर्वासां ग्रहकक्षाणां कालानां वैषम्यात् कलादिका गतयस्तुल्या न भवन्ति । अर्थात् ग्रहाः स्वस्वकक्षावृत्ते भ्रमन्ति, कक्षावृत्तानि च चक्रकलाभिरङ्कितानि सन्ति तेन यदि ग्रहकक्षायोजनैश्चक्रकला लभ्यन्ते तदा

ग्रहगतियोजनैः किमित्यनुपातेन योजनगतिसम्बन्धिकलाः समायान्ति । तस्माद्यस्य ग्रहस्य कक्षा महती तस्य कलाया लघुत्वं, यस्य कक्षा लघ्वी तस्य कलाया महत्वं सिध्यति । शनि कक्षाऽन्यग्रहापेक्षया महती, चन्द्रकक्षा च लघ्वी, अतः शनैश्चरस्य कलात्मिका मध्यगतिर्लघुतमा, चन्द्रस्य च महत्तमा भवति, चन्द्रापेक्षया बुधोऽल्पगतिः । बुधापेक्षया शुक्रोऽल्पगतिः । शुक्रापेक्षया रविरल्पगतिरित्यादि । सिद्धान्तशेखरे 'तुल्या गतियोजनवर्त्मनैषां लिप्ता प्रकृत्या मृदुशीघ्रभावः' ऽप्येवमेवास्ति । सिद्धान्तशिरोमणौ 'कक्षाः सर्वा अपि दिविषदां चक्रलिप्ताङ्कितास्ता वृत्ते लघ्व्यो लघुनि महति स्युर्महत्यश्च लिप्ताः । तस्मादेते शशिज-भृगुजादित्यभौमेज्यमन्दा मन्दाक्रान्ता इव शशधराद् भान्ति यान्तः क्रमेण' इत्यनेन भास्कराचार्येणाप्याचार्योक्तानुरूपमेव कथ्यत इति ॥१४॥

अब शनैश्चरादिग्रह कैसे शीघ्रगतिक होते हैं इसके कारण कहते हैं ।

हि. भा.—स्वल्पवृत्त में राव्यंश विभाग लघु होते हैं । यह वृत्त में वे विभाग महान् (बड़े) होते हैं । इस कारण से चन्द्र छोटी अपनी कक्षा को अल्प समय में ही पूरा करते हैं अर्थात् सम्पूर्ण कक्षा में घूम जाते हैं, और शनैश्चर अपनी बड़ी कक्षा को बहुत समय में पूरा करते हैं अर्थात् सम्पूर्ण कक्षा में घूमते हैं ।

उपपत्ति

सब ग्रहों की योजनात्मक गति तुल्य ही होती है, 'समा गतिस्तु' योजनैर्नभः सदां सदा भवेदि' ति भास्करोक्तेः सिद्धान्तशेखरेऽपि 'तुल्यागतियोजनवर्त्मनैषां' श्रीपत्युक्तेः । सब ग्रह कक्षाओं की कलाओं की असमता के कारण कलादिक गति तुल्य नहीं होती है अर्थात् अपनी अपनी कक्षा में भ्रमण करते हैं । कक्षा वृत्तों में चक्रकला अङ्कित है अतः यदि ग्रह कक्षा योजन में चक्र कला पाते हैं तो ग्रहगति योजन में क्या इस अनुपात से योजन गति सम्बन्धी कला आती है । इस कारण से जिस ग्रह की कक्षा बड़ी है उसकी कला छोटी होती है और जिसकी कक्षा छोटी है उसकी कला बड़ी होती है यह सिद्ध हुआ । शनि कक्षा सब ग्रहों की कक्षाओं से बड़ी है इसलिये शनैश्चर की कलात्मक मध्यमगति सब ग्रहों की गति से छोटी होती है, चन्द्रकक्षा सब ग्रहों की कक्षा से छोटी है इसलिए चन्द्र की कलात्मक मध्यमगति सब ग्रहों की मध्यम गति से बड़ी होती है । अतः सबसे शीघ्रगतिक चन्द्र होता है । चन्द्र से अल्पगतिक बुध, बुध से अल्पगतिक शुक्र, शुक्र से अल्पगतिक रवि इत्यादि कक्षाक्रम के अनुसार शीघ्रगतिक और मन्दगतिक होते हैं । सिद्धान्तशेखर में 'तुल्यागतियोजनवर्त्मनैषां लिप्ता प्रकृत्या मृदुशीघ्रभावः' इससे श्रीपति ने भी शीघ्रगतिक और मन्दगतिक होने का कारण यही कहा है । सिद्धान्त शिरोमणि में 'कक्षाः सर्वा अपि दिविषदां' इत्यादि में भास्कराचार्य भी आचार्योक्त के अनुरूप ही कहा है इति ॥१४॥

इदानीं वृत्तपरिधेर्व्यासानयनमाह ।

यन्मूलं तद्व्यासो मण्डललिप्ताकृतेर्वशहृतायाः ।

तस्यार्धं व्यासार्धं योजनकर्णप्रमाणार्धम् ॥१५॥

अत्रोपपत्तिः ।

व्यासे भनन्दाग्निहृते विभक्ते खवाणसूर्यैरित्यादि भास्करोक्तपरिध्यान-
यनप्रकारेण वृत्तपरिधिः = $\frac{\text{व्या} \times ३९२७}{१२५०}$, अत्रा $\frac{३९२७}{१२५०}$ स्य विततरूपकर-
णेनाऽऽसन्नमानानि $\frac{२२}{७}$, $\frac{३५५}{११३}$, $\frac{३९२७}{१२५०}$ व्यास परिधयोः सम्बन्धः = $\frac{२२}{७}$

$\frac{३५५}{११३}$, $\frac{३९२७}{१२५०}$ भास्करेण व्यास \times सम्बन्ध = $\frac{\text{व्या} \times ३९२७}{१२५०}$ = सूक्ष्मपरिधिः

कथ्यते, तथा $\frac{२२ \times \text{व्या}}{७}$ = स्थूलपरिधिः कथ्यते, पर $\frac{३५५}{११३}$ मिदं कथं न गृहीतं,

एतद्ग्रहणेन तु-भास्करोक्तसूक्ष्मपरिधितोऽपि सूक्ष्मतरः परिधिर्भवितुमर्हति ।

$\frac{\text{परिधि}}{\text{व्या}} = \text{सम्बन्ध} = \text{सं} = \frac{२२}{७} = ३ + \frac{१}{७}$ अत्राऽस्य वर्गः सं = $\left(३ + \frac{१}{७}\right)^२$

= १० स्वल्पान्तरात् $\therefore \frac{\text{परिधि}^२}{\text{व्या}^२} = १० \therefore \text{परिधि}^२ = १० \times \text{व्या}^२$ पक्षौ १० भक्तौ

तदा $\frac{\text{परिधि}^२}{१०} = \text{व्या}^२$, मूलेन $\sqrt{\frac{\text{परिधि}^२}{१०}} = \text{व्यासः}$, परन्तु $\left(३ + \frac{१}{७}\right)^२$

< १० अतः 'तद्वर्गतो दशगुणात्पदं परिधिरि' तिसूर्यसिद्धान्तोक्तपरिध्यानयने
नव्याः "तद्वर्गतोऽदशगुणात् पदं परिधिः" न दशेत्पदश किञ्चिन्न्यूना दश तैर्गुणात्
पदं परिधिरेवं कथयन्ति दशगुणक एव समीचीन इति कमलाकरेण सौरवासनायां
सिद्धान्ततत्त्वविवेके च सर्वं युक्ति शून्यं प्रलपितं रङ्गनाथेन स्वगूढार्थप्रकाशे दश-
गुणकः स्थूल उक्तः । एवं सौरभाष्ये नृसिंहेनापि व्यासः किञ्चिदधिकत्रिभिर्गुणितः

परिधिर्भवति, तत्र किञ्चिदधिकत्रयाणां वर्गो दशमितः कृतस्तेन व्यासवर्गो दशभिर्गुणितस्तन्मूलं स्थूलः परिधिरेव भवितुमर्हति, दशग्रहणाद् दोषावहमेव व्याख्यात-मतो मन्त्रव्यानां व्याख्यानमेव समीचीनमिति सूर्यसिद्धान्तस्य सुधावर्षिणीटीकायां म.म. पण्डित सुधाकरद्विवेदिनः कथयन्ति । स्थूलपरिधितः साधितं व्यासार्धं स्थूलमेव भवेत् । वस्तुतो दश भक्तस्य वृत्तपरिधिवर्गस्य मूलं सूक्ष्मो व्यासो न भवति, अयं साधितो व्यासः स्थूलः, ज्यादीनामानयनोपयुक्तो नहि तत एवाग्रे कथयतीति ॥१५॥

अब परिधि से व्यास के आनयन को कहते हैं ।

हि. भा.—चक्रकला वर्ग को दश से भाग देने से जो लब्ध हो उसका मूल चक्र कला परिधि का व्यास होता है उसका आधा व्यासार्ध है । उस व्यासार्ध को ग्रह कक्षा योजन से गुणा कर चक्रकला से भाग देने से ग्रह योजन कर्ण प्रमाण होता है । यह साधित व्यासार्ध योजन कर्ण प्रमाण के लिये उपयुक्त है ।

उपपत्ति ।

‘व्यासे भनन्दाग्निहते विभक्ते खवाणसूर्यः’ इत्यादि भास्करोक्तपरिध्यानयन से वृत्त-

$$\text{परिधि} = \frac{३६२७ \times \text{व्या}}{१२५०} \text{ यहां इसका विततरूप करने से आसन्न मान } \frac{२२}{७}, \frac{३५५}{११३}$$

$$\frac{३६२७}{१२५०} \text{ आते हैं, व्यास और परिधि का सम्बन्ध} = \frac{२२}{७}, \frac{३५५}{११३}, \frac{३६२७}{१२५०} \text{ व्या} =$$

$$\text{व्यास, परिधि} = ५, \text{ व्यास और परिधि का सम्बन्ध} = \text{सं व्या} \times ५ = \frac{\text{व्या} \times ३६२७}{१२५०}$$

$$= \text{भास्करोक्त सूक्ष्म परिधि, तथा } \frac{२२ \times \text{व्या}}{७} = \text{स्थूलपरिधि, परन्तु } \frac{३५५ \times \text{व्या}}{११३} \text{ यह}$$

भास्करोक्त सूक्ष्म परिधि से सूक्ष्मतर परिधि है, जिसको भास्कराचार्य ने नहीं कहा है । इस के सम्बन्ध में “व्यासे पञ्चशराग्नि क्षुण्णो दहनेशभाजिते परिधिः । आचार्योक्तात्सूक्ष्मा त्परिधेरपि भवति सूक्ष्मतरः” यह संशोधक (बापूदेव शास्त्री जी) कहते हैं । $\frac{\text{परिधि}}{\text{व्यास}} = \text{सं}^१$

$$= \text{सं}^१ \text{ इसका वर्ग} = \left(३ + \frac{१}{७} \right)^२ = १० \text{ स्वल्पान्तर से, अतः } \frac{\text{प}^१}{\text{व्या}^१} = १० \therefore \text{प}^१$$

$$= \text{आधार दोनों पक्षों को दश से भाग देने से } \frac{\text{प}^१}{१०} = \text{व्या, मूल लेने से } \sqrt{\frac{\text{प}^१}{१०}} =$$

व्या, परन्तु $\left(३ + \frac{१}{७} \right)^२ > १०$ अतः ‘तद्वर्गतोदशगुणात्पदं परिधिः’ इस सूर्यसिद्धान्तोक्त परिध्यानयन में नवीन लोग ‘तद्वर्गतोदशगुणात् पदं परिधिः’ नहीं जो दश वह अदश हुआ

अर्थात् किञ्चिन्मूल दश से परिधि को गुणा कर मूल लेने से व्यास होता है इस तरह कहते हैं । दश गुणक ही ठीक है यह बात कमलाकर ने 'सौरवासना में' और सिद्धान्त तत्त्व विवेक में सब युक्ति शून्य कही है । रङ्गनाथ ने अपनी गूढार्थ प्रकाश टीका में दश गुणक को स्थूल कहा है । एवं सौर भाष्य में नृसिंह ने भी व्यास को तीन से कुछ अधिक गुणक से गुणा करने से परिधि मान बताया है, वहाँ कुछ अधिक तीन का वर्ग दश लिया है । अतः व्यास वर्ग को दस से गुणाकर मूल लेने से स्थूल परिधिमान हो सकता है दश ग्रहण से दोषावह ही व्याख्या की गई है इसलिये हम नवीनों के व्याख्यान ही समीचीन हैं ये बातें सूर्यसिद्धान्त की सुधार्वाषिणी टीका में म.म. पण्डित सुधाकर द्विवेदीजी कहते हैं । स्थूल परिधि से साधित व्यासार्ध स्थूल ही है । वस्तुतः वृत्तपरिधि वर्ग को दस से भाग देकर मूल लेने से सूक्ष्म व्यास नहीं होता है, यह साधित व्यास स्थूल है, ज्या आदियों के साधन के लिये उपयुक्त नहीं है इसलिये आगे कहते हैं इति ॥१५॥

इदानीं तदेव प्रतिपादयति ।

भगणकला व्यासार्धं भवति कलाभिर्यतो न सविकलं हि ।

ज्यार्धानि न स्फुटानि च ततः कृतं व्यासदलमन्यत् ॥१६॥

सु. भा.—यतो भगणकलाव्यासार्धं पूर्वप्रकारेण सकलाभिः सावयवाभिः कलाभिरपि स्फुटं न भवति ततस्तस्माद्व्यासार्धाज्ज्यार्धानि च न स्फुटानि भवन्ति, तस्माज्ज्यार्धाधने स्फुटार्थं मया चक्रकलापरिधिव्यासार्धमन्यत् कृतमित्याचार्योक्तिर्गोलयुक्तियुक्ताऽतिसमीचीनेति सिद्धान्तविदां स्फुटमिति । चतुर्वेदाचार्य-सम्मतः पाठः 'सविकलम्'—इति । सविकलं सशेषमित्यर्थः ॥१६॥

इति सामान्यगोल प्रकरणम् ।

वि. भा.—हि (यतः) भगणकलाव्यासार्धं पूर्वप्रकारेण सावयवाभिः कलाभिरपि स्फुटं न भवति, ततः (तस्मात्) ज्यार्धानि स्फुटानि न भवन्ति, अस्मात् मया स्फुटार्थं चक्रकलापरिधि व्यासार्धं अन्यत् कृतमित्याचार्योक्तिर्गोलयुक्तियुक्ता । सविकलं (सशेषम्) इति ॥१६॥

इति सामान्यगोल प्रकरणम्

अब उसी को कहते हैं ।

हि. भा.—जिस हेतु से सावयव कलाओं से भी भगण कला व्यासार्ध स्फुट नहीं होता है, इससे ज्यार्ध भी स्फुट नहीं होते हैं, इस कारण से मैंने स्फुटार्थं चक्रकला परिधि व्यासार्ध अन्य किया है यह आचार्य की उक्ति गोलयुक्ति से युत है इति ॥१६॥

इति सामान्य गोल प्रकरण समाप्त हुआ ।

अथ ज्याप्रकरणं प्रारभ्यते

तत्र प्रथमं ज्याखण्डानयनमाह ।

राश्यष्टांशेष्वङ्कान् पदसन्धिभ्यः क्रमोत्क्रमात् कृत्वा ।

णोक्तं श्रीपतिना । भास्करोऽप्यमुमेवाशयं किञ्चिद्विशदीकृत्य इष्टाङ्गुल व्यास
दलेन वृत्तं कार्यं दिगङ्क भलवाङ्कितं च । ज्यासंख्ययाप्ता नवतेर्लवा ये तदाद्यजीवा
धनुरेतदेव ॥ द्वित्र्यादिनिघ्नं तदनन्तराणां चापे तु दत्वोभयतो दिगङ्कात् । ज्ञेयं
तदग्रद्वयवद्धरज्जोरर्धं ज्याकार्धं निखिलानि चैवम् ॥ ज्याचापमध्ये खलुवाणरूपा
स्यादुत्क्रमज्याऽत्र विलोमखण्डैः ॥” एवमाह पूर्वं पठिताः क्रमज्या उत्क्रमज्याश्च
कथमानीयन्ते इत्येतदर्थमियमुपपत्तिरेव ज्यासाधनस्य । त्रिज्यादि कल्पनयाऽनेन
विधिना ज्यार्धानां प्रमाणाभ्यानेतुं शक्यन्त एवेति ॥१७॥१८॥

अब ज्या प्रकरण प्रारम्भ किया जाता है ।

उसमें पहले ज्याखण्डानयन कहते हैं ।

हि. भा.—इष्ट त्रिज्या से वृत्त बना कर लम्बरूप दोनों व्यासों से वृत्त को चार भाग
करने से चार पद होते हैं । उसमें किसी पद सन्धि से अठारह सौ कलाओं के अष्टांश २२५
दो सौ पचीस कला तुल्य चाप को क्रम से और विलोम से अर्थात् दोनों तरफ से देकर दोनों
के अग्र में सूत्र को बाँध देना चाहिए । एवं द्विगुणित दो सौ पचीस कला को पद सन्धि से
दोनों तरफ से देकर दोनों के अग्र में सूत्र को बाँध देना चाहिए । इस तरह दो दो के अग्र में
बाँधे हुए सूत्र पूर्णज्याएं होती हैं । उनके आधे चौबीस ज्यार्ध (अर्धज्या) होते हैं । ज्यार्धों
के अन्तर ज्याखण्ड होते हैं । उन्हीं को अन्त्य से व्यस्त (उल्टा) स्थापन करना । तब
क्रमज्याखण्ड अथवा शरखण्ड होते हैं । उन दोनों खण्डों (क्रमज्या खण्ड और उत्क्रमज्याखण्ड)
से चाप साधन करना चाहिए ॥

उपपत्ति ।

सिद्धान्तशेखर में ‘राश्यष्ट भागेषु विधाय लाञ्छनान् सन्धेः पदानां’ इत्यादि संस्कृतो-
पपत्ति में लिखित श्लोकों से श्रीपति ने आचार्योक्त ही को सर्वथा श्लोकान्तर से कहा है ।
भास्कराचार्य भी इसी आशय को कुछ विशद कर ‘इष्टाङ्गुलव्यासदलेन वृत्तं कार्यं दिगङ्क
भलवाङ्कितं च’ इत्यादि श्लोकों से इस तरह कहते हैं । क्रमज्याएं और उत्क्रमज्याएं कैसे
लायी जाती हैं इसके लिये ज्यासाधन की यही उपपत्ति है त्रिज्यादि कल्पना कर इसी विधि
से ज्यार्धों के प्रमाण ला सकते हैं इति ॥१७—१८॥

इदानीं गणितेन ज्यार्धानियनमाह ।

एकद्वित्रिगुणाया व्यासार्धकृतेः पृथक् चतुर्थेभ्यः ।

मूलान्यष्टद्वादशषोडशखण्डान्यतोऽन्यानि ॥१६॥

सु. भा.—व्यासार्धकृतेस्त्रिज्याकृतेः किंभूतायाः । एकगुणायास्तथा द्विगुणायास्तथा त्रिगुणायाः पृथक् चतुर्थेभ्यश्चतुर्भगिभ्यो मूलानि क्रमेण अष्ट द्वादश षोडश ज्याखण्डानि ज्यार्धानि भवन्ति । अत एभ्यो ज्यार्धेभ्योऽन्यानि वक्ष्यमाणविधिना साध्यानि । अत्रैतदुक्तं भवति । त्रिज्यावर्गं एकगुणाश्चतुर्भक्तस्तन्मूलं राशिज्याऽष्टमी ज्या । त्रिज्यावर्गो द्विगुणाश्चतुर्भक्तस्तन्मूलं शरवेदभागज्या द्वादशी ज्या । त्रिज्यावर्गस्त्रिगुणाश्चतुर्भक्तस्तन्मूलं षष्टिभागज्या षोडशी ज्या ।

अत्रोपपत्तिः । भास्करज्योत्पत्या स्फुटा । भास्करेणापि तथैव पटितत्वादिति ॥१६॥

वि. भा.—एकगुणितत्रिज्यावर्गस्य, तथा द्विगुणितत्रिज्यावर्गस्य, तथा त्रिगुणितत्रिज्यावर्गस्य पृथक् चतुर्विभक्तस्य मूलानि क्रमेण अष्ट-द्वादश-षोडश ज्यार्धानि भवन्ति, अत एभ्यो ज्यार्धेभ्योऽन्यानि ज्यार्धानि वक्ष्यमाणविधिना साध्यानीति ।

अत्रोपपत्तिः ।

$$\begin{aligned} \text{के} &= \text{वृत्तकेन्द्रम्} । \text{नपचापम्} = ६०^{\circ}, \text{वनचापम्} = ३०^{\circ}, \\ \text{नर} &= \text{ज्या } ३०, \text{पश} = \text{ज्या } ६०, \text{पन} = \text{पूर्वाज्या } (६०^{\circ}) । \\ \text{नश} &= \text{ज्या } ६०, \text{ज्या } ६० = \text{उत्क्रमज्या तदा केनर,} \\ \text{पनश त्रिभुजयोः साजात्यादनुपातेन} &= \frac{\text{नश} \times \text{केर}}{\text{पश}} \\ &= \text{नर} = \frac{\text{ज्या } ६० \times \text{ज्या } ६०}{\text{ज्या } ६०} = \text{ज्या } ३० = \end{aligned}$$

ज्या ६० = त्रि—ज्या ३० समयोजनेन त्रि = ज्या ३० + ज्या ३० = २ ज्या ३०
पक्षौ द्वाभ्यां भक्तौ तदा $\frac{\text{त्रि}}{२} = \text{ज्या } ३० = \text{अष्टमं ज्यार्धम्} = \text{अष्टमी ज्या} ।$ अथ

$$\begin{aligned} \text{त्रि}^2 - \text{ज्या}^2 ३० &= \text{कोज्या}^2 ३० = \text{ज्या}^2 ६० = \text{त्रि}^2 - \left(\frac{\text{त्रि}}{२}\right)^2 = \text{त्रि}^2 - \frac{\text{त्रि}^2}{४} \\ &= \frac{४ \text{ त्रि}^2 - \text{त्रि}^2}{४} = \frac{३ \text{ त्रि}^2}{४} \text{ मूल ग्रहणेन ज्या } ६० = \sqrt{\frac{३ \text{ त्रि}^2}{४}} = \text{षोडशी} \end{aligned}$$

ज्या । त्रि=त्रिज्या । केम=केग=त्रि । मग=पूर्णज्या (९०), मय=गय=ज्या ४५, ल=मगचापार्धविन्दुः । केम^२+केग^२=पूज्या^२ (९०)=त्रि^२+त्रि^२=२ त्रि^२, पक्षौ चतुर्भिर्भक्तौ तदा $\frac{\text{पूज्या}^2 (९०)}{४} = \frac{२ \text{ त्रि}^2}{४} = \text{ज्या}^2 ४५$ मूलेन $\sqrt{\frac{२ \text{ त्रि}^2}{४}}$ =ज्या ४५=द्वादशी ज्या, एतेनैकगुणितत्रिज्यावर्गश्चतुर्भक्तस्तन्मूलमष्टमी ज्या =राशिज्या=त्रिशदंशज्या, त्रिज्यावर्गो द्विगुणश्चतुर्भक्तस्तन्मूलं पञ्चचत्वारिंशदंशज्या=द्वादशी ज्या त्रिज्यावर्गस्त्रिगुणश्चतुर्भक्तस्तन्मूलं षष्टिभागज्या=षोडशी-ज्या, आचार्योक्तमुपपन्नम् । सिद्धान्तशेखरे “शशियमदहनघनात् व्यासखण्डस्य वर्गात् पृथगुदधिविभक्तात् त्रीणि मूलानि यानि । वसुरविनृपसंख्याभाञ्जि जीवादलानि क्रमश इह भवेयुर्नूनमन्यानि तेभ्यः ।” इत्यनेन श्रीपतिनाऽऽचार्योक्तमेव श्लोकान्तरेणोक्तम् । भास्करेणापि “त्रिज्यार्धं राशिज्या तत्कोटिज्या च षष्टि-भागानाम् । त्रिज्यावर्गार्धपदं शरवेदांशज्यका भवति ।” इत्युत्तथा तदेवोक्तमिति ॥१६॥

अब गणित से ज्यार्धानयन को कहते हैं ।

हि. मा.—एक गुणित त्रिज्यावर्ग को चार से भाग देकर मूल लेने से अष्टमज्यार्ध = अष्टमीज्या=तीस अंश की ज्या होती है, तथा द्विगुणित त्रिज्यावर्ग को चार से भाग देकर मूल लेने से पैंतालीस अंश की ज्या=द्वादशीज्या होती है, एवं त्रिज्यावर्ग को तीन से गुणाकर चार से भाग देकर मूल लेने से साठ अंश की ज्या=षोडशी ज्या होती है इति ।

उपपत्ति ।

वहां संस्कृतोपपत्ति में लिखित (क) क्षेत्र को देखिये । के=वृत्तकेन्द्र । मपचाप =६०° । वनचाप=३०°, नर=ज्या ३०, पश=ज्या ६०, वन=पूर्णज्या (६०) । नश =ज्याउ ६० । ज्याउ=उत्क्रमज्या, तब केनर, पनश दोनों त्रिभुजों के सजातीयत्व से अनुपात करते हैं $\frac{\text{नश} \times \text{केर}}{\text{पश}} = \frac{\text{नर}}{\text{ज्याउ ६०} \times \text{ज्या ६०}} = \text{ज्या ३०} = \text{ज्याउ ६०}$

६०=त्रि—ज्या ३० दोनों पक्षों में ज्या ३० जोड़ने से त्रि=ज्या ३०+ज्या ३०=२ ज्या ३० दोनों पक्षों को दो से भाग देने से $\frac{\text{त्रि}}{२} = \text{ज्या ३०} = \text{अष्टमीज्या} = \text{राशिज्या}$ । तथा

त्रि^२ — ज्या^२ ३० = कोज्या^२ ३० = ज्या^२ ६० = त्रि^२ — $\left(\frac{\text{त्रि}}{२}\right)^2 = \text{त्रि}^2 - \frac{\text{त्रि}^2}{४}$
 $= \frac{४ \text{ त्रि}^2 - \text{त्रि}^2}{४} = \frac{३ \text{ त्रि}^2}{४}$ मूल लेने से ज्या ६० = $\sqrt{\frac{३ \text{ त्रि}^2}{४}} = \text{षोडशीज्या}$ ।

तथा केम=केग=त्रि । मग चाप पूर्णज्या=पूज्या (९०) । मय=गय=ज्या ४५ । ल=

मगचापार्धं बिन्दु केम^३+केग^३=पूज्या^३ (६०)=२ त्रि^३ दोनों पक्षों में चार से भाग देने से

$$\frac{पूज्या^३ (६०)}{४} = ज्या^३ ४५ = \frac{२ त्रि^३}{४} मूल लेने से \sqrt{\frac{२ त्रि^३}{४}} = ज्या ४५ = द्वाद-$$

शी ज्या, इससे आचार्योक्त उपपन्न हुआ। सिद्धान्तशेखर में 'शशियमदहनघ्नात्' इत्यादि संस्कृतोपपत्ति में लिखित श्लोक से श्रीपति ने आचार्योक्त ही को श्लोकान्तर से कहा है। भास्कराचार्य ने भी 'त्रिज्यार्धं राशिज्या' इत्यादि से वही कहा है इति ॥१६॥

इत्ययमेवार्थः स्फुटोत्तथा सम्यगुक्त इति ॥२०-२१॥

अब अर्धांशज्यानयन को कहते हैं ।

हि. भा.—एक ही चाप की समक्रमज्या और उत्क्रमज्या के वर्ग योग के चतुर्थांश (अनष्ट) को त्रिज्या वर्ग में से घटाकर उनका (अनष्ट और शेष) मूल लेना चाहिये उन में

प्रथम मूल उस चापार्ध की ज्या होती है, और द्वितीय मूल चौबीस में से उसको घटाने से उस अर्धचाप की कोटिज्या होती है। इस तरह ज्योत्पत्ति में पुनः पुनः समज्यार्ध अष्टम से और बारहम से कर्म करने से ४।२।१।१०।११।५।७।६।३।६ आदि अर्धांशज्या होते हैं। जैसे अष्टमज्या की अर्धांशज्या और उसकी कोटिज्या से ४।२०, २।२२, १।३, १०।१४, ५।६, ७।१७, ११।१३ बारह बीज्या से ६।१८, ३।२१, ६।१५ बारहवीं सोलहवीं चौबीसवीं (त्रिज्या) ये तीनों ज्या विदित ही हैं इन से इष्ट व्यासार्ध में उनके अर्धज्यानयन से चौबीस ज्याएँ सिद्ध होती हैं इति।

उपपत्ति।

यहां संस्कृतोपपत्ति में लिखित (क) क्षेत्र को देखिये। के = वृत्तकेन्द्र। रय = इष्ट-चाप, यन = चापज्या। रन = चाप की उत्क्रमज्या। यर = चापपूर्णज्या। तब $यन^२ + रन^२ = यर^२ = चापपूर्णज्या^२$, दोनों पक्षों को चार से भाग देने से $\frac{यन^२ + रन^२}{४}$

$$= \frac{चापज्या^२ + चापोत्क्रमज्या^२}{४} = \frac{चापपूर्णज्या^२}{४} = चापार्धज्या^२ = अनष्ट, त्रि^२ -$$

$$\frac{चापपूर्णज्या^२}{४} = चापार्धकोटिज्या^२, \text{ दोनों का मूल लेने से } \sqrt{\frac{चापज्या^२ + चापोत्क्रमज्या^२}{४}}$$

$$= चापार्धज्या \text{ तथा } \sqrt{त्रि^२ - \frac{चापपूर्णज्या^२}{४}} = चापार्ध कोटिज्या। \text{ इससे आचार्योक्त सूत्र}$$

उपपन्न हुआ। सिद्धान्तशेखर में 'उत्क्रमक्रमसमानसमज्याखण्डवर्गयुतिवेदविभागम्' इत्यादि संस्कृतोपपत्ति में लिखित श्रीपत्युक्त श्लोकों का आदर्श आचार्योक्त ही है, भास्कराचार्य ने भी "इष्टा त्रिज्या सा श्रुतिर्दोभुजज्या" इत्यादि संस्कृतोपपत्ति में लिखित श्लोकों से आचार्योक्त बात को ही स्पष्टतया कहा है इति ॥२०-२१॥

इदानीं विशेषमाह।

एवं जीवाखण्डाल्पानि बहूनि वाऽऽद्यखण्डानि।

ज्यार्धानि वृत्तपरिधेः षष्ठचतुर्थभागानाम् ॥२२॥

सु. भा.—एवं तदर्धज्यानयनेन गणकेनाल्पानि वा बहूनि यथेप्सितानि जीवाखण्डानि साध्यानि। आचार्येण च स्वग्रन्थे चतुर्विंशतिज्यार्धानि साधितानि यदीप्सितानि १६ ज्यार्धानि स्युस्तदा पुनस्तदर्धभागज्याविधिः कार्यः। अर्धभाग-ज्याविधौ सर्वत्र त्रिज्यार्धं त्रिज्यावर्गार्धपदं त्रिगुणत्रिज्यावर्गचतुर्थांशपदं क्रमेण वृत्तपरिधेः षष्ठचतुर्थत्रिभागानां ज्यार्धानि चाद्यखण्डानि व्यक्तानि। परिधिषष्ठ-भागस्य षष्ठिभागानां या ज्या पूर्णज्या तस्या अर्धं त्रिज्यार्धम् चतुर्थभागस्य नवते-

ज्यार्धं त्रिज्यावर्गार्धपदम् । त्रिभागस्य विंशत्यधिकशतभागानां ज्यार्धं त्रिगुणत्रि-
ज्यावर्गचतुर्थांशपदम् । इति ज्यार्धान्याद्यानि विज्ञाय ततस्तदर्धभागज्यानयन
विधानेन वृत्तपादे यथेप्सितानि ज्याखण्डानि साध्यानीति सर्वं स्फुटम् ।

वि. भा.—एवं पूर्वोक्तार्धज्यानयनविधिनाऽल्पानि बहूनि वेप्सितानि
ज्याखण्डानि ज्योतिर्विद्विः साध्यानि आचार्येण चतुर्विंशतिज्यार्धानि साधितानि
यदि ९६ संख्यकज्यार्धानीप्सितानि भवेयुस्तदा पुनस्तदर्धार्धज्याविधिः कार्यः ।

धेस्तृतीयांशस्य विंशत्यधिक शतमितांशानां ज्यार्धं = ज्या ६० = $\sqrt{\frac{३ \text{ त्रि}^३}{४}}$

इति ज्यार्धान्याद्यानि ज्ञात्वा ततस्तदर्धार्धज्यानयनविधिना वृत्तपादे (नवत्यंश-
तुल्ये) यथेप्सिताणि ज्याखण्डानि साध्यानीति ॥२२॥

अब विशेष कहते हैं ।

हि. भा.—एवं पूर्व कथित अर्धज्यानयन से अल्प वा बहुत यथेच्छ ज्याखण्ड साधन
करना चाहिये । आचार्य अपने ग्रन्थ में चौबीस ज्यार्ध साधन किया है, यदि ९६ संख्यक
ज्यार्ध अभीष्ट हो तो फिर अर्धार्धज्या विधि करनी चाहिये । अर्धार्धज्या विधि में सब जगह
त्रिज्या का आधा, त्रिज्यावर्ग के आधा का मूल, त्रिगुणित त्रिज्यावर्ग के चतुर्थांश का मूल
क्रम से वृत्तपरिधि का षष्ठंश, चतुर्थांश और तृतीयांश का ज्यार्ध आद्यखण्ड व्यक्त है वृत्तपरिधि

का षष्ठंश $\frac{३६०}{६} = ६०$ की पूर्णज्या का आधा त्रिज्यार्ध, परिधि का चतुर्थांश $\frac{३६०}{४}$

= ९० की पूर्णज्या का आधा पैंतालीस अंश की ज्या = $\sqrt{\frac{\text{त्रि}^३}{२}}$, परिधि का तृतीयांश

= $\frac{३६०}{३} = १२०$ इसका ज्यार्ध (पूर्णज्यार्ध) = ज्या ६० = $\sqrt{\frac{३ \text{ त्रि}^३}{४}}$, इन ज्यार्धों

को जान कर अर्धार्धज्यानयन विधि से वृत्तपाद (९०°) में यथेप्सित ज्याखण्डों का साधन
करना चाहिये इति ॥२२॥

इदानीं प्रकारान्तरेणार्धार्धज्यानयनमाह ।

इति ज्या प्रकरणम्

अब प्रकारान्तर से अर्धांशज्यानयन को कहते हैं

हि. भा.—यत्संख्यक ज्या की अर्धज्या लाते हैं तत्संख्यक उत्क्रमज्या से व्यास को गुणा कर चार से भाग देने से जो लब्ध हो उससे पूर्ववत् ज्यार्धानयन करना चाहिये । इस आनयन प्रकार से अन्य आनयन प्रकार छोटा नहीं है अर्थात् इस प्रकार से लाभ ही से ज्यार्ध सिद्ध होता है ।

उपपत्ति ।

यहां संस्कृतोपपत्ति में लिखित (क) क्षेत्र को देखिये । के=वृत्तकेन्द्र । रयचाप =अ, इसी चाप का अर्धांशज्यानयन करना है । यश=ज्याअ, रश=उज्याअ, रय=अचाप की पूर्णज्या, केश=चापकोटिज्या=कोज्याअ केर=त्रिज्या=त्रि । तब केर=केश=रय=त्रि=कोज्याअ=उज्याअ, वर्ग करने से त्रि^२—२ त्रि. कोज्याअ+कोज्या^२अ=उज्या^२अ परन्तु यश^२+रश^२=अचाप पूर्णज्या^२=ज्या^२अ+उज्या^२अ=त्रि^२—२ त्रि कोज्याअ+कोज्या^२अ+ज्या^२अ=त्रि^२—२ त्रि. कोज्याअ+त्रि^२=२ त्रि^२—२ त्रि. कोज्याअ=अचापपूज्या^२=२ त्रि (त्रि—कोज्याअ)=२ त्रि. उज्याअ=व्या × उज्याअ दोनों पक्षों को चार से भाग देने से $\frac{\text{व्यास—उज्याअ}}{४} = \frac{\text{अचापपूज्या}^२}{४} = \text{ज्या}^२ \frac{१}{४}$ अ इससे 'तुल्य क्रमोत्क्रमज्या सम-

खण्डकवर्गयुतिचतुर्भागम्” इस पूर्वोक्त प्रथम प्रकार से अर्धांशज्या और उसकी कोटिज्या से ज्यार्ध होता है इससे आचार्योक्त उपपन्न हुआ । २ त्रि (त्रि—कोज्याअ)=अचापपूज्या^२=२ त्रि. उज्याअ दोनों पक्षों को चार से भाग देने से $\frac{२ त्रि. उज्याअ}{४} = \frac{त्रि. उज्याअ}{२}$

$= \frac{\text{अचापपूज्या}^२}{४} = \text{ज्या}^२ \frac{१}{४}$ अ, मूल लेने से $\sqrt{\frac{त्रि उज्याअ}{२}} = \text{ज्या} \frac{१}{२}$ अ, इस से

‘त्रिज्योत्क्रमज्या निहतेर्दलस्यमूलम्’ इत्यादि भास्करोक्त उपपन्न होता है । सिद्धान्तशेखर में ‘उत्क्रमविषमखण्डविनिष्णात्’ इत्यादि श्रीपत्युक्त आचार्योक्त की ही पुनरुक्ति है । भास्कराचार्य ने भी ‘त्रिज्योत्क्रमज्या निहतेर्दलस्य’ इत्यादि इससे उसी को कह कर वासनाभाष्य में अच्छी तरह कहा है इति ॥२३॥

इति ज्या प्रकरण समाप्त हुआ

अथ स्फुटगति वासना ।

तत्रादौ स्पष्टीकरणे छेद्यकमाह ।

कक्षामण्डलमध्यं भूमध्ये मध्यमः स्वकक्षायाम् ॥

अनुलोमं मन्दोच्चात् प्रतिलोमं भ्रमति शीघ्रोच्चात् ॥ २४ ॥

सु. भा.—भूमध्ये कक्षामण्डलस्य मध्यं केन्द्रमस्ति । मध्यमो ग्रहः स्वकक्षायां प्रतिवृत्ते मन्दोच्चादनुलोमं शीघ्रोच्चाच्च प्रतिलोमं भ्रमति । ‘भूमेर्मध्ये खलु भूवल्यस्यापि मध्यम्’—इत्यादिना तथा ‘मन्दोच्चितोऽग्रे प्रतिमण्डले प्राग्ग्रहोऽनुलोमं निजकेन्द्रगत्या’—इत्यादिना भास्करविधिनाऽपीयमेव स्थितिः ॥ २४ ॥

वि. भा.—भूमध्ये (भूकेन्द्रे) कक्षावृत्तस्य केन्द्रमस्ति, मध्यमो ग्रहः स्वकक्षायां (प्रतिवृत्ते) मन्दोच्चादनुलोमं शीघ्रोच्चाच्च विलोमं भ्रमति । मन्दोच्चादनुलोमं राश्यादिगणनयाऽग्रतः शीघ्रोच्चाच्च विलोमत इति राश्यादिगणनया पृष्ठतो यथोत्तरं भ्रमति । ग्रहगत्यपेक्षया शीघ्रोच्चगतिर्महती भवतीति तत्र यदि शीघ्रोच्चं स्थिरं मन्यते तदा ग्रहो विपरीतगमन इव लक्ष्यते । मन्दोच्चस्य चालक्ष्याल्पगतित्वात् सदैव ग्रहो राश्यादिगणनया अनुगामी भवतीति । सिद्धान्त शेखरे “मध्यः स्वकक्षा परिधौ स्फुटस्तु स्वकेन्द्रवृत्ते भ्रमति द्युचारी । स्वमन्दतुङ्गादनुलोमगत्या विलोमतो याति च शीघ्रतुङ्गात्” श्रीपतिनैवं कथितम् । अत्र लल्लः—“अनुलोमं निजमन्दात् प्रतिलोमं गच्छति स्वशीघ्रोच्चात् । कक्षावृत्ते मध्यः स्वकेन्द्रवृत्ते ग्रहाः स्पष्टाः ॥ ” स्वकेन्द्रवृत्ते (स्वीये प्रतिवृत्ते) । भास्करश्च “मन्दोच्चतोऽग्रे प्रतिमण्डले प्राक् ग्रहोऽनुलोमं निजकेन्द्रगत्या । शीघ्राद्विलोमं भ्रमतीव भाति विलम्बितः पृष्ठत एव यस्मात्” एवमेव ग्रहभ्रमणव्यवस्थां प्रतिपादयतीति ॥ २४ ॥

अब स्फुटगति वासना प्रारम्भ की जाती है ।

उसमें पहले स्पष्टीकरण में छेद्यक को कहते हैं ।

हि. भा.—भूकेन्द्र कक्षावृत्त का केन्द्र है । मध्यमग्रह अपनी कक्षा में मन्दोच्च से अनुलोम (क्रमिक) और शीघ्रोच्च से विलोम (उल्टा) भ्रमण करते हैं मन्दोच्च से अनुलोम अर्थात् राश्यादि गणना से आगे और शीघ्रोच्च से विलोम अर्थात् राश्यादि गणना से पीछे भ्रमण करते हैं । ग्रहगति की अपेक्षा शीघ्रोच्चगति अधिक है यदि शीघ्रोच्च को स्थिर माना जाय तो ग्रह विपरीत चलते हुए लक्षित होते हैं । मन्दोच्च की अत्यन्त अल्प गति के कारण राश्यादि गणना से ग्रह सर्वदा अनुगामी होते हैं । सिद्धान्त शेखर में ‘मध्यः स्वकक्षा परिधौ’

इत्यादि से श्रीपति ने आचार्योक्त के अनुसार ही कहा है । 'अनुलोमं निजमन्दात् प्रतिलोमं' इत्यादि विज्ञान भाष्य में लिखित श्लोक से लल्लाचार्य तथा 'मन्दोच्चतोप्रे प्रतिमण्डले प्राक्' इत्यादि विज्ञान भाष्य में लिखित श्लोक से भास्कराचार्य ने भी इसी तरह ग्रहभ्रमण व्यवस्था कही है इति ॥ २४ ॥

इदानीं नीचोच्चवृत्तभङ्गिमाह ।

नीचोच्चवृत्तमध्यं मध्ये तद् भ्रमति मध्यगः स्वोच्चात् ।

तत्परिधौ प्रतिलोमं मन्दोच्चाद् भ्रमति शीघ्रोच्चात् ॥ २५ ॥

अनुलोमं मध्यसमं भूस्थः पश्यति यतो न कक्षायाम् ।

अब नीचोच्चवृत्त भङ्गी को कहते हैं ।

हि. भा.—कक्षावृत्त में जहाँ मध्यमग्रह चिन्ह है वही नीचोच्चवृत्त का केन्द्र है । नीचोच्चवृत्त परिधि में मन्दोच्च से विलोम और शीघ्रोच्च से अनुलोम-ग्रह भ्रमण करते हैं । जिस प्रकार भूकेन्द्र स्थित द्रष्टा (दर्शक) कक्षा में मध्यम ग्रह के बराबर स्पष्ट ग्रह को नहीं देखते हैं उसी प्रकार स्पष्ट ग्रह और मध्यम ग्रह का अन्तर (फल) मध्यम ग्रह में ऋण वा घन किया जाता है तब स्पष्ट ग्रह होते हैं । अर्थात् समान भूमि में इष्ट बिन्दु को केन्द्र मान कर इष्ट त्रिज्या व्यासार्ध से कक्षावृत्त बनाकर उसको भगणाङ्कित कर मेषादि से उच्च और ग्रह को देखकर चिह्नित करना चाहिये । भूकेन्द्र से उच्चोपरि गत रेखा उच्चरेखा कहलाती है । भूकेन्द्र से उच्चरेखा के ऊपर लम्ब रेखा (तिर्यक् रेखा) करनी चाहिये । भूकेन्द्र से उच्च की ओर उच्चरेखा में अन्त्य फलज्या तुल्य देकर दानाग्र बिन्दु के द्वारा उसी त्रिज्या व्यासार्ध से प्रतिवृत्त बनाना चाहिये । इस प्रतिवृत्त में उच्चरेखा ऊर्ध्व भाग में जहाँ लगती है वहाँ प्रतिवृत्त में उच्च होता है । वहाँ से प्रतिवृत्त में उच्च भोग विलोम देना चाहिये । वहाँ से ग्रह को अनुलोम देकर चिह्न कर देना चाहिये । प्रतिवृत्त केन्द्र से उच्च रेखा के ऊपर लम्ब रेखा प्रतिवृत्तीय तिर्यक् रेखा करनी चाहिये । दोनों तिर्यक् रेखाओं का अन्तर सर्वत्र अन्त्यफलज्या तुल्य ही होता है । ग्रह और उच्च का ज्यारूप अन्तर दोर्ज्या (भुजज्या) होती है । ग्रह से प्रतिवृत्तीय तिर्यक् रेखा पर्यन्त कोटिज्या होती है । ग्रह से कक्षा मध्यगतिर्यक् रेखा पर्यन्त स्फुट कोटि है । भूकेन्द्र से प्रतिवृत्तस्थ ग्रह पर्यन्त रेखा कर्ण है । कर्ण रेखा जहाँ कक्षावृत्त में लगती है वही स्पष्ट ग्रह है । कक्षावृत्त में स्फुट ग्रह और मध्यम ग्रह का अन्तर फल है । मध्यम ग्रह से स्फुट ग्रह के आगे रहने से मध्यम ग्रह में उस फल को घन करने से स्फुट ग्रह होते हैं । मध्यम ग्रह से स्फुट ग्रह के पीछे रहने से मध्यम ग्रह में से उस फल को ऋण करने से स्फुट

ग्रह होते हैं ॥ सिद्धान्तशेखर में 'द्रष्टा स्फुटं पश्यति मध्यतुल्यं भान्तस्थिते भार्गते च केन्द्रे' इत्यादि विज्ञान भाष्य में लिखित श्लोकों से श्रीपति ने इसी तरह कहा है। लल्लाचार्य ने पहले आर्यभट्टोक्त स्पष्टी करण क्रिया की उपपत्ति ही कही है। 'मध्यमतुल्यं स्पष्टं भान्तरते भार्गगेऽपि वा केन्द्रे' इत्यादि विज्ञान भाष्य में लिखित श्लोकों से भास्कराचार्य ने भी 'भूमेर्मध्ये खलु भवत्स्यापि मध्यं यतः स्यात्' इत्यादि विज्ञान भाष्य में लिखित श्लोक (एक ही) से पहले प्राचीनोक्त मध्यम ग्रह की स्पष्टता विधायक विधि को कहा है। पश्चात् विशद व्याख्या से प्रतिपादन किया है। ग्रहों के स्पष्टीकरण में छेद्यक आदि की उपपत्ति में प्राचीनाचार्यों ने कक्षावृत्त-प्रतिवृत्तादियों की कल्पना क्यों की इसके सम्बन्ध में कुछ कहते हैं। किसी इष्ट बिन्दु (कल्पित भूकेन्द्र) से इष्ट त्रिज्या व्यासार्ध से कक्षावृत्त संज्ञक वृत्त बनाना वस्तुतः यह वेधवलय (वेधवृत्त) है इस वृत्त के केन्द्र से तत्तत् ग्रह गोलस्थ ग्रह गत सूत्र जहाँ जहाँ इस वृत्त (कक्षावृत्त) में लगते हैं तहाँ तहाँ वे ग्रह परिणत होते हैं। कक्षा वृत्त केन्द्र (भूकेन्द्र) से कक्षावृत्त की ऊर्ध्वाधर व्यास रेखा और केन्द्र से उसके ऊपर लम्बरूप तिर्यक् व्यास रेखा करनी चाहिये। ऊर्ध्वाधर व्यास रेखा में केन्द्र से उच्चाभिमुख वेध विदित ग्रह की अन्त्यफलज्या तुल्य दान देकर दानाग्र बिन्दु से उसी त्रिज्या व्यासार्ध से वृत्त बनाना यह शीघ्र प्रतिवृत्त कहलाता है। यही वृत्त मन्दस्पष्टग्रह भ्रमणवृत्त है। इस वृत्त का भी केन्द्र भूकेन्द्र ही क्यों नहीं होता है इसका ज्ञान प्रति दिन वेधविधि से कर्ण ज्ञान द्वारा होता है। वह बिन्दु भूकेन्द्र से कितने अन्तर पर है जहाँ से प्रति वृत्त की प्रत्येक बिन्दु गत रेखा बराबर होती है वेध से इसको भी समझ कर उसी बिन्दु को प्रति वृत्त के केन्द्र की कल्पना की गयी, कक्षावृत्त और प्रतिवृत्त के केन्द्र से भगोलीय मेषादिगत रेखाद्वय वृत्तद्वय (कक्षावृत्त और प्रतिवृत्त) में जहाँ जहाँ लगता है वहाँ वहाँ वृत्तद्वय में मेषादि बिन्दु होते हैं। भूकेन्द्र से प्रतिवृत्त का जो प्रदेश सब बिन्दुओं से अति दूर है वह उच्च संज्ञक है, उसके राश्यादि जानकर तत्तुल्य ही उच्च कक्षावृत्त में कल्पना कर ग्रहानयन होता है। इससे अन्यथा नहीं होता है। तथा उच्चद्वय के तुल्यत्व में इन दोनों रेखाओं को भगोलीय मेषादि बिन्दु में योग रहने पर भी समानान्तरत्व स्वीकार कर अनन्त दूर में जिस बिन्दु में रेखा द्वय को योग होता है वह रेखाद्वय भी समानान्तर होता है इसको प्राचीनाचार्यों ने स्वीकार किया है। वास्तव भगोल इतनी दूर पर है जहाँ भूकेन्द्र से आरम्भ कर शनि कक्षानिष्ठ किसी बिन्दु से लायी गयी रेखा अनन्त होती है। ग्रह गणित में भूकेन्द्र से शनि कक्षापर्यंत ही भगोलीय बिन्दुगत रेखाद्वय का समानान्तरत्व स्वीकार किया जाता है। इसलिये भगोल का केन्द्र जहाँ तहाँ कल्पना कर सकते हैं। भूकेन्द्र से प्रतिवृत्त का कौन बिन्दु अति दूर है जो उच्च संज्ञक है वृत्तद्वय केन्द्र गत रेखा ही सर्वाधिक होती है, इसलिये यही रेखा प्रतिवृत्त की भी उच्च रेखा होती है, वस्तुतः प्रतिवृत्त ही में उच्च है, अनुपातागत राश्यादि उच्च को कक्षावृत्त में दिया जाता है भूकेन्द्र से तद्गत रेखा ही प्रतिवृत्तीय उच्च रेखा होती है इस विलोम से प्रतिवृत्त में मेषादि ज्ञान होता है। यदि किसी रीति से प्रति वृत्तीय ग्रह ज्ञान हो तो उस स्थान से उच्च रेखा की समानान्तर रेखा कक्षावृत्त में जहाँ

लगती है वहां उसी ग्रह के बराबर ग्रह कक्षा वृत्त में होते हैं, भूकेन्द्र से प्रतिवृत्तस्थ ग्रहगत रेखा कक्षा वृत्त में जहां लगती है वहीं पर वह (प्रतिवृत्तीय ग्रह) दृश्य होते हैं अतः उन दोनों का अन्तर ग्रह का शीघ्र फल है। प्रतिवृत्त में से मेषादि मन्दोच्चराश्यादि देकर उस के अग्र गत प्रतिवृत्त केन्द्र से जो रेखा होगी उसमें मन्दान्त्यफलज्या तुल्य प्रतिवृत्त केन्द्र से दान देकर दानाग्र बिन्दु से त्रिज्या व्यासार्ध से जो वृत्त होता है वह मन्द प्रतिवृत्त है, इसमें भी मेषादिज्ञान विपरीत गणना से होता है। शीघ्र प्रतिवृत्त और मन्द प्रतिवृत्त के केन्द्र से भगोलीय मेषादि गत रेखाद्वय का समानान्तरत्व यहां भी स्वीकार करते हैं। अतः मेषादि से राश्यादि गणना से अनुलोम ही मन्द स्पष्ट ग्रह को देना चाहिये। मन्द प्रतिवृत्तीय मन्द स्पष्टग्रह से उच्च रेखा की समानान्तर रेखा शीघ्र प्रतिवृत्त में जहां पर लगती है वहां मन्द प्रतिवृत्तीय मन्द स्पष्टग्रह के बराबर ही मन्द स्पष्टग्रह होते हैं। शीघ्र प्रतिवृत्त के केन्द्र से मन्द प्रतिवृत्तीय मन्द स्पष्ट ग्रहगत रेखा शीघ्र प्रतिवृत्त में जहां लगती है वहीं पर उस ग्रह को शीघ्र प्रतिवृत्त केन्द्रस्थ द्रष्टा देखता है इसलिये शीघ्र प्रतिवृत्त केन्द्र से मन्द प्रतिवृत्तीय मन्द स्पष्ट ग्रहगत रेखा और उच्च रेखा की समानान्तर रेखा का शीघ्र प्रतिवृत्त में जो अन्तर होता है वह मन्द फल है। मन्द प्रतिवृत्त के केन्द्र से शीघ्र प्रतिवृत्तीय मन्द स्पष्टग्रह गत रेखा मन्द प्रतिवृत्त में जहां लगती है वही बिन्दु मन्द प्रतिवृत्तीय मन्द स्पष्ट ग्रह है। अब मन्द स्पष्टग्रह का निरूपण करते हैं। वेध से पहले स्पष्टग्रह ही का ज्ञान होता है अतः वेध वृत्त में जहां बिम्ब उपलब्ध होता है केन्द्र से तद्गत रेखाग्रह गोल में जहां लगती है वहीं पर वास्तव ग्रहबिम्ब होता है, उसके ऊपर तद्गोलीय कदम्ब प्रोतवृत्त शीघ्र प्रतिवृत्त में जहां लगती है वहां एक तरह के शरसाधनोपयुक्त मन्द स्पष्टग्रह होते हैं। वेधवलय में जहां बिम्ब उपलब्ध होता है उसके ऊपर तद्गोलीय कदम्ब प्रोतवृत्त करने से वह कक्षावृत्त में जहां लगता है भूकेन्द्र से तद्गत रेखा शीघ्र प्रतिवृत्त में जहां लगती है वह अन्य मन्द स्पष्ट ग्रह है; प्राचीनाचार्य इन दोनों मन्द स्पष्ट ग्रहों में भेद नहीं मानते हैं। स्पष्ट ग्रह ज्ञान बिना मन्द स्पष्ट ग्रह ज्ञान हो इसके लिये उसके उपकरण रूप मन्द प्रतिवृत्त में झमरण करते हुए एक मध्यम ग्रह को प्राचीनों ने कल्पित किया। इसलिये मन्द प्रतिवृत्तीय वास्तव ग्रह मध्यम ग्रह ही है वह जितना अन्तरित करके शीघ्र प्रतिवृत्त में देखे जाते हैं वही मन्द फल है, वही (मध्यम ग्रह) मन्द स्पष्ट ग्रह है। वह मन्द स्पष्ट ग्रह वेधवृत्त में तत्तुल्य राशि से जितना अन्तर करके देखे जाते हैं वही शीघ्र फल है, वही स्पष्टग्रह है इस कल्पना में किसी तरह का तारतम्य नहीं है, यथार्थतः मन्द फल साधनार्थ शीघ्र प्रतिवृत्त ही कक्षा वृत्त है, यहां वेध न करने से अभीष्ट बिन्दु ही ग्रह गोल का केन्द्र है अतः कक्षावृत्त ही का जान कर फलानयन किया। प्रतिवृत्तीय कोटि रेखा (उच्च रेखा की समानान्तर रेखा) कक्षावृत्त में जहां लगती है वहीं पर शीघ्र प्रतिवृत्तीय मन्द स्पष्ट समान राश्यात्मक बिन्दु है। इस बिन्दु में भूकेन्द्र से रेखा लाने से कक्षावृत्त में जहां लगती है वहीं पर वह देखे जाते हैं उन दोनों का अन्तर फल ही है। उसके साधन के उपाय समीचीन ही है क्योंकि प्रथम कल्पित कक्षावृत्त प्रतिवृत्त ही है। वहां बिना वेध के इष्ट स्थान ही

की मेषादि कल्पना की गयी । वृत्तकेन्द्र से तदुपरिगत उच्च रेखा ही यहां की उच्च रेखा है, मेषादि से मन्द प्रतिवृत्तीय समान मध्यमग्रह देकर मन्दकेन्द्र जानना चाहिये । मध्यम ग्रह की उपलब्धि जहां होती है वही मन्द स्पष्ट है इसलिये यहां के फलादियों का आनयन समीचीन ही है उसके संस्कार से मन्द स्पष्ट ग्रह भी समीचीन ही होते हैं । इस प्रदर्शित मार्ग से वास्तव शीघ्र प्रतिवृत्तीय मन्द स्पष्ट ग्रह-उच्च और मेषादि का ज्ञान हुआ । यहां वेध बिना जानने योग्य स्थिति ही में पुनः अग्नीष्ट बिन्दु से जो कक्षावृत्त होता है वह वास्तव कक्षा वृत्त है । इसमें मेषादि त्रिन्दु, शीघ्रोच्च और मन्द स्पष्टग्रह पृथक् विधि से अङ्कित करना । शीघ्र प्रतिवृत्तीय मन्द स्पष्ट बिन्दु से उच्च रेखा की समानान्तर रेखा कक्षा वृत्त में जहां लगती है वहीं मेषादि से मन्द स्पष्टग्रह के तुल्य खण्ड होता है । भूकेन्द्र से प्रतिवृत्तीय मन्द स्पष्ट-ग्रह गत कर्ण रेखा कक्षा वृत्त में जहां लगती है वहीं पर उसकी उपलब्धि होती है । कोटि रेखा और कर्ण रेखा का अन्तर फल है उसके साधन के लिये जो उपकरण (सामग्री) हैं उनसे उसका साधन सुगम ही है इति ॥२५-२६॥

अब नीचोच्चवृत्तभङ्गी से शीघ्रफलानयन करते हैं ।

हि. भा.—प्रथम पद और चतुर्थपद (मकरादि केन्द्र) में त्रिज्या से कोटिफल ऊपर होता है । द्वितीयपद और तृतीयपद (कर्कशादिकेन्द्र) में कोटिफल त्रिज्या से नीचा होता है इसलिये मकरादि केन्द्र में त्रिज्या में कोटिफल को जोड़ने से और कर्कशादि केन्द्र में त्रिज्या में कोटिफल को घटाने से नीचोच्चवृत्तीय स्पष्टा कोटि होती है, स्पष्टकोटि और भुजफल के वर्गयोग का मूल शीघ्र कर्ण होता है । त्रिज्या को भुजफल से गुणाकर शीघ्रकर्ण से भाग देने से जो लब्ध हो उसका चाप शीघ्रफल होता है इति ।

उपपत्ति ।

यहां संस्कृतोपपत्ति में लिखित (क) क्षेत्र को देखिये । उ = उच्च । ग = पारमार्थिक-ग्रह । भू = भूकेन्द्र, म = मध्यमग्रह । मग्र = शीघ्रान्त्यफलज्या = अग्रज्या । भूम = त्रिज्या = त्रि । ग्रन = शीघ्रभुजफल । मन = ग्रर = कोटिफल = कोफ । म केन्द्र से शीघ्रान्त्यफलज्या व्यासार्ध से जो वृत्त होता है वह शीघ्रनीचोच्चवृत्त है । पय = नीचोच्चवृत्तीय तिर्यग्रेखा । उल = उच्चरेखा । कक्षावृत्तीय मध्यम ग्रहस्थान को केन्द्र मान कर अन्त्यफलज्या व्यासार्ध से नीचोच्चवृत्त लिखकर भूकेन्द्र से मध्यमग्रह स्थान गत रेखा करनी चाहिये, वही यहां उच्च रेखा है । उच्च रेखा और नीचोच्चवृत्त का ऊपर भाग में योग उच्च संज्ञक है । अधोभाग में योग नीच संज्ञक है । उच्च रेखा के ऊपर मध्यमग्रह स्थान से लम्ब रेखा नीचोच्चवृत्तीय तिर्यग्रेखा है । नीचोच्चवृत्त में उच्च प्रदेश से भांश ३६० अङ्कित करना, उस (नीचोच्चवृत्त) में उच्च से शीघ्र केन्द्र को अनुलोम दान देना, वहां शीघ्र केन्द्राग्र में पारमार्थिक ग्रह होता है । यहाँ ग्रह और उच्चरेखा का तिर्यक् अन्तर शीघ्र भुजफल है । ग्रह और तिर्यक् रेखा का अन्तर कोटिफल है । भूकेन्द्र और ग्रह का अन्तर शीघ्रकर्ण है । इसका आनयन करते हैं । मकरादि केन्द्र में (प्रथम पद में और चतुर्थपद में) भूम त्रिज्या से ऊपर मन कोटिफल को देखते हैं अतः भूम + मन = भून = त्रि + कोफ = स्पष्टाकोटि, भून^२ + ग्रन^२ = भूग्र^२ = स्पष्टाको^२ + भुजक^२ = (त्रि + कोफ)^२ + भुजफ^२ = शीघ्रकर्ण^२ मूल लेने से $\sqrt{(त्रि + कोफ)^2 + भुजफ^2}$ = शीघ्रक । इसी तरह चतुर्थपद में भी होता है । क्षेत्र के ऊर्ध्व भाग में मकरादि केन्द्र समझना चाहिये । अधोभाग में कर्कशादिकेन्द्र समझना चाहिये । द्वितीय पद में भूम = त्रिज्या, ग्रर = कोटिफल = मन । ग्रन = भुजफल, भूग्र = शीघ्रकर्ण, यहां भूम त्रिज्या से मन कोटि फल को नीचा देखते हैं अतः भूम - मन = भून = त्रि - कोफ = स्पष्टाको । भून^२ + ग्रन^२ = स्पको^२ + भुजफ^२ = (त्रि - कोफ)^२ + भुजफ^२ = शीघ्रक^२ मूल लेने से $\sqrt{(त्रि - कोफ)^2 + भुजफ^2}$ = शीघ्रक, अब शीघ्रफलानयन करते हैं । शीघ्र कर्ण एक

भुज, भुजफल द्वितीयभुज, स्पष्टा कोटि तृतीयभुज, इन तीनों भुजों से उत्पन्न एक जात्य त्रिभुज है । तथा त्रिज्या एक भुज, शीघ्र फलज्या द्वितीयभुज, शीघ्रफल कोटिज्या तृतीय भुज इन तीनों भुजों से उत्पन्न द्वितीय जात्य त्रिभुज है । इन दोनों त्रिभुजों के सजातीयत्व से अनुपात करते हैं यदि शीघ्र कर्ण में शीघ्र भुजफल पाते हैं तो त्रिज्या में क्या इस अनुपात से शीघ्र फलज्या आती है उसका स्वरूप = $\frac{\text{शीभुज} \times \text{त्रि}}{\text{शीकर्ण}}$ = शी फज्या, इसका चाप =

शीफल, इससे आचार्योक्त उपपन्न हुआ । सूर्यसिद्धान्त में “शैर्घ्यं कोटिफलं केन्द्रमकरादौ घनं स्मृतम् । संशोध्यं तु त्रिजीवायां” इत्यादि संस्कृतोपपत्ति में लिखित सूर्यसिद्धान्तकारोक्त श्लोकों के अनुरूप ही आचार्योक्त है । सिद्धान्तशेखर में ‘त्रिज्यकायां पदैस्तत् । फल मथ खलु कोटेः कोटिसिद्धयं विधेयम्’ इत्यादि श्रीपत्युक्त आचार्योक्त के अनुरूप ही है । सिद्धान्तशिरोमणि में ‘त्रिज्योर्ध्वतः कोटिफलं मृगादौ कर्षादि केन्द्रे तदधो यतः स्यान्’ इत्यादि भास्करोक्त भी आचार्योक्त के अनुरूप ही है इति ॥२७—२८॥

इदानीं मन्दकर्मणि कर्णः किमु न क्रियते इत्यत्र कारणमाह ।

त्रिज्याभक्तः परिधिः कर्णगुणो बाहुकोटिगुणकारः ।

असकृन्मान्दे तत्फलमाद्यसमं नात्रकर्णोऽस्मात् ॥ २६ ॥

वि. भा.—मन्दफलसाधने मन्दपरिधिर्मन्दकर्णेन गुणितः त्रिज्याभक्तः सन् भुजकोट्योर्गुणकोऽसकृत् वारं वारं क्रियया स्यात् । ततश्च परिधेः मान्दं फलमाद्य-सममेव कर्णानुपातं विनैवानीते न मन्दफलेन सममेवेति तस्मान्मन्दफलानयन-क्रियायां कर्णो न कृतोऽर्थात् कर्णाग्रे यदि मन्दफलं तदा त्रिज्याग्रे किमिति त्रैराशि-कार्थं कर्णानयनं न कृतमित्यर्थः । सिद्धान्तशेखरे “त्रिज्याहृतः श्रुतिगुणः परिधि-र्यतो दोः कोट्योर्गुणो मृदुफलानयनेऽसकृत् स्यात् । स्यान्मान्दमाद्यसममेव फलं ततश्च कर्णः कृतो न मृदुकर्मणि तन्त्रकारैः ॥” इह मन्दफल साधनेऽपि कर्णानुपातेन यत्फलं तदेव समीचीनमिति कर्णः कथं न कृत इत्यस्योपपत्तिरूपोऽयं श्रीपतेः श्लोक आचार्योक्त श्लोकस्यानुवादरूप एव । भास्कराचार्येणापि “स्वल्पान्तरत्वान्मृदु-कर्मणीह कर्णः कृतो नेति वदन्ति केचित् । त्रिज्योद्धृतः कर्णगुणः कृतेऽपि कर्णो स्फुटः स्यात् परिधिर्यतोऽत्र ॥ तेनाद्यतुल्यं फलमेति तस्मात् कर्णः कृतो नेति च केचिदूचुः । नाशङ्कनीयं न चले किमित्थं यतो विचित्रा फलवासनाऽत्र ॥” इह कर्णेन यत्फलमानीयते तदेव समीचीनम् । यन्मन्दकर्मणि कर्णेन कृतस्तत्स्वल्पा-न्तरात् । मन्दफलानि हि स्वल्पानि तदन्तरं चातिस्वल्पमिति केषांचित् पक्षः ।

आचार्योऽत्र कारणमाह । मन्दकर्मणि मन्दकर्णानुत्पत्त्येन व्यासार्धेन यद्वृत्तमुत्पद्यते तत्कक्षावृत्तम् । तेन ग्रहो गच्छति । यो मन्दपरिधिः पाठपठितः स त्रिज्यापरिणतः । अतोऽसौ कर्णव्यासार्धे परिणाम्यते । यदि त्रिज्यावृत्तेऽयं परिधिस्तदा कर्णवृत्ते क इति स्फुटपरिधिः । तेन भुजज्या गुण्या भांशैः ३६० भाज्या, ततस्त्रिज्यया गुण्या कर्णेन भाज्या तदा जातं स्वरूपम् = $\frac{\text{परिधि. कर्ण} \times \text{भुज्या} \times \text{त्रि}}{\text{त्रि} \times ३६० \times \text{कर्ण}}$
 == $\frac{\text{परिधि} \times \text{भुज्या}}{३६०}$ पूर्वफलतुल्यमेव फलभागच्छतीत्याचार्यमतम् ।

अथ यद्येवं परिधेः कर्णेन स्फुटत्वं तर्हि शीघ्रकर्मणि किं न कृतमत्र चतुर्वेदाचार्य आह । चले कर्मणीत्थं किं न कृतमिति नाशङ्कनीयम् । यतः फलवासना विचित्रा । शुक्रस्यान्यथा परिधेः स्फुटत्वं कुजस्यान्यथा तथा किं न बुधादीनामिति नाशङ्कनीयमत आचार्योक्तिरत्र सुन्दरी ॥ २९ ॥

अब मन्द कर्म में कर्णानुपात क्यों नहीं किया जाता है इसके कारण कहते हैं ।

हि. भा.—मन्द फल साधन में मन्द परिधि को कर्ण से गुणाकर त्रिज्या से भाग देने से भुज और कोटि का गुणक बार-बार क्रिया से होता है । उस परिधि से मन्दफल आब सम ही होता है अर्थात् बिना कर्णानुपात के समागत मन्दफल के बराबर ही होता है । इसलिये मन्दफलानयन में कर्णानुपात नहीं किया गया अर्थात् यदि कर्णाग्र में मन्दफल पाते हैं तो त्रिज्याग्र में क्या इस त्रैराशिक के लिये कर्णानुपात नहीं किया जाता है । सिद्धान्त-शेखर में 'त्रिज्याहृतः श्रुतिगुणः परिधिः' इत्यादि विज्ञानभाष्य में लिखित श्लोक से मन्दफल साधन में भी कर्णानुपात से जो फल आता है वही समीचीन है । इसलिये कर्णानुपात क्यों नहीं किया गया इसके उपपत्तिरूप श्रीपत्युक्तश्लोक आचार्योक्त श्लोक के अनुवादरूप ही है । भास्कराचार्य भी 'स्वल्पान्तरत्वान्मृदुकर्मणीह' इत्यादि विज्ञानभाष्य में लिखित श्लोकों से यहां कर्ण से जो फल लाते हैं वही समीचीन हैं, मन्दकर्म में कर्णानुपात स्वल्पान्तर से नहीं किया गया, मन्दफल स्वल्प है उसका अन्तर अतिशयेन स्वल्प है यह किसी-किसी का पक्ष है । यहां आचार्य कारण कहते हैं । मन्दकर्म में मन्दकर्ण तुल्य व्यासार्ध से जो वृत्त होता है वह कक्षावृत्त है । उसमें ग्रह भ्रमण करते हैं । पाठपठित मन्द परिधि त्रिज्याग्र में परिणत है । उसको कर्ण व्यासार्ध में परिणत करते हैं, यदि त्रिज्यावृत्त में यह पाठ-पठित मन्द-परिधि पाते हैं तो कर्णवृत्त में क्या इससे स्फुट परिधि प्रमाण आता है, इसको भुजज्या से गुणाकर ३६० भांश से भाग देकर जो फल होता है उसको त्रिज्या से गुणाकर कर्ण से भाग देना चाहिये तब उसका स्वरूप = $\frac{\text{परिधि. कर्ण. भुज्या. त्रि}}{\text{त्रि. ३६०. कर्ण}}$ = $\frac{\text{परिधि. भुज्या.}}{३६०}$

पूर्वफल तुल्य ही फल आता है यह आचार्य का मत है यदि इस तरह कर्ण से परिधि का स्फुटत्व होता है तब शीघ्रकर्म में क्यों नहीं किया गया इसके लिये चतुर्वेदाचार्य कहते हैं ।

शीघ्रकर्म में इस तरह क्यों नहीं किया गया यह आश्चर्य नहीं करनी चाहिये क्योंकि फलोपपत्ति विचित्र है, यहां ब्रह्मगुप्तोक्त ही बहुत सुन्दर है इति ॥ २६ ॥

इदानीं विशेषमाह ।

प्रतिपादनार्थमुच्चं प्रकल्पितं ग्रहगतेस्तथा पातः ।

भुक्तेर्यूनाधिकता मानस्य च भवति कर्णवशात् ॥ ३० ॥

सु. भा.—ग्रहगतेः प्रतिपादनार्थमुच्चं प्रकल्पितं तथा पातश्च प्रकल्पितः क्रान्तिवृत्तीयगत्यर्थमुच्चं विमण्डलीयगत्यर्थं पातः प्रकल्पित इति । कर्णस्य न्यूनाधिकवशात् भुक्तेरिम्बमानस्य च न्यूनाधिकता भवतीति । एवं मन्दस्पष्टग्रहे स्थितिर्भवति । भीमादीनां शीघ्रकर्णवशात् इव बिम्बमाने न्यूनाधिकता भवति परन्तु स्पष्टगतौ कर्णवशेन न न्यूनाधिकतोत्पद्यते इति छेद्यकेन सर्वं स्फुटम् । 'यः स्यात् प्रदेशः प्रतिमण्डलस्य' इत्यादि तथा 'उच्चस्थितो व्योमचरः सुदूरे' इत्यादि च भास्करोक्तमेतदनुरूपमेव ॥ ३० ॥

वि. भा.—ग्रहगतेः प्रतिपादनार्थमुच्चं प्रकल्पितं तथा पातश्च प्रकल्पितः । उच्चं क्रान्तिवृत्तीयगत्यर्थं विमण्डलीयगत्यर्थं च पातः प्रकल्पित इत्यर्थः । कर्णस्य न्यूनाधिकवशाद् भुक्तेरिम्बमानस्य च न्यूनाधिकता भवति । मन्दस्पष्टग्रहे एवं स्थितिर्भवति । मङ्गलादीनां ग्रहाणां शीघ्रकर्णवशाद्विम्बमाने न्यूनाधिकत्वं भवति । परं स्फुटगतौ कर्णवशेन न्यूनाधिकता नोत्पद्यते । कर्णवशेन बिम्बमाने न्यूनाधिकत्वं कथं भवति तदर्थं भास्करेण 'उच्चस्थितो व्योमचरः ; सुदूरे नीचस्थित इत्यादिना युक्तियुक्तं कथितम् । यथा

(ख)

दृ = दृष्टिस्थानम् = भूकेन्द्रम् । दृके = ग्रह-
कर्णः । केस्प = बिम्ब व्यासार्धम् । दृकेस्प त्रिभुजे-
ऽनुपातः क्रियते । यदि ग्रहकर्णेन त्रिज्या लभ्यते तदा
बिम्ब व्यासार्धेन किं जाता बिम्बार्धकलाज्या
तत्स्वरूपम् = $\frac{\text{त्रि. विव्या}}{\text{ग्रहक}}$, उच्चस्थानीय

कर्णः > अन्यस्थानीय क अत उच्चस्थाने हरस्याधि-
कत्वाद्विम्बमानमन्यस्थानीय-बिम्बमानादल्पं भवेत् ।
नीचस्थानीयकर्णः < अन्यस्थानीय कर्णं, अतो नीच-
स्थाने हरस्याल्पत्वादन्यस्थानीय बिम्बमानादधिकं

बिम्बमानं भवितुमर्हतीति ॥ ३० ॥

अब विशेष कहते हैं ।

हि. भा.—ग्रहगति ज्ञान के लिये उच्च की कल्पना की गई है तथा पात की कल्पना की गयी है । अर्थात् क्रान्ति वृत्तीय गति के लिये उच्च कल्पित है, और विमण्डलीय गति के लिये पात कल्पित है । कर्ण की न्यूनाधिकतावश से ग्रहगति और बिम्बमान में न्यूनाधिकता होती है, इस तरह की स्थिति मन्दस्पष्ट ग्रह में होती है । कुजादिग्रहों के शीघ्रकर्णवश से बिम्बमान में न्यूनाधिकता होती है । लेकिन स्पष्टगति में कर्णवश से न्यूनाधिकता नहीं होती है । कर्णवश से बिम्बमान में न्यूनाधिकत्व क्यों होता है, नीचे लिखी हुई युक्ति से स्पष्ट है ।

संस्कृत भाष्य में लिखित (१) क्षेत्र को देखिये । $दृ = दृष्टिस्थान = स्वल्पान्तर से भूकेन्द्र । के = बिम्बकेन्द्र । दृके = ग्रहकर्ण केस्प = बिम्ब व्यासार्ध । दृकेस्प त्रिभुज में अनुपात करते हैं । यदि ग्रहकर्ण में त्रिज्या पाते हैं तो बिम्ब व्यासार्ध में क्या इस अनुपात से बिम्बार्ध कलाज्या आती है । इसका स्वरूप = \frac{त्रि. विव्या ३}{ग्रह कर्ण} = ज्या ३ विक । उच्च-$

स्थानीय ग्रहकर्ण $>$ अन्यस्थानीयग्रहकर्ण, इसलिये उच्चस्थान में हर की अधिकता से बिम्बमान अन्य स्थानीय बिम्बमान से अल्प होता है । तथा नीचस्थानीय कर्ण $>$ अन्यस्थानीय कर्ण, अतः नीचस्थान में हर की अल्पता से बिम्बमान अन्यस्थानीय बिम्बमान से अधिक होता है इति ॥ ३० ॥

इदानीं स्फुटयोजनात्मककर्णनियनमाह ।

कक्षा व्यासार्धगुणा मण्डललिप्ता विभाजिता कर्णः ।

स्वकलाकर्णेन गुणः कर्णस्त्रिज्याहृतः स्पष्टः ॥३१॥

सु. भा.—ग्रहकक्षा व्यासार्धेन त्रिज्यया गुणा मण्डललिप्ताभिश्चक्रकलाभिर्विभाजिता फलं मध्यमयोजनकर्णः स्यात् । स कर्णः स्वकलाकर्णेन स्फुटशीघ्रकर्णेन गुणस्त्रिज्याहृतः स्पष्टो योजनकर्णः स्यात् ।

अत्रोपपत्तिः ।

पूर्वार्धस्य परिधितो व्यासार्धनियनेन स्फुटा । त्रिज्यातुल्येन कलाकर्णेन मध्यो योजनकर्णस्तदा स्वेष्टकलाकर्णेन किमित्यनुपातेन स्फुटो योजनकर्णो भवति । 'लिप्ताश्रुतिघ्नस्त्रिगुणेन भक्तः'—इत्यादि भास्करोक्तमेतदनुरूपमेव ॥३१॥

वि. भा.—ग्रहकक्षा त्रिज्यया गुणा मण्डलकलाभिः (चक्रकलाभिः) भक्ता तदा मध्यमयोजनकर्णो भवेत् स कर्णः स्फुटशीघ्रकरणगुणः, त्रिज्यया भक्तस्तदा स्फुटो योजनकर्णः स्यादिति ।

अत्रोपपत्तिः ।

यदि चक्रकलाभिर्ग्रहकक्षा योजनानि लभ्यन्ते तदा त्रिज्याया किं समागच्छति मध्यमयोजनकर्णः । पुनरनुपातो यदि त्रिज्यायाऽयं मध्यमयोजनकर्णो लभ्यते तदा स्फुटशीघ्रकर्णो किं समागच्छति स्फुटो योजनकर्णः । एतावताऽऽचार्योक्तमुपपन्नम् । सिद्धान्तशिरोमणौ 'लिप्ताश्रुतिघ्नस्त्रिगुणेन भक्तः स्पष्टो भवेद्योजनकर्ण एवमिति' भास्करोक्तमाचार्योक्तानुरूपमेवास्तीति ॥३१॥

अब स्पष्ट योजनात्मक कर्णानयन को कहते हैं ।

हि. भा.—ग्रहकक्षा को त्रिज्या से गुणा कर चक्रकला से भाग देने से मध्यमयोजन कर्ण होता है । मध्यमयोजन कर्ण को स्फुट शीघ्र कर्ण से गुणाकर त्रिज्या से भाग देने से स्फुट योजन कर्ण होता है ।

उपपत्ति । -

यदि चक्र कला में ग्रह कक्षा योजन पाते हैं तो त्रिज्या में क्या इस अनुपात से मध्यमयोजन कर्णप्रमाण आता है । पुनः अनुपात करते हैं यदि त्रिज्या में यह मध्यम योजन कर्ण पाते हैं तो स्फुट शीघ्र कर्ण में क्या इससे स्फुट योजन कर्ण आता है । इससे आचार्योक्त उपपन्न हुआ । सिद्धान्तशिरोमणि में 'लिप्ताश्रुतिघ्नस्त्रिगुणेन भक्तः' इत्यादि भास्करोक्त आचार्योक्त के अनुरूप ही है इति ॥३१॥

इदानीं भूरविचन्द्राणां योजनव्यासानाह ।

मृद्हनजलमयानां विष्कम्भो योजनैः क्विनेन्दूनाम् ।

शशिवसुतिथिभि १५८१ र्यमपक्षशररसै ६५२२ शून्यवसुवेदैः ॥३२॥

सु. भा.—क्विनेन्दूनां भूरविचन्द्राणां किंविशिष्टानां मृद्हनजलमयानां क्रमेण शशिवसुतिथिभिर्यमपक्षशररसैः शून्यवसुवेदैर्योजनैर्विष्कम्भो ज्ञेयः । भूगोलस्य मृष्मयस्य व्यासः=१५८१ । सूर्यगोलस्याग्निमयस्य व्यासः=६५२२ । जलमयस्य चन्द्रस्य व्यासः=४८० । योजनात्मको ज्ञेय इत्यर्थः ।

अत्रोपपत्तिः । भास्करविधिना 'पुरान्तरं चेदिदमुत्तरं स्यात्'—इत्यादिना तथा 'बिम्बं रवेर्द्विद्विशरत्संस्थानि' इत्यादिना तत्तद्वासनया च स्फुटा ॥३२॥

वि. भा.—मृष्मयस्य भूगोलस्य व्यासः=१५८१, अग्निमयस्य सूर्यगोलस्य व्यासः=६५२२, जलमयस्य चन्द्रस्य व्यासः=४८०, योजनात्मको भवतीति ।

उपपत्ति ।

यहां संस्कृतोपपत्ति में लिखित (क) क्षेत्र को देखिये । के = ग्रहबिम्बकेन्द्र । दृ = दृष्टिस्थान । दृके = दृष्टि सूत्र । दृष्टि स्थान से ग्रहबिम्ब की स्पर्शरेखा = दृस्प, केस्प = ग्रहबिम्ब व्यासार्ध, ग्रहबिम्ब व्यासार्ध संमुख दृष्टि स्थानगत कोण = स्फुट बिम्बार्धकला, < दृस्पके = ६०, तब दृकेस्प त्रिभुज में अनुपात से $\frac{\text{त्रि.केस्प}}{\text{दृके}} = \text{ज्या} < \text{स्पदृके} = \text{ज्या} \frac{\text{स्फुवि}}{२}$
 $= \frac{\text{त्रि. } \frac{१}{२} \text{ योव्या}}{\text{क}} = \text{स्फुवि } \frac{१}{२}$ स्वल्पान्तर से ज्या और चाप के अभेदत्व से अतः $\frac{\text{त्रि.योव्या}}{\text{मक}}$
 $= \text{मवि} । \frac{\text{त्रि.योव्या}}{\text{क}} = \text{स्फुवि} ।$ मक = मध्यम कर्ण, स्फुट बिम्ब में मध्यम बिम्ब से भाग देने से $\frac{\text{स्फुवि}}{\text{मवि}} = \frac{\text{त्रि. योव्या. मक}}{\text{त्रि. योव्या. क}}$ यदि स्वल्पान्तर से योव्या = योव्या तब $\frac{\text{स्फुवि}}{\text{मवि}} = \frac{\text{मक}}{\text{क}}$
उच्चस्थान में ग्रहबिम्ब छोटा होता है, ग्रह गति भी छोटी होती है । नीच स्थान में ग्रह बिम्ब बड़ा होता है, गति भी बड़ी होती है अतः बिम्बों की निष्पत्ति गति की निष्पत्ति के बराबर होती है, अतः $\frac{\text{मक}}{\text{क}} = \frac{\text{स्फुवि}}{\text{मवि}} = \frac{\text{स्फुग}}{\text{मग}}$, अतः $\frac{\text{मक.मग}}{\text{स्फुग}} = \text{क}$ स्फुट बिम्ब में इसके उत्थापन से स्फुवि = $\frac{\text{त्रि. योव्या}}{\text{क}} = \frac{\text{त्रि. स्फुग}}{\text{मक}} \times \frac{\text{योव्या}}{\text{मग}}$ स्वल्पान्तर से । यहां स्वल्पान्तर से यदि मध्यमकर्ण = स्फुट कर्ण तब $\frac{\text{त्रि. स्फुग. योव्या}}{\text{क. मग}} = \text{स्फुवि}$, अतः $\frac{\text{क.स्फुवि}}{\text{त्रि}} = \text{योव्या}$
 $= \frac{\text{स्फुग.योव्या}}{\text{मग}}$ मध्यम गति स्थान में दृके, दृस्प दृष्टिद्वय से वेध से जो केस्प मान होता है उसको द्विगुणित करने से योव्या मान होता है । तथा स्फुट गति स्थान में जो केस्प मान होता है उसको द्विगुणित करने से योव्या मान जानना चाहिये । इस रीति से रवि और चन्द्र का व्यासानयन करना चाहिये, भूव्यासानयन वेध से होता है उसके लिये बटेस्वर सिद्धान्त में मेरी टीका देखनी चाहिये इति ॥३२॥

इदानीं भूभाबिम्बानयनमाह ।

— रपलं = चा । परन्तु भूभाविम्बार्धम् = चंपलं - चा = चंपलं — (१ रवि — रपलं)

=चंपलं + रपलं—३ रवि, एतेन “दिवाकर निशानाथपरलम्बनसंयुतिः । रवि बिम्बार्ध रहिता भूभाबिम्बदलं भवेत् ।” इति गुरपदेशीयानां प्रकार उपपद्यत इति । एवं यदि स्प, स्प, स्प, स्प, विरुद्ध स्पर्शरेखे क्रियेते तदा चन्द्रकक्षायां ल, ल, विन्दोरन्तर्गतो भागः सर्वकिरणानां संयोगाभावात् म्लान इव भवति । अतस्तत्र

प्रदेशत एव चन्द्रकान्तिमालिन्यम् । अत एव लभूच इदं कोणमानं भूभाभाबिम्बार्धं कल्प्यते तदा र बिन्दुतः स्प, स्प, रेखायाः समानान्तरा रेखा कार्या तदुपरि भू बिन्दुतो लम्बः = भूम तदा भूम = ३ रव्या + ३ भूव्या ततो रभूभ त्रिभुजेऽनुपातेन त्रि (३ रव्या + ३ भूव्या) = ज्या ३ रवि + ज्यारपलं = ज्या < मरभू अस्याश्चा-

पम् = चा, नवतेर्विशोध्यं तदा ९०—चा = < मभूर, तथा भूलस्प, त्रिभुजेऽनुपातः त्रि × ३ भूव्या = ज्या < भूलस्प, = ज्याचंपलं, अस्याश्चापं, नवतेर्विशोध्यं तदा चकं

९०—चंपलं = < लभूस्प, ∴ < मभूर + < लभूस्प, = ९०—चा + ९०—चंपलं = < रभूल = १८०—(चा + चंपलं)

∴ १८०—{१८०—(चा + चंपलं)} = १८०—१८० + चा + चंपलं = चा + चंपलं = < चभूल = भूभाभाबिम्बार्धम् । एतेन “रवितनुदलजीवा लम्बनस्य ज्याऽऽद्यचा क्षितिजजनितया तत्कार्मुकं कार्यमार्यैः । द्विजपतिजपराख्यं लम्बनं तद्युतंसद भवति वसुमतीभाभावपुः खण्डमानम् ।” इति म. म. सुधाकर द्विवेद्युक्तं सूत्रमुपपन्नम् ।

अत्रैव यदि स्वल्पान्तराज्ज्या चापयोरभेदत्वं स्वीक्रियेत तदा चा = ३ रवि + रपलं, तदा भूभाभाबिम्बार्धम् = चा + चंपलं = ३ रवि + रपलं + चंपलं, एतेन “दिवाकर निशानाथपरलम्बनसंयुतिः । रविविम्बार्धसहिता भूभाभाविस्तृते-दलम् ।” इति म. म. सुधाकरोक्तसूत्रमुपपद्यते । अत्रान्ये विशेषा वटेश्वरसिद्धान्तस्य मट्टिकायां विलोक्या इति ॥ ३३ ॥

अब भूभा बिम्बानयन कहते हैं ।

हि. भा.—चन्द्रके स्फुटकर्ण को भूव्यासहीन रविव्यास से गुणाकर रविकर्ण से भाग देने से जो लब्ध हो उसको भूव्यास में घटाने से चन्द्रकक्षा में भूभाव्यास होता है । इति ॥

उपपत्ति ।

यहां संस्कृतोपपत्ति में लिखित (क) क्षेत्र को देखिये । रविविम्ब और भूबिम्ब की क्रमस्पर्शरेखायें चन्द्रकक्षा में जहाँ जहाँ लगती है उन बिन्दु जनित मार्ग वृत्ताकार होता है, वही भूभावृत्त है; वक्षित रविकर्ण चन्द्रकक्षा में जहाँ लगता है वह बिन्दु उस वृत्त का केन्द्र होता है । सब स्पर्शरेखायें वक्षित रविकर्ण के साथ एक ही बिन्दु में मिलती है । वह यह

बिन्दु है। र=रविबिम्ब केन्द्र। भू=भूकेन्द्र। रस्प=रविब्यासार्ध= $\frac{1}{2}$ रव्या। भूस्प= $\frac{1}{2}$ भूव्यासार्ध= $\frac{1}{2}$ भूव्या, भूर=रविकर्ण। च=चन्द्रकेन्द्र। भू बिन्दु से स्पर्शरेखा की समानान्तरा रेखा=भूस, च बिन्दु से स्पर्शरेखा की समानान्तरा रेखा=चन सस्प=भूसस्प= $\frac{1}{2}$ भूव्या, रस्प—सस्प= $\frac{1}{2}$ रव्या— $\frac{1}{2}$ भूव्या, च बिन्दु से स्पर्शरेखा के ऊपर लम्ब= $\frac{1}{2}$ भूभाव्या
 =नस्प भूरस, भूचन दोनों त्रिभुजों के सजातीयत्व से अनुपात करते हैं $\frac{\text{रस} \times \text{भूच}}{\text{रभू}}$
 =भून = $\frac{(\frac{1}{2} \text{ रव्या} - \frac{1}{2} \text{ भूव्या}) \text{ चंकर्ण}}{\text{रविक}} \quad \text{अतः भूस्प—भून = नस्प = } \frac{1}{2} \text{ भूव्या—}$
 $\frac{(\frac{1}{2} \text{ रव्या} - \frac{1}{2} \text{ भूव्या}) \text{ रक}}{\text{रक}} = \frac{1}{2} \text{ भूभाव्या} = \text{चल, द्विगुणित करने से भूव्या—}$
 $\frac{\text{चंक} (\text{रव्या—भूयण})}{\text{रक}} = \text{भूभाव्यास, इससे आचार्योक्त उपपन्न हुआ। इसी से}$
 'भूव्यासहीनं रवि बिम्बमिन्दुकर्णाहतं' इत्यादि संस्कृतोपपत्ति में लिखित भास्करोक्त सूत्र भी उपपन्न होता है। यह भूभाव्यास चन्द्रकक्षा में नहीं आता है। यह क्षेत्र देखने ही से स्फुट है।

अब यहां संस्कृतोपपत्ति में लिखित (ख) क्षेत्र को देखिये। र=रवि बिम्बकेन्द्र। भू=भू केन्द्र, भूर=रविकर्ण रस्प=रविब्यासार्ध= $\frac{1}{2}$ रव्या। भूस्प= $\frac{1}{2}$ भूव्यासार्ध= $\frac{1}{2}$ भूव्या, भू बिन्दु से स्पर्शरेखा की समानान्तरा रेखा=भून, भूल = चन्द्रकर्ण, रन= $\frac{1}{2}$ रव्या — $\frac{1}{2}$ भूव्या, < रनभू = ९०, भूरन त्रिभुज में अनुपात करते हैं।
 $\frac{\text{त्रि} (\frac{1}{2} \text{ रव्या} - \frac{1}{2} \text{ भूव्या})}{\text{रक}} = \text{ज्या} < \text{रभून} = \frac{\text{त्रि. } \frac{1}{2} \text{ रव्या}}{\text{रक}} - \frac{\text{त्रि. } \frac{1}{2} \text{ भूव्या}}{\text{रक}}$
 =ज्या $\frac{1}{2}$ रवि—ज्यारपलं, इसका चाप=चा, नवत्यंश में घटाने से < नरभू=९०—चा
 = < चभूस्प, भूलस्प त्रिभुज में अनुपात करते हैं। $\frac{\text{त्रि. } \frac{1}{2} \text{ भूव्या}}{\text{चंकर्ण}} = \text{ज्या} < \text{भूलस्प}$
 =ज्या चंपलं, इसका चाप=चन्द्रपरम लम्बन=चंपलं, नवत्यंश में घटाने से < लभूस्प
 =९०—चंपलं, अतः < चभूस्प — < लभूस्प = ९०—चा — (९० चंपलं) = ९०
 — चा — ९० + चंपलं=चंपलं—चा= $\frac{1}{2}$ भूभावि, इससे 'रवितनुदल जीवा लम्बनस्य ज्ययोना' इत्यादि संस्कृतोपपत्ति में लिखित म. म. पण्डित सुधाकर द्विवेदीजी का सूत्र उपपन्न हुआ। इनके प्रकार से वास्तव भूभा बिम्बार्ध आता है। यहीं पर ज्या और चाप का

अभेदत्व स्वीकार करने से $\frac{1}{2}$ रवि—रपलं = चा, परन्तु भूभा विम्बार्ध = चंपलं—चा । अतः चंपलं—($\frac{1}{2}$ रवि—रपलं) = चंपलं + रपलं $\frac{1}{2}$ रवि = भूभाविम्बार्ध, इससे 'दिवाकर-निशानाथ परलम्बनसंयुतिः' इत्यादि संस्कृतोपपत्ति में लिखित यूरोप देशीय का प्रकार उपपन्न होता है ॥

एवं यदि स्प, स्प, विरुद्ध स्पर्शरेखायें की जाय तो चन्द्र कक्षा में ल, ल, बिन्दुओं के अन्तर्गत भाग सब किरणों के संयोग के अभाव से म्लान की तरह होता है, अतः वहां चन्द्रकान्ति की मलिनता होती है । अत एव ल भू च कोणमान को भूभाभा विम्बार्ध कल्पना करते हैं, तब र बिन्दु से स्प, स्प, रेखा की समानान्तर रेखा के ऊपर भू बिन्दु से लम्ब = भूम, तब भूम = $\frac{1}{2}$ रव्या + $\frac{1}{2}$ भूव्या, अतः रभूम त्रिभुज में अनुपात से त्रि ($\frac{1}{2}$ रव्या + $\frac{1}{2}$ भूव्या) $\frac{1}{\text{रक}}$ = ज्या $\frac{1}{2}$ रवि + ज्या रपलं = ज्या < मरभू, इसका चाप = चा, नवत्यंश में घटाने से ९० — चा = < मभूर, तथा भूलस्प, त्रिभुज में अनुपात से त्रि. $\frac{1}{2}$ भूव्या $\frac{1}{\text{चक}}$ = ज्या < भूलस्प, = ज्या चंपलं इसके चाप को नवत्यंश में घटाने से ९०—चंपलं = < लभूस्प, अतः < मभूर + लभूस्प, = ९०—चा + ९०—चंपलं = < रभूल = १८०—(चा + चंपलं) ।

$$\therefore १८०—\{१८०—(चा + चंपलं)\}$$

= चा + चंपलं = < चभूल = भूभाभा विम्बार्ध, इससे 'रवितनुदलजीवा लम्बनस्य ज्ययाऽऽद्या' इत्यादि संस्कृतोपपत्ति में लिखित, म. म. पण्डित सुधाकर द्विवेदीजी का सूत्र उपपन्न हुआ । यहां पर यदि ज्या और चाप में अभेदत्व स्वीकार किया जाय तो चा = $\frac{1}{2}$ रवि + रपलं, तब भूभाभा विम्बार्ध = चा + चंपलं = $\frac{1}{2}$ रवि + रपलं + चंपलं, इससे "दिवाकरनिशानाथपरलम्बनसंयुतिः । रवि विम्बार्ध सहिता भूभाभा विस्तृतेर्दलम्" म. म. पण्डित सुधाकर द्विवेदीजी का सूत्र उपपन्न होता है । यहां अन्य विशेष बातें वटेस्वरसिद्धान्त की हमारी टीका में देखनी चाहिये इति ॥ ३३ ॥

इदानीं कलात्मकविम्बान्याह ।

तद्गुणितं व्यासार्धं शशिकर्णहृतं तमः प्रमाणकलाः ।

एवं त्रिज्यारविशशिविष्कम्भगुणा स्वकर्णहृता ॥३४॥

सु. भा.—स्पष्टार्थम् । 'सूर्येन्दुभूभातनुयोजनानि त्रिज्याहतानि' इत्यादि भास्करोक्तमेतदनु रूपमेव ।

अब कलात्मक बिम्बानयन को कहते हैं ।

हि. भा.—योजनात्मक भूभाबिम्ब को त्रिज्या से गुणा कर चन्द्रकर्ण से भाग देने से कलात्मक भूभाबिम्ब होता है एवं योजनात्मक रविबिम्ब को त्रिज्या से गुणाकर रविकर्ण से भाग देने से कलात्मक रविबिम्ब होता है । योजनात्मक चन्द्र बिम्ब को त्रिज्या से गुणा कर चन्द्रकर्ण से भाग देने से कलात्मक चन्द्र बिम्ब होता है इति ।

उपपत्ति ।

यहां संस्कृतोपपत्ति में लिखित (क) क्षेत्र को देखिये । के=रविबिम्बकेन्द्र । इ==
दृष्टिस्थान=भूकेन्द्र । दृस्प, दृस्प दृष्टि स्थान से रवि बिम्ब की स्पर्श रेखा, दृके=रविकर्ण
केस्प=केस्प=रविबिम्बव्यासार्ध < केस्पदृ = < केस्पदृ = ९०, < केदृस्प = < केदृस्प=रवि
बिम्बकला, इकेस्प त्रिभुज में अनुपात करते हैं $\frac{\text{त्रि. केस्प}}{\text{दृके}} = \frac{\text{त्रि. रव्या}}{\text{रकर्ण}} = ज्या < \frac{१}{२}$
रविक द्विगुणित करने से $\frac{\text{त्रि. रव्या}}{\text{रकर्ण}} = \text{रविर्विकला} ।$ एवं $\frac{\text{त्रि. चंव्या}}{\text{चंकर्ण}} = \text{चंर्विकला} ।$

$\frac{\text{त्रि. भूभाज्या}}{\text{चंकर्ण}} = \text{भूभार्विक}$ इससे आचार्योक्त उपपन्न हुआ । सिद्धान्तशेखर में 'एतानि
भास्करमृगाङ्गमहीप्रमाणां' इत्यादि संस्कृतोपपत्ति में लिखित श्रीपत्युक्त प्रकार आचार्योक्त
के अनुरूप ही है । लेकिन ये प्रकार (आचार्योक्त तथा श्रीपत्युक्त) ठीक नहीं है । अनुपात
से जो बिम्बकलार्धज्या आती है उसके चाप को द्विगुणित करने से बिम्बकला प्रमाण वास्त-
विक होता है, आचार्य बिम्बकलार्धज्या को द्विगुणित कर बिम्बकला प्रमाण कहते हैं ।
सिद्धान्तशिरोमणि में 'सूर्येन्दुभूभातनुयोजनानि' इत्यादि संस्कृतोपपत्ति में लिखित श्लोक से
भास्कराचार्य बिम्बकलार्धज्या को द्विगुणित कर बिम्बकला प्रमाण को कहते हैं यह भी ठीक
नहीं है क्योंकि बिम्बकलार्धज्या को द्विगुणित करने से द्विगुणित बिम्बकलार्ध चाप की
पूर्णज्या होती है । पूर्णज्या से चाप करने का नियम नहीं है अतः भास्करोक्त प्रकार
भी ठीक नहीं है इति ॥३४॥

इदानीं छादकमाह ।

भूच्छायेन्दुं चन्द्रः सूर्यं छादयति मानयोगार्धात् ।

विक्षेपो यच्च नः शुक्लेतरपञ्चदश्यन्ते ॥३५॥

सु. भा.—यदि मानयोगार्धात् मानैक्यखण्डाद्विक्षेप ऊनस्तदा शुक्ले पञ्च-
दश्यन्ते पूर्णान्ते भूच्छाया चन्द्रं छादयति । इतरपञ्चदश्यन्ते दर्शान्ते चन्द्रः सूर्यं
छादयति । 'भूभाविधुं विधुरिनं ग्रहणे पिधत्ते' इति भास्करोक्तमेतदनुरूप-
मेव ॥३५॥

वि. भा.—यदि मानयोगार्थात् (बिम्बयोर्मानैक्यार्थात्) विक्षेपः (शरः) ऊनोऽल्पोभवेत्तदा शुक्ले पञ्चदश्यन्ते (पूरुणान्ते) भूच्छाया (भभा) चन्द्रं छादयति । इतरपञ्चदश्यन्ते (अमान्ते) चन्द्रः सूर्यं छादयतीत्यर्थाच्चदा रवितः षड्भान्तरे चन्द्रस्थानं तदा पूरुणान्तः । अतोऽमान्तकाले सूर्यचन्द्रस्थाने राश्यादिभिः सर्वावयवैस्तुल्यौ स्यातां चन्द्रोपरिगतं कदम्बप्रोतवृत्तं क्रान्तिवृत्ते यत्र लगति तत्र चन्द्रस्थानं तत्रैव च यदा रविस्तदाऽमान्तकाल इत्यमान्तस्य परिभाषातः, पौर्णमास्यन्ते चैकोऽन्यस्मात् षड्भान्तरेऽस्तस्तांशादिकौ समौ स्याताम् । अथःस्थश्चन्द्रो मेघवद्वेष्टादको भवेदत एव कस्मिंश्चिद्देशे रविश्छन्नः क्वचिन्नं छन्नो लक्ष्यते कक्षान्तरत्वात् । चन्द्रश्च पूर्वाभिमुखं गच्छन् भूभां प्रविशत्यत एव भूभैव चन्द्रस्य छादकः । अस्तश्चन्द्रः सर्वत्रैव दर्शनयोग्ये समये लक्ष्यते । अनेनैव छादकनिर्णयेन रवेः पश्चिमतः स्पर्शश्चन्द्रस्य च पूर्वत इति ॥३५॥

इति ब्राह्मस्फुट सिद्धान्ते स्फुटगतिवासना

अब छादक को कहते हैं ।

हि. भा.—छाद्य और छादक के मानैक्यार्थ से चन्द्रशर अल्प हो तब पूरुणान्त में भूभा चन्द्रबिम्ब को आच्छादित (ढकती) करती है, और अमान्त में चन्द्र सूर्य बिम्ब को आच्छादित करते हैं अर्थात् जब रविसे छः राशि पर चन्द्रस्थान रहता है तब पूरुणान्त होता है । इसलिये अमान्तकाले सूर्य और चन्द्र स्थान राश्यादि सर्वावयव से बराबर होता है, चन्द्रोपरिगत कदम्ब प्रोतवृत्त क्रान्तिवृत्त में जहां लगता है वही चन्द्र स्थान है, वहीं पर जब रवि होते हैं तो अमान्तकाल होता है इस अमान्त की परिभाषा से, पूरुणान्त में एक दूसरे से छः राश्यन्तर पर रहते हैं अतः तब अंशादि अवयव से दोनों बराबर होते हैं, चन्द्र पूर्वाभिमुख जाते हुए भूभा में प्रवेश करते हैं इसलिये भूभा ही चन्द्र की छादिका है, रवि से अथः स्थित चन्द्र मेघ की तरह रवि के छादक होते हैं, अतः किसी देश में रवि छन्न, और किसी देश में नहीं छन्न लक्षित होते हैं कक्षान्तरत्व के कारण से । अस्त चन्द्र सब जगह दर्शन योग्य समय में लक्षित होते हैं । इसी छादक निर्णय से रविग्रहण में पश्चिम से स्पर्श और चन्द्रग्रहण में पूर्व से स्पर्श सिद्ध होता है इति ॥३५॥

इति ब्राह्मस्फुट सिद्धान्त में स्फुटगति वासना समाप्त ।

अथ ग्रहणवासना प्रारभ्यते ।

तत्रादौ छादकनिर्णयमाह ।

महद्बिन्दोरावरणं कुण्ठविषाणो यतोऽर्धसञ्छन्नः ।

अर्धच्छन्नो भानुस्तीक्ष्णविषाणस्ततोऽस्याल्पम् ॥३६॥

सु. भा.—यतोऽर्धसञ्छन्नश्चन्द्रः कुण्ठविषाणो भवत्यत इन्दोरावरणं छादकमानं महत् । भानुश्चार्धच्छन्नस्तीक्ष्णविषाणो भवति ततस्तस्मादस्यावरणमल्पमस्तीत्यवगम्यते । लघुपरिधौ महापरिधिखण्डितेन विषाणयोः परिधियोगबिन्द्वोः कुण्ठता महापरिधौ च लघुपरिधिखण्डितेन विषाणयोस्तीक्ष्णतोत्पद्यते । अतश्चन्द्रस्य छादकः पृथुतरः सूर्यस्याल्पतर इति । ‘छादकः पृथुतरस्ततो विधिः’ इत्यादि भास्करोक्तमेतदनुरूपमेव ॥३६॥

वि. भा.—यस्मात् कारणात् अर्धच्छन्नश्चन्द्रः कुण्ठविषाणो भवति अतश्चन्द्रस्याऽऽवरणं (छादकमानं) महत् । भानुः (सूर्यः) अर्धच्छन्नः तीक्ष्णविषाणो भवति, तस्मात्कारणादस्याऽऽवरणमल्पमस्तीति । लघुपरिधेर्बृहत्परिधिना खण्डने परिधियोगबिन्दुरूपयोर्विषाणयोः कुण्ठता भग्नशृङ्गता जायते, बृहत्परिधेर्लघुपरिधिना खण्डने विषाणयोस्तीक्ष्णतोत्पद्यते । अत एव चन्द्रस्याच्छादको महान् सूर्यस्य च लघुरिति । एतं प्राचीनोक्तयुक्तिवादमेव भास्कराचार्योऽपि “छादकः पृथुतरस्ततो विधोर्धखण्डिततनोर्विषाणयोः । कुण्ठता च महती स्थितिर्यतो लक्ष्यते हरिणालक्षणग्रहे । अर्धखण्डिततनोर्विषाणयोस्तीक्ष्णता भवति तीक्ष्णदीधितेः । स्यात् स्थितिर्लघुरतो लघुः पृथक् छादको दिनकृतोऽवगम्यते । इत्यनेनोक्तवानिति ॥३६॥

अब ग्रहण वासना प्रारम्भ की जाती है ।

उसमें पहले छादक निर्णय को कहते हैं ।

हि. भा.—आधा आच्छादित चन्द्र का शृङ्गकुण्ठ (भोंय) होता है इसलिये चन्द्र का छादक बड़ा है । आधे आच्छादित सूर्य के शृङ्ग तीक्ष्ण (नुकीले) होते हैं अतः सूर्य के छादक छोटे हैं । लघुपरिधि को बृहत् परिधि से काटने से परिधि के योग बिन्दुरूप शृङ्गद्वय की कुण्ठता होती है । बृहत्परिधि को लघु परिधि से काटने से दोनों शृङ्गों की तीक्ष्णता होती है अतः चन्द्र का छादक महान् है और सूर्य का छादक लघु है । इस प्राचीनोक्त युक्तिवाद ही को भास्कराचार्य ने भी “छादकः पृथुतरस्ततोविधोः’ इत्यादि विज्ञान भाष्य में लिखित श्लोकों से कहा है इति ॥३६॥

इदानीं राहुकृतं ग्रहणं नेति बराहमिहिरादीनां मतं प्रतिपादयति ।

यदि राहुः प्राग्भागादिन्दुं छादयति किं तथा नार्कम् ।

स्थित्यर्धं महदिन्दोर्यथा तथा किं न सूर्यस्य ॥३७॥

किं प्रतिविषयं सूर्यो राहुश्चान्यो यतो रविग्रहणे ।

ग्रासान्यत्वं न ततो राहुकृतं ग्रहणमर्कन्दोः ॥३८॥

एवं बराहमिहिरश्रीषेणार्यभटविष्णुचन्द्राद्यैः ।

लोकविरुद्धमभिहितं वेदस्मृतिसंहिताबाह्यम् ॥३९॥

सु. भा.—आर्याद्वयं स्पष्टार्थम् । एवं बराहमिहिरादिभी राहुकृतं रवीन्दोर्न ग्रहणमिति लोकविरुद्धं वेदस्मृतिसंहिताबाह्यं चाभिहितम् ॥३७-३९॥

वि. भा.—यदि राहुः पूर्वतश्चन्द्रं छादयति अर्थाच्चन्द्रग्रहे पूर्वतः स्पर्शो भवति, तथा रवि कथं न छादयति अर्थात् सूर्यग्रहणेऽपि पूर्वत एव कथं न स्पर्शो भवति । चन्द्रग्रहणे स्थित्यर्धं महद्भवति तथा सूर्यस्य कथं न भवति । प्रत्येक देशे सूर्यो राहुश्च अन्योऽन्यो भवति किम् ? यतः सूर्यग्रहणे ग्रासान्यत्वं भवति तस्मात् कारणात् राहुकृतं सूर्याचन्द्रमसोर्ग्रहणं न भवतीति बराहमिहिर-श्रीषेणार्यभट-विष्णुचन्द्राद्यैर्लोकविरुद्धं वेदस्मृतिसंहिताबाहिर्भूतं कथितमिति । यदि राहुकृतं सूर्यचन्द्रयोर्ग्रहणं तदा चन्द्रस्य प्राक्स्पर्शः, सूर्यस्य पश्चादिति कथम् । राहोरेक-रूपत्वात् । चन्द्रस्य पश्चान्मुक्तिः, रवेः प्राग् मुक्तिरिति कथम् । ग्रहणाद्वये स्पर्श-मोक्षादेर्दर्शनं समानरूपेण भवितव्यम् । अर्धखण्डितस्य रवेर्विषाणयोः (शृङ्गयोः) तीक्ष्णता स्थितिश्च लघ्वी, रवेः क्वापि ग्रहणमस्ति क्वापि नास्तीत्यादि नोपपद्यते अत्र बराह मिहिरोक्तम् ।

“आवरणं महदिन्दोः कुण्ठविषाणस्ततोऽर्धसञ्छन्नः ।

स्वल्पं रवेर्यतोऽतस्तीक्ष्णविषाणो रविर्भवति ॥”

लल्लोक्तं च—

“प्रथमं रविमण्डलं ततो न ततः खण्डितमिन्दुमण्डलम् ।

न समाकृतिरीक्ष्यते स्थितिर्यदतो राहुकृतो न स ग्रहः ॥

सवितुश्च यदन्यथाऽन्यथा प्रतिदेशं सकलं समीक्ष्यते ।

न च कुत्रचिदित्यवैत्य कः कुरुते राहुकृते ग्रहे ग्रहम् ॥”

सिद्धान्तशेखरे

“राहुणा यदि पिधीयते ग्रहस्तिग्मशीतमहसोः स्वतृप्तये ।

नैकरूपमवलोक्यते कथं स्पर्शमोचनविमर्दपूर्वकम् ॥”

श्रीपतिना संक्षेपेणोक्तमिति ॥३७-३९॥

अब राहुकृत ग्रहण नहीं होता है वराहमिहिरादियों के मत को कहते हैं ।

हि. भा.—यदि राहु पूर्वदिशा से चन्द्र को आच्छादित (ढकता) करता है अर्थात् यदि चन्द्र ग्रहण में पूर्व से स्पर्श होता है, तो उसी तरह सूर्य को क्यों नहीं आच्छादित करता है अर्थात् सूर्यग्रहण में भी पूर्व ही से क्यों स्पर्श नहीं होता है, चन्द्रग्रहण में स्थित्यर्थ बड़ा होता है वेसे ही सूर्यग्रहण में क्यों नहीं होता है । क्या प्रत्येक देश में सूर्य और राहु भिन्न होते हैं, क्यों कि सूर्य ग्रहण में रास में भिन्नता होती है । इसलिये राहुकृत सूर्यग्रहण और चन्द्रग्रहण नहीं होता है ये बातें वराहमिहिर-श्रीषेण-आर्यभट-विष्णुचन्द्र आदि आचार्यों ने लोकविरुद्ध और वेद स्मृति संहिता से बहिर्भूत कही हैं यदि राहुकृत सूर्य-ग्रहण और चन्द्रग्रहण होता है तो चन्द्र के पूर्व तरफ स्पर्श और सूर्य के पश्चिम तरफ स्पर्श क्यों होता है क्योंकि राहु एक ही है । चन्द्र ग्रहण में पश्चिम में मोक्ष होता है, सूर्यग्रहण में पूर्व तरफ से क्यों ? दोनों ग्रहणों में स्पर्श मोक्ष आदि का दर्शन समान रूप से होना चाहिये, सो नहीं होता है, अर्ध खण्डित रविविम्ब के शृङ्गद्वय की तीक्ष्णता और स्थिति लघु, रवि ग्रहण कहीं दृश्य होता है कहीं नहीं इत्यादि उपपन्न नहीं होता है यहां वराह-मिहिरोक्त वचन 'आवर्गं महदिन्दोः कुण्डविषाणः' इत्यादि विज्ञान भाष्य में लिखित है । 'प्रथमं रवि मण्डलं ततो न ततः खण्डितमिन्दुमण्डलम्' इत्यादि विज्ञान भाष्य में लिखित श्लोकों से राहुकृत ग्रहण का खण्डन लल्लाचार्य ने किया है । सिद्धान्तशेखर में 'राहुणा यदि पिषीयते ग्रहः' इत्यादि से श्रीपति ने भी राहुकृत ग्रहण का खण्डन किया है इति ॥३७-३९॥

इदानीं संहितामतमवलम्ब्य वराहादीन् निराकरोति ।

यद्येवं ग्रहणफलं गर्गाद्यैः संहितासु यदभिहितम् ।

तदभावे होमजपस्नानादीनां फलाभावः ॥४०॥

सु. भा.—गर्गाद्यै राहुवशतः संहितासु यद्ग्रहणफलमभिहितं तद् व्यर्थमेव । यद्येवमेव वराहमिहिरादीनां मतमिति । तदभावे राहुकृतग्रहणाभावे । शेषं स्पष्टार्थम् ॥४०॥

वि. भा.—यद्येवं वराहमिहिरादीनां मतं संहितासु राहुवशतो यद्ग्रहण-फलं कथितं तद्व्यर्थमेव भवेत् । तदभावे (राहुकृत ग्रहणाभावे) होमजपस्नाना-दीनामपि फलाभावो भवेदिति ॥४०॥

अब संहितामत को अवलम्बन कर वराहमिहिरादि मत का खण्डन करते हैं ।

हि. भा.—यदि वराहमिहिर आदि आचार्यों के इस तरह मत हैं तब संहिताओं में राहुवश से जो ग्रहण फल कहा गया है वह व्यर्थ है । राहुकृत ग्रहण के अभाव (राहु के द्वारा ग्रहण नहीं होने) में होम जप स्नान आदि का भी फलाभाव होता है इति ॥४०॥

इदानीं लोकप्रथामाह ।

राहुकृतं ग्रहणद्वयमागोपालाङ्गनादिसिद्धमिदम् ।

बहुफलमिदमपि सिद्धं जपहोमस्नानफलमत्र ॥४१॥

सु. भा.—स्पष्टार्थम् ॥४१॥

वि. भा.—राहुद्वारा सूर्यग्रहणं चन्द्रग्रहणं च भवतीति गोपस्त्रीष्वपि प्रसिद्धमस्त्यर्थाद्गोपस्त्रियोऽपि जानन्ति यद्राहुकृतं ग्रहणद्वयं भवति, अत्र ग्रहणे जप करणे होम करणे स्नाने च बहुफलं भवतीत्यपि प्रसिद्धमस्तीति ॥४१॥

अब लोक प्रथा को कहते हैं ।

हि. भा.—राहुद्वारा सूर्यग्रहण और चन्द्र ग्रहण होता है यह विषय गोपालों (ग्वालों) की स्त्रियों में भी प्रसिद्ध है अर्थात् ग्वालों की स्त्रियां तक भी इस बात को जानती हैं कि दोनों ग्रहण राहु से ही होते हैं, और इस ग्रहण समय में जप करने से, हवन करने से, और स्नान करने से बहुत फल होता है यह भी उन लोगों (ग्वालों की स्त्रियों) में प्रसिद्ध है इति ॥४१॥

इदानीं राहुकृतं ग्रहणं भवतीत्यत्र स्मृतिवाक्यं प्रदर्शयति ।

स्मृतिषूक्तं न स्नानं राहोरन्यत्र दर्शनाद्वात्रौ ।

राहुग्रस्ते सूर्ये सर्वं गङ्गासमं तोयम् ॥४२॥

सु. भा.—स्पष्टार्थम् ॥४२॥

वि. भा.—सूर्ये राहुग्रस्ते चन्द्रे वा राहुग्रस्ते सर्वं जलं गङ्गासमं भवति । राहुदर्शनाद् भिन्न समये रात्रौ स्नानं न कुर्यात् । एवं स्मृतिषु (धर्मशास्त्रेषु) उक्तम् (कथितम्) । सिद्धान्तशेखरे “सर्वं च गङ्गासममम्बु राहुग्रस्ते दिनेशे यदि वा शशाङ्के । राहुपलब्धेरपरत्र कुर्यात् । स्नानं न रात्रौ स्मृतिषूक्तमेवम् ।” श्रीपति-नैवमुच्यते । “अप्रशस्तं निशि स्नानं राहोरन्यत्र दर्शनात् । राहुदर्शनसंक्रान्ति-विवाहात्ययवृद्धिषु । स्नानदानादिकं कुर्यान्निशि काम्यव्रतेषु च । सर्वं गङ्गासमं तोयं सर्वे ब्रह्मसमा द्विजाः । सर्वं भूमिसमं दानं राहुग्रस्ते दिवाकरे ।” इत्यादि स्मृति पुराणवचनानुक्कलं श्रीपत्युक्तमिति स्फुटमेवेति ॥४२॥

अब राहुकृत ग्रहण होता है इस में स्मृति वाक्य को दिखलाते हैं ।

हि. भा.—राहु द्वारा सूर्य के ग्रस्त होने में वा चन्द्र के ग्रस्त होने में सब जल गङ्गाजल के बराबर होता है । राहुदर्शन से भिन्न समय में रात्रि में स्नान नहीं करना

चाहिये, इस तरह धर्मशास्त्र में कहा गया है। सिद्धान्तशेखर में 'सर्वं च गङ्गासमम्बुरा-
हुग्रस्ते' इत्यादि विज्ञान भाष्य में लिखित श्लोक से श्रीपति ने आचार्योक्त के अनुरूप ही कहा
है। तथा "अप्रशस्तं निशि स्नानं राहोरन्यत्रदर्शनात्" इत्यादि विज्ञानभाष्य में लिखित
स्मृति पुराण बचनों के अनुकूल ही कहा है इति ॥४२॥

इदानीं राहुकृतग्रहणो वेदवाक्यं प्रदर्शयति ।

स्वर्भानुरासुरिनं तमसा विव्याध वेदवाक्यमिदम् ।

श्रुति संहितास्मृतीनां भवति यथैक्यं तदुक्तिरतः ॥४३॥

सु. भा.—'स्वर्भानुर्ह वा आसुरिः सूर्यं तमसा विव्याध'—इति माध्यन्दिनी
श्रुतिः । अथ यथा श्रुतिसंहितास्मृतीनामैक्यं भवति तथा कथनमुचितमत
एकवाक्यता प्रतिपादनार्थं तदुक्तिरत्रोचिता ॥४३॥

वि. भा.—स्वर्भानुरासुरिरित्यादिवेदवचनम् यथा स्वर्भानुर्ह वा आसुरिः
सूर्यं तमसा विव्याध । इति माध्यन्दिनी श्रुतिस्तत्र आसुरिरसुरकुलोत्पन्नः स्वर्भानुः
(सिंहिकासूनुः राहुः) तमसा (अन्धकारेण) इनं (सूर्यबिम्बं) विव्याध (भेदितवान्)
इदं वेदवाक्यमस्ति, यथा श्रुतिसंहितास्मृतीनामैक्यं (समता) भवति तथा
कथनमुचितमत एकताप्रतिपादनार्थं तदुक्तिरत्रोचितास्तीति । सिद्धान्तशेखरे
'स्वर्भानुरासुरिरिनं तमसा घनेन विव्याध वेदवचने तदपि प्रसिद्धम् । प्रोक्तानि
भानुशशिनोरसुरेश्वरेण सञ्छन्नयोरपि च सांहितिकैः फलानि ।' श्रीपतिनैवं
कथितम् । असुरेश्वरेण (राहुणा) आच्छादितयोः सूर्याचन्द्रमसोः सांहितिकैः
(संहितावेत्तृभिः) शुभाशुभानि च फलानि प्रोक्तानि । यदाह गर्गसंहितायां भटोत्पलः
"यन्नक्षत्रगतो राहुर्ग्रसते शशिभास्करो । तज्जातानां भवेत्पीडा ये नराः शान्ति-
वर्जिताः ।" इत्यादिना सर्वत्रैव ग्रहणकारणं राहुरिति प्रसिद्धम् ॥४३॥

अब राहुकृत ग्रहण में वेदवाक्य को कहते हैं ।

हि. भा.—'स्वर्भानुर्ह वा आसुरिः सूर्यं तमसा विव्याध' यह माध्यन्दिनी श्रुति है
इसका अर्थ यह है आसुरि (राक्षस कुलोत्पन्न) स्वर्भानु (सिंहिका पुत्र राहु) ने अन्धकार से सूर्य
बिम्ब को भेदित किया, । श्रुति (वेद) संहिता और स्मृति (धर्मशास्त्र) में जैसे ऐक्य
(समता-एकवाक्यता) हो वैसे कहना उचित है अतः एकता प्रतिपादन के लिये उस की उक्ति
यहां उचित है । सिद्धान्तशेखर में 'स्वर्भानुरासुरिरिनं तमसा घनेन' इत्यादि से श्रीपति ने
आचार्योक्त के सदृश ही कहा है इति ॥४३॥

इदानीं स्वोक्तिमाह ।

राहुस्तच्छादयति प्रविशति यच्छुक्लपञ्चदश्यन्ते ।

भूछाया तमसीन्दोर्वरप्रदानात् कमलयोनेः ॥४४॥

चन्द्रोऽम्बुमयोऽधः स्थो यदग्निमयभास्करस्य मासान्ते ।

छादयति शमिततापो राहुश्छादयति तत् सवितुः ॥४५॥

सु. भा.—इन्दोर्यद्विम्बं शुक्लपञ्चदश्यन्ते पूर्णान्ते भूछायातमसि भूमान्धकारे प्रविशति तदेव बिम्बं कमलयोनेर्ब्रह्मणो वरप्रदानाद् भूछायामाश्रित्य राहुश्छादयति । एवं मासान्ते दर्शान्तेऽग्निमयस्य भास्करस्य महद्विम्बं जलमयः शमिततापोऽधः स्थश्च चन्द्रश्छादयति सवितुः सूर्यस्य तदेव बिम्बं छायामाश्रित्य राहुश्छादयतीति । भास्करोत्तिरप्येतादृशी ॥४५॥

वि भा.—इन्दोः (चन्द्रस्य) यद्विम्बं शुक्लपक्षपञ्चदश्यन्ते (पूर्णान्ते) भूछायातमसि (भूमान्धकारे) प्रविशति, तदेव बिम्बं ब्रह्मणो वरप्रदानात् भूछायामाश्रित्य राहुश्छादयति । एवं मासान्ते (अमान्तकाले) ऽग्निमयस्य भास्करस्य (सूर्यस्य) महद्विम्बं जलमयः शमिततापोऽधः स्थश्चन्द्रश्छादयति, सूर्यस्य तदेव बिम्बं भूछायामाश्रित्य राहुश्छादयतीति । सिद्धान्तशेखरे “विष्णुलूनशिरसः किल पङ्कोदत्तवान् वरमिमं परमेष्ठी । हेमदानविधिना तव तृप्तिस्तिग्मशीतमहसोरुपरागे । भूमेश्छायां प्रविष्टः स्थगयति शशिनं शुक्लपक्षावसाने राहुर्ब्रह्मप्रसादात् समधिगतवरस्तत्तमो व्यासतुल्यः । ऊर्ध्वस्थं भानुबिम्बं सलिलमयतनोरप्यधोवर्त्तिबिम्बं संसृत्यैवं च मासव्युपरति समये स्वस्य साहित्यहेतोः ।” इत्यनेन श्रीपतिनाऽऽचार्योक्तानुरूपमेव कथितम् । श्रीपत्युक्तश्लोकार्थः विष्णुना (नारायणोऽनं) लूनं (छिन्नं) शिरो (मस्तकं) यस्य स विष्णुलूनशिरास्तस्य पङ्कोः (गतिविकलस्य राहोरित्यर्थः) परमेष्ठी (ब्रह्मा) इमं वरं दत्तवान् । किं वरमित्याह—तिग्मशीतमहसोः (सूर्याचन्द्रमसोः) उपरागे (ग्रहणे) हेमदानविधिना ग्रहणकाले यद्दानं दीयते यच्चाग्नौ हूयते तेन तव तृप्तिः (तर्पणमाप्यायनमित्यर्थः) भविष्यति ब्रह्मप्रसादात् समधिगतवरोराहुः तत्तमो व्यासतुल्यः (तस्या भूछायाया अन्धकाररूपेण व्यासेन समानः) शुक्लपक्षावसाने (पौर्णमास्यन्ते) भूभां प्रविष्टः सन् चन्द्रं ग्रसते । एवममुना प्रकारेण मासव्युपरति समये (अमावास्यायां) स्वस्य साहित्यहेतोः । सूर्यचन्द्राभ्यां मिलनकामनया पीयूषपिण्डस्य चन्द्रस्य अधोवर्त्तिबिम्बं सूर्यबिम्बापेक्षयेतिभावः । संसृत्य (आश्रित्य) ऊर्ध्वस्थं सूर्यबिम्बं स्थगयति स्वस्य साहित्यहेतोरिति । अत्र लल्लोक्तम्—“ग्रहणे कमलासनानुभावाद्भुतदत्तांशभुजोऽस्य सन्निधानम् । यदतः स्मृतिवेदसंहितासु ग्रहणं राहुकृतं गतं प्रसिद्धिम् ।” इति, श्रीपत्युक्तं च “भूमेश्छायां प्रविष्टः स्थगयति शशिनं” मित्यादि दृष्ट्वा भास्कराचार्येण गोलाध्यायस्य ग्रहणवासनाधिकारे—

दिग्देशकालावरणादिभेदान्नच्छादको राहुरिति ब्रुवन्ति ।

यन्मानिनः केवल गोलविद्यास्तत्संहिता वेदपुराणबाह्यम् ॥

राहुः कुभामण्डलगः शशाङ्कं शशाङ्कगच्छादयतीनबिम्बम् ।
तमोमयः शम्भुवस्प्रदानात् सर्वागमानामविरुद्धमेतत् ॥

एवमुक्तमिति ।

अथात्र संहितायां गणितागतसमयात् पूर्वं परतो वा ग्रहणदर्शने तदुत्पात-
रूपमिति तत्फलं च गगोक्तम् ।

“बेलाहीने शस्त्रभयं गर्भाणां श्रावणं तथा ।

अतिबेले फलानां तु सस्यानां क्षयमादिशेत् ॥

हक्समे पर्वणि नृपा निर्वेरा विगतज्वराः ।

प्रजाश्च सुखिताः सर्वाभयरोगविर्वजिताः ॥”

इति लक्ष्यीकृत्य वराहमिहिरेण

“बेलाहीने पर्वणि गर्भविपत्तिश्च शस्त्रकोपश्च ।

अतिबेले कुसुमफलक्षयो भयं सस्यनाशश्च ॥

हीनातिरिक्तकाले फलमुक्तं पूर्वशास्त्रदृष्टत्वात् ।

स्फुटगणितविदः कालः कथञ्चिदपि नान्यथा भवति ॥”

एवं दृग्गणितैक्यं विधाने स्वपाटवं प्रदर्शितमिति ॥४४-४५॥

अब अपना मन्तव्य कहते हैं ।

हि. भा.—पूर्णान्तकाल में चन्द्र बिम्ब भूमा के अन्वकार में प्रवेश करता है ब्रह्मा के वरप्रदान से भूछाया (भूमा) को आश्रयण कर अर्थात् भूमा बिम्ब में प्रविष्ट हो कर राहु उसी चन्द्र बिम्ब को आच्छादित करता है । एवं अमान्त काल में सूर्य बिम्ब से अघः स्थित चन्द्रबिम्ब सूर्यबिम्ब को आच्छादित करता है, ब्रह्मवरप्रदान से राहु चन्द्रबिम्ब में प्रविष्ट हो कर उसी सूर्य बिम्ब को आच्छादित करता है । अर्थात् पूर्णान्त काल में भूमामण्डलगत राहु चन्द्र बिम्ब को आच्छादित करता है तथा अमान्त में चन्द्रमण्डलगत राहु सूर्यबिम्ब को आच्छादित करता है । सिद्धान्तशेखर में “विष्णुलूनशिरसः किल पद्मोदन्तवान् वरमिमं परमेष्ठी” इत्यादि विज्ञान भाष्य में लिखित श्लोकों से श्रीपति ने भी आचार्योक्त के अनुरूप ही कहा है । ‘ग्रहणे कमलासनानुभावादुत्तदांशभुजोऽस्य सन्निधानम्’ इत्यादि विज्ञान भाष्य में लिखित लल्लोक्त श्लोक को देख कर तथा ‘भूमेच्छायां प्रविष्टः स्थगयति शशिनं’ इत्यादि विज्ञानभाष्य में लिखित श्रीपत्युक्त को देख कर सिद्धान्तशिरोमणि के गोलाध्याय ग्रहणवासनाधिकार में “दिग्देश कालावरणादिभेदान्नच्छादको राहुरिति ब्रुवन्ति” इत्यादि से आस्कराचार्य ने आचार्योक्त के अनुरूप ही संहिता-वेद-स्मृति-पुराणों के मतों के साथ ज्यौ-तिष सिद्धान्त का समन्वय किया है । संहिता में गणितागत समय से पहले वा पीछे ग्रहण-दर्शन होने से उत्पातरूप फल गगं ने कहा है जैसे “बेलाहीने शस्त्रभयं गर्भाणां श्रावणं तथा” इत्यादि विज्ञान भाष्य में लिखित श्लोकों को देखना चाहिये । इसी को लक्ष्य कर

बराह मिहिराचार्य ने “वेलाहीने पर्वणि गर्भविपत्तिश्च शस्त्रकोपश्च” इत्यादि विज्ञान भाष्य में लिखित श्लोकों से दृग्गणितैक्य विधान में अपनी पटुता को दिखलाया है इति ॥४४-४५॥

इदानीं राहुबिम्बमाह ।

भूछायाव्याससमः शशिकक्षायां स्थितः शशिग्रहणे ।

राहुश्छादयतीन्दुं सूर्यग्रहणेऽर्कमिन्दुसमः ॥४६॥

सु. भा.—शशिग्रहणे शशिकक्षायां स्थितो भूछायाव्याससमो राहुरिन्दुं सूर्यग्रहणे चेन्दुसमोऽर्कं सूर्यं च छादयति ॥४६॥

वि. भा.—शशिग्रहणे (चन्द्रग्रहणे) चन्द्रकक्षायां स्थितो भूभावाव्याससमो राहुश्चन्द्रं छादयति । सूर्यग्रहणे च चन्द्रसमो राहुः सूर्यं छादयतीति ॥४६॥

अब राहुबिम्ब को कहते हैं ।

हि. भा.—चन्द्रग्रहण में चन्द्रकक्षा में स्थित भूभावाव्यास के बराबर राहु चन्द्र बिम्ब को ग्रस्त करता है । तथा सूर्यग्रहण में चन्द्र व्यास के बराबर राहु सूर्य को ग्रसित करता है इति ॥४६॥

इदानीं ग्रहणे राहुदर्शनं कथं न भवतीत्याह ।

यत् तदधिकं तमोमयराहुव्यासस्य सूर्यदृष्टत्वात् ।

नश्यति भूछायेन्द्रोर्ध्वाससमोऽस्माद् भवति राहुः ॥४७॥

सु. भा.—तमोमयराहुव्यासस्य यन्मानं तदधिकं ताभ्यां भूभाचन्द्रव्यासाभ्यामधिकं तत् सूर्यदृष्टत्वात् तत्तेजसा नश्यति तस्माद्राहुर्भूछायासमश्चन्द्रमसो व्याससमश्चैव भवति । स चान्धकारमध्ये स्थितत्वात् दृश्यो भवतीति स्फुटम् ॥४७॥

वि. भा.—तमोमयराहुव्यासस्य यन्मानं तदधिकं ताभ्यां भूभाचन्द्राभ्यामधिकं तत् सूर्यदृष्टत्वात् तत्तेजसा नश्यति, अस्मात् कारणाद्राहुर्भूछायेन्द्रोः (भूभाचन्द्रमसोः) व्याससमश्चैव भवति । स चान्धकारमध्ये स्थितत्वात् दृश्यो भवतीति ॥४७॥

अब ग्रहण में राहु दर्शन क्यों नहीं होता है कहते हैं ।

हि. भा.—भूभा और चन्द्र से सूर्य बिम्ब के अधिक होने के कारण सूर्य बिम्ब के तेज से अन्धकार मय राहु का अन्धकार नष्ट होता है अतः भूभाबिम्ब व्यास के बराबर तथा चन्द्रबिम्ब के व्यास के बराबर ही तमोमय राहु व्यास होता है, वह अन्धकार के बीच में रहने के कारण दृश्य नहीं होता है इति ॥४७॥

इदानीं निर्गलितार्थमाह ।

भूछायेन्दुमतो हि ग्रहणे छादयति नार्कमिन्दुर्वा ।

तत्स्थस्तद्व्याससमो राहुश्छादयति शशिसूर्यौ ॥४८॥

सु. भा.—अतो ग्रहणे भूछाया चन्द्रं वा चन्द्रः सूर्यं न छादयति । किन्तु तद्व्याससमस्तत्स्थो राहुरेव शशिसूर्यौ छादयतीति सिद्धान्तः ॥४८॥

वि. भा.—अतोऽस्मात् कारणात् ग्रहणे भूछाया (भूभा) चन्द्रं न छादयति वा चन्द्रः सूर्यं न छादयति किन्तु तद्व्याससमस्तत्स्थो राहुरेव चन्द्रसूर्यौ छादयतीति ॥४८॥

इति ग्रहण वासना

अब निर्गलितार्थ (निचोड़) को कहते हैं ।

हि. भा.—इस कारण से ग्रहण में भूभा चन्द्र को आच्छादित नहीं करती है, वा चन्द्र सूर्य को आच्छादित नहीं करते हैं किन्तु उनके व्यास के बराबर तत्स्थित राहु ही चन्द्र और सूर्य को आच्छादित करता है इति ॥४८॥

इति ग्रहण वासना

अथ गोलबन्धाधिकारः प्रारम्भ्यते ।

तत्रादौ पूर्वापरयाम्योत्तरक्षितिजवृत्तान्याह ।

प्राच्यपरं सममण्डलमन्यद्याम्योत्तरं क्षितिजमन्यत् ।

परिकरवत् तन्मध्ये भूगोलस्तत्स्थितद्रष्टुः ॥४६॥

सु. भा.—पूर्वापरमेव वृत्तं सममण्डलम् । अन्यद् याम्योत्तरवृत्तम् । परिकर-
वत् कटिवन्धनवत् तदर्धेऽन्यत् क्षितिजम् । तन्मध्ये तेषां वृत्तानां गर्भीयकेन्द्रे
तत्स्थित द्रष्टुस्तस्य भूगोलस्योपरि स्थितो यो द्रष्टा तस्य भूगोलः कल्प्य
इति ॥४६॥

वि. भा.—प्रथमं पूर्वापरं सममण्डलसंज्ञकं वृत्तं विधायान्यत् (द्वितीयं)
याम्योत्तरवृत्तं च विधाय पूर्वापरयाम्योत्तरवृत्तयोः सर्वतोऽप्यर्धभागे लम्बाकारेण
संश्लिष्टमन्यत् (तृतीयं) क्षितिजवृत्तसंज्ञकं विधेयम् । तेषां वृत्तानां गर्भीयकेन्द्रे
तस्य भूगोलस्योपरि स्थितो यो द्रष्टा तस्य भूगोलः कल्प्यः । सिद्धान्तशेखरे
“श्रीपरार्थादिससारदारुघटितैः श्लक्ष्णैः समैर्मंडलैर्गोलज्ञो दृढसन्धिबन्धश्चिरं
गोलं विनिर्मापयेत् । तत्र प्रागपरं विधाय बलयं याम्योत्तरं चापरं तिर्यक् तद्व्रित-
त्यार्धसक्तमभितः कुर्यात्तृतीयं पुनः ।” इति श्रीपत्युक्तवृत्तरचनाक्रम आचार्योक्तानु-
रूप एव, एवमेव गोलबन्धविधिल्लोक्तशिष्यधोवृद्धिदत्तत्रे, भास्करसिद्धान्त-
शिरोमणौ चास्ति, भास्करेण “सुसरलवंशशलाकावलयैः श्लक्ष्णैः सचक्रभा-
गाङ्कैः । रचयेद् गोलं गोले शिल्पे चानल्पनैपुणो गणकः ।” इति श्रीपत्युक्तिरेव
विशदीकृत्यवगम्यत इति ॥४७॥

अब गोलबन्धाधिकार प्रारम्भ किया जाता है ।

उस में पहले पूर्वापरवृत्त, याम्योत्तरवृत्त और क्षितिजवृत्त को कहते हैं ।

हि. भा.—प्रथम सममण्डल संज्ञक पूर्वापर वृत्त बनाकर द्वितीय याम्योत्तर वृत्त
को बनाकर इन दोनों (पूर्वापर वृत्त और याम्योत्तर वृत्त) के चारों तन्फ अर्धभाग में
लम्बाकार सटा हुआ तृतीय क्षितिजवृत्त बनाना चाहिये उन वृत्तों के गर्भीय केन्द्र में उस
भूगोल के ऊपर स्थित द्रष्टा (दर्शक) के भूगोल की कल्पना करनी चाहिये । सिद्धान्तशेखर
में ‘श्रीपरार्थादि ससार दारुघटितैः’ इत्यादि विज्ञान भाष्य में लिखित श्लोक से श्रीपति
आचार्योक्त वृत्त रचनानुरूप ही वृत्त रचना क्रम को कहा है । इसी तरह गोलबन्ध विधि
ल्लोक्त शिष्यवृद्धिदत्तत्रे में और भास्कर सिद्धान्तशिरोमणि में भी है । भास्कराचार्य
‘सुसरलवंशशलाकावलयैः,’ इत्यादि से श्रीपत्युक्ति ही को विशदरूप में कहा है इति ॥ ४६॥

इदानीमुन्मण्डलसंस्थानमाह ।

पूर्वापरयोर्लग्नं याम्योत्तरयोर्नतोन्नतं क्षितिजात् ।

स्वाक्षांशैरुन्मण्डलमहर्निशोर्हानि वृद्धिकरम् ॥५०॥

सु. भा.—स्पष्टार्थम् । पूर्वापरक्षितिजसङ्गमयोर्विलग्नम्—इत्यादि भास्करोक्तमेतदनुरूपम् ॥५०॥

वि. भा.—पूर्वापरवृत्तक्षितिजवृत्तयोः पूर्वदिशि यत्र योगः पश्चिमदिशि च यत्र योगस्तद्विन्दुद्वयगतं क्षितिजात् स्वाक्षांशैर्यम्योत्तरयोर्नतोन्नतमर्थात् दक्षिण-समस्थानात् स्वाक्षांशैरधोगतमुत्तरसमस्थानाच्च स्वाक्षांशैरुपरिगतमुन्मण्डलं भवति तच्च दिनरात्र्योरपचयोपचयकारकं भवत्यथदितदुन्मण्डलं निरक्षद्वेशीयं क्षितिजं भवति उन्मण्डलवति देशे दिनरात्री-उपचयापचयवत्यौ भवतः । उन्मण्डल-हीने निरक्षदेशे च दिनरात्री सर्वदैव समाने भवत इति । सिद्धान्तशेखरे “संसक्तं समवृत्तभूजवलयप्राक्पश्चिमासङ्गयोर्याम्योदक् क्षितिजाधरोत्तरगतं स्वाक्षांश-तुल्यान्तरे । स्यादुन्मण्डलमेतदप्यवनिजं देशे निरक्षे स्मृतं जायेते तमस्विनी दिवस-योर्वृद्धिक्षयौ तद्वशात् ।” इति श्रीपत्युक्तोन्मण्डलरचनाक्रम आचार्योक्तानुरूप एव । सिद्धान्तशिरोमणी ‘पूर्वापरक्षितिजसङ्गमयोर्विलग्नं याम्ये ध्रुवे पललवैः क्षितिजादधः स्थे । सौम्ये कुजादुपरिचाक्षलवैध्रुवे तदुन्मण्डलं दिननिशोः क्षयवृद्धि-कारि ।” भास्करोक्तमिदमाचार्योक्तानुरूपमेवेति ॥५०॥

अब उन्मण्डल संस्थान को कहते हैं ।

हि. भा.—पूर्वापरवृत्त और क्षितिजवृत्त की पूर्वदिशा में जहां योग (पूर्वस्वस्तिक) है और पश्चिम दिशा में योग (पश्चिम स्वस्तिक) है, एतद्विन्दुद्वय गत तथा दक्षिण समस्थान से अपने अक्षांशान्तर पर अधोगत उत्तर समस्थान से अपने अक्षांशान्तर पर ऊपर गया हुआ वृत्त उन्मण्डल है, यह दिन और रात्रि का हानि (अपचय) और वृद्धि (उपचय) कारक है । यह उन्मण्डल ही निरक्ष देशीय क्षितिज है इसलिये निरक्ष देश में दिन और रात्रि सर्वदा बराबर होती है, निरक्ष देश से भिन्न देश (जहां उन्मण्डल है) में दिन और रात्रि के न्यूनाधिकत्व के कारण उन्मण्डल ही है । सिद्धान्त शेखर में श्रोपति और भास्कराचार्य ने भी आचार्योक्त के अनुरूप ही कहा है इति ॥५०॥

इदानीं विषुवन्मण्डलसंस्थानमाह ।

विषुवन्मण्डलमूर्ध्वं सममण्डलतः स्थितं स्वकाक्षांशः ।

याम्येनोत्तरतोऽधः क्षितिजे प्राच्यपरयोर्लग्नम् ॥५१॥

सु. भा.—ऊर्ध्वं खस्वस्तिकम् । अघोऽधः स्वस्तिकम् । शेषं स्पष्टम् । ‘पूर्वा परस्वस्तिकयोर्विलग्नम्’—इत्यादि भास्करोक्तं चिन्त्यम् ॥५१॥

वि. भा.—सममण्डलतः (पूर्वापरवृत्तात्) स्वकीयाक्षांशैर्दक्षिणेनोर्ध्वभागे (ऊर्ध्वखस्वस्तिके) स्वकीलाक्षांशैरुत्तरतोऽधः खस्वस्तिके स्थितं क्षितिजवृत्ते पूर्वस्वस्तिके पश्चिमस्वस्तिके च लग्नं विषुवन्मण्डलं विषुवन्नाम (समरात्रिन्दिव-कालः) उपचारात् समरात्रिन्दिवकालो यत्र तिष्ठति रवौ भवति तत्रासक्तमिति । पूर्वापर बिन्द्वोरेव विषुवच्चिह्ने गोलबन्धे प्राचीनैः स्वीकृते इति पूर्वापर चिन्हयोः संसक्तमित्यर्थः) स्यात्-एतस्य नाम नाडीवृत्तमप्यस्ति यतो वृत्तमिदं षष्ठ्या ६० नाडिकाभिश्चिन्हितमस्तीति । सिद्धान्तशेखरे “नतमथ समवृत्ताद्दक्षिणेनाक्षभागौ विषुवदुपपतन्तं मण्डलं नाडिकाख्यम् । उदगपि पलभागैः स्यादधस्तात्तदेतद् गगन रसमिताभिर्लाञ्छितं नाडिकाभिः ।” श्रीपत्युक्तमिदमाचार्योक्तानुरूपमेवास्ति-सिद्धान्तशिरोमणौ “पूर्वापरस्वस्तिकयोर्विलग्नं खस्वस्तिकाद् दक्षिणतोऽक्षभागैः । अघश्च तैरुत्तरतोऽङ्कितं च षष्ठ्याऽत्र नाडीवलयं विदध्यात् ।” भास्करोक्तश्चायं श्रीपत्यादर्शरूपो द्रष्टव्य इति ॥५१॥

अब विषुवन्मण्डल की संस्थिति को कहते हैं ।

हि. भा.—पूर्वापर वृत्त से दक्षिण तरफ अक्षांशान्तर (ऊर्ध्वखस्वस्तिक) में, उत्तर तरफ अघः खस्वस्तिक (अक्षांशान्तर) में स्थित, क्षितिज वृत्त में पूर्वस्वस्तिक और पश्चिम स्वस्तिक में लगा हुआ विषुवद्वृत्त है, इसका नाम नाडी वृत्त भी है क्योंकि इस वृत्त में साठ नाडी (घटी) अङ्कित रहती हैं, विषुवद्वृत्त इसका नाम इसलिये है कि विषुवत् उसको कहते हैं जहाँ पर रवि के रहने से दिनमान और रात्रिमान बराबर होता है सायनमेषादि और सायन तुलादि में रवि के रहने से यह स्थिति होती है अर्थात् पूर्वस्वस्तिक और पश्चिम स्वस्तिक में संसक्त रहने से इसका नाम विषुवद्वृत्त है इति । सिद्धान्तशेखर में ‘नतमथसमवृत्ताद्दक्षिणेनाक्षभागैः’ इत्यादि विज्ञान भाष्य में लिखित श्लोक से श्रीपति ने आचार्योक्त के अनुरूप ही कहा है सिद्धान्तशिरोमणि में ‘पूर्वापर स्वस्तिकयोर्विलग्नं’ इत्यादि से भास्कराचार्य श्रीपत्युक्त को आदर्श रूप मानते हैं इति ॥५१॥

इदानीं क्रान्तिमण्डलसंस्थानमाह ।

विषुवन्मण्डललग्नं मेषतुलाबाबुदक् कुलीरादौ ।

जिनभागैर्याम्येन मृगादावपममण्डलमिहाकः ॥५२॥

पाताश्चन्द्रादीनां भ्रमन्ति भार्गव रवेश्च भूछाया ।

पातादपमण्डलवद् विमण्डलानि स्वविक्षेपैः ॥५३॥

सु. भा.—स्पष्टार्थम् । ‘क्रान्तिवृत्तं विधेयं’—इत्यादि तथा ‘क्रान्तिपाते च पाताद्भ्रष्टकान्तरे’ इत्यादि भास्करोक्तं चिन्त्यं । आचार्यमतेऽयनाभावो ज्ञेयः । पातादपमण्डलवदित्यनेन ग्रहाणां विमण्डलानि न्यस्तानीत्यग्रे सम्बन्धः ॥५२-५३॥

वि. भा.—पूर्वापरवृत्त नाडीवृत्त क्षितिजवृत्तोन्मण्डलानां पूर्वदिशि सम्पात-विन्दुः पूर्वस्वस्तिकं, पश्चिमदिशि सम्पातविन्दुश्च पश्चिमस्वस्तिकम् । अनयोः पूर्वापरस्वस्तिकयोः मेपादितुलादिबिन्दू अपि तिष्ठत इत्ययनांशाभावकालिकी-स्थितिः । तेन मेपादिबिन्दौ तुलादिबिन्दौ च (पूर्वस्वस्तिके पश्चिम स्वस्तिके च) नाडीवृत्तेन सह सक्तवृत्तं क्रान्तिवृत्तं वध्नीयात्, कृलोरादौ (कर्कटादौ) मिथुनान्त-बिन्दात्मके नवत्यंशापात्रे नाडीवृत्ताच्चतुर्विंशत्यंशैरुत्तरतः—मृगादौ (धनुरन्तबिन्दात्मके तुलादिबिन्दोर्नवत्यंशापात्रे) चतुर्विंशत्यंशैर्दक्षिणतः । वध्नीयात् अस्मिन् (क्रान्तिवृत्ते) वृत्ते रविभ्रमति, चन्द्रादीनां ग्रहाणां पाताश्च भ्रमन्ति । रवेः षड्भान्तरे भूध्याया (भूभा) भ्रमति । पातात् (क्रान्ति विमण्डल सम्पातात्) क्रान्ति वृत्तवत् स्वस्वशरांशान्तरे तेषां ग्रहाणां (चन्द्रादीनां) विमण्डलानि भवन्ति । सिद्धान्तशेखरे “पूर्वापरस्वस्तिकमक्तवृत्तं क्रान्त्याख्यमत्राजतुलाधराद्योः । उदग् जिनांशैः खलु कर्कटादौ नाड्याह्वयाद् दक्षिणतो मृगादौ । भ्रमत्यमुष्मिन् वलये दिनेशः शशाङ्कपूर्वद्युसदां च पाताः । सहस्रगोः षड्भवनान्तरे हि छाया मही गोल समुत्थिता च ।” श्रीपत्युक्तमिदमाचार्योक्तानुरूपमेव । शिष्यधीवृद्धिदे तन्त्रे लल्लोक्तं च “मेपतुलादौ लग्नं नाडीवृत्तेऽपमण्डलं तदुदक् । जिनभागैः कर्कटादौ याम्यैस्तैरेव मकरादौ । भ्रमति रविरत्र वलये ग्रहाश्च चन्द्रादयः स्वपातयुताः । भूभाभार्धेभानोः स्वशीघ्रवृत्ते ज्ञसितपातौ ।” इत्यनुपदमेव गृहीतं श्रीपतिना । भास्कराचार्येण च “क्रान्तिवृत्तं विधेयं गृहाङ्क भ्रमत्यत्र भानुश्रभार्धेकुभा भानुतः । क्रान्तिपातः प्रतीपं तथा प्रस्फुटाः क्षेपपाताश्च तत्स्थानकान्यङ्कयेत् । क्रान्तिपाते च पाताद् भ्रष्टकान्तरे नाडिकावृत्तलग्नं विदध्यादिदम् । पाततः प्राक्त्रिभे सिद्धभागैरुदक् दक्षिणे तैश्च भागैर्विभागेऽपरे ।” इति प्राचीनोक्तरीत्यैव तथैव क्रान्तिवृत्त-संस्थानमुक्तम् । रवित एव छायोत्पद्यते । रविकेन्द्राद् भूकेन्द्रगामिसूत्रं यत्र क्रान्ति-वृत्ते लगति तदेव भूभामध्यस्थानम् । रविः क्रान्तिवृत्ते—क्रान्तिवृत्तस्य केन्द्रं च भूकेन्द्रम् । अतो रवेर्भूकेन्द्रगामिसूत्रं क्रान्तिवृत्तस्य व्यासत्वाद्भवितः षड्भान्तरे क्रान्तिवृत्ते लगति तेन ‘भार्धे रवेश्च भूछाये’ ति युक्तियुक्तमाचार्योक्त-मिति ॥५२-५३॥

अब क्रान्तिवृत्त संस्थान को कहते हैं ।

हि. भा.—पूर्वापरवृत्त नाडीवृत्त क्षितिजवृत्त उन्मण्डल इन वृत्तों के पूर्वतरफ सम्पात बिन्दु पूर्वस्वस्तिक है, और पश्चिम तरफ सम्पात बिन्दु पश्चिम स्वस्तिक है । अयनांशाभाव काल में पूर्वस्वस्तिक ही मेपादि बिन्दु तथा पश्चिम स्वस्तिक तुलादि बिन्दु रहता है । अतः

मेषादि बिन्दु (पूर्वस्वस्तिक) और तुलादि बिन्दु (पश्चिम स्वस्तिक) में नाड़ीवृत्त के साथ संसक्त क्रान्तिवृत्त को बांधना चाहिये । कर्कषादि (मिथुनान्न बिन्दुआत्मकनवत्यंशचाप) में नाड़ीवृत्त से चौबीस अंश उत्तर, मकरादि (धनुरन्नबिन्दुआत्मक नवत्यंशचाप) में चौबीस अंश दक्षिण क्रान्तिवृत्त को बांधना चाहिये, इस क्रान्तिवृत्त में रवि भ्रमण करते हैं चन्द्र आदि ग्रहों के पात भ्रमण करते हैं । रवि से छः राशि पर भूभा भ्रमण करती हैं । पात (क्रान्तिवृत्त और विमण्डल के सम्पात) से क्रान्तिवृत्त के सदृश अपने अपने शरांशान्तर पर उन ग्रहों का विमण्डल होता है । रवि से छाया की उत्पत्ति होती है । रविकेन्द्र से भूकेन्द्र-गामी सूत्र क्रान्तिवृत्त में जहां लगता है वही भूभा मध्यस्थान (केन्द्र) है । रवि क्रान्तिवृत्त में है, क्रान्तिवृत्त का केन्द्र भूकेन्द्र है इसलिये रवि से भूकेन्द्रगामी सूत्र क्रान्तिवृत्त में छः राशि पर लगता है क्यों कि वह सूत्र (रवि से भूकेन्द्रगामी सूत्र) क्रान्तिवृत्त का व्यास है, व्यास रेखा वृत्त के दो समान खण्ड करती है अतः रवि से छः राशि पर भूभाकेन्द्र होता है यह आचार्योंक्त युक्तियुक्त है । सिद्धान्तशेखर में 'पूर्वापर स्वस्तिक सक्तवृत्तं इत्यादि' विज्ञान भाष्य में लिखित श्लोकों से श्रीपतिआचार्योंक्त के अनुरूप ही कहा है । शिष्यवृद्धिद तन्त्र में 'मेषतुलादौ लग्नं नाड़ीवृत्तेऽपमण्डलं' इत्यादि लल्लाचार्योंक्त विषय को अक्षरशः श्रीपति ने ग्रहण किया है इति ॥५२-५३॥

इदानीं विमण्डलान्याह ।

सौम्यं विमण्डलार्धं प्रथमं याम्यं द्वितीयमेतेषु ।

चन्द्रकुजजीवमन्दा भ्रमन्ति शीघ्रेण बुधशुक्रौ ॥५४॥

क्षेपवृत्तानि षण्णां विदध्यात्पृथक् स्वस्ववृत्ते भ्रमन्तीन्दु पूर्वाग्रहाः ॥

इत्यनेनानीता भगोलविमण्डल रचनां भास्करेण गृहीताः । प्राचीनैस्त
एव पूर्वपठिताः शरा अत्र विमण्डलरचनायामपि गृहीता ॥ इति ॥५४॥

अब विमण्डलों को कहते हैं ।

हि. भा.—क्रान्तिवृत्त और विमण्डल के सम्पात पात है, वहां से प्रथम विमण्डलार्धं
(मेषादि छः राशिरूप) को शरांशान्तर पर उत्तर तरफ तथा द्वितीय विमण्डलार्धं (तुलादि
छः राशिरूप) को शरांशान्तर पर दक्षिण तरफ बांधना चाहिये । इन अपने अपने विमण्डलों
में चन्द्र, भौम, गुरु, शनि भ्रमण करते हैं । बुध और शुक्र शीघ्रोच्च से अपने अपने विमण्डल
में भ्रमण करते हैं । सिद्धान्तशेखर में ‘विमण्डलार्धं प्रथमं निजेषु भागैः’ इत्यादि से श्रीपति,
‘भूमा भार्गवानोः स्वशीघ्रवृत्ते ज्ञसित पातौ’ इत्यादि से लल्लाचार्य, ‘नाडिका मण्डले क्रान्ति-
वृत्तं यथा क्रान्तिवृत्ते’ इत्यादि से भास्कराचार्य ने सब एक ही तरह कहा है । केवल भास्करा-
चार्य ने ‘शीघ्रकर्णेन भक्तास्त्रिभज्यागुणाः’ इत्यादि से साधित भगोलीय परमस्फुटशरवश से
भगोलीय विमण्डल रचना की है प्राचीनाचार्यों ने पूर्व पठितशर ही को इस विमण्डल रचना
में ग्रहण किया है इति ॥५४॥

इदानीं दृग्मण्डलाभिनिवेशमाह ।

दृग्मण्डलार्धंमूर्ध्वं यत् तत् परिधिस्थितं द्रष्टा ।

पश्यति यतः क्षितिस्थस्तद्भ्रमति ततो ग्रहाभिमुखम् ॥५५॥

सु. भा.—यतः क्षितिस्थः क्षितिगर्भस्थो द्रष्टा यदूर्ध्वं दृग्मण्डलार्धं तत्परि-
धिस्थितं ग्रहं पश्यन्ति ततस्तस्मात् कारणात् तद् दृग्मण्डलं ग्रहाभिमुखं भ्रमति ।
‘ऊर्ध्वधिर स्वस्तिककीलयुग्मे’ इत्यादि भास्करोक्तं विचिन्त्यम् ॥५५॥

वि. भा.—यतः (यस्मात् कारणात्) भूगर्भस्थो द्रष्टा ऊर्ध्वं दृग्मण्डलार्धं यत्
तत्परिधिस्थितं ग्रहं पश्यति तस्मात् कारणात् तद् दृग्मण्डलं ग्रहाभिमुखं भ्रमतीति ।
सिद्धान्तशेखरे “द्रष्टुर्ग्रहाभिमुखमभ्रमवृत्तसक्तं दृग्मण्डलं प्रतिपलं भ्रमति ग्रहाणाम्”

श्रीपत्युक्तमेवास्ति । भास्करश्च—“ऊर्ध्वाधरस्वस्तिक कीलयुग्मे प्रोतं श्लथं ह्रस्वल्यं तदन्तः । कृत्वा परिभ्राम्य च तत्र तत्र नेयं ग्रहो गच्छति यत्र यत्र । ज्ञेयं तदेवाखिल खेचराणां पृथक् पृथग्वा रचयेत्तथाष्टौ ।” यथा ह्रस्मण्डलबन्धनमुपपादयति तदेव श्रीपत्युक्ताद्यापि पर्यवस्यतीति स्फुटमेव ॥५५॥

अब ह्रस्मण्डल को कहते हैं ।

हि. भा.—भूगर्भस्थित द्रष्टा (दर्शक) ह्रस्मण्डल के ऊर्ध्व परिध्यर्ध स्थित ग्रह को देखता है इसलिये वह ह्रस्मण्डल ग्रहाभिमुख भ्रमण करता है । सिद्धान्तशेखर में ‘द्रष्टुर्ग्राहिमुखम-भ्रमवृत्तसक्त’ ह्रस्मण्डलं प्रतिपलं भ्रमति ग्रहाणाम् ।’ श्रीपति इस तरह कहते हैं । भास्कराचार्य ‘ऊर्ध्वाधरस्वस्तिक कीलयुग्मे प्रोतं श्लथं ह्रस्वल्यं तदन्तः ।’ इत्यादि से ह्रस्मण्डल बन्धन को जैसे कहते हैं श्रीपत्युक्ति से भी वही होता है इति ॥५५॥

इदानीं दृक्षेपवृत्तमाह ।

क्षितिजापमण्डलयुतिर्लग्नं लग्नाग्रया दिशा लग्नम् ।

दृक्षेपमण्डलं दक्षिणोत्तरं वित्रिभल्लगने ॥५६॥

सु. भा.—क्षितिजक्रान्तिमण्डलयोर्यत्र युतिस्तदेव लग्नम् । दृक्षेपमण्डलं लग्नाग्रया दिशा लग्नं वित्रिभल्लगने वित्रिभल्लग्नस्थाने क्रान्तिमण्डले दक्षिणोत्तरं तिर्यग् भवति । लग्नाग्रा यद्युत्तरा तदा लग्नाग्रांशैर्दक्षिणसमस्थानात् पूर्वस्वस्तिक-दिशि दक्षिणाग्रायां च लग्नाग्रांशैर्दक्षिणसमस्थानात् पश्चिमस्वस्तिकदिशि क्षितिजे लग्नं वित्रिभल्लग्नस्वस्तिकगतं दृक्षेपमण्डलं भवतीत्यर्थः । ‘ज्ञेयं तदेवाखिल-खे चराणाम्’—इत्यादि भास्करोक्तं विचिन्त्यम् ॥५६॥

वि. भा.—क्षितिजवृत्तक्रान्तिवृत्तयोर्यत्र योगस्तदेव लग्नम् । लग्नोत्पन्नं नवत्यंशवृत्तं दृक्षेपवृत्तं भवति तच्च वित्रिभ लग्नस्थाने क्रान्तिवृत्ते तिर्यक् (लम्ब-रूपं) भवति, लग्नाग्रया दिशा लग्नमर्थल्लग्नग्रा यद्युत्तरा तदा दक्षिणसमस्था-नाल्लग्नग्रांशैः पूर्वस्वस्तिकदिशि यदि च लग्नाग्रा दक्षिणा तदा दक्षिणसमस्था-नाल्लग्नग्रांशैः पश्चिमस्वस्तिकदिशि क्षितिजे लग्नं वित्रिभल्लग्नस्वस्तिकगतं तत् (दृक्षेपवृत्तं) भवतीत्यर्थः । सिद्धान्तशेखरे ‘प्रागलग्नमत्र भवनत्रितयेन हीनं दृक्षेपमण्डलमुशन्ति कुशाग्रधीराः’ इत्यनेन श्रीपतिः, सिद्धान्तशिरोमणौ ‘ह्रस्मण्डलं वित्रिभल्लग्नकस्य दृक्षेपवृत्ताख्यमिदं वदन्ती’ त्यनेन भास्करोऽप्याचार्योक्तानुरूपमेव कथयतीति ॥५६॥

अब दृक्षेपवृत्त को कहते हैं ।

हि. भा.—क्षितिजवृत्त और क्रान्तिवृत्त की पूर्व दिशा में जहाँ योग है वही लग्न है ।

लग्नोत्पन्न नवत्यंश वृत्त दृक्क्षेपवृत्त होता है। वह (दृक्क्षेपवृत्त) विभिन्न लग्नस्थान में क्रान्तिवृत्त के ऊपर तिर्यक् (लम्ब रूप) होता है, तथा लग्नाग्रा यदि उत्तर दिशा की है तब दक्षिण समस्थान से लग्नाग्रांशान्तर पर पूर्वस्वस्तिक की तरफ यदि लग्नाग्रा दक्षिण दिशा की है तब दक्षिण समस्थान से लग्नाग्रांशान्तर पर पश्चिम स्वस्तिक की तरफ क्षितिजवृत्त में लगता है। अर्थात् वह दृक्क्षेपवृत्त विभिन्नलग्न और खस्वस्तिक में गया हुआ होता है। सिद्धान्तशेखर में 'प्राग्लग्नमत्र भवनत्रितयेन हीन' इत्यादि से श्रीपति तथा सिद्धान्तशिरोमणि में 'दृग्मण्डलं विभिन्न लग्नकस्थ' इत्यादि से भास्कराचार्य ने भी आचार्योक्त के अनुरूप ही कहा है इति ॥५६॥

इदानीं मेषादि द्वादशराशीनामहोरात्रवृत्तान्यमाह ।

ष्टचंशाः = ९०-वृषान्तजायनवलनम् । गोलसन्धावायनवलनं परमं जिनांशसमम् ।
 अयनसन्धावर्थांमिथुनान्ते आयनवलनम् = ०, अत एतयोर्मध्ये वृषान्ते आयनवल-
 नम् < २४ परमाल्पद्युज्याचापम् = ६०-जिनांश = ६०-२४ = ३६,

वृषान्ते यष्टचंशाः = ९०-वृषान्तजायनवलनं = ९०-जिनांशाल्पाऽऽयनव-
 लनम् । अतो वृषान्ते यष्टचंशाः > परमाल्पद्युज्याचापम्, ध्रुगोमे चापीय त्रिभुजेऽनु-
 पातः क्रियते ज्या < गोध्रुमे = $\frac{\text{परमाल्पद्युज्या} \times \text{ज्या } ३०}{\text{मेषान्तद्युज्या}}$ = मेषोदयज्या = ज्यागोन

ध्रुमेव चापीय त्रिभुजेऽनुपातेन $\frac{\text{वृषान्तजयष्टि} \times \text{ज्या } ३०}{\text{मेषान्तद्युज्या}}$ = ज्या < मेध्रुवृ = ज्या

नम = वृषोदयज्या, परन्तु वृषान्तय > परमाल्पद्यु । अतः $\frac{\text{वृषान्तयष्टि} \times \text{ज्या } ३०}{\text{मेषान्तद्युज्या}}$

> $\frac{\text{परमाल्पद्युज्या} \times \text{ज्या } ३०}{\text{मेषान्तद्युज्या}}$ अर्थात् वृषोदयज्या > मेषोदयज्या वा मेषोदयमान

< वृषोदयमानं, एवमेव मिष्टध्रुचापीय त्रिभुजेऽनुपातेन $\frac{\text{वृषान्तयष्टि} \times \text{ज्या } ३०}{\text{परमाल्पद्युज्या}}$

= ज्या < मिध्रुवृ = ज्यामश = मिथुनोदयज्या, परन्तु वृषान्तयष्टि > परमाल्पद्यु
 तथा मेषान्तद्यु > परमाल्पद्यु अतः $\frac{\text{वृषान्तयष्टि} \times \text{ज्या } ३०}{\text{परमाल्पद्यु}}$

> $\frac{\text{वृषान्तयष्टि} \times \text{ज्या } ३०}{\text{मेषान्तद्यु}}$ अर्थात् मिथुनोदयज्या > वृषोदयज्या

∴ मिथुनोदयज्या < वृषोदयज्या < मेषोदयज्या वा मिथुनोदयमा < वृषोद-
 यमान < मेषोदयमान ∴ सिद्धम् ।

एतदुपपत्तिर्वस्तुतो यथैव शिष्यधीवृद्धिदतन्त्रे लल्लाचार्येणोक्ता तथैव
 हलोकान्तरेण श्रीपतिना भास्कराचार्येण चोक्ता स्वस्वग्रन्थे ।

यथा लल्लः—

लङ्कावृत्ते मध्यस्थिते भुवो यत्कुजं तद्वृत्तम् ।

तेन न तत्र चरदलं सदा समत्वं च दिवसनिशोः ॥

इत्यादि से प्राचीनोक्त ग्रहोरात्रवृत्तों के सदृश ही ग्रहोरात्रवृत्त कहते हैं । केवल ग्रयनांश की उपलब्धि के हेतु से 'विषुवत्क्रान्तिवलयोः सम्पातः क्रान्तिपातः स्यात्' पहले यह कह कर 'अथ कल्प्या मेषाद्या अनुलोमं क्रान्तिपाताङ्कात् ।' यह कहते हैं इति ॥५७-५८॥

इदानीं राश्युदयाः कथं समानेत्याशङ्क्याह ।

लङ्का समपश्चिमगं प्राणेन कलां भ्रमण्डलं भ्रमति ।

अपमण्डलस्य राशिर्द्वादशभागः क्षितिजलग्नाः ॥५९॥

यान्त्युदयं मेषाद्या यतस्तदुदया न कालसमाः ।

क्रान्तिवशाल्लङ्कायां तदूनताधिक्यमक्षवशात् ॥६०॥

सु. भा.—लङ्कासमपश्चिमगं भ्रमण्डलं भ्रमण्डलं भ्रमण्डलप्रदेशरूपं नाडीमंडलं प्राणेनैकेनासुना कलामेकं कलां भ्रमति । नाडीमण्डलस्यैका कलैकेनासुनोदेति । क्रान्तिमण्डलस्य द्वादशभागो द्वादशसमानभागो राशिः कथ्यते । ते मेषाद्याः क्षितिजलग्ना यत उदयं यान्त्यतो लङ्कायां क्रान्तिवशात् तिरश्चीनत्वात् तदुदयाः कालसमाः कालेन समा न सन्ति । एवं स्वदेशेऽपि क्रान्तिवशादक्षवशाच्च तेषां राशीनामुदयेषु ऊनताधिक्यं भवति । 'यो हि प्रदेशो ऽपमण्डलस्य तिर्यक्स्थितो यात्युदयं तथाऽस्तम्'—इत्यादि भास्करोक्तं चिन्त्यम् ॥६०॥

 सिद्धान्तशिरोमणौर्गोलाध्याये भास्कराचार्यश्च ।
 “यो हि प्रदेशोऽपममण्डलस्य तिर्यक् स्थितो यात्युदयं तथाऽस्तम् ।
 सोऽल्पेन कालेन य ऊर्ध्वसंस्थोऽनल्पेन सोऽस्मादुदया न तुल्याः ॥
 य उद्गमे याम्यनता मृगाद्याः स्वस्वापमेनापि निरक्षदेशे ।
 याम्याक्षतस्तेऽति नतत्वमाप्ता उद्यन्ति कालेन ततोऽल्पकेन ॥
 कर्क्यादयः सौम्यनता हि येऽत्र ते यान्ति याम्याक्षवशाद्भुजुत्वम् ।
 कालेन तस्माद्बहुनोदयन्ते तदन्तरे स्वं चरखण्डमेव ॥” इति ५९-६०॥

अब राशियों का उदयमान् बराबर क्यों नहीं होता है सो कहते हैं ।

हि. भा.—भूचक्रमध्यप्रदेशरूप नाड़ीवृत्त एक अक्षु में एक कला भ्रमण करता है
 अर्थात् नाड़ीवृत्त की एक कला एक अक्षु में उदित होती है । क्रान्तिवृत्त का समान द्वादश
 भाग राशि कहलाता है । वे मेषादिराशि क्षितिज संलग्न होने से उदित होता है इसलिये
 क्रान्तिवश से लङ्का में वह उदय काल बराबर नहीं होता है एवं अपने देश में भी क्रान्तिवश
 से और अक्षांश वश से उन राशियों के उदय में न्यूनाधिक्य होता है इति ॥५९-६०॥

उपपत्ति ।

राश्यादि के ऊपर ध्रुवप्रोतवृत्त तथा राश्यन्त के ऊपर ध्रुवप्रोतवृत्त नाड़ीवृत्त में जहाँ

लगता है तदन्तर्गत नाडीवृत्तीय चाप उस राशि का निरक्षदेशीय उदयमान होता है। जैसे मेषादिगत ध्रुवप्रोतवृत्ता में नाडीवृत्त मेषादि (गोलसन्धि) ही में लगता है वहां (मेषादि) से मेषान्तोपरिगत ध्रुव प्रोतवृत्त नाडीवृत्त के सम्पात पर्यन्त निरक्षदेशीय मेषोदयमान है। एवं मेषान्तो (वृषादि) परिगत ध्रुव प्रोतवृत्त तथा वृषान्तोपरिगत ध्रुव प्रोतवृत्त के अन्तर्गत नाडीवृत्तीय चाप निरक्ष देशीय वृषोदयमान है एवं वृषान्तो (मिथुनादि) परिगत ध्रुवप्रोतवृत्त तथा मिथुनान्तोपरिगत ध्रुवप्रोतवृत्त के अन्तर्गत नाडीवृत्तीय चाप निरक्ष देशीय मिथुनोदय मान है, इन उदयमानों में न्यूनाधिक्य क्यों होता है तदर्थ निम्नलिखित युक्ति है यहां संस्कृतोपपत्ति में लिखित (१) क्षेत्र को देखिये।

गो = गोलसन्धि = मेषादि, मे = मेषान्त बिन्दु। वृ = वृषान्तबिन्दु। मि = मिथुनान्त बिन्दु। गोमे = मेवृ = वृमि = ३०° गोम = मेषोदयमान। नम = वृषोदयमान। मश = मिथुनोदयमान। ध्रु = ध्रुव। ध्रुमि = परमाल्पद्युज्याचाप ध्रुमे = मेषान्तद्युज्याचाप। ध्रुवु = वृषान्त द्युज्याचाप। < ध्रुगोमि = परमाल्पद्युज्यांश, < मेवृध्रु = वृषान्तज्यष्ट्यंश = ६० - वृषान्त-जायनवल। गोल सन्धि में आयनवलन परम जिनांश (२४) के बराबर होता है अयन सन्धि (मिथुनान्त) में आयनवलनाभाव होता है अतः इन दोनों के बीच (वृषान्त) में आयनवलन < २४, परमाल्पद्युज्याचाप = ६० - जिनांश = ६० - २४ = ३६, वृषान्त में ज्यष्ट्यंश = ६० - वृषान्तायनवलन = ६० - जिनांशलपायनवलन। अतः वृषान्त में ज्यष्ट्यंश < परमाल्प-द्युज्याचाप। ध्रुगोमे चापीय त्रिभुज में अनुपात करते हैं $\frac{\text{परमाल्पद्यु} \times \text{ज्या } ३०}{\text{मेषान्तद्यु}} = \text{ज्या}$

< गोध्रुमे = मेषोदयज्या = ज्यागोन। ध्रुमेवृ चापीय त्रिभुज में अनुपात से $\frac{\text{वृषान्तयष्टि} \times \text{ज्या } ३०}{\text{मेषान्तद्यु}} = \text{ज्या} < \text{मेध्रुव} = \text{ज्यामश} = \text{मिथुनोदयज्या}$ परन्तु वृषान्तयष्टि >

परमाल्पद्यु. $\therefore \frac{\text{वृषान्तय} \times \text{ज्या } ३०}{\text{मेषान्तद्यु}} > \frac{\text{परमाल्पद्यु} \times \text{ज्या } ३०}{\text{मेषान्तद्यु}}$ अर्थात् वृषोदयज्या >

मेषोदयज्या वा मेषोदयमान < वृषोदयमान। इसी तरह मिथुध्रु चापीय त्रिभुज में अनुपात से $\frac{\text{वृषान्तयष्टि} \times \text{ज्या } ३०}{\text{परमाल्पद्यु}} = \text{ज्या} < \text{मिध्रुव} = \text{ज्यामश} = \text{मिथुनोदयज्या}$ । परन्तु वृषान्तयष्टि

> परमाल्पद्यु, तथा मेषान्तद्यु > परमाल्पद्यु

अतः $\frac{\text{वृषान्तय} \times \text{ज्या } ३०}{\text{परमाल्पद्यु}} > \frac{\text{वृषान्तय} \times \text{ज्या } ३०}{\text{मेषान्तद्यु}}$ अर्थात् मिथुनोदयज्या > वृषो-दयज्या, अतः मिथुनोदयज्या > वृषोदयज्या > मेषोदयज्या, वा मिथुनोदयमान > वृषोदयमान > मेषोदयमान। अतः आचार्योक्त उपपन्न हुआ। यह उपपत्ति यथार्थतः शिष्यवीवृद्धिदत्तन्त्र में जिस तरह लल्लाचार्य ने कहा है उसी तरह श्लोकान्तर से श्रीपति और भास्कराचार्य ने अपने ग्रन्थ में कहा है।

जैसे ललाचार्योक्त शिष्यवृद्धिदत्तत्र में

‘लङ्कावृत्ते मध्यस्थिते भुवो यत्कुजं तदुद्धृतम्’ इत्यादि संस्कृतोपपत्ति में श्लोकों को देखना चाहिये ।

सिद्धान्तशेखर में श्रीपति

‘यो द्वादशांशोऽपममण्डलस्य राशिः स ते द्वादश मेघ पूर्वाः’ इत्यादि संस्कृतोपपत्ति में लिखित श्लोकों को देखना चाहिये ।

सिद्धान्तशिरोमणि गोलाध्याय में भास्कराचार्य

‘यो हि प्रदेशोऽपममण्डलस्य तिर्यक् स्थितो यात्युदयं’ इत्यादि संस्कृतोपपत्ति में देखना चाहिये ॥५६-६०॥

इदानीं चराग्रयोः संस्थानमाह ।

क्षितिजोन्मण्डलयोर्यत्स्वाहोरात्रान्तरं चरदलं तत् ।

क्षितिजेऽग्रा प्राच्यपरस्वाहोरात्रान्तरांशज्या ॥६१॥

मु. भा.—स्पष्टार्थम् । ‘उन्मण्डलक्षमावलयान्तराले’—इत्यादि तथा ‘क्षमाजे द्युरात्रसमण्डलमध्यभाग’—इत्यादि भास्करोक्तमेतदनुरूपं विचिन्त्यम् ॥६१॥

वि. भा.—स्वक्षितिजवृत्तोन्मण्डलयोरन्तरेऽहोरात्रवृत्तीयं चापं चरखण्डकालः कथ्यते । क्षितिजाहोरात्रवृत्तयोः सम्पातात्पूर्वस्वस्तिकं यावत् क्षितिजवृत्तेऽग्रांशाः । एतज्ज्याऽग्रा कथ्यते इति । सिद्धान्तशिरोमणौ गोलाध्याये ‘उन्मण्डलक्षमावलयान्तराले द्युरात्रवृत्ते चरखण्डकाल’ इत्यनेन भास्कराचार्येणाप्याचार्योक्तानुरूपमेव कथितम् । तथे’ क्षमाजे द्युरात्र समण्डलमध्यभागजीवाऽग्रा भवति पूर्वपराशयोः सा’ त्यनेनाचार्योक्तानुरूपमेवाग्रा स्वरूपं कथितमिति ॥६१॥

अब चर और अग्रा की स्थिति को कहते हैं ।

हि. भा.—स्वक्षितिजवृत्त और उन्मण्डल के अन्तर्गत अहोरात्र वृत्तीय चाप चरखण्ड काल कहलाता है । क्षितिजाहोरात्र वृत्त के सम्पात से पूर्वस्वस्तिकपर्यन्त क्षितिज वृत्तीय चाप अग्रांश है इसकी ज्या अग्रा कहलाती है । सिद्धान्तशिरोमणि गोलाध्याय में उन्मण्डल-क्षमावलयान्तराले’ इत्यादि से भास्कराचार्य आचार्योक्त चर खण्डकाल के सदृश ही चरखण्ड काल कहा है । तथा ‘क्षमाजे द्युरात्र समण्डल मध्यभाग’ इत्यादि से आचार्योक्त अग्रा के अनुरूप ही अग्रा को भी कहा है इति ॥६१॥

इदानीं शङ्कुदृग्ज्ययोः संस्थानमाह ।

स्वाहोरात्रे क्षितिजाद्दिनगतशेषोच्छता रवेः शङ्कुः ।

तस्माद्दिनगतशेषं शङ्कुमध्यान्तरं दृग्ज्या ॥६२॥

सु. भा.—क्षितिजात् सकाशात् स्वाहोरात्रवृत्ते दिनगते वा पश्चिमकपाले दिनशेषे या रवेरुच्चता लम्बरूपा स शङ्कुर्भवति । तस्माच्छङ्कोश्च त्रिप्रश्नाधिकारविधिना दिनगतशेषं च भवति । शङ्कुमूलस्य भूगर्भस्य चान्तरं दृग्ज्येत्युच्यते । रविकेन्द्रात् क्षितिजोपरि लम्बः शङ्कुः । शङ्कुमूलं भूगर्भान्तरं च दृग्ज्या भवतीत्यर्थः ॥६२॥

वि. भा.—क्षितिजात् स्वाहोरात्रवृत्ते दिनगते वा पश्चिमकपाले दिनशेषे या रवेरुच्चता लम्बरूपा स शङ्कुर्भवति । तस्मात् (शङ्कोः) त्रिप्रश्नाधिकारोक्तविधिना दिनगतशेषं च भवति । शङ्कुमूलस्य भूगर्भस्य चान्तरं दृग्ज्येति कथ्यते । रविबिम्बकेन्द्रात् क्षितिजधरातलोपरि लम्बः शङ्कुः कथ्यते । सिद्धान्तशेखरे “पूर्वापरक्षितिजवृत्त उन्नतांशज्याशङ्कुरत्र कथितः स्फुटमिष्टभायाम् । तस्याग्रतो दिनकरोऽम्बररत्नबिम्बमध्यावलम्बकमुत प्रवदन्ति शङ्कुम् ।” इत्यनेन श्रीपतिनापि भूगर्भभूपृष्ठयोरभेदस्वीकारात् सूर्यबिम्ब केन्द्रात् क्षितिजधरातलोपरि लम्बसूत्रं शङ्कुः कथ्यते । शिष्यधीवृद्धिदत्तन्त्रे लल्लः “पूर्वापरकुजवृत्तादुन्नतलवशिञ्जिनीष्टभाशङ्कुः । तस्याग्रे दिवसकरो नरोऽर्कबिम्बावलम्बो वा ।” भास्कराचार्यश्च “दृष्टिमण्डलभवा लवाः कुजादुन्नता गगनमध्यतो नताः । शङ्कुरुन्नतलवज्यका भवेद् दृग्गुणश्च नतभाग शिञ्जिनी ।” तथैव सदृशोत्तथैव शङ्कुप्रतिपादयन्तीति ॥६२॥

अब शङ्कु और दृग्ज्या की स्थिति को कहते हैं ।

हि. भा.—क्षितिजवृत्त से स्वाहोरात्रवृत्त जो दिनगत है उसमें वा पश्चिमकपाल में दिनशेष में रवि की जो उच्चता है वह शङ्कु है अर्थात् रवि बिम्बकेन्द्र से क्षितिज धरातल के ऊपर लम्ब रेखा शङ्कु है । उस शङ्कु से त्रिप्रश्नाधिकारोक्त विधि से दिनगत और दिनशेष होता है, शङ्कु मूल से भूगर्भपर्यन्त रेखा दृग्ज्या कहलाती है तथा रविबिम्ब केन्द्र से क्षितिज धरातल के ऊपर लम्ब रेखा शङ्कु है अर्थात् रविबिम्ब केन्द्र से खस्वस्तिक गतवृत्ता दृग्ज्या है, रवि केन्द्र से खस्वस्तिक पर्यन्त चाप नतांश चाप है इसकी ज्या दृग्ज्या है, तथा रविबिम्ब केन्द्र से दृग्ज्या और क्षितिजवृत्त के सम्पात पर्यन्त दृग्ज्या चाप उन्नतांश है, इसकी ज्या शङ्कु है । सिद्धान्तशेखर में श्रीपति, शिष्यधीवृद्धिदत्तन्त्र में लल्लाचार्य, गोलाध्याय में भास्कराचार्य सब एक ही तरह शङ्कु को कहते हैं इति ॥६२॥

इदानीं प्रकारान्तरेण तयोः संस्थानं शङ्कुतलंचाह ।

दृग्मण्डले नतांशज्या दृग्ज्या शङ्कुहृत्तानांशज्या ।

अर्कोदयास्तसूत्राद्दिनशङ्कोर्बक्षिणेन तलम् ॥६३॥

सु. भा.—दिनशङ्कोर्दिवाशङ्कोस्तलं मूलमर्कोदयास्तसूत्राद्बक्षिणेन भवति ।

अर्कग्रहणमुपलक्षणार्थम् ।

शेषं स्पष्टार्थम् । 'दृष्टिमण्डलभवा लवाः कुजात्'—इत्यादिभास्करोक्तमेतदनुरूपं विचिन्त्यम् ॥६३॥

वि. भा.—दृग्वृत्ते यो हि नतांशस्तज्ज्या दृग्ज्या कथ्यते, उन्नतांशचापस्य ज्या शङ्कुः । दिवाशङ्कुमूलं रवेरुदयास्तसूत्रादक्षिणेन भवति । अत्रार्कग्रहणमुपलक्षणार्थम् । रव्युपरि दृग्वृत्ते निवेशिते दृग्वृत्तक्षितिजवृत्तयोः सम्पातद्वयगतं सूत्रं दृक्कुज सूत्रम् । रवि बिम्बकेन्द्रादूर्ध्वाधर सूत्रोपरि लम्बरेखा दृग्ज्या । रविबिम्बकेन्द्रादेव दृक्कुज सूत्रोपरिलम्बरेखा शङ्कुः । शङ्कुमूलाद् भूकेन्द्रपर्यन्तं दृक्कुजसूत्रखण्डं तथा नतांशज्यामूलाद् भूकेन्द्रपर्यन्तमूर्ध्वाधरसूत्रखण्डं चेति भुजचतुष्टयैरेकं चतुर्भुजं जातम् । अत्र शङ्कूर्ध्वाधररेखयोः समानान्तरत्वात् नतांशज्या-दृक्कुजसूत्र खण्डं च समानान्तरमत इत्यायतं चतुर्भुजम् । तेन दृक्कुजसूत्रखण्डं दृग्ज्यासंज्ञकं रविबिम्बकेन्द्रादूर्ध्वाधरसूत्रोपरिलम्बेन नतांशज्या प्रमाणेन समानम् । तथैव शङ्कुरेखा नतांशज्यामूलाद् भूकेन्द्रपर्यन्तमूर्ध्वाधरसूत्र खण्डेन समानेति । अत्र लल्लोक्तम्—“अम्बरमध्यांशुमतोर्मध्यांशज्या भवेन्नतज्या रवे । शङ्कोर्मूलाद्विड्मध्यगामिनी भूतले दृग्ज्या ।” इति “दृष्टिमण्डलभवा लवाः कुजादुन्नता गगनमध्यतो नताः” इत्यादि भास्करोक्तं च सदृशमेवेति ॥६३॥

अब प्रकारान्तर से उन दोनों (दृग्ज्या और शङ्कु) की संस्थिति और शङ्कुतल को कहते हैं ।

हि. भा.—दृग्वृत्त में जो नतांश चाप है उसकी ज्या दृग्ज्या कहलाती है । तथा उन्नतांश चाप की ज्या शङ्कु कहलाती है । दिवाशङ्कुमूल रवि के उदयास्त सूत्र से दक्षिण होता है । यहां रविग्रहण उपलक्षण के लिये है । रविबिम्ब केन्द्र के ऊपर दृग्वृत्त करने से दृग्वृत्त और क्षितिज वृत्त के दो स्थानों में जो योग है तद्गत सूत्र दृक्कुज सूत्र है । रवि बिम्बकेन्द्र से ऊर्ध्वाधर सूत्र के ऊपर लम्बरेखा दृग्ज्या है रवि बिम्ब केन्द्र ही से दृक्कुज सूत्र के ऊपर लम्ब रेखा शङ्कु । शङ्कुमूल से भूकेन्द्रपर्यन्त दृक्कुज सूत्रखण्ड तथा नतांशज्या मूल से भूकेन्द्रपर्यन्त ऊर्ध्वाधर सूत्रखण्ड इन चारों भुजों से एक चतुर्भुज उपपन्न हुआ । यहां शङ्कु और ऊर्ध्वाधर सूत्र के समानान्तर होने के कारण नतांशज्या और दृक्कुज सूत्रखण्ड समानान्तर हुआ अतः यह आयत चतुर्भुज है । इसलिये दृक्कुज सूत्र खण्ड दृग्ज्या संज्ञक रवि बिम्ब केन्द्र से ऊर्ध्वाधर सूत्र के ऊपर लम्बनतांशज्या के बराबर हुआ । उसी तरह शङ्कुसूत्र और नतांशज्यामूल से भूकेन्द्रपर्यन्त ऊर्ध्वाधर सूत्र खण्ड के बराबर हुआ । यहां “अम्बरमध्यांशुमतोः” इत्यादि लल्लोक्त तथा ‘दृष्टिमण्डलभवा लवाः’ इत्यादि भास्करोक्त समान ही है इति ॥६३॥

इदानीं दृग्गोलस्य दृश्यादृश्यत्वं लम्बनावनत्युत्पत्तौ कारणं चाह ।

दृश्यादृश्यं दृग्गोलाधं भूव्यासदलविहीनयुतम् ।

दृष्ट्वा भूगोलोपरि यतस्ततो लम्बनावनती ॥६४॥

सु. भा.—दृग्गोलार्धं दृग्मण्डलार्धं भूव्यासदलेन विहीनं कुपृष्ठगानां दृश्यं खण्डं भूव्यासदलेन युतं चादृश्यखण्डं भवति । यतो द्रष्टा भूगोलोपरि भूपृष्ठे तिष्ठति ततस्तस्माल्लम्बनावनती भवतः । कुपृष्ठगानां कुदलेन हीनं—इत्यादि तथा 'यतः क्वर्धोच्छ्रितो द्रष्टा'—इत्यादि भास्करोक्तमेतदनुरूपं विचिन्त्यम् ॥६४॥

वि. भा.—हृग्मण्डलार्धं भूव्यासार्धेन विहीनं तदा भूपृष्ठवासिनां दृश्यं खण्डं भवति । हृग्मण्डलार्धं भूव्यासार्धेन युतं तदाऽदृश्यं खण्डं भवति । यतो द्रष्टा भूपृष्ठोपरि तिष्ठति तस्मात् कारणाल्लम्बनावनती भवेताम् ।

 $\text{स्तुल्यत्वात् ज्या} < \text{ग्रपृख} = \text{ज्या (१८०} - < \text{ग्रपृख)} = \text{पृष्ठीयहृग्ज्या} = \text{ज्या} < \text{ग्रपृभू} \mid$
 $\text{भूग्र} = \text{ग्रहकर्णः} \mid \text{तदाऽनुपातेन } \frac{\text{पृहृग्ज्या.भूव्याऽ}}{\text{ग्रकर्ण}} = \text{ज्या} < \text{भूग्रपृ} = \text{हृग्लम्बन-}$

ज्या, यतः < भूग्रपृ = < यग्र न नीलाम्बरगोलस्य केन्द्रं यत्र कुत्रापि कल्पयितुं शक्यं ते तेन ग्र बिन्दावपि तत्केन्द्रं भवितुमर्हति । अतः < यग्रर = यर चापम् । परं यरचापम् = दृग्लम्बनम् । अतः < भूग्रपृ कोणोऽपि दृग्लम्बनम् । नतिश्च दृग्लम्बनाधीना । लम्बननत्योत्पत्तेः कारणं भूपृष्ठबिन्दुरेव सिद्धान्तशेखरे दृग्लम्बनार्धं यदि होर्ध्ववर्तिग्रहं यतस्तत्परिणाहसंस्थम् । द्रष्टा प्रपश्यत्यवनीतलस्थो भ्रमत्यतः खचरसंमुखं तत् ।” लल्लश्च-दृग्लम्बनमुपरिष्ठाद् दृष्टः स्यात्तद्वृत्तौ खचरः । श्रीपतेः प्रमाणम् । भास्कराचार्यः-कुपृष्ठगानां कुदलेन हीनं दृग्लम्बनार्धं खचरस्य दृश्यम् ।

कुच्छन्नलिप्तानुरतो विशोऽध्याः स्वभुक्तितिथ्यंशमिताः प्रभार्थम् ।” इति विशेषमा-
हेति ॥६४॥

अब दृग्गोल के दृश्यत्व और अदृश्यत्व को तथा लम्बन और नति की उत्पत्ति के
कारण को कहते हैं ।

हि. भा.—दृग्मण्डलार्ध में भूव्यासार्ध घटाने से भूपृष्ठस्थ लोगों का दृश्यखण्ड होता
है । दृग्मण्डलार्ध में भूव्यासार्ध जोड़ने से अदृश्य खण्ड होता है । क्योंकि द्रष्टा भूपृष्ठ के
ऊपर रहता है इसलिये लम्बन और नति होती है (अर्थात् लम्बन और नति की उत्पत्ति
होती है) ।

उपपत्ति ।

यहां संस्कृतोपपत्ति में लिखित (क) क्षेत्र को देखिये । भू = भूकेन्द्र, पृ = भूपृष्ठस्थान
चभूज = गर्भक्षितिजधरातल । नपृम = पृष्ठक्षितिजध, भूपृ = भूव्यासार्ध = भूव्या^३, ग्र = दृग्म-
ण्डले ग्रहः । नखम = क्षितिज से ऊपर दृग्मण्डलार्ध = दृश्यखण्ड । भूख = दृग्मण्डलव्यासार्ध ।
दृग्मण्डलव्या^३ — भूव्या^३ = पृख । पृ (भूपृष्ठ) स्थित द्रष्टा दृग्मण्डलार्ध (दृश्यखण्ड) स्थित
(ग्र) ग्रह को देखता है । क्षितिज अधोभाग में दृग्मण्डलार्ध = अदृश्यखण्ड = दृग्मण्डलव्या^३
+ भूव्या^३ । भू और पृ बिन्दुओं से ग्र—ग्रहगत भूग्र, पृग्र रेखाद्वय को बढ़ाने से नीलाम्बर
गोलीय दृग्मण्डल में जहां लगता है तदन्तर्गत दृग्मण्डलीय चाप दृग्लम्बन कहलाता है ।
यर = दृग्लम्बन अख = पृष्ठीयनतांश = < ग्रपृख, कोणज्या और कोणोन भाषांशज्या बराबर
होती है अतः ज्या < ग्रपृख = ज्या (१८० — < ग्रपृख) = पृष्ठीयदृग्ज्या = ज्या < ग्रपृभू ।
भूग्र = ग्रहकर्ण । तब अनुपात से $\frac{\text{पृदृज्या. भूव्या}^3}{\text{ग्रकर्ण}} = ज्या < भूग्रपृ = दृग्लम्बन ज्या$ । क्योंकि

< भूग्रपृ = < यग्रर । नीलाम्बर गोल के केन्द्र जहां तहां मान सकते हैं, अतः ग्र बिन्दु में भी
उसका केन्द्र हो सकता है, अतः < यग्रर = यरचाप, लेकिन यरचाप = दृग्लम्बन ।

∴ < भूग्रपृ = दृग्लम्बन । नति दृग्लम्बन के अधीन है । लम्बन और नति की
उत्पत्ति के कारण भूपृष्ठ बिन्दु ही है । सिद्धान्तशेखर में ‘दृग्मण्डलार्ध यदिहोर्ध्ववर्ति’ इत्यादि
संस्कृतोपपत्ति में लिखित श्लोक से श्रीपति ने कहा है । भास्कराचार्य सिद्धान्तशिरोमणि
में “कुपृष्ठगानां कुदलेन हीन” इत्यादि विशेष कहते हैं इति ॥६४॥

इदानीं परमलम्बनावनती आह ।

क्षितिजे भूदललिप्ताः कक्षायां दृङ्मतिर्नभो मध्यात् ।

अवनतिलिप्ता याम्योत्तरा रविग्रहवदन्यत्र ॥६५॥

सु. भा.—नभोमध्यात् खस्वस्तिकात् कक्षायां ग्रहगोले दृग्मण्डले क्षितिजे

या भूदललिप्ताः कुच्छन्नलिप्ताः सा दृङ्नतिर्दृग्लम्बनं परममुच्यते । अवनतलिप्ता तत्र दृग्मण्डले याम्योत्तरा लम्बरूपा भवति अन्यत्र ग्रहयोर्वा भग्रहयोर्युतावेवं दृग्लम्बननतिसंस्थानं विज्ञाय स्पष्टलम्बनादिकं रविग्रहवत् कार्यमिति । दिग्मात्रमिहाचार्येण प्रदर्शितं ग्रहयुत्यादौ च विशेषतः प्रतिपादितमिति ॥६५॥

वि. भा.—नभोमध्यात् (खस्वस्तिकात्) कक्षायां (ग्रहगोलीयदृग्मण्डले) क्षितिजे या भूदललिप्ताः (भूव्यासार्धकलाः-कुच्छन्नकला वा) सा दृङ्नतिः (परमं दृग्लम्बनं) कथ्यते, तत्र दृग्मण्डलेऽवनतिकला याम्योत्तरा (लम्बरूपा) भवति । अन्यत्र (ग्रहयुतौ-भग्रहयुतौ च) वं नतिदृग्लम्बनयोः संस्थानं ज्ञात्वा सूर्यग्रहणवत् स्पष्टलम्बनादिकं सर्वं कार्यमिति ॥६५॥

अत्रोपपत्तिः ।

पूर्वश्लोकोपपत्तौ प्रदर्शितं दृग्लम्बनज्या स्वरूपम् = $\frac{\text{पृष्ठज्या. भूव्यासः}}{\text{ग्रहकर्णः}}$

एतत्स्वरूपा बलोकनेन स्फुटमवसीयते यत्पृष्ठीयदृग्ज्याया यत्र परमत्वं भवेत्तत्रैव दृग्लम्बनज्यायाः परमत्वं भवेद्यदि कर्णमानं स्थिरं भवेत् । पृष्ठक्षितिजदृग्मण्डलयोः सम्पातबिन्दौ स्थिते ग्रहे पृष्ठीयदृग्ज्या = त्रि, तदा तत्र परमा दृग्लम्बनज्या = $\frac{\text{त्रि. भूव्यासः}}{\text{ग्रहकर्णः}}$ अस्याश्चापं गर्भक्षितिजपृष्ठक्षितिजयोरन्तर्गतं दृग्मण्डलीयचापं कुच्छन्नकलामानम् = परम दृग्लम्बनम् । नतैः परमत्वं वित्रिभे ग्रहे भवति दृग्लम्बननत्योन्ननेन स्पष्टलम्बनज्ञानं भवेत्तद्वशतो ग्रहयुत्यादेर्ज्ञानं भवतीति ग्रहयुत्यधिकाराबलोकनेन स्फुटं भवतीति ॥६५॥

अब परमलम्बन और नति को कहते हैं ।

हि. भा.—खस्वस्तिक से ग्रहगोलीय दृग्मण्डल और पृष्ठक्षितिज के योग बिन्दु में जो भूव्यासार्धकला (कुच्छन्नकला) होती है वह परम दृग्लम्बन कला है । उस दृग्मण्डल में नतिकला याम्योत्तरा (लम्बरूप) होती है । अन्यत्र (ग्रहयुति-भग्रहयुति में) इस तरह नति और दृग्लम्बन की संस्थिति जानकर सूर्यग्रहणवत् स्पष्टलम्बनादिक सब कुछ साधन करना चाहिये । यहां आचार्य ने केवल संकेत मात्र दिखलाया है, ग्रहयुत्यादि में विशेषरूप से कहते हैं इति ॥६५॥

उपपत्ति ।

पूर्वश्लोक की उपपत्ति में दृग्लम्बनज्या का स्वरूप = $\frac{\text{पृष्ठज्या. भूव्यासः}}{\text{ग्रहकर्णः}}$ इसको देखने

से मालूम होता है कि यदि ग्रहकर्ण को स्थिर माना जाय तब पृष्ठीय दृग्ज्या का परमत्व

जहां होगा वहीं दृग्लम्बन का भी परमत्व होगा। परन्तु ज्या परम त्रिज्या के बराबर होती है, पृष्ठीय दृग्लम्बन त्रिज्या के बराबर पृष्ठक्षितिज और दृग्लम्बन के सम्पात बिन्दु में ग्रह के रहने से होती है अतः वहीं (पृष्ठक्षितिज दृग्लम्बन के सम्पात बिन्दु) पर परम दृग्लम्बन (गर्भक्षितिजधरातल और पृष्ठक्षितिज धरातल के अन्तर्गत दृग्लम्बनीय चाप (कुच्छन्नकला) होता है। नति का परमत्व विभिन्न स्थान में ग्रह के रहने से होता है। दृग्लम्बन और नति के ज्ञान से स्पष्ट लम्बन ज्ञान होता है उसके वश से ग्रह युत्यादि ज्ञान होता है यह ग्रहयुत्यधिकार देखने से स्पष्ट है इति ॥६५॥

इदानीं दृक्कर्माह ।

सत्रिग्रहक्रान्तिरुदग्दक्षिणयोस्त्रिज्यया हृतं चलनम् ।

विक्षेपगुणमृणधनं ग्रहेऽन्यदृक्कर्मचरदलवत् ॥६६॥

सु. भा.—उदग्दक्षिणयोस्तरदक्षिणानयनयोः सत्रिग्रहक्रान्तिः सत्रिभग्रहक्रान्तिज्या चलनमायनं चलनं भवति । तद्विक्षेपेण गुणं त्रिज्यया हृतं ग्रहे ऋणं वा धनमायनं दृक्कर्म भवति । अन्यदृक्कर्मक्षिजं दृक्कर्म चरदलवत् चरसाधनवज्ज्ञेयम् ।

अत्रोपपत्त्यर्थमुदायास्ताधिकारे ३-४ श्लोकयोरुपपत्तिर्विलोक्या । अत्रैव चतुर्वेदाचार्येण 'सत्रिग्रहोत्क्रमज्यया क्रान्तिः साध्ये' त्यन्यथा व्याख्यातमत एव भास्करः 'ब्रह्मगुप्तकृतिरत्र सुन्दरी सान्यथा तदनुगैर्विचार्यते'—इत्याद्युक्तवान् ॥६६॥

वि. भा.—उत्तरदक्षिणायनयोः सत्रिभग्रहक्रान्तिज्याऽऽयनं चलनं भवति । तन्मध्यमशरेण गुणं त्रिज्यया भक्तं फलमृणं वा धनमायनं दृक्कर्म भवति । अन्यदृक्कर्म (अक्षजं दृक्कर्म) चरदलवत् (चरसाधनवत्) बोध्यम् ॥६६॥

अत्रोपपत्तिः ।

ग्रहबिम्बकेन्द्रोपरिगतं कदम्बप्रोतवृत्तं क्रान्तिवृत्ते यत्र लगति तदेव ग्रहस्थानम् । स्थानोपरि ध्रुवप्रोतवृत्तं कार्यं बिम्बकेन्द्रोपर्यहोरात्रवृत्तं कार्यं तदा बिम्बकेन्द्रात्स्थानावधि मध्यमशर एको भुजः । बिम्बकेन्द्रात्स्थानोपरि ध्रुवप्रोतवृत्तोपरिलम्बो द्वितीयो भुजः । स्थानोपरि ध्रुवप्रोतवृत्ते तृतीयो भुजः । त्रिभुजेऽस्मिन् स्थानगतकदम्बप्रोतवृत्तध्रुवप्रोतवृत्तयोस्त्वन्नः कोण आयनचलनम् । लम्बवृत्तस्थानगतध्रुवप्रोतवृत्तयोस्त्वन्नः कोणः=९० । तेनानुपातेन

मध्यमशरज्या × आयनचलनज्या

त्रि

= लम्बवृत्तीयचापज्या = बिम्बीयाहोरात्रवृत्तीय-

चापज्या परन्तु सत्रिभग्रहक्रांज्या = बुज्याग्रीयायनवज्या ।

$$\frac{\text{मध्यशज्या.सत्रिभक्रांज्या}}{\text{त्रि}} = \frac{\text{मध्यशर. सत्रिभक्रांज्या}}{\text{त्रि}} = \text{बिम्बीयाहोरा-}$$

त्रवृचापज्या = बिम्बीयाहोरात्रवृतीयचापासवः, इति स्वल्पान्तरात् कलात्वेन स्वीकृता आचार्येण, एतस्य कलात्वेन ग्रहे संस्कारो नोचित इति मत्वापि स्वल्पान्तरस्मवगत्याऽऽचार्येण लल्लेन च तदेव फलं ग्रहे संस्कृतम् । भास्कराचार्येण मध्यश. सत्रिभक्रांज्या तन्त्रिज्याग्रे परिणतं कृतं यथा

$$\frac{\text{मध्यश. सत्रिभक्रांज्या} \times \text{त्रि}}{\text{त्रि} \times \text{बिम्बीयद्यु}} = \text{नाडीवृत्तीयायन दृक्कर्मसवः}$$

$$= \frac{\text{मध्यश. सत्रिभक्रांज्या}}{\text{बिम्बीयद्यु}} = \frac{\text{मध्यश. सत्रिभक्रांज्या}}{\text{द्यु.}}, \quad \text{स्वल्पान्तरात्}$$

बिम्बीय द्यु = स्थानीयद्यु । स्थानीयद्यु = द्यु । तत एतस्य फलस्य ग्रहसंस्कारयोग्यत्वं 'यदि निरक्षोदयासुभी राशिकला १८०० लभ्यन्ते तदैभिरसुभिः किमिति' जाता

$$\text{आयन दृक्कर्मकला} = \frac{\text{मशर. सत्रिभक्रांज्या} \times १८००}{\text{द्यु. निरक्षोदयासु}} \text{ कृतम् । यद्यपि भास्करा-}$$

चार्येण साधितमायनदृक्कर्मकला प्रमाणं समीचीनं नास्ति, किन्तु आचार्योक्तापेक्षया किञ्चित् समीचीनमस्ति । भास्कराचार्येण आयनवलनज्यास्थाने सत्रिभग्रहक्रान्तिज्या न स्वीकृता तदा तदुक्ताऽऽयनदृक्कर्मकला = $\frac{\text{मशर. आयनदलन } १८००}{\text{द्यु. निरक्षोदयासु}}$ एतेन

“आयनं वलनमस्फुटेषुणा सङ्गुणं द्युगुणं भाजितं हृतम् । पूर्णं पूर्णघृतिभिर्ग्रहा-
श्रित व्यक्षभोदयहृदायनाः कलाः ।” भास्करोक्तमिदमुपपद्यते । सिद्धान्तशेखरे
“विक्षेप सत्रिभलगोत्क्रमजाऽपमज्याधाते गृहत्रयगुणेन हृते कलास्ताः । शोध्या-
स्तयोः समदिशोः खचरेषु देया भिन्नांशयोर्भवति द्विविधेषु पूर्वः ।” श्रोपतिनैवं
कथ्यते । लल्लाचार्येण सत्रिभग्रहक्रान्तिज्या स्थाने सत्रिभग्रहक्रान्त्युत्क्रमज्या
स्वीकृता, श्रीपतिरपि बहुधाऽऽचार्य (ब्रह्मगुप्त) मतानुसरणं कुर्वन्नपि कुत्रचित्
स्थले लल्लोक्तमपि मतान्तरं स्वीचकार, तदत्रापि लल्लोक्तवत् सत्रिभग्रहक्रान्ति-
ज्यास्थाने तदुत्क्रमज्यां स्वीकृतवान् । क्रान्तेर्वलनस्य च यद्येकैव दिक् यथा क्रान्तिः
शरश्च यद्युत्तरदिक् दक्षिणदिक् वा भवतस्तदा शरेणोन्नामितो यावत् क्षितिजे
नीयते तावत् क्रान्तिवृत्तग्रहस्थानात् पृष्ठतः क्रान्तिवृत्तं क्षितिजे लगति तत्तत्र
फलमृणाम् । भिन्नदिक्कयोर्वलनशरयोश्चैतद्विपरीतमतस्तत्र घनमिति ॥६६॥

अब दृक्कर्म को कहते हैं ।

हि. भा.—उत्तरायण और दक्षिणायन में सत्रिभग्रह क्रान्तिज्या आयनवलन होती है । उसको मध्यमशर से गुणाकर त्रिज्या से भाग देने से फल ऋण वा घन आयनदृक्कर्म होता है । अन्य दृक्कर्म (आक्षदृक्कर्म) चरखण्ड साधन की तरह समझना चाहिये इति ॥६६॥

उपपत्ति ।

ग्रहबिम्बकेन्द्रोपरिगत कदम्बप्रोतवृत्त क्रान्तिवृत्त में जहां लगता है वह ग्रह स्थान है । स्थानोपरिगत ध्रुवप्रोतवृत्त कर देना । बिम्ब केन्द्र के ऊपर ग्रहोरात्र वृत्त कर देना तब बिम्बकेन्द्र से स्थानपर्यन्त मध्यमशर एक भुज बिम्बकेन्द्र से स्थानोपरिगत ध्रुवप्रोतवृत्त के ऊपर लम्बवृत्त करने से लम्बवृत्तीय चाप द्वितीय भुज । लम्बन से स्थान पर्यन्त तृतीय भुज इन तीनों भुजों से उत्पन्न त्रिभुज में स्थानगत कदम्बप्रोतवृत्त और ध्रुवप्रोतवृत्त से उत्पन्न कोण आयनवलन है । स्थानगत ध्रुवप्रोतवृत्त और लम्बवृत्त से उत्पन्न कोण = ६०, तब

अनुपात से $\frac{\text{मध्यमशरज्या. आयनवलनज्या}}{\text{त्रि}} = \frac{\text{मध्यमशर. सत्रिभग्रहक्रान्ति}}{\text{त्रि}} = \text{लम्बवृत्तीयचापज्या} = \text{बिम्बीयाहोरात्रवृत्तीय चापज्या} = \text{बिम्बीयाहोरात्रवृत्तीयचापासु} = \text{बिम्बीयाहोरात्रवृत्तीय चापकला स्वल्पान्तर से आचार्य स्वीकार करते हैं । इसकी कलात्व से ग्रह में संस्कार करना उचित नहीं है इस बात को मान करके भी स्वल्पान्तर समझ कर आचार्य और ललाचार्य उसी फल का ग्रह में संस्कार किया है । भास्कराचार्य-}$

इसको त्रिज्याग्र में परिणत किया है जैसे $\frac{\text{मध्यमशर. आयनवलन. त्रि}}{\text{त्रि. बिम्बीयद्यु}} = \text{नाड़ीवृत्तीयायन-}$

दृक्कर्मसु = $\frac{\text{मध्यमशर. आयनवलन}}{\text{बिम्बीयद्यु}}$, यहां स्वल्पान्तर से बिम्बीयद्यु = स्थानीयद्यु = द्यु इस

फल को ग्रह संस्कार योग्यत्व 'यदि गृहाश्रित राशि के निरक्षोदयासु में राशिकला १८०० पाते हैं तो इन असुग्रों में क्या इससे आयनदृक्कर्म कला आती है उसका स्वरूप

= $\frac{\text{मध्यमशर. आयनवलन} \times १८००}{\text{द्यु, निरक्षोदयासु}}$; किया है इससे भास्करोक्त 'आयनं बलनमस्फुटेषुणा

सङ्गुणं' इत्यादि संस्कृतोपपत्ति में लिखित पद्य उपपन्न होता है । सिद्धान्तशेखर में 'विक्षेप सत्रिभ खगोत्क्रमज्याऽपमज्या' इत्यादि से श्रीपति प्रकार आचार्योंक्त प्रकार से भिन्न है । ललाचार्य ने सत्रिभग्रह क्रान्तिज्या स्थान में उसकी उत् क्रमज्या ली है श्रीपति ने भी लल्लोक्तवत् सत्रिभग्रह क्रान्तिज्या स्थान में उसकी उत्क्रमज्या को स्वीकार किया है । बहुत स्थानों में आचार्यमत को अनुसरण करते हुए कहीं कहीं लल्लोक्त को भी श्रीपति ने स्वीकार किया है यहां भी लल्लोक्तवत् सत्रिभग्रहक्रान्तिज्यास्थान उसकी उत्क्रमज्या को स्वीकार किया है । यदि क्रान्ति और बलन की एक दिशा हो यथा क्रान्ति और शर यदि उत्तर दिशा का है वा दक्षिण दिशा का तब शर से उन्नामित ग्रह जब क्षितिज में आते हैं तावत् क्रान्तिवृत्त ग्रह स्थान से पृष्ठ ही क्रान्तिवृत्त क्षितिज में लगता है वहां फल ऋण होता है । शर और बलन की दिशा भिन्न रहने से विपरीत होता है अतः वहां फल धन होता है इति ॥६६॥

इदानीं ग्रहर्क्षगोलयोः स्थिरवृत्तान्याह ।

कक्षा मण्डलतुल्यं प्राच्यपरं दक्षिणोत्तरं क्षितिजम् ।

उन्मण्डलविषुवन्मण्डले स्थिराणि ग्रहर्क्षाणाम् ॥६७॥

सु. भा.—पूर्वापरम् । दक्षिणोत्तरम् । क्षितिजम् । उन्मण्डलम् । विषुवन्मण्डलम् । सर्वं कक्षामण्डलतुल्यं समानं महद्वृत्तं च ज्ञेयम् । ग्रहर्क्षाणां गोलयोरेतानि स्थिराणि वृत्तानि सन्तीति ॥६७॥

वि. भा.—प्राच्यपरं (पूर्वापरम्), दक्षिणोत्तरं (याम्योत्तरम्), क्षितिजम्, उन्मण्डलम्, विषुवन्मण्डलम् (नाडीवृत्तम्) सर्वं कक्षामण्डल (क्रान्तिवृत्त) तुल्यं महद्वृत्तं चेति, ग्रहाणां—नक्षत्राणां चैतानि पञ्चवृत्तानि स्थिराणि कथितानि ॥६७॥

अब ग्रहगोल और नक्षत्र गोल में स्थिर वृत्तों को कहते हैं ।

हि. भा.—पूर्वापरवृत्ता, याम्योत्तरवृत्ता, क्षितिजवृत्ता, उन्मण्डल, नाडीवृत्ता ये सब (पांच) वृत्ता कक्षावृत्ता (क्रान्तिवृत्ता के बराबर महद्वृत्ता हैं) ग्रहों के और नक्षत्रों के ये पांच स्थिरवृत्ता कथित हैं इति ॥६७॥

इदानीं ग्रहाणां चलवृत्तान्याह ।

मन्दोच्चानां सप्तोच्चनीचवृत्तानि पञ्चशीघ्राणाम् ।

प्रतिमण्डलानि चैवं प्रत्येकं भास्करादीनाम् ॥६८॥

दृग्मण्डलविक्षेपापमण्डलानि क्षपाकरादीनाम् ।

षट्कं विमण्डलानां चलवृत्तान्येकपञ्चाशत् ॥६९॥

सु. भा.—मन्दनीचोच्चवृत्तानि = ७

भौमादीनां शीघ्रनीचोच्चवृत्तानि = ५

मन्दप्रतिवृत्तानि = ७

शीघ्रप्रतिवृत्तानि = ५

दृग्मण्डलं दृक्क्षेपमण्डलं कक्षामण्डलं

चेति सप्तानां ग्रहाणाम् = २१

चन्द्रादीनां षड्विमण्डलानि = ६

५१

एवं चलवृत्तान्येकपञ्चाशत् सन्तीति ॥६८-६९॥

वि. भा.—रव्यादिग्रहाणां मन्दोच्चनीचवृत्तानि = ७, भौमादिपञ्चकानामेव ग्रहाणां शीघ्रोच्चत्वात् शीघ्रनीचोच्चवृत्तानि पञ्च = ५, ग्रहाणां मन्दप्रति-

वृत्तानि=७, शीघ्रप्रतिवृत्तानि=५, दृग्वृत्तं, दृक्क्षेपवृत्तं कक्षावृत्तं चेति रव्यादि-
ग्रहाणामेकविंशतिः=२१, रविं विनैव चन्द्रादिग्रहाणां विमण्डलानि=६, सर्वेषां
योग एकपञ्चाशत् ५१ संख्यकानि चलवृत्तानि सन्तीति । सिद्धान्तशेखरे “मन्दोच्च-
नीचवलयाणि भवन्ति सप्त शैर्घ्याणि पञ्च च तथा प्रतिमण्डलानि । दृक्क्षेप दृष्ट्य-
पमजानि च खेचराणामर्कं विनैव खलु षट् च विमण्डलानि । पञ्चादशेकसहितानि
च मण्डलानि पूर्वापरं वलयमुत्तरदक्षिणां च । क्षमाजं तथा विषुवदुद्वलयाभिधाने
पञ्चस्थिराणि कथितान्युद्ध खेचराणाम् ।” इत्यनेन श्रीपतिनाऽऽचार्योक्तानुरूपमेव
कथितम् ॥६९॥

अब ग्रहों के चलवृत्तों को कहते हैं ।

हि. भा.—रव्यादि ग्रहों के मन्दोच्चनीच वृत्त सात ७ हैं, भौमादि पांच ग्रहों के
शीघ्रनीचोच्चवृत्त=५, रव्यादि ग्रहों के मन्दप्रतिवृत्त=७, भौमादिग्रहों के शीघ्रप्रतिवृत्त=५,
दृग्वृत्त, दृक्क्षेपवृत्त, और कक्षावृत्त ये सात ग्रहों के=२१, चन्द्रादिग्रहों के विमण्डल=६,
सबों के योग=५१, एतत् संख्यक चलवृत्त है सिद्धान्तशेखर में ‘मन्दोच्च नीचवलयाणि भवन्ति
सप्त’ इत्यादि विज्ञान भाष्य में लिखित श्लोकों से श्रीपति ने आचार्योक्त के अनुरूप ही कहा
है इति ॥६९-६९॥

इदानीमध्यायोपसंहारमाह ।

यत् स्पष्टीकरणाद्यं गोलादुत्प्रेक्ष्य तत् कृतं सर्वम् ।

गोलाध्यायः सप्तत्यार्याणामेकविंशोऽप्यम् ॥७०॥

सु. भा.—इह मया यत्स्पष्टीकरणाद्यं सर्वं कृतं तद्गोलादुत्प्रेक्ष्यावगम्य
कृतमतः सर्वं सयुक्तिकं ज्ञेयमिति । शेषं स्पष्टार्थम् ।

मधुसूदनसूनुनोदितो यस्तिलकः श्रीपृथुनेह जिष्णुजोक्तः ।

हृदि तं विनिधाय नूतनोऽयं रचितो गोलविधौ सुधाकरेण ।

इति श्रीकृपालुदत्तसूनुसुधाकरद्विवेदिविरचिते ब्राह्मस्फुटसिद्धान्तनूतनति-
लके गोलाध्यायो नामैकविंशोऽध्यायः ॥२१॥

वि. भा.—मया स्पष्टीकरणाद्यं यत् सर्वं कृतं तद्गोलादवगम्य कृतम् ।
अयमार्याणां सप्तत्यैकविंशो गोलाध्यायोऽस्तीति ॥७०॥

इति ब्राह्मस्फुटसिद्धान्ते गोलाध्यायो नामैकविंशतितमोऽध्यायः ॥२१॥

अब अध्याय के उपसंहार को कहते हैं ।

हि. भा.—स्पष्टीकरण आदि जो कुछ हमने किया है वह सब गोल से समझ कर
किया है, इसलिये इन सबों को धुक्ति युक्त समझना चाहिये । सत्तर आर्याओं का यह इक्कीसवां
गोलाध्याय है इति ॥७०॥

इति ब्राह्मस्फुटसिद्धान्त में गोलाध्याय नामक इक्कीसवां अध्याय समाप्त ।

ब्राह्मस्फुटसिद्धान्तः

यन्त्राध्यायः

ब्राह्मस्फुटसिद्धान्तः

अथ यन्त्राध्यायः प्रारभ्यते ।

तत्र प्रथमं गोल प्रशंसामाह ।

मध्याद्यमिह यदुक्तं तत् प्रत्यक्षमिव दर्शयति यस्मात् ।

तस्मादाचार्यत्वं गोलविदो भवति नान्यस्य ॥ १ ॥

सु. भा.—यस्मादिह सिद्धान्ते यन्मध्याद्यं गणितमुक्तमस्ति तत् सर्वं गोल-
वित् प्रत्यक्षमिव दर्शयति तस्माद्गोलविद एवाचार्यत्वं भवति नान्यस्येति ॥ १ ॥

वि. भा.—यस्मात् कारणादिह सिद्धान्तग्रन्थे ग्रहाणां मध्याद्यं गणितं
यदुक्त (कथित) मस्ति तत्सर्वं गोलवित् प्रत्यक्षमिव दर्शयति, तस्मात्कारणाद्
गोलविद आचार्यत्वं भवति, अन्यस्य नेति ॥ १ ॥

अथ यन्त्राध्याय प्रारम्भ किया जाता है ।

उसमें पहले गोल प्रशंसा कहते हैं ।

हि. भा.—जिस कारण से इस सिद्धान्त ग्रन्थ में ग्रहों के मध्यादि गणित जो कथित
है उन सबों को गोलवेत्ता (गोल को जानने वाले) प्रत्यक्ष के तरह दिखलाते हैं, इस कारण
से गोलवेत्ता ही को आचार्यत्व होता है, अन्य किसी को आचार्यत्व नहीं होता है अर्थात् गोल
को जानने वाले ही आचार्य होते हैं दूसरे नहीं ॥ १ ॥

इदानीं स्वगोलग्रथने कारणं कथयति ।

आचार्येन ज्ञातः श्रीषेणार्यभट्टविष्णुचन्द्राद्यैः ।

गोलो यस्मात् तस्मात् ब्राह्मो गोलः कृतः स्पष्टः ॥ २ ॥

सु० भा०—यस्मात् श्रीषेणार्यभट्टविष्णुचन्द्राद्यैर्गोलो न ज्ञातस्तस्मान्मयाऽयं
ब्राह्मो गोलः स्पष्ट कृत इति ॥ २ ॥

वि. भा.—यस्माद्धेतोः श्रीषेणार्यभटविष्णुचन्द्राद्यैराचार्यैर्गोलो न ज्ञात-
स्तस्मान्मयाऽयं ब्राह्मो गोलः स्पष्टः कृत इति ॥ २ ॥

अब अपनी गोल रचना के कारण कहते हैं ।

हि. भा.—क्योंकि श्रीषेण-आर्यभट-विष्णु-चन्द्र आदि आचार्य गोल को नहीं समझे
इसलिये हमने इस ब्राह्म गोल को स्पष्ट किया है इति ॥ २ ॥

इदानीं गणित गोलयोः प्रशंसामाह ।

गणितज्ञो गोलज्ञो गोलज्ञो ग्रहगतिं विजानाति ।

यो गणितगोलबाह्यो जानाति ग्रहगतिं स कथम् ॥ ३ ॥

सु. भा.—यो गणितज्ञः स गोलज्ञो भवति (गोलस्य गणितक्षेत्रान्तर्गतत्वात्)।
यो गोलज्ञः स एव ग्रहगतिं विशेषेण जानाति । तस्माद्यो गणितगोलबाह्योऽस्ति स
कथं ग्रहगतिं जानाति । न जानातीत्यर्थः ॥ ३ ॥

वि. भा.—यो गणितज्ञः स गोलज्ञो भवति (गोलस्य गणितान्तर्गतत्वात्),
यो गोलज्ञः स ग्रहगतिं विजानाति । सिद्धान्तशिरोमणौगोलाध्याये “दृष्टान्त एवा-
वनिभग्रहाणां संस्थानमानं प्रतिपादनार्थम् । गोलः स्मृतः क्षेत्रविशेष एषः प्राज्ञै-
रतः स्याद् गणितेन गम्यः ॥” भास्कराचार्येणाप्येवमेव कथ्यते । यो गणितगोल-
बाह्योऽर्थाद् गणितं गोलं च न जानाति स ग्रहगतिं कथं जानाति । कथमपि न
जानातीति ॥ ३ ॥

अब गणित और गोल की प्रशंसा करते हैं ।

हि. भा.—जो गणित जानते हैं वे गोल को भी जानते हैं क्योंकि गोल-गणितक्षेत्र
परिधि के अन्तर्गत है; जो गोल जानते हैं वे ग्रहगति को जानते हैं; सिद्धान्त-शिरोमणि
के गोलाध्याय में “दृष्टान्त एवावनिभग्रहाणां” इत्यादि विज्ञान भाष्य में लिखित श्लोक से
भास्कराचार्य ने भी आचार्यों के अनुरूप ही कहा है, जो गणित और गोल नहीं जानते हैं
वे ग्रहगति को कैसे जानेंगे अर्थात् किसी तरह भी नहीं जान सकते हैं इति ॥ ३ ॥

इदानीं यन्त्राध्यायारम्भप्रयोजनमाह ।

गोलस्य परिच्छेदः कर्तुं यन्त्रैर्विना यतोऽशक्यः ।

संक्षिप्तं स्पष्टार्थं यन्त्राध्यायं ततो वक्ष्ये ॥ ४ ॥

सु. भा.—यतो यन्त्रैर्विना गोलस्य परिच्छेदः सम्यन्विचारः कर्तुं गणकोऽ-

शक्यो भवति ततो गोलस्य स्पष्टार्थं संक्षिप्तं यन्त्राध्यायमहं वक्ष्ये इत्याचार्योक्तिः ॥ ४ ॥

वि. भा.—यतो यन्त्रैर्विना ज्योतिषिको गोलस्य परिच्छेदः (यथार्थरूपेण विचारः) कर्तुं मसमर्थो भवति, तस्माद्धेतोर्गोलस्य स्पष्टार्थं संक्षिप्तं यन्त्राध्यायमहं वक्ष्ये ॥ सिद्धान्तशेखरे “शक्यः परिच्छेदविधिर्विधातुं यन्त्रैर्विना नो समयस्य तज्ज्ञैः । तेषां स्वयंवाहक पूर्वकारणमतः प्रवक्ष्ये खलु लक्षणानि ॥” श्रीपतिनैवं यन्त्राध्यायारम्भप्रयोजनं कथ्यते । सिद्धान्तशिरोमणौ गोलाध्याये भास्कराचार्योऽपि श्रीपत्युक्तसदृशमेव कथयति—

“दिनगतकालावयवा ज्ञातुमशक्या यतो विना यन्त्रैः ।

वक्ष्ये यन्त्राणि ततः स्फुटानि संक्षेपतः कतिचित् ॥”

सर्वस्मिन् ज्योतिषसिद्धान्तग्रन्थे यन्त्राध्यायो भवत्येवेति ॥ ४ ॥

अब यन्त्राध्याय आरम्भ करने के कारण कहते हैं ।

हि. भा.—यन्त्रों के बिना ज्योतिषिक लोग गोल का विचार अच्छी तरह करने में असमर्थ होते हैं । इसलिए गोल की स्पष्टता के लिए संक्षेप से यन्त्राध्याय को मैं कहता हूँ । सिद्धान्तशेखर में “शक्यः परिच्छेदविधिर्विधातुं यन्त्रैर्विना नो समयस्य तज्ज्ञैः” इत्यादि विज्ञानभाष्य में लिखित श्लोकोक्त अनुसार यन्त्राध्याय आरम्भ करने के कारण कहते हैं । सिद्धान्तशिरोमणि के गोलाध्याय में भास्कराचार्य भी श्रीपत्युक्त के सदृश ही कहते हैं । ‘दिनगत कालावयवा ज्ञातुमशक्या यतो विना यन्त्रैः’ इत्यादि । सब ज्योतिष सिद्धान्त ग्रन्थों में यन्त्राध्याय होता ही है इति ॥ ४ ॥

इदानीं तन्त्राणि यन्त्रोपकरणानि चाह ।

सप्तदश कालयन्त्राण्यतो धनुस्तुर्यगोलकं चक्रम् ।

यष्टिः शङ्कुर्घटिका कपालकं कर्त्तरी पीठम् ॥५॥

सलिलं भ्रमोऽवलम्बः कर्णश्छाया दिनार्धमर्कोऽक्षः ।

नतकालज्ञानार्थं तेषां संसाधानान्यष्टौ ॥६॥

सु. भा.—यतो धनुर्यन्त्रम् । तुर्यगोलं तुरीयम् । चक्रयन्त्रम् । यष्टिः । शङ्कुः । घटिका घटीयन्त्रम् । कपालयन्त्रम् । कर्त्तरी । पीठसंज्ञं यन्त्रम् । सलिलं जलम् । भ्रमः शाराः । अवलम्बोऽवलम्बसूत्रम् । कर्णश्छायाकर्णः । छाया शङ्कुच्छाया । दिनार्धं दिनार्धमानम् । अर्कः सूर्यः । अक्षः पलांशाः । अतो नतकालज्ञानार्थं सप्तदश कालयन्त्राणि सन्ति । तेषां यन्त्राणां मध्ये सलिलादीन्यष्टौ यन्त्रसंसाधनानि यन्त्ररचनामूलभूतानि सन्ति ॥५-६॥

वि. भा.—यतोऽधुनयन्त्रम्, तुर्यंगोलकं (तुरीययन्त्रम्), चक्रं (चक्रयन्त्रम्), यष्टिः, शङ्कुः, घटिका (घटीयन्त्रम्), कपालकं (कपालयन्त्रम्), कर्त्तरी यन्त्रम् । पीठ संज्ञकं यन्त्रम् । सलिलं (जलम्), भ्रमः (शाणः), अवलम्बः (अवलम्बसूत्रम्), कर्णः (छायाकर्णः), छाया (शङ्कुच्छाया), दिनार्ध (दिनार्धमानम्), अर्कः (सूर्यः), अक्षः (अक्षांशः), नतकालज्ञानार्थं सप्तदशकाल यन्त्राणि सन्ति, तेषां यन्त्राणां मध्ये सलिलं भ्रम इत्यादीनि-अष्टौ यन्त्रसंसाधनानि (यन्त्र निर्माणोपकरणानि) सन्तीति ॥५-६॥

अब यन्त्र और यन्त्रोपकरण कहते हैं ।

हि. भा.—धनुर्यन्त्र, तुर्यंगोलक (तुरीय) यन्त्र, चक्र (चक्र) संज्ञक यन्त्र, यष्टि, शङ्कु, घटिका (घटी) यन्त्र, कपाल यन्त्र, कर्त्तरीयन्त्र, पीठसंज्ञकयन्त्र, सलिल (जल), भ्रम (शाण), अवलम्ब (अवलम्ब सूत्र), छायाकर्ण, शङ्कुच्छाया, दिनार्धमान, सूर्य, अक्षांश, नतकालज्ञान के लिये सत्रह काल यन्त्र हैं, उन यन्त्रों में जल, भ्रम आदि आठ यन्त्ररचना-मूल भूत हैं इति ॥५-६॥

इदानीं सलिलादीनां किं प्रयोजनमित्याह ।

सलिलेन समं साध्यं भ्रमेण वृत्तमवलम्बकेनोर्ध्वम् ।

तिर्यक् कर्णेनान्यैः कथितैश्च नव प्रवक्ष्यामि ॥७॥

सु० भा०—सलिलेन समं साम्यं साध्यम् । भ्रमेण शाणेन वृत्तं साध्यम् । अवलम्बकेनोर्ध्वमूर्ध्वधरत्वं साध्यम् । कर्णेनान्यैः कथितैश्छायादिभिश्च यन्त्रस्य तिर्यक् तिर्यक्त्वं साध्यम् । एवमवशिष्टानि नव यन्त्राणि प्रवक्ष्याम्यहमित्याचार्योक्तिः ॥७॥

वि. भा.—सलिलेन (जलेन), समं (भुवः साम्यं) साध्यम् । भ्रमेण (शाणेन), वृत्तं साध्यम् । अवलम्बकेन यन्त्रे उर्ध्वधरत्वं साध्यम् । कर्णेन, अन्यैः कथितैश्छायादिभिश्च यन्त्रस्य तिर्यक्त्वं साध्यम् । एवमवशिष्टानि नव यन्त्राण्यहं प्रवक्ष्यामि । सिद्धान्तशेखरे—

“अद्भिः समाभूर्बलयं भ्रमात्तु त्र्यस्त्रं च कर्णान्चितुरस्त्रयुक्तम् ।

लम्बोऽथ ऊर्ध्वार्जवसिद्धये स्यात् बीजानि तैलाम्बुरसाः ससूत्राः ॥”

श्रीपतिनैवं कथ्यते । ससूत्राः तैलाम्बुरसा बीजानि भवन्ति, तत्र सूत्रं मुख-
विवराद्वालुकादिनिःसरणार्थं लोहतन्तुरूपम् । तैलं तथा अम्बु (जलं), रसाः
(पारदाः), एतानि बीजानि आदि कारणानि सन्तीति । शिष्य धीवृद्धिदं तन्त्रे
लल्लश्च—

“इष्टं सुवृत्तबलयं लघुशुष्कदार निर्मापितं विविध शिल्पवदाततक्षणा ।
गोलं समं सलिल तैलवृषाङ्कबीजैः कालानुसारिणाममुं भ्रमयेत् स्वबुद्ध्या
त्रिंशत्पलं तरति यद्रसतैलकेषु तत्सार्यते त्रिभिरिदं स्वबुद्धस्य बीजम् ।
वृत्ते भ्रमात् त्रिचतुरस्रमुपैतिकर्णालम्बाच्च सिद्धिमधऊर्ध्वमिला समाद्भिः

यान्युपकरणानि तद्वशेन यथैव स्वयंवहयन्त्रनिर्माणं च प्रतिपादयतस्ता-
न्येवोपकरणानि तथैव स्वयंवहयन्त्रनिर्माणं च श्रीपतेरभिप्रेतमिति स्फुटं
प्रतीयमानेऽपि तदुक्त्या न सर्वं स्फुटीभवतीति विवेचकैर्विवेचनीयम् ॥ ७ ॥

अब सलिला (जल) दि से क्या किया जाता है कहते हैं ।

हि. भा.—जल से पृथ्वी को बराबर करना चाहिये । शाण से वृत्त साधन करना
चाहिए । अवलम्ब सूत्र से यन्त्र में ऊर्ध्वाधो भाव विदित होता है । कर्ण से और कथित
छायादियों से यन्त्र का तिर्यक्त्व (तिरछापन) साधन करना चाहिये । एवं अवशिष्ट नौ
यन्त्रों को मैं कहता हूं ॥

सिद्धान्त शेखर में ‘अद्भिः समा भूर्बलयं भ्रमात्’ इत्यादि विज्ञान भाष्य में लिखित
श्लोकोक्त के अनुसार श्रीपति ने कहा है । शिष्य धीवृद्धिदतन्त्र में लल्लाचार्य—‘इष्टं सुवृत्त-
बलयं लघुशुष्कदार निर्मापितं’ इत्यादि विज्ञान भाष्य में लिखित श्लोकों के अनुसार कहा
है इति ॥ ७ ॥

इदानीं धनुर्यन्त्रमाह ।

धार्यं धनुस्तथाऽन्यत् छाया साम्यं यथोन्नता भागाः ।

दिनगतशेषाः घटिकाः स्वलम्बभुक्ता धनुर्मध्या ॥ ८ ॥

सु. भा.—धनुर्यन्त्रं तथा धार्यं यथाऽन्यत् छायासाम्यं भवेत् । अत्रैतदुक्तं
भवति । यस्मिन् दिने धनुर्यन्त्रेण कालज्ञानमभीष्टं तद्दिनसम्बन्धिकान्तिचरादिना
प्रतिघटिकोन्नत कालवशेन धनुर्यन्त्रकेन्द्रस्थापितेष्टप्रमाणकीलस्य छायाः प्रसाध्य
स्वस्वोन्नतकालसम्मुखेऽङ्क्याः । इष्टदिने तथा धनुर्धार्यं यथा कीलच्छायाधनुरग्रयो-
रन्तरे परिधौ कीलच्छायासंबन्धि गणितागंतशङ्कभागसमा भागाः स्युस्तथा घृते
वाऽवलम्बोऽपि दृक्सूत्राकारो लगति । अतो धनुर्मध्यात् स्वलम्बभुक्ता भागा रवे-

रुक्षता भागास्तथा तत्राङ्कित उन्नतकालश्च पूर्वापरकपालयोर्दिनगतशेषा घटिकाः स्युः ।

अत्रोपपत्तिः । गोलयुक्त्यैव स्फुटा ॥८॥

वि. भा.—धनुर्यन्त्रं तथा धार्यं यथाऽन्यत् छायासाम्यं भवेदर्थात् क्रान्तिवशेन 'अक्षप्रभासंगुणितापमज्या तद्द्वादशांशो भवति । क्षितिज्येत्यादिना चरज्या साध्या, तथेष्टशङ्कोरिष्टहूतेर्ज्ञानम्, इष्टहूतेरिष्टान्त्या, ततश्चरज्या संस्कारेण सूत्रज्ञानं तत उन्नतकालावबोधः सम्यग्भवत्येवं प्रतिघटिकोन्नतकालवशेन धनुर्यन्त्रकेन्द्रे स्थापितस्येष्टप्रमाणकीलस्य छायाः प्रसाध्य स्वस्वोन्नतकालसंमुखेऽङ्कनीयाः । धनुर्यन्त्रमभीष्टदिने तथा धार्यं यथा कीलच्छाया धनुरग्रयोरन्तरे परिधौ कीलच्छायासम्बन्धिगणितागतशङ्कुभागसमा भागाः स्युस्तथा धृते सति—अवलम्बोऽपि दृक्सूत्राकारो लगति, धनुर्मध्यात् स्वलम्बभुक्ता भागा रवेरुन्नतभागास्तत्राङ्कित उन्नतकालश्च पूर्वापरकपालयोर्दिनगतशेषघटिकाः स्युरिति ॥

सिद्धान्तशेखरे गोलयन्त्रेण दिनगतघटिका दिनशेषघटिकाश्च निम्नलिखित प्रकारेण श्रीपतिना आनीताः—

चक्रांशाङ्कं क्रान्तिवृत्तं विधेयं उर्वीवृत्तं याम्यवृत्तं च तद्वत् ।
नाडीवृत्तं षष्टिभागाङ्कितं हि याम्योदक्स्था यष्टिरूर्वीजमध्ये ॥
कार्यं खगोलस्य दृढस्य मध्ये भगोलमेतत् परितस्तथा च ।
यन्त्रांशके तिग्मकरो ऽपवृत्ते क्षिपेच्छलाकामिह तत्र भागे ॥
ताम्राङ्किकावृत्तगतां विधाय समुद्रगमात् सूर्यवशेन भूजात् ।
तदीयभा केन्द्रगता यथा स्यात् स खम्बुनाड्या भ्रमयेत्तथैव ॥
पातङ्गचिह्नक्षितिजान्तरस्थाः समुद्रगतांशा गणकैर्निरुक्ताः ।
नाड्यः शलाका कुजयोस्तु मध्ये समुभ्रतास्ता नियतं भवन्तीति ॥

व्याख्या—षष्ट्यधिकशतत्रयांशैः समानैश्चिह्नितं क्रान्तिवृत्तं विधेयम् । तद्वत् । समषष्ट्यधिकशतत्रयांशैश्चिह्नितमेव क्षितिजवृत्तं याम्योत्तरवृत्तं च विधेयम् । नाडीवृत्तं षष्टिभागाङ्कितं विधेयम् । क्षितिजवृत्तस्य केन्द्रे दक्षिणोत्तरबिन्द्वोर्गता यष्टिः (सुसरलससारदारुनिर्मिता यष्टिका) धार्या, गोलकेन्द्ररूपे क्षिब्धजवृत्तकेन्द्रे दक्षिणोत्तरसमस्थानरूपयोर्गता च यष्टिः कार्येत्यर्थः । दृढस्य (कठिनमाबद्धस्य) खगोलस्य (सममण्डल-याम्योत्तर मण्डलादिनिर्मितस्य गोलस्य) केन्द्रे तथा समन्ततः एतत् अनन्तरोक्त क्रान्तिवृत्त-क्षितिजवृत्त-याम्योत्तरवृत्त, नाडीवृत्तात्मकं भगोलं कार्यम् । इह भगोले क्रान्तिवृत्ते यत्रांशके (यस्मिन्नंशे) सूर्य-

नाडीवृत्तस्थां तामुदयक्षितिजाद्रविवशेन ॥

भ्रमयेच्छ्वत्तद्वत् यथा न केन्द्रं त्यजेच्छलाकाभा ।

रविचिह्नक्षितिजान्तरमुदितांशास्तृणकुजान्तरं घटिकाः ॥

अस्य सर्वथैव समानार्थकमिति ॥

गोलाध्याययन्त्राध्याये भास्कराचारेणाऽप्येवमेवेदं गोलयन्त्रमभिहितम् ।

“अपवृत्तगरविचिह्नं क्षितिजे धृत्वा कुजेन संसक्ते ।

नाडीवृत्ते बिन्दुं कृत्वा धृत्वाऽथ जलसमं क्षितिजम् ॥

रविचिह्नस्य छाया पतति कुमध्ये यथा तथा विधृते ।

उडुगोले कुजबिन्द्वोर्मध्ये नाड्यो द्युयाताः स्युः ॥

यथोक्तविधिना खगोलान्तर्भगोलं बद्ध्वा तत्र क्रान्तिवृत्ते मेषादेरारभ्य रविभुक्तराशिभागाद्यं दत्त्वा तदग्रे यच्चिह्नं तदपवृत्तगरविचिह्नमुच्यते । भगोलं चालयित्वा रविचिह्नं क्षितिजे धार्यम् । तथा धृते सति क्षितिज प्राच्यां विषुवन्मण्डले यत्र लग्नं तत्र खटिकया बिन्दुः कार्यः । ततः क्षितिजवृत्तं जलसमं यथा भवति तथा गोलयन्त्रं स्थिरं कृत्वा भगोलस्तथा चाल्यो यथा रविचिह्नस्य छाया भूगर्भे पतति तथा कृते सति विषुवद्वृत्ते क्षितिजबिन्द्वोर्मध्ये यावत्यो घटिकास्तावत्यस्तस्मिन् काले दिनगता ज्ञेयाः इति ॥८॥

अथ धनुर्यन्त्र को कहते हैं ।

हि. भा.—धनुर्यन्त्र को इस तरह धारण करना चाहिये जिससे अन्य छाया साम्य हो अर्थात् क्रान्तिवश से 'अक्षप्रभा सङ्गुणितापमज्या तद्द्वादशांशो भवति क्षितिज्या' इत्यादि से चरज्या साधन करना तथा इष्टशङ्कु से इष्टहृति का ज्ञान, उससे इष्टान्त्या का ज्ञान कर उसमें चरज्या संस्कार से सूत्रज्ञान कर उस से उन्नत काल का ज्ञान होता है । एवं प्रत्येक घटिकोन्नत काल वश से धनुर्यन्त्र केन्द्र में स्थापित इष्ट प्रमाण कील की छाया साधन कर अपने अपने उन्नत काल के संमुख अङ्कित करना । धनुर्यन्त्र को इष्ट दिन में ऐसे धारण करना जिससे कील की छाया धनुष के दोनों अग्र के अन्तर में कीलच्छाया सम्बन्धी गरिगता-गतशङ्कुभाग के बराबर भाग (अंश) हो, ऐसे धरने से अवलम्ब भी दृक् सूत्राकार लगता है । धनुष के मध्य से अपने लम्बभुक्त भाग रवि के उन्नत भाग (उन्नतांश) होते हैं, वहां अङ्कित उन्नतकाल पूर्व कपाल और पश्चिम कपाल में दिनगत घटी-दिन शेष घटी होती है । सिद्धान्तशेखर में 'गोलयन्त्र से दिनघत घटी और दिन शेष घटी का ज्ञान अधोलिखित प्रकार से श्रीपति ने किया है जैसे 'चक्रांशाङ्क' क्रान्तिवृत्तं विधेयं विदध्यादुर्वीवृत्तं याम्यवृत्तं च तद्वत्' इत्यादि विज्ञान भाष्य में लिखित पद्यों से, श्रीपत्युक्त पद्यों का अर्थ यह है क्रान्तिवृत्त क्षितिजवृत्त और याम्योत्तरवृत्त में तीन सौ साठ अंश अङ्कित करना चाहिये । नाडीवृत्त को साठ अंशों से अङ्कित करना । क्षितिजवृत्त के केन्द्र में गोलकेन्द्र में दक्षिण सम स्थान और उत्तर समस्थानगत यष्टि स्थापन करना; दृढ़ (मजवूती से बन्धा हुआ) खगोल (पूर्वापरवृत्त याम्योत्तर वृत्तादि से निर्मित गोल) के केन्द्र में तथा चारों तरफ क्रान्तिवृत्त-क्षितिजवृत्त याम्योत्तरवृत्त नाडीवृत्तात्मक भगोल को करना, इस भगोल में क्रान्तिवृत्त में जिस अंश में सूर्य है उस अंश में लकड़ी की वा लोहे की शलाका देनी चाहिये । उस शलाका को उदय क्षितिज से सूर्यवश से नाडीवृत्त से संलग्न कर शलाका की छाया जैसे केन्द्रगत हो वैसे यन्त्र को अमण कराना चाहिये । शलाका से क्षिप्त रवि चिन्ह तथा क्षितिज के अन्तर में जो अंश है वह उन्नतांश कथित हैं । शलाका और क्षितिज के मध्य में शलाका संसक्त नाडीवृत्त और क्षितिजवृत्त के मध्य में उन्नत घटी होती है अर्थात् दिनगत घटी और दिनशेष घटी होती है । श्रीपति कथित गोलयन्त्र द्वारा रवि का उन्नतांश ज्ञान और उन्नत घटिका ज्ञान लल्लोक्त "अथ लग्नकाल सिद्धये पूर्वापरपरिकरोत्तरैर्नवभिः" इत्यादि विज्ञान भाष्य में लिखित प्रकार के सर्वथा समानार्थक है, गोलाध्याय के यन्त्राध्याय में भास्कराचार्य ने भी 'अपवृत्तग रविचिन्हं क्षितिजे घृत्वा कुजेन संसक्त' इत्यादि से इसी तरह कहा है इति ॥८॥

इदानीं प्रकारान्तरेण यन्त्रं सूर्याभिमुखे कथं समं धार्यमित्येतदर्थमाह ।

धार्यं समं तथा वा ज्या छाया मध्यगा यथा भवति ।

अप्रादिष्टा घटिका ज्यामध्यच्छायया भुक्ताः ॥९॥

सु. भा.—यथा ज्याछाया धनुषो ज्यायाः पूर्णज्यायाश्छाया मध्यगा धनुषो

मध्यगा भवति तथा वा यन्त्रं समं धार्यम् । दृग्मण्डलाकारं धार्यं यथा तत्पाश्वर्यो रवेस्तुल्यं तेजो लगतीत्यर्थः । एवं ज्यामध्यच्छायया ज्याया धनुः पूर्णज्याया मध्ये-
र्थात् केन्द्रे स्थापितो यः कीलस्तस्य छायाया भुक्ता या अग्राद्धनुः कोट्यग्रादङ्किता
घटिकास्ता इष्टा घटिकाः स्युः ॥

गोलयुक्तिरेव वासनाऽत्र ज्ञेया ॥९॥

वि. भा.—यथा ज्याछाया (धनुषो ज्यायाः पूर्णज्यायाश्छायाः) धनुषो
मध्यगा भवति तथा वा यन्त्रं समं धार्यम् । दृग्मण्डलाकारं धार्यं यथा तत्पाश्वर्यो
रवेस्तेजो तुल्यं लगतीत्यर्थः । एवं ज्यामध्यच्छायया (ज्याया धनुः पूर्णज्याया मध्ये
र्थात् केन्द्रे स्थापितो यः कीलस्तस्य छायाया) भुक्ता अग्रात् (धनुः कोट्यग्रा-
दङ्किता) या घटिकास्ता इष्टा घटिकाः स्युः ॥९॥

अब प्रकारान्तर से सूर्याभिमुख यन्त्र को कैसे रखा जाता है इस के लिये कहते हैं ।

हि. भा.—जैसे धनुष की पूर्णज्या की छाया धनुष के मध्यगत होती है वैसे यन्त्र
को समरूप से धारण करना । दृग्मण्डलाकार धारण करना जिससे उसकी दोनों बगल में
रवि का तेज बराबर (तुल्य) लगता है । एवं धनुष की पूर्णज्या के मध्य में अर्थात् केन्द्र में
स्थापित जो कील उसकी छाया से भुक्त जो धनुष के कोट्यग्रा से अङ्कित घटी है वह इष्टघटी
है इति ॥९॥

इदानीं प्रकारान्तरेणोष्टघटिकां धनुः स्वरूपं चाह ।

घटिका स्वशङ्कुभागैः पृथगतैर्लम्बभूसमज्याधर्वात् ।

साशीतिशतांशाङ्कं चक्रस्यार्धं धनुर्यन्त्रम् ॥१०॥

सु. भा.—पृथगतैः स्वशङ्कुभागैर्लम्बभूसमज्याधर्वाद्वा घटिकाः साध्याः ।
अत्रैतदुक्तं भवति । यदि स्वाभीष्टदिनेष्टकाले शङ्कुभागा एव विदितास्तदा धनुः-
कोट्यग्रात् तान् भागान् दत्त्वा तदग्राद्धनुर्ज्या या भूमिस्तस्या उपरि लम्ब एव यो
ज्याधर्वात् ज्याखण्डतो भवति स शङ्कुस्तस्मात् त्रिप्रश्नविधिनेष्टक्रान्तिचरादिनेष्टा-
न्त्यामवगम्य घटिका ज्ञेया इति । चक्रस्य वृत्तस्यार्धं साशीतिशताङ्कं चक्रार्धशाङ्कं
धनुर्यन्त्रं भवति ॥ १० ॥

वि. भा.—पृथगतैः स्वशङ्कुभागैर्लम्बभूसमज्याधर्वाद्वा घटिकाः साध्याः ।
अर्थाद्यदिष्टदिनेष्टकाले शङ्कुभागा एव विदितास्तदा धनुःकोट्यग्रात् तान्
भागान् दत्त्वा तदग्राद्धनुर्ज्या या भूमिस्तदुपरि लम्ब एव यो ज्याखण्डतो भवति
स शङ्कुस्तस्मात् त्रिप्रश्नाधिकार विधिनेष्टान्त्यां ज्ञात्वा घटिका ज्ञेयाः । चक्र-

स्यार्धं (वृत्तार्धं) अशीत्यधिकशतांशैरङ्कितं घनुर्यन्त्रं भवतीति । पूर्वश्लोकोक्त-
विषयस्यैतच्छ्लोकोक्तविषयस्य चानुरूप एव सिद्धान्तशिरोमणी भास्कराचार्येणा-
भिहितो यथा चक्रं चक्रांशाङ्कं परिधावित्यादि, फलकयन्त्रेणापि साहाय्यं नेयम् ।

“धार्यं तथा फलकयन्त्रमिदं यथैव तत्पाश्वर्योर्लगति तुल्यमिनस्य तेजः ।

छायाक्षजा स्पृशति तत्परिधौ यमंशं तत्रांशके मतिमता तरणिः प्रकल्प्यः ।

अक्षप्रोतां रविलवगतां पट्टिकां न्यस्य तस्मात्,

यष्टेरग्रादुपरि फलकेऽधश्च गोलक्रमेण ।

यत्नाद्देयश्चरदलगुणस्तत्र या ज्या तयात्र,

छिन्ने वृत्ते तलगघटिकाः स्युर्नता लम्बकान्ताः ।”

अस्यार्थः—यन्त्रमाधारेऽवलम्बमानं तथा धाय यथा यन्त्रोभयपाश्वर्योस्तुल्यकालमे-
वाकंतेजो लगति । अर्काभिमुख नेमिकं दृग्मण्डलाकारमित्यर्थः । तथा धृते सुषिरे
प्रोतस्याक्षस्य छाया वृत्तपरिधौ यस्मिन्नंशे लगति तत्रांशेऽर्कः कल्प्यः । अक्षप्रोतैव
पट्टिका रविचिह्ने स्थाप्या तथा धृतायां पट्टिकायां यत्पूर्वं कृतं यष्टिचिह्नं
तस्मादुपर्युत्तरगोले । दक्षिण गोले तु तदधश्चरज्यामितान्यङ्गुलानि फलके
गणयित्वा तत्र चिह्नं कार्यम् । चिह्नस्थाने या ज्यारेखा सा वृत्ते यत्र लग्ना
तस्मादधोवृत्ते लम्बरेखावधेयावत्यो घटिकास्तावत्यस्तत्काले नता ज्ञेयाः । एतद्वशे-
नेष्टघटिकाज्ञानं सुलभमिति ॥१०॥

अब प्रकारान्तर से इष्टघटी तथा घनुः स्वरूप को कहते हैं ।

हि. भा.—यदि इष्टदिन में इष्टकाल में शङ्कुभाग ही विदित हो तब घनुःकोटधग्र
से उन भागों (अंशों) को दान देकर उस के अग्र से घनुष की ज्या रूप भूमि के ऊपर लम्ब
ही शङ्कु हैं, उससे त्रिप्रक्षणाधिकारोक्त विधि से इष्टान्त्या जानकर इष्टघटी का ज्ञान
करना चाहिये, वृत्तार्ध में एक सौ अस्सी अंशों को अङ्कित करने से घनुर्यन्त्र होता है ।
पूर्वश्लोकोक्त विषय और इस श्लोकोक्त विषय के अनुरूप ही भास्कराचार्य ने ‘चक्रं चक्रां-
शाङ्कं परिधौ’ इत्यादि से कहा है, फलक यन्त्र से भी काम लेना चाहिये इति ॥१०॥

इदानीं परोक्तघटद्यानयनं खण्डयति ।

मध्यदिवसोन्नतांशदिनार्धनाडीवदन्ति तुल्या ये ।

ते भूर्खास्तच्छाया इष्टच्छाया समा न यतः ॥११॥

सु. भा.—ये मध्यदिवसोन्नतांशैर्दिनार्धनाडीस्तुल्या इष्टघटिकाः प्रकल्प्या-
भीष्टोन्नतांशैरनुपातेनेष्टा घटिका वदन्ति ते भूर्खाः सन्ति । यत इष्टघटीतो यदि

वस्तुत एतस्य खण्डनमाचार्येण भास्कराचार्येण च यत् क्रियते तत्समीचीन-
मेवेत्याचार्योक्तश्लोकव्याख्यायां द्रष्टव्यमिति ॥ ११ ॥

अब दूसरों के घट्यानयन का खण्डन करते हैं ।

हि. भा.—जो लोग मध्याह्नकालिक उन्नतांश से दिनार्ध घटी तुल्य इष्ट घटी

कल्पना कर अभीष्ट उन्नतांश से अनुपात द्वारा इष्ट घटी कहते हैं वे मूल हैं। क्योंकि यदि दिनार्ध घटी में मध्योन्नतांश पाते हैं तो इष्ट घटी में क्या इस अनुपात से जो इष्ट उन्नतांश आते हैं उसकी छाया वेधोपलब्ध इष्ट कालिक छाया के बराबर नहीं होती है इस लिये उनका आनयन ठीक नहीं है इति ॥ सिद्धान्त शिरोमणि में 'उन्नतलवसंगुणीकृतं द्युदलम् द्युदलोन्नतांशभक्तं नाड्यः स्थूलाः परैः प्रोक्ताः' इससे भास्कराचार्य ने भी अन्यो के घटिका नयन का खण्डन किया है। अन्य के वाक्य इष्टोन्नतांशा द्युदलेन निघ्ना मध्योन्नतांशैर्विहृताश्च नाड्यः' इत्यादि विज्ञान भाष्य में लिखित के अनुसार है। वस्तुतः इसका खण्डन आचार्य और भास्कराचार्य भी जो करते हैं सहीचिन्त है यह आचार्योक्त श्लोक के उपरिलिखित भाष्य से स्पष्ट है इति ॥११॥

इदानीं यन्त्रेण नतोन्नतकालज्ञानमाह ।

जीवां स्वाहोरात्रे परिकल्प्याग्रान्तोन्नतत्रिज्याः ।

अनुपातात् कार्यास्तुर्यगोलके चक्रके चैवम् ॥१२॥

सु. भा.—स्वाहोरात्रे द्युज्यावृत्तेऽनुपाताद् द्वादश कोट्या पलकर्णस्तदा शङ्कुकोट्या किमित्यनुपातात् जीवामिष्टहृतिं प्रकल्प्य ततोऽग्राद्धनुः कोट्यग्राह-
तत्रिज्याः कार्यास्त्रिज्यावशेन नतोन्नतकालौ कार्यौ । अत्रैतदुक्तं भवति । इष्टहृति-
वशेन त्रिज्यानुपातेनेष्टान्त्याः कार्याः । तत्र चरसंस्कारेण सूत्रमुत्पाद्य तत्समां ज्यां
धनुषि दत्त्वा धनुरग्राह्या घटिकास्ताश्चरसंस्कृतोन्नतकालघटिकाः । ज्याया
धनुर्यन्त्राधरभागपर्यन्तं या घटिकास्ता नतकालघटिकाः । एवं गोलयुक्तिवशान्न-
तोन्नतकालौ तुर्यगोलके तुरीये चक्रे च भवत इति ॥ १२ ॥

वि. भा.—स्वाहोरात्रे (द्युज्यावृत्ते) अनुपातात् "द्वादशाङ्गुलशङ्कुना पलकर्णरत
देष्टृशङ्कुना कि" मित्यनुपातेन समागतां हृतिं जीवां परिकल्प्य ततोऽग्रात् (धनुःकोट्य-
ग्रात्)नतोन्नतत्रिज्याः कार्याः । त्रिज्यावशेन नतोन्नतकालौ कार्यौ, अर्थादिष्टहृतिवशेन
त्रिज्यानुपातेन ($\frac{\text{इहृति.त्रि}}{\text{द्यु.}} = \text{इष्टान्त्या}$) ण्त्याः कार्याः, तत्र चरज्या संस्कारेण
सूत्रं 'इष्टाष्टा चरज्या = सूत्रम्' भवति । तत्तल्यां जीवां धनुषि दत्त्वा धनुरग्राह्या
घटिकास्ताश्चर संस्कृतोन्नतकाल घटिका भवन्ति । जीवाया धनुः (चापं) यन्त्राधो-
भागपर्यन्तं या घटिकास्ता नतकालघटिकाः । एवं नतोन्नतकालौ तुर्यगोलके
(तुरीय यन्त्रे) चक्रे (चक्रयन्त्रे) च भवत इति ॥१२॥

अब यन्त्र से नतकालज्ञान और उन्नतकालज्ञान को कहते हैं ।

हि. भा.—द्युज्यावृत्त में अनुपात से 'द्वादश कोटि में यदि पलकर्ण-कर्ण पाते हैं तो

इष्टशङ्कुकोटि में क्या इससे इष्टहृति आती है, इष्टहृति को जीवा कल्पना कर तब धनुष के कोट्यग्र से त्रिज्यावश से नतकाल और उन्नत काल साधन करना अर्थात् इष्टहृतिवश से त्रिज्यानुपात से $\frac{\text{'इहृति.त्रि'}}{\text{द्यु}} = \text{इष्टान्त्या}$ इष्टान्त्या लानी चाहिये, उसमें चरज्या संस्कार से इष्टान्त्या \pm चरज्या = सूत्र, सूत्र होता है, एतत्तुल्यज्या को धनुष (चाप) में देकर धनुष के अग्र से जो घटी होगी वह चर संस्कृत उन्नतकाल घटी होती है, इससे उन्नत काल घटी का ज्ञान स्पष्ट ही है। ज्या के चाप यन्त्र के अधोभाग पर्यन्त जो घटी है वह नतकाल घटी है। इस तरह तुरीय यन्त्र में और चक्र यन्त्र में भी नतकाल और उन्नत काल विदित होते हैं इति ॥१२॥

इदानीं यन्त्रादेव नतीम्नतकालज्ञानमाह ।

दिनघटिकाङ्कितयष्टेर्व्यस्त नतज्याग्रमुन्नतज्यां च ।

दिङ्मध्ये च शलाका तच्छायाग्रान्नता नाड्यः ॥१३॥

सु. भा.—दिनघटिकाङ्कितयष्टिर्द्युज्या तस्याः सकाशात् प्रतिघटिकं दिङ्-मध्यस्थापितशलाकाछाया प्रसाध्या सा रवितो व्यस्तदिवका भवति । तत्र प्रतिघटिकोन्नतकालसम्बन्धिच्छायाग्रं तात्कालिकं नतज्याग्रं नतज्यामुन्नतज्यां नतकाल-मुन्नतकालं चाङ्कयेत् । एवमेकस्मिन् फलके प्रतिद्युज्यासम्बन्धिनीं नतकालाद्यङ्कितां भाभ्रमरेखामुत्पादयेत् । इष्टदिनेष्टकाले समधरातले यथा दिक्के स्थापिते फलके दिङ्मध्यशलाकाछायाग्रं तद्दिनसम्बन्धि भाभ्रमरेखायां यत्र लग्नं तत्राङ्किता नाड्यो नता नाड्यः स्युः । एवं तत्राङ्कितोन्नत कालादित उन्नतकालादिज्ञानं भवतीति गोलयुक्तिः स्फुटम् ॥ १३ ॥

वि. भा.—दिनघटिकाङ्कितयष्टिः (द्युज्या) तस्याः सकाशात् प्रत्येकघटिकायां दिङ्मध्यस्थापित शलाकायाश्छायाः साध्यास्ता रवितो व्यस्ता (विपरीतदिक्काः) भवन्ति । तत्र प्रतिघटिकोन्नतकालसम्बन्धिच्छायाग्रं न तज्याग्रं नतज्यामुन्नतज्यां नतकालमुन्नतकालं चाङ्कयेत् । एव मेकस्मिन् फलके प्रतिद्युज्यासम्बन्धिनीं नतकाला-ङ्कितां भाभ्रमरेखां रचयेत् । इष्टदिने इष्टकाले समधरातले यथादिक्के स्थापिते फलके दिङ्मध्यशलाका छायाग्रं तद्दिनसम्बन्धि भाभ्रमरेखायां यत्र लगति तत्राङ्किता नाड्यो (घटिकाः) नता नाड्यः (नतघटिका) भवन्ति एवमेव तत्राङ्कितोन्नतकालादित उन्नतकालादिज्ञानं भवतीति ॥१३॥

अब यन्त्र ही से नतकालज्ञान और उन्नत कालज्ञान को कहते हैं ।

हि. भा.—दिन घटी से अङ्कित यष्टि (द्युज्या) से प्रत्येक घटी में दिङ्मध्य (वृत्त-

केन्द्र) स्थापित शलाका की छायाएँ साधन करनी चाहिये । वे रवि से विरुद्ध दिशा की होती हैं । वहाँ प्रत्येक घटी के उन्नतकाल सम्बन्धी छायाग्र में नतकाल और उन्नतकाल को अङ्कित करना । एवं एक फलक में प्रति द्युज्या सम्बन्धी नतकाल से अङ्कित (चिन्हित) भाभ्रम रेखा बनानी चाहिये । इष्टदिन में इष्टकाल में समधरातल में यथादिशा में स्थापित फलक में दिङ्मध्यशलाका का छायाग्र उस दिन सम्बन्धी भाभ्रमरेखा में जहाँ लगता है वहाँ अङ्कित नाड़ी (घटी) नतनाड़ी (नतघटी) होती है । इसी तरह उसमें अङ्कित उन्नतकालादि से उन्नत कालादि ज्ञान होता है इति ॥१३॥

इदानीं धनुर्यन्त्रे विशेषमाह ।

धनुषः पृष्ठे द्रष्ट्रा वेध्या ज्यामध्य संस्थया दृष्टया ।

इष्टान्तरं नतज्या धनुषि च्छायोन्नतज्यायाः ॥१४॥

ज्यार्धं दृष्टेर्हज्यां नतजीवांशं कुमुन्नतज्यां च ।

धनुषि प्रकल्प्य योज्यं यद्युक्तं नाडिकाद्यं च ॥१५॥

सु. भा.—द्रष्ट्रा पुरुषेण धनुषः पृष्ठे ज्यामध्यसंस्थया पूर्णज्यो परिस्थापित-
नलकरन्ध्रगतया दृष्टया इष्टग्रहयोरन्तरम् । उन्नतज्यायाः सकाशात् धनुषि यन्त्रे
नतज्या छाया चेत्यादि सर्वे पदार्था वेध्याः । एवं धनुषि धनुर्यन्त्रे दृष्टेर्ज्यार्धमेव
हज्यां नतजीवांशं नतभागान् । कुं भूमिपर्यन्तमर्थात् यन्त्रे कल्पितक्षितिज पर्यन्त-
मुन्नतज्यां च प्रकल्प्य यन्नाडिकाद्यमुपयुक्तमस्ति तत् सर्वं योज्यं गोलयुक्तितः ।
तथैव यन्त्रचिन्तामण्यादौ तुरीययन्त्रेऽङ्किताश्चोन्नतांशादयः प्रसिद्धाः सिद्धान्त-
विदाम् ॥ १४-१५ ॥

वि. भा.—द्रष्ट्रा (दर्शकेन पुरुषेण) धनुषः पृष्ठे, ज्यामध्यसंस्थया (पूर्ण-
ज्योपरिस्थापितनलकरन्ध्रगतया) दृष्टया, इष्टान्तरम् (इष्टग्रहयोरन्तरम्),
उन्नतज्यायाः सकाशात् धनुषि (धनुर्यन्त्रे) नतज्या, छाया चेत्यादयः सर्वे पदार्था
ज्ञातव्याः । एवं धनुर्यन्त्रे दृष्टेर्ज्यार्धमेव हज्यां-नतजीवांशं नतांशान् कुं (भूमिपर्यन्त-
मर्थात् यन्त्रे कल्पितक्षितिजपर्यन्तं) उन्नतज्यां च प्रकल्प्य यन्नाडिकाद्यमुपयुक्तं
तत्सर्वं गोलयुतथा योज्यम् । तुरीययन्त्रे तथैवोन्नतांशादयोऽङ्किता यन्त्रचिन्ता-
मण्यादि ग्रन्थे सन्तीति ॥ १४-१५ ॥

अब धनुर्यन्त्र में विशेष कहते हैं ।

हि. भा.—दर्शक पुरुष को धनुष के पृष्ठ में पूर्णज्या के ऊपर स्थापित नलकरन्ध्रगत
दृष्टि से इष्ट दो ग्रहों का अन्तर तथा धनुर्यन्त्र में उन्नतज्या से नतज्या-छाया इत्यादि सब
पदार्थ जानने चाहियें । एवं धनुर्यन्त्र में दृष्टि से ज्यार्ध को हज्या नतांश को यन्त्र में

कल्पित क्षितिज पर्यन्त उन्नतज्या मानकर जो नाड़िकादि उपयुक्त हैं उन सबों को काम में लाना चाहिये । तुरीय यन्त्र में उसी तरह उन्नतांशादि अङ्कित है यन्त्र चिन्तामणि आदि ग्रन्थों में स्फुट है इति ॥१४-१५॥

इदानीमन्यं विशेषमाह ।

अवलम्बनं शलाकाज्यार्धं यष्टिं प्रकल्प्य वा धनुषि ।

भूम्युच्छ्रायाल्लम्बो यष्ट्युक्तैरानयेत् करणैः ॥१६॥

सु. भा.—वा धनुषि धनुर्यन्त्रे केन्द्रगां शलाकामवलम्बनमवलम्बसूत्रं ज्यार्धं चापानां ज्यार्धानि शलाकाप्रोतां यष्टिं च प्रकल्प्य यष्ट्युक्तैर्यष्ट्यादिभिरुदितैः करणैः साधनैर्भूम्युच्छ्रायात् क्षितिजोच्छ्रायाल्लम्बः शङ्कुभागादीन् गणक आनयेत् । आचार्योक्तित एव तथैव भास्करेण फलकयन्त्रे सर्वं रचितमिति ॥ १६ ॥

वि. भा.—वा धनुर्यन्त्रे केन्द्रगतां शलाकामवलम्बसूत्रचापानां ज्यार्धानि शलाकां प्रोतां यष्टिं च प्रकल्प्य यष्ट्यादिभिः कथितैः साधनैः क्षितिजोच्छ्रायाल्लम्बः शङ्कुभागादीन् गणक आनयेत् । सिद्धान्तशिरोमणी 'कर्त्तव्यं चतुरस्रकं सुफलक' मित्यादि फलकयन्त्ररचनावैशद्यमाचार्योक्तमिदं संक्षिप्तमादर्शमादाय भास्कराचार्येण प्रतिपादितमिति ॥१६॥

अत्र अन्य विशेष कहते हैं ।

हि. भा.—अथवा धनुर्यन्त्र में केन्द्रगतशलाका को अवलम्बसूत्र, चाप के ज्यार्धं शलाका प्रोत (पहराई हुई) यष्टि मान कर यष्ट्यादि से कथित साधनों से क्षितिज के उच्छ्राय से उन्नतांशादि को गणक लावे, सिद्धान्तशिरोमणि में 'कर्त्तव्यं चतुरस्रकं सुफलक' मित्यादि फलकयन्त्र रचना का स्पष्टीकरण भास्कराचार्य ने आचार्योक्त इस संक्षिप्त आदर्श को लेकर किया है इति ॥१६॥

इदानीं तुर्यगोलमाह ।

अङ्कितमंशनवत्या धनुषोऽर्धं तुर्यगोलकं यन्त्रम् ।

घटिकानतोन्नतांशग्रहान्तराद्यं धनुर्बद्धिह ॥१७॥

सु. भा.—धनुषोऽर्धं कोदण्डखण्डमंशनवत्याङ्कितं तुर्यगोलकं यन्त्रं भवति । इहात्रापि धनुर्यन्त्रवदघटिकानतोन्नतांशग्रहान्तराद्यं सिध्यति ॥ १७ ॥

वि. भा.—धनुषोऽर्धं (कोदण्डखण्डं) अंशनवत्याङ्कितं कार्यं तत्तुर्यगोलकं यन्त्रं भवति, अत्रापि धनुर्यन्त्रवत् घटिकानतोन्नतांशग्रहान्तराद्यं सिध्यतीति ।

कथमेतेन यन्त्रेण नतोन्नतांश ज्ञानं भवतीति प्रतिपाद्यते ॥

नतोन्नतांशज्ञानार्थमुपपत्तिः ॥

केन्द्ररन्ध्रद्वारा कुजरन्ध्रं रविकिरणो यथा
विशेत्तथा यन्त्रं धार्यम् ।

र = रविविम्बम् । तत्तेजः 'के' बिन्दु द्वारा 'कु'
दृष्टिबिन्दौ निर्गच्छति । तथा यन्त्रे स्थिरीकृते ग्रहे
क्षितिजस्थे सति, यदि कु दृष्टिस्थानमपि क्षितिजस्थं
भवेत्तदा केग ऊर्ध्वाधरसूत्रमवलम्बसूत्रम् । कुजादू-
र्ध्वस्थे ग्रहे तथोक्तबद्यन्त्रे स्थिरीकृते केग ऊर्ध्वाधर-
रूपं न भवेदपि-ऊर्ध्वाधररूपं = केप, तत्समानान्त-
रम् = कुऊ सूत्रमप्यूर्ध्वाधररूपम् । ततः < उकुके = < कुकेच, परं < उकुके =
नतांशाः, अतः < पकेग = उन्नतांशाः । सिद्धान्ततत्त्वविवेके—

“धातुजं दारुजं वा यत् यन्त्रं बुद्धिमता कृतम् ।

तस्य केन्द्रकुजोर्ध्वस्थे रन्ध्रे कार्ये समान्तरे ॥

कुजरन्ध्रस्थदृष्ट्यव' केन्द्ररन्ध्रगतं ग्रहम् ।

खस्थं विध्वाऽथ तद्यन्त्रं कार्यं दृग्वृत्तवद्बुधैः ॥”

व्याख्या—तस्य यन्त्रस्य केन्द्रकुजबिन्द्वोर्ध्वस्थे समान्तरे रन्ध्रे (छिद्रे)
कार्ये, अर्थात् कुजरेखा तु नलिकारूपा कार्या, तथा कृते कुजरन्ध्रे दृष्टिं निवेश्य
दृग्वृत्तधरातले तथैतद्यन्त्रं धार्यं, यथा सा नलिकारूपा कुजरेखा, ग्रहगर्भदृष्टिसूत्रं
भवेत्तदैव आकाशस्थं ग्रहं केन्द्ररन्ध्रगतं पश्येदिति । अत्र यन्त्रमधोमुखं परिवर्त्य
निवेशितम् ॥

अथवा केन्द्ररन्ध्रेण क्षमाजरन्ध्रं विशेष्यथा ।

अर्कतेजस्तथा यन्त्रं धार्यमर्कमुखं सदा ॥

अर्कोदये भवेत् खस्थं लम्बसूत्रं यथा यथा ॥

वियत्यर्कः कुजस्थानादुन्नतरश्च तथा तथा ।

यन्त्रे खतश्च तत्सूत्रं नेम्यंशैश्चलितं भवेत् ॥

अतः खादुन्नतांशाश्च ज्ञेया भूजान्नतांशकाः ।

तज्ज्यके शङ्कुदृग्ज्ये च यन्त्रे दृग्वृत्तवत् स्थिते ॥”

कमलाकरेणैवं यन्त्रद्वारोन्नतांशनतांशयोर्ज्ञानं प्रतिपादितम् ।

तथा यन्त्रचिन्तामणौ—

“केन्द्रोर्ध्वरन्ध्रेण यथाऽर्कतेजः क्षमाजोर्ध्वरन्ध्रं प्रविशेत्तथैव ।

धार्यं तु केन्द्रादवलम्बभाग्य्या दृग्ज्यका स्यान्नतशिञ्जिनी वा ।”

कमलाकरोक्तसदृशमेवोक्तमस्तीति ॥१७॥

अब तुर्यगोल को कहते हैं ।

हि. भा.—घनूष (चक्रार्ध) के आधे भाग (कोदण्डखण्ड) को नव्वे अंश से अङ्कित करने से वह तुर्यगोलक नाम का यन्त्र होता है यहां भी घनुर्यन्त्र की तरह घटी, नतांश, उन्नतांश' ग्रहान्तरादि सिद्ध होता है । इस यन्त्र से नतांश और उन्नतांश ज्ञान कैसे होता है उसके लिये उपपत्ति ।

यहां संस्कृतोपपत्ति में लिखित (क) क्षेत्र को देखिये । केन्द्र छिद्र द्वारा क्षितिजस्थ रन्ध्र (छिद्र) में रविकिरण जिस तरह प्रवेश करे उस तरह यन्त्र को धारण करना चाहिये । र=रवि बिम्ब । उनके तेज 'के' बिन्दु द्वारा 'कु' दृष्टि बिन्दु में निकलता है । यन्त्र को स्थिर करने से ग्रह के क्षितिजस्थ रहने पर यदि 'कु' दृष्टिस्थान भी क्षितिजस्थ हो तब केग ऊर्ध्वाधर सूत्र अवलम्ब सूत्र होगा । क्षितिज से ग्रह के ऊपर रहने से पूर्ववत् यन्त्र को स्थिर करने से केग ऊर्ध्वाधर रूप न हो तथापि ऊर्ध्वाधररूप=केप, उसके समानान्तर=कुऊ सूत्र भी ऊर्ध्वाधर रूप है तब <ऊकुके= <कुकेच, लेकिन ऊकुके=नतांश, अतः <पकेग=उन्नतांश । सिद्धान्त तत्त्व विवेक में "धनुर्जं दारुजं वा यत् यन्त्रं बुद्धिमता कृतम्" इत्यादि तथा "अथवा केन्द्ररन्ध्रेण क्षमाजरन्ध्रं विशेष्यथा । अर्कतेजस्तथा यन्त्रं धार्यमर्कमुखं सदा" इत्यादि श्लोकों से कमलाकर ने उपर्युक्त उपपत्ति से यन्त्र द्वारा नतांश और उन्नतांश का ज्ञान कहा है । तथा यन्त्र चिन्तामणि में 'केन्द्रोर्ध्वरन्ध्रेण यथाऽर्कतेजः क्षमाजोर्ध्वरन्त्रं प्रविशेत्तथैव' इत्यादि से कमलाकरोक्त के सदृश ही कहा गया है इति ॥१७॥

इदानीं चक्रयन्त्रमाह ।

परिधौ भगणांशाङ्कं मीनान्तं चक्रतो विद्वा ।

चक्रकयन्त्रं मध्याल्लम्बोऽत्र फलं धनुस्तुल्यम् ॥१८॥

सु. भा.—चक्रकयन्त्रं परिधौ मीनान्तं द्वादशराश्यकं भगणांशाङ्कं च कार्यम् । अत्र परिधौ कल्पिताधारमध्याल्लम्बः कार्यः । अस्मान्चक्रतश्चक्रयन्त्राद्ग्रहादीन् विद्वा फलं धनुस्तुल्यं घनुर्यन्त्रसमं भवति । विशेषार्थं भास्करचक्रयन्त्रं तदीयगोलयन्त्राध्याये चिन्त्यम् ॥ १८ ॥

वि. भा.—चक्रकयन्त्रपरिधौ भगणांशाङ्कं मीनान्तं (द्वादशराश्यङ्कं) च कार्यम् । अत्र (चक्रकयन्त्र) परिधौ कल्पिताऽधारमध्याल्लम्बः कार्यः । अस्मान्चक्रतः (चक्रयन्त्रात्) ग्रहादीन् विद्वा फलं धनुस्तुल्यं (घनुर्यन्त्रं समं) भवतीति । सिद्धान्तशेखरे —

“कृत्वा सुवृत्तं फलकं हि षष्ठ्या चक्रांशकैश्चाङ्कितमत्र मध्ये ।

क्षराच्छ्रीपतेराशयोऽपि विविच्य विज्ञैर्निरूपणीय इति ॥१८॥

अब चक्र यन्त्र को कहते हैं ।

हि. भा.—चक्रयन्त्र परिधि में भगणांश को अङ्कित करना चाहिये, और द्वादश राशि (बारहों राशि) को भी अङ्कित करना चाहिये । इस चक्रयन्त्र परिधि में कल्पित आधार मध्य से लम्ब करना चाहिये । इस चक्रयन्त्र से ग्रहादियों को वेध कर फल धनुर्यन्त्र के बराबर होता है । सिद्धान्तशेखर में “कृत्वा सुवृत्तं फलकं हि पृथ्वा चक्रांशकैश्चाङ्कित-
मत्र मध्ये” इत्यादि विज्ञान भाष्य में लिखित श्लोकों के अनुसार कहा है, श्लोकों का अर्थ यह है—सरल सार वाली लकड़ी के वर्तुलाकार यन्त्र बनाकर उस यन्त्र में घटी ज्ञान के लिये साठ विभाग और अंश ज्ञान के लिये तीन सौ साठ विभाग करना चाहिये । इस यन्त्र के केन्द्रबिन्दु में अवलम्ब यष्टि देनी चाहिये जैसे अवलम्बयष्टिमूलगत यन्त्रछिद्र से सूर्य बिम्ब के तेज यन्त्र केन्द्र में पतित हो इस तरह से यन्त्र को स्थापन करना चाहिये । अवलम्ब-यष्टि से त्यक्त जो भाग वे सूर्याधिष्ठित अंश (जिस अंश में सूर्य है) से उदित भाग होते हैं । और घटी व्यतीत (गत) घटी होती है । इस चक्रयन्त्र का आषा चाप संज्ञक यन्त्र होता है । चक्रयन्त्ररूप वृत्त को आषा करने वाली व्यास रेखा के मध्य में रन्ध्र (छिद्र) करना और उसमें लम्ब देना ।

उपपत्ति ।

वृत्ताकार काष्ठ के यन्त्र में साठ घटी को और तीन सौ साठ अंश को अङ्कित कर मध्य में छोटा छिद्र कर तद् गत अवलम्बयष्टि को सूर्याभिमुख इस तरह रखना चाहिये जिससे यन्त्र को बढ़ाने से सूर्यबिम्ब के केन्द्र में चला जाय । इसलिये वह दृग्मण्डलाकार

दृष्ट्वा । इसके केन्द्र में लम्बरूपयष्टि की छाया उसकी परिधि में जहाँ लगती है वह बिन्दु सूर्यकेन्द्र बिन्दु से षड्भान्तर (छः राशि अन्तर) पर होता है । सूर्योदयकाल में सूर्याधिष्ठित अंश (जिस अंश में सूर्य है) से षड्भान्तर (छः राशि अन्तर) पर पश्चिम बिन्दु ही में अवलम्ब की छाया यन्त्र परिधि में लगती है, उसके बाद ज्यों-ज्यों सूर्य ऊपर जाते हैं त्यों त्यों लम्ब की छाया पश्चिम बिन्दु से नीचे जाती है । वही लम्ब से त्यक्त अंश है, वह सूर्याधिष्ठित अंश से लेकर (आरम्भकर) उन्नतांश ही है । यह यन्त्र घटिकाओं से अङ्कित है इसलिये यन्त्रमुक्त (यन्त्र से त्यक्त) घटी सूर्योदय से गत घटी है । इस चक्रयन्त्र का आधा वृत्तार्ध रूप चाप यन्त्र होता है । उस चाप यन्त्र में भी वृत्त की अर्धकारिणी व्यास रेखा के मध्य में सूक्ष्म छिद्र और तद्गत लम्ब चक्र यन्त्र ही की तरह देना चाहिये । चक्र यन्त्र के अनुसार ही इस चाप यन्त्र में भी वृत्तार्ध ही से उन्नतांश और उन्नतांश और उन्नत घटी का ज्ञान करते हैं । शिष्यधीवृद्धिद तन्त्र में वृत्तं कृत्वा फलकं षड्वर्गाङ्कं तथा च षष्ट्यङ्कम् इत्यादि विज्ञान भाष्य में लिखित, लल्लाचार्योक्त श्लोकों के आशय को श्रीपति ने श्लोकान्तर से कहा है । सिद्धान्तशिरोमणि के गोलाध्याय में 'चक्रं चक्रांशाङ्कं परिधौ श्लथशृङ्खला विकाधारम्' इत्यादि श्लोकों से भास्कराचार्य ने भी चक्रयन्त्र उसी तरह कहा है इति ॥१८॥

इदानीं यष्ट्याशङ्क्वाद्याह ।

यष्टिस्तिर्यग्धार्या नष्टच्छायावलम्बकः शङ्कुः ।

दृज्यान्तरमनुपातात् स्वाहोरात्रार्धमग्रा च ॥१९॥

सु. भा.—क्षितिजवृत्तकेन्द्रगता यष्टिस्तथा धार्या यथा सा नष्टच्छाया स्यात् । एवं यष्टिव्यासार्धभ्रमणोले यष्ट्यग्रे रविकेन्द्रं भवति तस्मात् क्षितिजोपरि योऽवलम्बकः स शङ्कुर्भवति । यष्टिमूलाच्छङ्कुमूलपर्यन्तमन्तरं दृज्या भवति । अनुपातात् यष्टेरनुपातात् स्वाहोरात्रार्धं दृज्या तथाऽग्रा च साध्या । उदयकाले रविकेन्द्रोपरि यष्ट्यनुपातेनार्थाष्ट्यग्रेप्रपातेन क्षितिजे तत्प्राग् बिन्द्वन्तरमग्रांशाः ततः पलकर्णेन द्वादशकोटिस्तदाऽग्रा किं जाता क्रान्तिज्या । तत्कोटिज्या दृज्या प्रसिद्धैव । 'यष्ट्यग्राल्लम्बोना ज्ञेया दृज्या नृकेन्द्रयोर्मध्ये' इति तथा उदयेऽस्ते यष्ट्यग्रप्राच्यपरा मध्यमग्रा स्यात्—इति च भास्करोक्तं चिन्त्यम् ॥ १९ ॥

वि. भा.—क्षितिजवृत्तकेन्द्रगता यष्टिस्तथा धार्या यथा सा नष्टद्युतिर्भवेत् । एवं यष्टिव्यासार्धोत्पन्नगोले यष्ट्यग्रे रविर्भवति, रविकेन्द्रात् क्षितिजं घरातलोपरि योऽवलम्बकः सशङ्कुर्भवति । यष्टिमूलाच्छङ्कुमूल पर्यन्तं दृज्या भवति । यष्टेरनुपातात् स्वाहोरात्रार्धं (दृज्या) अग्रा च साध्या । यष्ट्यग्रपूर्वापर रेखयो-
रन्तरं त्रिज्यावृत्ते ज्यार्धवत् स्थितम् । साग्रा ज्ञेया । ततः पलकर्णेन द्वादशकोटि-
स्तदाऽग्रा किं जाता क्रान्तिज्या, ततः $\sqrt{त्रि^2 - क्रान्तिज्या^2} =$ दृज्या, "यष्ट्याग्राल्ल-

म्बोना ज्ञेया दृग्ज्या नृकेन्द्रयोर्मध्ये" तथा ,उदयेऽस्ते यष्ट्यग्रप्राच्यपरामध्यमग्रा स्यात्' इति भास्करोक्तं विविच्य ज्ञेयमिति ॥१९॥

अब यष्टि से शङ्कु आदि को कहते हैं ।

हि. भा.—क्षितिजवृत्तकेन्द्रगत यष्टि को इस तरह रखना चाहिये जिससे छायारहित यष्टि हो । एवं यष्टिव्यासार्धोत्पन्न गोल में यष्टि के अग्र में रवि होते हैं । रवि केन्द्र से क्षितिज धरातल के ऊपर लम्ब शङ्कु है । यष्टि के मूल से शङ्कु मूलपर्यन्त अन्तर दृग्ज्या होती है । यष्टि के प्रपात (पतन) से स्वाहोरात्रार्ध (द्युज्या) तथा अग्रा साधन करना चाहिये अर्थात् उदयकाल में रविकेन्द्र के ऊपर यष्ट्यग्र के प्रपात से क्षितिज में उसका और पूर्व बिन्दु का अन्तर अग्रा है, तब पलकर्ण में यदि द्वादश कोटि पाते हैं तो अग्रा में क्या इस अनुपात से क्रान्तिज्या आती है, इसकी कोटिज्या $\sqrt{(\text{त्रि}^2 - \text{क्रांज्या}^2)}$ = द्युज्या, सिद्धान्त-शिरोमणि के गोलाध्याय में 'यष्ट्यग्राल्लम्बो ना ज्ञेया दृग्ज्या नृकेन्द्रयोर्मध्ये' तथा 'उदयेऽस्ते यष्ट्यग्रप्राच्यपरामध्यमग्रा स्यात्' यह भास्करोक्त के विचार करने से स्फुट है इति ॥१९॥

इति सर्वथा श्रीपत्युक्तसममेवेति ॥२०-२१॥

अब यष्टियन्त्र को कहते हैं ।

हि. भा.—समान पृथ्वी में यष्टि व्यासार्ध से वृत्त लिखकर इसके मध्य में दृग्ज्या व्यासार्ध से एक केंद्रिक अन्यदृग्ज्या वृत्त लिखकर इसकी परिधि में साठ घटी अङ्कित करनी चाहिये । अनन्तर यष्टिव्यासार्धगोले जहां यष्टि नष्टद्युति (छाया रहित) हुई है वहां यष्टी को स्थिर करना । क्षितिज में उस यष्ट्यग्र का और अग्रा का जो अन्तर है तत्तुल्य पूर्णज्या से द्वितीयवृत्त (दृग्ज्यावृत्त) में जो चाप हो उस चाप में जो घटी है वह पूर्वकपाल में दिनगत घटी होती है और पश्चिमकपाल में दिनशेषघटी होती है । यदि एक दिन में दृग्ज्या स्थिर मानीजाय अर्थात् एक दिन में रवि की क्रान्ति स्थिर हो तब ही इस विधि से कालज्ञान हो सकता है । सिद्धान्तशेखर में ‘संसाधिताशं कृतचक्रभागं विधायवृत्तं समभूप्रदेशे । त्रिज्या-ङ्कुलाङ्कां’ इत्यादि श्लोकोक्त के अनुसार कहते हैं । इन श्लोकों का अर्थ यह है कि समान

पृथिवी प्रदेश में वृत्त लिखकर उसमें पूर्वादि दिशाओं के सूचक चिन्ह अङ्कित करना तथा तीन सौ साठ समान भाग कर देना, उसके मध्य (केन्द्र) में अपनी इच्छा के अनुसार जितने अङ्गुल की त्रिज्या हो उतनी अङ्गुल संख्या से चिन्हित और सब तरह से समान छायाहीन अर्थात् सूर्याभिमुख यष्टि इस तरह रखी जाय जिससे स्वमार्ग में यष्टि को बढ़ाने से सूर्यबिम्ब केन्द्र में चली जाय। यष्टिघ्न से भू (क्षितिज) के ऊपर लम्बशङ्कु होता है। इस वृत्त (पूर्व लिखितवृत्त) में शङ्कुमूल और केन्द्र के अन्तर दृग्ज्या (नतांशज्या) होती है शङ्कुमूल से उदयास्त सूत्रपर्यन्त लम्बरूप अन्तर भुज है। शङ्कुमूल से उदयास्त सूत्रपर्यन्त लम्बरूपरेखा शङ्कुघ्न संज्ञक है यही शङ्कुतल है। शङ्कुघ्न (शङ्कुतल) को बारह से गुणाकर पूर्वकथित लम्ब (शङ्कु) से भाग देने से स्फुट पलभा होती है। पहले त्रिज्यारूप यष्टि जितनी अङ्गुल की बनाई गई तदङ्गुल व्यासार्धवृत्त सम्बन्धिनी दृग्ज्या करनी चाहिये इति ॥

उपपत्ति ।

समान पृथिवी में इष्ट त्रिज्या से वृत्त बनाकर उसमें दिशाओं के चिन्ह अङ्कित कर देना तथा भगणांश अङ्कित कर देना चाहिये वह क्षितिज वृत्त है। त्रिज्याङ्गुल यष्टि को इस तरह रखना चाहिये जिससे उसकी छाया नष्ट हो तथा उसको बढ़ाने से यष्टिघ्न रवि बिम्बकेन्द्र में चला जाय। नष्टवृत्ति (छाया रहित) यष्टिघ्न से नीचे जितना लम्ब है उतना उस समय में शङ्कु है। त्रिज्यारूप यष्टि और शङ्कुरूप लम्ब का वर्गान्तरमूल नतांशज्या (दृग्ज्या) शङ्कुमूल और वृत्तकेन्द्र का अन्तर रूप होता है। शङ्कुमूल से पूर्वापर रेखा के ऊपर लम्ब भुज है। अग्राग्रगत (पूर्व पश्चिम दिग्गत अग्राद्वयगत) रेखा उदयास्तसूत्र है। उदयास्तसूत्र और शङ्कुमूल का लम्बरूप अन्तर शङ्कुघ्न (शङ्कुतल) है। तब अनुपात करते हैं यदि शङ्कु में शङ्कुतल भुज पाते हैं तो द्वादशाङ्गुल शङ्कु में क्या इस अनुपात से स्फुट पलभा आती है। शङ्कुमूल और यष्टिमूल का अन्तर दृग्ज्या है इसका स्वरूप पहले कहा गया है। यहां नतज्या—अग्राग्र बिन्दु से यष्टिघ्न गुल मान के अनुसार अङ्गुलात्मक प्रमाण वाली लानी है। शङ्कुमूल और यष्टिमूल के अन्तर में एक सरल शलाका रख कर उसको अङ्गुल से मापन कर उसका मान समझना चाहिये। यहां लल्लाचार्य “दिङ्मध्यस्थित मूला यष्टिर्नष्टप्रभा त्रिगुणतुल्या” इत्यादि विज्ञान भाष्य में लिखित श्लोकों के अनुसार कहते हैं सिद्धान्तशिरोमणि के गोलाध्याय में “त्रिज्या विष्कम्भार्धं वृत्तं कृत्वा दिगङ्कितं तत्र” इत्यादि विज्ञानभाष्य में लिखित श्लोकों से भास्कराचार्य सर्वथा श्रीपत्युक्त के समान ही कहा है इति ॥२०-२१॥

इदानीं प्रकारान्तरेण घटिकानयनमाह ।

श्रीपतिनैवं कथ्यते । अस्यार्थः—अत्रास्मिन् पूर्वलिखितवृत्ते प्राक् प्रतीच्य-ग्रतः (पूर्वापरबिन्दुभ्यां) अग्रां न्यस्येत् । मध्यदेशात् (वृत्तकेन्द्रबिन्दोः) याम्योदक्-स्था (दक्षिणादिक्स्था, उत्तर दिक्स्था वा) नतज्या देया । तन्मितिभ्यां (अग्रान्तज्ययोर्मानाभ्यां) शङ्कुः साध्यः । तस्मिन् वृत्ते अमः—अहोरात्रवृत्तं—विरचितसमयांशः (विरचिताञ्चिन्हिताः समयांशा यस्मिन्) षष्टिघटीभिरहोरात्रवृत्तं चिन्हितं (अङ्कित) भवति, अत्राहोरात्रवृत्तमंशात्मकमर्थात् षष्ट्यधिकशतत्रय भागात्मकं कार्यम् । तच्च स्वीदयात् (स्वीदयबिन्दोः) स्वाग्रकात् (अग्रायबिन्दोः) दातव्यः । अस्मिन् षष्ट्यधिकशतत्रयभागाङ्कितेऽहोरात्रवृत्ते तन्मितंशङ्कु (अग्रान्त

ज्ययोर्मानानुसारेण मापितमङ्गुलात्मकं शङ्कुं तदुदरगतभागं यथा स्यात्तथा स्थापयेत् । अग्रकाशात् तदवधि (अग्राग्रबिन्दोः) शङ्कुमूलपर्यन्तमहोरात्रवृत्ते येषां गता कालभागाः स्युः । ते कालभागाः षड्भिर्भक्ता सन्तो दिनगत घटिका भवेयुरिति ॥

अस्योपपत्तिः ।

समभूमौ वृत्तकरणं यष्टेः शङ्कोश्च स्वरूपादिकं कथितमेव । अत्र पूर्वापर-बिन्दुभ्यामङ्गुलात्मिकाऽग्रा वृत्तकेन्द्रबिन्दोश्च नतज्या दत्ता, यष्ट्यग्रबिन्दोर्लम्बरूपोऽङ्गुलात्मकः शङ्कुस्तदनुसारिमानेन मापितश्चक्रभागाङ्कितेऽहोरात्रवृत्ते यष्टि-संलग्नस्तथा स्थापितो यथा छायाग्रं वृत्तकेन्द्रेपतेत् । एवमग्राग्रबिन्दोः शङ्कुमूल-पर्यन्तमहोरात्रवृत्तीयमंशादिमानं कालभागाः स्युरिति । अत्र श्री भास्कराचार्येण “अग्राग्रउदितो रविर्यथा यथाऽहोरात्रवृत्त गत्योपरि गच्छति तथा तथा केन्द्रे निवेशितमूलाया यष्टेरग्रे भ्राम्यमाणे यष्टिनष्टद्युतिः स्यात् । यतो यष्ट्यग्रे रविः । अग्राग्रादकं यावदहोरात्रवृत्ते यावत्यो घटिकास्तावत्यो दिनगता भवन्ति । तत्राकाशे द्युज्यावृत्तं लेखितुं नायाति ।

अतोऽग्राग्र यष्ट्यग्रयोरन्तरं शलाकया मित्वा गृहीतम् । ततो भुवि लिखिते द्युज्यावृत्ते तया शलाकया ज्यारूपया धनुषि घटिकाज्ञानं युक्तियुक्तम् ॥”

इत्युच्यते, अनयोर्भावनया श्रीपत्युक्तं भास्करोक्तं च सर्वमुपपद्यते । अत्र कलांशाः षड्भक्ता घटिका भवन्त्यहोरात्रवृत्ते शष्ट्यधिकशतत्रयमंशा अङ्किताः सन्ति तेन षष्टिघटिकानुसारेण षड्भिरंशैरेका घटिका भवतीति । श्रीपत्युक्तमिदं यष्ट्यन्त्रेण समयज्ञानं भास्करोक्तं च लल्लोक्तस्य—

“अग्राग्राच्छङ्कुभ्रमवृत्ते कालांशकैलिखेद्राशिम् ।

दिङ्मध्यच्छायाग्रं कृत्वाऽत्र स्थापयेच्छङ्कुम् ॥

अग्राग्राच्छङ्कुतलान्तरस्थिता वा समुद्रगता भागाः ।

कालांशाः षट्कहृता भवन्ति घटिका दिनस्य गताः ॥

इत्यस्यैवानुरूपमिति विज्ञैर्विवेच्यम् ॥२२॥

अब प्रकारान्तर से घटिकानयन को कहते हैं ।

हि. भा.—पहले अग्राग्र और यष्ट्यग्र के अन्तर को मापन कर जो लिया गया है । उसके आधे को त्रिज्या से गुणाकर यष्टि व्यासार्धोत्पन्न द्युज्या से भाग देने से जो फल हो उसके चापांश को दो से गुणा कर छः से भाग देने से वा (प्रकारान्तर से) घटी होती है इति ॥

उपपत्ति ।

अग्राग्र और यष्ट्यग्र के अन्तर घटचंश की पूर्णज्या है । इसका आधा द्युज्याव्यासार्ध में घटचंशार्धज्या होती है । तब अनुपात करते हैं यदि द्युज्याव्यासार्ध में यह घटचंशार्धज्या पाते हैं तो त्रिज्या व्यासार्ध में क्या इस अनुपात से त्रिज्याव्यासार्ध में घटचंशार्धज्या आती है उसका स्वरूप = $\frac{\text{ज्या } \frac{1}{2} \text{ घटचंश.त्रि}}{\text{द्यु}}$ इसके चाप को दो से गुणा करने से अंशात्मक

होता है उसको छः से भाग देने से घटी होती है इति । सिद्धान्तशेखर में “न्यसेदग्रां प्राक् प्रतीच्यग्रतोऽत्र याम्योदकस्था मध्यदेशान्तज्या” यहां संस्कृतोपपत्ति में लिखित श्लोकों के अनुसार श्रीपति कहते हैं । इन श्लोकों का अर्थ यह है—इस पूर्वलिखित वृत्त में पूर्वबिन्दु और पश्चिम बिन्दु से अग्रा का न्यास करना चाहिये । वृत्त के केन्द्र बिन्दु से दक्षिण दिशा में वा उत्तर दिशा में नतज्या दान देना चाहिये अग्रा और नतज्या के मानों से शङ्कु स.घन करना । उस वृत्त में अहोरात्रवृत्त साठ घटी से अङ्कित होता है यहां अहोरात्रवृत्त को अंशात्मक अर्थात् तीन सौ साठ अंशात्मक करना चाहिये । वह अग्राग्र बिन्दु से देना चाहिये अर्थात् अहोरात्रवृत्त में अंश बिभाग स्वोदयबिन्दु (अग्राग्रबिन्दु) से करना चाहिये । इस तीन सौ साठ अंश से अङ्कित अहोरात्रवृत्त में अग्रा और नतज्या के मानानुसार मापित शङ्कु को उसके मध्यन्त छायाग्र में जैसे हो वैसे स्थापन करना चाहिये । अग्राग्र बिन्दु से शङ्कुमूल पर्यन्त अहोरात्रवृत्त में जो अंश है वे गतकलांश है, उन गतकलांश को छः से भाग देने से दिनगत घटी होती है इति ॥

इसकी उपपत्ति ।

समान पृथिवी में वृत्त रचना और यष्टि-शङ्कु के स्वरूपादि पूर्व में कथित ही है । इस वृत्त में पूर्व बिन्दु और पश्चिम बिन्दु से अग्रा दान देना तथा वृत्त केन्द्र बिन्दु से नतज्या देनी चाहिये । यष्ट्यग्र बिन्दु से लम्बरूप अङ्गुलात्मकशङ्कु को चक्रभाग (३६० अंश) से अङ्कित अहोरात्रवृत्त में यष्टि से संलग्न उस तरह स्थापना करना चाहिये जिससे छायाग्र वृत्तकेन्द्र में पतित हो । इस तरह अग्राग्र बिन्दु से शङ्कुमूल पर्यन्त अहोरात्रवृत्तीय अंशादिमान कालभाग होते हैं । यहां भास्कराचार्य संस्कृतोपपत्ति में लिखित ‘अग्रागडदितो-रविः’ यहां से लेकर घटिकाज्ञानं युक्ति युक्त पर्यन्त’ कहते हैं, इन दोनों का विचार करने से श्रीपत्युक्त और भास्करोक्त भी उपपन्न होता है । यहां कालांश को छः से भाग देने से घटी होती है । अहोरात्रवृत्त में तीन सौ साठ अंश अङ्कित है इसलिये साठ घटी के अनुसार छः अंश में एक घटी होती है । यह श्रीपत्युक्त यष्टियन्त्र से समय ज्ञान भास्करोक्त भी शिष्यधी-वृद्धिद तन्त्र में लल्लोक्त ‘अग्राग्राच्छङ्कुभ्रमवृत्ते कालांशकैर्लिखेद्वाशिम’ इत्यादि संस्कृतोपपत्ति में लिखित इन श्लोकों के अनुरूप ही इसको विवेचक लोग विचार कर देखें इति ॥२२॥

अथवा घटिकानयनमाह ।

यष्टिव्यासार्धे वा घटिका शङ्कुवङ्गुलादितो मूलात् ।

अवलम्ब सूत्र युक्त्या घटिका दिवसस्य गतशेषाः ॥२३॥

सु. भा.—वा यष्टिव्यासार्धे गोले शङ्कुवङ्गुलादितो मूलात् शङ्कुतलाच्च घटिकाः साध्याः । शङ्कुतलात् शङ्कोश्चेष्टहृतिमानीय ततो द्युज्यानुपातेनेष्टान्त्यां सूत्रं चानीय त्रिप्रश्नोक्त्या घटिका साध्या इत्यर्थः । अर्थाद् गोलरचनां विनैव नष्टद्युतेर्यष्टेरग्रादवलम्बकं कृत्वा शङ्कुं विज्ञाय १९ सूत्र युक्त्या द्युज्येष्टान्त्यादिना त्रिप्रश्नोक्त्या गतशेषा घटिका ज्ञेयाः ॥ २३ ॥

तिथयः शुक्ले याताः कृष्णे शेषाः फलं भवति ॥”

इत्येतदनुरूपमेव श्रीपत्युक्तमिति ॥२४-२५॥

अब यष्टि यन्त्र द्वारा वेध से रवि और चन्द्र के अन्तरांशानयन को कहते हैं ।

हि. भा.— समान पृथिवी में यष्टि व्यासार्ध से वृत्त बनाकर चक्रांश से अङ्कित कर उसको केन्द्रगत कील करना चाहिये । कीलगत वृत्त के व्यासार्ध तुल्य दो यष्टि करना, कील में दोनों यष्टियों के मूल को मिलाकर रखना चाहिये । उन मूल मिलित यष्टिद्वय से मूलस्थ दृष्टि द्वारा एक ही समय में एक एक यष्ट्यग्रगत सूर्य और चन्द्र को यष्ट्यग्रगत सूत्र से वेध करना चाहिये । वह यष्ट्यग्रगत सूत्र रवि और चन्द्र की अन्तरांश पूर्णांज्या होती है । अतएव उस पूर्णांज्या से क्षितिज वृत्त में जो चाप होता है वह रवि और चन्द्र का अन्तरांश होता है । उस अन्तरांश को बारह से भाग देने से तिथि होती है । सिद्धान्तशेखर में “वृत्ते चक्रलवाङ्कितेऽत्र शकटाकारं शलाकाद्वयं” इत्यादि विज्ञान भाष्य में लिखित श्लोक के अनुसार श्रीपति कहते हैं । इस श्लोक का अर्थ यह है भगणाङ्कित वृत्त में शकटाकार मूल में मिली हुई दो यष्टियों से सूर्य और चन्द्र को वेध करना अर्थात् दोनों यष्टियों के मूल मिलाकर मूलस्थ दृष्टि से यष्टिद्वय द्वारा यष्ट्यग्रगत सूर्य और चन्द्र को वेध करना चाहिये । यष्ट्यग्रगत रवि और चन्द्र से लम्ब गिराना चाहिये । परिधि में लम्बान्तर के जितने अंश हैं उनको बारह से भाग देने से शुक्लपक्ष में गत तिथि होती है । कृष्णपक्ष में भोग्य (अवशिष्ट) तिथि होती है इति ।

उपपत्ति ।

मूल में मिली हुई दो यष्टियों से सूर्य और चन्द्र को वेध करना चाहिये, वेध करने से यष्ट्यग्रगत सूर्य और चन्द्र से लम्ब गिराने से लिखित वृत्त में लम्बान्तर के जितने अंश हैं वे सूर्य और चन्द्र के अन्तरांश होते हैं । उनको बारह से भाग देने से तिथि होती है । केवल गणित से तिथि साधन में चन्द्र में सूर्य को घटाने से जो अन्तरांश होता है उस को बारह से

भाग देने से शुक्ल प्रतिपदादिक तिथि होती है। यहां तो अन्तरांश आते हैं इसलिये चन्द्र-रहित सूर्य (अन्तरांश) को बारह से भाग देने सेच न्द्र से रवि पर्यन्त अर्थात् रवि और चन्द्र की पुनः योगात्मक अमावास्या पर्यन्त तिथि होती है वे ही भोग्य तिथियां हैं। यहां लल्लाचार्य ने—“शकटाकृति यष्टिभ्यां विद्ध्वा रविशीत गूतदवलम्बे” इत्यादि संस्कृतोपपत्ति में लिखित श्लोकों के अनुसार कहा है। लल्लोक्त के अनुरूप ही श्रीपत्युक्त है इति ॥२४-२५॥

इदानीं प्रकारान्तरेणान्तरांशानयनमाह ।

सूत्रार्धगुणा त्रिज्या यष्टिहृता फलधनुर्द्विगुणितं वा ।

रविचन्द्रान्तरमिष्टव्यासार्धोल्लिखितवृत्तस्य ॥२६॥

सु. भा.—पूर्वं यत् पूर्णज्यासमं सूत्रमागतं तस्यार्धेन त्रिज्या गुणा यष्टिहृता फलधनुर्द्विगुणितं वा रविचन्द्रान्तरं भवति । इष्टव्यासार्धोल्लिखितवृत्तस्याग्रे सम्बन्धः ।

अत्रोपपत्तिः ।

सूत्रार्धं यष्टिव्यासार्धे रविचन्द्रान्तरार्धज्या सा त्रिज्या व्यासाध परिणता । तद्धनुर्द्विगुणमन्तरांशा भवन्ति ॥२६॥

वि. भा.—पूर्वश्लोकोपपत्तौ रविचन्द्रान्तरपूर्णज्यासमं यत्सूत्रं समागतं तेन त्रिज्या गुणिता यष्ट्या भक्ता लब्धस्य चापं द्विगुणितं वा रविचन्द्रान्तरांशा भवन्तीति । इष्टव्यासार्धोल्लिखितवृत्तस्याग्रे सम्बन्धः ।

अत्रोपपत्तिः ।

अथ सूत्रम् = रविचन्द्रान्तरांश पूर्णज्या, अतः $\frac{\text{सूत्र}}{२} = \text{ज्या} \frac{१}{२}$ रविचन्द्रान्तरांश, इयं यष्टिव्यासार्धेऽस्ति, ततो ऽनुपातेनेष्ट त्रिज्या व्यासार्धे समानीयते, यदि यष्टि-व्यासार्धे इयं रविचन्द्रान्तरार्धज्या लभ्यते तदा त्रिज्या व्यासार्धे किं समागच्छति

त्रिज्या व्यासार्धे रविचन्द्रान्तरार्धज्या तत्स्वरूपम् $\frac{\text{सूत्र}}{२} \times \text{त्रि}$ अस्याश्चापं रवि-यष्टि

चन्द्रान्तरार्धम् । द्विगुणितं तदा रविचन्द्रान्तरांशा भवन्तीति ॥२६॥

अब प्रकारान्तर से अन्तरांशानयन कहते हैं ।

हि. भा.—पूर्वश्लोक में रविचन्द्रान्तरांश की पूर्णज्या तुल्य जो सूत्र आया है उससे त्रिज्या को गुणा कर यष्टि से भाग देने से जो लब्ध हो उसके चाप को द्विगुणित करने से रविचन्द्रान्तरांश होता है इति ।

उपपत्ति ।

सूत्र = रविचन्द्रान्तरांश पूर्णज्या, अतः $\frac{\text{सूत्र}}{2} = \text{ज्या } \frac{1}{2}$ रविचन्द्रान्तरांश, यह यष्टि-

व्यासार्धगोलीय है । इसको त्रिज्याव्यासार्ध में परिणत करते हैं । यदि यष्टि व्यासार्ध में यह रवि चन्द्रान्तरार्धज्या पाते हैं तो त्रिज्या व्यासार्ध में क्या इससे त्रिज्या व्यासार्ध में रवि चन्द्रान्तरार्धज्या आती है । इसके चाप को द्विगुणित करने से रविचन्द्रान्तरांश होता है इति ॥२६॥

इदानीं यष्टियन्त्रेण दिक्साधनमाह ।

मध्यधृताया यष्टेर्लम्बकशङ्कू प्रवेशनिर्गमने ।

क्रान्तिवशात् प्राच्यपरे मत्स्याद्याम्योत्तरे साध्ये ॥२७॥

सु. भा.—समावनाविष्टव्यासार्धेन लिखितस्य वृत्तस्य मध्ये स्थापित-
कीलस्य छाया पूर्वकपालस्थे रवौ यत्र प्रतीच्यां परिधौ लगति स प्रवेशबिन्दुः ।
यत्र च पश्चिमकपालस्थे रवौ प्राचि लगति स निर्गमनबिन्दुः । तत्र प्रवेशनिर्गमने
समये मध्यधृताया यष्टेर्नष्टद्युतेरग्राल्लम्बं विधाय द्वौ समौ शङ्कू साध्यौ । ताभ्यां
तत्तत्कालक्रान्तिवशात् त्रिप्रश्नोत्तथा भुजान्तरं विधाय प्राच्यपरे साध्ये ताभ्यां
मत्स्याद्याम्योत्तरे च साध्ये इति सर्वं त्रिप्रश्नाधिकारतः स्फुटम् ॥२७॥

वि. भा.—समपृथिव्यामिष्टव्यासार्धेन लिखितवृत्तस्य केन्द्रे स्थापितस्य
कीलस्य छाया पूर्वकपालस्थे रवौ यत्र पश्चिमदिशि वृत्तपरिधौ लगति स छाया-
प्रवेशबिन्दुः । पश्चिमकपालस्थे रवौ कीलच्छाया पूर्वदिशि वृत्तपरिधौ यत्र
लगति स छायानिर्गमनबिन्दुः । तत्र प्रवेशनिर्गमनसमये केन्द्रस्थयष्टे (कीलस्य)
नष्टद्युतेरग्राल्लम्बं विधाय द्वौ समौ शङ्कू साध्यौ, ताभ्यां (शङ्कुभ्यां) तत्तत्काल-
क्रान्तिवशाद् भुजान्तरं कृत्वा पूर्वापरे साध्ये ताभ्यां मत्स्योत्पादनेन याम्योत्तरे
साध्ये इति ।

अत्रोपपत्तिः ।

छायाप्रवेशनिर्गमनसमये केन्द्रस्थयष्टेरग्राल्लम्बं विधाय द्वौ समौ शङ्कु साध्यौ,
तदा $\frac{\text{शङ्कुतल} \times १२}{\text{शङ्कु}} = \text{पलभा}$ । ततः $\sqrt{\text{पलभा}^2 + १२^2} = \text{पलकर्णः}$ । क्रान्ति-

ज्ञानं तु वर्तत एवातः $\frac{\text{पलक.क्रांज्या}}{१२} = \text{प्रवेश कालिकाग्रा} = \text{अग्रा}$ । $\frac{\text{पक} \times \text{क्रांज्या}}{१२}$

$= \text{निर्गमनकालिकाग्रा} = \text{अग्रा}$ । क्रांज्या = छायाप्रवेशकालिक क्रान्तिज्या । क्रांज्या
= छायानिर्गमनकालिक क्रान्तिज्या । शङ्कु वोस्तुल्यत्वाच्छतकुलमपि तुल्यमस्ति ।
अग्रा \pm शतल = भुजः प्रवेशकालिकः । अग्रा \pm शतल = भुजः = निर्गमनकालिकः ।
अनयोरन्तरम् । अग्रान्तरम् = भुजान्तरम् । एतद्भुजान्तरं वशेन वास्तवपूर्वापर
रेखायाः समानान्तररेखाया ज्ञानं भवेत् । वृत्तकेन्द्रबिन्दुतस्तत्समानान्तरं रेखा
वास्तव पूर्वापररेखा भवेत् । केन्द्रबिन्दुतस्तदुपरिलम्बरेखा दक्षिणोत्तरा रेखा भवेत् ।
प्राचीनै रेखोपरिलम्बकरणार्थं मत्स्योत्पादनं क्रियते स्म । एतावता दिग्ज्ञानं
जातमिति ॥२७॥

अब यष्टियन्त्र से दिक्साधन को कहते हैं ।

हि. भा.—समान पृथिवी में इष्टव्यासार्ध से लिखित वृत्त के केन्द्र में स्थापित कील
की छाया पूर्वकपाल में रवि के रहने से पश्चिम दिशा में वृत्त परिधि में जहां लगती है वह
बिन्दु छायाप्रवेश बिन्दु है । पश्चिम कपाल में रवि के रहने से कील की छाया पूर्वदिशा
में वृत्तपरिधि में जहां लगती है वह छाया निर्गमबिन्दु है । छायाप्रवेश समय में और
निर्गमन समय में नष्टद्युति यष्टि के अग्र से लम्ब करके दो समानशङ्कु का साधन करना ।
उन दोनों शङ्कुओं से तत्तत्कालिक (प्रवेशकालिक और निर्गमनकालिक) क्रान्तिवश से
भुजान्तर लाकर पूर्वापर दिशा साधन करना, उन दोनों से मत्स्योत्पादन से दक्षिणदिक्षा
और उत्तर दिशा साधन करना चाहिये इति ॥२७॥

उपपत्ति ।

छाया प्रवेश समय में और निर्गमन समय में केन्द्रस्थ यष्टि के अग्र से लम्ब करके दो
समान शङ्कु का साधन करना चाहिये । तब $\frac{\text{शतल} \times १२}{\text{शङ्कु}} = \text{पलभा}$ । $\sqrt{\text{पलभा}^2 + १२^2}$

= पलकर्ण । क्रान्ति के ज्ञान से $\frac{\text{पलक.क्रांज्या}}{१२}$ = प्रवेशकालिक अग्रा = अग्रा । $\frac{\text{पलक.क्रांज्या}}{१२}$

= निर्गमनकालिक अग्रा = अग्रा । क्रांज्या = छायाप्रवेशकालिक क्रान्तिज्या । क्रांज्या = छाया निर्गमन कालिक क्रान्तिज्या । दोनों शङ्कुओं के बराबर रहने से शङ्कुतल भी बराबर है ।

∴ अग्रा ± शंतल = प्रवेशकालिक भुज । अग्रा ± शंतल = भुज = निर्गमनकालिक भुज दोनों के अन्तर करने से अग्रान्तर = भुजान्तर, इस भुजान्तर वश से वास्तव पूर्वापर रेखा की समानान्तर रेखा का ज्ञान होता है । वृत्त के केन्द्रबिन्दु से उसकी समानान्तर रेखा वास्तव पूर्वापर रेखा होती है । केन्द्र बिन्दु से उसके ऊपर लम्बरेखा दक्षिणोत्तरा रेखा होती है । प्राचीनाचार्य रेखा के ऊपर लम्ब करने के लिये मत्स्योत्पावन करते थे । इससे दिक् साधन हो गया इति ॥२७॥

इदानीं भुजकोटिसाधनमाह ।

शङ्कुतलाग्रान्तरयुतिरन्यैकदिशोभुजो भुजस्य कृतिम् ।

दृज्याकर्णकृतेः प्रोह्य पवं पूर्वापरा कोटिः ॥ २८॥

सु. भा.—स्पष्टार्थम् । त्रिप्रश्नाधिकारे सर्वं स्फुटमेव प्रतिपादितम् ॥२८॥

वि. भा.—अन्यदिशि शङ्कुतलस्याग्रायाश्चान्तरमेकदिशि तयोर्योगो भुजो भवति । दृज्यारूपकर्णवर्गाद् भुजस्य कृति (वर्ग) प्रोह्य (हित्वा) पूर्वापरानुकारा कोटिर्भवेदिति ॥

अत्रोपपत्तिः ।

यष्ट्यग्रादवलम्बसूत्रं शङ्कुः । शङ्कुमूलात्पूर्वापरसूत्रोपरिलम्बो भुज-संज्ञकः । स्वोदयास्तसूत्रपूर्वापरसूत्रयोरन्तरमग्रा । शङ्कुमूलात्स्वोदयास्तसूत्रोपरिलम्बः शङ्कुतलम् । एतेषां भुजाग्राशङ्कुतलानां स्वरूपदर्शनेन स्फुटमस्ति यदग्राशङ्कुतलयोर्भिन्नदिक्कयोरन्तरमेकदिक्कयोर्योगो भुजो भवति । शङ्कुमूलाद्वृत्तकेन्द्रपर्यन्तं दृज्याकर्णः । भुजाग्राद्वृत्तकेन्द्रपर्यन्तं पूर्वापरसूत्रखण्डं कोटिः । भुज-संज्ञको भुजः । एतैः कर्णकोटिभुजैरुत्पन्नत्रिभुजे $\sqrt{\text{दृज्या}^2 - \text{भुज}^2}$ = कोटिः । एतेनाचार्योक्तमुपपन्नम् ॥२८॥

अब भुज और कोटि के साधन को कहते हैं ।

हि. भा.—अग्रा और शङ्कुतल की भिन्न दिशा रहने से दोनों का अन्तर भुज होता है । तथा दोनों की दिशा एक रहने से योग करने से भुज होता है । दृग्यारूप कर्ण वर्ग में भुज वर्ग को घटाकर मूल लेने से पूर्वापरानुकार कोटिसंज्ञक होता है । इति ॥२८॥

उपपत्ति ।

यष्टधग्र से अबलम्ब सूत्र शङ्कु है । शङ्कुमूल से पूर्वापर सूत्र के ऊपर लम्ब भुज संज्ञक है स्वोदयास्त सूत्र और पूर्वापर सूत्र का अन्तर अग्रा है । शङ्कुमूल से स्वोदयास्त सूत्र के ऊपर लम्ब शङ्कुतल है । इन भुज, अग्रा शङ्कुतल का स्वरूप देखने से स्पष्ट है कि भिन्न दिशा का शङ्कुतल और अग्रा का अन्तरभुज होता है, तथा एक दिशा का शङ्कुतल और अग्रा का योग करने से भुज होता है । शङ्कुमूल से वृत्तकेन्द्रपर्यन्त दृग्यार्क, भुजसंज्ञक भुज, भुजाग्र से वृत्त केन्द्रपर्यन्त कोटि, इन कर्णभुज और कोटि से उत्पन्न जात्यत्रिभुज में $\sqrt{\text{दृग्यार्क}^2 - \text{भुज}^2} = \text{कोटि}$ । इससे आचार्योक्त उपपन्न हुआ इति ॥२८॥

इदानीं यष्टियन्त्रेण पलभाज्ञानमाह ।

उदयास्तसूत्रशङ्क्वन्तरं हृतं शङ्कुनाऽर्कसङ्गुणितम् ।

बिषुवच्छायेवं वा विनोदयास्तमयसूत्रेण ॥२९॥

सु. भा.—उदयास्तसूत्रशङ्क्वन्तरं शङ्कुतलं तदर्कसङ्गुणितं शङ्कुना हृतं फलं बिषुवच्छाया पलभा भवति । उदयास्तसूत्रेण विनाऽपि वा पलभाज्ञानमेवं वक्ष्यमाणेन विधिना भवतीत्यस्याग्रे सम्बन्धः ।

अत्रोपपत्तिः । अक्षक्षेत्रानुपातेन स्फुटा ॥२९॥

वि. भा.—उदयास्तसूत्रशङ्क्वन्तरं (शङ्कुतलं) तद्द्वादशभिर्गुणितं शङ्कुना भक्तं लब्धं बिषुवच्छाया (पलभा) भवति उदयास्तसूत्रेण विनाऽपि वा पलभाज्ञानमेवमग्निमश्लोकेन भवतीति ।

अत्रोपपत्तिः ।

पूर्वं समभुवि लिखितं वृत्तं क्षितिजवृत्तम् । त्रिज्याङ्गला यष्टिः स्वत एव त्रिज्यारूपा । सा नष्टद्युतिर्यथा भवति तथा धार्या, येन यष्ट्यग्रं वर्धितं सद्रविबिम्ब-केन्द्रं गच्छेत् । यष्ट्यग्रादधो यावान् लम्बस्तावान् तस्मिन् काले शङ्कुः । अथ त्रिज्यारूपाया यष्टेः शङ्कुरूपलम्बस्य वर्गान्तरमूलं नतांशज्या (दृग्यार्क) शङ्कुमूल-वृत्तकेन्द्रयोरन्तररूपेति । शङ्कुमूलपूर्वापररेखयोरन्तरं भुजः । पूर्वापरदिगगतयोर-

आग्रयोरुपरि गता रेखोदयास्तसूत्रम् । उदयास्तसूत्रस्य शंकुमूलस्यान्तरं शंकुतलम् । तदाऽक्षक्षेत्रानुपातेन यदि शंकुना शंकुतलं लभ्यते तदा द्वादशशंकु-
ना किमिति समागच्छति पलभा तत्स्वरूपम् = $\frac{\text{शंतल} \times १२}{\text{शंकु}}$ एतावताऽऽचार्योक्तमु-
पपन्नम् ॥२६॥

अब यष्टियन्त्र से पलभाज्ञान कहते हैं ।

हि. भा.—उदयास्तसूत्र और शङ्कुमूल के अन्तर (शङ्कुतल) को बारह से गुणा कर शङ्कु से भाग देने से पलभा होती है । बिना उदयास्तसूत्र के भी पलभा ज्ञान आगे कहते हैं इति ॥२६॥

उपपत्ति ।

पूर्व में समान पृथिवी में लिखित वृत्त क्षितिजवृत्त है । यष्टि त्रिज्या के बराबर है । यष्टि को इस तरह धारण करना चाहिये जिससे यष्ट्यग्र को बढ़ाने से रवि बिम्बकेन्द्र में जाय, यष्ट्यग्र से नीचे जो लम्ब होगा वह शङ्कु है । त्रिज्यारूपयष्टि और शङ्कुरूप लम्ब का वर्गान्तरमूल नतांशज्या (दृग्ज्या) शङ्कुमूल और वृत्तकेन्द्र का अन्तररूप है । शङ्कु-
मूल से पूर्वापरसूत्र पर्यन्त लम्बरूपभुज है । शङ्कुमूल से उदयास्तसूत्रपर्यन्त लम्बरूप शङ्कुतल है । तब अनुपात करते हैं यदि शङ्कु में शङ्कुतल पाते हैं तो द्वादशा (बारह शङ्कुल) शङ्कुल शङ्कु में क्या इस अनुपात से पलभा आती है, इसका स्वरूप
= $\frac{\text{शंतल} \times १२}{\text{शङ्कु}}$ = पलभा । इससे आचार्योक्त उपपन्न हुआ इति ॥२६॥

इदानीं भुजद्वयतः पलभाज्ञानमाह ।

प्राच्यपराशङ्कुतलान्तरद्वयान्तरयुतिः समान्यविशोः ।

द्वादशगुणिता विषुवच्छाया शङ्कुवन्तर विभक्ता ॥३०॥

सु. भा.—शंकुमूलप्राच्यपरान्तरं भुजः । एवमेकस्मिन् दिने भुजद्वयं ज्ञेयम् तयोः समान्यदिशोरन्तरयुतिः कार्या सा द्वादशगुणिता शङ्कुवन्तरविभक्ता विषुव-
च्छाया भवति । ‘भुजयोरेकान्यदिशोरन्तरमैक्यं’ रविक्षुण्णभि—त्यादिभास्करोक्त-
मेतदनुरूपमेव ।

अत्रोपपत्तिः ।

भास्करविधिना स्फुटा सजातीयक्षेत्रयोर्भुजयोः कौटर्धोः कर्णयोरन्तरतो योगाद्वा तथैव सजातीयक्षेत्रोत्पन्नत्वात् ॥३०॥

वि. भा.—शङ्कुतलम् (शङ्कुमूलम्), प्राच्यपरा (पूर्वापररेखा) । शङ्कु-
मूल पूर्वापररेखयोरन्तरं भुजः । एकस्मिन् दिने भुजद्वयं ज्ञेयम् । तयोर्भुजयोरैकदि-
शायां विद्युतिः (अन्तरं) भिन्न दिशायां युतिः कार्या, सा द्वादशगुणिता शङ्कुवन्त-
रेण विभक्ता तदा विषुवच्छाया (पलभा) भवतीति ॥

अत्रोपपत्तिः ।

अग्राशङ्कुतलयोः संस्कारेण भुजः = अग्रा ± शंतल । तथा अग्रा ± शंतल
= भुजः, अनयोरन्तरम् = शङ्कुतलान्तरम् = भुजान्तरम् । तदा शङ्कुतलान्तरं
भुजः । शङ्कुवन्तरं कोटिः । हृत्यन्तरं कर्णः, इति भुजत्रयैरुत्पन्नत्रिभुजमप्यक्षेत्र-
सजातीयमतोऽनुपातः $\frac{\text{शङ्कुतलान्तर} \times १२}{\text{शङ्कुवन्तर}} = \frac{\text{भुजान्तर} \times १२}{\text{शङ्कुवन्तर}} = \text{पलभा} ।$
सिद्धान्तशिरोमणौ गोलाध्याये भास्करोक्त 'भुजयोरेकान्यदिशोरन्तरमैक्य' रवि-
क्षुण्ण' मित्याचार्योक्तानुरूपमेवास्तीति ॥३०॥

अब भुजद्वय से पलभाज्ञान को कहते हैं ।

हि. भा.—शङ्कुमूल और पूर्वापररेखा का अन्तरभुज है । एक दिन में दो भुजों को
जानना चाहिये । एक दिशा में दोनों भुजों के अन्तर को और भिन्न दिशा में दोनों भुजों के
योग को बारह से गुणाकर शङ्कुवन्तर से भाग देने से पलभा होती है इति ॥३०॥

उपपत्ति ।

अग्रा और शङ्कुतल के संस्कार से भुज होता है । अग्रा ± शंतल = भुज । तथा अग्रा
± शंतल = भुज दोनों का अन्तर करने से शङ्कुतलान्तर = भुजान्तर । शङ्कुतलान्तरभुज,
शङ्कुवन्तरकोटि, हृत्यन्तर कर्ण इन तीनों अवयवों से उत्पन्न त्रिभुज अक्ष क्षेत्र के सजातीय
हैं, इसलिये अनुपात करते हैं । $\frac{\text{शंतलान्तर} \times १२}{\text{शङ्कुवन्तर}} = \frac{\text{भुजान्तर} \times १२}{\text{शङ्कुवन्तर}} = \text{पलभा},$ इससे
आचार्योक्त उपपन्न होता है । सिद्धान्तशिरोमणि के गोलाध्याय में 'भुजयोरेकान्यदिशोरन्तर-
मैक्यम्' इत्यादि भास्करोक्त आचार्योक्त के अनुरूप ही है इति ॥३०॥

इदानीं रविज्ञानमाह ।

शङ्कुप्राच्यपरान्तर शङ्कुवर्षमैक्यमुदगन्तरं याम्ये ।

लम्बगुणं यष्टिद्वयं क्रान्तिज्यास्तो रविः साध्यः ॥३१॥

सु. भा.—शंकुप्राच्यपरान्तरं भुजः । शंकुवग्रं शंकुतलम् । उदग्भुजेऽनयोरैक्यं याम्ये भुजेऽन्तरमग्रा भवति । एवमैक्यान्तरं लम्बगुणं लम्बज्यया गुणं यष्टिहृतं त्रिज्याहृतं फलं क्रान्तिज्या भवति । अतः प्राग्वत् त्रिप्रश्नोक्तिवद्विः साध्यः ।

अत्रोपपत्तिः ।

त्रिज्याकर्णो लम्बज्या कोटिस्तदाऽग्राकर्णो किं जाता क्रान्तिज्या । शेष वासना स्फुटा ॥३१॥

वि. भा.—शङ्कुप्राच्यपरान्तरं भुजः । शंकुवग्रं शङ्कुतलम् । उत्तरे भुजेऽनयो (शङ्कुतलभुजयोः) र्योगः, दक्षिणे भुजेऽन्तरं कार्यं तदाऽग्रा भवति । तद्योगान्तरं लम्ब (लम्बज्यया) गुणं यष्टि (त्रिज्या) भक्तं तदा क्रान्तिज्या भवति । अतः पूर्ववत् (त्रिप्रश्नोक्तवत्) रविः साध्य इति ॥

अत्रोपपत्तिः ।

अग्राशङ्कुतलयोः संस्कारेण भुजो भवत्यत एतद्विलोमेन शङ्कुतलभुजयोः संस्कारेणाग्रा भवेत् । ततोऽनुपातो यदि त्रिज्यया लम्बज्या लभ्यते तदाऽग्रा किं समागच्छति क्रान्तिज्या तत्स्वरूपम् = $\frac{\text{लज्या.अग्रा}}{\text{त्रि}} = \text{क्रांज्या}$, ततः $\frac{\text{त्रि.क्रांज्या}}{\text{त्रिज्या}} = \text{रविभुजज्या अस्याश्चापं रविभुजांशाः स्युरिति ॥३१॥}$

अब यष्टियन्त्र से रविज्ञान कहते हैं ।

हि. भा.—शङ्कुमूल और पूर्वापर सूत्र का अन्तरभुज है । शङ्कुवग्र (शङ्कुतल), उत्तरभुज में शङ्कुतल और भुज का योग अग्रा होती है । दक्षिणभुज में शङ्कुतल और भुज का योग अग्रा होती है । उस योगान्तर (अग्रा) को लम्बज्या से गुणाकर यष्टि (त्रिज्या) से भाग देने से क्रान्तिज्या होती है । इससे पूर्ववत् (त्रिप्रश्नाधिकारोक्त विधि से) रवि का साधन करना चाहिये ॥३१॥

उपपत्ति ।

अग्रा और शङ्कुतल के संस्कार से भुज होता है, इसके विलोम से शङ्कुतल और भुज के संस्कार से अग्रा होती है । तब अनुपात करते हैं, यदि त्रिज्या में लम्बज्या पाते हैं तो अग्रा में क्या इस अनुपात से क्रान्तिज्या आती है उसका स्वरूप = $\frac{\text{लज्या.अग्रा}}{\text{त्रि}} = \text{क्रांज्या}$ ।

अतः $\frac{\text{त्रि.क्रांज्या}}{\text{त्रिज्या}} = \text{भुजज्या}$ इसके चाप करने से भुजांश होता है इति ॥३१॥

इदानीं यष्ट्या गृहाद्यौच्च्यानयनमाह ।

अपसृतिरन्यशलाका गुणा शलाकान्तरेण भक्ता भूः ।

भूः स्वशलाकागुणिता यष्टि विभक्ता गृहाद्यौच्च्यम् ॥३२॥

सु. भा.—इष्टप्रमाणैका यष्टिर्धार्या । तस्या एकस्मिन्नग्रे लम्बरूपाऽङ्गुलादिभिरङ्किता विपुलैका शलाका बद्ध वा दृढीकार्या यथा यष्टिशलाकाभ्यां कोणः समकोणो भवेत् । यष्ट्यन्याग्रसंस्थदृष्ट्या समधरातलस्थगृहाद्यौच्च्यमन्यथा चलयष्ट्या विध्येत् । इयमन्या यष्टिर्यत्र शलाकायां लग्ना तस्माच्छलाकामूलपर्यन्तं सङ्ख्या वेधसम्बन्धिनी शलाका ज्ञेया । एवं प्रथमस्थानतो वेधं कृत्वा शलाकाप्रमाणं विज्ञाय प्रथमस्थानतस्तस्यामेव सरलरेखायामपसृत्य द्वितीयस्थानतो गृहाद्यौच्च्यं विध्वा तत्रापि शलाकाप्रमाणं जानीयात् । वेधस्थानयोरन्तरं चापसृतिरुच्यते । अपसृतिरन्यशलाकागुणा शलाकान्तरेण भक्ता तदा भूः स्वभूवेधस्थानगृहान्तरं भवति । भूश्च स्वशलाकागुणा यष्टिविभक्ता गृहाद्यौच्च्यं स्यात् ।

अत्रोपपत्तिः ।

गुड=गृहाद्यौच्च्यम् । प्रभू=यष्टिः=द्विभू । प्र=प्रथमवेधस्थानम् । द्वि=द्वितीयवेधस्थानम् । भूअ_१=प्रथमवेधे शलाका=श_१ भूअ_२ द्वितीयवेधे शलाका=श_२ प्रद्वि=अपसृतिः=आगृप्र=भू_३ । गृद्वि=भू_१=भू_२+अ ।

सजातीयक्षेत्रतः

$$\text{गुड } \frac{\text{भू.श}_1}{\text{य}} = \frac{(\text{भू.} + \text{अ}) \text{श}_1}{\text{य}}$$

$$\therefore \text{भू.श}_1 = \text{भू.श}_1 + \text{अ.श}_1 \text{ । ततः भू. (श}_1 - \text{श}_2) = \text{अ.श}_1 \text{ ।}$$

$$\therefore \frac{\text{अ.श}_1}{\text{श}_1 - \text{श}_2} = \text{भू.} \text{ । एवं भू.} = \frac{\text{अ.श}_1}{\text{श}_1 - \text{श}_2} \text{ । शेषोपपत्तिः स्फुटा ॥३२॥}$$

वि. भा.—एकेष्टा यष्टिर्ग्रहीतव्या तस्या एकस्मिन्नग्रे तदुपरि लम्बरूपाऽङ्गुलादिभिरिचिह्निता विपुलैका शलाका तथा वन्धनीया यथा दृढा भवेत् । यष्ट्यन्याग्रस्थितदृष्ट्या समपृथिव्यां स्थितं गृहाद्यौच्च्यं विध्येत् । शलाकाप्रमाणं च ज्ञात्वा प्रथमवेधस्थानात्तस्यामेव सरलरेखायामपसृत्य (किञ्चिदगत्वा) द्वितीयस्थानतोऽपि गृहाद्यौच्च्यं विध्येत् । तत्रापि शलाकाप्रमाणं ज्ञेयम् । वेधस्थानयोरन्तरमपसृतिः कथ्यते । अपसृतिरन्यशलाकया गुणा शलाकान्तरेण भक्ता तदा भूः (वेधस्थानस्य गृहस्य चान्तरं) भवति । भूः स्वशलाकया गुणिता यष्ट्या भक्ता तदा गृहाद्यौच्च्यं भवेदिति ॥

अत्रोपपत्तिः ।

प्रग = यष्टिः = द्विर ।

प्र = प्रथमवेधस्थानम् ।

द्वि = द्वितीयवेधस्थानम् प्रथमवेध-

स्थानेशलाका = गन = श ।

द्वितीयवेध स्थाने शलाका

= रम = श प्रद्वि = अपसृतिः ।

कप्र = भूः । कद्वि = भू = भू + अपसृति ।

तदा अकप्र, नगप्र त्रिभुजयो सजातीयत्वादनुपातः $\frac{\text{श.भू}}{\text{यष्टि}} = \text{अक} = \text{गृहाद्यौ-}$ च्यम् । तथा अकद्वि, मरद्वि त्रिभुजयोः साजात्यादनुपातेन $\frac{\text{श.भू}}{\text{यष्टि}} =$ $= \frac{\text{श (भू + अपसृति)}}{\text{यष्टि}} = \text{गृहाद्यौच्यम्} । \text{अतः } \frac{\text{श.भू}}{\text{यष्टि}} = \frac{\text{श (भू + अपसृति)}}{\text{यष्टि}}$ पक्षौ 'यष्टि' गुणितौ तदा $\text{श.भू} = \text{श (भू + अपसृति)} = \text{श.भू} + \text{श.अपसृति}$,समशोधनेन $\text{श.भू} - \text{श.भू} = \text{भू (श - श)} = \text{श अपसृति}$ पक्षौ $\text{श} - \text{श}$ भक्तौ तदा $\frac{\text{श.अपसृति}}{\text{श} - \text{श}} = \text{भू} । \text{एवं } \frac{\text{श.अपसृति}}{\text{श} - \text{श}} = \text{भू}, \text{ एतेनोपपन्नमाचार्योक्तमिति ॥३२॥}$

अब यष्टि से गृहादि की ऊँचाई का आनयन कहते हैं ।

हि. भा.—एक इष्ट प्रमाण की यष्टि ग्रहण कर उसके एक अग्र में उस के ऊपर लम्बरूप अङ्गुलीदि से अङ्कित एक विपुल (मोटी) शलाका खूब दृढ़ता से बाँधनी चाहिये । यष्टि के अन्य अग्र स्थित दृष्टि से समधरातलस्थित गृहादि की ऊँचाई को वेध करना शलाका प्रमाण को भी जान कर प्रथमवेधस्थान से उसी सरल रेखा में कुछ दूर जाकर द्वितीय स्थान से भी गृहादि की ऊँचाई को वेध करना चाहिये । वहाँ भी शलाका प्रमाण जान लेना चाहिये । दोनों वेध स्थानों का अन्तर अपसृति कहलाती है । अपसृति को अन्यशलाका से गुणाकर शलाकान्तर से भाग देने से भू (वेध स्थान और गृहादि का अन्तर) प्रमाण होता है । भू को अपनी शलाका से गुणाकर यष्टि से भाग देने से गृहादि की ऊँचाई होती है इति ॥३२॥

उपपत्ति ।

यहां संस्कृतोपपत्ति में लिखित (१) क्षेत्र को देखिये । प्रग = यष्टि = द्विर । प्र = प्रथम वेधस्थान । द्वि = द्वितीय वेधस्थान । प्रथम वेधस्थान में शलाका = गन = श । द्वितीय वेधस्थान में शलाका = रम = श । प्रद्वि = अपसृति । कप्र = भू । कद्वि = भू = भू + अपसृति, तब अकप्र, नगप्र दोनों त्रिभुजों के सजातीयत्व से अनुपात करते हैं $\frac{\text{श.भू}}{\text{यष्टि}} = \text{अक} = \text{गृहादि की ऊँचाई, तथा अकद्वि, मरद्वि दोनों त्रिभुजों के सजातीयत्व के द्वारा अनुपात करने से } \frac{\text{श.भू}}{\text{यष्टि}}$

$$= \frac{\text{श (भू + अपसृति)}}{\text{यष्टि}} = \text{गृहादि की ऊँचाई, अतः समीकरण से } \frac{\text{श.भू}}{\text{यष्टि}} =$$

$$= \frac{\text{श (भू + अपसृति)}}{\text{यष्टि}} \text{ दोनों पक्षों को 'यष्टि' से गुणा करने से श.भू = श (भू + अपसृति), = श.भू + श.अपसृति, समशोधन करने से श.भू — श.भू = श (श — श) = श अपसृति, दोनों पक्षों को श — श इससे भाग देने से } \frac{\text{श.अपसृति}}{\text{श — श}} = \text{भू । एवं } \frac{\text{श.अपसृति}}{\text{श — श}}$$

$$= \text{भू, इससे आचार्योक्त उपपन्न हुआ ॥३२॥}$$

इदानीं प्रकारान्तरेण गृहाद्यौ च न्यानयनमाह ।

दृष्ट्या गुरिगताऽपसृतिर्दृष्टि विशेषेण भाजिता भूमिः ।

भूमिः स्वदृष्टिभक्ता शलाकया सङ्गुणोच्छ्रायः ॥३३॥

सु. भा.—समधरातले यष्टिरूर्ध्वा धरा लम्बरूपा धार्या । धरातले दृष्टि-स्तथा चालनीया यथा दृष्टिर्यष्टेरग्रं गृहाद्यग्रं चैकसरलरेखायां स्युः । एवं कृते दृष्टियष्टिभूलयोरन्तरं यत् तदेवेह दृष्टिरित्युच्यते । अथ पुनः सैव यष्टिस्तस्यामेव सरलरेखायां तथैवोर्ध्वाधरा स्थाप्या । तद्वशतो द्वितीयवेधेऽपि दृष्टिस्थानं निश्चेयं तथा दृष्टियष्टिभूलान्तरं द्वितीयदृष्टिश्च ज्ञातव्या । द्वयोर्दृष्टिस्थानयोरन्तरं चात्रापसृतिरुच्यते । अपसृतिर्दृष्ट्या स्वदृष्ट्या गुरिगता दृष्टयोर्विशेषेणान्तरेण भाजिता स्वभूमिः स्यात् । सा भूमिशलाकया यष्ट्या संगुणा स्वदृष्टिभक्ता गृहाद्युच्छ्रायः स्यादिति ।

अत्रोपपत्तिः ।

$$\left\{ \begin{array}{l} \text{क्षेत्रं १४५७} \\ \text{तमे पृष्ठे} \\ \text{द्रष्टव्यम् ।} \end{array} \right\}$$

गृउ = गृहौच्यम् । मूअ_१ = मूअ_२ = यष्टिः ।

सुगममिति ॥३३॥

वि. भा.—समधरातले ऊर्ध्वाधरा लम्बरूपा च यष्टिः स्थाप्या, समधरातले दृष्टिस्तथा स्थाप्या यथा दृष्टिर्यष्टेरग्रं गृहाद्यग्रं चैकस्यां सरलरेखायां भवेयुः । एवं करणेन दृष्टियष्टिमूलयोरन्तरं यत्तद्दृष्टिः कथ्यते । पुनः सैव यष्टिस्तस्यामेव सरलरेखायां पूर्ववदेवोर्ध्वाधरा लम्बरूपा च स्थाप्या, तद्वशेन द्वितीय वेधेऽपि पूर्ववदेव दृष्टिस्थानस्य निश्चयः कार्यः । तथा दृष्टियष्टिमूलान्तरं ज्ञातव्यं द्वितीयदृष्टिश्च ज्ञेया । दृष्टिस्थानयोरन्तरमपसृतिः कथ्यते । अपसृति स्वदृष्ट्या गुणिता दृष्ट्योरन्तरेण भक्ता तदा स्वभूमिर्भवेत् । सा भूमिः शलाकया (यष्ट्या) संगुणितां स्वदृष्टिभक्ता तदोच्छ्रायः (गृहादेरुच्छ्रायः) भवतोति ॥

अत्रोपपत्तिः ।

कन = पश = यष्टिः ।
 नप्र = प्रथमदृष्टिः = द_१ ।
 शद्वि = द्वितीय दृष्टिः = द_२ ।
 मर = गृहाद्यौच्यम् ।
 प्रद्वि = अपसृतिः ।
 प्रर = प्रथम भूमिः = भू_१ ।
 द्विर = द्वितीयभूमिः = भू_२
 = भू_१ + अपसृतिः ।

तदा कनप्र, मरप त्रिभुजयोः साजात्यादनुपातेन $\frac{य \times भू}{दृ} =$ गृहाद्यौच्च्यम्

तथा पशद्वि, मरद्वि त्रिभुजयोः सजातीयत्वादनुपातः $\frac{य \times भू}{दृ}$
 $= \frac{य (भू + अपसृति)}{दृ} =$ गृहाद्यौच्च्यम् । अतः $\frac{य \times भू}{दृ} = \frac{य (भू + अपसृति)}{दृ}$

पक्षौ (य) भक्तौ तदा $\frac{भू}{दृ} = \frac{भू + अपसृति}{दृ}$ छेदगमेन $भू \times \frac{दृ}{दृ} = दृ (भू + अपसृति)$

$= दृ.भू + दृ.अपसृति$, समशोघनेन $भू.दृ - दृ.भू = भू (दृ - दृ) = दृ.अपसृति$ पक्षौ

$\frac{दृ - दृ}{दृ - दृ}$ भक्तौ तदा $\frac{दृ.अपसृति}{दृ - दृ} = भू$ एवमेव $\frac{दृ.अपसृति}{दृ - दृ} = भू$, एतेनोपपन्नं सूत्र-

मिति ॥३३॥

अब प्रकारान्तर से गृहादि की ऊंचाई का आनयन कहते हैं ।

हि. भा.—सम घरातल में ऊर्ध्वाधर लम्बरूप यष्टि स्थापन पर करना, समघरातल में दृष्टि को उस तरह रखना चाहिये जिस से दृष्टि, यष्टि का अग्र और गृहादि का अग्र एक ही सरल रेखा में हो । इस तरह करने से दृष्टि और यष्टि के मूल का अन्तर यहां दृष्टि कहलाती है । पुनः उसी यष्टि को उसी सरल रेखा में पूर्ववत् ऊर्ध्वाधर-लम्बरूप स्थापन करना । उसके वश से द्वितीय वेध में भी पूर्ववत् ही दृष्टिस्थान निश्चित करना चाहिये । तथा दृष्टि और यष्टि मूल का अन्तर जानना चाहिये । द्वितीय दृष्टि भी ज्ञातव्य है, दोनों दृष्टि स्थानों का अन्तर यहां अपसृति कथित है अपसृति को अपनी दृष्टि से गुणाकर दोनों दृष्टि के अन्तर से भाग देने से अपनी भू (भूमि) होती है । भूमि को शलाका (यष्टि) से गुणाकर अपनी दृष्टि से भाग देने से गृहादि की ऊंचाई होती है इति ॥३३॥

उपपत्ति ।

यहां संस्कृतोपपत्ति में लिखित (१) क्षेत्र को देखिये । कन=पश=यष्टि । नप्र
 $=$ प्रथमदृष्टि $=$ दृ । शद्वि $=$ द्वितीयदृष्टि $=$ दृ । मर $=$ गृहादि की ऊंचाई । प्रद्वि $=$ अपसृति ।
 प्रर $=$ प्रथम भूमि $=$ भू । द्विर $=$ द्वितीयभूमि $=$ भू $=$ भू + अपसृति । तब कनप्र, मरप दोनों

त्रिभुजों के सजातीयत्व से अनुपात करने से $\frac{य.भू}{द} = \text{गृहादि की ऊँचाई}$ । एवं पक्षद्वि,

मरद्वि दोनों त्रिभुजों के सजातीयत्व से अनुपात करने से $\frac{य.भू}{द} = \frac{य (भू + अपसृति)}{द}$

= गृहादि की ऊँचाई, अतः समीकरण करने से $\frac{य.भू}{द} = \frac{य (भू + अपसृति)}{द}$ दोनों

पक्षों को (य) भाग देने से $\frac{भू}{द} = \frac{भू + अपसृति}{द}$ छेदगम से $भू.द = द (भू + अपसृति)$

= द.भू + द.अपसृति, समशोधन करने से $भू.द - द.भू = भू (द - द) = द.अपसृति$

दोनों पक्षों को $द - द$ इससे भाग देने से $भू = \frac{द.अपसृति}{द - द}$; एवं $\frac{द.अपसृति}{द - द} = भू$, इस

से आचार्योक्त सूत्र उपपन्न हुआ ॥३३॥

इदानीं गृहादिमूलवेधेन भूमिज्ञानमाह ।

लम्बनिपातान्तरकं लम्बौच्च्यान्तरविभक्तमधिकगुणम् ।

भूर्लम्बान्तरगुणिता लम्बनिपातान्तरविभक्ता ॥३४॥

लम्बके हीने सति । अधिके चाधिकः कार्यस्तदा गृहाद्यौच्च्यं भवेत् । एवं तलाग्रके ये तयोर्विद्वया दृष्टया भूम्यौच्च्ये भवतः । भूमिज्ञानं तलवेधेनौच्च्यज्ञानं चाग्रवेधेन भवतीत्यर्थः ।

अत्रोपपत्तिः ।

लम्बनिपातान्तरेण लम्बौच्च्ययोरन्तरं तदा ऽऽत्मगृहाद्यन्तरभूम्यां किं लब्धेन हीनो युतश्च दृग्लम्बो दृग्लम्बादग्रलम्बे हीनाधिके गृहाद्यौच्च्यं भवतीत्यत्र स्थितिद्वये क्षेत्रे विरचय्य सर्वं स्फुटं निरीक्षणीयम् ॥३५॥

वि. भा.—इष्टयष्टेर्मूलस्थदृष्ट्या गृहाद्यग्रं विध्येत् । यष्टिमूलाग्राभ्यां भुवि लम्बौ कार्या, मूलाल्लम्बो दृग्लम्बः कथ्यते । भूल्लम्बौच्च्ययोरन्तरेण गुणिता लम्बनिपातयोरन्तरे भक्ता लब्धेन दृग्लम्बो हीनः कार्यो यदि दृग्लम्बादग्रलम्बो हीनो भवेत् । अग्रलम्बाद् दृग्लम्बो हीनश्चेत्तदाऽधिकः (युक्तः) कार्यस्तदा गृहाद्यौच्च्यं भवेत् । एवं तलाग्रके ये तयोर्विद्वया दृष्ट्या भूम्यौच्च्ये भवतोऽर्थात्तलवेधेन भूमि-ज्ञानमग्रवेधेन चौच्च्यज्ञानं भवतीति ॥

अत्रोपपत्तिः ।

हन=यष्टिः । दृ = दृष्टि
स्थानम् । र्म = गृहाद्यौच्च्यम् ।
दृच = दृष्टचक्रायः = दृग्लम्बः ।
नप = यष्ट्यग्राल्लम्बः । नल =
लम्बान्तरम् । पच = लम्बनिपा-
तान्तरम् = दृल । ततः मशदृ, नलदृ
त्रिभुजयोः साजात्यात्

$$\frac{\text{लम्बान्तर} \times \text{भू}}{\text{लम्बनिपातान्तर}} = \text{मश} ।$$

∴ मश + शर = मश + दृग्लम्ब = मर = गृहाद्यौच्च्यम् । दृश = आत्मगृहा-
न्तरभूमिः = भू । अत्र दृग्लम्बादग्रलम्बो ऽधिकोस्ति । दृग्लम्बादग्रलम्बेहीनेऽप्येवमेवो-
पपत्तिरिति ॥३५॥

अब भूमिज्ञान से वंशौच्च्यज्ञान को कहते हैं ।

हि. भा.—इष्ट यष्टि की मूलस्थ दृष्टि से गृहादि के अग्र को वेध करना । यष्टि के मूल और अग्र से भूमि के ऊपर लम्ब करना । यष्टि के मूल से जो लम्ब होता है वह

द्वग्लम्ब कहलाता है । भू को लम्बौच्य के अन्तर से गुणा कर लम्ब निपातान्तर से भाग देने से जो लब्ध हो उसको द्वग्लम्ब में से हीन करना यदि द्वग्लम्ब से अग्रलम्ब हीन हो तब । अग्रलम्ब से द्वग्लम्ब हीन हो तब जोड़ने से गृहादि का औच्य (ऊंचाई) प्रमाण होता है । एवं तल वेध से भूमिज्ञान और अग्रवेध से औच्यज्ञान होता है ॥३५॥

उपपत्ति ।

यहां संस्कृतोपपत्ति में लिखित(१)क्षेत्र को देखिये । दृन = यष्टि । दृ = दृष्टिस्थान । रम = गृहाद्यौच्य । दृच = दृष्ट्युच्छ्राय = द्वग्लम्ब । नप = यष्ट्यग्र से लम्ब । नल = लम्ब-मूलान्तर । पच = लम्बनिपातान्तरभू = दृल तब मशद, नलद दोनों त्रिभुजों के सजातीयत्व से अनुपात करते हैं $\frac{\text{लम्बान्त} \times \text{भू}}{\text{लम्बनिपातान्तर}} = \text{मश}$ । अतः श + शर = मश + द्वग्लम्ब = मर = गृहाद्यौच्य । दृश = आत्मगृहान्तर भूमि = भू । यहां द्वग्लम्ब से अग्र लम्ब अधिक है । द्वग्लम्ब से अग्रलम्ब के हीन रहने पर भी इसी तरह उपपत्ति समझनी चाहिये इति ॥३५॥

इदानीं प्रकारान्तरेण भूम्यौच्यानयनमाह ।

दृष्टिद्वग्लम्बगुणा विभाजिताऽधः शलाकया भूमिः ।

सकलशलाका गुणिता भूमिर्दृष्ट्या हृतोच्छ्रायः ॥३६॥

सु. भा.—यस्मिन् घरातले गृहाद्यौच्यं वस्तु वर्तते तस्मिन् घरातले ऊर्ध्वाघरा लम्बरूपैकेष्टप्रमाणा शलाका स्थाप्या । ततो दृष्टिस्तथा चाल्या यथा दृष्टि शलाकाग्रं गृहादिमूलं चैकरेखायां स्युः । एवं तत्र द्वगौच्यं द्वग्लम्बः । द्वगौच्य-शलाकामूलयोरन्तरं भूमिर्दृष्टिरित्युच्यते । सा शलाका चाधः शलाका ज्ञेया । दृष्टिद्वग्लम्बगुणाऽधः शलाकया विभाजिता भूमिः स्यात् । एवं तस्मिन्नेव घरातले तथा दृष्टिर्नियोज्या यथा दृष्टिः शलाकाग्रं गृहाद्यग्रं चैकरेखायां स्युः । अत्र शलाका सकलशलाका । दृष्टिशलाकामूलयोरन्तरं दृष्टिरित्युच्यते । भूमिः सकलशलाकागुणा दृष्ट्या हृतोच्छ्रायो भवति ।

अत्रोपपत्तिः । सजातीयक्षेत्रानुपातेन स्फुटा ॥३६॥

वि. भा.—यत्र भूमी गृहाद्यौच्यं वस्तु वर्तते तत्रैव घरातले ऊर्ध्वाघरा लम्बरूपैका शलाका स्थाप्या । ततो दृष्टिस्तथा चालनीया यथा दृष्टिः शलाकाग्रं गृहादिमूलं चैकस्यां रेखायां भवेयुः । तत्र द्वगौच्यं द्वग्लम्बः द्वगौच्यशलाका-मूलयोरन्तरं भूमिर्दृष्टिः कथ्यते । सा शलाकाऽधः शलाका बोध्या । दृष्टिद्वग्लम्ब-

गुणाऽधःशलाकया विभाजिता तदा भूमिः स्यात् । एवं तत्रैव धरातले तथा दृष्टिः स्थाप्या यथा दृष्टिः शलाकाग्रं गृहाद्यग्रं चैकस्यां रेखायां भवेयुः । अत्र शलाका सकल शलाका ज्ञेया । दृष्टिशलाकामूलयोरन्तरं दृष्टिः कथ्यते । भूमिः सकलशलाका गुणा दृष्ट्या भक्तोच्छ्रायो भवतीति ॥

अत्रोपपत्तिः ।

क्षेत्ररचनयाऽनुपातेन च स्फुटेति ॥३६॥

अब प्रकारान्तर से भूमि और औच्च्य (ऊँचाई) के आनयन को कहते हैं ।

हि. भा.—जिस धरातल में गृहादि उच्च वस्तु है उसी धरातल में ऊर्ध्वाधर लम्बरूप एक यष्टि स्थापन करना । दृष्टि को उस तरह चलाना जिससे दृष्टि, शलाका का अग्र, और गृहादि का मूल एक ही रेखा में हो । वहाँ दृगौच्च्य दृग्लम्ब है । दृगौच्च्यमूल और शलाका मूल का अन्तर भूमि दृष्टि संज्ञक है । उस शलाका को अधः शलाका समझना चाहिये । दृष्टि को दृग्लम्ब से गुणा कर अधः शलाका से भाग देने से भूमि होती है । एवं उसी धरातल में दृष्टि को उस तरह चलाना जिससे दृष्टि, शलाका का अग्र और गृहादि का अग्र एक ही रेखा में हो । यहाँ शलाका सकल (सम्पूर्ण) शलाका समझनी चाहिये । दृष्टि शलाका मूल की अन्तर दृष्टि संज्ञक है । भूमि को सकल शलाका से गुणा कर दृष्टि से भाग देने से गृहादि का उच्छ्राय होता है ।

उपपत्तिः ।

क्षेत्ररचना से अनुपात द्वारा स्फुट है इति ॥३६॥

इदानीं प्रकारान्तरेण गृहौच्च्यानयनमाह ।

मित्वा गृहैकदेशं विद्वेषेष्टशलाकया गृहं सर्वम् ।

प्रथमशलाकाभक्तं मितं द्वितीयागुणितमौच्च्यम् ॥३७॥

सु. भा.—यस्मिन् धरातले लम्बरूपं गृहादि वर्तते तस्मिन् धरातले लम्बरूप-पोर्ध्वाधरांगुलादिभिरङ्कितैका शलाका स्थाप्या । ततो दृष्टि तस्मिन्नेव धरातले कुत्रापि संस्थाप्य नलिकया वाऽन्ययष्ट्या ज्ञातौच्च्यं गृहैकदेशं विध्येत् । नलिका वाऽन्ययष्टिर्यत्र शलाकायां लग्ना तस्मात् शलाकामूलपर्यन्तं प्रथमा शलाका शलाकामूलदृष्टिस्थानान्तरं च दृष्टिर्ज्ञातिव्या । पुनस्तत्रस्थयैव दृष्ट्या गृहाग्रं चैकयष्ट्या विध्येत् । इयं यष्टिर्यत्र पूर्वशलाकायां लग्ना तस्मात् शलाकामूलपर्यन्तं द्वितीया शलाका ज्ञेया । अथ व्याख्या । गृहैकदेशं प्रथमशलाकावशेन मित्वा गुणयित्वा धार्यम् । इष्टशलाकया च सर्वं गृहौच्च्यं विद्वत्वा द्वितीया शलाका

ज्ञातव्या । ततो गृहैकदेशीच्च्यं मितं गणितं द्वितीयशलाकया गुणितं प्रथमशलाकया भक्तं गृहौच्च्यं स्यात् ।

अत्रोपपत्तिः ।

$$\begin{aligned} & \text{प्रथमशलाकया दृष्टितुल्यो भुजस्तदा ज्ञातौच्च्येन किं जाता भूमिः} \\ & = \frac{\text{ज्ञातौ.दृ.}}{\text{प्रश.}} \quad \text{। ततो दृष्ट्या द्वितीयशलाका तदा भूम्या किं जातं गृहौच्च्यं} \\ & = \frac{\text{द्विश.ज्ञातौ.दृ.}}{\text{प्रश.दृ.}} = \frac{\text{द्विश.गृहौ.}}{\text{प्रश.}} \quad \text{। अत उपपन्नम् ॥३॥} \end{aligned}$$

वि. भा.—यस्मिन् घरातले लम्बरूपं गृहादि वर्तते तस्मिन् घरातले लम्बरूपोर्ध्वाधराङ्ग लादिभिरङ्कितैका शलाका स्थाप्या । ततो दृष्टिं तस्मिन्नेव घरातले कुत्रापि संस्थाप्य नलिकयाऽन्ययष्ट्या वा ज्ञातौच्च्यं गृहैकदेशं विध्येत् । नलिकाऽन्ययष्टिर्वा शलाकायां यत्र लग्ना तस्माच्छलाकामूलपर्यन्तं प्रथमा शलाका, शलाकामूलदृष्टिस्थानान्तरं च दृष्टिर्ज्ञातव्या । पुनस्तत्रस्थयैव दृष्ट्या गृहाग्रं चैकयष्ट्या विध्येत् । इयं यष्टिर्यत्र पूर्वशलाकायां लग्ना तस्माच्छलाकामूलपर्यन्तं द्वितीया शलाका ज्ञेया ।

गृहैकदेशं प्रथमशलाकावशेन गणयित्वा धार्यम् । इष्टशलाकया च सर्वं गृहौच्च्यं विद्ध्वा द्वितीया शलाका ज्ञेया, ततो गृहैकदेशीच्च्यं द्वितीयशलाकया गुणितं प्रथमशलाकया भक्तं गृहौच्च्यं भवेत् ।

अत्रोपपत्तिः ।

अक=गृहाद्यौच्च्यम् । गप=शलाका । दृ=दृष्टिस्थानम् । कन=ज्ञातौच्च्यम् । कदृ=भूमिः । मग=प्रथम शलाका । चग=द्वितीय शलाका । गदृ=दृष्टि संज्ञकः=दृ तदा कनदृ, गमदृ त्रिभुजयोः सजातीयत्वादनुपातेन

$$\frac{\text{ज्ञातौच्च्य} \times \text{दृ}}{\text{प्रथमशलाका}} = \text{भूमिः} \quad \text{। ततः अकदृ, चगदृ त्रिभुजयोः सजात्यादनुपातः}$$

$$\begin{aligned} \frac{\text{द्वितीयशलाका. भूमि}}{\text{दृ}} &= \frac{\text{गृहाद्यौच्च्य}}{\text{प्रथमशलाका.दृ}} \\ &= \frac{\text{द्वितीयशलाका.ज्ञातौच्च्य}}{\text{प्रथमशलाका}} \quad \text{एतेनोपपन्नमाचार्योक्तमिति ॥३॥} \end{aligned}$$

अब प्रकारान्तर से गृहौच्यानयन को कहते हैं ।

हि. भा.—जिस धरातल में लम्बरूप गृहादि है उस धरातल में ऊर्ध्वाधराकार अंगुलादि से अङ्कित एक शलाका स्थापन करना । दृष्टि को उसी धरातल में कहीं पर रखकर नलिका से या अन्य यष्टि से गृहादि का एक प्रदेश (जिसकी ऊँचाई विदित है) को वेध करना । नलिका वा अन्ययष्टि शलाका में जहाँ लगती है वहाँ से शलाका मूलपर्यन्त प्रथम शलाका संज्ञक है । शलाका मूल दृष्टि स्थान का अन्तर दृष्टि समझनी चाहिये । पुनः उसी स्थान स्थित दृष्टि से गृहाग्र को एक यष्टि से वेध करना । यह यष्टि पूर्व शलाका में जहाँ लगती है वहाँ से शलाकामूल पर्यन्त द्वितीय शलाका संज्ञक है । गृहादि के एक प्रदेश को प्रथम शलाकावश से गणना कर धारण करना । इष्टशलाका से गृहौच्य को वेध कर द्वितीयशलाका समझनी चाहिये । तब गृह के प्रदेश के औच्यको द्वितीय शलाका से गुणा कर प्रथम शलाका से भाग देने से गृहौच्य होता है इति ॥३७॥

उपपत्ति ।

यहां संस्कृतोपपत्ति में लिखित (१) क्षेत्र को देखिये । अक = गृहादि का औच्य (ऊँचाई), गप = शलाका । दृ = दृष्टिस्थान । कन = ज्ञातौच्य = (विदित ऊँचाई) । कदृ = भूमि = भू । मग = प्रथमशलाका । चग = द्वितीयशलाका । गदृ = दृष्टि संज्ञक = दृ ।

तब कनदृ, गमदृ दोनों त्रिभुजों के सजातीयत्व से अनुपात करते हैं । $\frac{\text{ज्ञातौच्य.दृ}}{\text{प्रथमशलाका}} = \text{भूमि}$

= भू । ∴ अकदृ, चगदृ दोनों त्रिभुजों के सजातीयत्व से अनुपात करते हैं । $\frac{\text{द्वितीयशलाका.दृ}}{\text{भूमि}}$

= गृहाचौच्य = $\frac{\text{द्वितीयशलाका. ज्ञातौच्य.दृ}}{\text{प्रथमशलाका.दृ}} = \frac{\text{द्वितीयशलाका.ज्ञातौच्य}}{\text{प्रथमशलाका.दृ}}$ इससे

आचार्योक्त उपपन्न हुआ इति ॥३७॥

इदानीं परमतं खण्डयति

यष्ट्या हृताच्छलाका त्रिज्याघातादनुगृहान्तरकम् ।

यैरुक्तं भूर्वास्ते यतो न दृष्टान्तरं दृज्या ॥३८॥

सु. भा.—पूर्वश्लोकोक्तविधिना गृहाग्रवेधे अन्ययष्टिर्यत्र शलाकायां लग्ना तस्माद् दृष्टिस्थानपर्यन्तं कर्ण एव यष्टिः । द्वितीयशलाका कोटिः । दृष्टिर्भुजः । शलाका त्रिज्यागुणा यष्टिहृता फलस्य धनुर्दृष्टिस्थानाद्गृह मूलाग्ररेखयोरन्तरगः कोणो गृहान्तरांशाभिधस्त्रिकोणमित्या वास्तव एव सिध्यति । गृहाग्ररूपग्रह-

स्य दृष्टान्तरं दृष्टिसंज्ञसमं दृग्ज्या भवेद्वा न । अतो 'यैराचार्यैः पूर्वफलचापसमं गृहान्तरकमुक्तं' ते मूर्खाः सन्ति यतो दृष्टान्तरं दृग्ज्या नास्तीति वाग्बलमेतद्दूषणमिति सुधीभिश्चिन्त्यम् ॥३८॥

वि. भा.—शलाका त्रिज्यागुणा यष्टिहृता फलस्य धनुः (चापं) गृहान्तरकं यैराचार्यैरुक्तं ते मूर्खाः सन्ति । यतो दृष्टान्तरं दृग्ज्या नास्तीति ॥

अत्रोपपत्तिः ।

पूर्वश्लोकोक्तविधिना गृहाग्रवेधेऽन्ययष्टिर्यत्रशलाकायां लग्ना तस्माद् दृष्टिस्थानपर्यन्तं यष्टिः कर्णः । द्वितीयशलाका कोटिः । दृष्टिर्भुजः । पूर्वोक्तश्लोकोपपत्तौ लिखितं क्षेत्रं द्रष्टव्यम् । दृच=यष्टिः कर्णः । चग=शलाका कोटिः । गदृ=दृष्टिर्भुजः । अत्र त्रिभुजे कोणानुपातः क्रियते यदि यष्टिश्चा तत्संमुखकोणज्या त्रिज्या लभ्यते तदा शलाकाया किं समागच्छति दृष्टिस्थानाद्गृहाग्रमूलयोर्गन्तरेखयोस्तुपन्नकोणज्या तत्स्वरूपम् = $\frac{\text{त्रि} \times \text{शलाका}}{\text{यष्टि}} = \text{ज्या} < \text{गदृच}$, अस्याश्चापम् = $< \text{गदृच} = \text{गृहान्तरांशा वास्तवाः}$ । गृहाग्ररूपग्रहस्य दृष्टान्तरं दृष्टिसंज्ञसमं दृग्ज्या भवेदेव । आचार्येण व्यर्थमेव खण्डनं क्रियते इति ॥३८॥

अब अन्यो के मत का खण्डन करते हैं ।

हि. भा—शलाका को त्रिज्या से गुणाकर यष्टि से भाग देने से जो फल प्राप्त हो उसके चाप को जो आचार्य गृहान्तर कहते हैं वे मूर्ख हैं, क्योंकि दृष्टान्तर दृग्ज्या नहीं है इति ॥३८॥

उपपत्ति ।

पूर्वश्लोकोक्त विधि से गृहाग्रवेध करने से अन्य यष्टि शलाका में जहाँ लगती है, वहाँ से दृष्टि स्थान पर्यन्त यष्टिकर्ण, द्वितीयशलाका कोटि, दृष्टिर्भुज, पूर्वोक्तश्लोकोपपत्ति में लिखित क्षेत्र को देखना चाहिये । दृच=यष्टिकर्ण, चग=शलाका कोटि, गदृ=दृष्टिर्भुज, इस त्रिभुज में कोणानुपात करते हैं, यदि यष्टि में तत्संमुखकोणज्या त्रिज्या पाते हैं तो शलाका में क्या इस अनुपात से दृष्टि स्थान से गृह के अग्र और मूलगत रेखाद्वय से उत्पन्न कोणज्या आती है उसका स्वरूप = $\frac{\text{त्रि.शलाका}}{\text{यष्टि}} = \text{ज्या} > \text{गदृच}$, इसका चाप = $< \text{गदृच}$

—वास्तव गृहान्तरांश, गृहाग्ररूपग्रह का दृष्टान्तर (दृष्टि संज्ञतुल्य) दृश्यता होती है, आचार्य का यह खण्डन ठीक नहीं है इति । ३८॥

इदानीं शंकुमाह ।

मूले द्व्यङ्गुल विपुलः सूच्यग्रो द्वादशाङ्गुलोच्छ्रायः ।

शंकुस्तलाग्रविद्धोऽग्रवेधलम्बादृजुर्ज्ञेयः ॥३९॥

सु. भा. — (शंकुस्तलाग्रविद्धोऽग्रवेधलम्बादृजुर्ज्ञेयः ॥३९॥

अग्रवेधलम्बादग्ररन्ध्रगतावलम्बादृजुर्लम्बाकारो ज्ञेयः ।

तलादाधारवृत्तकेन्द्रादग्रपर्यन्तं विद्धः सरन्ध्र इत्यर्थः ।

वि. भा. — मूले (तले) द्व्यङ्गुलपिण्डः, अग्रसूच्याकारः । द्वादशाङ्गुल-मुच्छ्रितः । अग्रवेधलम्बात् (अग्ररन्ध्रगतावलम्बात्) ऋजुः (सरलाकारो लम्बा-कारो वा), तलाग्रविद्धः (आधारवृत्तकेन्द्रादग्रपर्यन्तं विद्धः सरन्ध्र इति) शंकुर्ज्ञेयः । सिद्धान्त शेषरे । “अमविरचितवृत्तस्तुल्यमूलाग्रभागो द्विरदरदन-जन्मा सारदारूढभवो वा । गुरु ऋजुरवलम्बादग्रः षट्कवृत्तः समतल इह शस्तः शंकुरकाङ्गुलः स्यात् ॥” अस्यार्थः — अमेण (शाणेन) विरचितं कृतं वृत्तं यस्मिन् सः । अत एव तुल्यमूलाग्रभागः (समानो मूलभागोऽग्रभागश्च यस्य सः) घर्षण शिलया तथा धृष्टो यथा सर्वत्रैव कृतानां वृत्तानां परिधयस्तुल्या भवेयुः । गजदन्तसम्भवः । वा सारवल्काष्ठेन निर्मितः । गुरुः (अलघुतौल्यः) । अवलम्ब-सूत्रतः सरलाकारः । व्रणरहितः । षड्वृत्तसहितः । समतलः (समीकृतस्तल-भागो यस्य), द्वादशाङ्गुलप्रमाणः । इह यत्रोपयोगे एतादृशः शंकुः प्रशस्तः स्यात् । ज्योतिषसिद्धान्ते दिग्देशकालज्ञानार्थं सर्वत्रैव शंकुरूपयोगित्वेन प्रसिद्धोऽस्ति । परं स कीदृशो निर्मापयितव्यस्तदेवानेन श्लोकेन श्रीपतिना कथ्यते, अतः कथितं लक्षणयुक्तः शंकुरेव प्रशस्तस्तद्विन्नश्चाशोभन इति ।

अत्र लल्लोक्तम्—

“अमसिद्धः सममूलाग्रपरिधिरतिसुगुरुसारदारुमयः ।

रज्जुव्रणराजिलाञ्छनस्तथा च समतलः शंकुः ॥”

इति लल्लोक्तमेव श्रीपतिना छन्दोऽन्तरेणोक्तमिति स्फुटमेव विदुषाम् ।

भास्कराचार्योऽपि—

“समतलमस्तकपरिधिर्भ्रमसिद्धो दन्तिदन्तजः शंकुः ।

तच्छायातः प्रोक्तं ज्ञानं दिग्देशकालानाम् ॥”

इत्यनेन लल्लोक्तं श्रीपद्युक्तं च विविच्य स्पष्टाशयं शंकुयन्त्रं कथयतीति ।

सूर्य सिद्धान्ते “नरयन्त्रं तथा साधु दिवा च विमले रवौ ।

छायासंसाधनैः प्रोक्तं कालसाधनमुत्तमम् ॥”

एवं कथ्यते ॥ इति ३६ ॥

अब शंकु को कहते हैं ।

हि. भा.—मूल (नीचे) में दो अंगुल मोटा, अग्र में सूची (सुई) के आकार का, बारह अंगुल ऊँचा, अग्र में जो रन्ध्र (छिद्र) तद्गत अवलम्ब से ऋजु (लम्बाकार), आधारवृत्त केन्द्र से अग्रपर्यन्त रन्ध्र में मिला हुआ शंकु समझना चाहिये इति ॥ सिद्धान्त शेखर में ‘भ्रम विरचितवृत्तस्तुल्यमूलाग्र भागो । द्विरदरदनजन्मा सारदारूढभवो वा’ इत्यादि विज्ञान भाष्य में लिखित श्लोक से श्रीपति कहते हैं कि शाण से विरचित है वृत्त जिसमें अत एव समान है मूल भाग और अग्र भाग, अर्थात् घिसने वाले पत्थर से इस तरह घिसा गया है जिससे सब जगह किये हुये वृत्तों की परिधि तुल्य है । हाथी दांत के या सार वाले काष्ठ का बना हुआ, गुरु (भारी), सरलाकार, ब्रण (आवड़ खूबड़) से रहित, तत्त्व भाग जिसका समान है, ऐसे बारह अंगुल के शंकु प्रशस्त है । ज्योतिष सिद्धान्त ग्रन्थों में दिशा-देश और काल के ज्ञान के लिये सब स्थानों में शंकु उपयोगिता के कारण प्रसिद्ध है अर्थात् हर जगह शंकु की जरूरत होने से शंकु प्रसिद्ध है लेकिन वह शंकु कैसा होना चाहिये वही बात श्रीपति ने उपर्युक्त श्लोक से कही है, उपर्युक्त लक्षणों से युक्त शंकु से भिन्न शंकु प्रशस्त (शोभन) नहीं है । यहां लल्लाचार्य ने “भ्रम सिद्धः सममूलाग्रपरिधिरतिसुगुरु सारदारूढभयः” इत्यादि विज्ञानभाष्य में लिखित श्लोक के अनुसार कहा है, लल्लोक्त का ही ने श्रीपति अनुवाद किया है । सिद्धान्त शिरोमणि के गोलाध्याय में “समतल मस्तक परिधिभ्रमसिद्धो दन्तिदन्तजः शंकुः” इत्यादि से भास्कराचार्य भी लल्लोक्त और श्रीपत्युक्त को ही सोच विचार कर स्पष्ट रूप से शंकु यन्त्र को कहते हैं । सूर्य सिद्धान्त में ‘नरयन्त्रं तथा साधु दिवा च विमले रवौ । छाया संसाधनैः’ इत्यादि विज्ञान भाष्य में लिखित श्लोक के अनुसार कहा गया है, शंकुछाया से कालज्ञान होता है जैसे छाया ज्ञान से $\sqrt{\text{छाया}^2 + \text{शंकु}} = \sqrt{\text{छाया}^2 + 12}$ = छायाकर्ण । तब $\frac{\text{छायाक} \times \text{शंकु}}{12} = \text{इहति}$ । इष्टइति से $\frac{\text{इष्टइति.त्रि}}{\text{त्रि}} = \text{इष्टान्त्या}$ । इस में चरज्या संस्कार करने से सूत्र ज्ञान होता है, इससे उन्नत काल का ज्ञान सुलभता ही से होता है, सिद्धान्त शिरोमणि आदि देखने से स्फुट है इति ॥३६॥

इदानीं शंकुयन्त्रेण कालज्ञानमाह ।

छायां दृज्यां दृष्टिं छायाकर्णमवलम्बकं शंकुम् ।

परिकल्प्य शंकुयन्त्रे योज्यं घटिकादि मष्टद्युक्तम् ॥४०॥

सु. भा.—शंकुयन्त्रे छायां दृग्ज्यां दृष्टिं छायाग्रशंकुवग्रसूत्रं छायाकर्णं शंकुमवलम्बकं प्रकल्प्य यष्टियुक्तं यष्टियन्त्रोक्तं घटिकादिसर्वं योज्यम् । यष्टियन्त्रात् सर्वं यथा साधितं तथाऽस्मादपि साधनीयमित्यर्थः ॥४०॥

वि. भा.—शंकुयन्त्रे छायां दृग्ज्यां दृष्टिं छायाग्रशंकुवग्रगतं सूत्रं छायाकर्णं शंकुमवलम्बकं प्रकल्प्य यष्टियन्त्रोक्तं घटिकादिसर्वं योज्यमर्थोद्यष्टियन्त्राद्यथा सर्वं साधितं तथाऽस्मादपि साधनीयमिति ॥४०॥

अब शंकुयन्त्र से कालज्ञान को कहते हैं ।

हि. भा.—शंकुयन्त्र में छाया को दृग्ज्या, दृष्टि (छायाग्रशंकुवग्रगतसूत्र) को छाया-कर्ण, शंकु को अवलम्बसूत्र कल्पना कर यष्टि यन्त्र में कथित घटिकादि सब साधन करना चाहिये अर्थात् यष्टि यन्त्र से जैसे सब कुछ साधन किया गया है वैसे इससे भी साधन करना चाहिये इति ॥४०॥

इदानीं घटीयन्त्रमाह ।

घटिका कलशार्धाकृति ताम्रम् पात्रं तलेऽपृथुच्छिद्रम् ।

मध्ये तज्जलमज्जनषष्ट्या द्युनिशं यथा भवति ॥४१॥

सु. भा.—ताम्रं ताम्रभवं पात्रं कलशार्धाकृतिघटार्धप्रतिमं घटिका घटीयन्त्रं भवति । अस्य पात्रस्य तले मध्ये तथाऽपृथुच्छिद्रं कार्यं यथा यज्जलमज्जनषष्ट्या द्युनिशमहोरात्रमानं भवति । एवमेकनिमज्जनेनैका घटी भवतीति सर्वं स्फुटम् ॥४१॥

वि. भा.—ताम्रभवं पात्रं घटार्धानुकारं घटिका (घटी यन्त्रं) भवति । अस्य ताम्रपात्रस्य तले तथाऽपृथु (लघु) च्छिद्रं कार्यं तथा तज्जलमज्जनषष्ट्या-होरात्रमानं भवति-अथदिकनिमज्जनेनैका घटी भवतीति ॥ सिद्धान्तशेखरे—

विद्धं तथा प्राक्तनमत्र पात्रं प्रपूर्यते नाडिकयाऽम्बुना तत् ॥”

श्रीपतिनैवमुच्यते । अस्यायमर्थः—शुल्बस्य (ताम्रस्य) दिग्भिः (दशभिः) पलैः—“षडङ्गुलैश्चतुर्भिश्चपलं तुलाज्ञा” इति भास्करोक्त्या चत्वारिंशद्भिः कर्षैः । विहितं (निर्मितं) षडङ्गुलोच्छ्रायम्, (द्वादशाङ्गुलदीर्घंमुखम्), घटार्धप्रमितं (कलशार्धरूपम्) अम्भसा (जलेन) षष्टिपलैः पूर्णं यत्पात्रमर्थाज्जलपात्रे निक्षिप्तं सत्—एकघट्या

जलपूर्णं भूत्वा यत्पात्रं निमज्जति तत् घटीसंज्ञकं यन्त्रं स्यात् ॥ अथानया रीत्या निर्मितं घटीयन्त्रं यथा जलपात्रे षष्टिपलैर्निमज्जेत्तदर्थं तस्य तले छिद्रकरणरीतिं कथयति । सत्र्यंशमाषत्रयनिर्मितेत्यनेन, तुल्या यवाभ्यां कथिताऽत्र गुञ्जा, दशार्ध-गुञ्जं प्रवदन्ति माषम्” इत्युक्तलक्षणेन सत्र्यंशमाषत्रयेण निर्मिता चतुरङ्गुला सुवर्णशलाका या स्यात्तयाविद्धं (भेदितं) पूर्वकथितं घटीयन्त्ररूपं पात्रमेकेन दण्डेन जलेन पूर्णं भवतीति ॥ अत्र ललाचार्योक्तम्—

“दशभिः शुल्बस्य पलैः पात्रं कलशार्धं सन्निभं घटितम् ।

हस्तार्धमुखव्यासं समघटवृत्तं दलोच्छ्रायम् ॥

सत्र्यंशमाषकत्रयनलया समसवृत्तया हेम्नः ।

चतुरङ्गुलया विद्धं मज्जति विमले जले नाड्याः ॥”

इत्येवानूदितं श्रीपतिना, अत्र भास्करोक्तं ।

“घटदलरूपा घटिता घटिका ताम्री तलेऽपृथुच्छिद्रा ।

द्युनिशनिमज्जनमित्या भक्तं द्युनिशं घटीमानम् ॥”

दशभिः शुल्बस्य पलैरित्यादि यद् घटीलक्षणं कैश्चित् कृतं तद्युक्तिशून्यं दुर्घटं चेत्येतदुपेक्षितम् । इष्टप्रमाणाकारमुषिरं पात्रं घटीसंज्ञमङ्गीकृतम् । यदि द्युनिशनिमज्जनसंख्यया षट्त्रिंशच्छता ३६०० नि पलानि लभ्यन्ते तदैकेन निमज्जनेन किमिति रीत्या घटीयन्त्रप्रमाणनिरूपणं लल्लश्रीपत्याद्युक्त्या षष्टिपल-प्रपूर्यघटीयन्त्रनिर्माणस्य युक्तिशून्यत्वं च यत्कथ्यते तत्समीचीन-मेवेति (क) ॥४१॥

अब घटीयन्त्र को कहते हैं ।

हि.भा.—आधा घट (घड़ा) के सदृश ताम्र (तांबा) का पात्र घटीयन्त्र होता है । इसके तल के मध्य में छोटा छिद्र (सूराख) ऐसा करना चाहिये जिससे जलपात्रस्थ जल में साठ बार उसके डूबने से अहोरात्रमान हो अर्थात् एक बार डूबने से एक घटी हो इति । सिद्धान्तशेखर में “शुल्बस्य दिग्भिर्विहितं पलैर्यत्” इत्यादि विज्ञान भाष्य में लिखित श्लोकों से श्रीपति कहते हैं कि दशपल अर्थात् ‘कर्बेश्चतुर्भिश्च पलं’ इस भास्करोक्त सूत्र के अनुसार चालीस कर्बे ताम्र (तांबा) से बनाया हुआ छः अंगुल ऊँचाई, बारह अंगुल चौड़े मुख की लम्बाई, आधे घट (घड़े) के सदृश साठ पल में जल से पूर्ण जलपात्र में देने से एक घटी में जल से पूर्ण हो कर जो पात्र डूबता है वह घटी नाम का यन्त्र (घटीयन्त्र) है । इस तरह निर्मित घटी यन्त्र जैसे साठ पल में जलपात्र में डूबे, उसके लिये उसके तल के मध्य में

(क) सूर्यसिद्धान्ते ‘ताम्रपात्रमवशिष्टं न्यस्तं कुण्डेऽमलाग्मसि । षष्टिर्मज्जत्यहोरात्रे स्फुटं यन्त्रं कपालकम्’ इत्यनेन घटी यन्त्रमेव कपालयन्त्रं कथ्यते

छिद्र करने के प्रकार कहते हैं। 'तुल्या यवाम्यां कथिताऽत्र गुञ्जा, दशार्धं गुञ्जं प्रवदन्ति माषम्" इस लक्षण से तृतीयांश सहित तीन माषा से निर्मित चार अंगुल सुवर्ण शलाका से विद्ध (भेदित) पूर्वकथित घटी यन्त्र रूप पात्र जल से एक दण्ड में पूर्ण होता है। यहां लल्लाचार्योक्त है "दशभिः शुल्बस्य पलैः पात्रं कलशार्धसन्निभं घटितम्" इत्यादि विज्ञान भाष्य में लिखित श्लोकों का अनुवाद श्रीपति ने 'शुल्बस्य दिग्भिर्विहित' इत्यादि से किया है। भास्कराचार्य के गोलाध्याय में "घटदलरूपा घटिता घटिका ताम्री तलेऽपृथुच्छिद्रा" इत्यादि—दशभिः शुल्बस्य पलैः इत्यादि घटी लक्षण जो किसी ने किया है वह युक्ति शून्य और दुर्घट है इसलिये वह उपेक्षा के योग्य है। इष्ट प्रमाण आकार छिद्र वाला पात्र घटी संज्ञक स्वीकार किया गया है। यदि द्युनिश (अहोरात्र) निमज्जन संख्या में छत्तीस सौ ३६०० पल पाते हैं तो एक निमज्जन में क्या इस रीति से घटी यन्त्र प्रमाण निरूपण किया है। लल्ल और श्रीपति आदि आचार्योक्ति से साठ पल में जल से भरने योग्य घटीयन्त्र के निर्माण को युक्ति शून्य और दुर्घट जो कहते हैं सो समीचान ही है' इति ॥४१॥

इदानीं कपालमन्त्रमाह।

मध्याद्य स्वन्तांशैः कपालकं दिक्स्थ सूत्रमध्याग्रात्।

व्यस्तोन्नतांश विवरे सूत्रैक्यापाततो नाड्यः ॥४२॥

अनयोः कीलच्छायामुक्ता घटिका वदन्ति वारुण्याः ।

पीठाकोदयवेधादग्राश्चापांशकाश्चापि ॥४२॥

अब कपालयन्त्र को कहते हैं ।

हि. भा. — मध्यादि अपने नतांश से कपालयन्त्र होता है । फलक में दिशा से अङ्कित क्षितिजानुकार वृत्त बनाकर अभीष्ट दिन में द्युज्या—चरज्या आदि से प्रत्येक अंश को कल्पनाकर मध्य नतांश पर्यन्त उन्नतघटी साधन कर उस घटी को व्यस्त कपाल में अपने अपने नतांशाग्र में वृत्तपाली में अङ्कित करना चाहिये, इस तरह से कपाल यन्त्र होता है । इष्टकाल में कपाल यन्त्र को दृग्मण्डलाकार रखने से केन्द्रस्थ कीलच्छायानुसार केन्द्रगत सूत्र वृत्तपरिधि में जहाँ लगती है वहाँ अङ्कित नाड़ी इष्टघटी होती है । एवं दिक्स्थसूत्र मध्याग्र से सूत्रों का जो ऐक्य (योग) है उसके आपात से अर्थात् वृत्तपरिधि के साथ संयोग से व्यस्त (उल्टा) कपालस्थ उन्नतांशान्तर में घटी होती है । सिद्धान्तशेखर में “इदं भवेदूर्ध्व-शलाकमुर्व्यां स्थितं कपालं द्युतिदिक् च चापम्” इत्यादि विज्ञान भाष्य में लिखित श्लोकों के अनुसार श्रीपति कहते हैं इस श्लोक का अर्थ यह है ऊर्ध्वगत है शलाका वा लम्ब जिसमें ऐसा यह चाप यन्त्र समान पृथिवी में छाया दिशा में स्थित कपाल यन्त्र होता है । कपाल यन्त्र में व्यास सूत्र के मध्य बिन्दु में स्थापित कील की छाया से त्यक्तघटी पश्चिम दिशा में होती है इति ॥४२॥

आचार्योक्त सूत्र की उपपत्ति व्याख्यारूप ही है । श्रीपत्युक्त सूत्रोपपत्ति के लिये शिष्यधीवृद्धिद तन्त्र में “इदमेवोर्ध्वशलाकं भुवि स्थितं स्यात् कपालकं यन्त्रम्” इत्यादि लल्लोक्त ही श्रीपत्युक्त का मूल है, सिद्धान्तशेखर में श्रीर शिष्यधीवृद्धिद में भी कपालयन्त्र और पीठ यन्त्र का उल्लेख साथ साथ है । जैसे सिद्धान्त शेखर में

इदं भवेदूर्ध्वशलाकमुर्व्यां स्थितं कपालं द्युतिदिक् च चापम् ।

संसाधितांशं खलु चक्रयन्त्रं पीठं भवत्यूर्ध्वशलाकमेव ॥

मध्यस्थ कीलप्रभया विमुक्ताः प्रत्यग्गतास्ता घटिका निरुक्ताः ।

पीठे तु सूर्योदय बिम्बवेधाद् भुक्तांशजीवा स्फुटमग्रका स्यात् ॥

शिष्यधीवृद्धिद तन्त्र में ।

इदमेवोर्ध्वशलाकं भुवि स्थितं स्यात् कपालकं यन्त्रम् ।

चक्रं चोर्ध्वशलाकं वदन्ति पीठं सुसिद्धाशम् ॥

अनयोः कीलच्छायामुक्ता घटिका वदन्ति वारण्याः ।

पीठाकौदयवेधादग्राश्चापांशकाश्चापि ॥

इदानीं विशेषमाह ।

अथवा कपालके नाड़िकादि सर्व यथा धनुष्युक्तम् ।

कर्त्तरि यन्त्रं स्थूलं कृतं यतोऽन्यैर्बदामि ततः ॥४३॥

सु. भा.—अथवा यथा धनुषि धनुर्यन्त्रे सर्वं नाडिकादि यथोक्तं तथैव कपालकेऽपि ज्ञेयम् । अथान्यैर्यतः कर्त्तरियन्त्रं स्थूलं कृतं ततस्तस्मादहं सूक्ष्मं वदामीति ॥४३॥

वि. भा.—अथवा धनुर्यन्त्रे सर्वं नाडिकादियथोक्तं कपालके यन्त्रेऽपि तथैव ज्ञेयम् । यतोऽन्यैराचार्यैः कर्त्तरि यन्त्रं स्थूलं कृतं तस्मात्कारणादहं सूक्ष्मं वदामीति ॥४३॥

अब विशेष कहते हैं ।

हि. भा.—अथवा धनुर्यन्त्र में सब नाडिकादि बातें जैसी कही गयी है वैसी ही कपालयन्त्र में समझनी चाहिये । क्यों कि अन्य आचार्य लोगों ने कर्त्तरी यन्त्र को स्थूलरूप से वर्णन किया है इस कारण से मैं सूक्ष्म कहता हूँ इति ॥४३॥

इदानीं कर्त्तरी यन्त्रमाह ।

द्विक्स्थितफलकद्विद्युतिस्तले तदग्रस्थसूत्रयोर्मध्ये ।

कीलस्तच्छायाग्रात् कर्त्तर्या नाडिकाः स्थूलाः ॥४४॥

सु. भा.—अर्धवृत्तानुकारं फलकद्वयं कार्यम् । एकमधोऽर्धनाडीवलयानुकारमन्यदधोऽर्धयाम्योत्तरवृत्तानुकारम् । ततस्तले यथाद्विक्स्थितयोर्द्वयोः फलकयोर्युतिः कार्या यथैकं नाडोमण्डलधरातलेऽन्यत् स्वयाम्योत्तरमण्डलधरातले स्यात् । तदग्रस्थे ये पूर्वापरदक्षिणोत्तरानुकारे सूत्रे तयोर्मध्येऽर्थाद्वृत्तयोः केन्द्रे कीलः स्थाप्यो यथाऽयं कीलो ध्रुवयष्टिरेव भवेत् । एवमिदं कर्त्तरीयन्त्रं भवेत् । अस्यां कर्त्तर्या तच्छायाग्रात् कीलच्छायाग्रात् स्थूला नाडिका इष्टघटधो भवन्ति । इदमेव भास्करेण 'भूस्थं ध्रुवयष्टिस्थं चक्रम्'—इत्यादिना नाडीवलयार्थं यन्त्रमुदितं । भास्करविधिना यदि रविक्रान्तिरेकस्मिन् दिने स्थिरा तदैवोन्नत-घटिका वास्तवा गोलयुक्तया भवन्ति परन्तु रवेः क्रान्तेः प्रतिक्षणं चलत्वान्नाडिकाः स्थूला भवन्तीत्याचार्योक्तं गोलयुक्तियुतं बुद्धिमद्भिश्चिन्त्यम् । अनेन यन्त्रेण नतकाल-ज्ञानं सूक्ष्मं भवतीति सिद्धान्तविदां स्फुटम् ॥४४॥

वि. भा.—अर्धवृत्तानुकारं फलकद्वयं कार्यम् । एकमधोऽर्धनाडीवृत्ताकारमन्य-दधोऽर्धं याम्योत्तरवृत्तानुकारम् । ततस्तले यथाद्विक् स्थितयोर्द्वयोः फलकयोर्युतिः कार्या यथैकं नाडीवृत्तधरातलेऽन्यत् स्वयाम्योत्तरवृत्तधरातले स्यात् । तदग्रस्थे ये पूर्वापर दक्षिणोत्तरानुकारे सूत्रे तयोर्मध्येऽर्थाद्वृत्तयोः केन्द्रे कीलः स्थाप्यो यथाऽयं कीलो ध्रुवयष्टिरेव भवेत् । एवमिदं कर्त्तरीयन्त्रं भवेत् अस्यां कर्त्तर्या कीलच्छाया-ग्रात् स्थूला इष्ट नाडिका भवन्ति । सिद्धान्तशेखरे—

“ज्यामध्यतिर्यक्स्थितकीलमेतत् पूर्वापरस्थं स्थिरकर्त्तरी स्यात् ।

प्रत्यग् धनुः कोटिमुखात् द्युनाड्यः समुज्झिताः कीलरूपा भवन्ति ॥”

श्रीपतिनैवं कथ्यते अस्यार्थः—एतच्चक्रयन्त्रं ज्यामध्यतिर्यक् स्थितकीलकं व्यासरेखाया मध्यबिन्दौ तिर्यगाकारेण निवेशितलौहादिकीलं पूर्वापरस्थं (पूर्वपश्चिमानुरूपेण स्थापितं) स्थिरकर्त्तरोति कर्त्तर्याख्यं यन्त्रं स्यात् । प्रत्यग्धनुः कोटिमुखात् पश्चिमबिन्दौ यद्धनुः या च कोटिः (धनुषः प्रान्तः) तदारभ्य कीलरूपा (ज्यामध्यस्थापित कीलच्छायाया) समुज्झिताः (मुक्ताः) नाड्यः द्युनाड्यः (दिनगत घटिका) भवन्ति ।

अत्रोपपत्तिः ।

चक्र यन्त्रस्यैव भेदान्तरं कर्त्तरीयन्त्रम् । चक्रयन्त्रे नाडीवृत्तानुसारेण स्थापिते पूर्ववदेव पश्चिमबिन्दोः कीलच्छायावधिका घटिकाः सूर्योदयतो दिनगता घटिकाः स्थूला भवन्ति । पूर्वबिन्दोः सूर्यो यथायथोपरि याति तथा तथा पश्चिमबिन्दोः कीलच्छायाऽधो यातीति । अत्र लल्लोक्तम्—

“समपूर्वापरमेतत् स्थिरं स्थितं भवति कर्त्तरीयन्त्रम् ।

ज्यामध्यस्थित तिर्यक्कीलच्छायोज्झिता घटिकाः ॥”

इति श्रीपत्युक्तसदृशमेव । सिद्धान्तशिरोमणोर्गोलाध्याये इदमेव ‘भूस्थं ध्रुवयष्टिस्थम्’ इत्यादिना भास्करेण नाडीवलयाख्यं यन्त्रं कथितम् । भास्करोक्तया यद्येकस्मिन् दिने रविक्रान्तिः स्थिरा भवेत्तदैवोन्नतघटिका वास्तवा भवितुमर्हन्ति परन्तु रवेः क्रान्तेः प्रतिक्षणं वैलक्षण्यान्नाडिकाः स्थूलाभवन्तीत्याचार्योक्तं युक्तियुक्तम् । अनेन यन्त्रेण नतकालज्ञानं सूक्ष्मं भवतीति विज्ञेयम् ॥४४॥

अब कर्त्तरी यन्त्र को कहते हैं ।

हि. भा.—एक नीचे में अर्धं नाडीवृत्ताकार, दूसरा नीचे में अर्धयाम्योत्तरवृत्ताकार, इस तरह के अर्धवृत्तानुकार दो फलक करना चाहिये । उसके बाद उनके तल में दोनों फलकों को इस तरह योग करा देना जिस से एक नाडीवृत्त धरातल में हो और दूसरा याम्योत्तरवृत्त धरातल में हो जाय । उन के अग्र में जो पूर्वापरानुकार और दक्षिणोत्तरानुकार सूत्र हो उन दोनों के मध्य में अर्थात् वृत्तद्वय के केन्द्र में कील को स्थापन करना जिससे यह कील ध्रुवयष्टि हो, इस तरह यह कर्त्तरी यन्त्र होता है । इस कर्त्तरीयन्त्र में कीलच्छायाग्र से स्थूल इष्टघटी होती है । सिद्धान्तशेखर में ‘ज्यामध्यतिर्यक्स्थितकीलमेतत्’ इत्यादि विज्ञान भाष्य में लिखित श्लोक के अनुसार श्रीपति कहते हैं । इसका तात्पर्य यह है कि यह चक्र यन्त्र व्यास रेखा के मध्य बिन्दु में तिर्यक् आकार से निवेशित लोह आदि कील

को पूर्वापर रूप से स्थापन करने से कर्तरी संज्ञक यन्त्र होता है । पश्चिम बिन्दु में जो घनुष और उसका जो प्रान्त उससे आरम्भ कर ज्यामध्य स्थापित कीलच्छाया से मुक्त (त्यक्त) नाड़ी — धुनाडी (दिनगत घटी) होती है । इति ॥४४॥

उपपत्ति ।

चक्रयन्त्र ही का भेदान्तर कर्तरी यन्त्र है । नाड़ीवृत्तानुसार चक्रयन्त्र को स्थापन करने से पूर्ववत् ही पश्चिम बिन्दु से कीलच्छायापर्यन्त घटी सूर्योदय से दिनगत स्थूल घटी होती है, पूर्वबिन्दु से ज्यों-ज्यों ऊपर जाते हैं त्यों त्यों पश्चिमबिन्दु से कीलच्छाया नीचे जाती है । यहां 'समपूर्वापरमेतत् स्थिरं स्थितं भवति कर्तरी यन्त्रम्' इत्यादि संस्कृतोपपत्ति में लिखित ललाचार्योक्त श्रीपत्युक्त के सदृश ही है । सिद्धान्तशिरोमणि के गोलाध्याय में 'भूस्थं ध्रुवयष्टिस्थम्' इत्यादि से श्रीभास्कराचार्य ने इसी को नाड़ीवलय संज्ञक यन्त्र कहा है । यदि एक दिन में रवि की क्रान्ति स्थिर मानी जाय तब ही भास्कराचार्योक्ति से उन्नत घटी वास्तव हो सकती है परन्तु रवि की क्रान्ति प्रतिक्षण विलक्षण होती है इसलिये 'नाड़िकाः स्थूला भवन्ति' यह आचार्योक्त युक्तियुक्त है । इस यन्त्र से नतकाल ज्ञान सूक्ष्म होता है इति ॥४४॥

इदानीं पीठयन्त्रमाह ।

दृष्ट्यौच्यं समपीठं यष्टिव्यासार्धमन्तिकं परिधौ ।

दिग्भगणांशैर्मूर्धन्यग्रा घटिकादिभिश्चाङ्कुचम् ॥४५॥

सु. भा.—एकं दृष्ट्यौच्यं दृष्ट्यौच्यसमे प्रदेशे खे गतं यष्टि व्यासार्धमन्तिकं समपीठं समं चक्राकारं फलकं कार्यम् । परिधौ दिग्भगणांशैस्तथा मूर्धनि परिध्यग्रभागेऽग्राघटिकादिभिर्ग्रोन्नतघटयादिभिश्चाङ्कुचं पीठसंज्ञं यन्त्रं चक्रयन्त्राकारं भवतीत्यर्थः ॥४५॥

तथा च लल्लः—चक्रं चोर्ध्वशलाकं वदन्ति पीठं सुसिद्धाशम् ।

(शिष्यघीवृ० यन्त्राध्याय, श्लोक २५)

वि. भा.—दृष्ट्यौच्यसमे प्रदेशे खे गतं यष्टिव्यासार्धमन्तिकं समपीठं (समं चक्राकारं फलकं कार्यम्) परिधौ दिग्भगणांशैः, मूर्धनि (परिध्यग्रभागे) अग्राघटिकादिभिः (अग्रोन्नत घटिकादिभिः) अङ्कुचं पीठयन्त्रं चक्राकारं भवतीति । सिद्धान्तशेखरे—

“संसाधितांशं खलु चक्रयन्त्रं पीठं भवत्यूर्ध्वशलाकमेव ।

पीठे तु सूर्योदय बिम्बवेधाद् भुक्तांशजीवा स्फुटमग्रका स्यात् ॥”

श्रीपतिनैवं कथ्यते । अस्यार्थः—संसाधितां चक्रयन्त्रं (कृतदिक् साधनं पूर्वकथितचक्रयन्त्रं) ऊर्ध्वशलाकमेव (उपरिगतलम्बमेव) पीठं (पीठ संज्ञकं) यन्त्रं भवेत् । पीठे यन्त्रे सूर्योदयबिम्बवेधात् (सूर्योदयसमये रविबिम्बवेधेन) भुक्तांशजीवा (भुक्तानामंशानां जीवा) ऽग्रा स्यात् । स्फुट (प्रत्यक्षमेव दृश्यते) मिति ।

अत्रोपपत्तिः ।

कृतदिक् साधनं वृत्ताकारं पीठयन्त्रं सूर्योदये सूर्याभिमुखं स्थापितं तेन पश्चिमबिन्दोर्यदन्तरेण छाया पतिता तदन्तरमग्रा चापांशास्तज्ज्याऽग्रा भवतीति यन्त्रस्थितिदर्शनेनैव स्फुटम् । शिष्यवीवृद्धिद तन्त्रे—

‘चक्रं चोर्ध्वशलाकं वदन्ति पीठं सुसिद्धाशम् ।

पीठाकौदयवेधादग्राश्चापांशकाश्चापी ॥’

ति लल्लोक्तमेव श्रीपत्युक्तस्य मूलमिति विज्ञैविवेचनीयम् ॥४५॥

अब पीठ यन्त्र को कहते हैं ।

हि. भा.—दृष्टि की ऊँचाई के तुल्य प्रदेश में आकाशस्थ यष्टि व्यासार्धजनित चक्राकार फलक करना चाहिये । परिधि में दिशा और भगणांश को अङ्कित करना चाहिये तथा परिधि के अग्रभाग में अग्राघटी को अङ्कित करना अर्थात् पीठ यन्त्र चक्राकार होता है । सिद्धान्तशेखर में “संसाधितां खलु चक्रयन्त्रं” इत्यादि विज्ञान भाष्य में लिखित श्लोक के अनुसार कहते हैं, इसका अर्थ यह है—पूर्वकथित चक्रयन्त्र जिसमें दिक्साधन किया हुआ है उपरिगत लम्ब ही पीठ संज्ञक यन्त्र होता है, पीठ यन्त्र में सूर्योदयकाल में रविबिम्ब वेध से भुक्त अंशों की जीवा (ज्या) अग्रा है इति ॥४५॥

उपपत्ति ।

जिस में दिक्साधन किया हुआ है ऐसे वृत्ताकार पीठ यन्त्र को सूर्योदयकाल में सूर्याभिमुख स्थापन करने से पश्चिम बिन्दु से जितने अन्तर पर छाया पतित होती है वह अग्राचापांश है उसकी ज्या अग्रा होती है, यह यन्त्रस्थिति की भावना ही से स्फुट है । शिष्यवीवृद्धिदतन्त्र में ‘चक्रं चोर्ध्वशलाकं वदन्ति पीठं’ इत्यादि लल्लोक्त ही श्रीपत्युक्ति का मूल है इसको विज्ञलोग विचार कर देखें इति ॥४५॥

इदानीं यन्त्रान्तरमाह ।

नलको भूले विद्वस्तस्त्वुतिघटिकोद्धृतः समुच्छ्रायः ।

लब्धाङ्गुलैस्तु तैर्नाङ्गिका क्रिया यन्त्रसिद्धिरतः ॥४६॥

सु० भा०—एक इष्टप्रमाणो नलको मूले विद्धः कार्यः । स च जलैः पूर्णः कार्यः । अधोरन्ध्रेण यावतीभिर्घटीभिर्जलस्रुतिः स्यात् ताः स्रुतिघटिका ज्ञातव्याः । नलकस्य समुच्छ्रायस्तत्स्रुतिघटिकोद्धतस्तैर्लब्धाङ्गुलैर्नलके चैकैको विभागोऽङ्कनीयः । अत एभ्यो विभागेभ्यो नाडिका क्रिया यन्त्रा सिद्धिर्भवति । नाडिकाक्रियया यन्त्रसिद्धिर्भवतीत्यर्थः । एकविभागपर्यन्तं जलस्रुत्यैका घटी द्वितीयभागपर्यन्तं जलस्रुत्या घटीद्वयम् । एवमत्र कालज्ञानं भवति ।

यदि जलस्रुतिघटिकाभिर्नलकोच्छ्रितितुल्या जलस्रुतिर्लभ्यते तदैकया घट्या किं जातैकघटीतुल्यकालजनितस्रुतानुच्छ्रितिरिति । सिद्धान्तशेखरे श्रीपतिनैतद्भिन्नमेव यन्त्रान्तरं कालज्ञानार्थं कथ्यते यथा—

“नीरस्रुत्या चिन्हिते नाडिकाद्यैर्मूलच्छिद्रे वारिपूर्णं च पात्रे ।

गोलं तुम्बं पारताडयं गुणेन बद्धे केन प्रक्षिपेत्तत्र युक्ते ॥

यथा यथाऽम्बु स्रवति क्रमेण तथा तथाऽधो ब्रजदत्र तुम्बम् ।

गोलं परिभ्रामयति स्वयं तत् सूर्याशिशुजान्तरगास्तु नाडयः ॥”

अस्यार्थः—मूलच्छिद्रे (अधोरन्ध्रवति) वारिपूर्णं पात्रे (जलपूर्णं कांस्यादिभाजने) नीरस्रुत्या (जलप्रस्रवणेन) नाडिकाद्यैः (घटीपलविपलाद्यैः) चिन्हिते पारतसहितं गोलं तुम्बं (वर्तुलाकारमलावु) तत्र जलपूर्णपात्रे गुणेन (रश्मिभिः) बद्धे, केन (जलेन) युक्ते प्रक्षिपेत् । अम्बु (तद्भाजनजलं) यथा यथा स्रवति (प्रस्रवितं भवति) तथा तथा अत्र अधो ब्रजत् तुम्बं स्वयं (अनन्यसापेक्षं) गोलं परिभ्रामयति । तत्र सूर्याशिशुजान्तरगाः—क्रान्तिवृत्ते यस्मिन्नंशे सूर्यो वर्तते तस्य क्षितिजवृत्तस्य चान्तरे गता नाडयो भवन्ति । अत्र लल्लोक्तम्—

जलकुण्डेऽधश्छिद्रे घटिकाकालाङ्किते जलस्रुत्या ।

गोले वेष्टनसूत्राग्रबद्धतुम्बं क्षिपेत् सरसम् ॥

स्रवति च यथा यथाऽम्भस्तथा तथाऽलाबु गच्छमानमधः ।

भ्रमयति गोलकमंभो भुक्ताङ्का नाडिका ज्ञेयाः ।

इदमेव श्रीपत्युक्तस्य मूलम् । सूत्रानुसारेण गोलनिर्माणं अधश्छिद्रजल-
कुण्डे मूलच्छिद्रे जलपूर्णपात्रे वा सपारदतुम्बप्रक्षेपेण नीचतो गच्छत् तत्तुम्बं स्वयं
गोलं भ्रामयतीति कारुकार्यनिपुणा एव तादृशं तुम्बयन्त्रमिदं निर्मातुमर्हन्ति ।
नाडीवृत्ते क्षितिजसूर्याभ्यन्तरगा अवयवाः सावनघटिका भवन्तीति ॥४६॥

अब यन्त्रान्तर को कहते हैं ।

हि. भा. — एक इष्ट प्रमाण नलक लेकर उसके मूल में छेद करना चाहिये । नलक
को जल से भर देना चाहिये, नीचे के छेद से जितनी घटी में जलस्रुति (जल का बहना)
होती है, उसको जलस्रुतिघटी समझनी चाहिये । उस जलस्रुति घटी से नलक के उच्छ्वाय
(ऊँचाई) में भाग देने से जो लब्ध अंगुल हो उससे नलक में एक एक विभाग अङ्कित
करना, इन विभागों से नाडिका क्रिया द्वारा यन्त्र सिद्ध होती है अर्थात् एक विभाग
पर्यन्त जलस्रुति से एक घटी, द्वितीय विभाग पर्यन्त जलस्रुति से दो घटी, आगे भी इसी
तरह, एवं काल ज्ञान होता है ॥४६॥

उपपत्ति ।

यदि स्रुति घटी में नलक की उच्छ्रितितुल्य जलस्रुति पाते हैं तो एक घटी में क्या
इससे एक घटी तुल्य काल जलस्रुति में उच्छ्रितित आती है इति ॥४६॥

इदानीं पुनर्यन्त्रान्तरमाह ।

इति, आचार्योक्तं लल्लोक्तं च श्रीपत्युक्तेर्मूलमिति प्रतीयते । लल्लोक्त-
मार्यात्रयं बहुत्रैवाशुद्धमिव प्रतिभाति न चास्य किमपि व्याख्यानं सम्यक्-दृश्यते ।
एतयो (आचार्य लल्लयोः) रनुरूपरचनस्य श्रीपत्युक्तस्य नितरामेवाशयोऽशुद्ध-
त्वान्नावगम्यते ॥ इति. ४७-४८ ॥

अब पुनः यन्त्रान्तर कहते हैं ।

हि. भा.—अल्प विस्तार और ज्यादा दैर्घ्य (लम्बाई) वाला वस्त्र खण्ड (कपड़े का टुकड़ा) चीरी कहलाता है । एक घटी में मनुष्य के मुख (मुँह) से जितना बड़ा वस्त्र खण्ड जलस्राव (जल का निकलना) के आघात (घट्का) से बाहर निकलता है वह घटिकां-गुल कहलाता है । घटिकांगुलान्तरस्थित एक, दो-तीन आदि घटी से अङ्कित (चिन्हित) गुटिका (गोली) चीरी में देनी चाहिये । इस चीरी को नरा (मनुष्य) कार यन्त्र के नीचे के छिद्र में रखना चाहिये, जिससे चीरी नर के नीचे छिद्र से प्रविष्ट होकर नर मुख में स्थित तिर्यक् रूप कील के उपरिगत हो जाय । नर मुखान्न में कील के ऊपर जो चीरी का खण्ड है उसके अग्र में पारे से भरे हुए तुम्ब (तुम्बी) को बांध कर, उसमें नलक आदि से जलधारा देनी चाहिये जिस से नीचे जाती हुई तुम्बी से घटिका में नरमुख से एक गुटिका (गोली) बाहर चली जाय । एवं जलस्राव से नराकार यन्त्र घटिका से एक गुटिका को मुख से बाहर फेंकता (निकालता) है । इस तरह नराकार यन्त्र की जगह कूर्म (कछुआ) आदि आकार का यन्त्र भी समझना चाहिये । सिद्धान्तशेखर में “चीरीं प्रकुर्याद् घटिकांगुलाङ्का-
मेतेन मुक्तं वा वदनेन धार्या” इत्यादि विज्ञान भाष्य में लिखित श्लोकानुसार श्रीपति कहते हैं । “घटिकाङ्कांगुल संख्यां बद्ध्वा चीर्या” इत्यादि विज्ञान भाष्य में लिखित लल्लोक्त श्लोक और आचार्योक्त ही श्रीपत्युक्ति का मूल है । लल्लोक्त तीनों श्लोक बहुत जगह अशुद्ध मालूम होते हैं । इनकी सम्यक् व्याख्या कहीं पर कुछ भी देखने में नहीं आती है । आचार्योक्त और लल्लोक्त के अनुरूप श्रीपत्युक्त का आशय अशुद्धता के कारण समझ में नहीं आता है इति ॥४७-४८॥

इदानीं विशेषमाह ।

जलपूर्णांकृत घटीभिः स्तनास्यकर्णादिभिर्जलं क्षिपति ।

पुरुषोऽन्यस्यासक्ते वक्त्रे पुरुषस्य कृतमुपरि ॥४९॥^१

सु. भा.—पुरुषो (नराकारयन्त्रम्) रचनीयः । जलपूर्णांकृता घटी घटीयन्त्र-
मस्य स्तने मुखे कर्णादौ वाऽन्तस्था योज्या यथाऽयं पुरुषः स्तनास्यकर्णादिभि-
रन्यस्य प्रतिपुरुषस्य तदासक्ते वक्त्रे मुखे घटीमितेन कालेन जलं क्षिपति ।
एवमप्युपरि पूर्वश्लोके प्रतिपादितं यन्त्रं प्रकारान्तरेण कृतं भवेदित्यर्थः ॥४९॥

१: पुरुषोऽन्यस्यासक्ते वक्त्रं पुरुषस्य कृतमुपरि ॥४९॥

वि. भा.—पुरुषो (नराकार यन्त्रं) निर्मातव्यः । जलपूर्णकृतघटी (घटी-यन्त्रं) अस्य स्तने-आस्ये (मुखे) कर्णादौ बाह्वन्तस्तथा प्रयोक्तव्या यथाऽयं पुरुषः स्तनास्यकर्णादिभिरन्यस्य पुरुषस्य तदासक्तं वक्त्रे (मुखे) घटीतुल्यकालेन जलं क्षिपति । एवमुपरि कथितं यन्त्रं प्रकारान्तरेण कृतं भवेदिति ॥४९॥

अब विशेष कहते हैं ।

हि. भा.—नराकार यन्त्र बनाना चाहिये । जल से भरे हुए घटीयन्त्र को इसके स्तन-मुख (मुँह) कर्ण (कान) आदि में भीतर इस तरह प्रयोग करना चाहिये जिस से यह पुरुष स्तन-मुख-कर्ण आदिओं से अन्य पुरुष के उससे आसक्त मुख (मुँह) में एक घटी तुल्यकाल में जल को निकाले । इस तरह पूर्वकथित यन्त्र प्रकारान्तर से किया हुआ होता है इति ॥४९॥

इदानीं पुनर्विशेषमाह ।

एवं वधूवरं नाडिकांगुलैः संयुता वरे योज्या ।

युद्धानि मल्लगजमहिषमेव विविधायुधभृतां च ॥५०॥

निगिरति गिरति घटिकांगुलाङ्कितैः खण्डकैर्मयूरोऽहिम् ।

चीयमिवं गुटिकोपरिस्थितैर्ब्रह्मचार्याद्यैः ॥५१॥

सु. भा.—एवं वधूवर मुखस्थितिर्यक् कीलोपरिगचीरिगतनाडिकाङ्गुलैस्तथैव वरे वधूर्योज्या यथा वध्वघोरन्ध्रग्रचीर्यग्रवद्दालाबुनाऽधोगच्छता घटीमितेन कालेनैका गुटिका वरमुखाद्वर्हिर्निर्गत्य वधूमुखे प्रविशेत् । एवमनेनैव बीजेन घटीमितेन कालेन मल्लगजमहिषमेषविविधायुधभृतां च युद्धानि स्युः । मयूरो घटिकाङ्गुलाङ्कितैः खण्डकैरहिं सर्पं च निगिरति वा गिरति । एवं चीर्या गुटिकोपरि स्थापितैर्ब्रह्मचार्याद्याकारैः कीलोत्क्षेपाभिहतः पटहो वा घण्टाशब्दं करोति । एवमत्र यन्त्र-सहस्राणि भवन्ति ॥५०-५२॥

वि. भा.—एवं वधूवरमुखस्थितिर्यक्कीलोपरिगतचीरिगतनाडिकांगुलैस्तथैव वरे वधूर्योज्या यथा वध्वघोरन्ध्रग्रचीर्यग्रवद्दालाबुनाऽधो गच्छता घटीमितेन कालेनैका गुटिका वरमुखाद्वर्हिर्निर्गत्य वधूमुखे प्रविशेत् । एवमनेनैव बीजेन घटीमितेन कालेन मल्ल-गज-महिष-मेषविविधायुधभृतां च युद्धानि स्युः । मयूरो घटिकांगुलाङ्कितैः खण्डकैरहिं (सर्पं) च निगिरति वा गिरति । एवं चीर्या गुटिकोपरि स्थापितैर्ब्रह्मचार्याकारैः कीलोत्क्षेपाभिहतः पटहो वा शब्दं

करोति । एवमत्र यन्त्रसहस्राणि भवन्तीति । सिद्धान्तशेखरे—

“इत्थं स्वबुद्ध्या गणकः प्रकुर्यान्मेषादियुद्धं गजयन्त्रमत्र ।

यत्र स्वयंवाहकनाभिमध्यात् बीजं दशाङ्केन हि कर्मणा यः ॥”

श्रीपतिनैवं कथ्यते । अस्त्यार्थः— इत्थममुना विधिना मेषादियुद्धं यन्त्रं तथा गजयन्त्रं चात्र गणकः प्रकुर्यात् । अत्र श्लोकोत्तरार्द्धं मन्त्रासङ्गिकमर्थरहितं च प्रतिभाति । अत्र लल्लोक्तं च—

“कुर्यादयोऽपि चैवं घटिका जन्तुर्यथेष्टकालेन ।

मेषादीनां युद्धं सूत्रे सक्ते भवेदुभयोः ॥

परिकल्पित कालाध्वनि युत्तया योगो भवेद्बध्नुवरयोः ।

घटिकांगुलाङ्कितं वा ग्रसति मयूरः क्रमादुरगम् ॥

हन्ति मनुष्यः पटहं छादयति छादकस्तथा छाद्यम् ।

एवं विधानि यन्त्राण्यैवमनेकानि सिध्यन्ति ॥”

इति श्रीपतेर्मूलम् । आचार्यादीनां समये ईदृशानि यन्त्राणि साधारणजना-
नामाश्चर्यं कराण्यासन्नित्यनुमीयते । श्रीपतिना त्वल्पान्येव यन्त्राणि सुगमोपायेनोप
योगवन्ति तत एवादाय लिखितानोति ॥५०—५२॥

अब पुनः विशेष कहते हैं ।

हि. मा.—एवं बध्नु-वर मुखस्थ तिर्यक्-कीलोपरिगत चीरिगत नाडिकांगुल से उसी तरह वर में बध्नु को जोड़ना (मिलाना) चाहिये जिससे बध्नु के नीचे रन्ध्र (छिद्र) गत चीरी के अग्र में बंधा हुआ नीचे जाते हुये अलावु (तुम्बी) से एक घटीकाल में एक गुटिका वर के मुख (मूँह) से बाहर निकल कर बध्नु के मुख में प्रवेश करे । एवं इसी बीज (मूल) से एक घटीमितकाल में मल्ल (पहलवान) गज (हाथी) महिष (भैंसा) मेष (भेंगा) और अनेक तरह के हथियार रखने वालों के युद्ध होते हैं । मयूर घटिकांगुल से अङ्कित खण्डों से सर्प को निगलता है । एवं चीरी में गुटिका के ऊपर स्थापित (रखे हुए) ब्रह्मचारी आदि आकार से कौल के उत्क्षेपण के आघात से घण्टा शब्द करती है । इस तरह यहाँ हजारों यन्त्र होते हैं । सिद्धान्तशेखर में ‘इत्थं स्वबुद्ध्या गणकः प्रकुर्यात्’ इत्यादि विज्ञान भाष्य में लिखित श्लोक के अनुसार श्रीपति कहते हैं । इसका अर्थ यह है—इस विधि से मेषा (भेंगा) दि युद्धयन्त्र तथा गजयन्त्र की रचना गणक (ज्योतिषी) करें । इस श्लोक का उत्तरार्ध बिना प्रसङ्ग का और बिना अर्थ का है । यहाँ “कुर्यादयोऽपि चैवं घटिका जन्तुर्यथेष्टकालेन” इत्यादि विज्ञान भाष्य में लिखित लल्लोक्त ही श्रीपत्युक्ति का मूल है । आचार्य (ब्रह्मगुप्त) आदि के समय में इस तरह के यन्त्र साधारण जनों के आश्चर्य कारक थे ऐसा

मालूम होता है । श्रीपति ने सुगम उपाय से उपयोग के लायक थोड़े ही यन्त्रों को (आचार्योंक्त और लल्लोक्त से) लेकर लिखा है इति ॥५०-५२॥

इदानीं स्वयंवहयन्त्रमाह ।

लघुदारुमयं चक्रं समसुषिरारान्तर पृथगराणाम् ।

अर्धेन रसेन पूर्णं परिधौ संश्लिष्टकृतसन्धिः ॥५३॥

तिर्यङ्गीलोमध्ये द्वयाधारस्थोऽस्य पारदो भ्रमति ।

देशकालयन्त्रपरिमाणाधीनमीश्वरैकगम्यमिति । सिद्धान्तशिरोमणौ—

“लघुदारुजसमचक्रे समसुषिराराः समान्तरा नेम्याम् ।

किञ्चिद्वक्रा योज्या सुषिरस्यार्धे पृथक् तासाम् ॥

रसपूर्णं तच्चक्रं द्वयाधाराक्षस्थितं स्वयंभ्रमतो”ति भास्करोक्तमाचार्योक्ता-
नुरूपमेवास्ति ॥ अस्यार्थः—ग्रन्थि कीलरहिते लघुदारुमये भ्रमसिद्धे चक्र आराः
किं विशिष्टाः—समप्रमाणाः समसुषिराः समतौल्याः समान्तरा नेम्यां योज्याः ।
ताश्च नद्यावत्तच्चदेकत एव सर्वाः किञ्चिद्वक्रा योज्याः । ततस्तासामाराणां सुषिरेषु
पारदस्तथा क्षेप्यो यथा सुषिरार्धमेव पूर्णं भवति, ततो मुद्रिताराग्रं तच्चक्रमयस्का-
रशाणवद् द्वयाधारस्थं स्वयं भ्रमति । अत्र युक्तिः—यन्त्रैकभागे रसोद्धारामूलं

१. छिद्राण्यूर्ध्वमधोऽतश्चक्रमजस्रं स्वयं भ्रमति ॥५४॥

प्रविशति । अन्यभागे त्वाराग्रं धावति । तेनाकृष्टं तत् स्वयं भ्रमतीति ॥५३-५४॥

अब स्वयंवहयन्त्र को कहते हैं ।

हि. भा.—लघुकाष्ठमय चक्र यन्त्र बनाना चाहिये, जिसके आराओं में समान छिद्र हो तथा समान्तर हो, जिस चक्र यन्त्र के संश्लिष्ट (मुद्रित) छिद्र है । तथा आधे पारे से पूर्ण (भराहुआ) परिधि है । इस यन्त्र के मध्य में तिर्यक् रूप में कील स्थापन करना । चक्र को शाण चढ़ाने वाले चक्र की तरह दो आधार पर रखना चाहिये । क्यों कि आराओं के छिद्र में पारा ऊपर और नीचे से घूमता है इसलिये उससे आकृष्ट (खींचाहुआ) चक्र बराबर स्वयं (अपने ही आप) भ्रमण करता है । यन्त्र की पालीगत अंकुश की आकृति (आकार स्वरूप की तरह पारे के प्रक्षेपण के लिये पारा ढालने के लिये धातु की वा काष्ठ (लकड़ी) की बनी हुई चीज आरा शब्द से व्यवहृत है । सिद्धान्तशिरोमणि में 'लघुदारुज समचक्रे समसुषिराराः समान्तरा नेम्याम्'—इत्यादि विज्ञान भाष्य में लिखित भास्करोक्त प्रकार आचार्योक्त के अनुरूप ही है । भास्करोक्त श्लोक का तात्पर्य यह है । ग्रन्थि (गेठी-गिरह) लाघु दाह (लकड़ी) मय भ्रमसिद्ध (खरादा हुआ) चक्र में समप्रमाण के समछिद्र के सम-तौल्य (सम वजन) के समान्तर पर आराओं को नेमी (परिधि) में जोड़ देना, वे नदी के हिलोड़ (पानी बहने के घुमाव) की तरह एक ही तरफ सबों को जोड़ना चाहिये । तब उन आराओं के छिद्रों में पाराओं को उस तरह देना चाहिये जिससे छिद्र का आधा ही पूर्ण (पूरा) हो, तब मुद्रित आरा के अग्र वाला वह चक्र शान चढ़ाने के चक्र के सदृश दो आधार पर स्थित होकर स्वयं घूमता है । यहां युक्ति यह है—पारा जहां एक भाग में आरा के मूल में प्रवेश करता है और अन्य भाग में आरा के अग्र में दौड़ता है, उससे आकृष्ट वह चक्र स्वयं भ्रमण करता है इति ॥५३-५४॥

इदानीं विशेषमाह ।

छिद्रे स्वधिया क्षिप्ता समं यथा पारदं भ्रमति ।

कालसममिष्टमानैश्चक्रसमुत्तानमूर्ध्वं वा ॥५५॥

सु. भा.—छिद्रे स्वबुद्ध्या समं पारदं क्षिप्त्वा तथा चक्रं स्थाप्यं यथा कालसमं कालानुसारि समुत्तानं क्षितिजानुकारं वोर्ध्वमूर्ध्वाधरं जलयन्त्रवदिष्ट-मानैर्भ्रमति । एकभ्रमणेन यथेष्टमानसमं कालमुत्पादयेत् तथा ऋतुविशेषे लघुगुरुकाष्ठमयं चक्रम् स्वल्पाधिकपारदसहितारं विरचयेदिति ॥५५॥

वि. भा.—छिद्रे स्वधिया (स्वबुद्ध्या), समं पारदं क्षिप्त्वा चक्रं तथा स्थाप्यं यथा कालसमं (कालानुसारि) समुत्तानं क्षितिजानुकारं वोर्ध्वं (ऊर्ध्वाधरं जलयन्त्रवत्) इष्टमानैर्भ्रमति । एकभ्रमणेन यथेष्टमानसमं कालमुत्पादयेत्तथा

ऋतुविशेषे लघुगुरुकाष्ठमयं चक्रं स्वल्पाधिकपारदसहितारं विरचयेत् ।
भास्कराचार्येण—

“उत्कीर्य नेमिमथवा परितो मदनेन संलग्नम् ।

तदुपरि तालदलाद्यं कृत्वा सुषिरे रसं क्षिपेत् तावत् ॥

यावद्रसैकपार्श्वे क्षिप्तजलं नान्यतो याति ।

पिहितच्छिद्रं तदतश्चक्रं भ्रमति स्वयं जलाकृष्टम् ॥”

सिद्धान्तशिरोमणौ स्वयंवहमन्त्रसम्बन्धे एवमभिहितम् । अस्य व्याख्या यन्त्रनेमि भ्रमयन्त्रेण समन्तादुत्कीर्य द्व्यगुलमात्रं सुषिरस्य वेधो विस्तारश्च यथा भवति ततस्तस्य सुषिरस्योपरि तालपत्रादिकं मदनादिना संलग्नं कार्यम् । तदपि चक्रं द्वाधाराक्षस्थितं कृत्वोपरि नेम्यां तालदलं विद्ध्वा सुषिरे रसस्तावत् क्षेप्यो यावत् सुषिरस्याधोभागो रसेन मुद्रितः । पुनरेकपार्श्वे जलं प्रक्षिपेत् । तेन जलेन द्रवोऽपि रसो गुरुत्वात् परतः सारयितुं न शक्यते । अतो मुद्रितच्छिद्रं तच्चक्रं जलेनाकृष्टं स्वयं भ्रमतीति ॥५५॥

अब विशेष कहते हैं ।

हि. भा.—छिद्र में अपनी बुद्धि से पारा देकर चक्र को इस तरह स्थापन करना चाहिये जिससे कालानुसारी क्षितिजानुकार वा ऊर्ध्वाधर जलयन्त्रवत् इष्टमान से भ्रमण करता है । एक भ्रमण से जैसे इष्टमान के तुल्यकाल को उत्पादन करे वैसे ऋतु विशेष में लघु-गुरु काष्ठमय चक्र को जिसमें स्वल्प-अधिक पारे वाला आरा हो बनाना चाहिये । सिद्धान्तशिरोमणि में ‘उत्कीर्य नेमिमथवा परितो मदनेन संलग्नम् । तदुपरि तालदलाद्यं कृत्वा सुषिरे रसं क्षिपेत् तावत्’ इत्यादि विज्ञान भाष्य में लिखित श्लोकानुसार भास्कराचार्य स्वयं इस यन्त्र के विषय में कहते हैं । इसका अर्थ यह है—यन्त्र की परिधि को चारों तरफ भ्रम-यन्त्र (खरादने के यन्त्र) से इस प्रकार ठीक करना चाहिये कि छिद्र की ऊँचाई और विस्तार दो अंगुल रह जाय । अनन्तर उस छिद्र के ऊपर तालपत्रादि को चिपका देना चाहिये चक्र को दो आधाराक्ष (आधार धुरी) स्थित करके ऊपर नेमि (परिधि) में ताल पत्र को बँध कर छिद्र में पारे को तब तक ढारना चाहिये जब तक छिद्र का अधोभाग पारे से मुद्रित (छिप जाय) हो । फिर एक पार्श्व (बगल) में जल देना—उस जल से द्रव (तरल) भी पारा गुरुत्व (भारीपन) के कारण चारों तरफ निकल नहीं सकता है, अतः वह चक्र जिसमें छिद्र मुद्रित है जल से आकृष्ट (खींचा गया) हो कर स्वयं भ्रमण करता है इति

इदानीं पुनर्विशेषमाह ।

कीलस्योपरिगामिनि तत्पर्ययसूत्रके धृतमलाबु ।

दिर्दशान्तिश्चान्द्रो मासः । रवेः स्फुटगत्या त्रिंशद्भागभोगः सौरमासः । त्रिंशद्दिनं
सावनमासः । चन्द्रस्य द्वादश राशिभोगो नाक्षत्रमास इति ॥१॥

अब मानाध्याय प्रारम्भ किया जाता है ।

उसमें पहले ‘किस किस मान से कौन कौन पदार्थ ग्रहण किये जाते हैं’ कहते हैं ।

हि. भा.—सौर मान से (अहर्गणानयन में सौरमान से) वर्ष ग्रहण किये जाते हैं ।
उन सौर वर्षों को बारह से गुणा करने के बाद जब मास जोड़ते हैं तो चान्द्रमास ग्रहण
करते हैं । उसको तीस से गुणा करने के बाद तिथि जोड़ने के समय चान्द्रमान ही से तिथि
ग्रहण करते हैं । पुनः साधित अहर्गण में सावन मान से दिन ग्रहण करते हैं । सावनमान
ही से वर्षपति और मासपति का ज्ञान होता है । जैसे ‘अहर्गणात् कल्पगतादवाप्त’ मित्यादि
विज्ञान भाष्य में लिखित श्लोक से वर्षाधिपति ज्ञान सावनमान ही से है तथा ‘अहर्गणात्
स्वामि ३० हतादवाप्त’ मित्यादि विज्ञान भाष्य में लिखित श्लोक से मासाधिपतिज्ञान भी
सावनमान ही से है । मध्यम ग्रहसाधन सावनमान ही से होने से मध्यम ग्रह सावनमान ही
से ग्रहण किये जाते हैं । वह सावनमान सौरमान और चान्द्रमान के बिना नहीं होता है ।
अर्थात् सौर और चान्द्र के बिना अहर्गण साधन नहीं होता है । सिद्धान्तशेखर में “वर्षाणि
सौरात् प्रवदन्ति चान्द्रात्” इत्यादि विज्ञानभाष्य में लिखित श्लोक से श्रीपति ने आचार्योक्त

के अनुरूप ही कहा है। एक राशि को छोड़ कर जितने काल में रवि राश्यन्तर (दूसरी राशि) में जाते हैं वह सौर मास है, उसका तीसवां अंश एक सौर दिन होता है, बारह सौर मासों का एक सौर वर्ष होता है, यह सौरमान है। तीस तिथि का एक चान्द्रमास होता है। रवि और चन्द्र का योग अमावस्यान्त में होता है, उसके बाद जितने काल में पुनः (फिर) उन दोनों का योग होगा वह चान्द्र मास है, एक चान्द्रमास में तीस तिथियां होती हैं तब रवि और चान्द्र का अन्तरांश चक्रांश ३६० के बराबर होता है इस से अनुपात द्वारा एक तिथि में रवि और चन्द्र का अन्तरांश बारह अंश होता है, यह चान्द्रमान है, दो सूर्योदय का अन्तरकाल एक रवि सावन दिन होता है, तीस सावन दिनों का एक सावन मास होता है, यह सावन मान है, साठ नाड़ी (दण्ड) का एक नाक्षत्र अहोरात्र होता है, एक नाक्षत्र के उदय के बाद पुनः जितने काल में उसका उदय होता है वह नाक्षत्राहोरात्र काल है। तीस नाक्षत्राहोरात्र का एक नाक्षत्र मास होता है, यह नाक्षत्र मान है। सूर्य सिद्धान्त में 'नाडीषष्ट्या तु नाक्षत्रमहोरात्रं प्रकीर्तितम्' इत्यादि विज्ञान भाष्य में लिखित श्लोकों से सौरादि मान वर्णित है। सिद्धान्तशेखर में 'दर्शार्धमासमुच्यन्ति चान्द्रं सौरं तथा भास्करराशिभोगम्' इत्यादि से श्रीपति ने भी सूर्य सिद्धान्तोक्त के अनुरूप ही कहा है इति ॥१॥

इदानीं मानान्याह ।

मानानि सौरचान्द्रार्क्षसावनानि ग्रहानयनमेभिः ।

मानैः पृथक् चतुर्भिः संव्यवहारोऽत्र लोकस्य ॥२॥

सु. भा.—सौरं चान्द्रमार्क्षं सावनमिति मानानि सन्ति । एभिर्मनैर्ग्रहानयनमेभिश्चतुर्भिः पृथक् पृथगत्र भुवि लोकस्य प्राणिनो व्यवहारो भवति । 'ज्ञेयं विमिश्रं तु मनुष्यमानम्'—इत्यादि भास्करोक्तमेतदनुरूपमेव ॥२॥

वि. भा.—सौरं चान्द्रं नाक्षत्रं सावनमिति मानानि सन्ति । एभिर्मनैर्ग्रहानयनं भवति, तथैभिश्चतुर्भिः पृथक् पृथक् अत्र पृथिव्यां लोकस्य व्यवहारो भवति । सिद्धान्तशेखरे—

सौर चान्द्रमससावनमानैः सौड्वैर्ग्रहगतेरवबोधः ।

एभिरत्र मनुजव्यवहारो दृश्यते च पृथगेव चतुर्भिः ।

उद्धूनि नक्षत्राणि तत्सम्बन्धीन्यौडवानि तैः सह वर्त्तन्त इति सौडवानि तैरित्यर्थः । न केवलं शास्त्रव्यवहारसिद्धत्वं किन्तु लोक व्यवहारसिद्धत्वमप्यस्त्येभिः । श्रीपत्युक्तमिदमाचार्योक्तानुरूपमेव । सिद्धान्तशिरोमणौ 'ज्ञेयं विमिश्रं तु मनुष्यमानम्' भास्करोक्तमपीदमाचार्योक्तानुरूपमेवेति ॥२॥

अब मानों को कहते हैं ।

हि. भा.—सौर-चान्द्र-नाक्षत्र-सावन ये मान हैं, इन मानों से ग्रहानयन होता है,

तथा इन चारों से पृथक् पृथक् इस पृथिवी में लोगों का व्यवहार होता है, सिद्धान्तशेखर में 'सौर चान्द्रमससावनमानैः सौड्वैग्रहगतेरवबोधः' इत्यादि श्रीपत्युक्त आचार्योंक्त के अनुरूप ही है । सिद्धान्तशिरोमणि में 'ज्ञेयं विमिश्रं तु मनुष्यमानम्' यह भास्कराचार्योंक्त भी आचार्योंक्त के अनुरूप ही है इति ॥२॥

इदानीं विशेषमाह ।

युगवर्षं विषुवदयनत्त्वं हर्निशो वृद्धिहानयः सौरात् ।

तिथिकरणाधिकमासोनरात्रपर्वक्रियाश्चान्द्रात् ॥३॥

यज्ञसवनप्रमाणग्रहगत्युपवाससूतकचिकित्साः ।

तथा दिनमासवर्षपतयश्च ग्रहाणां मध्यमा गतिश्च सावनेनैव दिनेन गृह्यते इति सूर्यसिद्धान्तकारेण कथ्यते ॥३-४॥

अब विशेष कहते हैं ।

हि.भा.—कृतादि(सत्ययुगादि)युगों की वर्ष संख्या सौरमान से ग्रहण करनी चाहिये । तथा वर्षाश्रित कार्यों को भी सौर मान ही से लेना चाहिये । विषुवत् (जब रवि का मेषादि में प्रवेश होता है तब उत्तर विषुवत्, तुलादि में प्रवेश होने से दक्षिण विषुवत्) सौर मान ही से समझना चाहिये । अयन भी (उत्तर और दक्षिण) (सूर्य की मकर संक्रान्ति से सौर छः महीना उत्तरायण होता है, कर्क संक्रान्ति से सौर छः महीना दक्षिणायन होता है) सौर मान ही से ग्रहण करना चाहिये । ऋतु भी दो दो सौर महीनों से होता है अर्थात् मकर संक्रान्ति से दो दो राशियों का एक एक ऋतुनाथ होता है मकर और कुम्भ का शिशिर, मीन और मेष का वसन्त, वृष और मिथुन का ग्रीष्म, कर्क और सिंह की वर्षा, कन्या और तुला का शरत्, वृश्चिक और धनु का हेमन्त, सिद्धान्तशेखर में 'मृगादि राशिद्वयभानुभोगात् षट् चर्तवः' इत्यादि से श्रीपति ने कहा है । दिन और रात्रि की वृद्धि और ह्रास (बढ़ना घटना) सौर ही से समझना चाहिये । तिथि करण (बवादि), अधिकमास (मलमास), अवमदिन, पर्वक्रिया (पूर्णांत्क्रिया—दशान्त क्रिया) ये सब चान्द्रमान से ग्रहण करना चाहिये । यज्ञ, पुंसवनादि, प्रमाण (द्रव्यदानादि में प्रमाण दिनादि), ग्रहों की वक्र अनुवक्र आदि गतियां, व्रत-उपवास, सूतक (जन्म-मरण सम्बन्धी अशौच), चिकित्सा (रोग प्रतीकार के लिये औषधि सेवन), प्रायश्चित्त (कुच्छ-चान्द्रायणादि), ये सब सावनमान से समझना चाहिये । सिद्धान्तशेखर में 'युगायनन्तु प्रभृतीनि सौरान्मानाद्द्युरात्र्योरपि वृद्धिहानी' इत्यादि विज्ञान भाष्य में लिखित श्रीपत्युक्त आचार्योंक्त के अनुरूप ही है । सिद्धान्तशिरोमणि में 'वर्षायनन्तु-युगपूर्वकमत्र सौरात्' इत्यादि भास्करोक्त आचार्योंक्त के अनुरूप ही है । सूर्यसिद्धान्त में 'सौरेण बुनिशोर्मानं षडशीति मुखानि च । अयनं विषुवच्चैव संक्रान्तेः पुण्यकालता' ये सब प्रत्येक दिन सूर्यगतिभोग (सौर) से उत्पन्न होते हैं । रवि केन्द्र जिस समय राश्यादि में जाता है । वह संक्रान्ति का मध्य काल कहलाता है । केन्द्र से पहले और पीछे जब तक रविबिम्ब कलातुल्य अन्तर होता है तबतक बिम्ब के एक प्रदेश के राश्यादि में संचार से संक्रान्ति काल होता है, उस काल के आनयन के लिये अनुपात करते हैं । यदि रवि गतिकला में साठ घटी पाते हैं । तो रवि बिम्बमानकला में क्या इस अनुपात से केन्द्राभिप्रायिकसंक्रान्ति से पहले और पीछे संक्रान्तिघटी आती है । इस संक्रान्ति कालमें स्नान दानादि करने से अतिशय पुण्य होता है । 'तिथिः करणमुद्वाहः क्षौरं सर्वक्रियास्तथा । व्रतोपवासयात्राणां क्रिया चान्द्रेण गृह्यते ।' तिथि करण (बव-बालव आदि) उद्वाह (विवाह), क्षौर (क्षुरकर्म), सर्वक्रिया (व्रत-बन्धादिक), व्रत उपवास यात्रा सम्बन्धी क्रिया, ये सब चान्द्रमान से ग्रहण करनी चाहिये । "उदयादुदयं भानोः सावनं कत्प्रकीर्तितम् । सावनानि स्युरेतेन यज्ञ काल विधिस्तु तैः" इत्यादि विज्ञान भाष्य में लिखित श्लोकों का अर्थ यह है कि सावन दिनों से यज्ञकाल विधि करनी

चाहिये, तथा जन्म-मरण सम्बन्धी अशौच, चिकित्सा-चान्द्रायणादि का निर्णय, मासपति और वर्षपति का ज्ञान, ग्रहों की मध्यमा गति ये सब सावनमान से ग्रहण करनी चाहिये, यह सूर्यसिद्धान्तकार कहता है इति ॥३-४॥

इदानीं नक्षत्रसावनप्रशंसासाह ।

नक्षत्रसावनदिनात् सूर्यादीनां स्वसावनदिनानि ।

यस्मात् तस्मादार्क्षं दुरधिगमं मन्दबुद्धीनाम् ॥५॥

सु. भा.—यस्मात् सूर्यादीनां स्वस्वसावनदिनानि नक्षत्रसावनदिनादेव सिद्धानि भवन्ति (‘भ्रमरास्तु भगणैर्विर्जिता यस्य तस्य कुदिनानि तानि वा’—इति भास्करोत्तथा स्फुटम्) । तस्मान्मन्दबुद्धीनां मध्ये ह्यार्क्षं मानं दुरधिगममतीव कठिनमित्यर्थः । तदेव सूक्ष्मं विवेचनीयमन्यथा ग्रहासावनानि न भवन्तीत्याचार्या-शयः ॥५॥

वि. भा.—यस्मात् कारणात् सूर्यादीनां ग्रहाणां स्वस्वसावनदिनानि नक्षत्रसावनदिनादेव सिध्यन्ति, तस्मात् कारणान्मन्दबुद्धीनां मध्ये हि आर्क्षं (नाक्षत्रं) मानं दुरधिगमम् (अति कठिनं) । तदेव सूक्ष्मं विचारणीयमन्यथा ग्रहासावनानि समीचीनानि न भवन्तीति । ग्रहाणां सावनदिनानि नक्षत्रसावन-दिनादेव सिध्यन्ति, सूर्यसिद्धान्ते ‘भोदया भगणैः स्वैः स्वरूपाः स्वस्वोदया युगे’ इत्युक्तैः । सिद्धान्तशेखरे—

“यस्य यस्य भगणैर्विर्जिता ज्योतिषां भगणसंहतिः स्फुटम् ।

तस्य तस्य दिवसांस्तु सावनान् विद्धि तामरसजन्मनो दिने ।”

इत्यनेन श्रीपतिना ग्रहासावनदिनानयनमुक्तं वा पुनरग्रे ‘भ्रममोक्षणकरमण्ड-लान्तरं सावनानि कुदिनानि तानि वा’ ऽस्य प्रतिपादनं कृतमित्यनेन नक्षत्रसावनेन बहूनि प्रयोजनानि सन्तीति सूच्यते । तेनैव हेतुना ऽऽचार्येणाप्य ‘तस्मादार्क्षं दुरधिगमं मन्दबुद्धीनाम्’ नेन नक्षत्रसावनसम्बन्धे तस्यातीवोपयोगित्वं प्रतिपादितम् । सिद्धान्तशेखरे ‘नाक्षत्रमानादघटिकादिकालः’ इत्यनेन श्रीपतिना नाक्षत्रेण प्रयोजनं कथितमर्थात्—अनेन ग्रहेणास्मिन्नक्षत्रे इत्ययो घटिका भुक्ता इति ज्ञानं नाक्षत्रमाने-नैव सिध्यति । सूर्यं सिद्धान्ते—

“भचक्रभ्रमणं नित्यं नाक्षत्रं दिनमुच्यते ।

नक्षत्रनाम्ना मासास्तु ज्ञेयाः पर्वन्तियोगतः ।

कार्तिक्यादिषु संयोगे कृत्तिकादिद्वयं द्वयम् ।

अन्योपांत्यौ पञ्चमश्च त्रिधा मासत्रयं स्मृत” ॥

मित्युक्तम् । अस्यार्थः—

नित्यं प्रवह्वायुना भचक्रस्यैकं भ्रमणं यद् भवति तदेव नाक्षत्रं दिनमुच्यते

अब नक्षत्र सावन की प्रशंसा को कहते हैं ।

हि. भा.—क्यों कि सूर्यादि ग्रहों का अपना अपना सावन दिन नक्षत्र सावन दिन ही से सिद्ध होता है । इसलिये मन्दबुद्धियों के लिये नाक्षत्रमान अत्यन्त कठिन है । उसी को सूक्ष्मरीति से विचार करना चाहिये । नहीं तो ग्रह सावन समीचीन नहीं होते हैं । ग्रहों का सावनदिन नक्षत्र सावन दिन ही से सिद्ध होता है जैसे सूर्यसिद्धान्त में 'भोदया भगणैः स्वैः स्वैरूनाः स्व स्वोदयायुगे' कहा है । सिद्धान्तशेखर में 'यस्य यस्य भगणैर्विवर्जिता ज्योतिषां भगणसंहतिः स्फुटम्' इत्यादि विज्ञान भाष्य में लिखित श्लोक से श्रीपति ने ग्रह सावन दिनानयन कहकर फिर आगे 'भ्रमभोष्णकरमण्डलान्तरं' इत्यादि कहा है, इससे सूचित होता है कि नक्षत्र सावन से बहुत प्रयोजन सिद्ध होते हैं, इसीलिये आचार्य भी 'तस्मादाक्षं दुरधिगमं मन्दबुद्धीनाम्' इससे नक्षत्र सावन का अतिशय उपयोगित्व कहा है । सिद्धान्त शेखर में 'नाक्षत्रमानाद् घटिकादिकालः' इससे श्रीपति ने नाक्षत्र के प्रयोजन कहे हैं । अर्थात् अमुक ग्रह ने अमुक नक्षत्र में इतनी घटी भोग की हैं इसका ज्ञान नाक्षत्रमान ही से सिद्ध होता है । सूर्य सिद्धान्त में 'भचक्र भ्रमणं नित्यं नाक्षत्रं दिनमुच्यते' इत्यादि विज्ञान भाष्य में लिखित श्लोकों से नाक्षत्र दिन की परिभाषा और नक्षत्रों के सम्बन्ध से कार्तिकादि मासों की संज्ञा कही है । उन श्लोकों का अर्थ यह है—नित्य प्रवह वायु के द्वारा भचक्र का एक

भ्रमण जो होता है उसी को प्राचीन लोग नाक्षत्र दिन कहते हैं और पूर्णिमान्त में नक्षत्र योग से चान्द्रमासों की संज्ञा कहते हैं जैसे कृत्तिका के सम्बन्ध से कार्तिक । मृगशीर्ष के सम्बन्ध से मार्गशीर्ष (अग्रहरण) । पुष्य के सम्बन्ध से पौष । मघा के सम्बन्ध से माघ । फाल्गुनी के सम्बन्ध से फाल्गुन । चित्रा के सम्बन्ध से चैत्र । विशाखा के सम्बन्ध से वैशाख । ज्येष्ठा के सम्बन्ध से ज्यैष्ठ । आषाढ़ा के सम्बन्ध से आषाढ़ । श्रवण के सम्बन्ध से श्रावण । भाद्रपद के सम्बन्ध से भाद्रपद (भादों) । अश्विनी के सम्बन्ध से आश्विन । यदि पूर्णिमान्त में उपर्युक्त नक्षत्र न हो तब मासों की संज्ञा कैसे उचित होगी इस के लिये कहते हैं । कार्ति-कादि मासों की पौर्णमासी में कृतिकादि दो दो नक्षत्र लेना चाहिये । जैसे कृत्तिका-रोहिणी के सम्बन्ध से कार्तिक । मृगशीर्ष और आर्द्रा के सम्बन्ध से मार्गशीर्ष । पुनर्वसु और पुष्य के सम्बन्ध से पौष । आश्लेषा और मघा के सम्बन्ध से माघ । चित्रा और स्वाती के सम्बन्ध से चैत्र । विशाखा और अनुराधा के सम्बन्ध से वैशाख । ज्येष्ठा और मूल के सम्बन्ध से ज्यैष्ठ पूर्वाषाढ़ और उत्तराषाढ़ के सम्बन्ध से आषाढ़ । श्रवण और धनिष्ठा के सम्बन्ध से श्रावण । अवशिष्ट मासों के लिये कहते हैं, आश्विन-भाद्रपद और फाल्गुन के तीनों मास तीन नक्षत्र वश से होते हैं जैसे रेवती-अश्विनी-भरणी के सम्बन्ध से आश्विन । शतभिष-पूर्वभाद्र-उत्तर भाद्र के सम्बन्ध से भाद्रपद । पूर्वफाल्गुनी-उत्तरफाल्गुनी—हस्त नक्षत्रों के सम्बन्ध से फाल्गुन । इस तरह निरयण नक्षत्रमानों से मासों की संज्ञा कही गई है । अथर्व वेद में भी ऐसी ही मासों की संज्ञा है । सायनमान वश से पूर्वकथित नक्षत्रों के सम्बन्धाभाव से मासों की संज्ञाओं में आपत्ति होती है इसलिये निरयणमान ही से व्यवहार उचित है यही प्राचीन वैदिकों की सम्मति है इति ॥५॥

इदानीं नवमानान्याह ।

मानुष्यदिव्यपित्र्यब्राह्मण्यष्टावमूर्तकालस्य ।

उक्तानि ज्ञानार्थं बार्हस्पत्यं नवममन्यत् ॥६॥

सु. भा.—अमूर्तकालस्याव्यक्तात्मककालस्य ज्ञानार्थं मानुष्यं मानचतुष्टयम् । दिव्यं दैवं पित्र्यं ब्राह्ममन्यच्च बार्हस्पत्यमिति नवमानान्युक्तानीति ॥६॥

वि. भा.—‘लोकानामन्तकृत् कालः कालोऽन्यः कलनात्मकः । स द्विधा स्थूलसूक्ष्मत्वान्मूर्तश्चामूर्त उच्यते’ इति सूर्यसिद्धान्तोक्तेरिह ज्योतिषसिद्धान्ते गणनात्मक काल एवामूर्तसंज्ञकः, एतस्यामूर्तसंज्ञकस्याव्यक्तात्मककालस्य ज्ञानार्थं मानुष्यं मान (सौरमानम् । चान्द्रमानम् । सावनमानम् । नाक्षत्रमानम्) चतुष्टयम् । दिव्यं मानं दैवं (प्राजापत्यं), पित्र्यं, ब्राह्मं, अन्यद्बार्हस्पत्यमिति नव मानानि कथितानि सन्तीति । सूर्य सिद्धान्ते—

“ब्राह्मं दिव्यं तथा पित्र्यं प्राजापत्यं गुरोस्तथा ।
सौरं च सावनं चान्द्रमाक्षं मानानि वै नवेति”
नवमानानि तथा सिद्धान्तशेखरे—

‘पैतामहं दिव्यमथासुरं च पित्र्यं तथा मानुषमानमन्यत् ।
सौराक्षं हैमांशवसावनानि जैवं तथैवं नव कीर्त्तितानि’
श्रीपत्युक्तानि नव मानानि । सिद्धान्तशिरोमणौ—

‘एवं पृथग् मानवदैवजैवपैत्राक्षंसौरैन्दवसावनानि ।
ब्राह्मं च काले नवमं प्रमाणं गृहास्तु साध्या मनुजैः स्वमानात्’
भास्करोक्तनवमानानि चाचार्योक्तसदृशान्येवेति विज्ञेयानीति ॥६॥

अब नव मानों को कहते हैं ।

हि. भा.—‘लोकानामन्तकृत् कालः’ इत्यादि सूर्य सिद्धान्तोक्त मूर्त्तं और अमूर्त्तं कालों में ज्योतिष सिद्धान्तीय गणनात्मक काल ही अमूर्त्त संज्ञक है । इस अमूर्त्त संज्ञक अव्यक्तात्मक काल के ज्ञान के लिये मानुष्य मान (सौरमान, चान्द्रमान, सावनमान, नाक्षत्रमान) । दिव्य-मान, दैव (प्राजापत्य) मान, पित्र्य (पितृ सम्बन्धी) मान, ब्राह्म (ब्रह्म सम्बन्धी) मान अन्य बार्हस्पत्य (वृहस्पति सम्बन्धी) मान ये नव मान कथित हैं । सूर्य सिद्धान्त में ‘ब्राह्मं दिव्यं तथा पित्र्यं प्राजापत्यं’ इत्यादि मानाध्यायोक्त नौ मान तथा सिद्धान्तशेखर में ‘पैतामहं दिव्यमथासुरं च पित्र्यं तथा मानुषमानमन्यत्’ इत्यादि श्रीपत्युक्त नौ मान तथा सिद्धान्तशिरो-मणि में ‘एवं पृथग् मानव दैव जैव पैत्राक्षं सौरैन्दव सावनानि’ इत्यादि भास्करोक्त नौ मान ये सब मान आचार्योक्त नौ मानों के सदृश ही हैं इति ॥६॥

इदानीमृतूनाह ।

द्वौ द्वौ राशी मकरादृतवः षट् सूर्यगतिवशाद् भाज्यः ।

शिशिरवसन्तग्रीष्मा वर्षाशिरदः सहेमन्ताः ॥७॥

सु. भा.—मकराद् द्वौ द्वौ राशी षट् ऋतवः सूर्यगतिवशाद्भाज्या विभाज-नीया इति शेषं स्पष्टार्थम् । ‘मृगादिराशिद्वयभानुभोगात् षट् चर्तवः स्युः’ इत्यादि श्रीपत्युक्तमेतदनुरूपमेव ॥७॥

वि. भा.—मकराद् द्वौ द्वौ राशी षट् ऋतवः सूर्यगतिवशाद्विभाजनीयाः । ते च ऋतवो हेमन्तसहिताः शिशिरवसन्तग्रीष्मवर्षाशिरद् इति नामका भवन्ती-ति । सिद्धान्तशेखरे ‘मृगादिराशिद्वय भानुभोगात् षट् चर्तवः स्युरिति’ श्रीपत्युक्त-माचार्योक्तानुरूपमेवेति ॥७॥

अब ऋतुओं को कहते हैं ।

हि. भा.—मकर संक्रान्ति से दो दो राशि छः ऋतु सूर्यगति वश से विभाग करने के योग्य है । वे छः ऋतुएँ गिशिर, वसन्त, ग्रीष्म, वर्षा, शरत्, हेमन्त, इन नामों की हैं । सिद्धान्तशेखर में 'मृगादि राशिद्वय भानु भोगात्' इत्यादि श्रीपत्युक्त आचार्योक्त के अनुरूप ही है इति ॥७॥

इदानीं भूमादैर्घ्यं भूभामानं चाह ।

भूव्यासगुणो भक्तः क्वर्कव्यासान्तरेण रविकर्णः ।

भूमध्याद्भूछाया दीर्घत्वं चन्द्रकर्णोन्म ॥८॥

शेषं भूव्यासगुणं दीर्घत्वहृतं शशाङ्कक्षायाम् ।

तमसो व्यासः शशिकर्णहृतस्त्रिज्यागुणो लिप्ताः ॥९॥

सु. भा.—स्पष्टार्थम् । उपपत्तिश्च भूभासाधनक्षेत्रानुपातेन स्फुटा ॥८-९॥

वि. भा.—रविकर्णो भूव्यासेन गुणो भूव्यासरविव्यासयोरन्तरेण भक्तस्तदा भूकेन्द्रात् भूछायाया दीर्घत्वं भवति । तद्दीर्घत्वं चन्द्रकर्णोन् हीनं शेषं यत्तद् भूव्यासेन गुणितं दीर्घत्वेन भक्तं तदा चन्द्रक्षायाम् तमसो (भूभायाः) व्यासो भवति । स च त्रिज्याया गुणश्चन्द्रकर्णभक्तस्तदा भूभामानकला भवन्तीति ।

अत्रोपपत्तिः ।

रविबिम्बभूबिम्बयोः क्रमस्पर्शरेखावर्धितरविकर्णोन् साकमेकस्मिन्नेव बिन्दौ चन्द्रकक्षात् उपरि मिलन्ति । स च बिन्दुः = यो, भूकेन्द्रात् स्पर्शरेखायाः समानान्तरा रेखा कार्या तदा रविकर्ण एको भुजः भूव्यासार्धोन्रविव्यासार्धं द्वितीयो भुजः । भूकेन्द्रात्समानान्तरेखारविव्यासार्धयोर्योगबिन्दुं यावत्तृतीयो भुजः । इति कर्णभुजकोटिभिरेकं त्रिभुजम् । तथा भूकेन्द्रात् यो बिन्दुं यावद्भूछाया-दैर्घ्यमेको भुजः । भूव्यासार्धं द्वितीयो भुजः । भूबिम्बस्पर्शबिन्दुतो यो बिन्दुं यावत्तृतीयो भुजः । इति कर्णभुज कोटिभिर्द्वितीयं त्रिभुजम् । अनयोस्त्रिभुजयोः साजा-

रविकर्ण × भूव्या

$$\text{त्यादनुपातेन } \frac{\text{रव्या}}{2} \frac{\text{भूव्या}}{2} = \frac{\text{रविकर्ण} \times \text{भूव्या}}{\text{रव्या} - \text{भूव्या}} = \text{भूयो} = \text{भूछाया दैर्घ्यम्}$$

वर्धितरविकर्णचन्द्रकक्षयोर्योगबिन्दुः = च, भू = भूकेन्द्रम् । भूच = चन्द्रकर्णः । भूयो — भूच = भूछाया दैर्घ्य — चन्द्रकर्ण = चयो । च बिन्दुतः स्पर्शरेखोपरिलम्बः =

चल = भूभा—व्यासार्धम् । भूबिम्बस्पर्श बिन्दुः = स्प, भूस्प = भूव्यासार्धम् । तदा

भूस्पयो, चलयो त्रिभुजयोः साजात्यादनुपातः । $\frac{\text{भूस्प} \times \text{चयो}}{\text{भूयो}} = \text{चल}$

= $\frac{\text{भूव्या} \frac{1}{2} \times (\text{भूछायादैर्घ्यं} - \text{चन्द्रकर्ण})}{\text{भूछायादैर्घ्यं}} = \text{भूभाव्यासार्धम्} ।$ द्विगुणीकरणेन

$\frac{\text{भूव्या} (\text{भूछायादैर्घ्यं} - \text{चन्द्रकर्ण})}{\text{भूछायादैर्घ्यं}} = \text{भूभाव्यासः} ।$ परमयं भूभाव्यासश्चन्द्रकक्षायां

नहि भवति । किन्तु चन्द्रकक्षात उपरि भवतीति भूभासाधनक्षेत्रदर्शनेन स्फुटम् ।

ततः 'सूर्येन्दुभूभातनुयोजनानी' त्यादिना $\frac{\text{भूभाव्यास} \times \text{त्रि}}{\text{चन्द्रक}} = \text{आचार्योक्त भूभा-}$

मानकलाः, एतेनाचार्योक्तमुपपन्नमिति । भूभामानकलासाधने या स्थूलता सा पूर्वमेव तत्साधनोपपत्तौ प्रदर्शितास्ति । सा तत्रैव द्रष्टव्येति ॥

अब भूभादैर्घ्य और भूभामान को कहते हैं ।

हि. भा.—रविकर्ण को भूव्यास से गुणाकर भूव्यासोन रविव्यास से भाग देने से भूकेन्द्र से भूछाया का दीर्घत्व (लम्बाई) होता है । उस दीर्घत्व में से चन्द्रकर्ण को घटाकर जो शेष रहता है उसको भूव्यास से गुणाकर दीर्घत्व से भाग देने से चन्द्रकक्षा में भूभाव्यास होता है । उसको त्रिज्या से गुणाकर चन्द्रकर्ण से भाग देने से भूभामान कला होती है इति ॥८-६॥

उपपत्ति ।

रविबिम्ब और भूबिम्ब की क्रमस्पर्श रेखाएँ वर्धित रविकर्ण के साथ चन्द्रकक्षा से ऊपर एक ही बिन्दु में मिलती है, वह बिन्दु = यो, है । भूकेन्द्र से स्पर्श रेखा की समानान्तर रेखा रवि व्यासार्ध में जहाँ लगती है वहाँ से रविकेन्द्र तक रेखा = रविव्यास $\frac{1}{2}$ — भूव्यास $\frac{1}{2}$ अब दो त्रिभुज बनते हैं जैसे रविकर्ण कर्ण एकभुजः । भूव्यासार्धोन रविव्यासार्ध भुज द्वितीयभुज, भूकेन्द्र से समानान्तर रेखा और रविव्यासार्ध के योग बिन्दु पर्यन्त कोटि तृतीय भुज, इन कर्ण—भुज कोटि से उत्पन्न एक त्रिभुज, तथा भूकेन्द्र से बिन्दु पर्यन्त भूछायादैर्घ्य कर्ण एकभुज, भूव्यासार्ध भुज द्वितीयभुज भूबिम्ब स्पर्श बिन्दु से यो बिन्दु पर्यन्त कोटि तृतीयभुज, इन कर्णभुजकोटि से उत्पन्न द्वितीय त्रिभुज; इन दोनों त्रिभुजों के सजातीयत्व से अनुपात करते हैं यदि भूव्यासार्धोन रवि व्यासार्धभुज में रविकर्ण—कर्ण पाते हैं तो भूव्यासार्ध भुज में क्या इस अनुपात से भूछाया दीर्घत्व आता है इसका स्वरूप = $\frac{\text{रविकर्ण} \cdot \text{भूव्यास} \frac{1}{2}}{\text{रव्या} \frac{1}{2} - \text{भूव्यास} \frac{1}{2}}$

= $\frac{\text{रविकर्णः भूव्या}}{\text{रव्या—भूव्या}} = \text{भूछाया दीर्घत्व} = \text{भूयो}$ । वर्धित रविकर्ण और चन्द्रकक्षा का योग-

बिन्दु = च । भू = भूकेन्द्र । भूच = चन्द्रकर्ण भूयो — भूच = चयो = भूछायादीर्घत्व — चन्द्रकर्ण;
च बिन्दु से स्पर्श रेखा के ऊपर लम्ब = चल = भूभाब्यासार्ध भूबिम्ब स्पर्श बिन्दु = स्प, भूस्प
= भूव्यासार्ध, तब भूस्पयो, चलयो दोनों त्रिभुजों के सजातीयत्व से अनुपात करते हैं $\frac{\text{भूस्प. चयो}}{\text{भूयो}}$

= चल = $\frac{\text{भूव्या}^{\frac{1}{2}} (\text{भूछायादीर्घत्व} - \text{चन्द्रकर्ण})}{\text{भूछायादीर्घत्व}} = \text{भूभाब्यासार्ध, द्विगुणित करने से भूभाब्यास}$

= $\frac{\text{भूव्यास} (\text{भूछायादीर्घत्व} - \text{चन्द्रकर्ण})}{\text{भूछायादीर्घत्व}}$, लेकिन यह भूभाब्यासा चन्द्र कक्षान्तर्गत नहीं

आता है किन्तु चन्द्रकक्षा से ऊपर आता है यह भूभासाधन क्षेत्र देखने से स्फुट है । तब अनुपात करते हैं यदि चन्द्रकर्ण में त्रिज्या पाते हैं तो भूभाबिम्ब व्यासार्ध में क्या इस अनुपात से भूभाबिम्बार्ध कलाज्या आती है इसको द्विगुणित करने से आचार्योक्त भूभामान कला होती है उसका स्वरूप = $\frac{\text{त्रि. भूभाबिम्बव्या}}{\text{चन्द्रकर्ण}}$, इससे आचार्योक्त उपपन्न हुआ । लेकिन भूभामानकला साधन में जो स्थूलता है उसको साधनोपपत्ति में देखना चाहिये । इति ॥८-९॥

पुनः प्रकारान्तरेण तत्साधनमाह ।

रविकर्णहृता त्रिज्या क्वर्कव्यासान्तराहृता शोध्या ।

त्रिज्या भूव्यासवधात् क्षणिकर्णहृतात् तमो व्यासः ॥१०॥

सु. भा.—स्पष्टार्थम् ॥

अत्रोपपत्तिः । योजनात्मकभूभाब्यासः = भूव्या = $\frac{\text{चक (रव्या—भूव्या)}}{\text{रक}}$

इयं त्रिज्यागुणा चन्द्रकर्णहृता जाता भूभाबिम्बकलाः = $\frac{\text{त्रि.भूव्या}}{\text{चक}}$

— $\frac{\text{त्रि (रव्या—भूव्या)}}{\text{रक}}$ । अत उपपन्नं यथोक्तम् ॥१०॥

वि. भा.—त्रिज्या भूव्यासोन रविव्यासेन गुणिता रविकर्णेन भक्ता लब्धिः त्रिज्या भूव्यासवधात् चन्द्रकर्णभक्तात् शोध्या तदा भूभाब्यासो भवतीति ॥१०॥

अत्रोपपत्तिः ।

 \text{इति ॥११॥}
 \end{aligned}$$

इदानीमध्यायोपसंहारमाह ।

योऽधिकमासावमरात्रसम्भवज्ञः स वेत्ति मानानि ।

आर्याद्वावशभिरयं मानाध्यायस्त्रयोविंशः ॥१२॥

सु. भा.—यो गणकोऽधिकमासावमरात्रसम्भवज्ञः स एव सौरादिमानानि वेत्ति यतः सौरचान्द्रमानाभ्यां सम्यग्ज्ञाताभ्यामधिमासज्ञानं चान्द्रसावनमानाभ्यां च क्षयाहज्ञानं भवति । शेषं स्पष्टम् ॥१२॥

मधुसूदनसूनुनोदितो यस्तिलकः श्रीपृथुनेह जिष्णुजोक्तः ।
हृदि तं विनिधाय नूतनोऽयं रचितो मानविधौ सुधाकरेण ॥

इति श्रीकृपालुदत्तसूनुसुधाकरद्विवेदिविरचिते ब्राह्मस्फुटसिद्धान्तनूतनतिलके मानाध्यायस्त्रयोविंशः ॥१२॥

वि. भा.—योऽधिमाससम्भवमवमसम्भवं च जानाति स मानानि (सौर-चान्द्रमानादि) जानाति, यतो ज्ञाताभ्यां सौरचान्द्रमानाभ्यामधिमासज्ञानं भवति तथा चान्द्रसावनमानाभ्यां चावमदिनज्ञानं भवति । अयमार्याद्वादशभिस्त्रयो-विंशो मानाध्यायोऽस्तीति ॥१२॥

इति ब्राह्मस्फुटसिद्धान्ते मानाध्यायस्त्रयोविंशः

अब अध्याय के उपसंहार को कहते हैं ।

हि. भा.—जो गणक अधिमास सम्भव को जानते हैं और अवम सम्भव को जानते हैं वे मान (सौर चान्द्रमानादि) को जानते हैं क्यों कि अच्छी तरह विदित सौरमान और चान्द्रमान से अधिमास ज्ञान होता है, तथा चान्द्रमान और सावनमान से क्षयाह ज्ञान होता है इति ॥१२॥

इति ब्राह्मस्फुट सिद्धान्त में तेईसवां मानाध्याय समाप्त हुआ ।

ब्राह्मस्फुटसिद्धान्तः

संज्ञाध्यायः

ब्राह्मस्फुटसिद्धान्तः

अथ संज्ञाध्यायः प्रारम्भ्यते ।

तत्रादौ तदारम्भ प्रयोजनमाह ।

यस्मात्संप्रतिपत्तिर्न संज्ञया संज्ञितो विना तस्मात् ।

लोके प्रसिद्धसंज्ञा रूपादीनां शशाङ्काद्याः ॥ १ ॥

सु. भा.—यस्मात् संज्ञया विना यः संज्ञितः पदार्थस्तस्य संप्रतिपत्तिः प्राप्तिः परिचयो वा न भवति, तस्मात् लोके रूपादीनां रूपवतां पदार्थानां शशाङ्काद्याः प्रसिद्धसंज्ञाः सन्ति ये ये रूपवन्तस्ते ते संज्ञावन्तः । संज्ञा विना परिचयो न भवतीत्यर्थः ॥१॥

वि. भा.—यस्मात् कारणात् यः संज्ञितः (संज्ञायुक्तो नामयुक्तोवा) पदार्थस्तस्य संप्रतिपत्तिः (परिचयः सम्यक् ज्ञानं वा) संज्ञया विना न भवति तस्मात् कारणात् लोके रूपादीनां (स्वरूपवतां पदार्थानां) शशाङ्काद्याः (चन्द्रादयः) प्रसिद्ध संज्ञाः सन्ति । अर्थाच्चे ये रूपवन्तः पदार्थास्तेते संज्ञावन्तः, संज्ञा (नाम) विना तेषां परिचयो न भवतीति ॥ १ ॥

अब संज्ञाध्याय प्रारम्भ किया जाता है । उसमें पहले आरम्भ करने का प्रयोजन कहते हैं ।

हि. भा.—क्योंकि जो संज्ञायुक्त (नाम वाले) पदार्थ हैं उनका परिचय वा अच्छी तरह से ज्ञान विना संज्ञा (नाम) के नहीं होता है; इसलिये लोक में रूपवान् पदार्थों की शशाङ्क (चन्द्र) आदि प्रसिद्ध संज्ञा है । अर्थात् रूपवान् जितने पदार्थ हैं वे सब संज्ञावान् हैं । संज्ञा (नाम) के बिना उनका परिचय नहीं होता है इति ॥ १ ॥

इदानीं सिद्धान्त एक एवेत्याह ।

युगपद्युगादिरुदयाद्याभ्यायां भास्करस्य वारुण्याम् ।

रात्र्यर्धात् सौम्यायामस्तमयाद्दिनदलादैन्द्रघाम् ॥ २ ॥

अयमेव कृतः सूर्येन्दु पुलिश रोमक वशिष्ठ यवनाद्यैः ।

यस्मात्तस्मादेकः सिद्धान्तो विरचितो नान्यः ॥ ३ ॥

सु. भा.—कस्यचिन्मते भास्करस्य याम्यायां लङ्कायामुदयाद्युगपद्युगादिः । अन्यमते तदैव वारुण्यां रोमकपत्तने रात्र्यर्धायुगादिः । अन्यमते तदैव सौम्यायां सिद्धपुरेऽस्तमयाद्युगादिः । अन्यमते च तदैवैन्द्रघां यमकोट्यां दिनदलाद्युगादिः । एवं देशविशेषे णोदयास्तादिकालः सूर्यस्य जातो वस्तुत आकाशे सूर्यस्य स्थितिश्च मेषादावेवातो ग्रहगणनायामेव सर्वत्र एक एवायं सिद्धान्तः सूर्येन्दुपुलिशरोमक-वशिष्ठय वनाद्यैः कृतः । यस्माद्देशविशेषस्य भिन्न-भिन्नकालग्रहणेन ग्रहगणनायां भेदो न भवति तस्मात् सूर्याद्यैर्वस्तुत एक एव सिद्धान्तो विरचितो नान्य इति सिद्धान्तविदां सर्वं स्फुटम् ॥२-३॥

वि. भा.—भास्करस्य (सूर्यस्य) याम्यायां (लङ्कायां) उदयादेकदैव युगादेः प्रवृत्तिर्बभूवेति कस्यचिन्मतम् । तदैव (लङ्काकोदयकाल एव) वारुण्यां (रोमक-पत्तने) रात्र्यर्धात् (अर्धरात्रिकालात्) युगादिप्रवृत्तिः । तदैव सौम्यायां (सिद्धपुरे) अस्तमयकालाद्युगादि प्रवृत्तिरिति कस्यचिन्मतम् । तदैवैन्द्रघाम् (यमकोटि पुर्यां) दिनार्धकालाद्युगादेः प्रवृत्तिरित्यन्यस्य मतम् । सिद्धान्त शिरोमणौ—

“लङ्का कुमध्ये यमकोटिरस्याः प्राक् पश्चिमे रोमकपत्तनं च ।

अधस्ततः सिद्धपुरं सुमेरुः सौम्ये च याम्ये वडवानलश्च ॥

कुवृत्त पादान्तरितानि तानि स्थानानि षड्गोलविदो वदन्ती”

तिभास्करोक्तपुरनिवेशस्थित्या गोलस्थितिदर्शनेन चाऽग्रे ।

“लङ्कापुरेऽर्कस्य यदोदयः स्यात्तदा दिनार्धं यमकोटिपुर्याम् ।

अधस्तदा सिद्धपुरेऽस्तकालः स्याद्रोमके रात्रिदलं तदैव ॥”

इति भास्करोक्तमस्ति, यदा लङ्कायां सूर्योदयस्तदैव यमकोटिनगरे दिनार्धमधःसिद्धपुरेऽस्तकालः । रोमकपत्तने रात्र्यर्धं भवति, तेन लङ्कासूर्योदय-काले-यमकोटिदिनार्धकाले, अधः सिद्धपुरेऽस्तकाले, रोमकपत्तनस्य रात्र्यर्धकाले एकदैव युगादि प्रवृत्तिर्बभूवेति कथने न कोऽपि दोषोऽस्ति । तथापि सिद्धान्तशेखरे-

“मधुसित प्रतिपददिवसादितो रविदिने दिनमासयुगादयः ।

दश शिरः पुरि सूर्यसमुद्गमात् समममी भवसृष्टिमुखेऽभवन्”

इत्यनेन श्री पतिना, सिद्धान्तशिरोमणौ

“लङ्कानगर्यामुदयाच्च भानोस्तस्यैव वारे प्रथमं बभूव ।

मधोः सितार्देदिनमासवर्षं युगादिकानां युगपत्प्रवृत्तिः ॥”

इत्यनेन भास्कराचार्येण, अन्येनाप्यनेकाऽऽचार्येण लङ्कायाः प्रधान-
त्वाल्लङ्कासूर्योदयकालत एव युगाद्यारम्भः कथ्यते, यमकोटि-सिद्धपुर-
रोमकपत्तननगराण्यप्रसिद्धानि सन्ति, बहुभिस्तेषां नामान्यपि न श्रुतानि,
तस्मादेव कारणात्—बहुभिरेवाचार्यैर्लङ्कासूर्योदयकालत एव युगादिप्रवृत्तिः
स्वीक्रियते । वस्तुतस्तु—आकाशे मेषादावेव सूर्यस्य स्थितिरतो ग्रहगणिते सर्वत्रैक
एवायं सिद्धान्तः सूर्य-चन्द्र-पुलिश-रोमक-वशिष्ट यवनाद्यैः कृतः । यस्मात्कारणात्
देशविशेषाणां भिन्नभिन्नकालग्रहगणिते कोऽपि भेदो न भवत्यतः पूर्वोक्तैराचा-
र्यैरेक एव सिद्धान्तो विरचितोऽन्यो नेति ॥ २-३ ॥

अब सिद्धान्त एक ही है कहते हैं ।

हि. भा.—लङ्का सूर्योदय काल से एक ही समय में युगादियों की प्रवृत्ति हुई यह
किसी का मत है । उसी समय में (लङ्कोदयकाल ही में) रोमक पत्तन में अर्ध रात्रिकाल से
युगाद्यारम्भ हुआ यह अन्य आचार्य का मत है । उसी समय में सिद्धपुर में सूर्यास्त काल से
युगादियों की प्रवृत्ति हुई यह किसी दूसरे आचार्य का मत है । उसी समय में यमकोटि पुरी
में दिनार्ध काल से युगादियों की प्रवृत्ति हुई यह किसी अन्य आचार्य का मत है । सिद्धान्त-
शिरोमणि में ‘लङ्का कुमध्ये यमकोटिरस्याः प्राक्पश्चिमे रोमक पत्तनं च’ इत्यादि भास्करा-
चार्य कथित पुरों के निवेश की स्थिति से और गोल स्थिति देखने से आगे ‘लङ्कापुरेऽर्कस्य
यदोदयः स्यात्ता दिनार्धं यमकोटि पुर्याम्’ इत्यादि भास्करोक्त है अर्थात् जब लङ्का में सूर्योदय
हुआ उसी समय यमकोटि पुरी में दिनार्ध होता है, सिद्धपुर में अस्तकाल होता है, और
रोमकपत्तन में रात्र्यर्ध होता है, इसलिये लङ्कासूर्योदय काल में-यम कोटि दिनार्ध काल में
सिद्धपुर के अस्तकाल में रोमक पत्तन में अर्धरात्रि काल में एक ही समय में युगादि प्रवृत्ति
हुई इस कथन में कोई भी दोष नहीं है ।

तथापि सिद्धान्त शेखर में ‘मधुसित प्रतिपद् दिवसादितो रविदिने दिनमासयुगादयः’
इत्यादि विज्ञान भाष्य में लिखित श्रीपत्युक्ति से सिद्धान्त शिरोमणि में ‘लङ्कानगर्यामुदयाच्च
भानोस्तस्यैव वारे प्रथमं बभूव’ इत्यादि भास्करोक्ति से और अनेक आचार्यों के कथन के अनुसार
प्रधाननगरी लङ्का के सूर्योदय काल ही से युगाद्यारम्भ माना जाता है । यमकोटि-सिद्धपुर-
रोमकपत्तन नगर अप्रसिद्ध है, बहुत लोग उनके नाम भी नहीं जानते हैं लंका को आबाल वृद्ध
सब जाते हैं, इसीलिये बहुत से आचार्यों ने लङ्का में सूर्योदय काल ही से युगादि प्रवृत्ति को
स्वीकार किया है ।

वस्तुतः आकाश में मेषादि ही में सूर्य की स्थिति थी इसलिये ग्रहगणना में सर्वत्र एक ही यह सिद्धान्त को सूर्य-चन्द्र-पुलिश-रोमक-वशिष्ठ-यवनादि आचार्यों ने स्वीकार किया है। क्योंकि देश विशेषों के भिन्न-भिन्न काल ग्रहण करने से ग्रहगणना में कोई भी भेद नहीं होता है अतः पूर्वोक्त आचार्यों ने एक ही सिद्धान्त बनाया, अन्य नहीं इति ॥ २-३ ॥

इदानीं कस्मिन्नंशे सूर्यसिद्धान्तादयो भिन्ना इति कथ्यते ।

यदि भिन्नाः सिद्धान्ताः भास्कर संक्रान्तयो विभेदसमाः ।

स स्पष्टः पूर्वस्यां विषुवत्यर्कोदयो यस्य ॥ ४ ॥

सु० भा०—यदि सौरादयः सिद्धान्ताः भिन्नास्तर्हि विभेदसमा भास्कर-सङ्क्रान्तयः सन्ति । रविसंक्रान्तिसमय एक एव तेषां सौरादीनां गणनया नायाति तेन हेतुना सिद्धान्ता भिन्नाः । तेषां कतमः स्फुट इत्याह स स्पष्ट इति । यस्य गणनया विषुवति मेषतुलादौ पूर्वस्यां दिश्येव प्राक् स्वस्तिकविन्दावर्कोदयो वेधेनोपलभ्यते स एव स्पष्टः स्फुटो ज्ञेय इति । यद्युदयकाल एव रविमेषतुलादिगस्तदैवैवं भवत्यन्यथा तारतम्येन रव्युदयेन सिद्धान्तगणना परीक्षणीयेति ॥४॥

वि. भा.—यदि सूर्यसिद्धान्तादयः सिद्धान्ता भिन्नास्तर्हि रविसंक्रान्तिसमय एक एव तेषां (सौरादीनां) गणनया नायात्यतः सिद्धान्ता भिन्ना सन्ति । तेषु सिद्धातेषु कतमः स्फुट इति कथ्यते । यस्य गणनया विषुवति (मेषादौ तुलादौ च) पूर्वस्यां दिश्येव (पूर्वस्वस्तिकविन्दावेव) रव्युदयो वेधेनोपलभ्यते स एव स्फुटः सिद्धान्तो बोद्धव्यः । यदि रविरुदय काल एव मेषतुलादिगतस्तदैवैवं भवितुमर्हति । अन्यथा रव्युदयेन सिद्धान्तगणनायास्तारतम्येन परीक्षणं कार्यमिति ॥ ४ ॥

अब किस अंश में सूर्य सिद्धान्तादि भिन्न हैं सो कहते हैं ।

हि. भा.—यदि सौरादि सिद्धान्त भिन्न है तो रवि संक्रान्ति काल उन सबों की गणना एक ही से नहीं आता है अतः सिद्धान्त भिन्न हैं । उन सिद्धान्तों में कौन सिद्धान्त स्फुट है सो कहते हैं । जिसकी गणना से मेषादि और तुलादि में पूर्वस्वस्तिक बिन्दु ही में वेध से रवि का उदय उपलब्ध हो उसी को स्फुट सिद्धान्त समझना चाहिये । यदि उदयकाल ही में रवि मेषादि-तुलादि गत हो तब ही ऐसा हो सकता है अन्यथा तारतम्य से रवि के उदय से सिद्धान्तगणना की परीक्षा करनी चाहिये इति ॥ ४ ॥

इदानीं स्व सिद्धान्तस्योत्तरार्धे क्रमिकाध्यायसंख्यामाह ।

तन्त्र परीक्षा गणितं मध्यमगत्युत्तरादयः पञ्च ।

कुट्टाकारो छेदद्वन्द्वद्विचत्युत्तरं गोलः ॥ ५ ॥

यन्त्राणि मानसंज्ञा ख्याताध्यायाश्चतुर्दश ब्राह्मे ।

अध्यायचतुर्विंशतिराद्यं दंशभिर्द्युताध्यायैः ॥ ६ ॥

सु. भा.—उत्तरार्धे तन्त्रपरीक्षाध्यायः । गणितं गणिताध्यायः । पञ्च मध्यमगत्युत्तरादयोऽधिकाराः सन्ति । मध्यगत्युत्तराध्यायः । स्पष्टगत्युत्तराध्यायः । त्रिप्रश्नोत्तराध्यायः । छेद्यकाध्यायः । शृङ्गोन्नत्युत्तराध्यायः । कुहाकाराध्यायः । छन्दश्चित्युत्तराध्यायः । गोलो गोलाध्यायः । यन्त्राणि, यन्त्राध्यायः । मानसंज्ञा-ध्यायः । ख्याताध्यायः संज्ञाध्यायोऽयमेव । एवमुत्तरार्धे ब्राह्मे सिद्धान्ते चतुर्दशाध्यायाः सन्ति । एत आद्यैर्दंशभिरध्यायैर्द्युता अध्यायचतुर्विंशतिरत्र ग्रन्थे ज्ञेयेति ॥ ५-६ ॥

वि. भा.—ब्राह्मे सिद्धान्ते (ब्राह्मस्फुट सिद्धान्ते) उत्तरार्धे (१) तन्त्र-परीक्षाध्यायः, (२) गणिताध्यायः, मध्यमगत्युत्तरादयः पञ्चाध्यायाः (३) मध्य-गत्युत्तराध्यायः, (४) स्फुटगत्युत्तराध्यायः, (५) त्रिप्रश्नोत्तराध्यायः, (६) ग्रहणो-त्तराध्यायः, (७) शृङ्गोन्नत्युत्तराध्यायः, (८) कुहाकाराध्यायः, (९) छेद्यकाध्यायः, (१०) छन्दश्चित्युत्तराध्यायः, (११) गोलाध्यायः (१२) यन्त्राध्यायः, (१३) मान-संज्ञाध्यायः, (१४) ख्याताध्यायः (संज्ञाध्यायोऽयमेव) इति चतुर्दशाध्यायाः सन्ति । एते चतुर्दशाध्याया आद्यैर्दंशभिरध्यायैर्द्युताश्चतुर्विंशति संख्याका अध्याया अत्र ग्रन्थे ज्ञेया इति ॥ ५-६ ॥

अब अपने सिद्धान्त के उत्तरार्ध में क्रमिक अध्याय संख्या कहते हैं ।

हि. भा.—इस ब्राह्मस्फुट सिद्धान्त के उत्तरार्ध में (१) तन्त्रपरीक्षाध्याय, (२) गणिताध्याय, (३) मध्यगत्युत्तराध्याय, (४) स्फुटगत्युत्तराध्याय, (५) त्रिप्रश्नोत्तराध्याय, (६) ग्रहणोत्तराध्याय, (७) शृङ्गोन्नत्युत्तराध्याय, (८) कुहाकाराध्याय, (९) छेद्यकाध्याय, (१०) छन्दश्चित्युत्तराध्याय, (११) गोलाध्याय, (१२) यन्त्राध्याय, (१३) मानसंज्ञाध्याय, (१४) संज्ञाध्याय, ये चौदह अध्याय हैं । इनमें पहले (पूर्वार्ध) के दश अध्याय जोड़ने से इस ग्रन्थ में चौबीस अध्याय समझने चाहिये इति ॥ ५-६ ॥

इदानीं ग्रन्थग्रथनकालमाह ।

श्री चापवंशतिलके श्रीव्याघ्रमुखे नृपे शकनूपाणास् ।

पञ्चाशत्संयुक्तैर्वर्षशतैः पञ्चभिरतीतैः ॥ ७ ॥

ब्राह्मस्फुटसिद्धान्तः सज्जनगणितगोलचित्रीत्यै ।

त्रिंशद्द्वर्षेण कृतो जिष्णुसुतब्रह्मगुप्तेन ॥ ८ ॥

सु. भा.—श्रीव्याघ्रमुखे नृपे पृथ्वीं शासति । किंविशिष्टे नृपे श्रीचापवंश-

तिलके । शकनृपाणां पञ्चाशत्संयुक्तैः पञ्चभिर्वर्षशतैरतीतैरर्थात् पञ्चाशदधिक-
पञ्चशतशके शेषं स्पष्टम् ॥७-८॥

वि. भा.—श्रीचापवंशस्य तिलके (टीकारूपे) श्रीव्याघ्रमुखे (एतन्नामके) महीपाले पृथ्वीं शासति, शकनृपाणां पञ्चाशत्संयुक्तैः पञ्चभिर्वर्षशतैरर्थात् पञ्चाशदधिकपञ्चशतवर्षैः, अतीतैः (गतैः) अर्थात् पञ्चाशदधिकपञ्चशत-
शकाब्दे सज्जनगणितगोलविदां विनोदाय त्रिशद्वर्षवयस्केन जिष्णोस्तनयेन ब्रह्मगुप्तेन ब्राह्मः स्फुटसिद्धान्तः कृत इति ॥ ७-८ ॥

अब ग्रन्थ रचना काल कहते हैं ।

हि. भा.—श्रीचापवंश में तिलक (टीका) रूप श्री व्याघ्रमुख नामक राजा के शासन में पांच सौ पचास शक (शके ५५०) में सज्जन (दौष्ट्यादि दोष रहित) गणित और गोल के पण्डितों के हर्ष के लिये तीस वर्ष अवस्था के जिष्णुपुत्र ब्रह्मगुप्त ने ब्राह्मस्फुट सिद्धान्त नामक इस ग्रन्थ को रचा अर्थात् ब्राह्मस्फुट सिद्धान्त को बनाया इति ॥ ७-८ ॥

इदानीमस्मिन् सिद्धान्ते गणितलाघवेन करणग्रन्थवत् फलसाधनं
कथं न कृतमिति कथयति

गणितेन फले सिद्धिर्ब्राह्मे ध्यानग्रहे यतोऽध्याये ।

ध्यानग्रहो द्विसप्ततिरार्याणां न लिखितोऽत्र मया ॥ ९ ॥

सु. भा.—यतो ब्राह्मे ब्रह्मकृते ध्यानग्रहे ध्यानग्रहनामन्यध्याये गणितेन फले मान्दादिफलसाधने लाघवेन सिद्धिः कृताऽतोऽत्रार्याणां द्विसप्ततिर्ध्यानग्रहोऽध्यायः पुनरुक्तिदोषभयान्मया न लिखित इति ॥९॥

वि. भा.—यतो ब्राह्मे (ब्रह्मगुप्तकृते) ध्यानग्रहेऽध्याये (ध्यानग्रहोपदेशाध्याये) मान्दादि फलसाधने गणितलाघवेन फलसिद्धिः कृता मयाऽतोऽत्रार्याणां द्विसप्ततिर्ध्यानग्रहोऽध्यायः पुनरुक्तिदोषभयान्न लिखित इति ॥ ९ ॥

अब इस सिद्धान्त में गणितलाघव से करण ग्रन्थ की तरह फलसाधन
क्यों नहीं किया गया कहते हैं ।

हि. भा.—क्योंकि ब्रह्मगुप्तकृत ध्यान ग्रह नामक अध्याय में गणित से मान्दादि फल साधन में लाघव द्वारा सिद्धि की गयी है इसलिये यहां बहत्तर आर्याओं का ध्यान ग्रहाध्याय पुनरुक्तिदोष के डर से नहीं लिखा गया इति ॥ ९ ॥

इदानीं ग्रन्थ संख्यां कथयति ।

भटब्रह्माचार्येण जिष्णोस्तनयेन गणितगोलविदा ।

आर्याष्टसहस्रेण स्फुटसिद्धान्तः कृतो ब्राह्मः ॥ १० ॥

सु. भा.—आर्याणामष्टाधिकैक सहस्रेण शेषं स्पष्टार्थम् ॥ १० ॥

वि. भा.—गणितगोलज्ञेन जिष्णुपुत्रेण भटब्रह्माचार्येण मया, आर्याणामष्टा-
धिकैकसहस्रेण ब्राह्मस्फुटसिद्धान्तः कृत इति ॥

अब ग्रन्थ संख्या (ग्रन्थ में श्लोक संख्या) कहते हैं ।

हि. भा.—गणित और गोल के पण्डित जिष्णु के पुत्र भटब्रह्माचार्य ने एक हजार
आठ आर्याओं के इस ब्राह्मस्फुटसिद्धान्त ग्रन्थ को बनाया इति ॥ १० ॥

इदानीं सूर्यग्रहणे चन्द्रशङ्कुः कथं न कृत एतदर्थमाह ।

भग्रहयुतिवच्छङ्कुर्वित्रिभलग्नाद्रविग्रहोक्तिसमः ।

शशिनः कर्मबहुत्वात् न कृतोऽतो भास्करग्रहणे ॥ ११ ॥

सु. भा.—भग्रहयुतिवद्रविग्रहोक्तिसमः शशिनो वित्रिभलग्नाच्छङ्कुः कर्मबहु-
त्वात् महताऽऽप्यामेन भवति । अतो मया भास्करग्रहणे शशिशङ्कुं न कृतः
प्रयोजनाभावात् इयमार्या निष्प्रयोजना ॥ ११ ॥

वि. भा.—भग्रहयुतिवत् सूर्यग्रहणोक्तस्थितिरस्ति-अर्थात् भग्रह योगे यथा
स्थिति रस्ति तथैव सूर्यग्रहणोऽपि विद्यते । वित्रिभलग्नाच्छङ्कुश्चन्द्रस्य क्रिया
गौरवान्महता प्रयासेन भवत्यतो मया सूर्यग्रहणे चन्द्रशङ्कुं न कृत इति ॥ ११ ॥

हि. भा.—भग्रह (नक्षत्र और ग्रह) योग की तरह सूर्यग्रहण में कथित स्थिति है
अर्थात् भग्रह योग स्थिति के तुल्य ही सूर्यग्रहणोक्त स्थिति है, वित्रिभलग्न से चन्द्रशङ्कु क्रिया
की अधिकता (कर्मबाहुल्य) से बहुत प्रयास द्वारा होता है इसलिये मैंने सूर्यग्रहण में चन्द्रशङ्कु
नहीं किया इति ॥ ११ ॥

इदानीं प्रश्न विशेषमाह ।

आग्नेये नैऋत्येवेष्टदिने संस्थितस्य योर्ऋक्स्य ।

शङ्कुच्छाये कथयति वर्षादिपि वेत्ति सूर्य सः ॥ १२ ॥

सु. भा.—इष्टदिने आग्नेये वा नैऋत्ये कोणवृत्ते संस्थितस्यार्ऋक्स्य वा यो

वर्षादपि वर्षपर्यन्तकालेनापि शङ्कुच्छाये कथयति स एव सूर्यं वेत्तीति ।

अस्योत्तरं कोणशङ्कोरानयनेन स्फुटम् ॥१२॥

वि. भा.—यो गणक इष्टदिने आग्नेये का नैऋत्ये कोणवृत्ते संस्थितस्यार्कस्य (रवेः) शङ्कुच्छाये वर्षपर्यन्तकालेनापि कथयति स सूर्यं वेत्ति (जानाति), इति ॥ १२ ॥

अस्योत्तरार्थमुपपत्तिः सूर्यसिद्धान्ते ।

“त्रिज्यावर्गार्धतोऽग्राज्या वर्गोनाद् द्वादशाहतात् ।

पुनर्द्वादश विघ्नाच्च लभ्यते यत् फलं बुधैः ॥

शङ्कुवर्गार्धसंयुक्तविषुवद्वर्गभाजितात् ।

तदेव करणी नाम तां पृथक् स्थापयेद् बुधः ॥

अर्कघ्नी विषुवच्छायाऽग्राज्यया गुणिता तथा ।

भक्ता फलाख्यं तद्वर्गसंयुक्तकरणीपदम् ॥

फलेन हीनसंयुक्तं दक्षिणोत्तर गोलयोः ।

याम्ययोर्विदिशोः शङ्कु रेवम्”

इति कोणशङ्कोरानयनमस्ति ।

एतद्व्याख्या—त्रिज्यावर्गार्धात् अग्राज्यावर्गहीनात् । शेषाद् द्वादशगुणात् पुनर्द्वादशगुणात् । द्वादशवर्गार्धसंयुक्त पलभावर्गेण भाजिताच्च त्फलं तदेव करणी नाम भवति । तां करणीं पृथगेकत्र स्थापयेत्, द्वादशगुणा पलभाऽग्राया गुणा तेनैव हरेण (द्वादशवर्गार्धसंयुक्त पलभावर्गेण) भक्ता लब्धं फलसंज्ञकम् । फलाख्यस्य वर्गेण संयुक्ता या करणी तत्पदं (वर्गमूलं) दक्षिणोत्तरगोलयोः क्रमेण फलाख्येन हीन संयुक्तं कार्यम् । दक्षिणगोले फलेन हीनमुत्तरगोले युक्तमित्यर्थः । एवं याम्ययोरग्निनैऋत्य-कोणयोः शङ्कुः स्यादिति । एतदुपपत्तिदर्शनेन प्रश्नोत्तरं स्फुटमस्तीति ॥ १२ ॥

अब प्रश्न विशेष को कहते हैं ।

हि. भा.—जो गणक इष्टदिन में आग्नेय वा नैऋत्य कोणवृत्त स्थित रवि के शङ्कु और छाया को एक वर्ष पर्यन्त समय में भी कहते हैं वे सूर्य को जानते हैं; इति ॥ १२ ॥

इसकी उपपत्ति ।

सूर्य सिद्धान्त में ‘त्रिज्यावर्गार्धतोऽग्राज्यावर्गोनाद् द्वादशाहतात् । पुनर्द्वादशविघ्नाच्च लभ्यते यत्फलं बुधैः’ इत्यादि संस्कृतोपपत्ति में लिलित श्लोकों में ‘फलेन हीन संयुक्तं

दक्षिणोत्तर गोलयोः । याम्ययोर्विदिशोः शङ्कुः' इसमें उपर्युक्त प्रश्न का उत्तर स्पष्ट है । उपर्युक्त सूर्य सिद्धान्तीय श्लोकों की उपपत्ति देखने से स्फुट है इति ॥ १२ ॥

इदानीमध्यायोपसंहारमाह ।

अत्र मया यन्नोक्तं गोलादुत्प्रेक्ष्य धीमता बोद्धव्यम् ।

आर्यात्रयोदशोऽयं संज्ञाध्यायश्चतुर्विधः ॥ १३ ॥

सु. भा.—अत्र मया यत् किञ्चिन्नोक्तं तत्सर्वं धीमता गणकेन गोलादुत्प्रेक्षां कृत्वोद्ध्यम् । गोलबोधे हीदमेव फलं यदनुक्तमपि बुद्धिमता ज्ञायते । शेषं स्पष्टम् ॥ १३ ॥

मधुसूदनसूनुनोदितो यस्तिलकः श्रीपृथुनेह जिष्णुजोक्ते ।

हृदि तं विनिधाय नूतनोऽयं रचितो नामविधौ सुधाकरेण ॥

इति श्रीकृपालुदत्तसूनुसुधाकरद्विवेदिरचिते ब्राह्मस्फुटसिद्धान्तनूतनतिलके संज्ञाध्यायश्चतुर्विंशतितमः सम्पूर्णतामगमत् ॥

वि. भा.—अत्र मया यत्किञ्चित् न कथितं तत्सर्वं बुद्धिमता गणकेन गोलादुत्प्रेक्षां कृत्वा ज्ञेयम् । गोलज्ञानस्येदमेव फलं यदकथितमपि बुद्धिमद्भिर्ज्ञायते इति ॥ १३ ॥

इति ब्राह्मस्फुट सिद्धान्ते संज्ञाध्यायश्चतुर्विंशतितमः समाप्तिमगमत् ॥ २४ ॥

अब अध्याय के उपसंहार को कहते हैं ।

हि. भा.—इसमें हमने जो कुछ नहीं कहा है उन सबों को बुद्धिमान् गणक (ज्योतिषिक) गोल ज्ञान से समझें क्योंकि गोलबोध का यही फल है कि जो विषय नहीं कहे हैं उनको समझें इति ॥ १३ ॥

इति ब्राह्मस्फुटसिद्धान्त में संज्ञाध्याय नाम का चौबीसवां अध्याय

समाप्त हुआ ॥ २४ ॥

तत्रादौ चैत्रादौ मासगणानयनमाह—

पञ्चाशत्संयुक्तं वर्षशतैः पञ्चभिर्विना शाकः

त्रिष्टोऽर्कवैसुवेदैर्नवचन्द्रं स्ताडितः क्रमशः ॥ १ ॥

पञ्चान्वियुतोऽधः षष्टिभाजितो लब्धियुक् सरसवेदः ।

मध्यमराशिर्विद्वैर्विभाजितोऽस्यधिकमासाः स्युः ॥ २ ॥

तैरुपरितनो युक्तो मासगणोऽस्यधिकशेषकः शुद्धः ।

घटिकादिको भक्तक्राद्विरविशेषो भवेद्भूदादिः ॥ ३ ॥

सु. भा.—शाकः खपञ्चपञ्चोनस्त्रिधा स्थाप्यः । एको रविभिर्गुणः । द्वितीयो वसुवेदैस्तृतीयो नवचन्द्रश्च गुणः । अधोराशिः पञ्चान्वि ४५ युतः षष्टि-
भाजितः फलं मध्यराशौ क्षेप्यम् । तत्रैव रसवेदाश्च ४६ क्षेप्याः । एवं संस्कृतो
मध्यो मध्यमराशिः शशाङ्कविद्वैर्विभाजितोऽधिमासाः स्युः । तैरधिमासैरुपरितनो
राशियुक्तो मासगणश्चान्द्रो भवति ।

अत्रोपपत्तिः ।

$$\text{एकस्मिन् वर्षेऽधिमासः} = \frac{१५६३३०००००}{४३२००००००००}$$

$$= \frac{५३११ \times ३०००००}{१४४०० \times ३०००००} = \frac{५३११}{१४४००} = \frac{५३११ \times १३१}{१३१ \times १४४००} = \frac{५३११ \times १३१}{१४४००} = \frac{४८१६}{१३१}$$

स्वल्पान्तरात् ।

अयमिष्टैः सौरवर्षैर्गुणोऽधिमासाः स्युः । शेषोपपत्तिः स्फुटा । ४५।४६ अस्य
क्षेपस्योपपत्तिर्ग्रन्थान्ते द्रष्टव्या ।

सौरवर्षचैत्राद्योर्मध्येऽधिमासशेषो मासात्मकश्चान्द्रस्तच्चालनं कल्पचान्द्रमासः

$$\text{कल्पसौरमासास्तदाऽधिशेषेण किं लब्धं राश्यादिवालनमृणम्} = \frac{५१८४००००००}{५३४३३३०००००}$$

$$\times \frac{\text{अधिशेषो}}{१३१} = \frac{१७२८०० \times ३०००००}{१७८१११ \times ३०००००} \times \frac{\text{अधिशेषो}}{१३१} = \frac{१७२८००}{१७८१११} \times \frac{\text{अधिशेषो}}{१३१}$$

इदं नवगुणं चतुर्भक्तं लब्धं नक्षत्रात्मकं चालनं षष्टिगुणं जातं घट्यात्मकम् ।

$$= \frac{१७२८०० \times ९ \times \text{अधिशेषो} \times ६०}{१७८१११ \times ४ \times १३१} = \frac{१७२८०० \times १३५ \times \text{अधिशेषो}}{१७८११८ \times १३१}$$

$$= \frac{२३३२८००० \times \text{अधिशेषो}}{२३३३२५४१} = \text{अधिशेषो} । \text{स्वल्पांतरात्} ।$$

सौरवर्षादौ रविर्भचक्रेण नक्षत्रसप्तविंशत्या समोऽतो भचक्रादधिशेषघटी-
समचालनं विशोध्य चैत्रादौ भादी रविर्ज्ञेय इति स्फुटम् ॥१-३॥

हि. भा — शाके में से ५५० घटाकर शेष को तीन जगह रखो, एक को बारह (१२) से, दूसरे को अड़तालीस (४८) से तथा तीसरे को १६ से गुणा करो ।

तीसरी राशि में ४५ जोड़कर ६० से भाग दो । लब्धि को दूसरी राशि में जोड़ दो, और उसी में रसवेद (४६) जोड़ दो । इस तरह करने पर मध्यमराशि होगी । उसको संशाङ्कविश्व (१३१) से भाग देने पर अधिमास होता है । अधिमास और उपरितन राशि का योग चान्द्रमास होता है ।

उपपत्ति ।

$$\text{एक वर्ष में अधिमास} = \frac{१५६३०००००}{४३२००००००००}$$

$$= \frac{५३११ \times ३०००००}{१४४०० \times ३००००००} = \frac{५३११}{१४४००} = \frac{५३११ \times १३१}{१३१ \times १४४००}$$

$$= \frac{\frac{५३११ \times १३१}{१४४००}}{१३१} = \frac{४८ + \frac{१६}{६०}}{१३१}$$

स्वल्पान्तर से । इसको इष्ट सौर वर्ष से गुणने पर अधिमास होता है, शेष की उपपत्ति स्पष्ट ही है । ४५ और ४६ के क्षेपक की उपपत्ति ग्रन्थ के अन्त में देखें ।

चैत्रादि सौर वर्ष में अधिमास शेष मासात्मक चान्द्र होता है उसका चालन लाने की युक्ति यथा—

कल्प चान्द्रमास में कल्प सौरमास पाते हैं तो अधिशेष में क्या इस तरह लब्धि

$$\begin{aligned} \text{राश्यादिक ऋण चालन} &= \frac{५१८४०००००००}{५३४३३३०००००} \times \frac{\text{अधिशेष}}{१३१} \\ &= \frac{१७२८०० \times ३०००००}{१७८१११ \times ३०००००} \times \frac{\text{अधिशेष}}{१३१} \\ &= \frac{१७२८००}{१७८१११} \times \frac{\text{अधिशेष}}{१३१} \quad \text{। इसको ६ से गुणा कर ४ से भाग} \end{aligned}$$

हैं तो लब्धि न क्षत्रात्मक चालन होगा, उसको ६० से गुणा करने पर घट्यात्मक चालन होगा, यथा—

$$\begin{aligned} &= \frac{१७२८०० \times ६ \times \text{अधिशेष} \times ६०}{१७८१११ \times ४ \times १३१} = \frac{१७२८०० \times १३५ \times \text{अधिशेष}}{१७८१११ \times १३१} \\ &= \frac{२३३२८००० \times \text{अधिशेष}}{२३३३२५४१} = \text{अधिशेष} \quad \text{। स्वल्पान्तर से सौर वर्षादि में} \end{aligned}$$

रविका भचक्र २७ नक्षत्र के बराबर होता है इसलिए भचक्र में से अधिक शेष घटी के तुल्य चालन को घटाने पर चैत्रादि में राश्यादि रवि होता है, यह स्पष्ट है ॥१-३॥

इदानीं त्रैत्रादौ दिनादिकं तिथिध्रुवसाधनमाह ।

रूपेण रूपरामः खसायकैस्ताडितो गणो युक्तः ।

षड्भिर्वेदैर्धृत्या वासरघटिकाविघटिकाः स्युः ॥ ४ ॥

खखरसलब्धं च गणाद् घटिकासु नियोजयेत् तिथिध्रुवकाः ।

रव्यादिकस्तदुदये त्रैत्रादावर्कचन्द्रौ च ॥ ५ ॥

सु. भा.--गणो मासगणो रूपेण १ दिनेन रूपरामे—३१ घट्टाभिः खसायकैर्विघटीभिस्ताडितो दिनादिस्थाने क्रमेण षड्भि ६ वेदै—४ धृत्या १८ युक्तः । गणान्मासगणात् खखरसै ६०० र्यल्लब्धं घट्यात्मकं फलं तद्घटिकासु नियोजयेत् तदा वासरघटिकाविघटिकाश्चैत्रादौ तिथिध्रुवकाः स्युः । वासरश्च रव्यादिको ज्ञेयस्तदुदये च त्रैत्रादावर्कचन्द्रौ मध्यमौ भवतः । नक्षत्रात्मको रविश्च पूर्वं साधितो दर्शन्ति चैत्रादौ तावनेष चन्द्रश्चेति ।

अत्रोपपत्तिः ।

एकस्मिन् चान्द्रमासे सावनदिमाहि २६ । ३१ । ५० । ६ सप्ततष्टं जातम्
= १ । ३१ । ५० । ६ = १३१ + १६० । अनेन मासगणो गुणितो ग्रन्थारम्भ-
क्षेपयुक्तोऽभीष्टे चैत्रादौ तिथिध्रुवो भवेदिति स्पष्टम् । क्षेपोपपत्तिर्ग्रन्थान्ते द्रष्टव्या
॥४-५॥

हि. भा.—मास समूह को १ दिन, ३१ घटी, ५० विघटी से गुणा करो। दिन स्थान में क्रम से ६, ४, १८ जोड़दो। मास समूह को ६०० से भाग देकर जो लब्धि होगी उसको घटी में जोड़दो। तब दिन, घटी, विघटी, चैत्रादि में तिथि का ध्रुवा होता है। रवि आदि दिन जानना चाहिये, उसके उदयकाल अर्थात् चैत्रादि में सूर्य तथा चन्द्रमा मध्यम होता है, नक्षत्रात्मक सूर्य को पहले साधन कर चुके हैं, अभावस्था के अन्त में चैत्रादि में उतना ही चन्द्रमा होता है।

उपपत्ति ।

एक चान्द्रमास में सावन दिन = २६।३१।५०।६ इसको ७ से भाग देने पर शेष = १।३१।५०।६ = १।३१ + $\frac{१}{१०}$ ।५०। इससे मास समूह को गुणाकर उसमें ग्रन्थारम्भ काल का क्षेप जोड़ दें तो चैत्रादि में अभीष्ट तिथि ध्रुवा होगी, क्षेपक की उपपत्ति ग्रन्थान्त में देखें।

इदानीं चन्द्रकेन्द्रसाधनमाह

मासगणो यमगुणितः पृथक् कुतस्त्वोद्धृतः फलसमेतः ।

सार्धाष्टियुतो वसुयमविभक्तशेषो विधोः केन्द्रम् ॥ ६ ॥

सु. भा.—यम-२ गुणितो मासगणः पृथक् स्थाप्यः कुतस्त्वं २५१ भक्तः पृथक्स्थः फलेन सहितः कार्यस्ततः सार्धाष्टियुतः। योगो वसुयमै-२८ विभक्तः शेषश्चन्द्रस्य केन्द्रं भवति।

अत्रोपपत्तिः ।

एकस्मिन् चन्द्रकेन्द्रभरणो वसुयमा २८ विभागाः कृताः। तद्विभागजातीय-शेषे केन्द्रमत्र साध्यते।

कल्पे चन्द्रभरणाः = ५७७५३३०००००

चन्द्रोच्चभरणाः = ४८८१०५८५८

केन्द्रभरणाः = ५७२६५१६४१४२

एते कल्पचान्द्रमासभक्ता जातमेकस्मिन् चान्द्रमासे भरणात्मकं केन्द्रम् = $\frac{५७२६५१६४१४२}{५३४३३३०००००} = १ + \frac{३८३१८९४१४२}{५३४३३३०००००}$ ।

अत्र प्रयोजनाभावाद्भ्रमं त्यक्त्वा भरणशेषं वसुयमैः संगुण्य हरेण विभज्यलब्ध-मभीष्टभागात्मकं केन्द्रमेकस्मिन् चान्द्रमासे = $२ + \frac{१०६६०८६६४ \times ४}{१३३५८३२५००० \times ४} २ + \frac{२}{२५१}$

स्वल्पान्तरात् । सार्धष्टसंख्या ग्रन्थारम्भे क्षेपमानं तदुपपत्तिश्च ग्रन्थान्ते
द्रष्टव्या अत उपपन्नं केन्द्रानयनम् ॥६॥

हि. भा.—दो से गुणित मास समूह को दो स्थान में रखो, एक स्थान में २५१ से भाग दो, लब्धि को दूसरे स्थान में जोड़ दो, फिर उसमें $८ + \frac{१}{२}$ जोड़ दो, उस योग में २८ से भाग दो, जो शेष होगा वह चन्द्रमा का केन्द्र होता है ।

उपपत्ति ।

एक चन्द्रभगण को २८ से विभाग करने से तत् विभागजातीय केन्द्र यहां साधन करते हैं ।

$$\text{कल्प में चन्द्रभगण} = ५७७५३३००००० ।$$

$$\text{चन्द्रोच्च भगण} = ४८८१०५८५८ ।$$

$$\text{दोनों का अन्तर} = ५७२६५१९४१४२ = \text{केन्द्र भगण} ।$$

इसमें चान्द्रमास से भाग देने पर, एक चान्द्रमास में भगणात्मक केन्द्र

$$= \frac{५७२६५१९४१४२}{५३४३३३०००००} = १ + \frac{३८३१८९४१४२}{५३४३३३०००००} ।$$

यहां प्रयोजन नहीं है इसलिये भगण को छोड़कर भगण शेष को २८ से गुणाकर हार से भाग देकर लब्धि जो होगी वही अभीष्ट भागात्मक केन्द्र होगा, एक चान्द्र मास में

$$= २ + \frac{१०६६०८९९४ \times ४}{१३३५८३२५००० \times ४} २ + \frac{२}{२५१} \text{ स्वल्पान्तर से । ग्रन्थारम्भ काल}$$

में $८ + \frac{१}{२}$ क्षेप मान की उपपत्ति ग्रन्थ के अन्त में देखें । इससे केन्द्रानयन उपपन्न हुआ ।

इदानीमिष्टमासादौ रव्यानयनमाह ।

चैत्रादिमासगुणिते द्वे नक्षत्रे क्षिपेत् सहस्रांशौ ।

घटिकैकादशयुक्ते सार्धेन फलेन सहिति च ॥७॥

सु. भा.—द्वे नक्षत्रे घटिकैकादशयुक्ते सार्धेनैकेन फलेन सहिते च चैत्रादितो ये गतचान्द्रमासास्तैर्गुणिते चैत्राद्युद्धवरवी फलं क्षिपेत् तदेष्टमासादौ नक्षत्रादिको रविर्भवेत् ।

अत्रोपपत्तिः कल्परविभगणाः = ४३२००००००० । सप्तविंशतिगुणाः कल्पचान्द्रमास—५३४३३३००००० भक्ता जातमेकस्मिन् चान्द्रमासे नक्षत्रात्मकं रविमानम् = $\frac{४३२००००००० \times २७}{५३४३३३००००} = \frac{१४४०० \times ३००००० \times २७}{१७८१११ \times ३०००००} = \frac{१४४०० \times २७}{१७८१११}$

$$= \frac{३८८८००}{१७८१११} = २ \frac{३२५७८}{१७८१११} \text{ शेषं षष्ठ्यागुणं हरभक्तमेवं नक्षत्रादिकं रविमानम्} \\ = २।१०।५८\frac{३}{४} \text{ स्वल्पान्तरात् ।}$$

तद्रूपान्तरम् = $\frac{न}{११} - \left(१\frac{१}{२} \right) प.$ । इदमिष्टमासगुणं तज्जो
नक्षत्रादिको रविर्भवेत् । शेषोपपत्तिः स्फुटा ॥७॥

हि. भा.—दो नक्षत्रों में ११ घटी जोड़ दें, और $१ + \frac{१}{२}$ पल घटा दें, चैत्रादि से जो
गत चान्द्रमास हो उससे गुणा दें, फल को चैत्रादि में उत्पन्न सूर्य में जोड़ दें, वह इष्ट-
मासादि में नक्षत्रादिक रवि होता है ।

अत्रोपपत्तिः

एक कल्प में सूर्य भगण = ४३२००००००० ।

एक कल्प में चान्द्रमास = ५३४३३३००००० ।

यहां कल्प सूर्य भगण को २७ से गुणाकर कल्प चान्द्रमास से भाग देने पर एक
चान्द्रमास में नक्षत्रात्मक रवि का मान

$$= \frac{४३२००००००० \times २७}{५३४३३३०००००} = \frac{१४४०० \times ३००००० \times २७}{१७८१११ \times ३०००००} \\ = \frac{१४४०० \times २७}{१७८१११} = \frac{३८८८००}{१७८१११} = २ + \frac{३२५७८}{१७८१११} ।$$

शेष को ६० से गुणाकर हर से भाग देने पर नक्षत्रादिक रवि का मान = २ । १०।५८ + $\frac{३}{४}$
स्वल्पान्तर से । इसका रूपान्तर = $\frac{न}{२} - \frac{घ}{११} - \left(१ + \frac{१}{२} \right) प.$ इसको इष्ट-
मास से गुणाकर फल नक्षत्रादिक रवि होता है । यहाँ अवशेष की उपपत्ति स्पष्ट ही है ।

इदानीं प्रतिमासं शशिकेन्द्रतिथिध्रुवक्षेपावाह ।

नाड्यर्धेन समेतं भद्रितयं प्रक्षिपेच्च शशिकेन्द्रे ।

रूपं रूपहुताशाः खशराश्च तिथिध्रुवे क्रमशः ॥ ८ ॥

सु. भा.—प्रतिमासं शशिकेन्द्रे नक्षत्रद्वितयं नाड्यर्धेन सहितं तिथिध्रुवे च
क्रमशो दिनादौ रूपं १ रूपहुताशाः ३१ खशराश्च ५० इति प्रक्षिपेत् ।

अत्रोपपत्तिः । ६ श्लोकेनैकस्मिन् चान्द्रमासे शशिकेन्द्रमानम् $२ + \frac{२}{२५१}$

२ न + $\frac{१}{२}$ घ स्वल्पान्तरात् । अत्रैकस्मिन् भचक्रे अष्टाविंशति नक्षत्राणि कल्पितानीति शशिकेन्द्रानयन एव प्रतिपादितम् । तिथिध्रुवक्षेपमानं च सप्ततष्ट चान्द्रमाससावनमानं दिनादि १।३१।५० स्फुटमेव । अत्राधिकं ६ विपलमानं त्यक्तं पलात्मकमानपर्यन्तमेव गणिते ग्राह्यत्वादिति स्फुटम् ॥८॥

हि. भा.—प्रति मास शशि केन्द्र में आधा नाडी से युक्त दो नक्षत्र युक्त करो । एवं तिथिध्रुवा में क्रम से १, ३१, ५० युक्त करो ।

उपपत्ति ।

$$\begin{aligned} & ६ श्लोक के अनुसार एक चान्द्रमास में चन्द्रमा का केन्द्रमान = २ + \frac{२}{२५१} \\ & = २ न + \frac{१}{२} घ, स्वल्पान्तर से ग्रहण किया । \end{aligned}$$

यहां एक भचक्र में २८ नक्षत्र की कल्पना की गई है, और चन्द्रमा का केन्द्रानयन भी कहा गया है, तिथि ध्रुव क्षेप मान को सात से शेषित करने पर चान्द्र मास सावन मान दिन १ । ३१ । ५० होता है, यह स्पष्ट है गणित में पलमान का ही ग्रहण होता है इसलिये यहां अधिक ६ विपलमान को छोड़ दिया है ।

इदानीं प्रतिदिनचालनमाह ।

वारं दद्यात् प्रतिदिनमब्धिपलोनां परित्यजेत् नाडीम् ।

केन्द्रे क्षिपेद्भूमेकं भद्वितयफलं घटीचतुष्कमिते ॥ ९ ॥

सु० भा०—प्रतिदिनं प्रतिचान्द्रदिनं तिथिध्रुवे दिनमेकं दद्याद्योजयेत् । अब्धिपलोनामेकां नाडीं च परित्यजेत् । शशिनः केन्द्रे च प्रतिचान्द्रदिनमेकं भं नक्षत्रं घटीचतुष्कमितं भूतस्वफलं घटीचतुष्कं भूतस्व २५१ हृतं फलं घट्यात्मकं च क्षिपेत् ।

अत्रोपपत्तिः । त्रिंशत्तिथ्यात्मके चान्द्रमासे सावनदिनादि २९।३१।५० इदं त्रिंशद्भूक्तं जातमेकस्मिन् चान्द्रदिने तिथिध्रुवे क्षेपकमानम् = $\frac{२९।३१।५०}{३०} = ०।५६।४$ = १ दि०—५६ प० = १ दि०—(१ घ—४ प) । एवमेकस्मिन् चान्द्रमासे शशिकेन्द्रं नक्षत्रात्मकम् = $३० \frac{२}{२५१}$ ।

(६ सूत्रे भगणात्मकं केन्द्रं २६ संगुण्य नक्षत्रात्मकं यदि क्रियते तदा

३० $\frac{२}{२५१}$ समुत्पद्यते) इदं त्रिशद्वृत्तं जातमेकस्मिन् चान्द्रदिने केन्द्रे क्षेपकमानम्

$$= \frac{३० + \frac{२}{२५१}}{३०} = १ + \frac{२}{३० \times २५१} = १ + \frac{२ \times ६०}{३० \times २५१} \text{ घटी} = १ न + \frac{४}{२५१} \text{ घटी। अतः}$$

उपपद्यते यथोक्तम् ।

भद्वितयेन भद्वितयमानेन १२० घटिकामितेन हूते घटीचतुष्कमिते यत्फलं घटद्यात्मकं तदपि क्षेपेदित्येके 'भद्वितयफलं घटीचतुष्कमिते' इति पाठानुसारेण व्याख्यां कुर्वन्ति । अनेन '२५१' स्थाने १२० इयं स्थूला सङ्ख्योत्पद्यतेऽत एव मया पाठान्तरमुपनिबद्धम् ॥६॥

हि. भा.—हर चान्द्रदिन के तिथि घृवा में एक दिन युक्त करें और चार पल कम एक नाड़ी घटा दें । चन्द्रकेन्द्र में, प्रति चान्द्र दिन में से एक नक्षत्र और ४ घटी को २५१ से भाग देने पर जो फल मिले वह युक्त करना चाहिये ।

उपपत्ति ।

तीस तिथ्यात्मक चान्द्रमास में सावदिन = २६ । ३१ । ५० इसको ३० से भाग देने से एक चान्द्र दिन में—तिथिघृवा क्षेपमान = $\frac{२६।३१।५०}{३०} = ०।५६।४ = १ \text{ दि} - ५६ \text{ प} = १ \text{ दि} - (१ \text{ घ} - ४ \text{ प})$ ।

इस तरह एक चान्द्रमास में चन्द्रकेन्द्र नक्षत्रात्मक = $३० + \frac{२}{२५१}$ । ६ श्लोक से भगणात्मक केन्द्र को २८ से गुणाकर नक्षत्रात्मक यदि करते हैं तब $(३० + \frac{२}{२५१})$ यह उपपन्न होता है । इसको तीस से भाग देने पर एक चान्द्र दिन में केन्द्र क्षेपक मान
$$= \frac{३० + \frac{२}{२५१}}{३०} = १ + \frac{२}{३० \times २५१} = १ + \frac{२ \times ६०}{३० \times २५१} \text{ घटी}$$

$$= १ न + \frac{४}{२५१} \text{ घटी। इससे ६ श्लोक उपपन्न होता है।}$$

भद्वितयेन अर्थात् १२० घटी के मान से हूत चार घटी का जो फलघट्यात्मक हो वह भी जोड़ दें यह किसी का मत है । दो नक्षत्र का फल चार घटी में जोड़ दें यह पाठ के अनुसार व्याख्या करते हैं, इससे २५१ की जगह १२० यह स्थूल संख्या उपपन्न होती है । इसलिये मैंने पाठान्तर कर दिया है ।

इदानीं देशान्तरसंस्कारमाह ।

उज्जयिनी याम्योत्तररेखायाः प्राग्धनं क्षयः पश्चात् ।

योजनषष्ठ्या नाडी चरदलमपि सौम्यदक्षिणयोः ॥ १० ॥

सु. भा.—योजनषष्ठ्यैका नाडी उज्जयिनी याम्योत्तररेखायाः प्राग्धनं पश्चात् क्षयो भवति । एवं सौम्यदक्षिणयोगोलयोश्चरदलं चरासवोऽपि धनं क्षयश्च क्रमेण बोध्या इति ।

अत्रोपपत्तिः । यदि स्पष्टभूपरिधियोजनैः षष्टिघटिकास्तदा देशान्तरयोजनैः किं जाता देशान्तरनाडी = $\frac{६० \text{ देयो}}{\text{स्पभूप}}$ । आचार्येण स्थूलस्पष्टभूपरिधिः = ३६०० योजनानि गृहीतः । ततो जाता देशान्तरनाडिका = $\frac{\text{देयो}}{६०}$ । धनर्णवासना चरधनर्ण-वासना च गोलयुक्त्या स्फुटा ॥ १० ॥

हि. भा.—उज्जयिनी याम्योत्तर रेखा से षष्टि योजन पूर्व में एक नाड़ी धन तथा पश्चिम में एक नाड़ी ऋण होता है । इसी तरह उत्तर दक्षिण गोल में चरदल तथा चरासु भी क्रम से धन तथा ऋण होता है ।

उपपत्ति ।

स्पष्ट भूपरिधि योजन में ६० घटी मिलता है तो देशान्तर योजन में क्या इस अनुपात से देशान्तर नाडी = $\frac{६० \times \text{देयो}}{\text{स्पभूप}}$ । यहां आचार्य ने स्थूल स्पष्ट भूपरिधिः ३६०० योजन स्वीकार किया है ।

$$\text{अतः } \frac{६० \times \text{देयो}}{३६००} = \text{देशान्तर नाडी ।}$$

= $\frac{\text{देयो}}{६०}$ = देशान्तर नाडी । इसकी धन और ऋण की युक्ति गोलाध्याय में स्पष्ट है ।

इदानीं चन्द्रसाधनमौदयिकरविसाधनं चाह ।

तिथयो दशभागोना रविणा समन्विता शशी भवति मध्यः ।

तिथ्यंशादध्याः शोभ्यास्तिथिभोगजनाडिकाः केन्द्राद् ॥ ११ ॥

१. तिथयो दशभागोना रविणा सहिताः शशी भवति मध्यः ।

तिथिभोगनाडिकाश्च द्विगुणोद्धृता रवेः शोभ्याः ॥

सु. भा.—स्वदशभागोनास्तिथयो नक्षत्रात्मकं रविचन्द्रयोरन्तरं भवति । ता रविणा नक्षत्रात्मकसूर्येण सहिता नक्षत्रात्मको मध्यः शशी भवति । तिथिभोग-नाडिका द्विगुणा उडु २७ हूताः फलं नक्षत्रघटिका भवन्ति । ता रवेः शोध्यास्तदा नक्षत्रादिको रविरुदये भवति ।

अत्रोपपत्तिः । तिथौ तिथौ रविचन्द्रयोर्द्वादशभागा अन्तरमतस्तिथयो द्वादशगुणा भागात्मकं रविचन्द्रयोरन्तरम् = १२ ति । चक्रांशैः सप्तविंशतिर्नक्ष-त्राणि तदेष्टान्तरेण १२ति अनेन किम् । जातं नक्षत्रात्मकमन्तरम् = $\frac{२७ \times १२ \text{ ति}}{३६०}$
 $\frac{२७ \text{ ति}}{३०} = \frac{६ \text{ ति}}{१०} = ६ - \frac{\text{ति}}{१०}$ । एवं तिथ्यन्ते रविचन्द्रौ जातौ । तिथ्यन्तसूर्योदययो-र्मध्ये तिथिभोगनाडिकास्तत्संबन्धिनक्षत्रात्मकचालनेन रवी रहित उदये रविर्भवति । तिथिभोगघटिकाश्च सावनाः प्रसिद्धाः । एकस्मिन् सावनदिने रविगतिः = ५९' १८" = ३५४८" । अतो नक्षत्रात्मिकागतिः = $\frac{३५४८}{६० \times ८००}$ । यदि घटीषष्ट्या रवेरियं नक्षत्रात्मिका गतिस्तदा तिथिभोगघटिकाभिः किं लब्धं नक्षत्रात्मकमृणचालनं षष्टिगुणं जातं घट्यात्मकम् = $\frac{३५४८}{६० \times ८००} \times \frac{\text{भोग} \times ६०}{६०}$
 $= \frac{३५४८}{६० \times ८००} = \frac{२ \times १७७४ \times \text{भोग}}{४८००} = \frac{२ \text{ भोग}}{४८००} = \frac{२ \text{ भोग}}{१७७४}$ स्वल्पान्तरात् ।

अत उपपन्नो मच्छोचितः पाठः ॥११॥

हि. भा.—अपने दसवें भाग से हीन तिथि नक्षत्रात्मक रविचन्द्रान्तर के बराबर होती है, उसको नक्षत्रात्मक सूर्य में जोड़ने से मध्यमचन्द्र होता है । द्विगुणित तिथिभोग नाडी को २७ से भाग देने पर लब्धि नक्षत्र की घटी होती है, उस नक्षत्र घटी को रवि में घटाने से उदयकालिक नक्षत्रादिक रवि होता है ।

उपपत्ति ।

रवि चन्द्रमा के अन्तर को १२ से भाग देने पर एक तिथि का मान होता है—
 इसलिये १२ × ति = अंशात्मक रविचन्द्रान्तर,

तब अनुपात से—

$$\frac{२७ \times १२ \text{ ति}}{३६०} = \text{नक्षत्रात्मक अन्तर} = \frac{२७ \text{ ति}}{३०} = \frac{६ \text{ ति}}{१०} = \text{ति} - \frac{\text{ति}}{१०} ।$$

इस तरह तिथि के अन्त में रवि और चन्द्र हुए । तिथ्यन्त सूर्योदय के बीच तिथि भोग नाडिका से सम्बन्धित नक्षत्रात्मक चालन को सूर्य में से घटाने से उदयकाल में सूर्य होता है । तिथि भोग घटी तो सावन होता है, यह प्रसिद्ध ही है । एक सावन दिन में रवि की गति = $५६' ८'' = ३५४८''$ इस पर से नक्षत्रात्मक गति = $\frac{३५४८}{६० \times ८००}$ ।

यदि ६० घटी में रवि की नक्षत्रात्मक गति पाते हैं तो तिथि भोग घटिकाओं में क्या इस अनुपात से नक्षत्रात्मक ऋण चालन = $\frac{३५४८ \times \text{भोग}}{६० \times ८००}$ । इसको ६० से गुणने पर घट्यात्मक चालन = $\frac{३५४८}{६० \times ८००} \times \frac{\text{भोग} \times ६०}{६०} = \frac{३५४८ \times \text{भोग}}{६० \times ८००}$
 $= \frac{२ \times १७७४ \times \text{भोग}}{४८०००} = \frac{२ \text{ भोग}}{४८०००} = \frac{२ \text{ भोग}}{२७} \text{ । स्वल्पान्तरसे । यहां श्री}$
 १७७४

सुधाकरद्विवेदी का संशोधित पाठ उपपन्न हुआ ॥११॥

इदानीमौदयिकार्थं चन्द्रस्य तत्केन्द्रस्य च चालनमाह ।

तिथिभोगनाडिकासु द्विगुणा रसगुणोद्धृताः शोभ्याः ।

पञ्चाशीत्यधिकोनास्तिथिनाड्यः शोधयेत् शशिनः ॥ १२ ॥

सु. भा.—स्पष्टार्थेयमार्या ।

अत्रोपपत्तिः । रविचालनवदत्रापि चन्द्रगतिः = $७६०' १३५'' = ४७४३५''$ ।
 नक्षत्रात्मिकागतिः = $\frac{४७४३५}{६० \times ८००}$ ।

अतो रविवत्नक्षत्रघट्यात्मकं चालनं $\frac{४७४३५ \text{ भोग} \times ६०}{६० \times ८०० \times ६०} = \frac{४७४३५ \text{ भोग}}{६० \times ८००}$
 $= \frac{९४८७ \text{ भोग}}{१२ \times ८००} = \frac{९४८७ \text{ भोग}}{९६००} = \text{भोग} - \frac{११३ \text{ भोग}}{९६००} = \text{भोग} - \frac{\text{भोग}}{८५}$

स्वल्पान्तरात् । एवं चन्द्रकेन्द्रगतिः = $७६०' १३५'' - ६' १४१'' = ७५३' ५४'' = ४५२०३''$
 चक्रकलाभिरष्टाविंशतिर्नक्षत्राणि तदा चन्द्रकेन्द्रकलाभिः किम् । जाता नक्षत्रा

त्मिका चन्द्रगतिः = $\frac{४७०३४ \times २८}{६० \times २१६००} = \frac{४७०३४ \times ७}{६० \times ५४००} = \frac{२३५१७ \times ७}{६० \times २७००}$

१. पञ्चाशीतिलवोनास्तिथिनाड्यस्ताश्च शोधयेच्छशिनः ।

षष्ठ्यंशादद्याः शोभ्यास्तिथिभोगजनाडिकाः केन्द्रात् ॥१२॥

$$= \frac{२६१३ \times ७}{६० \times ३००} = \frac{८७१ \times ७}{६० \times १००} = \frac{६०६७}{६०००}$$
 । (यतश्चक्रकेन्द्रसाधने चक्रकलास्व-
 ष्टाविंशतिनक्षत्राणि कल्पितानि) । ततो रविवृत्तक्षत्रघट्यात्मकं चालनम्

$$= \frac{६०६७ \text{ भोघ} \times ६०}{६००० \times ६०} = \frac{६०९७ \text{ भोघ}}{६०००} = \text{भोघ} + \frac{९७ \text{ भोघ}}{६०००} = \text{भोघ} + \frac{\text{भोघ}}{६२}$$
 स्वल्पान्तरात् । इहाचार्येण सुखार्थं ६२ स्थाने ६० गृहीता अत उपपद्यते मच्छोषितः
 पाठः ॥१२॥

हि. भा. — इसका अर्थ स्पष्ट ही है ।

उपपत्ति ।

यहां चन्द्रगतिः = ७६०' । ३५" अतः विकलात्मक चंग = ४७४३५" नक्षत्रात्मकगतिं

$$= \frac{४७४३५}{६० \times ८००}$$
 । यहां रवि की तरह नक्षत्रघट्यात्मक चालन = $\frac{४७४३५ \times \text{भोघ} \times ६०}{६० \times ८०० \times ६०}$

$$= \frac{४७४३५ \text{ भोघ}}{६० \times ८००} = \frac{६४८७ \text{ भोघ}}{१२ \times ८००} = \frac{६४८७ \text{ भोघ}}{६६००} = \text{भोघ} - \frac{११३ \text{ भोघ}}{६६००}$$

$$= \text{भोघ} - \frac{\text{भोघ}}{८५}$$
 स्वल्पान्तर से ।

इस तरह चन्द्रकेन्द्रगति = ७६०' । ३५" — ६' । ४१" = ७८३' । ५४" = $\frac{४७०३४}{६०}$
 चक्र कला में २८ नक्षत्र पाते हैं तो चन्द्रकेन्द्रगतिकला में क्या इस त्रैराशिक गणित से
 नक्षत्रात्मक चन्द्रकेन्द्रगति = $\frac{४७०३४ \times २८}{६० \times २१६००} = \frac{४७०३४ \times ७}{६० \times ५४००} = \frac{२३५१७ \times ७}{६० \times २७००}$

$$= \frac{२६१३ \times ७}{६० \times ३००} = \frac{८७१ \times ७}{६० \times १००} = \frac{६०६७}{६०००}$$
 यहां चन्द्रकेन्द्र साधन के हेतु चक्रकला
 में २८ नक्षत्र स्वीकार किये गये हैं । उससे रवि की तरह नक्षत्रात्मक चालनघटी

$$= \frac{६०६७ \times \text{भोघ} \times ६०}{६००० \times ६०} = \frac{६०६७ \times \text{भोघ}}{६०००} = \text{भोघ} + \frac{६७ \text{ भोघ}}{६०००} = \text{भोघ}$$

$$+ \frac{\text{भोघ}}{६२}$$
 , स्वल्पान्तर से । यहां आचार्य ने सुखार्थं ६२ के स्थानपर ६० को ग्रहण
 किया है ।

इससे उपपन्न होता है म. म. श्रीसुधाकर द्विवेदी जी का संशोधित प्रकार ॥

इदानीं रविचन्द्रकेन्द्राणां राशिमानमाह ।

त्रिगुणं सप्तविभक्तं नगाद्रयोऽंशा रवेरुच्चम् ।

विकलाष्टकसंयुक्ता नवबाणा लिप्तिका ५६।८ रवेर्भुक्तिः ॥ १३ ॥

विकलाष्टकसंयुक्ता नवबाणा लिप्तिका ५६।८ रवेर्भुक्तिः ।

खनवनगाः शीतांशोः पंचत्रिंशद्विलिप्ताश्च ॥ १४ ॥

स्वोच्चो न केन्द्रमितो नवभिलिप्ताशतैस्ततो जीवाः ।

विषमे भुक्तस्य समे भोग्यस्य सदैव केन्द्रपदे ॥ १५ ॥

सु. भा.—नक्षत्रात्मकौ रविचन्द्रौ वेद ४ गुणौ नव ९ भक्तौ तदा राश्यादिकौ भवतः । चन्द्रकेन्द्रं च त्रिगुणं सप्तहृतं राश्यादि भवेत् । नवभिलिप्ताशतैराचार्येण षोडशार्ययैकैका जीवा पठिता । अतः केन्द्रान्नवभिलिप्ताशतैस्ततो जीवाः साध्या इत्युक्तम् । विषमे केन्द्रपदे भुक्तस्य समे च सदैव भोग्यस्य जीवा कार्या । शेषं स्पष्टार्थम् ।

अत्रोपपत्तिः ।

यदि सप्तविंशतिनक्षत्रैर्द्वादश राशयस्तदा नक्षत्रात्मकेन रविणा वा चन्द्रेण किम् । एवं द्वादशगुणः सप्तविंशतिभिर्गणहारः । गुणहरौ त्रिभिरपर्वत्तितौ जातौ गुणः ४ । हरश्च ९ । केन्द्रराश्यानयने चक्रकलास्वष्टाविंशति नक्षत्रात्मक विभागत्वात् । यदि वसुयमै २८ नक्षत्रैर्द्वादश राशयस्तदा नक्षत्रात्मककेन्द्रेण किम् । अत्र गुणभागहारौ चतुर्भिरपर्वत्तितौ जातौ गुणः ३ । हरः ७ । अत उपपन्नं सर्वम् । शेष वासना चातिसरला ॥१३-१५॥

हि. भा.—नक्षत्रात्मक चन्द्ररवि को ४ से गुणाकर ९ से भाग देने से राश्यादिक चन्द्र और रवि होता है । चन्द्र केन्द्र को ३ से गुणाकर ७ से भाग देने पर राश्यादि केन्द्र होता है । ६०० कला पर एक जीवा पठित है इसलिये केन्द्र से ६०० कला पर से जीवा साधन करने के लिये आचार्य ने कहा है । विषम केन्द्रपद में भुक्तांश पर से तथा समकेन्द्रपद में भोग्यांश पर से जीवा साधन करना चाहिये । शेष शब्दों का अर्थ स्पष्ट ही है ।

उपपत्ति ।

२७ नक्षत्र में बारह राशि होती हैं वहां नक्षत्रात्मक सूर्य या चन्द्र में कितनी राशियां होंगी, इस तरह यहां १२ तो गुणक और २७ भागहार होता है । गु=१२, हर=२७ यहां

१. रविचन्द्रौ वेदगुणौ नन्दविभक्तौ गृहादिकौ केन्द्रम् ।

त्रिगुणं सप्तविभक्तं नगाद्रयोऽंशा खेरुच्चम् ॥१३॥

गुण और हर को ३ से अपवर्तन करने पर गु = ४ हर = ६ । केन्द्रराशि के आनयन में चक्रकाल में नक्षत्रात्मक २८ भाग माना गया है । इसलिये अनुपात से $\frac{१२ रा \times न.केन्द्रमें}{२८}$
 = तत् सम्बन्धी राशि का, यहां गुणभाग को ४ से अपवर्तन करने पर गुण = ३ । हर = ७ । इससे उपपन्न हुआ ॥१३-१५॥

इदानीं ज्याखण्डानि केन्द्रज्यासाधनं चाह ।

एष्यखण्डम् = ज्या (ग+प्र)—ज्याग

तद्युतिदलम् = $\frac{\text{ज्या (ग.प्र)} - \text{ज्या (ग—प्र)}}{२} = \frac{\text{ज्या.प्र.कोज्याग}}{\text{त्रि}} ।$

$$\text{तदन्तरदलम्} = \frac{२ \text{ ज्याग} - \{ \text{ज्या (ग + प्र)} + \text{ज्या (ग - प्र)} \}}{२}$$

$$= \text{ज्याग} - \frac{\text{ज्याग. कोज्याप्र}}{\text{त्रि}} = \frac{\text{ज्याग. उज्याप्र}}{\text{त्रि}}$$

$$\text{ज्याशे} = \frac{\text{ज्याप्र. शे}}{\text{प्र}} \text{ स्वल्पान्तरात् ।}$$

$$\begin{aligned} \text{कोज्याशे} &= \sqrt{\text{त्रि}^2 - \text{ज्या}^2 \text{शे}} = \sqrt{\text{त्रि}^2 - \frac{\text{ज्या}^2 \text{प्र. शे}}{\text{प्र}^2}} \\ &= \text{त्रि} - \frac{\text{ज्या}^2 \text{प्र. शे}^2}{२ \text{ त्रि. प्र}^2} \text{ स्वल्पान्तरात् ।} \end{aligned}$$

(१) समीकरणोऽनयोस्तथापनेन—

$$\begin{aligned} \text{ज्याचा} &= \frac{\text{ज्याग.} \left(\text{त्रि} - \frac{\text{ज्या}^2 \text{प्र. शे}^2}{२ \text{ त्रि. प्र}^2} \right)}{\text{त्रि}} + \frac{\text{कोज्याग. ज्याप्र. शे}}{\text{त्रि. प्र}} \\ &= \text{ज्याग} - \frac{\text{ज्याग. ज्या}^2 \text{ प्र. शे}^2}{२ \text{ त्रि}^2 \text{ प्र}^2} + \frac{\text{कोज्याग. ज्याप्र. शे}}{\text{त्रि. प्र}} \text{ अतो ज्याचा} = \text{ज्याग} \\ &= \frac{\text{कोज्याग. ज्याप्र. शे}}{\text{त्रि. प्र}} - \frac{\text{ज्याग. ज्या}^2 \text{ प्र. शे}^2}{२ \text{ त्रि}^2 \text{ प्र}^2} \\ &= \frac{\text{शे}}{\text{प्र}} \left(\frac{\text{कोज्याग. ज्याप्र}}{\text{त्रि}} - \frac{\text{ज्याग. ज्या}^2 \text{ प्र. प्र}^2 \text{ शे}}{२ \text{ त्रि}^2 \text{ प्र}^2} \right) \\ &= \frac{\text{शे}}{\text{प्र}} \left(\text{युद} - \frac{\text{ज्याग. उज्याप्र. शे}}{\text{प्र}} \right) \\ &= \frac{\text{शे}}{\text{प्र}} \left(\text{युद} - \frac{\text{अंद. शे}}{\text{प्र}} \right) \end{aligned}$$

अत्र कोष्ठान्तर्गतसंख्या यदि भोग्यखण्डं स्फुटं कल्प्येत तर्हि ज्याचा—ज्याग
 $= \frac{\text{शे. स्फुटभोखं}}{\text{प्र}}$ । अत इदं सूक्ष्मं भोग्यफलं ज्याभुक्तकथं गतज्यामिते योज्यं
 तदा वास्तवासन्ना सूक्ष्मज्या स्यात् । एतेन भास्करोक्तमुपपद्यते । उत्क्रमज्याकरणे
 भोग्यखण्डस्योपचयात् क्षयस्थाने घनं भवतीति स्फुटम् । जीवातश्चापानयने भोग्य-
 खण्डस्फुटीकरणं च भास्करविधिना ज्ञेयम् । तत्रैव बापूदेवशास्त्रिकृतं गौरवाननं
 च विचिन्त्यमिति ॥१६-१७॥

हि. भा-तीस में क्रम से ६, ६, १ युक्त करने पर ३६, ३६, ३१ हुआ । २४ । १५ । ५ यह गृहार्ध चाप का पञ्चदशभाग ज्याखण्ड है, चाप कला को ६०० सौ से भाग देने पर लब्धि के बराबर ज्यार्ध खण्ड के योग को ही ज्या का भुक्तिकय जानना चाहिये । ज्याभुक्तिकय और भोग्यफल का योग = इष्टज्या । यहाँ स्फुटभोग्यखण्ड से ज्या साधन सूक्ष्म होता है । अन्य प्रकार से स्थूल होत्र है ।

अब सूक्ष्म भोग्यखण्ड की युक्ति को कहते हैं ।

व्यतीत दो भोग्यखण्ड के अन्तर को आधा करो । उसके और शेष के गुणनफल में (६००) से भाग देने पर जो फल मिले उस को गतैष्यखण्ड के योगदल में जोड़ दो, यदि युतिदलभोग्य खण्ड से अल्प हो । यदि योगदल भोग्यखण्ड से अधिक हो तो उसे योग दल में से घटा दो । क्रमज्या प्रकार में घटावें, और उत्क्रमज्या प्रकार में जोड़ दें । 'यातैष्ययोः खण्ड-कयोर्विशेष' इत्यादि भास्करोक्त इसके अनुरूप ही है । भास्कराचार्य के मत में १२० = त्रि । आचार्य के मत में १५० = त्रिज्या ।

उपपत्ति ।

यदि ६०० = प्र । ज्या.प्र = ३६ । चापम् = इ.प्र + शे । ज्या (इ.प्र) = ज्यागा । इसकी कोटि = कोज्यागा ।

यहाँ ज्योत्पत्ति से—

$$\text{ज्याचा} = \frac{\text{ज्या.ग} \times \text{कोज्याशे} + \text{ज्याशे.कोज्याग}}{\text{त्रि}} \dots\dots\dots (१)$$

$$\text{गख} = \text{ज्या} - \text{ज्या (ग-प्र)}$$

$$\text{ऐष्यखं} = \text{ज्या (ग+प्र)} - \text{ज्याग}$$

दोनों का योग दल ।

$$\text{योदयो} = \frac{\text{ज्या (ग+प्र)} - \text{ज्या (ग-प्र)}}{२} = \frac{\text{ज्याप्र} \times \text{कोज्याग}}{\text{त्रि}} \quad ।$$

$$\text{योदत्रं} = \frac{२ \text{ ज्याग} - \{ \text{ज्या (ग+प्र)} + \text{ज्या (ग-प्र)} \}}{२}$$

$$= \text{ज्याग} - \frac{\text{ज्याग.कोज्याप्र}}{\text{त्रि}} = \frac{\text{ज्याग.उज्याप्र}}{\text{त्रि}}$$

$$\text{ज्याशे} = \frac{\text{ज्याप्र.शे}}{\text{प्र}} \quad \text{स्वल्पान्तर से ।}$$

$$\text{कोज्या शे} = \sqrt{\text{त्रि}^2 - \text{ज्या}^2 \cdot \text{शे}} = \sqrt{\text{त्रि}^2 - \text{ज्या}^2 \cdot \text{प्र.शे}^2}$$

$$= \left(\text{त्रि} = \frac{\text{ज्या}^3 \text{प्र.शे}^3}{2 \text{त्रि.प्र}^3} \right) \text{स्वल्पान्तर से।}$$

(१) एक समीकरण में उत्थापन देने से—

$$\text{ज्याचा} = \frac{\frac{\text{ज्याग (त्रि—ज्या}^3 \text{प्र.शे}^3}{2 \text{त्रि.प्र}^3}}{\text{त्रि}} + \frac{\text{कोज्याग.ज्याप्र.शे}}{\text{त्रि.प्र}}$$

$$= \text{ज्याग} = \frac{\text{ज्याग.ज्या}^3 \text{प्र.शे}^3}{\text{त्रि}^3 \text{प्र}^3} + \frac{\text{कोज्याग.ज्याप्र.शे.}}{\text{त्रि.प्र.}} \text{ अतः ज्याचा—ज्याग}$$

$$= \frac{\text{कोज्याग.ज्याप्र. शे}}{\text{त्रि.प्र}} - \frac{\text{ज्याग} \times \text{ज्या}^3 \text{प्र.शे}^3}{2 \text{त्रि}^3 \text{प्र}^3}$$

$$= \frac{\text{शे}}{\text{प्र}} \left(\frac{\text{कोज्याग. ज्या शे}}{\text{त्रि}} - \frac{\text{ज्याग.ज्या.}^3 \text{प्र.प्र.}^3 \text{शे}}{2 \text{त्रि}^3 \text{प्र}^3} \right)$$

$$= \frac{\text{शे}}{\text{प्र}} \left(\text{युद} - \frac{\text{ज्याग.ज्या प्र.शे}}{\text{प्र}} \right)$$

$$= \frac{\text{शे}}{\text{प्र}} \left(\text{युद} - \frac{\text{अद.शे}}{\text{प्र}} \right)$$

यहां कोष्ठ के अन्तर्गत को यदि भोग्यखण्ड स्फुट मानते हैं तो ज्याचा—ज्याग

$$= \frac{\text{शे.स्फु.भो.खं}}{\text{प्र}} \text{। इस सूक्ष्म भोगफल को गतज्या में जोड़ें तब वासवाखनन सूक्ष्मज्या}$$

होती है। इससे भास्करसूत्र उपपन्न होता है।

इदानीं रविचन्द्रयोर्मन्दफलानयनमाह।

स्वाष्टांशोना सवितुर्द्विगुणा ज्या शीतगोः फलं लिप्ताः।

स्वफलमृणं चक्रार्धादूने केन्द्रेऽधिके मध्ये ॥ १८ ॥

सु. भा.—सवितुः सूर्यस्य केन्द्रज्या स्वाष्टांशोना। शीतगोश्चन्द्रस्य च केन्द्रज्या द्विगुणा तदा तयोः क्रमेण लिप्तात्मकं मन्दफलं भवति। केन्द्रे चक्रार्धात् षड् राशित ऊने मध्ये स्वफलं स्वमन्दफलमृणं कार्यम्। अधिके तुलादिकेन्द्रे मध्ये घनं कार्यमित्यर्थत एव सिध्यति।

अत्रोपपत्तिः ।

रविपरममन्दफलकलाः = $१३०\frac{१}{२}$ स्वल्पान्तरात् । चन्द्रस्य च ३०० कलाः ।
ततोऽनुपातो यदि त्रिज्यातुल्यकेन्द्रज्यया परममन्दफलकलास्तदेष्ट केन्द्रज्यया किं
जाता रविमन्दफलकलाः = $\frac{१३०\frac{१}{२} \times \text{ज्याके}}{१५०}$, $\frac{(१३० \times ८ + ४) \text{ ज्याके}}{१५० \times ८}$
= $\frac{१०४४ \text{ ज्याके}}{१५० \times ८}$ = $\frac{७ \text{ ज्याके}}{८}$ स्वल्पान्तरात् । एवं चन्द्रमन्दफलकलाः
= $\frac{३०० \text{ ज्याके}}{१५०}$ = २ ज्याके । अत उपपन्नम् ॥ १८ ॥

हि. भा.—रवि की केन्द्रज्या में से अपना अष्टमांश घटा दो, और चन्द्रकेन्द्रज्या को दो से गुणा करो । दोनों का लिप्तात्मक मन्दफल होता है । केन्द्र ६ राशि में कम हो तो मन्दफल को मध्यम में से घटा दें । जहां केन्द्र दो राशि से अधिक हो वहां मन्दफल को मध्यम में जोड़ दो, यह बात मूलोक्त में स्पष्ट ही है ।

उपपत्ति ।

रविपरममन्दफलकाला = $१३० + \frac{१}{२}$ स्वल्पान्तर से चन्द्रमा का मन्दफलका = ३००
कला । तब अनुपात से—
रविमन्दफलक = $\frac{१३०\frac{१}{२} \times \text{ज्याके}}{१५०}$ = $\frac{(१३० \times ८ + ४) \text{ ज्या के}}{१५० \times ८}$
= $\frac{१०४४ \text{ ज्याके}}{१५० \times ८}$ = $\frac{\text{ज्याके } ७}{८}$ । स्वल्पान्तर से, एवं चन्द्रमन्द फलकला = $\frac{३०० \text{ ज्याके}}{१५०}$
= २ ज्या के । इससे उपपन्न हुआ ॥ १८ ॥

इदानीं रविचन्द्रयोरगतिफलसाधनमाह ।

नगमूहद्विभोग्यं खण्डं चन्द्रं विवसुलवं द्विगुणम् ।

भुक्तिफलं स्वमृणं स्यात् कुलीरमकरादिके केन्द्रे ॥ १९ ॥

सु. भा.—केन्द्रज्या करणो रवेर्यद्भोग्यखण्डं तन्नवभू १९ ह्रस्ववेभुक्तिफलं
स्यात् । चान्द्रं चन्द्रसम्बन्धि यद्भोग्यखण्डं तद्विवसुलवं स्वाष्टांशोनं द्विगुणं च
चन्द्रभुक्तिफलं स्यात् । तद्गति फलं कुलीरमकरादौ केन्द्रे क्रमेण स्वमृणं स्यात् ।

अत्रोपपत्तिः ।

प्रथमचापेन नवशतमितेन भोग्यखण्डं तदा केन्द्रगत्या किमिति लब्धमद्यत-

नश्चस्तनकेन्द्रज्ययोरन्तरं तेन या मन्दफलकलास्तदेव गतिफलम् ।

तद्यथा रवेः केन्द्रगतिः = ५६' १८" ॥

केन्द्रज्यान्तरम् = $\frac{(५६' १८") \text{ भोखं}}{१००}$ । १८ सूत्रेणानेनान्तरेण मन्दफल-

$$\begin{aligned} \text{कला एव रवेर्गतिफलम्} &= \frac{७ (५६' १८") \text{ भोख}}{८ \times १००} = \frac{७ \times ३५४८ \times \text{भोख}}{७२०० \times ६०} \\ &= \frac{२४८३६ \text{ भोख}}{४३२०००} = \frac{\text{भोख}}{१७} \text{ स्वल्पान्तरात् ।} \end{aligned}$$

एवं चन्द्रस्य केन्द्रगतिः = ७६०' । ३५"-६' । ४१" = ७८३' । ५४" = ७८४' स्वल्पान्तरात् ।

ततो गतिफलं पूर्वोक्तेन विधिना

$$\begin{aligned} &= \frac{२ \times ७८४ \text{ भोख}}{१००} २ + \frac{१९६ \times ४ \times \text{भोख}}{२२५ \times ४} \\ &= २ + \frac{१९६ \times ७ \times \text{भोखं}}{२२५ \times ७} = २ + \frac{७ \text{ भोखं}}{\frac{१५७५}{१९६}} \\ &= २ + \frac{७ \text{ भोख}}{८} \text{ स्वल्पान्तरात् ।} \end{aligned}$$

अत उपपन्नम् । धनर्णवासना भास्करविधिना स्फुटा ॥ १६ ॥

हि. भा.—केन्द्रज्या करण में रवि का जो भोग्यखण्ड है उसको १६ से भाग देने पर रवि का गतिफल होता है । चन्द्र सम्बन्धी भोग्य खण्ड का आठवां भाग भोग्यखण्ड में से घटाकर शेष को दो से गुणा करने पर चन्द्र का गतिफल होता है ।

उपपत्ति ।

पहलाचाप = ६०० ।

अनुपात से—

$\frac{\text{भोखं} \times \text{केग}}{६००} = \text{केंअ}$ । इस पर जो मन्दफल कला होया वह गतिफल है ।

रवि केन्द्र ग = ५६' १८" ।

केन्द्रज्यान्तर = $\frac{(५६' १८") \text{ भोखं}}{६००}$ ।

१८ सूत्र से मन्दफलकला = रविगफ = $\frac{७ (५६' १८") \text{ भोखं}}{८ \times ६०००}$

$$= \frac{७ \times ३५४८ \times \text{भोखं}}{७२०० \times ६०} = \frac{२४८३६ \text{ भोखं}}{४३२०००} = \frac{\text{भोख}}{१७} \text{ स्वल्पान्तर से। इस तरह चन्द्र}$$

की केन्द्रगति = ७६०' । ३५" — ६' । ४१" = ७८३' । ५४" = ७८४' स्वल्पान्तर से ।

$$\text{अतः पहली तरह गण = } \frac{२ \times ७८४ \text{ भोखं}}{६०००}$$

$$= २ + \frac{१६६ \times ४ \times \text{भोखं}}{२२५ \times ४} = २ + \frac{१६६ \times ७ \times \text{भोखं}}{२२५ \times ७}$$

$$= २ + \frac{७ \text{ भोखं}}{१५७५} = २ + \frac{७ \text{ भोखं}}{८} \text{ स्वल्पान्तर से। इससे उपपन्न हुआ।}$$

१६५

घन तथा ऋण की युक्ति भास्कर प्रकार से स्पष्ट ही है ।

इदानीं चन्द्रे भुजफलसंस्कारं तिथौ फलसंस्कारं चाह ।

भांशोऽर्कफलस्येन्दौ रविवद्दद्याद्विशोधिते तथा स्वोच्चे ।

रविफलमिनवच्च तिथौ चान्द्रे व्यस्तं स्फुटार्कान्तिम् ॥ २० ॥

सु. भा. — इन्दौ मध्यचन्द्रेऽर्कफलस्य यो भां २७ शः स रविवद्देयः । तथा इन्दौ स्वोच्चे विशोधितेऽर्थाच्चन्द्रमन्दकेन्द्रे च स रविफलभांशो रविवद्देयः । ततः संस्कृतचन्द्रकेन्द्रात् मन्दफलमानेयं चन्द्रस्येत्यर्थः । इनवद्धनमृणं वा यथा रविमन्द फलमागतं तच्चान्द्रे चन्द्रमन्दफले व्यस्तं संस्कार्यं संस्कृतमंशात्मकं फलमर्कान्तिं द्वादशभक्तं फलं तिथौ देयं तदा स्फुटं तिथिमानं भवेदिति ।

अत्रोपपत्तिः ।

स्फुटार्कौदयतश्चन्द्रसाधनार्थं रविभुजफलसंस्कार आनीतः । तदानयनोपपत्तिश्च 'भाप्तं च द्युमणिफलं लवे' इत्यस्य ग्रहलाघवस्य वासनायां भक्तुतोपपत्तिरवलोक्या । रव्यूनचन्द्रतस्तिथिसाधनं भवति । अतो मध्यमतिथौ रविफलोचन्द्रफलं द्वादशभिर्विभज्य संस्कार्यम् । अतो रविफलव्यस्तसंस्कृतचन्द्रफलं द्वादशहृतमित्युपपद्यते ॥२०॥

हि. भा. — मध्यम चन्द्रमा में रविफल का २७ वां भाग रवि की तरह जोड़ दें या घटा दें । चन्द्रमा को उच्च में घटाकर जो केन्द्र हो उसमें रविफल का २७ वां भाग रवि की तरह घन या ऋण करें । तब संस्कृत चन्द्रकेन्द्र पर से चन्द्रमा का मन्द फल लाना चाहिये । सूर्य की तरह घन या ऋण जो रविफल आवे उसको चन्द्र मन्दफल में व्यस्त (उलटा) संस्कार करें । संस्कृत अंशात्मक फल को १२ से भाग दें । लब्धि को तिथि में संस्कार करने पर स्पष्ट तिथिमान होता है ।

उपपत्ति ।

स्पष्टार्कोदय पर से चन्द्र साधन केलिये रवि का भुजफल संस्कार माना गया है । उस आनयन की उपपत्ति । 'भाप्तं च द्युमणिफलं' इस श्लोक का आशय सुधाकर कृत ग्रह-लाघव की युक्ति से स्पष्ट ही है । रवि में से चन्द्र घटाकर तिथि साधन होता है । इसलिये रविफलोन चन्द्रफल को बारह से भाग देकर फल को मध्यमतिथि में संस्कार करने से मूलोक्त उपपन्न होता है ।

इदानीं केन्द्रत एव तिथिसंस्कारयोग्यं घटिकात्मकं मन्दफलमाह ।

आचार्यैरेतेषां स्थाने स्वल्पान्तरात् क्रमेण २।२।२।२।१।१।० ता अन्तरा-
त्मका निरवयवघटिकाः पठिताः ॥२१॥

हि. भा.—एक पाद में २८ नक्षत्रात्मक केन्द्र संख्या = ७, वहां प्रतिनक्षत्र
चन्द्र मन्दफलघटी से प्राप्त अन्तरखण्ड 'पञ्चेषु पञ्च' इत्यादि पठित है । एवं सूर्य में सूर्योच्च
घटाकर तथा चन्द्र के केन्द्र की तरह केन्द्र बनाने पर प्रतिनक्षत्र रविमन्दफल घटी से प्राप्त
अन्तरखण्ड द्विद्वितीयादि के बराबर समझना चाहिये ।

उपपत्ति ।

एक चक्र में २८ चन्द्रकेन्द्र नक्षत्र कल्पित हैं । इसलिये वृत्त के चातुर्थांश पाद ६०
अंश के सात नक्षत्र हैं । हर एक नक्षत्र में स्वल्पान्तर के १३ भाग हैं । अतः

भानि	= १	२	३	४	५	६	७
भागाः	= १३	२६	३९	५२	६५	७८	९१
केन्द्रज्या	= ३४	६५	९४	११७	१३५	१४६	१५०
मन्दफलकला	= ६८	१३०	१८८	२३४	२७०	२९२	३००
द्वादशहृताघटिका	= ४५०	१०।५०	१५।४०	१९।३०	२२।३०	२४।२०	२५।०
अन्तराणि	= ५।४०	५।१०	४।१०	३।५०	३।०	१।५०	०।४०

यहां आचार्य ने इन स्थानों में स्वल्पान्तर से अन्तररूप निरवयव घटी को क्रम से
५ । ५ । ५ । ४ । ३ । २ । १ ग्रहण किया है । पहले स्थान में बड़ी स्थूलता है । वस्तुतः
अर्थाधिके रूपं ग्राह्य' इस नियम से ६ घटी समुचित हैं ।

इस तरह केन्द्रज्या पर क्रम से 'रविमन्दफल कला । स्वाष्टांशोना' इत्यादि आचार्य
की उक्ति से जानना चाहिये ।

मं. फक	= ३०	५७	८२	१०२	११८	१२८	१३१
द्वादशभक्त घटी	= २।३०	४।४५	६।५०	८।३०	१।५०	१०।४०	१०।५५
अन्तराणि	= २।३०	२।१५	२।५	१।४०	१।३०	०।५०	०।१५

आचार्य स्वल्पान्तर से इन सबों के स्थान पर (२।२।२।२।१।१।०) इतनी अन्तरघटी स्वीकार की है।

इदानीं तिथिसाधनमाह ।

अर्कोनचन्द्रलिप्ताः रवयमस्वरभाजिताः फलं तिथयः ।

गतगम्ये षष्टिगुणे भुक्तचन्तरभाजिते घटिकाः ॥ २२ ॥

सु. भा.—स्पष्टार्थम् । स्पष्टाधिकारेण स्फुटोपपत्तिश्च ॥ २२ ॥

हि. भा.—चन्द्रकला में से रविकला को घटाकर ७२० से भाग देने से फल तिथि होती है। गत और गम्य तिथि को ६० से गुणाकर गत्यन्तर से भाग देने पर क्रम से गत और गम्य तिथि घटी होती है।

उपपत्ति ।

उपपत्ति स्पष्टाधिकार में कही गई है।

इदानीं भयोगसाधनमाह ।

भान्यदिवन्यादीनि ग्रहलिप्ताः खलवसूद्धता लब्धम् ।

भुक्तिहते गतगम्ये दिवसाः षष्ट्याहते घटिकाः ॥ २३ ॥

$$\begin{aligned} \text{अनयोनिष्पत्तिः} &= \frac{२२९६८२८५२२}{४३२०००००००} = \frac{११४८४१४२६१ \times २}{२१६०००००० \times २} = \frac{११४८४१४२६१}{२१६००००००} \\ &= \frac{१}{\frac{१}{१ + \frac{१}{१ + \frac{१}{७ + \frac{१}{२ + \frac{१}{१ + \frac{१}{१ + \frac{१}{५ + \frac{५९६६३८}{४७२६६१९}}}}}}}} \end{aligned}$$

अस्मादासन्नमानानि

$\frac{1}{4}, \frac{1}{2}, \frac{5}{8}, \frac{3}{4}, \frac{7}{8}, \frac{1}{2}, \frac{5}{8}, \frac{3}{4}, \frac{7}{8}, \dots$ आचार्यैरोद $\frac{3}{8} \frac{3}{4}$ मासन्नं गृहीतम् ।
अनेनार्को गुण्यो भौमः स्यादतो भौमः $= \frac{3}{8} \frac{3}{4} \times \text{रवि} = \frac{1}{2} \text{ रवि} \times \frac{3}{8} \frac{3}{4} = \frac{1}{2} \text{ रवि}$
 $(1 + \frac{3}{8} \frac{3}{4}) = \frac{1}{2} \text{ रवि} (\frac{1}{2} + \frac{10 \times 10}{2210}) = \frac{1}{2} \text{ रवि} (1 + \frac{1}{4} \frac{1}{2})$ स्वल्पान्तरात् ।

अत उपपन्नम् । शेषवासना सुगमा ॥ ३३ ॥

अब प्रकारान्तर से भौमादिक ग्रहों का आनयन करते हैं ।

हि. भा.—सूर्य को दो जगह रखें, एक जगह १० से गुणा दें, और वसुशरच्चन्द्र (१५८) से भाग दें, लघ्वि को प्रथम स्थान में जोड़ दें, उसका आघार करें। भौम का ध्रुवा उसमें जोड़ दें तो मध्यम भौम होता है ।

उपपत्ति ।

कल्प में रविभगण = ४३२००००००० ।

कल्प में भौमभगण = २२६६८२८५२२ ।

दोनों का सम्बन्ध = $\frac{२२६६८२८५२२}{४३२०००००००}$

$= \frac{११४८४१४२६१ \times २}{२१६००००००० \times २} = \frac{११४८४१४२६१}{२१६०००००००}$

$= \frac{१}{१}$

$१ + \frac{१}{१}$

$१ + \frac{१}{१}$

$७ + \frac{१}{१}$

$२ + \frac{१}{१}$

$१ + \frac{१}{१}$

$१ + \frac{१}{८६६६३८}$

$५ + \frac{१}{४७२६६१९}$

$$\begin{aligned} \text{एवं । } \frac{\text{चं. पाभ}}{\text{रभ}} &= \frac{२३२३१११६८}{४३२०००००००} = \frac{१}{१८ + \frac{१}{१ + \frac{१}{१ + \frac{१}{२ + \frac{४९३८६२४}{४४४८६७८४}}}}} \end{aligned}$$

अत आसन्नमानानि

चं, चं, उ३, ह३ ह३ = चं इदमाचार्येण गृहीतम् । अत उपपद्यते सर्वम् ॥ ३५ ॥

अब गुरु शनि और राहु का साधन करते हैं ।

हि. भा.—रवि को सात से गुणाकर ८३ से भाग देने पर गुरु होता है । दो से गुणाकर ५९ से भाग देने पर शनि होता है । दश से गुणाकर रसधृति (१८६) से भाग देने पर राहु (पात) होता है ।

उपपत्ति ।

$$\begin{aligned} \text{पूर्व की तरह } \frac{\text{गुभ}}{\text{रभ}} &= \frac{३६४२२६४५५}{४३२०००००००} \\ &= \frac{१}{११ + \frac{१}{१ + \frac{१}{६ + \frac{१}{४६९६२८५} + \frac{५}{६२०४२३५}}}} \end{aligned}$$

इस पर से आसन्नमान = चं, चं, उ३

परन्तु ह३ को आचार्य ने ग्रहण किया है ।

एवम्—

$$\frac{\text{शभ}}{\text{रभ}} = \frac{१४६५६७२६८}{४३२०००००००}$$

$$= \frac{१}{२९ + \frac{१}{७४७०५८२}}$$

$$२ + \frac{१}{६९५४८३५८}$$

इससे आसन्नमान = $\frac{१}{२९}$, $\frac{१}{२९}$यहां $\frac{१}{२९}$ आचार्य ने ग्रहण किया है।

$$\frac{\text{एवम् चंपाभ}}{\text{रभ}} = \frac{२३२३१११६८}{४३२०००००००}$$

$$= \frac{१}{१८ + \frac{१}{१ + \frac{१}{१ + \frac{१}{१ + \frac{१}{४६३८६२४}}}}}$$

$$२ + \frac{१}{४४४८६७८४}$$

इससे आसन्नमान $\frac{१}{१८}$, $\frac{१}{१८}$, $\frac{१}{१८}$, $\frac{१}{१८}$, । $\frac{१}{१८} = \frac{१}{१८}$ इसको आचार्य ने ग्रहण किया। इससे (३५) श्लोक उपपन्न हुआ।

इदानीं शुक्रचलानयनमन्येषां चलं चाह।

त्रिगुणो दलितः स्वद्वादशांशयुक्तः सितचलं ध्रुवं स्यात्।

तात्कालिकं चलं स्याद्विरन्येषां जशुकौ स्तः ॥ ३६ ॥

सु. भा.—अन्येषां भौमगुरुशनीनां रविरेव तात्कालिकं चलं शीघ्रोच्चमस्ति।
तथा रविरेव मध्यमौ जशुकौ स्तः। शेषं स्पष्टम्।

अत्रोपपत्तिः।

$$\frac{\text{पूर्ववत् शुशीभ}}{\text{रभ}} = \frac{७०२२३८९४६२}{४३२०००००००}$$

$$\begin{aligned}
 &= 1 + \frac{1}{1 + \frac{1}{1 + \frac{1}{1 + \frac{1}{2 + \frac{199114936}{432031528}}}}}
 \end{aligned}$$

अत आसन्नमानानि

$$\frac{1}{2}, \frac{2}{3}, \frac{3}{4}, \frac{4}{5}, \frac{5}{6}, \dots \dots \dots \frac{1}{2} = \frac{12 \times 2}{2 \times 2} = \frac{12}{2} = \frac{12}{2} + \frac{12}{2} = \frac{12}{2} + \frac{12}{2 \times 12}$$

इदमाचार्येण गृहीतम् । ततो जातं सितचलम् = $2 \left(\frac{1}{2} + \frac{1}{2 \times 12} \right) = \frac{2}{2} + \frac{1}{2}$.

अत उपपन्नं सितचलानयनम् ।

शेषवासना स्फुटा ॥ ३६ ॥

अब शुक्र तथा अन्य ग्रहों का चलध्रुवानय करते हैं ।

हि. भा.—रवि को तीन से गुण दें, उसका आधा करें उसमें त्रिगुणित रवि का बारहवां भाग जोड़ने से शुक्र का शीघ्रोच्च होता है । अन्य ग्रह (भौम-शुक्र-शनि) का रवि ही तात्कालिक चल शीघ्रोच्च होता है । रवि ही मध्यम शुक्र और भौम होता है ।

उपपत्ति ।

$$\text{पूर्वयुक्ति से शुशीभ} = \frac{702235822}{4320001000}$$

$$\begin{aligned}
 &= 1 + \frac{1}{1 + \frac{1}{1 + \frac{1}{1 + \frac{1}{2 + \frac{161114936}{432031528}}}}}
 \end{aligned}$$

इससे आसन्नमान = $\frac{1}{2}, \frac{2}{3}, \frac{3}{4}, \frac{4}{5}, \frac{5}{6}, \dots \dots \dots$ ।

$$\frac{१३}{८} = \frac{१३ \times ३}{८ \times ३} = \frac{३९}{२४} = \frac{३६}{२४} + \frac{३}{२४} = \left(\frac{३}{२} + \frac{३}{८ \times ३} \right) \text{ इसको}$$

$$\text{आचार्य ने ग्रहण किया । अतः शुक्र का शीघ्रोच्च} = २ \left(\frac{३}{२} + \frac{३}{८ \times १२} \right)$$

$$= \frac{२ \times ३}{२} + \frac{३२}{२} \times \frac{१}{१२} \text{ इससे शुक्र शीघ्रोच्च उपपन्न हुआ । बाकी की युक्ति स्पष्ट ही है ॥}$$

इदानीं भौमादीनां मन्दोच्चांशानाह ।

मन्दांशा नगरवयो भयमाः खनगेन्दवः खनन्दाश्च ।

यमतत्त्वानि तद्वनान्मध्याज्ज्या सूर्यवत् ग्राह्या ॥ ३७ ॥

सु.भा.—भौमादीनां मन्दांशा मन्दोच्चांशाः क्रमेश १२७° । २२७° । १७०° । ९०° । २५२° । एते सन्ति । तद्वनान्मध्याद्ग्रहात् सूर्यवज्ज्या ग्राह्या । मन्दोच्चेन हीनो मध्यो मन्दकेन्द्रम् । सूर्यकेन्द्रवत् तस्य गतगम्यस्य ज्या केन्द्रभुजज्या ग्राह्येत्यर्थः ।

अत्रोपपत्तिः ।

मन्दोच्चानामल्पगतित्वात् सुखार्थं बहुकालोपयोगित्वात् स्वसमये स्थिरांशाः पठिताः । शेषवासना चातिसुगमा ॥ ३७ ॥

अब भौमादि ग्रहों के मन्दोच्चांश को कहते हैं ।

हि. भा.—भौमादि ग्रहों का मन्दोच्चांश क्रम से पठित है यथा भौमका १२७° । बुध का २२७° । गुरु का १७०° । शुक्र का ९०° । शनि का २२५° । इसको मध्यमग्रह में घटा कर सूर्य की तरह ज्या ग्रहण करें । मन्दोच्च मध्यमग्रह में घटाने से शेष मन्द केन्द्र होता है । सूर्य केन्द्र की तरह उसकी (गतगम्य की) ज्या तथा केन्द्रभुजज्या को ग्रहण करें ॥

उपपत्ति ।

मन्दोच्च की गति रूप है, बहुत समय में जाना जाता है इसलिये सुखार्थ उसका स्थिरांश पठित कर दिया गया है ।

इदानीं भौमादीनां मन्दफलानयनमाह

रदगुणिता सप्तहृता कुजस्य सौम्यस्य नागगुणा त्रिहृता ।

द्विगुणा हि फलं सूर्यद्विगुणाग्निविभाजिता स्फुजितः ॥ ३८ ॥

त्रिगुणा त्रिशङ्कता रविजस्य फलस्य मन्दफललिप्ताः ।

मन्दफलयुतोनं स्वशीघ्रोच्चाच्छोधयेन्मध्यम् ॥ ३६ ॥

सु. भा.—स्पष्टाधिकारोक्तमन्दपरिधिना भौमादीनां स्वल्पान्तरात् परममन्दफल कलाः । भौ=६७०' । बु=३६२' । गु=३१४' । शु=१०५' । श=४७६' ।

ततो यदि त्रिज्यया परममन्दफलकलास्तदा केन्द्रज्यया किम् । जाता मन्दफलकलाः, भौ = $\frac{६७० \text{ ज्याके}}{१५०} = \frac{६७ \text{ ज्याके}}{१५} = \frac{६७ \times ३२ \text{ ज्याके}}{१५ \times ३२}$
 $= \frac{६७ \times ३२}{४८०} = \frac{३२ \text{ ज्याके}}{४८०} = \frac{३२ \text{ ज्याके}}{७} \text{ स्वल्पान्तरात् ।}$

बु = $\frac{३६२ \text{ ज्याके}}{१५०} = \frac{७ \text{ ज्याके}}{३} \text{ स्वल्पान्तरात् ।}$

शु = $\frac{१०५ \text{ ज्याके}}{१५०} = \frac{२ \text{ ज्याके}}{३} \text{ ।}$

श = $\frac{४७६ \text{ ज्याके}}{१५०} = ३ \text{ ज्याके} + \frac{२६ \text{ ज्याके}}{१५०}$
 $= ३ \text{ ज्याके} + \frac{\text{ज्याके}}{६} \text{ स्वल्पान्तरात् ॥ ३८-३९ ॥}$

अब भौमादि ग्रहों का मन्दफलानयन करते हैं ।

हि. भा.—केन्द्रज्या को रद (३२) से गुणाकर सप्त (७) सात से भाग देने पर भौम की मन्दफलकला होती है । केन्द्रज्या को नग (सात) से गुणकर तीन से भाग देने पर बुध की मन्दफलकला होती है । द्विगुणित को केन्द्र के गुरु की मन्दफल कला होती है । द्विगुणित केन्द्रज्या को तीन से भाग देने पर शुक्र की मन्दफलकला होती है । केन्द्रज्या को तीन से गुणकर तीस से भाग देने पर शनि की मन्दफल कला होती है ।

उपपत्ति ।

स्पष्टाधिकार में कही गई मन्दपरिधि से भौमादिग्रहों की स्वल्पान्तर से परम मन्दफलकला पठित है । भौम की=६७०' । बुध की=३६२' । गुरु की=३१४' । शुक्र की=१०५' । शनि की=४७६' इस पर से त्रैराशिक अनुपात से भौमादिग्रहों की मन्दफल—

$$\text{कला, भीम} = \frac{३७० \times \text{ज्याके}}{१५०} = \frac{६७ \text{ ज्याके}}{१५} = \frac{६७ \times ३२ \text{ ज्याके}}{१५ \times ३२} = \frac{६७ \times ३२ \text{ ज्याके}}{४८०}$$

$$= \frac{३२ \text{ ज्याके}}{४८०} = \frac{३२ \text{ ज्याके}}{७} \text{ स्वल्पान्तर से ।}$$

$$\text{एवं बुध} = \frac{३६२ \times \text{ज्याके}}{१५०} = \frac{७ \text{ ज्याके}}{३}, \text{ स्वल्पान्तर से ।}$$

$$\text{गुरु} = \frac{३१४ \text{ ज्याके}}{१५०} = २ \text{ ज्या के, स्वल्पान्तर से ।}$$

$$\text{शुक्र} = \frac{१०५ \text{ ज्याके}}{१५०} = \frac{२ \text{ ज्याके}}{३}, \text{ स्वल्पान्तर से ।}$$

$$\text{शनि} = \frac{४७६ \text{ ज्याके}}{१५०} = \text{ज्याके} + \frac{२६ \text{ ज्याके}}{१५०} = \text{ज्याके} + \frac{\text{ज्याके}}{६}$$

स्वल्पान्तरग्रहण से उपपन्न हुआ ॥

इदानीं स्फुटग्रहार्थं संस्कारमाह ।

तस्माच्छीघ्रफलदलं स्वमृगं वा मन्दसंस्कृते दत्त्वा ।

प्राग्वन्मन्दफलमतः सकलं मन्दग्रहात् कुर्यात् ॥ ४० ॥

तस्मात् पृथक् सितादिशीघ्रोच्चविर्वर्जितात् (स्फुटं केन्द्रम्) ।

तस्मात् शीघ्रफलेन संस्कृतः स्फुटो जायते स्पष्टः ॥ ४१ ॥

सु. भा. — मन्दफलयुतोनं मध्यं शीघ्रोच्चाच्छोधयेदेवं शीघ्रकेन्द्रं भवति । तस्माच्छीघ्रफलं कृत्वा तदर्थं स्वं वा ऋणं यथागतं मन्दसंस्कृते मन्दफलसंस्कृते मध्यग्रहे दत्त्वा तं मध्यग्रहं प्रकल्प्यातः प्राग्वत्पुनर्मन्दफलं साध्यं तच्चथागतं सकलं सम्पूर्णं मध्यग्रहे देयम् । एवं गणको मन्दग्रहं मन्दस्पष्टं कुर्यात् । तस्मात् पृथक् स्थापितात् शुक्रादिशीघ्रोच्चविर्वर्जितात् स्फुटं केन्द्रं द्वितीयं शीघ्रकेन्द्रं कुर्यात् । तस्मात् पुनः शीघ्रफलं साध्यम् तेन संस्कृतमन्दः पृथक् स्थापितो मन्दस्पष्टश्च संस्कृतः एवं स्पष्टो ग्रहो जायते । लाघवेन शीघ्रफलसाधनार्थमग्रे खण्डानि वक्ष्यति ।

अत्रोपपत्तिः । उपलब्धिरेव ॥ ४०-४१ ॥

अब स्पष्टग्रह के लिये संस्कार का नियम कहते हैं ।

हि. भा. — मन्दफल से युत या ऋण मध्यग्रह मन्दस्पष्टग्रह होता है । मध्यमग्रह में से

मन्दोच्च घटाने पर शेष मन्दकेन्द्र होता है । शीघ्रोच्च घटाने पर शीघ्र केन्द्र होता है शीघ्र केन्द्र से शीघ्रफलसाधन कर उसका आधा घन या ऋण जो हो उसको मन्दस्पष्ट ग्रह में देकर उसको मध्यमग्रह मानकर उस पर से फिर मन्दफल लाकर सम्पूर्ण फल मध्यमग्रह में घन या ऋण करदें । इस तरह गणक मन्दग्रह को मन्द स्पष्ट करें । पृथक् स्थापित शुक्रादि शीघ्रोच्च से वर्जित स्फुट केन्द्र दूसरा शीघ्रकेन्द्र होता है । उस पर से फिर शीघ्रफल को साधन करें । उससे संस्कृत मन्दस्पष्टग्रह स्पष्टग्रह होता है । लघुता से शीघ्रफल साधन के लिये आगे खण्डों को पठित किया गया है ।

उपपत्ति ।

उपलब्धि ही यहां उपपत्ति है ॥

इदानीं लाघवेन शीघ्रफलानयनार्थं पिण्डमाह ।

भागीकृतचलकेन्द्रे त्रिगुणे खाग्न्युद्धृते फलं पिण्डः ।^१

षड्राश्यधिके चक्राद् विशोध्य शेषेण पिण्डः स्यात् ॥ ४२ ॥^१

सु. भा.—चलकेन्द्रस्य भागाः कर्तव्याः । केन्द्रे षड्राश्यधिके चक्रात् राशि-
द्वादशकात् केन्द्रं विशोध्य शेषस्य भागाः कर्तव्याः । भागास्त्रिगुणाः खाग्न्यु ४०
द्धृताः फलं फलसमो गतपिण्डः स्यात् ।

अत्रोपपत्तिः ।

उच्चनीचयोः शीघ्रकर्णस्य वेलक्षण्यादाचार्येण केन्द्रषड्राशिमध्ये सत्र्यंशत्र-
योदशभागवृद्ध्या भौमादीनां चलकेन्द्राणि प्रकल्प्य तेभ्यः शीघ्रफलान्यानीय
तद्भागा नवगुणाः पिण्डाङ्काः पठिताः । ते षड्राशिमध्ये सार्धत्रयोदश पिण्डाङ्का
भवन्ति । त्रयोदश चतुर्दशपिण्डयोर्मध्ये च केन्द्रान्तरं ५° मस्य दलं ३° मिदमस्तीति
चिन्त्यम् । इष्टकेन्द्रभागेषु कियन्तः पिण्डाङ्का गता एतदर्थमनुपातः । यदि ५°
केन्द्रभागेरेकः पिण्डस्तदेष्टकेन्द्रांशैः किम् । जातो गतपिण्डः । शेषफलानयनार्थमग्रे
वक्ष्यति ॥४२॥

अब लाघव से शीघ्रफल साधन के लिये पिण्ड को कहते हैं ।

हि. भा.—शीघ्रकेन्द्र का अंश करें, केन्द्र यदि ६ राशि से अधिक हो तो चक्र (१२)
में घटाकर शेष को अंश करलें । अंश को त्रि (३) से गुणकर खाग्न (३०) से भाग दें तो
लब्धि के बराबर गतपिण्ड होगा ।

१. भागीकृत चलकेन्द्रे त्रिगुणे खाग्न्युद्धृते फलं पिण्डः ।

उपपत्ति ।

उच्चनीच और शीघ्रकर्ण की विलक्षणता के कारण ६ राशि के मध्य में केन्द्र होने पर तृतीयांशयुक्त १३ भाग की वृद्धि से भौमादि ग्रहों को चल केन्द्र मानकर, उस पर से शीघ्रफल लाकर उसके भाग को ६ से गुणकर जो हो उसको पिण्डाङ्क पठित किया है। वे ६ राशि के भीतर $१३ + \frac{१}{३}$ पिण्डाङ्क होते हैं। तेरह और चौदह पिण्ड के मध्य में केन्द्रान्तर $= \frac{५}{३}$ इसका भाषा $\frac{५}{३}$ यह होता है इसका विचार करें। इष्टकेन्द्र भाग में कितना पिण्डाङ्क बीतगया इसकी जानकारी के लिये अनुपात करते हैं जैसे - यदि $(\frac{५}{३})$ केन्द्र भाग में १ पिण्ड पाते हैं तो इष्टकेन्द्रभाग में क्या इस अनुपात से इष्ट केन्द्रांश सम्बन्धी गतपिण्ड होगा। शेष सम्बन्धी फलानयन प्रक्रिया की युक्ति आगे कहेंगे।

इदानीं शेषसम्बन्धिपिण्डावयवानयनमाह ।

पिण्डान्तरेण गुणिते शेषे खाण्ड्यद्वते क्रमादेयम् ।

उत्क्रमविधौ विशोध्यं गतपिण्डे शीघ्रफलमेतत् ॥ ४३ ॥

सु. भा.—शेषे पिण्डान्तरेण गतैष्यपिण्डयोरन्तरेण गुणिते खाण्ड्य ४० द्वते फलं क्रमादुपचयात् गतपिण्डत एष्यपिण्डेऽधिके गतपिण्डे देयम् । उत्क्रमविधावर्थादि-गतपिण्डत एष्यपिण्डेऽल्पे फलं गतपिण्डे विशोध्यं तदैतत् संस्कृत शीघ्रफलं शीघ्र-फलसंबन्धि पिण्डमानं भवेत् ।

अत्रोपपत्तिः ।

यदि चत्वारिंशत् समेन त्रिगुणशेषेण गतैष्यपिण्डयोरन्तरं लभ्यते तदाऽभीष्ट त्रिगुण शेषेण किमित्यनुपातेन स्फुटा धनार्णोपपत्तिश्चातिसुगमा ॥४३॥

अब शेष सम्बन्धी पिण्डके अवयव को लाने का नियम कहते हैं ।

हि. भा.—शेषको गतैष्यपिण्डान्तर से गुण दें, खाण्ड्य (४०) से भाग दें, फल को ग्रहण करें। यदि गतपिण्ड से एष्यपिण्ड अधिक हो तो फल को गतपिण्ड में घन करने पर शीघ्र फल सम्बन्धी पिण्डमान होता है। यदि गतपिण्ड से एष्यपिण्ड अल्प हो तो पूर्वसाधित फल को गतपिण्ड में घटा दें तो शीघ्र फल सम्बन्धी पिण्डमान होता है।

उपपत्ति ।

यदि चत्वारिंशत् (४०) के बराबर त्रिगुण शेष में गतैष्यपिण्ड का अन्तर प्राप्त होता है तो इष्ट त्रिगुण शेष में क्या इस अनुपात से लाभ हुआ तत् सम्बन्धी पिण्डमान, यहां घन और ऋण की वासना स्पष्ट ही है।

इदानीं विशेषमाह ।

पिण्डाभावे विकलं गुणयेदाद्येन पिण्डकेन ततः ।

गण्यन्ते तु खवेदस्तदेव फलमत्र बोद्धव्यम् ॥ ४४ ॥

सु० भा०—चलकेन्द्रे त्रिगुणो खाव्युद्धृते यदि फलं शून्यं तदा पिण्डाभावः स्यात् । तस्मिन् पिण्डाभावे विकलं शेषमाद्येन पिण्डेन गुणयेत्, ततो गुणानफलानि खवेदे ४० गण्यन्ते विभज्यन्ते । अत्र यत् फलं तदेव शीघ्रफलसम्बन्धि पिण्डमानं बोद्धव्यं ज्ञातव्यमित्यर्थः ।

अत्र उपपत्तिः ।

प्राग्बद्धादि खवेदमितेन त्रिगुणशेषेण प्रथमपिण्डमानं लभ्यते तदेष्टत्रिगुणशेषेण किं जातं शेषसम्बन्धिफलं गतपिण्डाभावात् तदेव शीघ्रफलसम्बन्धि पिण्डमानम् । एतदनुक्तमपि बुद्धिमता ज्ञायते । आचार्येण बालावबोधार्थं लिखितम् ॥४४॥

अब पिण्डानयन में विशेष कहते हैं ।

हि. भा.—त्रिगुणित चलकेन्द्र को खाव्युद्धते (४०) से भाग देने पर फल यदि शून्य हो तब वहाँ पिण्ड का अभाव होगा अर्थात् पिण्ड नहीं होगा । ऐसी अवस्था में विकल शेष को आद्य पिण्ड से गुणा दें । गुणानफल को खवेद (४०) से भाग दें यहाँ जो फल (लब्धि) होगा वही पिण्डमान होगा, यह जानना चाहिये ।

उपपत्ति ।

पूर्व युक्ति से खवेद (४०) के तुल्य त्रिगुण शेष में पहला पिण्ड मिलता है तो इष्ट त्रिगुणशेष में क्या इस अनुपात से शेष सम्बन्धी फल मिला, यहाँ गतपिण्ड का अभाव है । इसलिये वही फल शीघ्रफल सम्बन्धी पिण्डमान हुआ । इस तरह अनुक्त को भी विद्वान समझें । आचार्य ने तो बालक के ज्ञान के लिये यह लिखा है ॥

इदानीं विश्वमिते गतपिण्डे विशेषमाह ।

पिण्डे चतुर्दश विश्वगुणिते नखोद्धृते विकलाः ।

लब्धेन विश्वपिण्डो रहितः शेषं फलं भवति ॥ ४५ ॥

सु. भा.—चतुर्दश संख्यक एष्यपिण्डे सति विकले शेषे विश्वविगुणिते त्रयोदश-संख्यकपिण्डेन गुणिते नखो २० दृते यल्लब्धं भवेत् तेन लब्धेन विश्वपिण्डस्त्र-

१. पिण्डे चतुर्दशैष्ये विश्वविगुणिते नखोद्धृते विकले ।

योदशसंख्यकः पिण्डो रहितः शेषं फलं शीघ्रफलसम्बन्धि पिण्डमानं भवेत् ।

अत्रोपपत्तिः ।

त्रयोदशचतुर्दशपिण्डयो रन्तरे ३० केन्द्रान्तरमस्ति । इति पूर्वमेव ४२ सूत्रे प्रतिपादितम् । चतुर्दशपिण्डमानं शून्यसमम् । अतोऽनुपातो यदि विंशतिमितेन त्रिगुणशेषेण विश्वचतुर्दश पिण्डधोरन्तरं विश्वपिण्डसमं लभ्यते तदेष्टशेषेण किं लब्धेन विश्वपिण्डो रहितश्चतुर्दशपिण्डस्याल्पत्वात् शेषं शीघ्रफलसम्बन्धि पिण्डमानं भवेत् ॥४५॥

अब विश्व के बराबर गतपिण्ड में विशेष नियम कहते हैं ।

हि. भा.—चतुर्दश (१४) संख्यक एष्य पिण्ड हो तो विकल शेष को त्रयोदश (१३) के बराबर पिण्ड से गुणा दें । उसमें नख (२०) से भाग दें । फल जो हो, उसको तेरहवें पिण्ड में से घटा देने पर शेष शीघ्रफल सम्बन्धी पिण्डमान होगा ।

उपपत्ति ।

तेरह और चौदह पिण्ड का अन्तर ३० में केन्द्रान्तर है यह बात पहले ही ४२ सूत्र में कही गई है । चौदहवां पिण्डमान = ० । अब अनुपात करते हैं । बीस के तुल्य त्रिगुणशेष में तेरह चौदह पिण्ड का अन्तर तेरह पिण्ड के तुल्य मिलता है तो इष्टशेष में क्या लाभ जो हो उसको विश्व (१३) पिण्ड में घटा देने पर शेष शीघ्रफल सम्बन्धी पिण्डमान होगा । यहां चौदहवां पिण्ड छोटा है इसलिये १३वें पिण्ड में फल को घटा दिया गया है ।

इदानीं पिण्डतः शीघ्रफलमाह ।

पिण्डफलनवमभागो भागादिफलं ग्रहेषु वा स्वमृणम् ।

चलकेन्द्रे मेषादौ तुलादिके कारयेत् क्रमशः ॥ ४६ ॥

सु. भा.—पिण्डफलस्य नवमांशो भागादिशीघ्रफलं भवेत् शेषं स्पष्टार्थम् ।

अत्रोपपत्तिः ।

नवगुणितं भागादि शीघ्रफलमेव पिण्डांकाः पठिताः इति ४२ सूत्रे प्रतिपादितम् । अतः पिण्डफलं नवहृतं भागादि शीघ्रफलं भवति धनर्णवासना स्पष्टाधिकारतः स्फुटा ॥४६॥

अब पिण्ड पर से शीघ्र फल लाते हैं ।

हि. भा.—पिण्ड फल का नवम भाग भागादि शीघ्र फल होता है । इस फल को

केन्द्र के वश ग्रह में घन ऋण करना चाहिये । मेषादि केन्द्र हो तो शीघ्र फल को ग्रह में घन और तुलादि केन्द्र में फल को ग्रहण करना चाहिये ।

उपपत्ति ।

नव (९) से गुणित भागादि शीघ्रफल ही पिण्डाङ्क पठित है । यह बात २४वें सूत्र में कही गई है । इसलिये पिण्डफल को नव (९) से भाग देने पर फल भागादि शीघ्रफल होता है । घन और ऋण का नियम स्पष्टाधिकार से जानना चाहिये ।

इदानीं भौमस्य चतुर्दशपिण्डानाह ।

खमन्दगतिफलसाधनवत् स्फुटा ॥ ५६-५७ १/२ ॥

१. मन्दविगुणिता भुक्तिः खखनविहृता स्वभुक्तेः स्यात् ॥ ५७ ॥

अथ भौमादि ग्रहों की मध्यगति और मन्दगतिफलों को कहते हैं ।

हि. भा.—भौमादि ग्रहों की क्रम से मध्यम गति कला

== ३१ भौ । बुध २४५ । गु ५ । शुक्र ६६ । श २ । रा. ३

भौमादि ग्रहों की क्रम से मध्यमगति विकला—

भौ = २६ । बुध = ३२ । गु = ० ॥ शुक्र = ८ । श = ० । रा = ११ ॥

भौमादि ग्रहों की मृदुकेन्द्र गति बहुत ही अल्प होती हैं । इसलिये मध्यमगति को ही मन्दभोग्य खण्ड से गुणाकर ६०० से भाग देने पर फल अद्यतन स्वस्तन मन्द केन्द्रज्या का अंतर होता है । इस अन्तर को ही केन्द्रज्या मानकर ग्रह की तरह (३८-३९) सूत्र से मन्द-फल लाना चाहिये । वह मृदुगति फल होता है । केन्द्र के वश से धनऋण करना उचित है । जैसे—कर्कादि केन्द्र में धन और तुलादि केन्द्र में ऋण करना चाहिये । इस तरह मन्दस्पष्टागति होती है । (तद्वनां च) इसका अगले श्लोक से सम्बन्ध है ।

उपपत्ति ।

इसकी उपपत्ति रविमन्दगतिफल साधन की उपपत्ति से स्पष्ट ही है ।

हरस्वगतिरेवं बहुगुणात्पाज्ये भुक्तपदलिते

द्वे द्वे सूकाले कारयेत् स्फुटा भुक्तिः ॥ ६० ॥^१

सु. भा.—मन्दस्फुटगत्यूनं शीघ्रगतिं शीघ्रोच्चगतिं शीघ्रकेन्द्रगतितां शीघ्रस्य खण्डेनार्थात् पिण्डान्तरेण पिण्डयोगतैष्यपिण्डयोरन्तरेण सङ्गुणयेत् खार्क १२० विभजेत्लिप्ताद्यं फलं तद्गते शीघ्रं फलं स्यात् । तच्च क्रमोत्क्रमविधौ स्वमृणं स्यात् । गतपिण्डत एष्यपिण्डेऽधिके धनमल्पे ऋणमित्यर्थः । अथ यदि चतुर्दशस्व-तुर्दशपिण्ड एष्यो भवेत् तदा शीघ्रकेन्द्रगतेगुणको विश्वपिण्डो हरश्च षष्टिर्भवेत् । शीघ्रकेन्द्रगतिं त्रयोदशपिण्डप्रमाणेन सङ्गुण्यषष्ट्या विभजेत् फलं तदा गतेः शीघ्रफलं स्यादित्यर्थः । मन्दस्फुटा गतिः शीघ्रगतिफलसंस्कृता स्फुटा गतिः

१. खरसहरो गतिरेवं बहुगुणमानं स्वमन्दभुक्तेष्वेत् ।

भुक्त्यपरहिते वक्रां तत्काले कारयेद् भुक्तिम् ॥ ६० ॥

स्यात् । एवं यदि मन्दस्पष्टगतेः शीघ्रगतिलभ्यमानं बहु स्यात् तदा ऋणमाने भुक्त्यपरहिते मन्दस्पष्टगतिरहिते सति शेषं तत्काले वक्रां भुक्तिं कारयेद्गणक इति शेषः ॥

अत्रोपपत्तिः ।

यदि चत्वारिंशन्मितेन भागात्मकेन त्रिगुणशेषेण गतैष्यपिण्डयोरन्तरं लभ्यते तदा त्रिगुणकेन्द्रगतिभाग समशेषेण किं पिण्डस्य नवगुणत्वात् फलं नवहृत-मद्यतनस्वस्तन शीघ्रफलयोरन्तरं भागात्मकं तत् षष्टिगुणं जातं कलात्मकं शीघ्र गतिफलम् $\frac{(गपि \sim एपि) जशीकेग}{४० \times ६ \times ६०} \times ६० = \frac{(गपि \sim एपि) शीकेग}{१२०}$ ।

त्रयोदशचतुर्दशपिण्डयोरन्तरे केन्द्रांशः $= \frac{२०}{३}$ इति पूर्वं ४२ सूत्रे प्रतिपादि-तम् । तत्र गतैष्यपिण्डान्तरं चतुर्दशपिण्डाभावात् त्रयोदशपिण्ड सममतः शीघ्रफल गति साधने तत्र केन्द्रगतेस्त्रयोदशपिण्डो गुणः षष्टिर्हरो भवेत् बनर्णवासना चाति-सुगमा ॥५८-६०॥

अब ग्रह के शीघ्रगति फल को कहते हैं ।

हि. भा.— मन्दस्फुटगति से ऊन शीघ्रोच्चगति शीघ्रकेन्द्रगति होती है । शीघ्रकेन्द्र-गति को शीघ्रखण्ड (अर्थात् गत-एष्य पिण्ड का अन्तर) से गुणा दें और खाकं (१२०) से भाग दें लब्धि कलादि होगी, वही शीघ्रफल होगा । उस शीघ्रफल को क्रम और उत्क्रम विधि में धन और ऋण करें । जैसे जहां पर गतपिण्ड से एष्यपिण्ड अधिक हो वहां फल को धन करें । जहां पर गतपिण्ड से एष्यपिण्ड अल्प हो वहां ऋण कर दें ।

जहां चतुर्दश (१४) पिण्डेष्य हो वहां शीघ्रकेन्द्रगति का गुणक विश्व (१३) पिण्ड होता है और भाग हर षष्टि (६०) होता है । शीघ्रकेन्द्रगति को त्रयोदश (१३) पिण्ड से गुणाकर साठ से भाग दें फल शीघ्रगतिफल होगा, मन्दस्फुटगति \pm शीघ्रफ $=$ स्फुटगति । यदि मन्दस्पष्टगति से ऋणाशीघ्रगतिफल अधिक हो तो शेष को वक्रगति करना चाहिये ।

उपपत्ति ।

त्रिगुणशेष भागात्मक चत्वारिंशत् (४०) में गत एष्यपिण्ड का अंतर मिलता है तो त्रिगुणित केन्द्रगति समशेष में क्या इस अनुपात से भागात्मक अद्यतन स्वस्तन शीघ्रफल का अन्तर $= \frac{(गपि \sim एपि) ३ शीकेग}{४० \times ६ \times ६०}$ । इसको साठ से गुणने पर कलात्मक शीघ्रगतिफल $= \frac{(गपि \sim एपि) १ शीकेग}{१२०}$ ।

तेरह-चौदह पिण्डों के अन्तर में केन्द्रांश $= \frac{२०}{३}$ । पहले ४२ सूत्र में कहा गया है ।

वहां चौदहवें पिण्ड के अभाव में तेरहवां पिण्ड ही गत एष्य पिण्ड का अन्तर होता है । इसलिये शीघ्रगति फल साधन में केन्द्र गति को तेरहवां पिण्ड गुणक और षष्टि (६०) भाग हर होता है । घन ऋण की युक्ति स्पष्ट ही है ।

खण्डखाद्यस्य श्लोका एते ।'

नवतिथयो १५६ ऽष्टि १६ विभक्ताः^१

पंचरसा ६५ वसु ८ हता दश १० त्रिहताः ।

विषुवच्छायागुणिताः

स्वदेशजाश्चरदलविनाडयः ॥ ६१ ॥

सु. भा.—नवतिथयो १५६ विषुवतीगुणिताः षोडशविभक्ताः फलं फला-
त्मकं स्वदेशे प्रथमं चरखण्डम् । पञ्चरसा ६५ विषुवतीगुणा वसु ८ हताः
फलं द्वितीयं चरखण्डम् । एवं दश १० पलभा हतास्त्रि ३ हतास्तृतीयं चरखण्डं
भवतीति ।

अत्रोपपत्तिः ।

एकाङ्गुलपलभादेशे चाचार्यमतेन क्रमेण पलात्मकानि चरखण्डानि प्रख
= $\frac{१५६}{१६}$ । द्विखं = $\frac{६५}{८}$ । तृखं = $\frac{१०}{३}$ एतानि पलभागुणानि स्वदेशे भवन्तीति स्फुटा
वासना । भास्कराचार्येण $\frac{१५६}{१६}$ । $\frac{६५}{८}$ अनयोः स्थाने क्रमेण १०, ८ संख्ये गृहीते ।
अत उक्तः 'दिङ्नागसत्र्यंशगुणैर्विनिधनी पलप्रभे' त्यादि ॥६१॥

अब चरखण्ड को कहते हैं ।

हि. भा.—नवतिथयः (१५६) को विषुवती (पलभा) से गुणाकर षोडश (१६) से
भाग देने पर फल अपने देश का पलात्मक पहला चरखण्ड होता है ॥ पञ्चरसा (६५) को
विषुवती (पलभा) से गुणाकर वसु (८) से भाग देने पर फल दूसरा चरखण्ड होता है ।

इस तरह दश (१०) को पलभा से गुणाकर तीन से भाग देने पर फल तीसरा
चरखण्ड होता है ।

उपपत्ति ।

जिस देश की पलभा १ अंगुल की है । उस देश का पलात्मक चरखण्ड = प्रखं

१. नवतिथयोविभक्ता इत्यादि आर्याषट्कं खण्डखाद्याच्चिन्त्यम् ।

२. नवतिथयोऽष्टिविभक्ता इति पाठः साधुः

$= \frac{1}{4} \frac{1}{2}$ । द्विखं $= \frac{1}{2}$ । तृखं $\frac{1}{3}$ । आचार्य ने स्वीकार किया है ।

भारकराचार्य ने $\frac{1}{4} \frac{1}{2}$, $\frac{1}{2}$ इन दोनों के क्रम से १०, ८ को ग्रहण किया है । इसलिये “दिग् नाग सत्र्यंशगुणीविनिघ्नीपलप्रभे” इत्यादि में कहा गया है ।

उपरोक्त चरखण्ड को अपने-अपने देश की पलभा से गुणने पर अपने-अपने देश का चरखण्ड होता है । इसकी उपपत्ति स्पष्ट ही है ।

ज्याः केन्द्रं स्फुटभानुं

कृत्वा ये राशयश्चरार्धानि ।

भुक्तानि भोग्यगुणिता

च्छेषात् खखधृतिहृतात् तु फलम् ॥ ६२ ॥

सु. भा.—स्फुटभानुं केन्द्रं कृत्वा तस्य तस्य भुजः साध्यस्तत्र चरार्धानि ज्या ज्या खण्डानि प्रकल्प्य केन्द्रभुजे ये राशयस्तन्मितानि भुक्तानि ज्याखण्डानि भवन्ति । शेषात् केन्द्रभुजशेषकलामानाद्भोग्यचरखण्डगुणात् खखधृति १८०० हृतात् फलं च गतचरखण्डयोगे क्षेप्यमेवमभीष्टं पलात्मकं चरमानं भवेत् । अत्रोपपत्तिस्त्रैराशिकेन स्फुटा ॥६२॥

पलात्मक चरमान को कहते हैं ।

हि. भा.—स्पष्टसूर्य का केन्द्र को भुज बना लें, वहां चरखण्डज्या को ज्या खण्ड कल्पना करें । केन्द्र भुज में जितनी राशियां हों उनके तुल्य व्यतीत ज्याखण्ड होते हैं । भुज शेषकला के मान से भोग्य चरखण्ड से गुणा करें, उसमें खखधृति (१८००) से भाग दें, फल को गत चरखण्ड योग में जोड़ दें तो अभीष्ट पलात्मक चरमान होता है ।

उपपत्ति ।

यहां चरानयन की उपपत्ति त्रैराशिक गणित द्वारा स्पष्ट ही है ।

गतिपादं पादोनां गतिं विशोध्यास्तकाल उदये च ।

संसाधितस्य तस्य ग्रहस्य चरकर्म चान्यस्य ॥ ६३ ॥

सु. भा.—निशीथकालिकग्रहे गतिचतुर्थांशं चतुर्थांशोनां गतिं च विशोध्य क्रमेणास्तकाले उदये च ग्रहो भवति । एवं तस्य रवेर्वाऽन्यस्य ग्रहस्य संसाधितस्य मध्ये चरकर्म कार्यम् अस्ते उदये वा ग्रहे चरकर्म देयं न दिनार्धे निशीथे चेति स्फुटं सिद्धान्तविदामिति ॥६३॥

हि. भा.—निशीथ कालिक ग्रह में गति का चौथे भाग और चौथा भाग से हीन गति को घटाने पर क्रम से अस्तकाल तथा उदयकाल में ग्रह होता है । जैसे—निशीथ

कालिक ग्रह में गति का चतुर्थांश घटाने से अस्तकालिक एवं चतुर्थांश भाग से हीनगति को निशीथकालिक ग्रह में घटाने से शेष उदयकालिक ग्रह होता है ।

इस तरह साधित ग्रहों के मध्य में चरकर्म करना चाहिये । उदयकाल या अस्तकाल में ग्रह में चरकर्म करना चाहिये । दिनार्ध और रात्र्यर्ध में चरकर्म नहीं करना चाहिये, यह बांत सिद्धान्त वेत्ता स्पष्ट रूप से जानते ही हैं ।

चरदलविनाडिकागतिकलावधात् खखरसाग्नि ३६०० लब्धकलाः ।

ऋणमुदयेऽस्तमये धनमुत्तरगोले ऽन्यथा याम्ये ॥ ६४ ॥

सु० भा०—स्पष्टार्थम् । उपपत्तिश्च 'चरघनभुक्तिद्यु' निशासु भक्ते' त्यादिना भास्करोक्तेन स्फुटा ॥६४॥

हि. भा.—चरदल घटी और गतिकला के गुणनफल में खखरसाग्नि (३६००) से भाग दें । फल कलात्मक होगा । उत्तर गोल में सूर्य हो तो उस फल कला को उदयकाल में ऋण और अस्तकाल में धन करना चाहिये । याम्य गोल में सूर्य हो तो फलकला को उदयकाल में धन और अस्तकाल में ऋण करना चाहिये ।

पञ्चदश हीनयुक्ताश्चरार्धनाडीभिरुत्तरे गोले ।

याम्ये युक्तविहीना द्विसङ्गुणा रात्रिदिननाडयः ६५

सु. भा.—स्पष्टार्थम् । उपपत्तिश्च 'चरघटीसहिता रहिता क्रमात् तिथि मिता घटिका खलु गोलयोरि' त्यादिना भास्करविधिना स्फुटा ॥६५॥

हि. भा.—पञ्चदश (१५) से युत चरघटी उत्तर गोल में दिनार्ध होता है । पञ्चदश (१५) से हीन चरघटी रात्र्यर्ध होता है ।

दक्षिण गोल में पञ्चदश (१५) से युत चरघटी रात्र्यर्ध तथा (१५) से हीन चरघटी दिनार्ध होता है । दिनार्ध और रात्र्यर्ध को दूना करने से दिनमान और रात्रिमान होता है ।

उपपत्ति ।

चरघटी सहिता रहिता क्रमात् तिथिमिता घटिका खलु गोलयोरित्यादि भास्करोक्त श्लोक की उपपत्ति से स्पष्ट ही है ।

मिश्रेष्टान्तरगुणिता भुक्तिर्दिवसे निशादले प्रथमे ।

षष्ठ्या विभज्य लब्धं विशोध्य तात्कालिको भवति ॥ ६६ ॥

सु. भा.—दिवसे दिनेष्टकाले वा प्रथमे निशादले निशीथतोऽर्वाक् चेष्ट

काले मिश्रस्य राश्वर्धकालस्य स्वेष्टकालस्य च यदन्तरं तेन भुक्तिर्ग्रहगतिगुणा फलं षष्ठ्या विभज्य लब्धं निशीथकालिकग्रहाद्विशोध्य शेषं तात्कालिको ग्रहो भवति । एवं निशीथानन्तरेष्टकाले लब्धं निशीथकालिकग्रहे संयोज्य तात्कालिक-ग्रहः कार्यं इत्यनुक्तमपि बुद्धिमता ज्ञायत इति ।

अत्रोपपत्तिस्त्रैराशिकेन स्फुटा ॥६६॥

हि. भा.—दिन में या राश्वर्ध से पूर्व इष्टकाल हो तो मिश्रकाल, इष्टकाल के अंतर को ग्रहगति से गुणा करें, गुणनफल में साठ (६०) से भाग देने पर फल जो हो उसको निशीथ (राश्वर्ध) कालिक ग्रह में घटा देने से शेष तात्कालिक (इष्टकालिक) ग्रह होता है । इस तरह राश्वर्ध के बाद इष्टकाल हो तो मिश्रकाल और इष्टकाल के अन्तर को ग्रहगति से गुणाकर ६० से भाग दें, लब्ध फल को राश्वर्धकालिक ग्रह में जोड़ देने से इष्टकालिक ग्रह होता है ।

उपपत्ति ।

यहां इसकी उपपत्ति त्रैराशिक गणित से स्पष्ट ही है । विज्ञान के लिये इससे अधिक स्पष्ट क्या हो सकता है ।

क्रान्त्ययुतिवियोगादक्षपदेः शोधिते दिनदले भा ।

भाश्रुतिकृत्योः कृतमनुयुतो नयाकृत्वकर्षः स्यात् ॥ ६७ ॥

सु. भा.—क्रान्त्यक्षययुतिवियोगात् त्रिप्रश्नोक्त्या मध्यनतांशः साध्याः । नतांशमाने चक्रपदान्नवतेः शोधिते शङ्कुचापमाने विदिते सति त्रिप्रश्नाधिकार विधिना शङ्कुना मध्यनताशज्या तदा द्वादशांगुल शङ्कुना किमित्यनुपातेन दिनदले मध्याह्ने भा छाया साध्या । छायाकर्णं कृत्योः कृतमनुयुतो नयोः सत्योयारकर्षस्या-परस्य कृतिः क्रमेण भवति । छायाकृतिः कृतमनु १४४ युता छायाकर्णकृतिस्तथा छायाकर्णकृतिः कृतमनु १४४ भिरूना छायाकृतिर्भवतीत्यर्थः ।

अत्रोपपत्तिः ।

त्रिप्रश्नाधिकारविधिना स्फुटा ॥६७॥

हि. भा.—क्रान्ति और अक्षांश का योग या अन्तर मध्य नतांश होता है । नतांश मान को चक्रपद (९०) में घटाने से ९०—नतांश=उन्नतांश होता है । इस पर से शङ्कुमान जानकर त्रिप्रश्नाधिकारोक्त प्रकार से अनुपात द्वारा दिनार्ध में छाया साधन करना चाहिये

१ क्रान्त्यक्षययुतिवियोगाच्चक्रपदात् शोधिते दिनदले भा ।

भाश्रुतिकृत्योः कृतमनुयुतो नयोः कृतिरकर्षस्य ॥६७॥

यथा $\frac{\text{मनज्या} \times \text{द्वारांशकु}}{\text{शंकु}}$ मछाया । छाया + १४४ = छाक तथा छाक - १४४ = छा ।

दोनों का मूल लेने से छायाकर्ण तथा छाया होती है ।

उपपत्ति ।

यहां त्रिप्रश्नाधिकरोक्त विधि से उपपत्ति स्पष्ट है ।

इदानीमिष्टकाले स्थूलं छायाकर्णमाह ।

षड्गुणिता गतशेषा नाड्यो दिवसविभाजिताज्या तत् ।

दिनदलकर्मगुणाः स्वानया त्रिभज्याभक्तं फलं कर्णः ॥ ६८ ॥

सु. भा. — गतशेषा नाड्य उन्नतकालः । षड्गुणिता दिनार्धभाजिता यत् फलं स्यात् तत्संख्यया ज्या साध्या । यत्लब्धं तत्संख्यकानां १५ सूत्रे लिखितानां ज्याखण्डानां योगः कार्यः सा ज्या भवतीत्यर्थः । एवमियं ज्या स्थूलेष्टान्त्या ज्ञातव्येति । त्रिभज्या दिनार्धकर्णो गुणाऽनया पूर्वसाधितया स्थूलेष्टान्त्याऽऽप्ता फलं स्थूल इष्टकाले छायाकर्णो भवतीति ।

अत्रोपपत्तिः ।

यदि दिनदलोन्नतकालेन नवतिभागास्तदेष्टोन्नतकालेन किं लब्धा भागाः

षष्टिगुणाः कलास्ताः खखनवो १०० द्यूता लब्धाः $= \frac{१०० \text{ उका} \times ६०}{\text{दिद} \times १००} = \frac{६० \text{ उका}}{\text{दिद}}$ ।

लब्धसंख्यकानां ज्याखण्डानां योगः स्थूलेष्टान्त्या जाता । ततो यदि दिनार्धान्त्यया स्थूलतया त्रिज्यासमया दिनार्धकर्णो लभ्यते तदेष्टान्त्यया किं व्यस्तानुपातेन जात

इष्टकर्णः $= \frac{\text{दिद} \times \text{त्रि}}{\text{इ अ}}$ । अत उपपन्नम् ॥ ६८ ॥

अब इष्टकाल में स्थूल छायाकर्ण को कहते हैं ।

हि. भा. — गतशेषनाडी (उन्नतकाल) को षट् (६) से गुणाकर दिनार्ध से भाग दें जो फल मिले उससे ज्या साधन करना चाहिये । फल के बराबर (१५) सूत्र के अनुसार ज्या खण्डों का योग करें, वही ज्या होगी । यह ज्या को स्थूल इष्टान्त्या समझनी चाहिये । त्रिभज्या को दिनार्ध कर्ण से गुणाकर पूर्वसाधित स्थूल इष्टान्त्या से भाग देने पर फल जो हो वह इष्टकाल में स्थूल छायाकर्ण होता है ।

१ षड्गुणिता गतशेषा नाड्यो दिवसार्धभाजिता तज्ज्या ।

दिनदलकर्णगुणाऽऽप्तानया त्रिभज्या फलं कर्णः ॥ ६८ ॥

उपपत्ति ।

यदि दिनार्धतुल्य उन्नतकाल में नवति (६०') भाग मिलता है तो उन्नतकाल में क्या इस अनुपात से जो फल भाग हो उसको षष्टि (६०) से गुणाकर कला होती हैं। उसको खखनव (६००) से भाग देने से उसका स्वरूप
$$= \frac{६० \text{ उका} \times ६०}{\text{दिक्} \times ६००} = \frac{६ \text{ उका}}{\text{दिक्}} ।$$

यहां लब्ध संख्यक ज्या खण्डों का योग स्थूल इष्टान्त्या होती है। इस पर से उलटे अनुपात से इष्टकर्ण
$$= \frac{\text{दिक्} \times \text{त्रि}}{\text{इयं}} ।$$
 इससे उपपन्न हुआ ।

इदानीमिष्टकर्णत उन्नतकालमाह ।

दिनदलकर्णं त्रिभज्यागुरो श्रवणोद्धृते फलस्य धनुः ।

द्युदलगुरां तिथिभक्तं दिनगतशेषासवः क्रमशः ॥ ६६ ॥

सु. भा.—धनुर्दिनार्धगुणं पञ्चदशभक्तं फल क्रमशः पूर्वापरकपालयोर्दिनगतशेषासवो भवन्ति । शेषं स्पष्टार्थम् ।

अत्रोपपत्तिः ।

पूर्वप्रकारवैपरीत्येन धनुः
$$= \frac{६० \times ६० \times \text{उका}}{\text{दिद}} \text{ अतो घटद्यात्मक उन्नतकाल}$$

$$= \frac{\text{दिन} \times \text{घ}}{६० \times ६०} ।$$
 अयं ३६० गुरां जातोऽस्वात्मक उन्नत कालः
$$= \frac{\text{दिद} \times \text{घ}}{१५}$$
 अत उपपन्नम् ॥ ६६ ॥

अब इष्टकर्ण पर से उन्नतकाल को लाते हैं ।

हि. भा.—दिनार्धं कर्णं को त्रिज्या से गुणा दें, कर्ण से भाग दें, फल जो हो उसका चाप कर लें, उसको दिनार्ध से गुणाकर तिथि (१५) से भाग दें फल क्रम से दिनगत शेषासव होता है ।

उपपत्ति ।

(६८) सूत्र के विपरीत क्रम से यहां धनु
$$= \frac{६० \times ६० \times \text{उका}}{\text{दिद}} ।$$

इससे घटद्यात्मक उन्नतकाल
$$= \frac{\text{दिद} \times \text{घ}}{६० \times ६०} ।$$

इसको (३६०) से गुणने पर, उन्नतकाल = $\frac{दद \times घ}{१५}$ ।

इस युक्ति से (६६) वां श्लोक उपपन्न हुआ ।

इदानीं ज्यातश्चापानयनमाह ।

ज्याखण्डोने शेषे गुणिते नवभिः शतैरशुद्धहृते ।

क्षेप्याणि शुद्धखण्डैर्गुणितानि शतानि नव चापम् ॥ ७० ॥

सु. भा.—ज्यामाने ज्याखण्डः १५ सूत्रे पठितरूपे शेषे नवशतैर्गुणितेऽशुद्ध-
खण्डहृते लब्धौ शुद्धखण्डैः शुद्धखण्डसंख्याभिर्गुणितानि नवशतानि क्षेप्याणि तदा
चापं भवति ।

अत्रोपपत्तिः ।

ज्यासाधनवैपरीत्येन सुगमा ॥ ७० ॥

अब ज्या से चाप साधन को कहते हैं ।

हि. भा.—यहां (१५) सूत्र में कथित ज्या खण्ड को ज्या मान में से घटाकर—नव-
शत (९००) से गुणा दें, अशुद्ध खण्ड से भाग दें, लब्ध शुद्धखण्ड संख्या से गुणा हुआ नव-
शत (९००) उसमें जोड़ दें तो चाप मान होता है ।

उपपत्ति ।

यहां ज्या साधनोपपत्ति के विपरीत (उलटा) उपपत्ति द्वारा (७०) वां श्लोक
उपपन्न होता है—व्यर्थ बार-बार लिखने के प्रयास से क्या लाभ ।

इदानीमुपसंहारमाह ।

इति तिथिनक्षत्रदिनमाद्यादिकसिद्धौ ब्रह्मगुप्तेन ।

द्वासप्तत्यार्याणां संक्षिप्तोऽतिस्फुटश्चैषः ॥ ७१ ॥

सु. भा.—स्पष्टार्थम् ॥ ७१ ॥

हि. भा.—इसका अर्थ तो स्पष्ट ही है । इस ग्रन्थ में आचार्य ब्रह्मगुप्त ने तिथि,
नक्षत्र, दिन आदि समस्त विषयों का उल्लेख इन बहत्तर आर्याओं के द्वारा संक्षिप्त रूप से
कर दिया है ॥ ७१ ॥

इदानीमयं कस्मै न दातव्य इत्याह ।

दुर्जनकृतघ्नशत्रुप्रतिकंचुककारिणे न दातव्यः ।

ध्यानग्रहाधिकारो जिष्णु सुतब्रह्मगुप्तकृतः ॥ ७२ ॥

इति श्री ब्रह्मगुप्तकृतो ध्यानग्रहोपदेशाध्यायः समाप्तः ॥

सु. भा.—प्रतिकञ्चुककारी पिशुनः । शेषं स्पष्टम् ॥७२॥

मधुसूदनसूनुनोदितो यस्तिलकः श्रीपृथुनेह जिष्णुजोक्तं ।

हृदि तं विनिधाय नूतनोऽयं रचितो ध्यानखगे सुधाकरेण ॥१॥

अपकृष्य दशावतारलीलां प्रकृतिर्विमकलामलङ्करोति ।

परिहाय सुपात्रमत्र लोकाः सकला सङ्कलयन्ति कौ कुपात्रम् ॥२॥

या ब्रह्मगुप्तकृतिरत्र सहस्रसूत्रैर्नाना प्रकारकरणेन च भास्करेण ।

मन्दीकृता पृथुवृथातिलकेन सेयं विद्योतिता निजकरेण सुधाकरेण ॥३॥

ये भास्करादिकृतिपारगता नवीने चापप्रपञ्चजविधौ कुशलाः सुशीलाः ।

श्रीमत्सुधाकरकृतं तिलकं निधाय सज्ज्योतिषेऽत्र विहरन्तु त एव धीराः ॥४॥

कृपालुसूनुना सुधाकरद्विवेदिना सुतं परात्परं निधाय मानसे सुकोशलापतेः ।

गजेषुनन्दभूमिहायने मधौ सितेगुरौ, सुरामज्जन्मसत्तिथावकारि सोपपत्तिका ॥५॥

सन् १६०१ मार्चमासस्याष्टाविंशतिदिने श्रीजानकीरमणचरण सरोजरजः

प्रसादेनायं तिलकः सम्पूर्णतामगात् ॥

इति श्रीकृपालुदत्तसूनु सुधारकद्विवेदिविरचितो ब्रह्मगुप्तकृतध्यानग्रहोपदेशाध्यायतिलकः समाप्तः ।

यह किसको न देना चाहिये सो कहते हैं ।

हि. भा.—जिष्णु सुत ब्रह्मगुप्त से निर्मित इस “ध्यानग्रहोपदेशाध्याय” को दुर्जन, कृतघ्न, शत्रु, प्रतिकञ्चुक (बुगलखोर) इन सबों को न देना चाहिये, यह ग्रन्थ बनाने वाले का उपदेश है ॥७२॥

यहां ब्रह्मगुप्तकृत ध्यानग्रहोपदेशाध्याय समाप्त हुआ ।

अथ ध्यानग्रहोपदेशाध्याये क्षेपसाधनम् ।

२ श्लोके पञ्चचत्वारिंशत् षष्टिभक्ता फलम् = $\frac{4}{5} \times \frac{3}{4} = \frac{3}{5}$ इदं स्थूलत्वेन व्यर्थमेव मध्यराशावाचार्येण प्रक्षिप्तम् ।

‘अथ सरसवेदयुक्त’ एतदर्थम्—

‘गोद्रीन्द्रद्विकृताङ्कदसूनगगोचन्द्राः—१६७२९४७१७६ शकाब्दान्विताः’ इति भास्करोक्त्या खपञ्चपञ्च ५५० मिते शके कल्पगताब्दाः = १६७२९४७७२६ । वर्षादावधिशेषज्ञानायाऽनुपातः, कल्पसौरवर्षः कल्पाधिमामासा लभ्यन्ते तदेष्टसौर वर्षरेभिः क इति जाता इष्टाऽधिमासाः = $\frac{१६७२९४७७२६ \times १५९३३०००००}{४३२०००००००}$
= $\frac{१६७२९४७७२६ \times ५३११}{१४४००}$ ।

(१) कल्पगताब्देषु हरतष्टेषु शेषम् = ३६२६ ।**

(२) $\frac{३७२९}{१४४००} = \frac{१६८०४७१६}{१४४००} = १३७५ \frac{६७१९}{१४४००}$ ।

(३) यद्येतावति १४४०० हरे ४७१६ क्षेपकोऽयं तदैतावति १३१ क इति संचारितः क्षेपकः = $\frac{४७१६ \times १३१}{१४४००} = \frac{६१८१८६}{१४४००} = ४२ \frac{१३३८६}{१४४००} = ४३$ स्व० ।

अतोऽत्र ‘सगुणवेदः’ इति पाठः सम्यगिति सिध्यति ।

 १७८३३३६६४०८
 \end{array}$$

अत्राऽऽचार्येण सुखार्थं छन्दोऽनुरोधाद् वा ८ $\frac{१}{४}$ स्थाने ८ $\frac{१}{४}$ गृहीतेति कल्प्यते ।

अथ ध्यानग्रहोपदेशाध्याय में क्षेप साधन करते हैं ।

हि. भा.—ध्यान ग्रहोपदेशाध्याय का दूसरे श्लोक में पञ्चचत्वारिंशत् (४५) को षष्टि (६०) से भाग देकर फल = $\frac{५}{४}$ = $\frac{१}{४}$ इसको व्यर्थ ही मध्यमराशि में आचार्य ने जोड़ दिया है । इसके बाद “सरसवेदयुक्त” इसके लिये गौड्रीन्द्रक्रिस्ताङ्क दस्मनगगोचन्द्राः

= १६७२६४७१७६, इसको शाकाब्द में जोड़ दें, यह भास्करोक्ति से खपखपख के तुल्य शाका में कल्प गताब्द = १६७२६४७७२६। वर्ष के आदि में अधिशेष के ज्ञान के लिये अनुपात करते हैं।

$$\frac{\text{कअमा} \times \text{इष्टसौर वर्ष}}{\text{कसीव}} = \frac{१६७२६४७७२६ \times १५६३३०००००}{४३२०००००००}$$

$$= \frac{१६७२६४७७२६ \times ५३११}{१४४००} \quad ।$$

(१) कल्पगताब्द में हर से भाग देने पर शेष = ३६२६।

$$(२) \frac{३६२६ \times ५३११}{१४४००} = \frac{१६८०४७१६}{१४४००} = १३७५ + \frac{४७१६}{१४४००} ।$$

(३) यदि १४४०० इस हर में ४७१६ यह क्षेप मिलता है तो १३१ में क्या इससे

$$\text{मिला संचारितक्षेपक} = \frac{४७१६ \times १३१}{१४४००}$$

$$= \frac{६१८१८६}{१४४००} = ४२ + \frac{१३३८६}{१४४००} = ४३ स्वल्पान्तर से।$$

इसलिये यहां 'सगुणवेदः' यह पाठ उचित सिद्ध होता है।

$$(१) \quad १४४,००) १६७२६४७७,२६(१३७०१० = \text{लब्धिः ।}$$

$$\begin{array}{r} ५३२ \\ १००६ \\ १४७ \end{array}$$

३७२६ = कलिगताब्द।

(२)

$$\begin{array}{r} ३७२६ = \text{कलिगताब्द} \\ ५३११ \end{array}$$

$$\hline ३७२६$$

$$३७२६$$

$$१११८७$$

$$\hline १८६४५$$

$$१६८०४७,१६ (१३७५$$

= कलि के आदि से बीता हुआ अधिमास।

$$\begin{array}{r} ५४० \\ १०८४ \\ ७६७ \\ ४७१६ \\ १३१ \end{array}$$

(३)

$$\begin{array}{r}
 ४७१६ \\
 १४१५७ \\
 ४११८ \\
 \hline
 ६१८१,८६(४२=क्षेपकः \\
 ४२१ \\
 १३३८६=शेषम् ।
 \end{array}$$

लब्धि = १३७०१० । गुण = ५३११

इन दोनों का गुणनफल = १३७०१०
 १३७०१०
 १०१०
 ४११०३०
 ६८५०५०

$$\begin{array}{l}
 ७२७६०११० = \text{कल्प के आदि में गताधिमास} \\
 ७२७६६०११० + १३७५ = \text{कल्पारम्भ से ग्रन्थारम्भशक} \\
 \text{पर्यन्त गताधिमास} = ७२७६६१४८५ ।
 \end{array}$$

चौथे (४) श्लोक की क्षेप साधनोपपत्ति ।

$$\begin{array}{l}
 \text{पूर्व साधित कल्पगतवर्ष} = १६७२६४७७२६ । \\
 \text{इसको १२ से गुणाकर कल्पगतमास} = २००६७५३७२७४८ । \\
 \text{पूर्व साधित अधिमास} = ७२७६६१४८५ । \\
 \text{अधिमास को कल्पगतमास में जोड़ने से चान्द्रमास} = २४४०३०३४२३३
 \end{array}$$

अब अनुपात करते हैं ।

कल्प चान्द्रमास में कल्पकुदिन पाते हैं तो उपरोक्त चान्द्रमास में क्या इस अनुपात से वर्षारम्भ समीपस्थ मध्यमदशान्तकालिक कुदिन समूह =

$$\begin{array}{l}
 = \frac{२४४०३०३४२३३ \times १५७७६१६४५००००}{५३४३३३०००००} \\
 = \frac{२४४०३०३०२३३ \times १०५१६४४३}{३५६२२२} ।
 \end{array}$$

अब सात से गुणा हुआ हार (२४६३५५४) इससे गुण्य और गुणक को तक्षण के लिये न्यास करते हैं ।

$$\begin{array}{r}
 २४६३५५४) २४४०३०३४, २३३ (६७८६ \\
 \underline{२२४४१६८६} \\
 १६६१०४८२ \\
 \underline{१७४५४८७८} \\
 \times २१५५६०४३ \\
 \underline{१६६४८४३२} \\
 ०१६०७६११३ \\
 \underline{१४६६१३२४} \\
 १११४७८६ = \text{गुण्यशेषम् ।}
 \end{array}$$

$$\begin{array}{r}
 २४६३५५४) १०५१६४४३ (४ \\
 \underline{६६७४२१६} \\
 ०५४५२२७ = \text{गुणकशेषम् ।}
 \end{array}$$

$$\text{गुण्यशेष} \times \text{गुणकशेष} = १११४७८६ \times ५४५२२७ = ६०७८१३०६२१०३ ।$$

$$३५६२२२) ६०७८१३०६२१०३ (१७०६२७६ = \text{ल प्र ।}$$

$$\begin{array}{r}
 ३५६२२२ \\
 \underline{२५१५६१०} \\
 २४६३५५४ \\
 \underline{००२२३५६६२} \\
 २१३७३३२ \\
 \underline{६८३३०१} \\
 ७१२४४४ \\
 \underline{२७०८५७०} \\
 २४६३५५४ \\
 \underline{२१५०१६३} \\
 २१३७३३२ \\
 \underline{\times \times १२८३१ = \text{शेष}}
 \end{array}$$

यहां शेष को ६० से गुणाकर (३५६२२२) इससे भाग देने से

$$१२८३१ \times ६० = ७६९८६० ।$$

$$\begin{array}{r}
 ३५६२२२) ७६९८६० (२ \text{ घटी} \\
 \underline{७१२४४४} \\
 \times ५७४१६ = \text{शेष}
 \end{array}$$

फिर शेष को ६० से गुणाकर भागहर (३५६२२२) से भाग देने पर—

$$५७४१६ \times ६० = ३४४४९६०।$$

$$\begin{array}{r} ३५६२२२) ३४४४९६० (९ + ३ \text{ पल स्वल्पान्तर से} \\ \underline{३२०५९९८} \\ २३८९६२ \end{array}$$

यहां प्रथम लब्धि (१७०६२७६) इसको ७ से भाग देने पर शेष = ५ = वार ।

क्रम से वार ५ । घटी २ । पल ९ + ३ । स्वल्पान्तर से यहां वर्तमान दिन के लिये ५ की जगह ६ संख्या को आचार्य ने ग्रहण किया और २ की जगह ४, एवं ९ की जगह १८ संख्या को आचार्य ने स्वीकार किया है ।

इस तरह यहां २ घटी, ९ पल को आचार्य ने अधिक ग्रहण किया है, इस बात को व्योतिषी लोग विचार करें ।

(६) छठे श्लोक के क्षेप साधन की युक्ति —

$$\text{पूर्वसाधित कल्प से व्यतीत वर्ष} = १९७२९४७७२९।$$

$$१९७२९४७७२९ \times १२ = २३६७५३७२७४८ = \text{सौरमास}।$$

$$\text{इष्टशाका} = ५५०। ५५० \text{ शाकारम्भ समय में—}$$

$$\text{गताधिमास} = १३७०१० \times ५३११ + १३७५ = ७२७६६१४८५*$$

$$\text{इष्टचान्द्रमास} = २३६७५३७२७४८ + ७२७६६१४८५ =$$

$$= २४४०३०३४२३३$$

अब अनुपात करते हैं—

कल्पमास में कल्पचान्द्रमास घटा हुआ कल्पचन्द्र मन्दकेन्द्रभगणा मिलता है तो इष्ट-चान्द्रमास में क्या इस अनुपात से भगणात्मक चन्द्रकेन्द्र =

$$= \frac{२४४०३०३४२३३ \times ३८३१८९४४२}{५३४३३३०००००}$$

१	२४४०३०३४२३३	१	५३४३३३
२	४८८०६०६८४६६	२	१०६८६६६
३	७३२०९१०२६९९	३	१६०२९९९
४	९७६१२१३६९३२	४	२१७१६६४
५	१२२०१२७३६६४	५	२७०५९९८
६	१४६४२७३०८९७	६	३२४०३३१
		७	४२७४६६४
		८	४८०८९९७
